To this Rāmānujācārya's reply is that in the case of an ordinary existent thing there is a difference between its existence as such and its manifestation of knowledge, for it always depends upon specific relations between itself and knowledge; but in the case of a self-luminous entity where no such relations are needed there is no difference between its existence and its manifestation. The fire illuminates other objects but it does not need any other assistance to manifest itself. It is this that is meant by self-luminosity. Just as no entity depends upon any other entity of its own class for its

manifestation, so knowledge also does not need assistance from knowledge for its manifestation. The relations that are needed for the manifestation of other objects are not needed for the manifestation of knowledge itself¹. Knowledge thus being self-luminous helps our behaviour directly but does not depend upon anything else for lending such assistance. It is against all experience that knowledge for its manifestation requires some other knowledge, and if it has no support in our experience there is no justification for making such an extraordinary theory that any knowledge for its manifestation should require the operation of another knowledge. That only can be called an object of knowledge which though existent remains unmanifested. But it cannot be said that there was knowledge which was not known, for a cognition would not last like other objective entities awaiting the time when it might be manifested. In the case of a past knowledge which is merely inferred now, there is no notion of that knowledge, so one can always draw a distinction between the known and the unknown. If only the object were illuminated and not the knowledge of it, no one would fail for a moment to perceive that. If knowledge were merely inferred from its effect, everyone would have so experienced it, but no one has a moment's hesitation in discriminating between what is known and unknown. It is again wrong to say that knowledge arises only after inquiry, for in the present knowledge whatever is sought to be known is known directly, and in the past knowledge also there is no such inference that there was knowledge because it is remembered, but the past knowledge directly appears as memory; for if that is called an inference, then even re-perception may be regarded as an inference from memory.

Again, a thing that exists without being an object of knowledge at the same time is liable to erroneous manifestation on account of the presence of defects in the collocation conditioning the knowledge, but knowledge itself is never liable to error, and consequently it has no existence apart from being known. Just as there cannot be any doubt whether a pleasure or a pain is experienced, so there cannot be any doubt about knowledge, and this shows that whenever there is knowledge it is self-manifested. When one knows an object one is also sure about one's knowledge of it. Again, it is

¹ *jñānam ananyā-dhīna-prakāśam artha-prakāśakatvāt dīpavat. Nyāya-kulīśa. MS.*

wrong to suppose that if knowledge is self-manifested then there would be no difference between itself and its objective content, for the difference is obvious; knowledge in itself is formless, while the object supplies the content. Two entities which appear in the same manifestation, such as quality and substance, things and their number, are not on that account identical. It cannot also be said that knowledge and its object are identical because they are simultaneously manifested, for the very fact that they are simultaneously manifested shows that they are two different things. Knowledge and the object shine forth in the same manifestation and it is impossible to determine which of them shines before or after.

The self also is to be regarded as being of the nature of knowledge from the testimony of the scriptures. Self being of the nature of knowledge is also self-luminous, and it is not therefore to be supposed that it is cognized by mental intuition (*mānasa-pratyakṣa*).

Rāmānujadāsa alias Mahācārya.

Rāmānujadāsa, called also Mahācārya, was the pupil of Bādhūla Śrīnivāsācārya. He is not, however, to be confused with Rāmānujācārya II, the son of Padmanābhārya and the maternal uncle of Vedānta-deśika—who was also known as Vādi-haṁsanaṁbuda. He wrote at least three books: *Sad-vidyā-vijaya*, *Advaita-vijaya*, and *Parikara-vijaya*.

In his *Sad-vidyā-vijaya*, in refuting the Śāṅkarite doctrine that the existence of positive nescience (*bhāva-rūpā-jñāna*) can be known by the different *pramāṇas* of perception, inference and implication, he says that intuitive experience of ignorance, such as “I am ignorant,” cannot be regarded as an experience of nescience as such in its entirety (*kṛtsnā-jñāna-pratītiḥ tāvad asiddhā*), for it can never refer to all objects as negating all knowledge. A perceptual mental state of the *antaḥkaraṇa* is not admitted by the Śāṅkarites to refer to entities past and gone. Even when a man intuits that he is ignorant, there is at that stage an illumination of his own ego and the fact of his being ignorant, and it cannot be said that in such an experience the nescience in its entirety has been illuminated, for the ego is also illuminated at the time. If nescience in its entirety

is not illuminated, then the nescience is only illuminated with reference to particular objects, and if that is so the assumption of a positive nescience is useless. Again, if nescience or want of knowledge refers to a particular object, then there is a knowledge of that object implied in it; and therefore nescience as such is not experienced and a supposition of a positive nescience is no better than the ordinarily accepted view that in such cases there is only a negation of the knowledge of an object except in deep dreamless sleep. In all other stages all experiences of ignorance refer to the negation of knowledge of particular objects. All cases of ignorance mean that their objects are known only in a general manner, but not in their specific details. Again, it cannot be said that nescience is regarded as positive merely to denote that it is of the nature of a stuff that is opposed to knowledge in general (*jñāna-sāmānya-virodhī*); for in such experiences as “I am ignorant” there is the knowledge of the subject to which the ignorance belongs and also some general content regarding which there is the ignorance. Further, since the nescience has the pure consciousness as its support and since the mind (*antahkaraṇa*) is not regarded as its support, how can the experience “I am ignorant” be said to refer to the experience of this stuff? If it be held that since the mind is an illusory construction on the pure consciousness which is the support of the nescience (*ajñāna*), the latter may appear as a mental function, for both the ego and the nescience, being illusory impositions on the pure consciousness, may shine forth from the same identical basis of consciousness. The reply is that such an explanation is obviously wrong, for if both the ego-consciousness and the *ajñāna* shone forth from the same basic consciousness, the latter could not appear as the predicate of the former. If the one pure consciousness manifests both the ego and the *ajñāna*, they would not appear as different and arranged in a definite subject-predicate order. Again, if it is held that the *ajñāna* shines only as a predicative to the ego because they are based on pure consciousness, then how can such an *ajñāna* refer to the objective things (which are independent impositions on pure consciousness) in such experiences as “I do not know a jug?” If it is said that since there is the one identical consciousness on which the objective entities, the *ajñāna* and the ego-entity, are all imposed, and the *ajñāna* is always in relation with the objective entities, then it may be said that even when a jug is known, the *ajñāna*, being in

relation with other entities (such as cloth) and through them with the pure consciousness underlying them, is also in relation with the pure consciousness on which the jug is a construction. As such it would also be in relation with the jug, with the result that there would be the experience that the jug is not known. It may be argued that the very fact of the positive perception of the jug may be an obstacle to the association of *ajñāna* with it. To this the reply is that just as when one says "I do not know this tree" there is knowledge regarding the "this" and ignorance regarding the nature of the tree, so here also there may be a partial knowledge and ignorance in different aspects of the same jug. In cases of doubt one has to admit knowledge and ignorance subsisting in the same entity, and this is true in all cases of inquiry where a thing may be known in a general way and yet remain unknown so far as its specific details are concerned.

Again, it is wrongly contended by the Śāṅkarites that during deep dreamless sleep there is a direct intuition of *ajñāna*; for if *ajñāna* were then known in its own nature as such, a man could not wake up and remember that he knew nothing. He should then have remembered that he had a direct intuition of *ajñāna*. If during deep dreamless sleep the pure consciousness illuminated *ajñāna*, it must have also illuminated all known and unknown things in the world, which is absurd, for then these would have been remembered during the waking period. It cannot be said that during deep dreamless sleep only *ajñāna* is manifested and nothing else, for according to the testimony of waking consciousness time is also perceived during dreamless sleep which accounts for the memory of the waking stage "so long I did not know anything." Further, if it is held that whatever is illuminated by pure *sākṣi*-consciousness (i.e. without passing through the *vṛtti* stage) then the *ajñāna* also would not be remembered. If it is held that the objects of *ajñāna* only are not illuminated by the *sākṣi*-consciousness but only the *ajñāna*, then that could not account for the memory in the waking stage "I did not know anything," where "anything" definitely refers to some object of *ajñāna*. Moreover, if the above supposition were correct, then the pure bliss could not be illuminated during dreamless sleep and remembered later in the waking stage. If in reply to this it were contended that certain specific characters were remembered during the waking period in addition to the *ajñāna*

because they were represented through the modes of *avidyā*, the reply is that instead of assuming that there were specific modes of *avidyā* one might as well admit them to be due to mental modes or states, and the experience of *ajñāna* might well be accounted for as being the experience of absence of knowledge. Since absence of knowledge is acceptable to all, there is no justification for admitting a new entity such as a positive *ajñāna*.

Again, in the case of loss of memory of a perceived object, a person might say that he did not know the object, but that does not prove that while he knew the object he had an intuition of the *ajñāna* of that object. After an illusory perception of conch-shell-silver one says "I did not know silver so long"; and how is this to be explained? Moreover, when one sees an object at the present moment, one may say "I did not know this object so long." How is this to be explained? The obvious reply is that in all such cases we infer only that there was an absence of knowledge of those entities. In the instance under discussion also we may hold the same view and say that we infer that during dreamless sleep we had no knowledge. But we cannot say that we then intuited directly a positive *ajñāna*. The Śāṅkarites say that the existence of *ajñāna* as a positive stuff can be proved by inference also, for according to them just as light manifests things by removing the positive stuff of darkness, so knowledge also manifests things by removing the *ajñāna* stuff that was hiding them. In refuting this, Mahācārya enters into a long discourse of formal and scholastic criticism of the Śāṅkarite mode of syllogism which cannot appropriately be treated here. The main point that is worthy of our notice here and which has a philosophical significance is the view of the Rāmānuja school that the illumination of things by knowledge does not presuppose that some positive stuff of *ajñāna* must have been removed. The Śāṅkarites object that unless *ajñāna* is admitted as a separate stuff, hiding the pure bliss of the self, it is difficult to explain emancipation. To this Mahācārya's reply is that emancipation can well be explained as cessation of bondage. People are as anxious to gain positive pleasure as to remove negative pain. It is wrong to suppose that unless the bondage were false it could not be removed, for it is well known that the effects of poison can be removed by the meditation of the mythical bird Garuḍa. So worldly bondage can also be removed by the meditation of God, though it be real. Meditation

as knowledge can remove not only ignorance but also the real fact of bondage. Emancipation may thus be regarded as the eternal manifestation of bliss and it is not indispensably necessary that all manifestation of bliss or happiness must be associated with a body like other ordinary bodily pleasure¹.

The Śāṅkarites say that since the unchangeable self cannot be the material cause of the world phenomena nor anything else, it comes by implication that there must be an *ajñāna* stuff which is the material cause of the world, for it is only such a material cause that can explain the *ajñāna* characteristics of the world-phenomena. Brahman has often been designated as the material cause of the world, and this is true only so far as it is the basic cause (*adhiṣṭhāna-kāraṇa*), the pure being that underlies all phenomena. The *ajñāna* is the changing material cause (*pariṇāmi-kāraṇa*), and as such the world participates in the nature of *ajñāna* in its characters.

To this Mahācārya's reply is that even though the world-creation may be supposed to be false, that does not necessarily imply the assumption of a positive *ajñāna*. Thus the illusory silver is produced without any cause, or the self may be regarded as the material cause of the world-creation, which though partless may appear as the world through error. It cannot be said that a false effect must have a false entity as its cause, for no such generalization can be made. The presence of the common characteristic of falsehood cannot determine the supposition that a false entity must necessarily be the cause of a false effect, for there must be other common characteristics in other respects too and there is certainly no absolute similarity of characteristics between the cause and the effect². Moreover, an effect does not necessarily possess the same identity of existence as its changing material cause; it is therefore not impossible for the Brahman to be the material cause of the world, though its purity may not be found in the world. If the Brahman is regarded as the *pariṇāmi-kāraṇa* of the world, it cannot of course have the same identical existence as the world, but if an entity can show itself in another form we may call it a *pariṇāmi-kāraṇa*, and it is not necessary for it to have the same existence as that effect. Thus, destruction and the cessation of *avidyā* are both regarded as

¹ *Sad-vidyā-vijaya*, pp. 39-75 (MSS.).

² *namu upādāno-pādeyayohi sālakṣaṇya-niyama-darśanād eva tat-siddhir iti cet sarvathā sālakṣaṇyasya mṛd-ghaṭayoh apy adarśanāt yat kiñcit sārūpyasya śūkti-rajatā-dāv api padārthatvā-dinā satvāt. Ibid. p. 77.*

effects and yet they have not the same existence as their causes¹. It cannot therefore be argued that if Brahman be regarded as the *pariṇāmi-kāraṇa* of the world, the world would thereby be as real as Brahman. Again, the non-appearance of the Brahma-character of the world may well be explained as being due to the influence of *karma*. Even for explaining the non-appearance of the Brahma-character of the world the assumption of an *ajñāna* is not necessary. It is also not necessary to define emancipation as the cessation of *ajñāna*, for that stage, being itself a state of bliss, can thereby be regarded as an object of our efforts, and the supposition of *avidyā* and its cessation is wholly groundless.

Mahācārya also made a vigorous effort to show by textual contents that the existence of *avidyā* as a positive ignorance is not admitted in the Vedic scriptures.

In the second chapter Mahācārya attempts to show that there is no necessity to admit an *ajñāna* as an independent hiding stuff. The Śāṅkarites argue that though the self is experienced in the notion of our ego, yet the self is not expressed in our ego-experience as identical with Brahman as the fullness of bliss, and for this it is necessary to admit that there is an *ajñāna* stuff which hides the pure character of Brahman. To this Mahācārya's reply is that since *ajñāna* is regarded as beginningless its hiding capacity will also be eternal and no emancipation is possible; and if Brahman could be hidden, it will cease to have its own nature as self-luminous and will be ignorant. Moreover, the experience is of the form "I am ignorant" and as such the *ajñāna* seems to have reference only to the ego. If it is held that the existence of the veil is admitted only to explain the limited appearance of Brahman through mind (*antaḥkāraṇa*), then it may well be pointed out that the limited appearance of Brahman as ego may well be explained through the limitation of the *antaḥkāraṇa* through which it manifests itself, and for that it is not necessary to admit a separate veil of *ajñāna*.

Again it may be asked whether the veiling is identical with *ajñāna* or different from it. In the former case it would ever remain

¹ *yad uktam brahmaṇaḥ pariṇāmitayā upādānatve pariṇāmasya pariṇāmi-samāna-sattākatva-niyamena kāryasyā'pi satyatva-prasaṅga iti. tatra kim pariṇāma-śabdena kārya-mātraṁ vivakṣitam, uta rūpā-ntarā-patitih; dhvamsasya avidyā-nirvṛtteṣca pariṇāmi-samāna-sattākatvā-bhāvāt na hi tad-rūpeṇa pariṇāmi kiñcid asti. na dvītiyaṁ rūpā-ntarā-patiteḥ pariṇāmi-mātra-sāpekṣatvāt gauraveṇa sva-samāna-sattāka-pariṇāmya-apekṣā-bhāvāt. Sad-vidyā-vijaya, p. 77.*

unmanifested, and the manifestation of the world-appearance would be impossible. If the veiling is something different from *ajñāna*, then since that something is not in any way related with pure consciousness its operation would not explain the world-illusion. If this veiling is supposed to render the *ajñāna* indefinable, then it may be asked if this veiling is something different from *ajñāna* or identical with it; in the latter case it would not depend on it and in the former case it is meaningless to regard *ajñāna* as antagonistic to Brahman. Thus, since the limitations through which the Brahman manifests itself are sufficient to explain the limited appearance of Brahman as world-objects, it is unnecessary to admit a separate *ajñāna*.

Again, if *ajñāna* can veil the pure *sākṣi*-consciousness, then the whole world would be blind and there would be no knowledge at all. If the *sākṣi*-consciousness cannot be veiled, then the Brahman also cannot be veiled. Further, if Brahman is always self-luminous, then it can never be hidden by *ajñāna*. If it is said that the self-luminosity of Brahman means that it cannot be the object of cognition (*a-vedyatva*) or of immediacy (*aparokṣa*), then it is unnecessary to indulge in the conception of veiling, for the non-cognizability is neither of the two. Again, the Śāṅkarites hold that the *ajñāna* hides the bliss part of Brahman but not the part of its consciousness. This is obviously impossible, for they hold that bliss and pure consciousness are identical; and if that were so, how can the bliss part be covered without covering also the part of consciousness, and how can one identical partless being, the Brahman, be divided into two parts of which one is covered while the other is not? Again, if the self is admitted to be of the nature of pure bliss, and if our love of pleasure is explained as being due to the illusory construction of the ego on this self, then since all things of the world are but illusory impositions on the self, all things in the world would be dear to us and even pain would be pleasurable.

In the third chapter Mahācārya refutes the Śāṅkarite theory of the support of *ajñāna*. It is held by some exponents of the Śāṅkara school that the *ajñāna*-constituents of the objects are supported in the pure consciousness underlying these objects. Though there are the modifications of these *ajñāna* entities, yet they may have relation with our ego-consciousness, for both the ego and the objects are but the states of a ground-*ajñāna*. To this Mahācārya says that

if all objects of the world have separate and different *ajñāna* materials as their causes, then it is wrong to suppose that the illusory silver is produced by the *ajñāna* of the conch-shell. It would be much better to say that the *ajñāna* of the subject (*pramātā*) as it comes out with the *antaḥkaraṇa* has produced the illusory silver. Again, if the *ajñāna* of the conch-shell is regarded as beginningless, it is meaningless to regard it as being a modification of a ground-*ajñāna*, and if it is not regarded as a mode its perception cannot be explained.

There are again others who hold that the *ajñāna* constituting an external object in some sense subsists in the subject as well and thus there may be a connection between the subject and the object. To this Mahācārya says that such a view is impossible, for the consciousness underlying the object is different from that underlying the subject; and if it is held that pure consciousness is ultimately one, then all objects ought to be illuminated just as much as any particular object is illuminated at the time of any particular cognition. Again, if the consciousness underlying the objects and the subject is without any distinction, why should a man know himself to be ignorant when he says "I am ignorant"? There is no reason why this feeling of ignorance should be felt in the subject and not in the object when the consciousness underlying them are one and the same. Moreover, in that case where one person knows an object, there would be a knowledge of that object with all persons.

There are again others who say that the *ajñāna* constituent of the conch-shell has the consciousness underlying the ego-experience as its support and the consciousness underlying the conch-shell as its object. To this Mahācārya says that the *ajñāna* supported by the consciousness underlying the ego-experience cannot undergo transformation, and, if this is so, it cannot explain the diverse objects.

There are others again who think that when a man says that he does not know the conch-shell his ignorance refers to the root-*ajñāna*; for though the *ajñāna* refers to the pure consciousness, that being identical with the pure consciousness underlying the conch-shell, the *ajñāna* also refers to the conch-shell and may be so apprehended. One has also to admit that the illusory silver is also made up of the stuff of *ajñāna*, for since the illusory silver appears in perception, it must have some stuff as its material cause.

To this Mahācārya's reply is that if the apperception of self-

ignorance has a reference to the root-*ajñāna*, there is no justification for admitting separate *ajñānas* constituting the stuff of the objects. It cannot be suggested that the existence of such *ajñāna* may be proved by the fact that each perception implies the cessation of a particular *ajñāna*, for the disappearance of such an *ajñāna* is only a matter of inference, and it may as well be assumed that it does not mean anything more than that a particular cognition follows only the absence of that particular knowledge. A negation-precedent-to-a-production is always destroyed by the production of a particular entity. When one says "I did not know the jug long, but I know it now," the cessation of the absence of knowledge or the *ajñāna* has a direct and immediate reference to the subject, the knower. But the removal of the *ajñāna* hiding the objects is only a matter of inference from the fact of cognition, and it can never be immediate or intuitive. Again, if the root-*ajñāna* is supposed to veil the pure consciousness as underlying the objects, it is unnecessary to suppose the existence of separate *ajñānas* hiding the objects. If it is supposed that the pure consciousness underlying the objects, being identical with Brahman, which is referred to by the root-*ajñāna*, may appear in consciousness as being limited under the object-appearance, it may be asked how on account of the association of the root-*ajñāna* the object may appear to be unknown even when it is known. Again, the root-ignorance implied in such an experience as "I do not know" cannot belong to the mind (*antaḥkaraṇa*), for it is a material object and it cannot belong to the self-shining pure consciousness. Being what it is, it cannot be ignorant about itself.

Further, it may well be said that though the self is manifested in self-consciousness yet it often appears as associated with the body, and though objects may generally be known as "knowable" yet their specific nature may not be known and it is this that often leads to doubt; all these are inexplicable except on the assumption of ignorance. They may all be admitted, but even then the assumption that *ajñāna* acts as a veiling agent is wholly unwarrantable. Uncertainty (*anuvadhāraṇa*) and veiling (*āvaraṇa*) are not one and the same thing. In the appearance of water in a mirage there may be doubt due to uncertainty, and it cannot be denied that there is all the appearance of water which could not have been if the so-called *ajñāna* had veiled it. Nor can it be said that the uncertainty

is due to the veiling, for it may well be urged that since veiling cannot manifest itself either as being or as self-luminous, it is itself a mere consequence or result of the factor of uncertainty. If it is urged that the factor of indefiniteness or uncertainty itself constitutes the nature of veiling (*anavadhāraṇatvam eva āvaranam*), then it may be said that the fact that the individual ego is not felt to be identical is regarded as being due to the veiling operation; but that does not mean that there is any uncertainty in our experience as the limited individual. If there were any such uncertainty, then ego-experience would not have stood as an indubitable fact. Again, if *ajñāna* be itself of the nature of uncertainty, then there is no meaning in ascribing a separate veiling character to it. If it is held that *ajñāna* is supported only by pure consciousness, then there would be no reason why the individual selves should pass through the cycles of birth and rebirth, for such *ajñāna* would have no association with the individual selves. If it is urged that the same consciousness manifests itself through the individual self, then it may also be urged that since the consciousness underlies both the individuals and God, God may equally well be supposed to undergo the cycle of birth and rebirth¹.

It is sometimes said that it is the mind (*antaḥkaraṇa*) which experiences pleasure and pain and it is this that constitutes bondage. The mind itself being an illusory construction on the pure consciousness, the characters of the mind are felt to belong to the consciousness. To this Mahācārya's reply is that if the bondage belonged to the mind, then the pure consciousness cannot be supposed to suffer bondage. For if the suffering of bondage is due to the false notion of the identification of the pure consciousness with the mind, the bondage is not due to mind but to that false notion. In a similar manner Mahācārya enters into a criticism of many alternative interpretations that are offered by various writers of the Śāṅkara school in support of the existence of *ajñāna* and such of its relations as may explain the world creation, and finally tries to establish his view that in whichever way the relation of *ajñāna* may be conceived it is fraught with diverse kinds of contradictions which baffle explanation.

Again, in the fourth chapter Mahācārya contends that the

¹ *ajñānasya caitanya-mātrā-śrayatve jīve saṁsāra-hetutā na syāt vaiyadhi-karanyāc caitanyasyai'va jīve-śa-vibhāgāt sāmānādhikaranye iśvarasyā'pi saṁsāra-prasaṅgaḥ. Sad-vidyā-vijaya*, p. 107 (MS.).

avidyā cannot be regarded as ultimately real (*pāramārthikī*) for then there would be no monism. It cannot be regarded as the stuff of all that is cognized in practical experience (*vyavahārikī*), for then it could not be called the stuff of illusory experiences. It is sometimes urged that even from false things, such as a false fear, there may be real illness or even death, and so even from ignorance there can be real knowledge. Mahācārya points out that this analogy is false, for even in the above instances it is knowledge that produces the said results. If *avidyā* is false, then all its material transformations must also be false, for the effect is always identical with the cause. It is urged that since the world-objects are false their knowledge must also be false; then the Brahman, which is the knowledge which is itself a product of *avidyā*, is also false.

Further, if *ajñāna* be regarded as one, then with the knowledge of conch-shell all *ajñāna* should cease; for without the cessation of *ajñāna* the conch-shell could not have been known. It cannot be said that with the knowledge of the conch-shell only the veil hiding it has been removed and that the *ajñāna* did not cease, for experience testifies to the disappearance of *ajñāna* and not that of the veil. Thus one is forced to admit the existence of many *ajñānas*. For if it is held that knowledge removes only the veil, then even the last emancipating knowledge would also remove only a particular veil and that would not result in the destruction of the ultimate *ajñāna*. Again, *ajñāna* is defined as that which is destroyed by knowledge (*jñāna*). If that is so, it is obviously wrong to define knowledge as being itself a product of *ajñāna*. The effect cannot destroy the causal entity. Again, if at the time of emancipation of a man the *ajñāna* is supposed to be destroyed, such an *ajñāna* if it is one only would be wholly destroyed and there would be no other *ajñāna* left which could bind the other unemancipated individuals. It is supposed that *ajñāna* must be false, for it is destroyed by knowledge, but at the same time it is admitted that the *ajñāna* is destroyed by the true scriptures (*śruti*), and when a thing is destroyed by another real and true entity the former cannot be regarded as false.

Again, *avidyā* is sometimes defined as something the cessation of which can be produced by knowledge (*jñānajanya*). Now Brahman is itself the cessation of *avidyā*, but it is not produced by knowledge. If knowledge is regarded as a means to the cessation of knowledge (*jñānasādhyatvāt*), then it does not necessarily mean that

it has produced the cessation (*na ca sva-janyatvam eva sva-sā-dhyatvam*). If the two concepts are regarded as identical, then the relationing of *avidyā* to which *avidyā* may be regarded as a means would also have to be admitted as being produced by *avidyā*, which is reasoning in a circle¹. Arguing on the same analogy, one might as well say that the cessation of the relationing with *avidyā* depends on the cessation of *avidyā*, but in that case since the cessation of *avidyā* itself means a relationing with *avidyā* it becomes a tautology only.

Again, in order to differentiate any ordinary erroneous view, which is removed by right knowledge from *avidyā*, it has been defined as being beginningless yet destructible by knowledge. Now, it may be asked, what is the nature of this knowledge which destroys *avidyā*? Does it mean pure consciousness or only mental states? If it is pure consciousness, then it cannot destroy the root-impressions (*saṃskāra*); for it is only the mental states (*vyrtti*) which can destroy the mental root-impressions, and if *avidyā* is a beginningless *saṃskāra* it cannot be removed by knowledge as pure consciousness and thus the assumption of its being beginningless serves no useful purpose. The second supposition, that knowledge which destroys *avidyā* is only a mental state, cannot also be correct, for it is held that knowledge as mental state can remove only the veil of *ajñāna* but not the *ajñāna* itself. If it is said that the mental state removes both the veil and the *ajñāna*, then the definition of *ajñāna* as that which can be removed by knowledge becomes too wide, as it would also signify the veil (*āvaraṇa*) which is not intended to be covered within the definition of *ajñāna*. Again, if *ajñānas* are regarded as many, then such cognitive states can remove only the *ajñānas* veiling the ordinary objects, and cannot therefore be applied to one undifferentiated *ajñāna*-whole which can be removed only by the intuition of the partless real, for this knowledge would not be a mental state which is always limited². Here also the *ajñāna* must be supposed to be hiding the nature of Brahman, and the cessation of the *ajñāna* is directly consequent upon the cessation of the veil. So, firstly, the direct cause of the cessation of the *ajñāna* is not knowledge but the removal of the veil; secondly, it is the removal of the veil that is caused by the knowledge, and so it is this that ought to be called *ajñāna* according to the definition, for the veil is both beginningless and destructible by knowledge.

¹ *Sad-vidyā-vijaya*, p. 116.

² *Ibid.*

Mahācārya enters into a series of further criticisms of the definition of *avidyā* which are more or less of a scholastic nature and may therefore be omitted here.

In the fifth chapter Mahācārya disputes the possibility that the *avidyā* is illuminated or manifested. If *avidyā* was self-manifesting, then it would be real and spiritual like the Brahman. If the manifestation of Brahman were the manifestation of the manifestation of the *avidyā*, then the former being eternal the manifestation of the *avidyā* would also be eternal; yet *avidyā* is always regarded as existing only so long as it shines, and therefore as false (*mithyā-rthasya pratibhāsa-samāna-kālinatva-niyamāt*). If the manifestation (*prakāśa*) of *avidyā* be regarded as its non-distinguishingness (*abheda*) with the manifestation of Brahman, then so long as the manifestation of Brahman remains, the *avidyā* would also remain and hence *avidyā* itself would be eternal. Again, if it is urged that, when the *avidyā* ceases, its non-distinguishingness with the Brahman-manifestation would also cease, and hence Brahman would be eternal and *avidyā* would be destructible, a further difficulty may be pointed out to this contention, namely, that if the *avidyā* be indistinguishable from the Brahman-manifestation, then either the latter would be false or the former real. It would be absurd to suggest in reply that, though different, they have an identical being (*bhinnatve satyabhinnas-attākatvam*). The criticisms suggested herein will apply to the doctrine if the illumination of *avidyā* be explained as the manifestation of Brahman, as limited by *avidyā* (*avidyā-vacchinnaṃ brahma-svarūpaṃ avidyā-prakāśaḥ*) or as conditioned by it or reflected through it.

In the next chapter Mahācārya tries to show the incompatibility of the conception that *avidyā* may be brought to an end. He says that pure consciousness cannot be supposed to destroy *avidyā*. Then *avidyā* can never exist, for the pure consciousness is eternally existing and as such by itself destroys *avidyā* and no other effort is necessary. If pure consciousness cannot destroy *avidyā*, it cannot do so when reflected through a mental state (*vr̥tti-prativimbitam*), for it is not more than the unlimited consciousness (*caitanyaḍ adhika-viśayatvā-bhāve tadvad eva nivarttakatvā-sambhavāt*). If the pure consciousness reflected through a *vr̥tti* cannot remove *avidyā*, then it cannot do so when limited by a *vr̥tti* or conditioned by it. The *vr̥tti* itself also cannot remove it, for it is itself material. If it

is held that the knowledge which contradicts the illusory notion brought about by the *ajñāna* destroys it and not the intuition of the reality, then if that contradiction is something identical with pure consciousness, it is the pure consciousness which is to be supposed as destroying the *ajñāna*; the objections against such a view have already been dealt with. If knowledge and *ajñāna* are different, then it is wrong to suppose that knowledge destroys *ajñāna*; for knowledge is the contradiction that is supposed to destroy *avidyā* and by supposition *avidyā* is not knowledge. Moreover, since that illumination which destroys *ajñāna* cannot be supposed to have a further veil which is removed by it, it cannot rightly be called knowledge; for knowledge according to the supposition of the Śāṅkarites operates by removing a veil. Further, this knowledge is supposed to be opposed to all things in the world, and if that is so how can it be said that by this knowledge only the *ajñāna* is destroyed? Again, if it is supposed that illusion consists in identifying everything with Brahman and knowledge is supposed to remove this false identification, then since knowledge is supposed to operate by removing a veil, it has to be supposed that *ajñāna* was veiling the false identification, and if that were so there could have been no knowledge in our world-experience.

Again, the cessation of *avidyā* is also incomprehensible in itself, for it cannot be different from the nature of Brahman; if it were there would be duality and emancipation would be impossible. If it were one with the Brahman, then being so it would exist always and there would be no scope for making any effort about it. It cannot also be said that *avidyā* and Brahman mutually negate each other; for *avidyā* has Brahman for its support and as such is not antagonistic to it.

Prapatti Doctrine as expounded in Śrīvacana-bhūṣaṇa of Lokācārya and Saumya Jāmāṭṛ Muni's Commentary on it.

According to the *Śrīvacana-bhūṣaṇa* the mercy of God remains always as submerged in His justice, but yet it always exists and its apprehension by us is obstructed by certain conditions. It is not produced by our efforts, for then God would not always be merciful (*anudbhūta-dayā-dy-udbhāṇaka-puruṣa-kāra-sāpekṣakatve nityo-dbhūta-dayā-dī-mattvaṃ vyāhataṃ syāt* 35. B.).

The mercy of God is dependent on Him and on no one else; yet there exists in Nārāyaṇa the deity Lakṣmī who is like the essence of Him or the body of Him, and who has voluntarily reconciled her will absolutely with that of Nārāyaṇa. Though in such a conception the Lakṣmī is dependent on Nārāyaṇa, yet for the devotees Nārāyaṇa and Lakṣmī go together, and for him the mercy of God is to be attributed to both Lakṣmī and Nārāyaṇa taken as a whole.

The conception of Lakṣmī is such that she is the greatest object of love for Nārāyaṇa, who has conceived her as a part of Himself, and Lakṣmī has also so identified herself with Him that there is no separate existence for her. As such Lakṣmī has not to make any special effort for bringing Nārāyaṇa in consonance with her will; for there is practically no existence of duality, and for this reason there is no necessity for devotees to cling separately to Lakṣmī. The nature of Lakṣmī is the pure essence of the mercy of God¹.

When the devotee is in a state of separation from God through the wrong conception of his own independence and separate individuality, he has to make an effort in the negative direction in forsaking his own sense of freedom and adopting God as his ultimate end. But once he has forsaken his false egoism and surrendered himself entirely to God, there is no need of further effort on his part. At such a stage through the influence of Lakṣmī all the sins of the devotee are destroyed and through her influence God extends His mercy to him². Lakṣmī also rouses in the human mind through internal moral persuasion the belief in the necessity of seeking His friendship. She performs the dual function, first that of turning the minds of the people, who are under the sway of beginningless *avidyā* by which they are always being attracted by mundane interest to God; and, secondly, she also melts the heart of God Who is bent upon giving fruits in accordance with the deserts of the people, and persuades Him to extend His bliss to all people by overruling the bondage of *karma*.

The *prapatti*, as seeking the protection of God, is not restricted

¹ *devyā kārūṇya-rūpaye'ti tad-guṇa-sāratvena kārūṇyaṃ svayam eve'ti. Śrīvacana-bhūṣaṇa. MS.*

² *prapatter deśa-niyamaḥ kāla-niyamaḥ prakāra-niyamaḥ adhikāri-niyamaḥ phala-niyamaś ca nāsti. Śrīvacana-bhūṣaṇa-vyākhyā. MS.*

The above idea is supported in the commentary by a quotation from *Bhāradvāja-saṃhitā* which runs as follows:

*brahma-kṣatra-viśaḥ śūdrāḥ striyaś cā'ntara-jātayaḥ
sarva eva prapadyeran sarva-dhātāraṃ acyutam. Ibid.*

by any limiting conditions of holy or unholy places, or of any special time, or of any special mode, or of any caste restriction, or that it can produce only this or that result. When God accepts any person through *prapatti* He forgives all his faults of commission and omission. The only fault that He does not forgive is insincerity or cruelty (*kraurya*). People take to *prapatti* either because they feel helpless and know no other means of saving themselves, or because they are very wise and definitely know that this is the best means, or because they are naturally attached to God, like the Ārvārs¹. In the first case true knowledge and devotion are at the minimum; in the second case there is not so much ignorance but devotion also is of the normal extent. In the third case ignorance is least and attachment is at its highest and as such even true knowledge of the nature of God is engulfed as it were by an excess of attachment. In the first case the consciousness of one's own ignorance is strongest; in the second case the consciousness of one's humbleness and ignorance is equally balanced with the true knowledge of the essence of God and the relation of one's nature with Him.

The devotee who has in great love surrendered himself to God has occasional communion and detachment with Him. In the first case he is filled with ecstatic joy by coming in direct contact with God as associated with noble qualities. But at the moment of detachment the memory of that communion and ecstasy of joy is a source of dire pain. It has been related above that God's mercy is continuous and ever-flowing; but in spite of this, on account of obstructive tendencies which by investing us with a false belief in our own independence lead to the assertion of our false individuality, the course of God's mercy is obstructed. The adoption of *prapatti* removes the obstructive attitude and renders it possible for God to extend His mercy to us. In such a conception *prapatti* is to be regarded only as a negative means. The positive means (*upāya*) is God Who extends His mercy. *Prapatti* therefore should not be regarded as the cause of our deliverance. It only removes our obstructive tendencies, and cannot therefore be regarded as an element of the cause that secures our deliverance—that cause being God

¹ As an illustration of the last type a few lines from *Śrīvacana-bhūṣaṇa-vyākhyā* may be quoted: *bhakti-p̄ravaśyena prapaṇṇā bhagavat-prema-pauṣ-kalyena pādaḥ stabdhau manaḥ śīthilaṃ bhavati cakṣur bhramati pādaḥ hastau ca niṣceṣṭau ity ukta-prakāreṇa śīthila-karaṇatvena sādhanā-nuṣṭhāna-yogyatā-bhāvād ananya-gatikās santas tasmin bhara-samarpaṇaṃ kṛtaṃ*. MS.

and God alone. God is thus both the means and end of attainment, and the only absolute means for the devotee to attain Him. The *prapatti* view here propounded flatly denies the necessity of any other means. The essence of *prapatti* consists in the passivity involved in the mental attitude of the devotee surrendering himself to God and thus giving occasion for God's affecting powers to affect him favourably. When the devotee ceases to concern himself with any anxiety as to how he may be saved, then God exerts His will to save him¹. This view of God's relationship with the devotee involves within it the philosophical doctrine that the individual souls exist for God and have no end to realize for themselves. It is only through ignorance that the individual seems to possess an independent end for himself. The denial of this position through excessive love of God renders the philosophical reality of their mutual relationship realizable as a spiritual fact.

The definition of soul as consciousness and bliss and as atomic is only an external description (*taṭastha*). The internal situation (*antaraṅga*) of the relation of the individual soul with God may best be described as his servitude to Him.

The nature of emotional attachment which is associated with *prapatti* is such that the devotee by his tender love for God induces the same in Him so that the emotion of love may be regarded on the one hand as a consciousness of bliss and on the other hand as a relation in which the lover and the beloved are the constituents. The first inferior stage of *prapatti* is not always actuated by deep natural attachment, but by a sense of one's own insignificance and helplessness². In the second stage called the *upeya* the devotee is so much actuated by his deep love for God that he loses all considerations for himself, and the intoxication of love may grow so deep that it may lead to the annihilation of his body. But the prospect of such an annihilation does not deter him from moving forward in the path of intoxication, for at that stage he loses all interest in the consequences of such an attachment. He is simply lost in God through intoxicating emotion. This is technically called *rāga-prāpta-prapatti*.

The relation between the devotee and God is interpreted on the analogy of the wedding of the mistress with her lover, of the

¹ *asya icchā nirvṛttā cet tasya'cchā asya kāryakārī bhavati. Śrīvacana-bhūṣaṇa-vyākhyā. MS.*

² This is regarded as the *upāya* stage where the devotee seeks God as the means to his highest attainment.

Gopikā with Kṛṣṇa, and it is held that the deep emotion is like the erotic emotion that leads to the wedding of the bridegroom with the bride. *Bhakti* or devotion is described as a special kind of consciousness dissociated from ignorance which reveals itself in the form of a deep emotion. The devotee is supposed to pass through all the stages which a love-stricken woman would do. All the emotions of the devotee, the lover, are for rousing the pleasure of God. Just as a woman's behaviour under the influence of love is intended to bring a smile or twinkle into the eyes of her lover, so the emotion of the devotee is intended solely to please God¹. This is regarded as *siddha-prema* or natural love. Devotees intoxicated by such a love are not necessarily subjected to any kind of code of duty. It is only those whose intoxication by love is so great that they cannot wait and pass through any such discipline as is prescribed in the *vaidhī* or the *upāya* stage of *prapatti* who are driven to embrace God as it were with their melting hearts. The ordinary rules of *prapatti* are utterly unbinding on these people. In the adoption of *prapatti* of all the three types mentioned above the personal effort (*puruṣakāra*) necessary is limited to the extent that the individual should hold himself in absolute self-surrender so that God may be inclined to accept even his faults and defects as they are and remove them by His divine grace. In the case of those who are advanced in the stage of *prapatti*—the *paramārtas*—God removes even all the *prārabdha-karmas* and grants them immediate emancipation².

The person who adopts the path of *prapatti* is not anxious to attain even emancipation. He has also no specific preference as to the nature of the spiritual emancipation that may be granted to him. To desire emancipation and to attach any preference to any possible state of existence involves an egoistic desire. But the person who has sincerely adopted the path of *prapatti* must annihilate altogether even the last traces of egoism. On the one side egoism means ignorance, for it is only by false knowledge that a man asserts

¹ *ajñāna-nivṛtti-pūrvaka-bhakti-rūpā-pannam jñānam prasādhitam. mahad-vivāha-janaka-kāmaṁ samudra-tulyatayā varddhayan megha-saṁśa-vigraho smat-kṛṣṇa ity evaṁ-bhūta-pravṛtti-hetor bhakter utpādako varddhakaś ca. sā eva hi tasya bhakti-pāraśya-nivandhanā pravṛttir upāya-phalam ity ucyate... prāpya-tvarayā strī-vratayā netra-bhramāṇena etasya sambhramā sarve mad-viśayā'sm kṛtvā evam avasthā labdhā iti tan-mukha-vikāśā-rtham kṛyamāṇa-kainikaryatad upeyā-ntarbhūta. Śrīvacana-bhūṣaṇa-vyākhyā. MS.*

² *evam-bhūtasya śarīra-sthiti-hetuḥ prārabdha-karme'ti na vaktum śakyate sarva-pāpebhyah mokṣayiṣyāmi ity anena virodhāt. Ibid. MS.*

himself as having an independent being. On the other side egoism means insincerity (*kraurya*). It has been said above that God may forgive all our sins excepting insincerity. The fundamental requirement of *prapatti* therefore consists in the annihilation of egoism. It is only through the annihilation of egoism that the perfect self-surrender required by *prapatti* is possible¹.

The four stages precedent to the attainment of the *summum bonum* through *prapatti* are as follows: (i) *jñāna-daśā*, i.e. the state in which through the instructions of the teacher the devotee attains self-knowledge in relation to God. (ii) *varaṇa-daśā*, the state in which the devotee adopts God in a spirit of helpless surrender as the only protector. (iii) *prāpti-daśā*, the state in which he realizes God. (iv) *prāpyā-nubhava-daśā*, i.e. the state in which, having realized God, he attains the *summum bonum*².

The doctrine of *prapatti* is, indeed, very old. It is found in the *Ahīrbudhnya-saṃhitā*, *Lakṣmī Tantra*, *Bharadvāja-saṃhitā* and other *Pañca-rātra* works. The *Śrīvaiṣṇava* writers trace its origin to much older literature such as the *Taittirīyopaniṣad*, *Kaṭhopaniṣad* and the *Śvetāśvatara*, the *Mahābhārata* and the *Rāmāyaṇa*. The nature of *prapatti* in the *Ahīrbudhnya-saṃhitā* has already been discussed. In the *Bharadvāja-Saṃhitā* the *prapatti* is described as self-surrender to God, and the descriptions that it gives are more or less the same as those found in the *Ahīrbudhnya*. The devotee who adopts the path of *prapatti* is not exempted from the ordinary duties of a *Vaiṣṇava* or from the regular caste duties. The *Bharadvāja-saṃhitā* describes in some detail the courses of action which are favourable or unfavourable to the adoption of such a path. Rāmānuja, in his *Śaraṇā-gati-gadya*, advocates the path of *prapatti* in which the devotee seeks protection not only of *Nārāyaṇa* but also of *Lakṣmī*. But it does not appear either in the *Śaraṇā-gati-gadya* or in his commentary of the *Gītā* that a person who has adopted the path of *prapatti* is exempted from the normal caste and other duties, nor is the function of *Lakṣmī* in awarding the fruits of *prapatti* explained by him. In his explanation of the *Bhagavad-gītā* text (*sarva-dharmān parityajya*, etc., 18. 66), he says that the devotee should perform all his normal duties without any motive of

¹ *Śrīvacana-bhūṣaṇa-vyākhyā*. MS.

² *etad-anubhava-janita-prīti-kārita-kainkaryam eva parama-puruṣa-rthaḥ*. *Ibid*.

attaining fruits thereby¹. As regards the destruction of the *prāraddha-karma* also, Rāmānuja and Veṅkaṭanātha hold that though most of it is destroyed by the grace of God, yet a trace of it is left². Vātsya Varada, in his *Prapanna-pārijāta*, follows the same idea. Veṅkaṭanātha also repeats the same view in his *Nyāsa-viṃśati* and *Nyāsa-tilaka*, and Anṇayārya, a disciple of Vedānti Rāmānuja, follows the idea in his *Prapatti-prayoga*. Varadanātha, the son of Veṅkaṭanātha, also repeats the idea in his *Nyāsa-tilaka-vākhyā* and *Nyāsa-kārikā*. The view of Lokācārya and Saumya Jāmātr muni, the leaders of the *Tengalai* school, differs from it to the extent that while the above-mentioned *prapatti* doctrine may be true of the inferior devotees, the superior devotees who are absolutely intoxicated with God's love are through the very nature of their psychological intoxication unable to follow any of the normal duties and are entirely exempted from them. Their *prāraddha-karma* may also be entirely destroyed by God's grace. The distinction

¹ Veṅkaṭanātha in his *Tātparya-dīpikā* on *Rāmānuja-bhāṣya* on the *Gītā* (verse 18. 66) says: *etac-chlokā-pāta-pratītyā kūṭa-yuktibhīṣca yathā varṇāśrama-dharma-svarūpa-tyāgā-dī-pakṣo no'deti tathā upapāditam*.

² *sādhya-bhaktistu sā hantrī prāraddhasyā'pi bhūyati*. (*Ruhasya-rakṣā* commentary of Veṅkaṭanātha on *Śaraṇā-gati-gadya*, p. 50. Vānivilāsa Press, 1910).

In the *Nyāsa-viṃśati* and the *Nyāsa-tilaka* as commented in the *Nyāsa-tilaka-vyākhyā* by Veṅkaṭanātha's son Varadanātha *prapatti* is defined in the same manner as that by Lokācārya. *Prapatti* is an old doctrine in Southern Vaiṣṇavism and its fundamental characters are more or less final. In the *Nyāsa-tilaka-vyākhyā* great emphasis is laid on the fact that *prapatti* as a path of approach to God is different from the path of *bhakti* and superior to it. In the *Śrīvacana-bhūṣaṇa* there is a tendency to treat *bhakti* as an intermediary way to *prapatti*. In the *Nyāsa-tilaka-vyākhyā* it is said that the chief difference between *bhakti* and *prapatti* is firstly that the former is of the nature of unbroken meditation, while the latter has to be done once for all; secondly, the *prāraddha-karma* cannot be destroyed by the former, whereas in the latter it can be so done by the grace of God; thirdly, the former needs various accessory methods of worship—continual effort and continual action—whereas in the latter we have excessive faith; fourthly, the former produces fruit after a long time whereas the latter applies only to those who want immediate fruit; fifthly, the former may have different objectives and may yield different fruits accordingly, whereas the latter being of the nature of absolutely helpless surrender produces all fruits immediately. High faith is the foundation of *prapatti*. In and through many obstacles this faith and attachment to God leads the devotee to his goal. For these reasons the path of *bhakti* is inferior to the path of *prapatti*. *Prapatti* to the teacher is regarded as a part of *prapatti* to God. The difference between the conception of *prapatti* in the *Śrīvacana-bhūṣaṇa* and the *Nyāsa-tilaka* is that the latter holds that even those who adopt the path of *prapatti* should perform the obligatory duties imposed by the scriptures and refrain from committing the acts prohibited by them; for the scriptures are the commands of God. The former however thinks that a man who adopts the path of *prapatti* by the very nature of the psychological state produced by it is unable to adhere to any programme of duties outlined by the scriptures. He therefore transcends it.

between the *Varaṅgalai* and *Teṅgalai* schools depends largely on the emphasis given by the latter to the superior type of *prapatti*.

Kastūrī Raṅgācārya.

Kastūrī Raṅgācārya, otherwise called Śrī Raṅgasūri, was a disciple of Saumya Jāmāṭṭ muni and probably lived late in the fifteenth or the beginning of the sixteenth century. Rāmānuja's views do not seem to have undergone great changes of interpretation, and we do not find the emergence of different schools of interpretation as in the case of the philosophy of Śaṅkara. The followers of Rāmānuja throughout the succeeding centuries directed their efforts mostly to elucidating Rāmānuja's views and adducing new arguments for his doctrines or refuting the arguments of his opponents and finding fault with the theories of other schools. A sectarian difference, however, arose with Veṅkaṭanātha's efforts to explain the nature of devotion and the ultimate nature of emancipation and various other problems associated with it. Some external ritualistic differences can also be traced from his time. One sect¹ (*Vaḍkalai* or *Uttara-kalārya*) was led by Veṅkaṭanātha and the other school (called *Teṅgalai* or *Dakṣiṇa-kalārya*) by Lokācārya and Saumya Jāmāṭṭ muni.

Kastūrī Raṅgācārya wrote two works called *Kāryā-dhikaraṇa-vāda* and the *Kāryā-dhikaraṇa-tattva*, in which he discussed some of the most important differences of these two schools and lent his support to the *Teṅgalai* or the *Dakṣiṇa-kalārya* school. The discussion began on the occasion of the interpretation of Rāmānuja of a topic in the *Brahma-sūtra* (4.3.6-15) called the *Kāryā-dhikaraṇa-vāda*, in which some Upaniṣad texts raised certain difficulties regarding the attainment of absolute immortality as conditioned by wisdom or worship (*upāsana*). Vādari says that the worship of Hiraṇyagarbha, the highest of the created beings, leads to absolute immortality; Jaimini says that only the worship of the highest Brahman can produce immortality. Bādarāyaṇa, however, rejects their views and holds that only those who regard their souls as naturally dissociated from *Prakṛti* and as parts of Brahman attain absolute immortality.

¹ *sarvāsu vipratipattiṣu purvā kakṣyā vedāntā-cārya-tad-anuvandhinām uttara-kalārya-saṃjñānām uttarā tu lokācārya-tad-anubandhinām dakṣiṇa-kalārya-saṃjñānām iti viveko bodhyaḥ. Kārya-kūṇḍa-dhikaraṇa-vāda, 8. 2.*

Those who cannot realize their essential difference from the material qualities with which they are seemingly associated cannot attain the highest immortality and have ultimately to follow the cycles of births and rebirths. Those alone who worship Brahman with a proper apprehension of their own nature in relation to it can attain the highest immortality. The nature of this worship has been described by Raṅgācārya in accordance with the *Gītā* which enjoins the worship of Brahman with *śraddhā* (*śraddhā-pūrvakam brahmo-pāśanam*). The word *śraddhā* ordinarily means faith. This faith undergoes a special characterization at the hands of Raṅgācārya and other thinkers of the *Tēngalai* school. Thus it is said that the first stage is the full apprehension of the great and noble qualities of God; the second stage is the attachment produced by such apprehension; the third stage is to regard Him as the ultimate end and fulfilment of our nature; the fourth stage is to think of Him as the only dear object of our life; the fifth stage is the incapacity to bear separation from God through intense love for Him; the sixth stage is absolute faith in God as the only means of self-fulfilment; the seventh and last stage is the enkindling of the spirit in its forward movement to hold fast to Him. It is this last stage as associated with all the previous stages and as integrated with them which is called *śraddhā*. The worship of God with such faith (*śraddhā*) is also called devotion or *bhakti*. The worship of God again means intense joy in Him (*prīti-rūpo-paśāntatva-lakṣaṇam*). The mere realization of one's self as dissociated from the material elements is not sufficient. Those who follow the process of *Pañcāgni-vidyā* rest only with self-discriminative wisdom and do not take to God as the final end of self-fulfilment.

The first point of dispute between the followers of *Uttara-kalārya* and *Dakṣiṇa-kalārya* concerns the nature of emancipation called *kaivalya* which consists in self-realization as the ultimate end (*ātmā-nubhava-lakṣaṇa-kaivalyā-khya-puruṣa-rthah*). Veṅkaṭa-nātha, the leader of the *Uttara-kalārya*, thinks that those who attain such emancipation have again to come back, i.e. such an emancipation is destructible. The *Dakṣiṇa-kalārya* school, however, thinks that such an emancipation is eternal. Thus Veṅkaṭa, in his *Nyāya-siddhāntajñāna*, says that mere realization of self as distinguished from all material elements is not sufficient, for it should also be supplemented by the knowledge that that self is a part of God and is

entirely subordinate to Him, and that this view is held in the *Śrī-bhāṣya*¹. He draws a distinction between the realization of one's own nature as bliss and the realization of the blissful nature of God. The former may happen without the latter. It has to be admitted that in the state of *kaivalya* there is an association of materiality (*acit-saṃsarga*), since the *karma* in its entirety is not destroyed in this case; for to know one's proper essence is to know oneself as a part of God and so long as this state is not attained one is under the influence of *māyā*. In the case of such a person the *māyā* obstructs his vision of God. Veṅkaṭa, however, cannot say anything definitely as to the ultimate destiny of those who attain *kaivalya*. He asserts only that they cannot attain the eternal Brahmahood. He is also uncertain as to whether they are associated with bodies or not. He is also aware that his interpretation of the nature of *kaivalya* is not in harmony with all the scriptural texts, but he feels that since some of the texts definitely support his views other texts also should be taken in that light.

Kastūrī Raṅgācārya, however, asserts that, according to the testimony of the old Drāviḍa texts and also of the Gītā and such other texts, those who attain emancipation through self-knowledge attain the state of absolute immortality. The difference between liberation through self-knowledge and the liberation through one's self-knowledge in association with God is only a difference in the richness and greatness of experience, the latter being higher than the former in this respect². Other points of difference between the *Uttara-kalāryas* and the *Dakṣiṇa-kalāryas* are closely connected with the point discussed above. They have been enumerated in the second chapter of *Kāryā-dhikaraṇa-vāda* and are as follows. The *Uttara-kalāryas* think that those who attain the emancipation of a self-realization as *kaivalya* pass to a higher world through other

¹ *parama-puruṣa-vibhūti-bhūtasya prāptur ātmanaḥ svarūpa-yāthātmya-vedanam apavarga-sādhana-bhūta-parama-puruṣa-vedano-payogitayā āvaśyakam. na svata eva upāyatvena ity uktam. Nyāya-siddhānta-jana*, p. 82.

Veṅkaṭa also refers to Varada Viṣṇumiśra in support of his views. "niḥśeṣa-karma-kṣayā-bhāvāt kaivalya-prāptau na muktiḥ."

He refers to *Saṅgati-mālā*, where Śrī Viṣṇucitta says that a person wishing to attain Brahman may commit such errors of conception that instead of attaining the true Brahmahood he may attain only the lower state of *kaivalya* just as a man performing sacrifices to attain Heaven may commit errors for which he may become a *brahma-rākṣasa* instead of attaining Heaven. *Ibid.* p. 84.

² *Kāryā-dhikaraṇa-vāda*, 3. 79. Kastūrī Raṅgācārya goes through a long course of references to scriptural texts, Dravidian and Sanskritic, in support of his views.

channels than those adopted by persons who attain ultimate emancipation. This is denied by the *Dakṣiṇa-kalāryas*. Secondly, the former hold that the absolute dissociation of all trace of the elements of *prakṛti* is the same as emancipation, but the latter deny it. Thirdly, the former hold that those who attain the *kaivalya* are associated with subtle material impurities and may still be regarded as attaining immortality in a remote sense; this is desired by the latter. Fourthly, the former hold that those who attain *kaivalya* remain in a place within the sphere of the material world and their state is therefore not unchangeable, but the latter deny it. Fifthly, the former hold that those who attain wisdom through the five sacrifices (*pañcāgni-vidyā*) are different from those that attain *kaivalya*, but the latter hold that they may or may not be so. Sixthly, the former hold that those who attain wisdom through the five sacrifices may remain within the sphere of the material world when they attain only self-knowledge, but when they realize the nature of their relation with Brahman they pass away beyond the sphere of the material world (*prakṛti*); the latter, however, deny this. Seventhly, the former hold that those who attain wisdom through *pañcāgni-vidyā*, those who realize the nature of their relation to God, have the same characteristics, but the latter deny it. Eighthly, the former hold that outside the sphere of the material world (*prakṛti*) there cannot be any difference in the nature of one's highest experience, but this also is denied by the latter¹.

In his *Kāryā-dhikaraṇa-tattva*, Raṅgācārya only repeats the same arguments and the topic of discussion is also the same as that in *Kāryā-dhikaraṇa-vāda*.

Śaila Śrīnivāsa.

Śaila Śrīnivāsa was the disciple of Kaunḍinya Śrīnivāsa Dikṣita, the son of Śrīnivāsa Tātācārya, and the brother of Anvayārya Dikṣita. He was very much influenced by the writings of his elder brother Anvayārya and some of his works are but elaborations of the works of his elder brother who wrote many books, e.g. *Virodha-bhañjanī*, etc. Śaila Śrīnivāsa wrote at least six books: *Virodha-nirodha*, *Bheda-darpaṇa*, *Advaita-vaṇa-kuṭhāra*, *Sāra-darpaṇa*, *Mukti-darpaṇa*, *Jñāna-ratna-darpaṇa*, *Guṇa-darpaṇa*, and *Bheda-maṇi*.

¹ *Kāryā-dhikaraṇa-vāda*, II. 7.

In his *Virodha-nirodha*, probably the last of his works, he tries mainly to explain away the criticisms that are made on the different Rāmānuja doctrines by the Śāṅkarites, and also by the writers of other Vedānticschools—viz. that the Rāmānuja views are not strictly faithful to the scriptural texts—by showing that the scriptural texts favour the Rāmānuja interpretations and not the views of the other Vedāntic writers.

In the first chapter of the *Virodha-nirodha* Śaila Śrīnivāsa first takes up the view that the Brahman is both the material and efficient cause of the world—which he thinks is possible only in the conception that Brahman has the individual souls and the matter-stuff associated with Him (*brahmaṇi cid-acid-viśiṣṭa-rūpatām antareṇa na ghaṭate*). The Brahman remains unchanged in itself but suffers transformations through its two parts, the soul and the matter-stuff. Brahman as cause is associated with souls and the matter-stuff in their subtle forms, and when it undergoes transformation the souls expand and broaden as it were through the various intellectual states as a result of their *karma*, and the matter-stuff passes through its grosser stages as the visible material world; the portion of God as the inner controller of these two suffers transformation only so far as it is possible through its association with these two transforming entities¹. When the scriptural texts deny the changing character of the Brahman, all that is meant by them is that it does not undergo the changes through which matter and individual souls pass through their *karma*, but that does not deny the fact that Brahman is the material cause². Brahman has two parts, a substantive and a qualifying part, and it is the substantive part that through its subtle material parts becomes the transforming cause of the grosser qualifying material part. This material part being inseparable from Brahman may be regarded as subsisting in it. So also the Brahman has a spiritual part which undergoes a sort of expansion through thought-experiences and behaves as individual souls. Thus Brahman suffers modification through its physical and spiritual parts, and from this point of view God is

¹ *acid-aṁśasya kāraṇa-vasthāyām śabdā-di-vihānasya bhogyatvāya śabdā-di-mattvayā svarūpā-nyathā-bhāva-rūpa-vikāro bhavati ubhaya-prakāra-viśiṣṭe nīyantr-aṁśe tad-avastha-tad-ubhaya-viśiṣṭatā-rūpa-vikāro bhavati. Virodha-nirodha. MS.*

² *cid-acid-gata-karmā-dy-adhūna-vikāratvaṁ nirvikāratva-śrutir niṣedhati ity etādṛśaṁ jagad-upādānatvaṁ na sā śrutir bādhte. Ibid.*

subject to development through its two parts and through their association independently as their inner controller. Unlike Veṅkaṭa, Śaila Śrīnivāsa holds that this causal transformation is like the Sāṃkhyist causal transformation¹; *vikāra* or change here means change of states. Brahman thus suffers change directly in the spiritual and the intellectual part and indirectly as their inner controller, though in itself it suffers no change. To the objection that if matter and spirit are regarded as suffering transformation there is no meaning in attributing causality to Brahman as qualified by them, the reply is that the causality of Brahman is admitted on the strength of scriptural testimony. So far as Brahman remains as the inner controller and does not suffer any change in itself, it is regarded as the efficient cause².

In the second chapter Śaila Śrīnivāsa replies to the criticisms against the Rāmānuja doctrine of soul, and says that the contraction and expansion of soul due to ignorance and increase of knowledge does not imply that it is non-eternal, for non-eternality or destructibility can be affirmed only of those who undergo accretion or decrease of parts (*avayavo-pacayā-pacayayor eva anityatva-vyāpyatayā*). Knowledge is partless and so there is no contraction or expansion of it in any real sense. What are called contraction and expansion consist in reality of its absence of relationship with objects due to the effects of *karma* or the natural extension of relations with objects like the ray of a lamp; *karma* is thus regarded as the *upādhi* (limiting condition) which limits the natural flow of knowledge to its objects and is figuratively described as contraction. It is on account of this nature of knowledge that unless obstructed by *karma* it can grasp all sensations of pain and pleasure spreading over all parts of the body, though it belongs to soul which is an atomic entity. So knowledge is all-pervading (*vibhu*)³. Knowledge also is eternal in its own nature though changeful so far as its states are concerned.

In the third chapter Śrīnivāsa deals with the question as to

¹ *viśiṣṭaṃ brahma kāraṇam ity uktam tena kāryam api viśiṣṭam eva tatra ca brahmaṇa upādānatvaṃ viśeṣaṇā-mśaṃ viśeṣyā-mśaṃ prati tatra cācid-aṃśaṃ prati yad-upādānatvaṃ tat sūkṣmā-vasthā-cid-aṃśa-dvāraṇaṃ tatra tatra dvāra-bhūtā-cid-aṃśa-gata-svarūpā nyathā-bhāva-rūpa eve vikāraḥ sa ca aprthak-siddha-vastu-gatatvāt brahma-gato'pi... evaṃ ca sāmṛkhyā-bhīmato-pādānatāyāḥ siddhāntē'py anapāyāt na ko'pi virodhaḥ. Virodha-nirodha. MS.*

² *tena tad eva advāraṇaṃ nimittaṃ-sad-vāraṇaṃ upādānam. Ibid.*

³ *Ibid.*

whether the souls are produced or eternal, and his conclusion is that in their own nature they are unproduced, but they are produced so far as their own specific data of knowledge are concerned¹. The production of eternal knowledge is possible only so far as its contraction and expansion are concerned, which is due to the action of the body and other accessories. It is only in this sense that knowledge though eternal in itself can be said to be suffering production through its various kinds of manifestation (*abhivyakti*).

In the fourth chapter Śrīnivāsa discusses the same question in which the Upaniṣads urge that by the knowledge of one everything is known. He criticizes the Madhva and the Śaṅkarite views and holds that the knowledge of one means the knowledge of Brahman which, being always associated with the individual souls and matter, involves the knowledge of these two entities. His exposition in this subject is based throughout on the interpretations of scriptural texts.

In the fifth chapter Śrīnivāsa explains the same question in which the individual souls can be called agents (*kartā*). Agency (*kartṛtva*) consists in an effort that may lead to the production of any action (*kāryā-nukūla kṛtimattvam*). In the Rāmānuja view effort means a particular intellectual state and as such it may well belong to the soul, and so the effort that may lead to any action also belongs to the soul which, though eternal in itself, is changeful so far as its states are concerned². The agency of the individual souls, however, is controlled by God, though the fruits of the action are enjoyed by the former, for the direction of God which determines the efforts of the individuals is in accordance with their actions. This virtually means an admixture of determinism and occasionalism.

In the seventh chapter Śrīnivāsa contends that though knowledge is universal it only manifests itself in accordance with the deeds of any particular person in association with his body, and so there is no possibility that it should have all kinds of sufferings and enjoyments and should not be limited to his own series of experiences. In the eighth and ninth chapters he tries to establish

¹ *tatra niṣedhāḥ viyad-ādivat jīva-svarūpo-tpattim pratiśedhanti utpatti-vidhayaas tu svā-sādhāraṇa-dharma-bhūta-jñāna-viśiṣṭa-veśeṇa utpattim vadanti. Virodha-nirodha. MS.*

² *prayatnā-der buddhi-viśeṣa-rūpatayā kāryā-nukūla-kṛtimattvasy'āpi kartṛtvasya jñāna-viśeṣa-rūpatayā tasya svābhā vikatayā tad-ātmanā jīvasya jñānasya nityatve'pi tat-parināma-viśeṣasya anityatvāt. Ibid.*

the view that during emancipation the individuals are cleanly purged of all their deeds, virtues and sins, but at this stage God may be pleased to endow them with extraordinary bodies for the enjoyment of various kinds of pleasures. In the remaining nineteen chapters Śaila Śrīnivāsa introduces some of the relatively unimportant theological doctrines of the Rāmānuja system and discusses them on the basis of scriptural texts which may very well be dropped for their insignificance as philosophical contribution.

In the *Bheda-darpaṇa* also Śaila Śrīnivāsa takes some of the important doctrines where the Rāmānujists and the Śāṅkarites part company, and tries to show by textual criticism that the Rāmānuja interpretation of the scriptural texts is the only correct interpretation¹. The work, therefore, is absolutely worthless from a philosophical point of view. In most of his other works mentioned above, Śaila Śrīnivāsa prefers to discuss the doctrines of Rāmānuja philosophy in the same style of scriptural criticism, and any account of these is therefore of very little value to students of philosophy.

Śrī Śaila Śrīnivāsa, in his *Siddhānta-cintāmaṇi*, discusses the nature of Brahma-causality. Brahman is both the instrumental (*nimitta*) and the material (*upādāna*) cause of the world. Such a Brahman is the object of our meditation (*dhyāna*). An object of meditation must have knowledge and will. A mere qualityless entity cannot be the object of meditation. In order that Brahman may be properly meditated upon it is necessary that the nature of His causality should be properly ascertained. It is no use to attribute false qualities for the sake of meditation. If the world is an illusion, then the causality of Brahman is also illusory, and that would give us an insight into His real nature. If God is the real cause of the world, the world must also be real. It is sometimes said that the same entity cannot be both a material and instrumental cause (*samavāya-samavāyi-bhinnam kāraṇam nimitta-kāraṇamiti*). The material cause of the jar is earth, while the instrumental cause is the potter, the wheel, etc. To this the reply is that such an objection is groundless; for it is difficult to assert that that which is an instrumental cause cannot be a material cause, since the wheel of the potter, though an instrumental cause in itself, is also the material

¹ *bhedā-bheda-śruti-vrāta-jāta-sandeha-santatāḥ
bheda-darpaṇam ādāya niścinvantu vipaścitāḥ.*

Bheda-darpaṇa. MS.

cause of its own form, colour, etc. There is thus nothing which can lead us to suppose that the material cause and the instrumental cause cannot exist together in the same entity. It may further be contended that the same entity cannot behave as the material and instrumental cause with regard to the production of another entity. To this the reply is that the internal structure of rod is both the material cause for its form as well as the instrumental cause for its destruction in association with other entities. Or it may be contended that time (*kāla*) is the cause for both the production and destruction of entities (*kāla-ghaṭa-samyogā-dikam prati kālasya nimittatvād upādānatvācca*). To this the obvious reply would be that the behaviour of the same entity as the material and the instrumental cause is limited by separate specific conditions in each case. The association of separate specific conditions renders a difference in the nature of the cause; and therefore it would be inexact to say that the same entity is both the material and the instrumental cause. This objection, however, produces more difficulty in the conception of the causality of Brahman according to the *Viśiṣṭādvaita* theory, for in our view Brahman in His own nature may be regarded as the instrumental cause and in His nature as matter (*acit*) and souls (*cit*). He may be regarded as the material cause¹. It is sometimes objected that if Brahman as described in the texts is changeless, how can He be associated with changes as required by the conception of Him as the material and instrumental cause, which involves the view of associating Him with a body? Moreover, the association of body (*śarīra*) with God is neither an analogy nor an imagery. The general conception of body involves the idea that an entity is called the body where it is only controlled by some spiritual substance². To this the reply is that Brahman may Himself remain unchangeable and may yet be the cause of changes in His twofold body-substance. The objection is that the material world is so different from the bodies of animals that the conception of body cannot be directly applied to it. The reply is that even among animal bodies there is a large amount of diversity,

¹ *evam hi brahmany'api no'pādānatva-nimittatvayor virodhah; tasya cid-acid-viśiṣṭa-veśeṇa upādānatvāt svarūpeṇa nimittatvāc ca. tat-tad-avacchedakabheda-prayukta-tad-bhedasya tasya tatra'pi niṣpratyūhantāt. Siddhānta-cintāmaṇi. MS.*

² *yasya cetanasya yad dravyam sarvā-tmanā svārthe niyāmyam tat tasya śarīram. Ibid.* This subject has been dealt with elaborately in Śrī Saila Śrīnivāsa's *Sāra-darpaṇa*.

e.g. the body of a man and the body of a microscopic insect. Under the circumstances we are to fall upon a general definition which would cover the concept of all bodies and ignore the individual differences. The definition given above suits the concept of bodies of all living beings and applies also to the concept of the world as the body of Brahman. This is also supported by the *Śruti* texts of the *Antaryāmi-brāhmaṇa*, where the world has been spoken of as the body of God. If there is an apparent difference in our conception of body as indicated in the definition as testified by the Vedic texts, with our ordinary perception of the world which does not reveal its nature as body, the testimony of the Vedic texts should prevail; for while our perception can be explained away as erroneous, a scientific definition and the testimony of texts cannot be dismissed. Our ordinary perception is not always reliable. We perceive the moon like a small dish in size, whereas the scriptural testimony reveals its nature to us as much bigger. When there is a conflict between two sources of evidence, the decision is to be made in favour of one or the other by the canon of unconditionality (*ananyathā-siddhatva*). An evidence which is unconditional in its nature has to be relied upon, whereas that which is conditional has to be subordinated to it. It is in accordance with this that sometimes the Vedic texts have to be interpreted in such a manner that they may not contradict perceptual experience, whereas in other cases the evidence of perceptual experience has to be dismissed on the strength of scriptural testimony. It cannot also be said that the evidence of a later *pramāṇa* will have greater force, for there may be a series of errors, in which case there is no certitude in any of the later *pramāṇas*. Again, there is no force also in mere cumulation of evidence, for in the case of a blind man leading other blind men mere cumulation is no guarantee of certitude¹. In the case of the conflict of *pramāṇas*, the dissolution of doubt and the attainment of certitude are achieved on the principle of unconditionality. That which is realized in an unconditional manner should be given precedence over what is realized only in a conditional manner². Our powers of perception are limited by their own limitations and can-

¹ *na ca paratvād uttarena purva-bādhah iti yuktam dhārā-vāhika-bhramasthale vyabhicārāt ata eva na bhūyastvam opi nirṇāyakam śatā'ndha-nyāyena aprayojakatvāc ca. Siddhānta-cintāmaṇi. MS.*

² *ananyathā-siddhatvam eva virodhy-aprāmānya-vyavasthā pakatā-vacchedakam iṣyate. Ibid.*

not therefore discern whether the world may after all be the body of the transcendent Brahman, and therefore it cannot successfully contradict the testimony of the Vedic texts which declare the world to be the body of God. The Vedic texts of pure monism are intended only to deny the duality of Brahman, but it can well be interpreted on the supposition of one Brahman as associated with his body, the world. The denial of dualism only means the denial of any other being like Brahman. Thus Brahman as *cit* and *acit* forms the material cause of the world, and Brahman as idea and will as affecting these is the instrumental cause of the world. The twofold causality of Brahman thus refers to twofold conditions as stated above which exist together in Brahman¹.

In the Vedāntic texts we have expressions in the ablative case indicating the fact that the world has proceeded out of Brahman as the material cause (*upādāna*). The ablative case always signifies the materiality of the cause and not its instrumentality². But it also denotes that the effect comes out of the cause and it may be objected that the world, being always in Brahman and not outside Him, the ablative expressions of the Vedāntic texts cannot be justified. To this the reply is that the conception of material cause or the signification of the ablative cause does not necessarily mean that the effect should come out and be spatially or temporally differentiated from the cause. Even if this were its meaning, it may well be conceived that there are subtle parts in Brahman corresponding to *cit* and *acit* in their manifested forms, and it is from these that the world has evolved in its manifested form. Such an evolution does not mean that the effect should stand entirely outside the cause, for when the entire causal substance is transformed, the effect cannot be spatially outside the cause³. It is true that all

material causes suffer a transformation; but in the *Viśiṣṭādvaita* view there is no difficulty, for it is held here that Brahman suffers this modification and controls it only so far as it has reference to his body, the *cit* and *acit*. God's instrumentality is through His will, and will is but a form of knowledge.

In the *Bheda-darpaṇa* Śrīnivāsa tries to support all the principal contentions of the *Viśiṣṭādvaita* theory by a reference to Upaniṣadic and other scriptural texts. In his other works mentioned above the subjects that he takes up for discussion are almost the same as those treated in *Virodha-nirodha*, but the method of treatment is somewhat different; what is treated briefly in one book is elaborately discussed in another, just as the problem of causality is the main topic of discussion in *Siddhānta-cintāmaṇi*, though it has been only slightly touched upon in *Virodha-nirodha*. His *Naya-dyu-maṇi-saṃgraha* is a brief summary in verse and prose of the contents of what the author wrote in his *Naya-dyu-maṇi*, a much bigger work to which constant references are made in the *Naya-dyu-maṇi-saṃgraha*. Śrī Śaila Śrīnivāsa wrote also another work called *Naya-dyu-maṇi-dīpikā* which is bigger than *Naya-dyu-maṇi-saṃgraha*. It is probably smaller than *Naya-dyu-maṇi*, which is referred to as a big work¹. There is nothing particular to be noted which is of any philosophical importance in *Naya-dyu-maṇi-dīpikā* or *Naya-dyu-maṇi-saṃgraha*. He generally clarifies the ideas which are already contained in the *Śrūta-prakāśikā* of Sudarśana Sūri. He also wrote *Omkāra-vādārtha*, *Ānandatāra-tamya-khaṇḍana*, *Arunādhikaraṇa-saraṇi-vivaraṇi* and *Jijñāsā-darpaṇa*. He lived probably in the fifteenth century.

Śrīnivāsa wrote first his *Sāra-darpaṇa* which was followed by *Siddhānta-cintāmaṇi*, and *Virodha-nirodha*. In fact *Virodha-nirodha* was one of his last works, if not the last. In the first chapter of this work he deals with the same subject as he did in the *Siddhānta-cintāmaṇi*, and tries to explain the nature of Brahman as the material and instrumental cause of the world. In the second chapter he tries to refute the objections against the view that the souls as associated with knowledge or rather as having their character interpreted as knowledge should be regarded as the means for God's manifestation as the world. The objector says that thought is always moving, either expanding or contracting, and as such it can-

¹ Unfortunately this *Naya-dyu-maṇi* was not available to the present writer.

not be the nature of self which is regarded as eternal. In the case of the Jains the soul is regarded as contracting and expanding in accordance with the body that it occupies, and it may rightly be objected that in such a conception the soul has to be regarded as non-eternal. But in the *Viśiṣṭādvaita* conception it is only thought that is regarded as expanding or contracting. The expansion or contraction of thought means that it conceives greater or lesser things, and this is different from the idea of an entity that grows larger or smaller by the accretion or dissociation of parts. The expansion or contraction of thought is due to one's *karma* and as such it cannot be regarded as non-eternal. Knowledge in its own nature is without parts and all-pervading; its contraction is due to the effect of one's bad deeds which is often called *māyā* or *avidyā*¹. The *Viśiṣṭādvaitins* do not regard knowledge as produced through the collocations of conditions as the *Naiyāyikas* think, but they regard it as eternal and yet behaving as occasional (*āgantuka-dharmavattvam*) or as being produced. Earth in its own nature is eternal, and remaining eternal in its own nature suffers transformation as a jug, etc. In this way the conception of the eternity of the soul is different from the conception of knowledge as eternal, for in the case of knowledge, while remaining all-pervasive in itself, it seems to suffer transformation by virtue of the hindrances that obstruct its nature in relation to objects². Universal relationship is the essential nature of knowledge, but this nature may be obstructed by hindrances, in which case the sphere of relationship is narrowed, and it is this narrowing and expansive action of knowledge which is spoken of as transformation of knowledge or as the rise or cessation of knowledge. A distinction has thus to be made between knowledge as process and knowledge as essence. In its nature as essence it is the eternal self; in its nature as process, as memory, perception, thinking, etc., it is changing. The Jaina objection on this point is that in the above view it is unnecessary to admit a special quality of *ajñāna* as the cause for this expansion or contraction of thought, for it may well be admitted that the soul itself undergoes such a

¹ *jñānasya svābhāvikaṃ prasaraṇaṃ aupadhikas tu saṃkocaḥ; upādhis tu prācīnaṃ karma eva. Virodha-nirodha*, pp. 39, 40 (MS.).

² *na hi yādṛśaṃ ātmano nityatvaṃ tādṛg jñānasyā'pi nityatvaṃ abhyapugacchāmaḥ karaṇa-vyāpāra-vaiyarthyaḥ prasaṅgāt. kintu tārīkikā'dy abhīmatam jñānasya āgantuka-dharmatvaṃ nī ākartuṃ dṛśer iva svarūpato nityatvaṃ āgantukā'-vasthā'-śrayatvaṃ ca; tena rūpeṇa nityatvaṃ tu ghaṭatvā'-dy-avasthā-viśiṣṭa-veṣeṇa mṛdāderiva iṣṭam eva. Ibid.* p. 44.

transformation through the instrumentality of its deeds. To this the reply is that the Vedic texts always declare that the soul is in itself unchangeable, and if that is so the change has to be explained through the instrumentality of another factor, the *ajñāna*. Knowledge is thus to be regarded as the pure essence or nature of the soul and not as its *dharma* or character, and it is this character that is in itself universal and yet is observed to undergo change on account of obstructions. Thus, the soul in itself is eternal, though when looked at in association with its character as knowledge which is continually expanding or contracting it may seemingly appear to be non-eternal¹. Thought in itself has no parts and therefore cannot itself be regarded as non-eternal. It is nothing but relationship, and as such the analogy of change which, in other objects, determines their non-eternity cannot apply to it.

Now there are different kinds of Upaniṣadic texts, from some of which it may appear that the soul is eternal, whereas from others it may appear that the soul is created. How can this difficulty be avoided? On this point Śrinivāsa says that the eternity and uncreated nature of the self is a correct assertion, for the soul as such is eternal and has never been created. In its own nature also the soul has thought associated with it as it were in a potential form. Such an unmanifested thought is non-existent. But knowledge in its growing richness of relations is an after-production, and it is from this point of view that the soul may be regarded as having been created. Even that which is eternal may be regarded as created with reference to any of its special characteristics or characters². The whole idea, therefore, is that before the creative action of God the souls are only potentially conscious; their real conscious activity is only a result of later development in consequence of God's creative action.

Again, the Upaniṣads assert that by the knowledge of Brahman everything else is known. Now according to the Śāṅkarite explanation the whole world is but a magical creation on Brahman which alone has real being. Under the circumstances it is impossible that

prāk ṣṛṣṭer jivānām niṣkriyatvo-ktiyā ca idam eva darśitam. Ibid.

by the knowledge of Brahman, the real, there would be the knowledge of all illusory and unreal creation, for these two, the reality and the appearance, are entirely different and therefore by the knowledge of one there cannot be the knowledge of the other. In the *Viśiṣṭādvaita* view it may be said that when God as associated with his subtle body, the subtle causal nature of the souls and the material world, is known the knowledge of God as associated with the grosser development of His body as souls and the world is also by that means realized¹.

In performing the actions it need not be supposed that the eternal soul undergoes any transformation, for the individual soul may remain identically unchanged in itself and yet undergo transformation so far as the process of its knowledge is concerned. In the *Viśiṣṭādvaita* view, will and desire are regarded as but modes of knowledge and as such the psychological transformations of the mind involved in the performance of actions have reference only to knowledge². It has already been shown that possibly knowledge in its essential form is unchangeable and yet unchangeable so far as its nature as process is concerned. Such an activity and performance of actions belongs naturally to the individual souls.

The *Virodha-nirodha* is written in twenty-seven chapters, but most of these are devoted to the refutation of objections raised by opponents on questions of theological dogma which have no philosophical interest. These have therefore been left out in this book.

Raṅgācārya³.

A follower of Śaṅkara named Umā-Maheśvara wrote a work named *Virodha-varūthinī* in which he proposed to show one hundred contradictions in Rāmānuja's *bhāṣya* and other cognate

śrī-raṅga-sūriḥ śrīśaile tasya siṃhāsane sthitaḥ
Ku-dṛṣṭi-dhvānta-mārtandaṃ prakāśayati sampratī."

He was thus a disciple of Anantārya of the middle of the nineteenth century. At the end of his *San-mārga-dīpa* he says that it was written in refutation of Rāma Miśra's work on the subject. Rāma Miśra lived late in the nineteenth century and wrote *Sneha-pūrti*.

literature of the school, such as *Śatadūsaṇi*, etc., but through illness he lost his tongue and could offer criticisms on only twenty-seven points¹. As a refutation of that work Raṅgācārya wrote his *Ku-dṛṣṭi-dhvānta-mārtanda*. It also appears that Annayārya's grandson and Śrīnivāsa-tāyārya's son, Śrīnivāsa-dīkṣita, also wrote a work called *Virodha-varūthini-pramāthini* as a refutation of *Virodha-varūthini*. The first chapter of *Ku-dṛṣṭi-dhvānta-mārtanda* is also called *Virodha-varūthini-pramāthini*.

Umā-Maheśvara says that according to the view of Rāmānuja the manifold world and the individual souls (*acit* and *cit*) exist in an undivided and subtle state in Brahman, the original cause. In the state of actualized transformation, as the manifested manifold worlds and the experiencing selves, we have thus a change of state, and as Brahman holds within Himself as qualifying Him this gross transformation of the world He is associated with them. He must, therefore, be supposed to have Himself undergone change. But again Rāmānuja refers to many scriptural texts in which Brahman is regarded as unchanging.

To this the reply is that the mode in which the *cit* and the *acit* undergo transformation is different from the mode in which the all-controlling Brahman produces those changes in them. For this reason the causality of Brahman remains unaffected by the changes through which the *cit* and the *acit* pass. It is this unaffectedness of Brahma-causality that has often been described as the changelessness of Brahman. In the Śāṅkara view, the manifested world being the transformation of *māyā*, Brahman cannot on any account be regarded as a material cause of it. The Brahman of Śāṅkara being only pure consciousness, no instrumental agencies (*nimitta-kāraṇatā*) can be attributed to it. If Brahman cannot undergo any change in any manner and if it always remains absolutely changeless it can never be regarded as cause. Causality implies power of producing change or undergoing change. If both these are impossible in Brahman it cannot consistently be regarded as the cause. According to the Rāmānuja view, however, Brahman is not absolutely changeless; for, as producer of change it also itself undergoes a change homogeneous (*brahma-samasattāka-vikārā-ṅgikārāt*) with

¹ Umā-Maheśvara is said to have written other works also, i.e. *Tattva-candrikā*, *Advaita-kāmadhenu*, *Tapta-mudrā-vidrāvaṇa*, *Prasaṅga-ratnākara*, and *Rāmāyana-tīkā*.

it. As the change is of a homogeneous nature, it may also be regarded as unchanged. The Brahman is the ultimate upholder of the world; though the worldly things have their intermediate causes, in which they may be regarded as subsisting, yet since Brahman is the ultimate and absolute locus of subsistence all things are said to be upheld in it.

Causation may be defined as unconditional, invariable antecedence (*ananyathā-siddha-niyata-pūrva-vartitā*). Brahman is certainly the ultimate antecedent entity of all things, and its unconditional character is testified by all scriptural texts. The fact that it determines the changes in *cit* and *acit* and is therefore to be regarded as the instrumental agent does not divest it of its right to be regarded as the material cause; for it alone is the ultimate antecedent substance. Brahman originally holds within itself the *cit* and the *acit* in their subtle nature as undivided in itself, and later on undergoes within itself such changes by its own will as to allow the transformation of *cit* and *acit* in their gross manifested forms. It leaves its pristine homogeneous character and adopts an altered state at least with reference to its true parts, the *cit* and the *acit*, which in their subtle state remained undivided in themselves. It is this change of Brahman's nature that is regarded as the *pariṇāma* of Brahman. Since Brahman is thus admitted to be undergoing change of state (*pariṇāma*), it can consistently be regarded as the material cause of the world. The illustration of the ocean and the waves is also consistent with such an explanation. Just as mud transforms itself into earthen jugs or earthen pots, and yet in spite of all its changes into jugs or pots really remains nothing but mud, so Brahman also undergoes changes in the form of the manifested world with which it can always be regarded as one¹. As the jug and the pot are not false, so the world also is not false. But the true conception of the world will be to consider it as one with Brahman. The upper and the lower parts of a jug may appear to be different when they are not regarded as parts of the jug, and

¹ *vahu syām prajāyeye'tyā-di-śrutibhiḥ sṛṣṭeḥ prāñ nāma-rūpa-vibhāgā-bhāvena ekatvā-vasthāpannasya sūkṣma-cid-acid-viśiṣṭa-brahmaṇaḥ paścān-nāma-rūpa-vibhāgena ekatvā-vasthā-prahāṇa-pūrvakamsthūla-cid-acid-vaiśiṣṭya-lakṣaṇa-vahutvā-pattir-hi prasphuṭaṃ pratipādyate; sai'va hi brahmaṇaḥ pariṇāmo nāma; prāg-avasthā-prahāṇenā' vasthā-ntara-prāpter eva pariṇāma-sabdā-rthatvāt... yathā sarvaṃ mṛd-dravya-vikṛti-bhūtaṃ ghaṭā-di-kārya-jātaṃ kāraṇa-bhūta-mṛd-dravyā-bhinname va na tu dravyā-ntaraṃ tathā brahmā'pi jagataḥ abhinnaṃ eva. Ku-dṛṣṭi-dhvānta-mārtanḍa, p. 66.*

in that condition to consider them as two would be false; for they attain their meaning only when they are taken as the parts of one whole jug. When the Upaniṣads say that plurality is false, the import of the text is that plurality attains its full meaning only in its unified conception as parts of God, the Absolute.

The Śāṅkarites do not admit the theory of illusion as one thing appearing as another (*anyathā-khyāti*). According to them illusion consists in the production of an indefinable illusory object. Such an object appears to a person only at a particular moment when he commits an error of perception. It cannot be proved that the illusory object was not present at the time of the commission of illusory perception. Under the circumstances the absence of that object at other times cannot prove its falsity; for an object present at one time and not present at another cannot indicate its false nature. Falsity has then to be defined as relative to the perceiver at the time of perception. When the perceiver has knowledge of the true object, and knows also that one object is being perceived as another object, he is aware of the falsity of his perception. But if at the time of perception he has only one kind of knowledge and he is not aware of any contradiction, his perception at any time cannot be regarded as false. But since the dream experiences are not known to be self-contradictory in the same stage, the experience of conch-shell-silver is not known to be illusory at the time of the illusion; and as the world experience is uncontradicted at the time of our waking consciousness, it cannot be regarded as false in the respective stages of experience. The falsehood of the dream experiences therefore is only relative to the experience of another stage at another time. In such a view of the Śāṅkarites everything becomes relative, and there is no positive certainty regarding the experience of any stage. According to the Buddhists and their scriptures, the notion of Brahman is also false; and thus, if we consider their experience, the notion of Brahman is also relatively true. In such a view we are necessarily landed in a state of uncertainty from which there is no escape¹.

¹ Raṅgācārya wrote at least one other work called *San-mārga-dīpa* which, being of a ritualistic nature, does not warrant any treatment in this work.

CHAPTER XXI

THE NIMBĀRKA SCHOOL OF PHILOSOPHY

Teachers and Pupils of the Nimbārka School.

NIMBĀRKA, Nimbāditya or Niyamānanda is said to have been a Telugu Brahmin who probably lived in Nimba or Nimbapura in the Bellary district. It is said in Harivyāsadeva's commentary on *Daśa-śloki* that his father's name was Jagannātha and his mother's name was Sarasvatī. But it is difficult to fix his exact date. Sir R. G. Bhandarkar, in his *Vaiṣṇavism, Śaivism and Minor Religious Systems*, thinks that he lived shortly after Rāmānuja. The argument that he adduces is as follows: Harivyāsadeva is counted in the *Guru-paramparā* list as the thirty-second teacher in succession from Nimbārka, and Bhandarkar discovered a manuscript containing this list which was written in Samvat 1806 or A.D. 1750 when Dāmodara Gosvāmī was living. Allowing fifteen years for the life of Dāmodara Gosvāmī we have A.D. 1765. Now the thirty-third successor from Madhva died in A.D. 1876 and Madhva died in A.D. 1276. Thus thirty-three successive teachers, on the Madhva line, occupied 600 years. Applying the same test and deducting 600 years from A.D. 1765, the date of the thirty-third successor, we have 1165 as the date of Nimbārka. This, therefore, ought to be regarded as the date of Nimbārka's death and it means that he died sometime after Rāmānuja and might have been his junior contemporary. Bhandarkar would thus put roughly eighteen years as the pontifical period for each teacher. But Pandit Kiśoradāsa says that in the lives of teachers written by Pandit Anantarām Devācārya the twelfth teacher from Nimbārka was born in Samvat 1112 or A.D. 1056, and applying the same test of eighteen years for each teacher we have A.D. 868 as the date of Nimbārka, in which case he is to be credited with having lived long before Rāmānuja. But from the internal examination of the writings of Nimbārka and Śrīnivāsa this would appear to be hardly credible. Again, in the *Catalogue of Sanskrit Manuscripts in the Private Libraries of the North Western Provinces*, Part I, Benares, 1874 (or *N.W.P. Catalogue*, MS. No. 274), *Madhva-mukha-mardana*, deposited in the

Madan Mohan Library, Benares, is attributed to Nimbārka. This manuscript is not procurable on loan and has not been available to the present writer. But if the account of the authors of the *Catalogue* is to be believed, Nimbārka is to be placed after Madhva. One argument in support of this later date is to be found in the fact that Mādhava who lived in the fourteenth century did not make any reference in his *Sarva-darśana-saṃgraha*, to Nimbārka's system, though he referred to all important systems of thought known at the time. If Nimbārka had lived before the fourteenth century there would have been at least some reference to him in the *Sarva-darśana-saṃgraha*, or by some of the writers of that time. Dr Rajendra Lal Mitra, however, thinks that since Nimbārka refers to the schools (*saṃpradāya*) of Śrī, Brahmā and Sanaka, he lived later than Rāmānuja, Madhva and even Vallabha. While there is no positive, definite evidence that Nimbārka lived after Vallabha, yet from the long list of teachers of his school it probably would not be correct to attribute a very recent date to him. Again, on the assumption that the *Madhva-mukha-mardana* was really written by him as testified in the *N.W.P. Catalogue*, one would be inclined to place him towards the latter quarter of the fourteenth or the beginning of the fifteenth century. Considering the fact that there have been up till now about forty-three teachers from the time of Nimbārka, this would mean that the pontifical period of each teacher was on the average about ten to twelve years, which is not improbable. An internal analysis of Nimbārka's philosophy shows its great indebtedness to Rāmānuja's system and even the style of Nimbārka's *bhāṣya* in many places shows that it was modelled upon the style of approach adopted by Rāmānuja in his *bhāṣya*. This is an additional corroboration of the fact that Nimbārka must have lived after Rāmānuja.

The works attributed to him are as follows: (1) *Vedānta-pārijāta-saurabha*. (2) *Daśa-śloki*. (3) *Kṛṣṇa-stava-rāja*. (4) *Guru-paramparā*. (5) *Madhva-mukha-mardana*. (6) *Vedānta-tattva-bodha*. (7) *Vedānta-siddhānta-pradīpa*. (8) *Sva-dharmā-dhva-bodha*. (9) *Śrī-kṛṣṇa-stava*. But excepting the first three works all the rest exist in MS. most of which are not procurable¹. Of these the present writer

¹ *Vedānta-tattva-bodha* exists in the *Oudh Catalogue*, 1877, 42 and VIII. 24, compiled by Pandit Deviprasad.

Vedānta-siddhānta-pradīpa and *Sva-dharmā-dhva-bodha* occur in the *Notices*

could secure only the *Sva-dharmā-dhva-bodha*, which is deposited with the Bengal Asiatic Society. It is difficult to say whether this work was actually written by Nimbārka. In any case it must have been considerably manipulated by some later followers of the Nimbārka school, since it contains several verses interspersed, in which Nimbārka is regarded as an *avatāra* and salutations are offered to him. He is also spoken of in the third person, and views are expressed as being *Nimbārka-matam* which could not have come from the pen of Nimbārka. The book contains reference to the *Kevala-bheda-vādī* which must be a reference to the Madhva school. It is a curious piece of work, containing various topics, partly related and partly unrelated, in a very unmethodical style. It contains references to the various schools of asceticism and religion.

In the *Guru-paramparā* list found in the *Har-iguru-stava-mālā* noted in Sir R. G. Bhandarkar's *Report of the Search for Sanskrit Manuscripts 1882-1883*, we find that Haṃsa, the unity of Rādhā and Kṛṣṇa, is regarded as the first teacher of the Nimbārka school. His pupil was Kumāra of the form of four *vyūhas*. Kumāra's pupil was Nārada, the teacher of *prema-bhakti* in the Tretā-yuga. Nimbārka was the pupil of Nārada and the incarnation of the power (*sudarśana*) of Nārāyaṇa. He is supposed to have introduced the worship of Kṛṣṇa in Dvāpara-yuga. His pupil was Śrīnivāsa, who is supposed to be the incarnation of the conch-shell of Nārāyaṇa. Śrīnivāsa's pupil was Viśvācārya, whose pupil was Puruṣottama, who in turn had as his pupil Svarūpācārya. These are all described as devotees. Svarūpācārya's pupil was Mādhavācārya, who had a pupil Balabhadraācārya, and his pupil was Padmācārya who is said to have been a great controversialist, who travelled over different parts of India defeating people in discussion. Padmācārya's pupil was Śyāmācārya, and his pupil was Gopālācārya, who is described as a great scholar of the Vedas and the Vedānta. He had as pupil Kṛpācārya, who taught Devācārya, who is described as a great controversialist. Devācārya's pupil was Sundara Bhaṭṭa, and Sundara Bhaṭṭa's pupil was Padmanā Bhācārya. His pupil was Upendra Bhaṭṭa; the succession of pupils is in the following order :

of *Sanskrit Manuscripts*, by R. L. Mitra, Nos. 2826 and 1216, and the *Guru-paramparā* in the *Catalogue of Manuscripts in the Private Libraries of the N.W.P.*, Parts 1-x, Allahabad, 1877-86.

Rāmacandra Bhaṭṭa, Kṛṣṇa Bhaṭṭa, Padmākara Bhaṭṭa, Śravaṇa Bhaṭṭa, Bhūri Bhaṭṭa, Madhva Bhaṭṭa, Śyāma Bhaṭṭa, Gopāla Bhaṭṭa, Valabhadra Bhaṭṭa, Gopinātha Bhaṭṭa (who is described as a great controversialist), Keśava, Gaṅgala Bhaṭṭa, Keśava Kāśmīrī, Śrī Bhaṭṭa and Harivyāsadeva. Up to Harivyāsadeva apparently all available lists of teachers agree with one another; but after him it seems that the school split into two and we have two different lists of teachers. Bhandarkar has fixed the date for Harivyāsadeva as the thirty-second teacher after Nimbārka. The date of Harivyāsadeva and his successor in one branch line, Dāmodara Gosvāmī, has been fixed as 1750-1755. After Harivyāsadeva we have, according to some lists, Paraśurāmadeva, Harivaṃśadeva, Nārāyaṇadeva, Vṛndāvanadeva and Govindadeva. According to another list we have Svabhūrāmadeva after Harivyāsadeva, and after him Karmaharadeva, Mathuradeva, Śyāmadeva, Sevadeva, Naraharideva, Dayārāmadeva, Pūrṇadeva, Maniśideva, Rādhā-kṛṣṇaśaraṇadeva, Harideva and Vrajabhūṣaṇasaraṇadeva who was living in 1924 and Santadāsa Vāvāji who died in 1935. A study of the list of teachers gives fairly convincing proof that on the average the pontifical period of each teacher was about fourteen years. If Harivyāsadeva lived in 1750 and Śāntadāsa Vāvāji who was the thirteenth teacher from Harivyāsadeva died in 1935, the thirteen teachers occupied a period of 185 years. This would make the average pontifical period for each teacher about fourteen years. By backward calculation from Harivyāsadeva, putting a period of fourteen years for each teacher, we have for Nimbārka a date which would be roughly about the middle of the fourteenth century.

Nimbārka's commentary of the *Brahma-sūtras* is called the *Vedānta-pārijata-saurabha* as has been already stated. A commentary on it, called the *Vedānta-kaustubha*, was written by his direct disciple Śrīnivāsa. Kesava-kāśmīrī Bhaṭṭa, the disciple of Mukunda, wrote a commentary on the *Vedānta-kaustubha*, called the *Vedānta-kaustubha-prabhā*. He also is said to have written a commentary on the *Bhagavad-gītā*, called the *Tattva-prakāśikā*, a commentary on the tenth skanda of *Bhāgavata-purāṇa* called the *Tattva-prakāśikā-veda-stuti-tīkā*, and a commentary on the *Taittirīya Upaniṣad* called the *Taittirīya-prakāśikā*. He also wrote a work called *Krama-dīpikā*, which was commented upon by Govinda

Bhattachārya¹. The *Krama-dīpikā* is a work of eight chapters dealing mainly with the ritualistic parts of the Nimbārka school of religion. This work deals very largely with various kinds of *Mantras* and meditations on them. Śrīnivāsa also wrote a work called *Laghu-stava-raja-stotra* in which he praises his own teacher Nimbārka. It has been commented upon by Puruṣottama Prasāda, and the commentary is called *Guru-bhakti-mandākinī*. The work *Vedānta-siddhānta-pradīpa* attributed to Nimbārka seems to be a spurious work so far as can be judged from the colophon of the work and from the summary of the contents given in R. L. Mitra's *Notices of Sanskrit Manuscripts* (MS. No. 2826). It appears that the book is devoted to the elucidation of the doctrine of monistic Vedānta of the school of Śaṅkara. Nimbārka's *Daśa-ślokī*, called also *Siddhānta-ratna*, had at least three commentaries: *Vedānta-ratna-mañjuṣā*, by Puruṣottama Prasāda; *Laghu-mañjuṣā*, the author of which is unknown; and a commentary by Harivyāsa muni. Puruṣottama Prasāda wrote a work called *Vedānta-ratna-mañjuṣā* as a commentary on the *Daśa-ślokī* of Nimbārka, and also *Guru-bhakti-mandākinī* commentary as already mentioned. He wrote also a commentary on the *Śrī-kṛṣṇa-stava* of Nimbārka in twenty chapters called *Śruty-anta-sura-druma*, and also *Stotra-trayī*². The discussions contained in the commentary are more or less of the same nature as those found in *Para-pakṣa-giri-vajra*, which has been already described in a separate section. The polemic therein is mainly directed against Śaṅkara *vedānta*. Puruṣottama also strongly criticizes Rāmānuja's view in which the impure *cit* and *acit* are regarded as parts of Brahman possessed of the highest and noblest qualities, and suggests the impossibility of this. According to the Nimbārka school the individual selves are different from Brahman. Their identity is only in the remote sense inasmuch as the individual selves cannot have any separate existence apart from God. Puruṣottama also criticizes the dualists, the Madhvas. The dualistic texts have as much force as the identity texts, and therefore on the strength of the identity texts we have to admit that the world exists in Brahman, and on the strength of the duality texts we have to

¹ This Keśava Kāśmīrī Bhaṭṭa seems to be a very different person from the Keśava Kāśmīrī who is said to have had a discussion with Caitanya as described in the *Caitanya-caritāmṛta*.

² The *Śrī-kṛṣṇa-stava* had another commentary on it called *Śruti-siddhānta-mañjari*, the writer of which is unknown.

admit that the world is different from Brahman. The real meaning of the view that God is the material cause of the world is that though everything springs from Him, yet the nature of God remains the same in spite of all His productions. The energy of God exists in God and though He produces everything by the diverse kinds of manifestations of His energies, He remains unchanged in His Self¹.

Puruṣottama makes reference to Devācārya's *Siddhanta-jāhnavī*, and therefore lived after him. According to Pandit Kīśoradāsa's introduction to *Śruty-anta-sura-druma*, he was born in 1623 and was the son of Nārāyaṇa Śarmā. The present writer is unable to substantiate this view. According to Pandit Kīśoradāsa he was a pupil of Dharmadevācārya.² Devācārya wrote a commentary on the *Brahma-sūtras* called the *Siddhānta-jāhnavī*, on which Sundara Bhaṭṭa wrote a commentary called the *Siddhānta-setukā*.

A General Idea of Nimbārka's Philosophy.

According to Nimbārka, the inquiry into the nature of Brahman can take place only after one has studied the literature that deals with the Vedic duties leading to various kinds of beneficial results and discovered that they are all vitiated by enjoyment and cannot bring about a state of eternal bliss. After such a discovery, and after the seeker has learnt in a general manner from the various religious texts that the realization of Brahman leads to the unchangeable, eternal and ever-constant state of bliss, he becomes anxious to attain it through the grace of God and approaches his teacher with affection and reverence for instruction regarding the

¹ *yathā ca bhūmes tathā-bhūta-śakti-matyā oṣadhīnām janma-mātram tathā sarva-kāryo-tpādanā-rha-lakṣaṇā-cintyānmanta-sarva-śakter akṣara-padārthād brahmaṇo viśvam sambhavati* 'ti; *yadā sva-svā-bhāvīkā-lpā-dhika-sātiśaya-śaktima-dbhyo' cetanebhyas tat-tac-chaktya-nusāreṇa sva-sva-kārya-bhāvā-pattavapi apracyuta-sva-rūpatvaṃ pratyakṣa-pramāṇa-siddham, tarhy acintya-sarvā-cintya-viśākhyā-kāryo-tpādanā-rha-śaktimato bhagavata ukta-rityā jagad-bhāvā-pattavapya-pracyuta-sva-rūpatvaṃ kim aśakyam iti... śakti-vikṣepa-saṃharaṇasya pariṇāma-śabda-vācyaivā-bhiprāyeṇa kvacit pariṇāmo-ktiḥ. sva-rūpa-pariṇāma-bhāvaś ca pārcam eva nirūpitaḥ; śakteḥ śakti-mato' pṛthak-siddhatvāt.* (*Śruty-anta-sura-druma*, pp. 73-74.)

² Pandit Kīśoradāsa contradicts himself in his introduction to *Vedānta-maṇjuṣā* and it seems that the dates he gives are of a more or less fanciful character. Pandit Kīśoradāsa further says that Devācārya lived in A.D. 1055. This would place Nimbārka prior even to Rāmānuja, which seems very improbable.

nature of Brahman. The Brahman is Śrī Kṛṣṇa, who is omniscient, omnipotent, the ultimate cause, and the all-pervading Being. Such a Being can be realized only through a constant effort to permeate oneself with His nature by means of thought and devotion. The import of the first aphorism of the *Brahma-sūtra* consists in the imposition of such a duty on the devotee, namely, the constant effort at realizing the nature of Brahman¹. The pupil listens to the instruction of his teacher who has a direct realization of the nature of Brahman and whose words are therefore pregnant with his concrete experience. He tries to understand the import and meaning of the instruction of his teacher which is technically called *śravaṇa*. This is indeed different from the ordinary accepted meaning of the *śravaṇa* in the Śāṅkara literature where it is used in the sense of listening to the Upaniṣadic texts. The next step is called *manana*—the process of organizing one's thought so as to facilitate a favourable mental approach towards the truths communicated by the teacher in order to rouse a growing faith in it. The third step is called *nididhyāsana*—the process of marshalling one's inner psychical processes by constant meditation leading ultimately to a permanent conviction and experiences of the truths inspired and communicated by the teacher. It is the fruitful culmination of the last process that brings about the realization of the nature of Brahman. The study of the nature of the Vedic duties, technically called *dharma*, and their inefficacy, rouses a desire for the knowledge of the nature of Brahman leading to eternal bliss. As a means to that end the pupil approaches the teacher who has a direct experience of the nature of Brahman. The revelation of the nature of the Brahman in the pupil is possible through a process of spiritual communication of which *śravaṇa*, *manana* and *nididhyāsana* are the three moments.

According to Nimbārka's philosophy which is a type of *Bhedā-bheda-vāda*, that is, the theory of the Absolute as Unity-in-difference, Brahman or the Absolute has transformed itself into the world of matter and spirits. Just as the life-force or *prāṇa* manifests itself into the various conative and cognitive sense-functions, yet keeps its own independence, integrity and difference from them,

¹ As the nature of this duty is revealed through the text of the *Brahma-sūtra*, namely, that the Brahma-hood can be attained only by such a process of *nididhyāsana*, it is called the *apūrvā-vidhi*.

so the Brahman also manifests itself through the numberless spirits and matter without losing itself in them. Just as the spider spins out of its own self its web and yet remains independent of it, so the Brahman also has split itself up into the numberless spirits and matter but remains in its fullness and purity. The very existence and movement of the spirits and indeed all their operations are said to depend upon Brahman (*tad-āyatta-sthiti-pūrvikā*) in the sense that the Brahman is both the material and the determining cause of them all¹.

In the scriptures we hear of dualistic and monistic texts, and the only way in which the claims of both these types of texts can be reconciled is by coming to a position of compromise that the Brahman is at once different from and identical with the world of spirits and matter. The nature of Brahman is regarded as such that it is at once one with and different from the world of spirits and matter, not by any imposition or supposition, but as the specific peculiarity of its spiritual nature. It is on this account that this *Bhedā-bheda* doctrine is called the *svābhāvika bhedā-bheda-vāda*. In the pure dualistic interpretation of the Vedānta the Brahman is to be regarded only as the determining cause and as such the claims of all texts that speak of the Brahman as the material cause or of the ultimate identity of the spirits with the Brahman are to be disregarded. The monistic view of the Vedānta is also untenable, for a pure differenceless qualityless consciousness as the ultimate reality is not amenable to perception, since it is super-sensible, nor to inference, since it is devoid of any distinctive marks, nor also to scriptural testimony, as no words can signify it. The supposition that, just as one's attention to the moon may be drawn in an indirect manner by perceiving the branch of a tree with which the moon may be in a line, so the nature of Brahman also may be expressed by demonstrating other concepts which are more or less contiguous or associated with it, is untenable; for in the above illustration the moon and the branch of the tree are both sensible objects, whereas Brahman is absolutely super-sensible. Again, if it is supposed that Brahman is amenable to logical proofs, then also this supposition would be false; for all that is amenable to proofs or subject to any demonstration is false. Further, if it is not amenable to any proof, the Brahman would be chimerical as the

¹ Śrīnivāsa's commentary on Nimbārka's *Vedānta-pārijāta-saurabha* on *Brahma-sūtra*, I. i. 1-3.

hare's horn. If it is held that, Brahman being self-luminous, no proofs are required for its demonstration, then all the scriptural texts describing the nature of Brahman would be superfluous. Moreover, the pure qualityless Brahman being absolutely unassociated with any kind of impurity has to be regarded as being eternally free from any bondage, and thus all scriptural texts giving instruction in the methods for the attainment of salvation would be meaningless. The reply of the Śāṅkarites, that all duality though false has yet an appearance and serves practical purposes, is untenable; for when the scriptures speak of the destruction of bondage they mean that it was a real bondage and its dissolution is also a real one. Again, an illusion is possible in a locus only when it has some specific as well as some general characters, and the illusion takes place only when the object is known in a general manner without any of its specific attributes. But if the Brahman is absolutely qualityless, it is impossible that it should be the locus of any illusion. Again, since it is difficult to explain how the *ajñāna* should have any support or object (*āśraya* or *viśaya*), the illusion itself becomes inexplicable. The Brahman being of the nature of pure knowledge can hardly be supposed to be the support or object of *ajñāna*. The *jīva* also being itself a product of *ajñāna* cannot be regarded as its support. Moreover, since Brahman is of the nature of pure illumination and *ajñāna* is darkness, the former cannot legitimately be regarded as the support of the latter, just as the sun cannot be regarded as the supporter of darkness.

The operation that results in the formation of illusion cannot be regarded as being due to the agency of *ajñāna*, for *ajñāna* is devoid of consciousness and cannot, therefore, be regarded as an agent. The agency cannot also be attributed to Brahman because it is pure and static. Again, the false appearance of Brahman as diverse undesirable phenomena such as a sinner, an animal, and the like, is inexplicable; for if the Brahman is always conscious and independent it cannot be admitted to allow itself to suffer through the undesirable states which one has to experience in various animal lives through rebirth. If the Brahman has no knowledge of such experiences, then it is to be regarded as ignorant and its claim to self-luminosity fails. Again, if *ajñāna* is regarded as an existent entity, there is the change to dualism, and if it is regarded as non-existent then it cannot hide the nature of Brahman. Further, if

Brahman is self-luminous, how can it be hidden and how can there be any illusion about it? If the conch-shell shines forth in its own nature, there cannot be any misperception of its nature as a piece of silver. Again, if the nature of Brahman is admitted to be hidden by *ajñāna*, the question that naturally arises is whether the *ajñāna* veils the nature of the Brahman as a whole or in part. The former supposition is impossible, for then the world would be absolutely blind and dark (*jagad-āndhya-prasaṅgāt*), and the latter is impossible, for the Brahman is a homogeneous entity and has no characters or parts. It is admitted by the monists to be absolutely qualityless and partless. If it is held that ordinarily only the "bliss" part of the Brahman is hidden by *ajñāna* whereas the "being" part remains unveiled, then that would mean that Brahman is divisible in parts and the falsity of the Brahman would be demonstrable by such inferences as: Brahman is false, because it has parts like the jug (*brahma mithyā sāmśatvāt, ghaṭādivat*).

In reply to the above objections it may be argued that the objections against *ajñāna* are inadmissible, for the *ajñāna* is absolutely false knowledge. Just as an owl perceives utter darkness, even in bright sunlight, so the intuitive perception "I am ignorant" is manifest to all. Anantarāma, a follower of the Nimbārka school, raises further objections against such a supposition in his *Vedānta-tattva-bodha*. He says that this intuitively felt "I" in "I am ignorant" cannot be pure knowledge, for pure knowledge cannot be felt as ignorant. It cannot be mere egoism, for then the experience would be "the egoism is ignorant." If by "ego" one means the pure self, then such a self cannot be experienced before emancipation. The ego-entity cannot be something different from both pure consciousness and *ajñāna*, for such an entity must doubtless be an effect of *ajñāna* which cannot exist before the association of the *ajñāna* with Brahman. The reply of the Śāṅkarites that *ajñāna*, being merely false imagination, cannot affect the nature of the Brahman, the abiding substratum (*adhiṣṭhāna*), is also inadmissible; for if the *ajñāna* be regarded as false imagination there must be someone who imagines it. But such an imagination cannot be attributed to either of the two possible entities, Brahman or the *ajñāna*; for the former is pure qualityless which cannot therefore imagine and the latter is inert and unconscious and therefore devoid of all imagination. It is also wrong to suppose that Brahman

as pure consciousness has no intrinsic opposition to *ajñāna*, for there can be no knowledge which is not opposed to ignorance. Therefore the Śāṅkarites are not in a position to demonstrate any entity which they mean by the intuition "I" in "I am ignorant."

The final conclusion from the Nimbārka point of view therefore is that it is inadmissible to accept any *ajñāna* as a world-principle producing the world-appearance by working in co-operation with the Brahman. The *ajñāna* or ignorance is a quality of individual beings or selves who are by nature different from Brahman but are under its complete domination. They are eternal parts of it, atomic in nature, and are of limited powers. Being associated with beginningless chains of *karma* they are naturally largely blinded in their outlook on knowledge¹.

The Śāṅkarites affirm that, through habitual failure in distinguishing between the real nature of the self and the not-self, mis-perceptions, misapprehensions and illusions occur. The objection of Anantarāma against such an explanation is that such a failure cannot be attributed either to Brahman or to *ajñāna*. And since all other entities are but later products of illusion, they cannot be responsible for producing the illusion².

In his commentary Śāṅkara had said that the pure consciousness was not absolutely undemonstrable, since it was constantly being referred to by our ego-intuitions. To this the objection that naturally arises is that the entity referred to by our ego-intuitions cannot be pure consciousness; for then the pure consciousness would have the characteristic of an ego—a view which is favourable to the Nimbārka but absolutely unacceptable to the Śāṅkarites. If it is held to be illusory, then it has to be admitted that the ego-intuition appears when there is an illusion. But by supposition the illusion can only occur when there is an ego-intuition³. Here is then a reasoning in a circle. The defence that reasoning in a circle can be avoided on the supposition that the illusory imposition is beginningless is also unavailing. For the supposition that illusions as such are beginningless is false, as it is well known that illusions

¹ *paramā-tma-bhinno' lpa-śaktis tad-adhīnaḥ sanātanas tad-aṁśa-bhūto' nādi-karmā-tmikā-vidyā-vṛta-dharma-bhūtā-jñāno jīva-kṣetrajñā-di-śabdā-bhīdheya tat-pratyayā-śraya iti. Vedānta-tattva-bodha*, p. 12.

² *Ibid.* p. 13.

³ *adhyastattve tu adhyāse sati bhāsamānatvam, tasmin sati sa ity anyonyā-śraya-doṣaḥ. Ibid.* p. 14.

are possible only through the operation of the subconscious impressions of previous valid cognitions¹. Again, the reflection of the pure consciousness in the *ajñāna* is impossible, for reflections can take place only between two entities which have the same order of existence. From other considerations also the illusion has to be regarded as illegitimate. Illusions take place as the result of certain physical conditions such as contact, defect of the organs of perception, the operation of the subconscious impressions, etc. These conditions are all absent in the supposed case of the illusion involved in the ego-intuition.

The Śāṅkarites described *māyā* as indefinable. By "indefinable" they mean something that appears in perception but is ultimately contradicted. The Śāṅkarites define falsehood or non-existence as that which is liable to contradiction. The phenomena of *māyā* appear in experience and are therefore regarded as existent. They are liable to contradiction and are therefore regarded as non-existent. It is this unity of existence and non-existence in *māyā* that constitutes its indefinability. To this Anantarāma's objection is that contradiction does not imply non-existence. As a particular object, say a jug, may be destroyed by the stroke of a club, so one knowledge can destroy another. The destruction of the jug by the stroke of the club does not involve the supposition that the jug was non-existent. So the contradiction of the prior knowledge by a later one does not involve the non-existence or falsity of the former. All cognitions are true in themselves, though some of them may destroy another. This is what the Nimbārkaists mean by the *sat-khyāti* of knowledge. The theory of *sat-khyāti* with them means that all knowledge (*khyāti*) is produced by some existent objects, which are to be regarded as its cause (*sad-dhetukā khyāti*, *sat-khyāti*). According to such a view, therefore, the illusory knowledge must have its basic cause in some existent object. It is wrong also to suppose that false or non-existent objects can produce effects on the analogy that the illusory cobra may produce fear and even death. For here it is not the illusory cobra that produces fear but the memory of a true snake. It is wrong therefore to suppose that the illusory world-appearance may be the cause of our bondage.

Since illusions are not possible, it is idle to suppose that all our

¹ *adhyaśo nā'nādih, pūrva-pramā-hita-saṃskāra-janyatīāt. Vedānta-tattva-bodha*, p. 14.

perceptual, inferential, and other kinds of cognitions are produced as associated with an ego through sheer illusion. Right knowledge is to be regarded as a characteristic quality of the self and the production of knowledge does not need the intervention of a *vṛtti*. The *ajñāna* which prevents the flashing in of knowledge is our *karma* which is in accumulation from beginningless time. Through the operation of the sense-organs our selves expand outside us and are filled with the cognition of the sense-objects. It is for this reason that when the sense-organs are not in operation the sense-objects do not appear in cognition, as in the state of sleep. The self is thus a real knower (*jñātā*) and a real agent (*kartā*), and its experiences as a knower and as an agent should on no account be regarded as the result of a process of illusion¹.

The self is of the nature of pure consciousness, but it should yet be regarded as the real knower. The objection that what is knowledge cannot behave in a different aspect as a knower, just as water cannot be mixed with water and yet remain distinct from it, is regarded by the Nimbārkists as invalid. As an illustration vindicating the Nimbārka position, Puruṣottama, in his *Vedānta-ratna-mañjuṣā*, refers to the case of the sun which is both light and that from which light emanates. Even when a drop of water is mixed with another drop the distinction of the drops, both quantitative and qualitative, remains, though it may not be so apprehended. The mere non-apprehension of difference is no proof that the two drops have merged into identity. On the other hand, since the second drop has its parts distinct from the first one it must be regarded as having a separate existence, even when the two drops are mixed. The character as knower must be attributed to the self; for the other scheme proposed by the Śāṅkarites, that the character as knower is due to the reflection of the pure consciousness in the *vṛtti*, is inefficacious. The sun that is reflected in water as an image cannot be regarded as a glowing orb by itself. Moreover, reflection can only take place between two visible objects; neither pure consciousness nor the *antaḥkaraṇa-vṛtti* can be regarded as visible objects justifying the assumption of reflection.

The ego-intuition refers directly to the self and there is no illusion about it. The ego-intuition thus appears to be a continuous revelation of the nature of the self. After deep dreamless sleep one

¹ *Vedānta-tattva-bodha*, p. 20. •

says "I slept so well that I did not know even myself." But this should not be interpreted as the absence of the ego-intuition or the revelation of the self. The experience "I did not know myself" refers to the absence of the intuition of the body and the mental psychosis, but it does not indicate that the self-conscious self had ever ceased to shine by itself. The negation involved in the denial of the perception of one's self during dreamless sleep refers to the negation of certain associations (say, of the body, etc.) with which the ego ordinarily links itself. Similar experience of negation can also be illustrated in such expressions as "I was not so long in the room," "I did not live at that time," etc., where negations refer to the associations of the ego and not to the ego. The self is not only to be regarded as expressed in the ego-intuition, but it is also to be regarded as distinct from the knowledge it has. The perception of the self continues not only in the state of dreamless sleep but also in the state of emancipation, and even God in His absolute freedom is conscious of Himself in His super-ego intuition. He is also all-Merciful, the supreme Instructor, and the presiding deity of all our understanding. Like individual selves God is also the agent, the creator of the universe. If the Brahman were not an agent by nature, then He could not have been the creator of the universe, even with the association of the *māyā* conditions. Unlike Brahman the activity of the individual souls has to depend upon the operation of the conative organs for its manifestation. The self also really experiences the feelings of pleasure and pain. The existence and agency of the human souls, however, ultimately depend on the will of God. Yet there is no reason to suppose that God is partial or cruel because He makes some suffer and others enjoy; for He is like the grand master and Lord who directs different men differently and awards suffering and enjoyment according to their individual deserts. The whole idea is that though God awards suffering and enjoyment to individuals and directs their actions according to their deserts, He is not ultimately bound by the law of *karma*, and may by His grace at any time free them from their bondage. The law of *karma* is a mechanical law and God as the superintendent decides each individual case. He is thus the dispenser of the laws of *karma* but is not bound by it¹. The human souls are a part of the

¹ *na vayam brahma-niyantṛtvasya karma-sāpekṣattvaṃ brūmaḥ, kintu punyā-di-karma-kārayitṛtve tat-phala-dāyitṛtve ca. Vedānta-ratna-maṇjuṣā*, p. 14.

nature of God and as such are dependent on Him for their essence, existence, and activities (*tad-āyatta-svarūpa-sthiti-pūrvikāḥ*). God being the ultimate truth, both the human souls and inanimate nature attain their essence and existence by virtue of the fact that they are parts of Him and participate in His nature. They are therefore entirely dependent on Him for their existence and all their operations.

The individual souls are infinite in number and atomic in size. But though atomic in size they can at the same time cognize the various sensations in various parts of the body through all-pervading knowledge which exists in them as their attribute. Though atomic and partless in their nature, they are completely pervaded by God through His all-pervading nature. The atomic souls are associated with the beginningless girdle of *karma* which is the cause of the body, and are yet through the grace of God finally emancipated when their doubts are dissolved by listening to the instructions of the *śāstras* from the teachers, and by entering into a deep meditation regarding the true essence of God by which they are ultimately merged in Him. God is absolutely free in extending His mercy and grace. But it so happens that He actually extends them to those who deserve them by their good deeds and devotion. God in His transcendence is beyond His three natures as souls, the world and even as God. In this His pure and transcendent nature He is absolutely unaffected by any changes, and He is the unity of pure being, bliss and consciousness. In His nature as God He realizes His own infinite joy through the infinite souls which are but constituent parts of Him. The experiences of individuals are therefore contained in Him as constituents of Him because it is by His own *īkṣaṇa* or self-perceiving activity that the experiences of the individual selves can be accounted for. The existence and the process of all human experience are therefore contained and controlled by Him. The individual selves are thus in one sense different from Him and in another sense but constituent parts of Him. In Bhāskara's philosophy the emphasis was on the aspect of unity, since the differences were due to conditions (*upādhi*). But though Nimbārka's system is to be counted as a type of *Bhedā-bheda* or *Dvaitā-dvaita* theory, the emphasis here is not merely on the part of the unity but on the difference as well. As a part cannot be different from the whole, so the individual souls can never be dif-

ferent from God. But, in the state of bondage the individuals are apt to forget their aspects of unity with God and feel themselves independent in all their actions and experiences. When by absolute self-abnegation springing from love the individual feels himself to be absolutely controlled and regulated by God and realizes himself to be a constituent of Him, he loses all his interests in his actions and is not affected by them. The ultimate ideal, therefore, is to realize the relation with God, to abnegate all actions, desires and motives, and to feel oneself as a constituent of Him. Such a being never again comes within the grasp of mundane bondage and lives in eternal bliss in his devotional contemplation of God. The devotee in the state of his emancipation feels himself to be one with God and abides in Him as a part of His energy (*tat-tādātmyā-nubhava-pūrvakam viśvarūpe bhagavati tac-chaktyā-tmanā avasthānam*)¹. Thus, even in the state of emancipation, there is a difference between the emancipated beings and God, though in this state they are filled with the utmost bliss. With the true realization of the nature of God and one's relation with Him, all the three kinds of *karma* (*sañcita*, *kriyamāṇa* and *ārabdha*) are destroyed². *Avidyā* in this system means ignorance of one's true nature and relationship with God which is the cause of his *karma* and his association with the body, senses and the subtle matter³. The *prārabdha karma*, or the *karma* which is in a state of fructification, may persist through the present life or through other lives if necessary, for until their fruits are reaped the bodiless emancipation cannot be attained⁴. Sainthood consists in the devotional state consisting of a continual and unflinching meditation on the nature of God (*dhyāna-paripākena dhruva-smṛti-para-bhakty-ākhyā-jñānā-dhigame*). Such a saint becomes free from the tainting influence of all deeds committed and collected before and all good or bad actions that may be performed later on (*tatra uttara-bhāvināḥ kriyamāṇasya pāpasya āśleṣaḥ tat-prāg-bhūtasya sañcitasya tasya nāśaḥ. Vedānta-kaustubha-prabhā*, IV. 1. 13). The regular caste duties and the duties of the various stages of life help the rise of wisdom and ought therefore always to be performed, even when the wisdom has arisen; for the flame of

¹ *Para-pakṣa-giri-vajra*, p. 591.

² *Ibid.* p. 598.

³ *Ibid.*

⁴ *viduṣo vidyā-māhātmyāt sañcita-kriyamāṇayor āśleṣa-vināśau, prārabdhasya tu karmaṇo bhogena vināśaḥ, tatra prārabdhasya etac charireṇa itara-śarīrair vā bhuktvā vināśān-mokṣa iti saṅkṣepaḥ. Ibid.* p. 583.

this light has always to be kept burning (*tasmāt vidyo-dayāya svāśrama-karmā-gnihotrā-dī-rūpaṃ grhasthena, tapo-japā-dīni karmāṇi ūrdhva-retobhir anuṣṭheyāni iti siddham*). But the conglomeration of deeds which has started fructifying must fructify and the results of such deeds have to be reaped by the saint either in one life or in many lives as the case may be. The realization of Brahman consists in the unflinching meditation on the nature of God and the participation in Him as His constituent which is the same thing as the establishment of a continuous devotional relationship with Him. This is independent of the ontological fusion and return in Him which may happen as a result of the complete destruction of the fructifying deeds (*prārabdha karma*) through their experiences in the life of the saint (*vidyā-yoni-śarīra*) or in other lives that may follow. A saint, after the exhaustion of his fructifying deeds, leaves his gross body through the *suṣumnā* nerve in his subtle body, and going beyond the material regions (*prākṛta-maṇḍala*) reaches the border region—the river *virajā*—between the material regions and the universe of *Viṣṇu*¹. Here he leaves aside his subtle body in the supreme being and enters into the transcendent essence of God (*Vedānta-kaustubha-prabhā*, iv. 2. 15). The emancipated beings thus exist in God as His distinct energies and may again be employed by Him for His own purposes. Such emancipated beings, however, are never sent down by God for carrying on an earthly existence. Though the emancipated beings become one with God, they have no control over the affairs of the world, which are managed entirely by God Himself².

Though it is through the will of God that we enjoy the dream experiences and though He remains the controller and abides in us through all stages of our experiences, yet He is never tainted by the imperfections of our experiential existence (*Vedānta-kaustubha* and its commentary *Prabha*, iii. 2. 11). The objects of our experiences are not in themselves pleasurable or painful, but God makes them so to us in accordance with the reward and punishment due to us according to our good or bad deeds. In themselves the objects are

¹ *para-loka-gamane dehād utsarṣaṇa-samaye eva viduṣaḥ puṇya-pāpe nira-vaśeṣaṃ kṣtyate, . . . vidyā hi sva-sāmarthyād eva sva-phala-bhūta-brahma-prāpti-pratipādanāya . . . enaṃ deva-yānena pathā gamayitum sūkṣma-śarīraṃ sthāpayati. Vedānta-kaustubha-prabhā*, iii. 3. 27.

² *muktasya tu para-brahma-sādharmye'pi nikhila-cetanā-cetana-patitva-tan-nīyantriva-tad-vidhāra-katva-sarva-gatatvā-dy-asambhavāt jagad-vyāpāra-varjam aiśvaryaṃ. Ibid.* iv. 4. 20.

but indifferent entities and are neither pleasurable nor painful (*Vedānta-kaustubha-prabhā*, III. 2. 12). The relation of God and the world is like that of a snake and its coiled existence. The coiled (*kuṇḍala*) condition of a snake is neither different from it nor absolutely identical with it. So God's relation with the individuals also is like that of a lamp and its light (*prabhā-tadvator iva*) or like the sun and the illumination (*prakāśa*). God remains unchanged in Himself and only undergoes transformation through His energies as conscious (*cic-chakti*) and unconscious (*acic-chakti*)¹. As the individuals cannot have any existence apart from Brahman, so the material world also cannot have any existence apart from him. It is in this sense that the material world is a part or constituent of God and is regarded as being one with God. But as the nature of the material world is different from the nature of God, it is regarded as different from Him².

The Vedic duties of caste and stages of life are to be performed for the production of the desire of wisdom (*vividiṣā*), but once the true wisdom is produced there is no further need of the performance of the duties (*Ibid.* III. 4. 9). The wise man is never affected by the deeds that he performs. But though ordinarily the performance of the duties is helpful to the attainment of wisdom, this is not indispensable, and there are many who achieve wisdom without going through the customary path of caste duties and the duties attached to stages of life.

Controversy with the Monists by Mādhava Mukunda.

(a) *The Main Thesis and the Ultimate End in Advaita Vedānta are Untenable.*

Mādhava Mukunda, supposed to be a native of the village of Aruṇaghaṭī, Bengal, wrote a work called *Para-pakṣa-giri-vajra* or *Hārda-saṅcaya*, in which he tried to show from various points of

¹ *ananta-guṇa-śaktimato brahmaṇaḥ pariṇāmi-svabhāva-cic-chakteḥ sthūlā-vasthāyām satyām tad-antarā-tmatvena tatrā'vasthāne'pi pariṇāmasya śakti-gatatvāt svarūpe pariṇāmā-bhāvāt kuṇḍala-dṛṣṭānto na doṣa-vahaḥ aprthak-siddhatvena abhede'pi bheda-jñāpanā-rthaḥ. Vedānta-kaustubha-prabhā*, III. 2. 29.

² *jīvaḥ prthak-sthity-anarha-viśeṣaṇatvena acid-vastuno brahmā-mśatvam viśiṣṭa-vastu-eka-deśatvena abheda-vyavahāro mukhyaḥ viśeṣaṇa-viśeṣyayoḥ svārūpa-svabhāva-bhedena ca bheda-vyavahāro mukhyaḥ. Ibid.* III. 2. 30.

view the futility of the monistic interpretation of Vedānta by Śaṅkara and his followers.

He says that the Śaṅkarites are interested in demonstrating the identity of the individuals with Brahman (*jīva-brahmai-kya*) and this forms the principal subject-matter of all their discussions. This identity may be illusory or not. In the former case duality or plurality would be real, and in the latter case, i.e. if identity be real, then the duality presupposed in the identification must also be real¹. It is not the case of the single point of an identity that Śaṅkarites are interested in, but in the demonstration of an identification of the individuals with Brahman. The demonstration of identity necessarily implies the reality of the negation of the duality. If such a negation is false, the identification must also be false, for it is on the reality of the negation that the reality of the identification depends. If the negation of duality be real, then the duality must also be real in some sense and the identification can imply the reality of the negation only in some particular aspect.

The objections levelled by the Śaṅkarites against the admission of "duality" or "difference" as a category are, firstly, that the category of difference (*bheda*) being by nature a relation involves two poles and hence it cannot be identical in nature with its locus in which it is supposed to subsist (*bhedasya na adhikaraṇa-svarūpatvam*). Secondly, that if "difference" is different in nature from its locus, then a second grade of "difference" has to be introduced and this would imply another grade of difference and so on *ad infinitum*. Thus we have a vicious infinite. To the first objection, the reply is that "difference" is not relational in nature with this or that individual locus, but with the concept of the locus as such (*bhūtalatvā-dinā nirapekṣatve'pi adhikaraṇātmakatvena sāpekṣatve kṣater abhāvāt*)². The charge of vicious infinite by the introduction of differences of differences is invalid, for all differences are identical in nature with their locus. So in the case of a series of differences the nature of each difference becomes well defined and the viciousness of the infinite series vanishes. In the instance "there is a jug on the ground" the nature of the difference of the jug is jugness, whereas in the case of the difference of the difference, the second order of

¹ *dvītiye aikya-pratīyogika-bhedasya pāramārthikatva-prasaṅgāt. Para-pakṣa-giri-vajra*, p. 12.

² *Ibid.* p. 14.

difference has a separate specification as a special order of differenceness. Moreover, since difference reveals only the particular modes of the objects, these difficulties cannot arise. In perceiving difference we do not perceive difference as an entity different from the two objects between which it is supposed to subsist¹. One might equally well find such a fault of mutual dependence on the identification of Brahman with *jīva*, since it depends upon the identification of the *jīva* with the Brahman.

A further discussion of the subject shows that there cannot be any objections against "differences" on the score of their being produced, for they merely subsist and are not produced; or on the possibility of their being known, for if differences were never perceived the Śāṅkarites would not have been so anxious to remove the so-called illusions or mis-perception of differences, or to mis-spend their energies in trying to demonstrate that Brahman was different from all that was false, material and the like; and the saint also would not be able to distinguish between what was eternal and transitory. Again, it is held that there is a knowledge which contradicts the notion of difference. But if this knowledge itself involves difference it cannot contradict it. Whatever may signify anything must do so by restricting its signification to it, and all such restriction involves difference. Even the comprehension that demonstrates the illusoriness of "difference" (e.g. this is not difference, or there is no difference here, etc.) proves the existence of "difference." Moreover, a question may be raised as to whether the notion that contradicts difference is itself comprehended as different from difference or not. In the former case the validity of the notion leaves "difference" unmolested and in the second case, i.e. if it is not comprehended as different from "difference," it becomes identical with it and cannot contradict it.

If it is contended that in the above procedure an attempt has been made to establish the category of difference only in indirect manner and that nothing has been directly said in explanation of the concept of difference, the reply is that those who have sought to explain the concept of unity have fared no better. If it is urged that if ultimately the absolute unity or identity is not accepted then

¹ *nā'py anyonyā-śrayaḥ bheda-pratyakṣe pratiyogitā-vacchedaka-stambhatvā-di-prakāraka-jñānasyai'va hetutvāt na tāvad bheda-pratyakṣe bheda-śrayād bhinnatvena pratiyogi-jñānaṃ hetuḥ. Para-pakṣa-giri-vajra, pp. 14, 15.*

that would lead us to nihilism, then it may also be urged with the same force that, differences being but modes of the objects themselves, a denial of difference would mean the denial of the objects, and this would also land us in nihilism. It must, however, be noted that though difference is but a mode of the objects which differ, yet the terms of reference by which difference becomes intelligible (the table is different from the chair: here the difference of the table is but its mode, though it becomes intelligible by its difference from the chair) are by no means constituents of the objects in which the difference exists as their mode. The Śāṅkarites believe in the refutation of dualism, as by such a refutation the unity is established. The thesis of unity is thus though, on the one hand dependent upon such refutation and yet on the other hand identical with it because all such refutations are believed to be imaginary. In the same manner it may be urged that the demonstration of difference involves with it a reference to other terms, but is yet identical in nature with the object of which it is a mode; the reference to the terms is necessary only for purposes of comprehension.

It must, however, be noted that since difference is but a mode of the object the comprehension of the latter necessarily means the comprehension of all differences existing in it. An object may be known in a particular manner, yet it may remain unknown in its differential aspects, just as the monists hold that pure consciousness is always flashing forth but yet its aspect as the unity of all things may remain unknown. In comprehending a difference between any two objects, no logical priority which could have led to a vicious circle is demanded. But the two are together taken in consciousness and the apprehension of the one is felt as its distinction from the other. The same sort of distinction has to be adduced by the monists also in explaining the comprehension of the identity of the individual souls with the Brahman, otherwise in their case too there would have been the charge of a vicious circle. For when one says "these two are not different," their duality and difference depend upon a comprehension of their difference which, while present, prevents their identity from being established. If it is held that the duality is imaginary whereas the identity is real, then the two being of a different order of existence the contradiction of the one cannot lead to the affirmation of the other. The apology that in comprehending identity no two-term reference is needed is futile, for an

identity is comprehended only as the negation of the two-term duality.

Thus, from the above considerations, the main thesis of the Śāṅkarites, that all things are identical with Brahman, falls to the ground.

According to Nimbārka the ideal of emancipation is participation in God's nature (*tad-bhāvā-patti*). This is the ultimate end and *summum bonum* of life (*prayojana*). According to the Śāṅkarites emancipation consists in the ultimate oneness or identity existing between individual souls and Brahman. The Brahman in reality is one with the individual souls, and the apparent difference noticed in our ordinary practical life is due to misconception and ignorance, which impose upon us a false notion of duality. Mādhava Mukunda urges that in such a view, since the individual souls are already one with Brahman, they have nothing to strive for. There is thus really no actual end (*proyojana*) as the goal of our strivings. Mādhava Mukunda, in attempting to emphasize the futility of the Śāṅkarite position, says that, if the ultimate consciousness be regarded as one, then it would be speckled with the various experiences of individuals. It cannot be held to be appearing as different in accordance with the variety of conditions through which it appears, for in our experiences we find that though through our various cognitive organs we have various experiences they are also emphasized as belonging to one being. Variability of conditions does not necessarily imply a variety of the units of experience of individual beings, as is maintained by the Śāṅkarites. The pure and ubiquitous differenceless consciousness (*nirviśeṣa-caitanya*) cannot also be regarded as capable of being identified as one with the plurality of minds (*antaḥkaraṇa*). Again, it is admitted by the Śāṅkarites that in dreamless sleep the mind is dissolved. If that were so and if pure consciousness is regarded as being capable of manifesting itself through false identification with minds, there would be no explanation of the continuity of consciousness from day to day in the form of memory. It cannot be urged that such a continuity is maintained by the fact that minds exist in a state of potency (*saṃskārā-tmanā' vasthīṭasya*) in the deep dreamless sleep; for the mind in a potent state cannot be regarded as carrying impressions and memories, since in that case there would be memories even in dreamless sleep.

Further, if the experiences are supposed to belong to the states of ignorance, then emancipation, which refers only to pure consciousness, would refer to an entity different from that which was suffering from bondage. On the other hand, if the experiences belong to pure consciousness, then emancipation will be associated with diverse contradictory experiences at the same time according to the diversity of experiences.

The Śāṅkarites may urge that the conditions which bring about the experiences are associated with pure consciousness and hence in an indirect manner there is a continuity of the being that experiences and attains salvation. To this the reply is that the experiencing of sorrow is a sufficient description of the conditions. That being so, where the experiencing of sorrow does not exist, the conditions, of which it is a sufficient description, also do not exist. Thus, the discontinuity of the entities which suffer bondage and attain emancipation remains the same.

Again, since it is held that the conditions subsist in the pure consciousness, it may well be asked whether emancipation means the dissolution of one condition or many conditions. In the former case we should have emancipation always, for one or other of the conditions is being dissolved every moment, and in the latter case we might not have any emancipation at all, for all the conditions determining the experiences of infinite individuals can never be dissolved.

It may also be asked whether the conditions are associated with the pure consciousness in part or in whole. In the first alternative there would be a vicious infinite and in the second the differentiation of the pure consciousness in various units would be inadmissible.

Moreover, it may be asked whether conditions are associated with pure consciousness conditionally or unconditionally. In the former alternative there would be a vicious infinite and in the second case there would be no chance of emancipation. The theory of reflection cannot also explain the situation, for reflection is admitted only when the reflected image has the same order of existence as the object. The *avidyā* has a different order of existence from Brahman, and thus reflection of Brahman in *avidyā* cannot be justified. Again, in reflection that which is reflected and that in which the reflection takes place must be in two different places,

whereas in the case of *avidyā* and Brahman the former is supposed to have Brahman as its support. The conditions (*upādhi*) cannot occupy a part of Brahman, for Brahman has no parts; nor can they occupy the whole of it, for in that case there will be no reflection.

In the Nimbārka system both the monistic and the dualistic texts have their full scope, the dualistic texts in demonstrating the difference that exists between souls and God, and the monistic texts showing the final goal in which the individuals realize themselves as constituents of Him and as such one with Him. But in the Śāṅkara system, where no duality is admitted, everything is self-realized, there is nothing to be attained and even the process of instruction of the disciple by the preceptor is unavailable, as they are all but adumbrations of ignorance.

(b) *Refutation of the Śāṅkara Theory of
Illusion in its various Aspects.*

The Śāṅkarite doctrine of illusion involves a supposition that the basis of illusion (*adhiṣṭhāna*) is imperfectly or partly known. The illusion consists in the imposition of certain appearances upon the unknown part. The stump of a tree is perceived in part as an elongated thing but not in the other part as the stump of a tree, and it is in reference to this part that the mis-attribution of an illusory appearance, e.g. a man, is possible by virtue of which the elongated part is perceived as man. But Brahman is partless and no division of its part is conceivable. It must therefore be wholly known or wholly unknown, and hence there can be no illusion regarding it. Again, illusion implies that an illusory appearance has to be imposed upon an object. But the *avidyā*, which is beginningless, cannot itself be supposed to be an illusory appearance. Following the analogy of beginninglessness Brahman may be regarded as illusory. The reply that Brahman being the basis cannot be illusory is meaningless; for though the basis is regarded as the ground of the imposition, there is no necessary implication that the basis must also be true. The objection that the basis has an independent reality because it is the basis associated with ignorance which can become the datum of illusion is futile; because the basis may also be an unreal one in a serial process where at each stage it is associated with ignorance. In such a view it is not the pure Brahman which becomes the basis but the illusory Brahman which is associated with

ignorance. Moreover, if the *avidyā* and its modifications were absolutely non-existent they could not be the subject of imposition. What really exists somewhere may be imposed elsewhere, but not that which does not exist at all. The pure chimericals like the hare's horn can never be the subjects of imposition, for that which is absolutely non-existent cannot appear at all.

Again, illusions are supposed to happen through the operation of impressions (*saṃskāra*), but in the beginningless cosmic illusion the impressions must also be beginningless and co-existent with the basis (*adhiṣṭhāna*) and therefore real. The impressions must exist prior to the illusion and as such they cannot themselves be illusory, and if they are not illusory they must be real. Again, the impressions cannot belong to Brahman, for then it could not be qualityless and pure; they cannot belong to individual souls, for these are produced as a result of illusory impositions which are again the products of the operation of impressions. Further, similarity plays an important part in all illusions, but Brahman as the ground or basis which is absolutely pure and qualityless has no similarity with anything. There cannot also be any imaginary similarity imposed upon the qualityless Brahman, for such an imaginary imposition presupposes a prior illusion. Again, all illusions are seen to have a beginning, whereas entities that are not illusory, such as the individual souls, are found to be beginningless. It is also erroneous to hold that the ego-substratum behaves as the basis of the illusion, for it is itself a product of the illusion.

Furthermore, the supposition that the world-appearance is a cosmic illusion which is related to pure consciousness in an illusory relation (*ādhyāsika-sambandha*) is unwarrantable. But the Śāṅkarites admit that the relation between the external world and the knower is brought about by the operation of the mind in modification, called *vṛtti*. Moreover, if the pure consciousness be admitted to be right knowledge or *pramā*, then its object or that which shines with it must also be right knowledge and as such it cannot be the basis of false knowledge. If the pure consciousness be false knowledge, it cannot obviously be the basis of false knowledge. The mere fact that some of the known relations, such as contact, inseparable inherence, do not hold between the object of knowledge and knowledge does not prove that their relation must be an illusory one, for other kinds of relations may subsist between them. Knowledge-and-

the-known may itself be regarded as a unique kind of relation. It is also wrong to suppose that all relations are false because they are constituents of the false universe, for the universe is supposed to be false because the relations are false, and hence there would be a vicious infinite. Again, the objection that, if relations are admitted to establish connection between two relata, then further relations may be necessary to relate the relation to relata and that this would lead to a vicious infinite, and also that, if relations are identical in essence with the relata, then relations become useless, is futile. The same objections would be admissible in the case of illusory relations. If it is held that, since all relations are illusory, the above strictures do not apply, then it may be pointed out that if the order of the relations be subversed, then, instead of conceiving the jug to be a product of *māyā*, *māyā* may be taken as a product of the jug. Thus, not only the Śaṅkarites but even the Buddhists have to admit the orderly character of relations. In the Nimbārka view all relations are regarded as true, being the different modes of the manifestation of the energy of God. Even if the relations be denied, then the nature of Brahman cannot be described as this or that.

(c) *Refutation of the Śaṅkarite View of Ajñāna.*

Ajñāna is defined as a beginningless positive entity which is destructible by knowledge (*anādi-bhāvatve sati jñāna-nivartyatvam*). The definition is unavailing as it does not apply to ignorance that hides an ordinary object before it is perceived. Nor does *ajñāna* apply to the ignorance regarding the negation of an object, since it is of a positive nature. Again, in the case of the ignorance that abides in the saint who has attained the knowledge of Brahman, the *ajñāna* is seen to persist even though knowledge has been attained; hence the definition of *ajñāna* as that which is destructible by knowledge fails. In the case of the perception of red colour in the crystal through reflection, the ignorant perception of the white crystal as red persists even though it is known to be false and due to reflection. Here also the ignorance is not removed by knowledge. It is also wrong to suppose that *ajñāna*, which is but the product of defect, should be regarded as beginningless. Moreover, it may be pointed out that all things (excluding negation) that are beginningless are also eternal like the souls and it is a curious assumption that

there should be an entity called *ajñāna* which is beginningless and yet destructible. Again, *ajñāna* is often described as being different both from being and non-being, but has yet been defined as a positive entity. It is also difficult to imagine how, since negative entities are regarded as products of *ajñāna*, *ajñāna* may itself be regarded as a positive entity. Moreover, the error or illusion that takes place through absence of knowledge has to be admitted as a negative entity; but being an illusion it has to be regarded as a product of *ajñāna*.

There is no proof of the existence of *ajñāna* in the so-called perception "I am ignorant." It cannot be the pure Brahman, for then that would have to be styled impure. It cannot be a positive knowledge by itself, for that is the very point which has to be proved. Further, if in establishing *ajñāna* (ignorance) one has to fall back upon *jñāna* or knowledge, and if in establishing the latter one has to fall back upon the former, then that would involve a vicious circle. It cannot be the ego-substratum (*aham-artha*), for that is itself a product of *ajñāna* and cannot be in existence as the datum of the perception of *ajñāna*. The ego itself cannot be perceived as ignorant, for it is itself a product of ignorance. The ego is never regarded as synonymous with ignorance, and thus there is no means of proving the supposition that ignorance is perceived as a positive entity either as a quality or as a substance. Ignorance is thus nothing but "absence of knowledge" (*jñānā-bhāva*) and ought to be recognized by the Śāṅkarites, since they have to admit the validity of the experience "I do not know what you say" which is evidently nothing but a reference to the absence of knowledge which is admitted by the Śāṅkarites in other cases. There is no proof that the cases in point are in any way different from such cases of absence of knowledge. Again, if the *ajñāna* is regarded as hiding an object, then in the case of mediate knowledge (*parokṣa-vṛtti*)—where according to the Śāṅkarites the *vṛtti* or the mental state does not remove the veil of *ajñāna*) one ought to feel that one is ignorant of the object of one's mediate knowledge, for the veil of *ajñāna* remains here intact¹. Moreover, all cases of the supposed perception of ignorance can be explained as the comprehension of the absence of knowledge. In the above manner Mukunda criti-

¹ *parokṣa-vṛtter viśayā-varakā-jñāna-nivartakatvena parokṣato jñāte'pi na jñānā'mīty anubhavā-pātāt ca. Para-pakṣa-giri-vajra*, p. 76.

cizes the theories of *ajñāna* and of the illusion in their various aspects. But as the method of the dialectic followed in these logical refutations is substantially the same as that attempted by Veṅkaṭa-nātha and Vyāsātīrtha which have been examined in detail it is not necessary to give a detailed study of Mukunda's treatment.

The Pramāṇas according to Mādhava Mukunda.

The followers of Nimbārka admit only three (perception, inference and testimony) out of the following eight *pramāṇas*, viz. perception (*pratyakṣa*), inference (*anumāna*), similarity (*upamāna*), scriptural testimony (*śabda*), implication (*arthāpatti*), non-perception (*anupalabdhi*), inclusion of the lower within the higher as of ten within a hundred (*sambhava*), and tradition (*aitihya*). Perception is of two kinds, external and internal. The external perception is of five kinds according to the five cognitive senses. The mental perception called also the internal perception is of two kinds, ordinary (*laukika*) and transcendent (*alaukika*). The perception of pleasure and pain is a case of ordinary internal perception, whereas the perception of the nature of self, God and their qualities is a case of transcendent internal perception. This transcendent internal perception is again of two kinds, that which flashes forth through the meditation of an entity and that which comes out of meditation on the essence of a scriptural text. The scriptural reference that the ultimate truth cannot be perceived by the mind means either that the ultimate truth in its entirety cannot be perceived by the mind or that unless the mind is duly trained by a teacher or by the formation of right tendencies it cannot have a glimpse of the transcendent realities. Knowledge is a beginningless, eternal and all-pervasive characteristic of individual selves. But in our state of bondage this knowledge is like the rays of a lamp in a closed place, in a state of contraction. Just as the rays of a lamp enclosed within a jug may go out through the hole into the room and straight through the door of the room and flood with light some object outside, so the knowledge in each individual may by the modification of the mind reach the senses and again through their modification reach the object and, having flood-lit it, may illuminate both the object and the knowledge. The *ajñāna* (ignorance) that ceases with the knowledge of an object is the partial cessation of a state of contraction

leading to the flashing of knowledge. What is meant by the phrase “knowledge has an object” is that knowledge takes a particular form and illuminates it. The objects remain as they are, but they are manifested through their association with knowledge and remain unmanifested without it. In the case of internal perception the operation of the senses is not required, and so pleasure and pain are directly perceived by the mind. In self-consciousness or the perception of the self, the self being itself self-luminous, the mental directions to the self remove the state of contraction and reveal the nature of the self. So God can be realized through His grace and the removal of obstruction through the meditative condition of the mind¹.

In inference the knowledge of the existence of the *hetu* (reason) in the minor (*pakṣa*) having a concomitance (*vyāpti*) with the probandum (*sādhya*), otherwise called *parāmārśa* (*vahni-vyāpya-dhūmavān ayam evaṃ-rūpaḥ*), is regarded as the inferential process (*anumāna*) and from it comes the inference (e.g. “the hill is fiery”). Two kinds of inference, i.e. for the conviction of one’s own self (*svārthānumāna*) and for convincing others (*parārthānumāna*), are admitted here; and in the latter case only three propositions (the thesis, *pratijñā*, the reason, *hetu*, and the instance, *udāharaṇa*) are regarded as necessary. Three kinds of inference are admitted, namely *kevalā-nvayi* (argument from only positive instances, where negative instances are not available), *kevala-vyatireki* (argument from purely negative instances, where positive instances are not available), and *anvaya-vyatireki* (argument from both sets of positive and negative instances). In addition to the well-known concomitance (*vyāpti*) arising from the above three ways, scriptural assertions are also regarded as cases of concomitance. Thus there is a scriptural passage to the following effect: The self is indestructible and it is never-divested of its essential qualities (*avināśi vā are ātma an-ucchitti-dharmā*), and this is regarded as a *vyāpti* or concomitance, from which one may infer the indestructibility of the soul like the Brahman.² There are no other specially interesting features in the Nimbārka doctrine of inference.

Knowledge of similarity is regarded as being due to a separate *pramāṇa* called *upamāna*. Such a comprehension of similarity (*sādrśya*) may be due to perception or through a scriptural assertion

¹ *Para-pakṣa-giri-vajra*, pp. 203–206.

² *Ibid.* p. 210.

of similarity. 'Thus a man may perceive the similarity of the face to the moon or he may learn from the scriptures that the self and God are similar in nature and thus comprehend such similarity. This may be included within the proposition of instance or illustration in an inference (*upamānasya dr̥ṣṭānta-mātrā-ika-vigraha-tvenā'numānā-vayave udāharāṇe antarbhāvaḥ*. *Para-pakṣa-giri-vajra*, p. 254).

That from which there is a communication of the negation or non-existence of anything is regarded as the *pramāṇa* or *anupalabdhi*. It is of four kinds: firstly, the negation that precedes a production, called *prāg-abhāva*; secondly, the negation of one entity in another, i.e. the negation as "otherness," called *anyonyā-bhāva*; thirdly, the negation as the destruction of an entity, called *dhvaṃ-sā-bhāva*; fourthly, the negation of an entity in all times (*kālatraye'pi nastī'ti pratīti-viśayaḥ atyantū-bhāvaḥ*). But it is unnecessary to admit *abhāva* or *anupalabdhi* as a separate *pramāṇa*, for according to the Nimbārka's negation is not admitted as a separate category. The perception of negation is nothing but the perception of the locus of the object of negation as unassociated with it. The negation-precedent (*prāg-abhāva*) of a jug is nothing but the lump of clay; the negation of destruction of a jug is nothing but the broken fragments of a jug; the negation of otherness (*anyonyā-bhāva*) is the entity that is perceived as the other of another, and the negation existent in all times is nothing but the locus of a negation. Thus the *pramāṇa* of negation may best be included with perception. The *pramāṇa* of implication may well be taken as a species of inference. The *pramāṇa* of *sambhava* may well be regarded as a deductive piece of reasoning.

The Nimbārka's admit the self-validity of the *pramāṇas* (*svataḥ-prāmāṇya*) in the manner of the Śāṅkarites. Self-validity (*svataṣṭva*) is defined as the fact that in the absence of any defect an assemblage forming the data of cognition produces a cognition that represents its nature as it is (*doṣā-bhāvatve yāvat-svā-śraya-bhūta-pramāṅgrāhaka-sāmagrī-mātra-grāhyatvam*)¹. Just as the eye when it perceives a coloured object perceives also the colours and forms associated with it, so it takes with the cognition of an object also the validity of such a cognition.

The nature of God can, however, be expressed only by the

¹ *Para-pakṣa-giri-vajra*, p. 253.

scriptural texts, as the signifying powers of these texts directly originate from God. Indeed, all the powers of individual minds also are derived from God, but they cannot signify Him as they are tainted by the imperfections of the human mind. The Mīmāṃsists are wrong to think that the import of all parts of the Vedas consists in enjoining the performance of the Vedic duties, for the results of all deeds ultimately produce a desire for knowing Brahman and through it produce the fitness for the attainment of emancipation. Thus considered from this point of view the goal of the performance of all duties is the attainment of emancipation¹. There cannot be any scope for the performance of duties for one who has realized the Brahman, for that is the ultimate fruit of all actions and the wise man has nothing else to attain by the performance of actions. Just as though different kinds of seeds may be sown, yet if there is no rain these different kinds of seeds cannot produce the different kinds of trees, so the actions by themselves cannot produce the fruits independently. It is through God's grace that actions can produce their specific fruits. So though the obligatory duties are helpful in purifying the mind and in producing a desire for true knowledge, they cannot by themselves be regarded as the ultimate end, which consists in the production of a desire for true knowledge and the ultimate union with God.

Criticism of the views of Rāmānuja and Bhāskara.

The view of Rāmānuja and his followers is that the souls and the inanimate world are associated with God as His qualities. The function of qualities (*viśeṣana*) is that by their presence they distinguish an object from other similar objects. Thus, when one says "Rāma the son of Daśaratha," the adjective "son of Daśaratha" distinguishes this Rāma from the other two Rāmas, Balarāma and Paraśurāma. But no such purpose is served by styling the individual souls and the inanimate nature as being qualities of Brahman, for they do not distinguish Him from any other similar persons; for the Rāmānujists also do not admit any other category than the conscious souls, the unconscious world and God the controller of them both. Since there is nothing to differentiate, the concept of the souls and matter as quality or differentia also fails. Another

¹ *Para-ṣakṣa-giri-vajra*, pp. 279-280.

function of qualities is that they help the substance to which they belong to become better known. The knowledge of souls and matter as qualities of God does not help us to know or comprehend Him better.

Again, if God be associated with matter and souls, He is found to be associated with their defects also. It may be argued whether the Brahman in which the souls and matter are held to abide is itself unqualified or qualified. In the former alternative the Rāmānujas like the Śāṅkarites have to admit the existence of an unqualified entity and a part in Brahman has to be admitted which exists in itself as an unqualified entity. If the Brahman be in part qualityless and in part associated with qualities, then it would in part be omniscient only in certain parts of itself. Again, if the pure unassociated Brahman be regarded as omniscient, then there would be one Brahman associated with omniscience and other qualities and another Brahman associated with matter and soul, and the doctrine of qualified monism would thus break down. The pure Brahman being outside the souls and matter, these two would be without a controller inside them and would thus be independent of God. Moreover, God in this view would be in certain parts associated with the highest and purest qualities and in other parts with the defiled characters of the material world and the imperfect souls. In the other alternative, i.e. if Brahman as associated with matter and souls be the ultimate substance which is qualified with matter and souls, then there would be two composite entities and not one, and God will as before be associated with two opposite sets of pure and impure qualities. Again, if God be admitted to be a composite unity and if matter and souls which are regarded as mutually distinct and different are admitted to be constituents of Him though He is different in nature from them, it is difficult to imagine how under the circumstances those constituents can be at once one with God and yet different from Him¹.

In the Nimbārka view Śrī Kṛṣṇa is the Lord, the ultimate Brahman and He is the support of the universe consisting of the souls and matter which are derivative parts of Him and are absolutely under His control and thus have a dependent existence only (*para-tantra-sattva*). Entities that have dependent existence are of two kinds, the souls which, though they pass through apparent

¹ *Para-pakṣa-giri-vajra*, p. 342.

birth and death, are yet eternal in their nature and the substance of the corporeal structure that supports them, the matter. The scriptural texts that speak of duality refer to this duality that subsists between the ultimate substance, the Brahman, which alone has the independent existence, and souls and matter which have only a dependent existence. The scriptural texts that deny duality refer to the ultimate entity which has independent existence which forms the common ground and basis of all kinds of existence. The texts that try to refer to Brahman by negations (*ne'ti, ne'ti*) signify how Brahman is different from all other things, or, in other words, how Brahman is different from matter and the souls which are limited by material conditions¹. Brahman is thus the absolute Being, the abode of all good and noble qualities, which is different from all entities having only dependent existence. The monistic texts refer to the fact, as has already been noted, that the world of matter and the infinite number of souls having but dependent existence cannot exist independent of God (*tad-aprthak-siddha*) and are, in that sense, one with Him. They also have the essence of their being in Brahman (*brahmā-tmatva*), are pervaded through and through by it (*tad-vyāpyatva*), are supported in it and held in it and are always being completely controlled and dominated by it². Just as all individual objects, a jug, a stone, etc., may be said to have substantiality (*dravyatva*) permeating through them by virtue of their being substances, so the souls and the matter may be called God by virtue of the fact that God permeates through them as their inner essence. But just as none of these individual objects can be regarded as substance *per se*, so the souls and matter cannot also be identified with God as being one with Him³.

The Bhāskarites are wrong in asserting that the individuals are false inasmuch as they have only a false appearance through the

¹ *vastutas tu ne'ti ne'ti'ti naibhyām prakṛta-sthūla-sūkṣmatvām-di-dharmavat jada-vastu - tad - avacchinna - jīva - vastu - vilakṣaṇam brahme'ti pratipādyate. Para-pakṣa-giri-vajra, p. 347.*

³ *yathā ghaṭo dravyam, prthivī-dravyam ity-ātau dravyatvā-vacchinna saha ghaṭatvā-vacchinna-prthivītvā-vacchinnaayoḥ sāmānādhikarānyam mukhyam eva viśeṣasya sāmānyā-bhinnatva-niyamāt evam prakṛte'pi sārvaññyā-dy-anantā-chintyā-parimita-viśeṣā-vacchinnaenā'paricchinna-śakti-vibhūtikena tat-padārthena para-bhrahmaṇā svā-tmaka-cetana-cetanatvā-vacchinnyayos tad-ātma-rūpayos tvam-ādi-padārthayoḥ sāmānādhikarānyam mukhyam eva. Ibid. pp. 355-356.*

limitations (*upādhi*) imposed upon the pure Brahman. The nature of the imposition of Brahman by the so-called conditions is unintelligible. It may mean that the atomic individual is the result of the imposition of the conditions on Brahman by which the Brahman as a whole appears as the individual soul or by which the Brahman is split asunder, and being thus split appears as the individual self or the Brahman as qualified by the conditions or that the conditions themselves appear as the individuals. The Brahman being homogeneous and unchangeable cannot be split asunder. Even if it can be split asunder, the individual selves being the products of such a splitting would have a beginning in time and would not thus be eternal; and it has to be admitted that on such a view Brahman has to be split up into as many infinite parts as there are selves. If it is held that the parts of Brahman as limited by the conditions appear as individual souls, then Brahman would be subject to all the defects of the conditions which could so modify it as to resolve it into parts for the production of the individual selves. Moreover, owing to the shifting nature of the conditions the nature of the selves would vary and they might have in this way spontaneous bondage and salvation¹. If with the shifting of the conditions Brahman also shifts, then Brahman would not be partless and all-pervasive. If it is held that Brahman in its entirety becomes envisaged by the conditions, then, on the one hand, there will be no transcendent pure Brahman and, on the other, there will be one self in all the different bodies. Again, if the individuals are regarded as entirely different from Brahman, then the assertion that they are but the product of the conditioning of Brahman has to be given up. If it is held that the conditions themselves are the individuals, then it becomes a materialistic view like that of the Cārvākas. Again, it cannot be held that the conditions only cover up the natural qualities of Brahman such as omniscience, etc., for these being natural qualities of Brahman cannot be removed. Further questions may arise as to whether these natural qualities of Brahman are different from Brahman or not, or whether this is a case of difference-in-identity. They cannot be absolutely different, for that would be an admission of duality. They cannot be identical with Brahman, for then they

¹ *kiñ ca upādhau gacchati sati upādhinā svā-vacchinna-brahma-pradeśa-karṣanā-yogāt anukṣaṇam upādhi-samyukta-pradeśa-bhedāt kṣane kṣane bandha-mokṣau syātām. Para-pakṣa-giri-vajra, p. 357.*

could not be regarded as qualities of Brahman. If it be its own essence, then it cannot be covered up, for in that case Brahman would lose all its omniscience. If it is held that it is a case of difference-in-identity, then it comes to an acceptance of the Nimbārka creed.

Again, if it is held that the so-called natural qualities of omniscience, etc., are also due to conditions, it may be asked whether such conditions are different from or identical with Brahman. In the latter alternative they would have no capacity to produce any plurality in Brahman. In the former alternative, it may be asked whether they are moved by themselves into operation or by some other entity or by Brahman. The first view would be open to the criticism of self-dynamism, the second to that of a vicious infinite, and the third to a vicious circle. Moreover, in this view, Brahman being eternal, its dynamism would also be eternal; at no time would the conditions cease to operate, and thus there would be no emancipation. The conditions cannot be regarded as false, unreal or non-existent, for then that would be an acceptance of the Nimbārka creed¹.

It may further be asked whether the conditions are imposed by certain causes or whether they are without any cause. In the former alternative we have a vicious infinite and in the latter even emancipated beings may have further bondage. Again, it may be asked whether the qualities, e.g. omniscience, that belong to Brahman pervade the whole of Brahman or whether they belong only to particular parts of Brahman. In the former view, if there is entire veiling of the qualities of Brahman there cannot be any emancipation and the whole field of consciousness being veiled by ignorance there is absolute blindness or darkness (*jagad-āndhya-prasaṅga*). In the second view the omniscience of Brahman being only a quality or a part of it the importance of Brahman as a whole fails.

Following the Bhāskara line it may be asked whether the emancipated beings have separate existence or not. If the former alternative be admitted, and if after destruction of the conditions the individuals still retain their separate existence then the view that differences are created by the conditions has to be given up (*aupādhika-bheda-vādo datta-jalāñjaliḥ syāt*). If the distinctness of the souls is not preserved in their emancipation, then their very

¹ *Para-pakṣa-giri-vajra*, p. 358.

essence is destroyed, and this would almost be the same as the *māyā* doctrine of the Śāṅkarites, who hold that the essential nature of both God and souls is destructible.

It is wrong to suppose that individuals are but parts of which a structural Brahman is constituted, for in that case, being made up of parts, the Brahman would be itself destructible. When the scriptures speak of the universe and the souls as being but a part of Brahman, the main emphasis is on the fact that Brahman is infinite and the universe is but too small in comparison with it. It is also difficult to imagine how the minds or the *antaḥkaraṇas* can operate as conditions for limiting the nature of the Brahman. How should Brahman allow these so-called conditions to mutilate its nature? It could not have created these conditions for the production of individual souls, for these souls were not in existence before the conditions were in existence. Thus the Bhāskara doctrine that the concept of distinction and unity of Brahman is due to the operation of conditions (*aupādhika-bhedābheda-vāda*) is entirely false.

According to the Nimbārka view, therefore, the unity and difference that exist between the individuals and Brahman is natural (*svābhāvika*) and not due to conditions (*aupādhika*) as in the case of Bhāskara. The coiling posture (*kuṇḍala*) of a snake is different from the long snake as it is in itself and is yet identical with it in the sense that the coiling posture is an effect; it is dependent and under the absolute control of the snake as it is and it has no separate existence from the nature of the snake as it is. The coiled state of the snake exists in the elongated state but only in an undifferentiated, unperceivable way; and is nothing but the snake by which it is pervaded through and through and supported in its entirety. So this universe of matter and souls is also in one aspect absolutely identical with God, being supported entirely by Him, pervaded through and through by Him and entirely dependent on Him, and yet in another aspect different from Him in all its visible manifestations and operations¹. The other analogy through which the Nimbārkaists try to explain the situation is that of the sun and its rays which are at once one with it and are also perceived as different from it.

¹ *yathā kuṇḍalā-vasthā-pannasya aheḥ kuṇḍalaṁ vyaktā-pannatvāt pratyakṣa-pramāṇa-gocaraṁ tad-bhedasya svābhāvika-tvāt lambāyamānā-vasthūyām tu sarvā-yatā-vacchinnā-svārūpeṇa kuṇḍalasya tatra sattve'pi vyakta-nāma-rūpatā-patya pratyakṣa-gocaratvaṁ sarvā-tmakatva-tad-ādheyatva-tad-vyāpyatvā-dinā tad-aprthak-siddhatvād abhedasyā'pi svābhāvika-tvam. Para-pakṣa-giri-vajra, p. 361.*

The difference of this view from that of the Rāmānujists is that while the latter consider that the souls and the matter qualify the nature of Brahman and are in that sense one with it, the former repudiate the concept of a permanent modification of the nature of Brahman by the souls and matter.

The Reality of the World.

The Śāṅkarites hold that if the world which is of the nature of effect were real it would not be liable to contradiction at the time of Brahma-knowledge; if it were chimerical it would not appear to our sense. The world, however, appears to our senses and is ultimately liable to contradiction; it has therefore an indefinable (*anirvacanīya*) nature which is the same thing as saying that the world is false¹. But what is the meaning of this indefinability? It cannot mean the absolutely non-existent, like the chimerical entities of the hare's horn; it cannot mean that which is absolutely non-existent, for then it would be the souls. But all things must be either existent or non-existent, for there is no third category which is different from the existent and the non-existent. It cannot also be that of which no definition can be given, for it has already been defined as indefinability (*nā'pi nirvacanā-narhattvaṃ anenai'va nirucyamānatayā asambhavāt*). It cannot be said to be that which is not the locus of non-existence, for even the chimericals are not so, and even Brahman, which is regarded as existent and which is absolutely qualityless, is not the locus of any real existence; for Brahman is only existent in its own nature and is not the locus of any other existence. If it is said that Brahman is the locus of the existence of false appearances, then that may be said to be true as well of the so-called indefinable. Brahman is not the locus of any existence that has the same status as itself. It cannot be defined as that which is not the locus of either the existent or the non-existent, for there is nothing which is the locus of absolute non-existence, since even the chimerical is not the locus of its own non-existence. Moreover, since Brahman and the chimerical have the quality of being qualityless, they may themselves be regarded as the locus of that which is both existent and

¹ *asac cen na prattiyate sac cen na vādhyate, prattiyate vādhyate ca atah sad-asad-vilakṣaṇaṃ hy anirvacanīyam eva abhyūpagantavyam. Para-pakṣa-giri-vajra*, p. 384.

non-existent, and as such may themselves be regarded as indefinable.

It cannot also be said that indefinability is that of which no sufficient description can be given that "this is such" or that "this is not such," for no such sufficient description can be given of Brahman itself. There would thus be little difference between Brahman and the indefinable. If it is held that "the indefinable" is that regarding the existence of which no evidence can be put forward, then the same may be said about Brahman, because the Brahman being the conceptless pure essence, it is not possible to prove its existence by any proof.

Again, when it is said that the indefinable is that which is neither existent nor non-existent, the meaning of the two terms "existence" and "non-existence" becomes somewhat unintelligible. For "existence" cannot mean only "being" as a class concept, for such a concept does not exist either in Brahman or in the world-appearance. Existence cannot be defined as causal efficiency (*artha-kriyā-kāritva*), nor as that which is never contradicted; nor non-existence as that which is contradicted, for the world-appearance which is liable to contradiction is not supposed to be non-existent; it is said to be that which is neither existent nor non-existent. Existence and non-existence cannot also be defined as that which can or cannot be proved, for Brahman is an entity which is neither proved nor unproved. Moreover, the world-appearance cannot be said to be that which is different from all that which can be called "existent" or "non-existent," for it is admitted to have a practical existence (*vyavahārika-sattā*). Again, it cannot be urged that if the nature of anything cannot be properly defined as existent or non-existent that it signifies that such an entity must be wholly unreal (*avāstava*). If a thing is not properly describable as existent or non-existent, that does not imply that it is unreal. The nature of the final dissolution of *avidyā* cannot be described as existent or not, but that does not imply that such a dissolution is itself unreal and indefinable (*nā'nirvācyaśca tat-kṣayaḥ*).

Again, from the simple assertion that the world is liable to dissolution through knowledge, its falsity does not necessarily follow. It is wrong to suppose that knowledge destroys only false ignorance, for knowledge destroys its own negation which has a content similar to that of itself; the knowledge of one thing, say

that of a jug, is removed by the knowledge of another, the sub-conscious impression is removed by recognition, attachment is removed by the knowledge of the defects of all worldly things and so also virtuous actions destroy sins. In the case under discussion also it may well be supposed that it is not merely the knowledge of Brahman but meditation of its nature that removes all false notions about the world. Thus, even if the bondage is real, there cannot be any objection that it cannot be cut asunder through the meditation of the nature of Brahman if the scriptures so direct. It does not follow from any legitimate assumption that what can be cut asunder or removed must necessarily be false. Again, it is well known in experience that what demolishes and what is demolished have the same status of existence; if the knowledge of Brahman can destroy our outlook of the world, that outlook must also be a real and true one. As the knowledge and the object of knowledge have the same status, the defects, as also the locus wherein the defects are imposed, have the same status; the Brahman and the *ajñāna* also have the same status and both are equally real.

Further, if what is called *ajñāna* is merely false knowledge, then even when it is removed by the realization, there is no reason why it should still persist in the stage of *jīvanmukti* or sainthood. The mere fact, therefore, that anything is removable by knowledge does not prove its falsity but only its antagonism to knowledge. So the world is real and the bondage also is real. The bondage is removed not by any kind of knowledge but by the grace of God¹. The function of true knowledge is to awaken God to exert His grace to cut asunder the knots of bondage.

Again, all the scriptures agree in holding that the world we see around us is being protected and maintained by God. If the world were but a mere false appearance, there would be no meaning in saying that it is being maintained by God. For knowing the world-appearance to be false, He would not be tempted to make any effort for the protection and maintenance of that which is false and unreal. If God Himself is admitted to be under the influence of ignorance, He cannot be entitled to be called God at all.

Pursuing the old dialectical type of reasoning, Mādhava Mukunda urges that the sort of falsehood that is asserted of the

¹ *vastutas tu bhagavat-prasādād eva bandha-nivṛttir na prakāra'ntareṇa. Para-pakṣa-giri-vajra*, p. 388.

world can never be proved or demonstrated. One of the reasons that is adduced in favour of the falsity of the world is that it is knowable or the object of an intellectual state (*dṛśya*). But if the Vedāntic texts refer to the nature of Brahman, the due comprehension and realization of the meaning of such texts must involve the concept of the nature of Brahman as its object, and thus Brahman itself would be the object of an intellectual state and therefore false. If it is urged that the Brahman can be the object of an intellectual state only in a conditioned form and that the conditioned Brahman is admitted to be false, then the reply is that since the Brahman in its pure form can never manifest itself its purity cannot be proved. If the Brahman does not express itself in its purity through an ideational state corresponding to scriptural texts describing the nature of Brahman, then it is not self-luminous; if it is expressed through such a state, then being expressible through a mental state it is false. It cannot also be said that since all that is impure is known to be non-self-luminous it follows that all that is pure is self-luminous, for the pure being absolutely unrelatined cannot be referred to or known by way of a negative concomitance. Thus the impure is known only in itself as a positive entity and not as the opposite of the pure, for such a knowledge would imply the knowledge of purity. If, therefore, the predicate of self-luminosity is not denied of impurity as an opposite of "purity," the predicate of self-luminosity cannot also be affirmed of "purity." Moreover, if the pure Brahman is never intelligibly realizable, then there would be no emancipation, or there would be an emancipation only with the conditioned Brahman.

Moreover, if all objects are regarded as illusory impositions on pure Brahman, then in the comprehension of these objects the pure Brahman must also be comprehended. The scriptures also say: "Brahman is to be perceived with the mind and with the keen intellect" (*manasa'vā'nudraṣṭavyam . . . dṛśyate tvagrayā buddhyā*). There are also scriptural passages which say that it is the pure Brahman which is the object of meditation (*taṁ paśyati niṣkalam dhyāyamānam*).

Again, if perceivability or intelligibility determining falsehood is defined as relationing with consciousness, then since pure consciousness is supposed to have a relationing through illusion it also is liable to the charge of being perceivable. In this connection it is

difficult to conceive how Brahman, which has no opposition to *ajñāna*, can have an opposing influence against it when it is in conjunction with a mental state or *vytti*. Instead of such an assumption it might as well be assumed that the object itself acquires an opposing influence to its own ignorance when it is in association with a mental state having the same content as itself. On such a supposition perceivability does not consist in relation with consciousness as conditioned by mental state, for the conditioning has a bearing on the object and not on the consciousness. Thus it may well be assumed that an object becomes perceivable by being conditioned by a mental state of its own content. The assumption that the *vytti* or the mental state must be reflected on pure consciousness is unnecessary, for it may well be assumed that the ignorance is removed by the mental state itself. An object comes into awareness when it is represented by a mental state, and in order to be aware of anything it is not necessary that the mental state, idea or representation should be reflected in consciousness. Again, if Brahman cannot be its own object, it cannot also be termed self-luminous. For self-luminous means that it is manifest to itself independently, and this involves the implication that the Brahman is an object to itself. If that which is not an object to itself can be called self-luminous, then even material objects can be called self-luminous. Moreover, in the differenceless Brahman there cannot be any immediacy or self-luminousness apart from its nature (*nirviśeṣe brahmaṇi svarūpa-bhinnā-parokṣasya abhāvena*).

In the monistic view the self is regarded as pure knowledge which has neither a subject nor an object. But that which is subjectless and object-less can hardly be called knowledge, for knowledge is that which manifests objects. If that which does not manifest objects can be called knowledge, even a jug can be called knowledge. Again, the question naturally arises whether, if knowledge be regarded as identical with the self, such knowledge is valid or invalid; if it be valid, then the *ajñāna* which shines through it should also be valid, and if it be invalid, then that must be due to some defects and there are no such defects in the self. If it is neither false nor right knowledge, it would not be knowledge at all. Again, if the world-appearance is an illusion, then it must be an imposition on the Brahman. If Brahman be the basis (*adhiṣṭhāna*) of the illusory imposition, then it must be an entity that is known in a general

manner but not in its details. But Brahman is not an entity of which we can have either any general or specific knowledge. Brahman cannot therefore be regarded as the basis of the imposition of any illusion. In this connection it has further to be borne in mind that if the world were non-existent then it could not have appeared in consciousness; the chimerical entities are never perceived by anyone. The argument that even the illusory snake can produce real fear is invalid, for it is not the illusory snake that produces fear but the real knowledge of snakes that produces it. The child is not afraid of handling even a real snake, for it has no knowledge of snakes and their injurious character. Even dreams are to be regarded as real creation by God and not illusory impositions. The argument that they are false since they can only be perceived by the dreamer and not by others who are near him is invalid, for even the feelings and ideas felt or known by a person cannot be perceived by others who are near him¹.

The world is thus not an illusory imposition on the pure Brahman, but a real transformation of the varied powers of God. The difference of this view from that of Sāṃkhya is that while the Sāṃkhya believes in the transformation of certain primary entities in their entirety, the Nimbārkists believe in the transformation of the various powers of God. God Himself remains unchanged and unmodified, and it is only His powers that suffer modification and thereby produce the visible world².

The explanation that the world is produced through the reflection of Brahman in *māyā* or by its limitation through it is invalid, for since the *māyā* is an entity of an entirely different order, there cannot be any reflection of Brahman in it or a limitation by it. It is not possible to bind down a thief with a dream-rope.

Vanamālī Miśra.

Vanamālī Miśra, a native of Triyaga, a village within two miles of Brindavan, of Bharadvāja lineage, in his *Vedānta-siddhānta-saṃgraha*, called also *Śruti-siddhānta-saṃgraha*, gives some of the important tenets of the Nimbārka school. The work is written in the form of *Kārikās* and a commentary on it and is based on the commentary on the *Brahma-sūtra* by Nimbārka and other commentaries on it.

¹ *Para-pakṣa-giri-vajra*, p. 420.

² *Ibid.* p. 429.

He regards sorrow as being due to attachment to things that are outside one's own self, and the opposite of it as happiness¹. All actions performed with a view to securing any selfish end, all performance of actions prohibited by Vedic injunctions and non-performance of duties rendered obligatory by Vedas produce sins. The opposite of this and all such actions as may please God are regarded as producing virtue. It is the power of God which is at the root of all virtue and vice which operates by veiling the qualities of God to us. This nescience (*avidyā*) is real and positive and different in different individuals. It produces the error or illusion which consists in regarding a thing as what it is not; and it is this false knowledge that is the cause of rebirth². This *avidyā* is different with different individuals. It is through this *avidyā* that one gets attached to one's possession as "mine" and has also the false experience of individual freedom. In reality all one's actions are due to God, and when a person realizes this he ceases to have any attachment to anything and does not look forward for the fruits of his deeds. The *avidyā* produces the mind and its experiences of sorrows and pleasures; it also produces the false attachment by which the self regards the experiences as its own and ceases to realize its own nature as pure knowledge and bliss. Only the *videhi-muktas* enjoy this state; those in the state of *jīvanmukti* or sainthood enjoy it only to a partial extent. It is on account of attachments produced by ignorance that man is stirred to be led by the will of God. But as the ignorance is a true ignorance, so the experience of sorrow is also a true experience. All our rebirths are due to our actions performed against the mandates of the Vedas or for the fulfilment of our desires³. The purity of the soul is attained by the realization of the idea that all our actions are induced by God and that the performer has no independence in anything. When a person feels that it is through false association with other things, and by considering oneself as the real independent agent that one gets into trouble, one naturally loses all interest in one's actions and experience of

¹ *Śruti-siddhānta-saṃgraha*, I. 9, 10, 11.

² *prati-jīvaṃ vibhinnā syāt satyā ca bhāva-rūpiṇī | a-tasmīṃs tad-dhiyo hetur midānam jīva-saṃsṛtau.* || *Ibid.* I. 15.

³ *ataḥ kāmyaṃ niṣiddhaṃ ca duḥkh-avijāṃ tyajed budhaḥ.* *Śruti-siddhānta-saṃgraha*, I. 63. According to Vanamālī Miśra at death a person goes to Heaven or to Hell according to his deeds and then after enjoying the fruits of his actions or suffering therefrom he is born as plants and then as lower animals, then as *Yavanas* or *mlecchas* and then in lower castes and finally as Brahmins.

pleasure and pain, and regards all objects as being invested with harmful defects. It is this disinclination or detachment that pleases God. The process of attaining devotion is also described in the scriptures as listening to the Upaniṣads (*śravaṇa*), realizing their meaning with logical persuasion (*manana*), and continual meditation on the nature of God as an unceasing flow (*nididhyāsana*)¹. The last can come only as a result of the first two; for meditation involves a direct realization which is not possible without the performance of *śravaṇa* and *manana*. It is only through the purification of the mind by the above processes that God is pleased and makes Himself directly intuited (*aparokṣa*) by the devotee, just as one can intuit the musical melodies and tunes through musical discipline. This direct intuition is of the very nature of one's own self. For at this stage one has no functioning of the mind. The destruction of experiential knowledge is identical with the intuition of God. This stage therefore implies the annihilation of *avidyā* or the mind². It is in this way that the nature of God as bliss is realized by man in his state of supreme emancipation; but even then it is not possible for him to know all the qualities of God, for even God Himself does not know all His qualities. Such an emancipation can be realized only through the grace of God. In the state of emancipation, man exists in God just as the fish swims about in the ocean. God creates because of the spontaneity of His grace and not in order to increase His grace; so also emancipated souls dally in God out of the spontaneity of their essence as bliss and not in order to increase their bliss³. The nature of God is always within us, and it is only when it is directly intuited that we can attain salvation. Some people attain emancipation in this world while others attain it in the upper worlds through which they pass as a result of their deeds. But emancipation of all kinds may be defined as the existence of man in his own nature as a result of the destruction of nescience⁴. The *jīvanmuktas* or saints are those whose *avidyā* has

³ *ānando-drekuto viṣṇoryathā srstyā-di-ceṣṭanam.*

tathā mukta-citām kṛdā na tv ānanda-vivṛddhaye. Ibid. II. 37.

⁴ *sva-rūpeṇa sthitir muktir ajñāna-dhvamsa-pūrvakam (Ibid.* II. 58). This *mukti* can be of four kinds: *sārūpya*, i.e. the same external form as Kṛṣṇa;

been destroyed, but who have still to suffer the effects of their *prārabdha karma*. The realization of God can destroy the *sañcita* and *kriyamāṇa karma*, i.e. previously collected *karma* and those that are performed in the present life, but not the *prārabdha karma*, i.e. the *karma* that is already in a state of fruition.

It is wrong to suppose that the attainment of a state of bliss can be desired by any person; the state desired can only be one in which a person enjoys unobstructed bliss¹. In a state of deep dreamless sleep one can enjoy a little bliss, but not the full bliss, as the *māyāvādins* hold. There is but little difference between the *māyāvādins* and the Buddhists; the difference is only in the mode of expression².

The self is regarded as atomic, but its existence is definitely proved by the notion of the ego (*ahaṃ-pratyayavedya*) who enjoys all his experiences. Even though he may be dependent upon God, yet he is a real and active agent who works through the influence of *avidyā*. The existence of the self is also proved by the continuity of experiences through all stages of life. The self-love manifested in all beings for selfish ends also shows that each person feels a self or soul within himself and that this self is also different in different individuals. The difference between *jīva* and *īśvara* is that the former is of little power and little knowledge and always dependent, and the latter is omniscient, omnipotent and independent; He makes the *jīvas* work or assert their supposed independence by His *avidyā*-power. The *jīvas* are thus different from God, but as they exist in Him at the time of emancipation and as all their actions are guided by the *avidyā*-power of God, they are regarded also as being

sālokya, i.e. existence in the same sphere as God; *sāyujya*, as being merged in God; *sāmīpya*, as existence in proximity to God as associated with a particular form of Him. The merging in God called *sāyujya* should not be regarded as being unified with God. This merging is like the animals roaming in the forest. The emancipated beings are different from God, but exist in Him (*evaṃ muktvā harer bhinna ramante tatra modataḥ* (*Ibid.* II. 61). They can thus come out of God also, and we hear of them as entering in succession the bodies of Aniruddha, Pradyumna, Saṃkarṣaṇa and Vāsudeva. Such emancipated beings are not associated with the creation and destruction of the worlds, but remain the same in spite of all cosmic changes. They are like the being of *Śvetadvīpa* referred to in the Nārāyaṇīya section of the *Mahābhārata*. But they are still always under the control of God and do not suffer any sorrow on account of such control.

¹ *puṣṭā-rthaṃ sukhitaṃ hi na tv ānanda-svarūpatā. Śruti-siddhānta-saṃgraha*, II. 96.

² *meyato na viśeṣo'sti māyī-saugatayor mate bhaṅgī-mātra-bhidā tu syāt ekasminn api darśane. Ibid.* II. 136.

one with Him. The mind of the individual being a creation of God's *avidyā*, all His world experience is also due to God's activity. In His own nature as self the *jīvas*, the individuals, have the revelation of God's nature which is pure bliss. The existence of individuals in their own essential nature is therefore regarded as a state of salvation. The individuals in their essential nature are therefore of the nature of *sat*, *cit* and *ānanda*, and though atomic they can enjoy the experiences all over the body through their internal functioning just as a lamp illuminates the whole room by rays. The experience of sorrow also is possible through the expansion or dilatation of the mind (*antaḥ-karaṇa*) through the various parts of the body and by means of the help of *avidyā* by which the *jīva* wrongly identifies himself with other objects. As the relation of the self with other objects takes place through the *antaḥ-karaṇa* of each person the sphere of experience of each of the *jīvas* is limited by the functioning of his own *antaḥ-karaṇa*. The *antaḥ-karaṇa* is different in different persons.

The Upaniṣads speak of God as the all (*sarvaṃ khalv'idaṃ Brahma*), and this is due to the fact that He pervades all things and controls all things. It means that the souls are dependent on Him or maintained in Him (*tad-ādhāratva*), but it does not mean their identity with Him. God is Himself able to create all things by Himself; but for His pleasure, for His mere sportive dalliance, He takes the help of *prakṛti* and the destiny born out of the deeds of human beings as His accessories. Though God makes all persons act in the manner in which they do act, yet His directive control is regulated in accordance with the *adṛṣṭa* or the destiny of the human beings which is beginningless. The theory of *karma* doctrine herein suggested is different from that propounded by Patañjali. According to Patañjali and his commentators, the fruits of the deeds, i.e. pleasure or pain, are enjoyed by the persons while they are free to act by themselves. Here, however, the freedom of the individuals is controlled and limited by God in accordance with the previous good or bad deeds of the individual, which are beginningless. Thus in our ordinary life not only our pleasures and pains but also our power to do good or bad actions are determined by previous deeds and the consequent control of God.

CHAPTER XXII

THE PHILOSOPHY OF VIJÑĀNA BHIKṢU

A General Idea of Vijñāna Bhikṣu's Philosophy.

THE ultimate goal is not the cessation of sorrow, but the cessation of the experience of sorrow; for when in the state of emancipation one ceases to experience sorrow, the sorrow as such is not emancipated since it remains in the world and others suffer from it. It is only the emancipated individual who ceases to experience sorrow. The ultimate state of emancipation cannot be a state of bliss, for since there are no mental organs and no mind in this state there cannot be any experience of bliss. The self cannot itself be of the nature of bliss and be at the same time the experiencer of it. When it is said that self is of the nature of bliss (*ānanda*), the word bliss is there used in a technical sense of negation of sorrow.

Bhikṣu admits a gradation of realities. He holds that one is stabler and more real than the other. Since *paramātmā* is always the same and does not undergo any change or transformation or dissolution, he is more real than the *prakṛti* or *puruṣa* or the evolutes of *prakṛti*. This idea has also been expressed in the view of the Purāṇas that the ultimate essence of the world is of the nature of knowledge which is the form of the *paramātman*. It is in this essential form that the world is regarded as ultimately real and not as *prakṛti* and *puruṣa* which are changing forms; *prakṛti*, so far as it exists as a potential power in God, is regarded as non-existent but so far as it manifests itself through evolutionary changes it is regarded as existent. The state of emancipation is brought about by the dissociation of the subtle body consisting of the five *tammātras* and the eleven senses. Consequent upon such a dissociation the self as pure consciousness is merged in Brahman as the rivers mingle with the ocean, a state not one of identity but identity-in-difference. According to the Sāṃkhya, emancipation cannot be attained until the fruits of the *karmas* which have ripened for giving experiences of pleasure and pain are actually exhausted through experiencing them, i.e. even when ignorance or *avidyā* is destroyed the attainment of the emancipation is delayed until the *prārabdha*

karma is finished. The Yogin, however, can enter into an objectless state of meditation (*asamprajñāta yoga*) and this wards off the possibility of experiencing the *prārabdha karma*. From the state of *asamprajñāta samādhi* he can at will pass into a state of emancipation. The state of emancipation is reached not merely by realizing the purport of the text of the Upaniṣads but by philosophic wisdom attained through a reasoned process of thought and by the successive stages of *Yoga* meditation.

The world does not emanate directly from Brahman as pure consciousness, nor are the *kāla*, *prakṛti* and *puruṣa* derived from Brahman through transformatory changes (*pariṇāma*). Had the world come into being directly from Brahman, evil and sins would have been regarded as coming into being from it. With the association of *sattva* through the beginningless will of God at the beginning of the previous cycles the Brahman behaves as *Īśvara* and brings into actual being the *prakṛti* and the *puruṣa* which are already potentially existent in God, and connects the *prakṛti* with the *puruṣa*. The moment of God's activity in bringing out the *prakṛti* and *puruṣa* may be regarded as *kāla*. In this sense *kāla* is often regarded as the dynamic agency of God. Though *puruṣas* in themselves are absolutely static, yet they have a seeming movement as they are always associated with *prakṛti*, which is ever in a state of movement. *kāla* as the dynamic agency of God is naturally associated with the movement of *prakṛti*, for both the *prakṛti* and the *puruṣa* are in themselves passive and are rendered active by the dynamic agency of God. This dynamic agency is otherwise called *kāla*, and as such it is an eternal power existing in Brahman, like the *prakṛti* and *puruṣa*. In all other forms of actual existence *kāla* is determinate and conditioned, and as such non-eternal and to some extent imaginary. It is only as the eternal power that subsists in and through all the operations of dynamic activity that *kāla* may be called eternal. The *kāla* that produces the connection of the *prakṛti* and the *puruṣa* and also produces the *mahat* is non-eternal and therefore does not exist at the time of *pralaya* when no such connection exists. The reason for this is that the *kāla* that produces the connection between *prakṛti* and *puruṣa* is a determinate *kāla* which is conditioned, on the one hand by the will of God, and, on the other, by the effects it produces. It is this determinate *kāla* that can be designated as present, past and future. But the terms pre-

sent, past and future imply an evolutionary change and such a change implies activity; it is this activity as dissociated from the manifest forms of *kāla* as present, past and future that can be regarded as eternal¹.

The reference to the *Atharva-Veda*, as noted below in the footnote, will show how the conception of time in very ancient eras reveals "time" as a separate entity or energy which has brought everything into being, maintains it, and destroys everything. The God, *parameṣṭhin* Brahman or *prajāpati* is said to be derived from it. In the *Maitrī Upaniṣad* we also hear of the conception of *kāla* or time as *akāla* or timeless. The timeless time is the primordial time which is only the pure energy unmeasured and immeasurable. It appears in a measurable form when, after the production of the sun from it, it is measured in terms of the movement of the sun. The entire course of natural phenomena is thus seen to be an emanation or manifestation of the energy of time undirected by any other superintendent. Such a conception of time seems to be of an atheistic character, for even the highest gods, the *parameṣṭhin* and the *prajāpati*, are said to be produced from it.

In the first chapter of the *anuśāsana parvan* of the *Mahābhārata* there is a dialogue between Gautamī, whose son was bitten by a serpent, the hunter who was pressing for killing the serpent, the serpent, the *mṛtyu* or death and *kāla*. It appears from the dialogue that time is not only the propeller of all events by itself but all states of *sattva*, *rajas* and *tamas*, all that is moving and the unmoved in the heaven and in the earth, all our movements and cessation of movements, the sun, the moon, the waters, the fire, the sky, the earth, the rivers, the oceans and all that is being or not being are of the

¹ *Atharva-Veda*, xix. 54. In the *Atharva-Veda* time is regarded as a generator of the sky and the earth and all beings exist through time. *Tapas* and Brahman exist in time and time is the god of all. Time produced all creatures. The universe has been set in motion by time, has been produced by it and is supported in it. Time becoming Brahman supports *parameṣṭhin*. In the *Svetāśvatara Upaniṣad* time is regarded as being held by the sun as the ultimate cause. In the *Maitrī Upaniṣad*, vi. 14, it is said that from time all creatures spring, grow and decay. Time is a formless form (*kālāt sravanti bhūtāni, kālāt vṛddhiṃ prayānti ca. | kāle cā'staṃ niyacchanti kālo mūrtir amūrtimān*).

It is again stated in the same work that there are two forms of Brahman, Time and no-Time.

² That which is before the sun is no-Time and is devoid of parts, and that which is after the sun is Time with parts.

nature of time and brought into being by time and dissolved in time. Time is thus the original cause. Time, however, operates in accordance with the laws of *karma*; there is thus the beginningless relation between time and *karma* which determines the courses of all events. *Karma* in itself is also a product of time and as such determines the future modes of the operation of time. Here we have an instance of the second stage, the conception of time as the transcendental and immanent cause of all things. Here time is guided by *karma*. In the third stage of the conception of time, which is found in the *purāṇas* and also adopted by Bhikṣu, it is regarded as the eternal dynamic power inherent in Brahman and brought into operation by the will of God¹.

The word *puruṣa* is often used in the scriptural text in the singular number, but that signifies only that it is used in a generic sense, cf. *Sāṃkhya-sūtra*, I. 154 (*nā'dvaita-śruti-virodho jāti-paratvāt*)². The difference between the superior *puruṣa* or God and the ordinary *puruṣas* is that while the latter are subject to experiences of pleasure and pain as a result of the actions or *karma*, the former has an eternal and continual experience of bliss through its reflection from its *sattvamaya* body to itself. The ordinary *puruṣas*, however, have not the experience of pleasure and pain as of constitutive definition, for in the stage of saintliness (*jīvanmukti*) they have no such experiences. God can, however, have an experience of the experiences of pleasure and pain of other *puruṣas* without having been affected by them. The ultimate principle or the Brahman is a principle of pure consciousness which underlies

¹ In the *Ahīrbudhnyā-saṃhitā*, the work of the *Pañcarātra* school, *niyati* (destiny) and *kāla* (time) are the two manifestations of the power of transcendent *kāla* as arising from *aniruddha*. From this *kāla* first arises the *sattva-guṇa* and from that the *rajo-guṇa* and thence the *tamo-guṇa*.

It is further said that it is time which connects and separates. The *kāla* of course in its own turn derives its power from the self-perceiving activity (*sudarśana*) of Viṣṇu. That the *prakṛti* transforms itself into its evolutes is also due to the dynamic function of *kāla*.

The *Māthara vṛtti* on the *Sāṃkhya-kārikā*, however, refers to the doctrine of *kāla* as the cause of the world (*kālāḥ sṛjati bhūtāni, kālāḥ saṃharate prajāḥ | kālāḥ supteṣu jāgṛti tasmāt kālas tu kāraṇam*) and refutes it by saying that there is no separate entity as *kāla* (*kālo nāma na kaś cit padārtho'sti*), there are only three categories, *vyakta*, *avyakta* and *puruṣa*, and *kāla* falls within them (*vyaktam avyaktam puruṣa iti trayāḥ eva padārthāḥ tatra kālo antarbhūtaḥ*).

² The *Ahīrbudhnyā-saṃhitā*, however, explains the singular number by the concept of a conglomeration of *puruṣa* or a colony of cells, as the honey-comb, which behaves as a totality and also in a multiple capacity as separate cells. *Ahīrbudhnyā-saṃhitā*, VI. 33.

the reality of both the *puruṣas*, *prakṛti* and its evolutes; and it is because they are emergent forms which have their essence in the Brahman that they can appear as connected together. The movement of the *prakṛti* is also ultimately due to the spontaneous movement of the pure consciousness, the basic reality.

The *viveka* and the *aviveka*, the distinction and the non-distinction, are all inherent in *buddhi*, and this explains why the *puruṣas* fail to distinguish themselves from the *buddhi* with which they are associated. The association of the *puruṣas* with the *buddhi* implies that it has in it both the characters of distinction and non-distinction. The difficulty is that the "revelation of the distinction" is so opposed by the force of non-distinction that the former cannot find scope for its manifestation. It is the purpose of *yoga* to weaken the force of the tendency towards non-distinction and ultimately uproot it so that revelation of distinction may manifest itself. Now it may be asked what is the nature of this obstruction. It may be replied that it is merely a negative condition consisting in the non-production of the cognition of the distinction through association with the products of *prakṛti*, such as attachment and antipathy, through which we are continually passing. The Sāṃkhya, however, says that the non-production of the distinction is due to the extreme subtleness of the nature of *buddhi* and *puruṣa* which so much resemble each other that it is difficult to distinguish their nature. But this view of the Sāṃkhya should not be interpreted as meaning that it is only the subtleness of the natures of these two entities that arrests our discriminating knowledge regarding them. For had it been so, then the process of *yoga* would be inefficacious in attaining such a knowledge. The real reason is that our association with attachment and antipathy with regard to gross objects obstructs our discriminating vision regarding these subtle entities. Our attachment to gross objects is also due to our long association with sense-objects. A philosopher, therefore, should try to dissociate himself from attachment with gross objects. The whole purpose of creation consists in furnishing materials for the experiences of *puruṣa* which seems to undergo all experiential changes of enjoyment and suffering, of pleasure and pain, in and through the medium of *buddhi*. With the dissociation of *buddhi*, therefore, all experience ceases. The God is essentially pure consciousness, and though the knowledge of Him as such

brings about liberation, yet epithets of omnipotence, all-pervasiveness and other personal characteristics are attributed to Him because it is through an approach to God as a super-personal Being that devotion is possible, and it is through devotion and personal attachment that true knowledge can arise. It is said in the scriptures that God cannot be realized by *tapas*, gifts or sacrifices, but only by *bhakti*¹. The highest devotion is of the nature of love (*attuyuttamā bhaktiḥ prema-lakṣaṇā*).

God remains within all as the inner controller and everything is revealed to, His super-consciousness without the mediation of sense-consciousness. God is called all-pervasive because He is the cause of all and also because He is the inner controller.

Bhakti consists in the whole process of listening to God's name, describing His virtues, adoration to Him, and meditation ultimately leading to true knowledge. These are all to be designated as the service of God. These processes of operations constituting *bhakti* are all to be performed with love. Bhikṣu quotes *Garuḍa purāṇa* to prove that the root "*bhaj*" is used in the sense of service. He also refers to the Bhāgavata to show that the true *bhakti* is associated with an emotion which brings tears to the eyes, melts the heart and raises the hairs of the body. Through the emotion of *bhakti* one dissolves oneself as it were and merges into God's existence, just as the river Ganges does into the ocean.

It will be seen from the above that Bhikṣu urges on the doctrine of *bhakti* as love, as a way to the highest realization. The metaphysical views that he propounded give but small scope for the indulgence of such an attitude towards divinity. For, if the Ultimate Reality be of the nature of pure consciousness, we cannot have any personal relations with such a Being. The ultimate state of realization is also the entrance into a state of non-difference with this Ultimate Being, who is not Himself a person, and therefore no personal relations ought to be possible with Him. In the *Vijñāna-mṛta-bhāṣya*, IV. 1. 3, Bhikṣu says that at the time of dissolution or emancipation the individuals are not associated with any content of knowledge, and are therefore devoid of any consciousness, and being of the nature of unconscious entities like wood or stone they

¹ *aham prakṛtaḥ bhaktito'anyaiḥ sādhanaiḥ draṣṭum na śakyah, bhaktir eva kevalā mad-darśane sādhanam.*

Īśvara-gītā-tīkā (MS. borrowed from N. N. Gopinātha Kavirāja, late Principal, Queen's College, Benares).

enter into the all-illuminating great Soul just as rivers enter into the ocean. Again, it is this great Soul that out of its own will sends them forth like sparks of fire and distinguishes them from one another and goads them to action¹. This great Soul or *paramātman* is the inner-controller and mover of our selves. But it may be remembered that this great Soul is not also the Ultimate Principle, the pure consciousness, but is the manifestation of the pure consciousness in association with the *sattvamaya* body. Under the circumstances the metaphysical position does not allow of any personal relation between the human beings and the Ultimate Entity. But yet the personal relation with the divinity as the ultimate consciousness not being philosophically possible, that relation is ushered in more out of a theistic tendency of Bhikṣu than as a necessary natural conclusion. The theistic relation is also conceived in a mystical fashion in the indulgence of the emotions of love rising to a state of intoxication. Such a conception of Divine love is found in the *Bhāgavata-purāṇa*; and later on in the school of Vaiṣṇavism preached by Caitanya. It is different from the conception of devotion or *bhakti* as found in the system of Rāmānuja, where *bhakti* is conceived as incessant continual meditation. He seems to have been, therefore, one of the earliest, if not the earliest, exponent of emotionalism in theism, if we do not take into account the Purāṇic emotionalism of the *Bhāgavata-purāṇa*. There are instances in the writings of modern European philosophers also, where the difficult position does not justify an emotionalism that is preached merely out of the theistic experiences of a personal nature, and as an illustration one may refer to the idea of God of Pringle Pattison. In the conception of *jīva* or individuals also there seems to be an apparent contradiction. For while the *puruṣas* are sometimes described as pure consciousness, they are at other times described as inert and wholly under the domination of *paramātman*. The contradiction is to be solved by the supposition that the inertness is only relative, i.e. the *puruṣas* are to be regarded as themselves inactive, being goaded to action by the inlying controller,

¹ *tasmāt pralaya-mokṣā-dau viśaya-sambandhā-bhāvāt kāṣṭha-loṣṭrā-dīvat jaḍāḥ sānto jīvā madhyandīnā-dītyavat sadā sarvā-vabhāsake paramā-tmani viliyante samudre nada-nadya iva punasca sa eva paramā-tmā sve-cchayā gni-vissphul īṅgavat tā-nupāyi-sambandhena svato vibhajyā'ntaryāmī sa na prerayati tathā cokaṣṭha cākṣuṣmatā'ndhā iva nīyamānā iti atah sa eva mukhya ātmā-ntaryāmy amṛtaḥ. Vijñāna-mṛta-bhāṣya, iv. 1. 3.*

paramātman. They are called “*jaḍa*,” resembling stone or wood only in the sense that they are inactive in themselves. But this inactivity should not be associated with want of consciousness. Being sparks of the eternal consciousness they are always of the nature of consciousness. Their activity, however, is derived from the *paramātman*, so that, drawn by Him, they come out of the Eternal consciousness and play the role of a mundane individual and ultimately return to Brahman like rivers into the ocean at the time of emancipation. This activity of God is an eternal activity, an eternal creative impulse which is absolutely without any extraneous purpose (*carama-kāraṇasya kṛteḥ nityatvāt*)¹. It proceeds from the spontaneous joy of God in a spontaneous manner like the process of breathing, and has no reference to the fulfilment of any purpose. In the *Vyāsa-bhāṣya* it is said that the creation of God is for the benefit of living beings. But Bhikṣu does not support any purpose at all. This activity is sometimes compared with the purposeless playful activity. But Bhikṣu says that even if there is any slight purpose in play that also is absent in the activity of God. The action also proceeds spontaneously with the creative desire of God, for which no body or senses are necessary. He is identical with the whole universe and as such His action has no objective outside of Himself, as in the case of ordinary actions. It is He who, depending upon the beginningless *karma* of human beings, makes them act for good or for evil. The *karma* itself, also being a part of His energy and a manifestation of His impulse, cannot be regarded as limiting His freedom². The analogy of the doctrine of grace where the king bestows his grace or withholds it in accordance with the good or bad services of his servants is also regarded as helpful to conceive of the freedom of God in harmony with the deeds of the individual. If it is argued now, if the creative activity of God is eternal, it can depend on the *karma*, Bhikṣu’s reply is that the *karmas* act as accessory causes determining the eternal creative impulse of God as producing pleasurable and painful experiences. Following the trend of the Purāṇic method Bhikṣu further suggests that it is the Hiranyagarbha created by God who appears as the law-giver of the law of *karma*, as manifested in the spontaneous activity of God. It is He, therefore, who is responsible for the suffering of humanity

¹ See *Vijñāna-mṛta-bhāṣya*, II. 1. 32.

² *Ibid.* II. 1. 33.

in accordance with their *karmas*. God helps the process only by letting it go on in an unobstructed manner¹. In another passage he says that God perceives within Himself as parts of Him the *jīvas* and their conditioning factors (*upādhi*) as associated with merit and demerit (*dharma* and *adharma*); associating these conditions with the *jīvas* He brings them out of Himself. He is thus the maker of souls, just as the potter is the maker of pots².

The self is regarded as being itself untouchable and devoid of any kind of association (*a-śaṅga*). The association between *prakṛti* and *puruṣa*, therefore, is not to be interpreted in the sense of a direct contact in the ordinary sense of the term, but the association is to be understood only as transcendental reflection through the conditioning factors which make the pure soul behave as a phenomenal self or *jīva*. The self has no knowledge as its quality or character, and is in itself pure consciousness, and there is at no time a cessation of this consciousness, which exists even during dreamless sleep. But in dreamless sleep there is no actual knowledge, as there is no content present at the time; and it is for that reason that the consciousness though present in the very nature of the self cannot be apperceived. The *vāsanās* or desires existing in the *antaḥkaraṇa* cannot affect the pure soul, for at that time the *antaḥkaraṇa* remains in a dissolved condition. Knowledge of contents or objects is possible only through reflections from the states of the *buddhi*. The pure consciousness being identical with the self, there cannot also be the self-consciousness involving the notion of a duality as subject and object during dreamless sleep. The pure consciousness remains the same and it is only in accordance with changes of mental state that knowledge of objects arises and passes away³. The *jīvas* are thus not to be regarded as themselves the products of the reflection of *paramātman* as the Śāṅkarites suppose; for in that case the *jīvas* would be absolutely unreal, and bondage and emancipation would also be unreal.

³ *Ibid.* II. 3. 5.

The Brahman and the World according to Vijñānā-mṛta-bhāṣya.

The production, existence, maintenance, modification, decay and destruction of the world are from Brahman as God. He holds within Himself all the energies constituting the *prakṛti* and *puruṣas*, and manifests Himself in other diverse forms; Brahman as pure consciousness is associated with the conditioning factor of His own being, the *māyā* as pure *sattva* quality in all this creative activity, so from that great Being who is devoid of all afflictions, *karmas* and their fruits are also produced. The fact that the *Brahma-sūtra*, II. 2, says that Brahman is that from which the world has come into being and is being maintained implies that the world as it is in its own reality is an eternal fact in the very being of the ultimately real and the unmanifested. The production, the transformation and the destruction of the world are only its phenomenal aspect¹. Brahman is here regarded as the *adhiṣṭhāna-kāraṇa*. This means that Brahman is the basis, the ground, the *ādhāra* (container) as it were of the universe in which it exists as undivided and as indistinguishable from it and which also holds the universe together. Brahman is the cause which holds together the material cause of the universe so that it may transform itself into it². Brahman is the principle of ultimate cause which renders all other kinds of causality possible. In the original Brahman, the *prakṛti* and the *puruṣas* exist in the eternal consciousness and as such are held together as being one with it. The Brahman is neither changeable nor identifiable with *prakṛti* and *puruṣa*. It is because of this that, though Brahman is of the nature of pure consciousness and unchangeable, yet it is regarded as being one with the universe and as the material cause. The material cause or *upādāna-kāraṇa* is the name which is given to changing material cause (the *vikāri-kāraṇa*) and to the ground cause or the *adhiṣṭhāna-kāraṇa*. The underlying principle of both the ground cause (*adhiṣṭhāna-kāraṇa*) and the material cause (*upādāna-kāraṇa*) is that the effect is held in it as merged in it or

¹ *atra cai'tad yata ity'anuktvā janmā-dyasya yata iti vacanād avyakta-rūpeṇa jagan nityam eva ity ācāryā-śayaḥ. Vijñānā-mṛta-bhāṣya, I. 1. 2.*

² *kim punar adhiṣṭhāna-kāraṇatvam ucyate tad evā' dhiṣṭhāna-kāraṇam yatra' vibhaktam yeno' paṣṭabdham ca sad upādāna-kāraṇam kāryā-kāreṇa pārīṇamate. Ibid.*

indistinguishable from it¹. The idea involved in *avibhāga* or oneness with the cause is not regarded as an ordinary relation of identity but as a sort of non-relational relation or a situation of uniqueness which cannot be decomposed into its constituents so that a relational bond may be affirmed of them. The upshot of the whole position is that the nature of the universe is so founded in Brahman which forms its ground that it cannot be regarded as a mere illusory appearance of it or as a modification or a product of it; but while these two possible ways of relation between the cause and the effect fail, the universe as such has no existence, significance or meaning without the ground in which it is sustained and which helps its evolutionary process. The ordinary relation of the sustainer and the sustained is inadequate here, for it implies a duality of independent existence; in the present case, however, where Brahman is regarded as the ground cause there is no such duality and the universe cannot be conceived as apart from Brahman which forms its ground and essence while remaining unchanged in its transcendent reality. Thus, though it may have to be acknowledged that there is a relation between the two, the relation has to be conceived as the transcendental one, of which no analogy is found elsewhere. The seeming pictorial analogy which falls far short of the situation is to be found in the case where water is mixed with milk². Here the existence of the water is dependent upon the existence of the milk so long as the two exist in a mixed condition; and neither of them can be conceived without the other. The nature of the *prakṛti* and the *puruṣa* is also manifested from the essence of God's nature as pure consciousness. The causality of substance, qualities and actions is also due to the underlying essence of God which permeates all things. The difference between the relation of *samavāya* and this unique relation of indistinguishableness in the ground is that while the former applies to the case of the intimate relation of the effects in and through themselves, the latter refers only to the special fact of the indistinguishable character of the effect in the cause, and has no reference to the relation of the effect-parts among themselves with reference to the whole as an inseparable concatenation of effects. The ordinary organic relation such

¹ *Kāryā-vibhāgā-dhāratvasyai' vo' pādāna-sāmānya-lakṣaṇatvāt. Vijñānamṛta-bhāṣya*, I. 1. 2.

as that which subsists between the parts of a living body is thus different from that which is referred to here as the indistinguishable character of the effects in the ground. The parts of the universe as comprising the living and the non-living may be regarded as inseparably united with one another in the whole, but such a relation is an intimate relation between the effects, and the whole is nothing but an assemblage of these. This is what may be called the special feature of *samavāya* relation. But in the unique relation of indistinguishableness in the ground the effect subsists in the ground in such a manner that the effect has no separate reality from the cause¹. Brahman in this view is the basis or the substratum—the ground which supports the totality of the unity of *prakṛti* and the *puruṣas* to evolve itself into the universe with its varied forms². It does not, therefore, in itself participate in the changing evolution and transformation of world-forms, but it always exists as one with it, and being in it and supported by it, it develops into the world.

Vijñāna Bhikṣu says that the Vaiśeṣikas believe that God is the dynamic or the instrumental agent, whereas he thinks that the causality of God cannot be regarded as being either of the *samavāyi*, *asamavāyi* or *nimitta* types, but is a fourth kind of conception—cause as ground or container³. He also describes this type of causation as being *adhiṣṭhāna*, a term with which we are familiar in Śāṅkara Vedānta. But the difference between the two kinds of conception of *adhiṣṭhāna kāraṇa* is indeed very great, for while Bhikṣu considers this to be the unchangeable ground which sustains the movements of the principle of change in it in an undivided unity, Śāṅkara regards *adhiṣṭhāna* as the basis of all changes which are unreal in themselves. According to Bhikṣu, however, the changing phenomena are not unreal, but they are only changes which are the modifications of a principle of change which subsists in an undivided unity with the ground cause. When they say that the world is both being and non-being (*sad-asadrūpa*), and is hence unreal and illusory, the Śāṅkarites suffer from a grave misconception. The

³ *asmābhis tu samavāy-asamavāyibhyām udāśīnam nimitta-kāraṇebhyaś ca vilakṣaṇatayā caturtham ādhāra-kāraṇatvam. Ibid.*

world is called *sat* and *asat* (being and non-being), because it represents the principle of becoming or change. It is affirmed as "this" and yet because it changes it is again not affirmed as "this." The future forms of the changing process are also non-existent as it were in the present form and the present form is also non-existent as it were in the future forms that are to be. Thus, any of its forms may be regarded as not existing and hence false when compared with an entity that always exists and in the same form¹. All objects of the world so far as they are past and future are contradicted by their present states and are therefore regarded as false, but so far as they are perceived in their present state they are regarded as real².

The universe has, however, an eternal and immutable form as pure consciousness in the very nature of Brahman from which it is separated out as the world of matter and souls. The pure consciousness in itself is the only ultimate reality which is ever the same and is not subject to any change or process of becoming. Both the individual souls and the world of matter are ultimately dissolved and merged in Brahman, the pure and ultimate consciousness. These, therefore, are regarded as being names and forms when compared with the ultimate changeless Reality, Brahman³. But this does not mean that the universe of matter and souls is absolutely unreal and mere *māyā* or illusion. If all that appears were absolutely false, then all moral values would disappear and all notions of bondage and emancipation would become meaningless. If the falsity of all things except the pure consciousness can be proved by any means, that itself would prove that such proofs have validity and that therefore there are other things over and above pure consciousness which may be valid. If such proofs are invalid but can establish the validity of pure consciousness as against the validity of all other things, then such proofs may also prove the reality of all other things in the world. It may be held that what ordinary people consider as true can be proved to be invalid by what is regarded by them as valid means of proof; but on the Śāṅkarite view nothing is regarded as valid and therefore there are

¹ *eka-dharmena sattva-daśāyām pariṇāmi-vastūnām atītā-nāgata-dharmena asattvāt. Vijñānā-mṛta-bhāṣya*, I. 1. 3.

no proofs by which the validity of the world-process can be maintained. But the reply that naturally comes to such a view is that though the validity of the world may not be proved, yet that does not lead to the conclusion that the world-process is unreal; for even if its validity is not proved, its validity or reality may at least be doubtful. There is, therefore, nothing by which we may come to any conclusion about its invalidity and unreality. The reality of the universe is of a different order from that of Brahman, which is of the nature of pure consciousness, as the former consists of practical efficiency (*artha-kriyā-kāritva*). But even though in the state of a changing process the reality of the world is only its reality as becoming and as causal efficiency, yet it has also an ultimate reality in itself, since it has come into being from the ultimate reality, Brahman. The world of matter and souls exists in God as pure consciousness and therefore as one with Him. When from out of its state as pure consciousness it is manifested as the world of matter and souls, we mark it as the stage of creation. When again they retire back into God as being one with His consciousness, that is marked as the state of dissolution¹. The universe of matter and souls is also ultimately to be regarded as being of the nature of consciousness, and is as such a constituent of the ultimate pure consciousness in which it remains as it were merged and lost. The world of visible forms and changes is also thus of the nature of thought, and only the ignorant regard them as mere objects². When the scriptural texts speak of the identity of the world and Brahman they refer to this ultimate state in which the world exists in the pure consciousness—Brahman as one with it. But it is not only in the state of dissolution that the world exists in Brahman in undivided unity, but in the state of creation also the world exists in Brahman as one with it, for all the so-called mechanical and other kinds of forces that are to be found in matter and which constitute its reality are but the energy of God. And as the energy is always conceived as being one with that which possesses it, it is believed that the world with all its changes exists in God³. In the state of

pralaya the world-energies exist in God as some form of consciousness or conscious energy which is later on manifested by Him as material energy or matter. The unity of the world-energies in God is such that though these retain some kind of independence yet it is so held up and mixed up as it were in the reality of God that it cannot be separated from Him. Their independence consists in the fact that they are of the nature of energy, but as God possesses them they can have no existence and they cannot be conceived as apart from Him. As thus described the world of matter has no permanent reality, and the consciousness of this fact may be called the *bādha* or contradiction (*pāramārthika-sattvā-bhāva-niścaya eva bādhaḥ*)¹. But in spite of this *bādha* the universe has a relative or *vyavahārika* existence (*tādrśa-bādhe'pi ca sati jñāna-sāadhanā-dīnām vyavahārika-sattvāt*).

The causality of *prakṛti* and *paraśa* is limited to their specific capacities which determine the nature of modifications. But God is the universal all-cause behind them which not only shows itself through these specific limitations but which regulates the inner harmony and order subsisting in them and in their mutual relations. Thus the visual organ is limited in its function to the operation of vision, and the tactile organ is limited in its function to the operation of touch, but the functions and activities of all these are organized by the individual self which operates and manifests itself through them. Thus Brahman in this sense may be regarded as being both the instrumental and the material cause². According to Sāṃkhya and Yoga the *prakṛti* is supposed to be associated with the *puruṣas* through the inner and inherent teleology, but according to the Vedāntic view as interpreted by Bhikṣu their mutual association is due to the operation of God³.

The Individual.

In his commentary on the *Īśvara-gītā*, Bhikṣu says that the more universal has a wider sphere than the less universal and therefore it is called Brahman in relation to it. The cause of an effect is wider and more universal than the effect and is therefore called Brahman in comparison with it. Thus there is a hierarchy of Brahman. But that which is at the apex of the hierarchy is the highest universal and the ultimate cause, and is therefore called the highest Brahman. Brahman is thus the highest and the ultimate reality. The determinations that make the universe of matter exist in Brahman as merged in its nature as thought. Creation means that these determinations which exist there in a potential form and without any operation are manifested and made operative as the world of nature. God in His nature as pure consciousness has a full and complete acquaintance of all the possible developments and modifications of the pre-matter as evolving into the actual universe. The starting point in the evolution of the pre-matter or *prakṛti* is the moment of its association with the spirits. The scriptural text says that the Lord entered into the *prakṛti* and the *puruṣas*, disturbed the equilibrium and associated them with one another. The *puruṣas* are, however, like sparks of consciousness and it is not possible to produce any disturbance in them. The disturbance is thus produced in the *prakṛti* and the effect of such disturbance in the *prakṛti* on the *puruṣas* is interpreted as seeming disturbances in the *puruṣas* as well. The *puruṣas* are to be conceived as being parts of God and there cannot be a real identity between the *puruṣas* and the Brahman. The so-called identity between the *puruṣas* and the Brahman refers merely to the fact of the *puruṣas* being the constituent entities in the being of God such as that which exists between the parts and the whole. The assertion of the Śāṅkarites that the individual soul is the same as Brahman and that the difference is due to external limitations of nescience or on account of reflections through it is wrong. The kind of unity that exists between the individual souls and the Brahman lies in the fact that they are indistinguishable in character from it (*avibhāga*). If the reality of individual souls is denied, that would amount to a denial of religious and moral values and of bondage and emancipation.

In this connection it is also urged that the individual souls are derived from God just as sparks come out of fire or the son comes out of the father. The individual souls resemble God so far as they are of the nature of pure consciousness. But though they have come out of Him, yet they retain their individuality and thus preserves for them the sphere of their moral career. The individual souls are free and emancipated in their own nature, they are all-pervasive and they also hold the universe within them in their consciousness. In all these they share the nature of Brahman. But in association with the limiting conditions (*upādhi*) they appear as finite and limited. When the entire career of the individual souls is known as existing in Brahman as part of it, as being manifested out of it as separate entities, as leading a career of their own in association with the limiting conditions and ultimately dissociating themselves from them and realizing their own natures as one with Brahman and in a sense different from it, this is the true philosophic knowledge and realization of their own nature. When the individuals start their career and destiny in life they are different from Brahman; but there was a time when they remained in one undivided unity with Brahman. But in spite of this unity the Brahman is always felt as different and as the other of the individuals, and this difference is never sublated¹. But the difference of this view from the Sāṃkhya is that the Sāṃkhya is satisfied only with considering the individuality and separateness of the *puruṣas*, but the Vedāntic view as interpreted herein cannot ignore the fact that in spite of their separateness they are one in essence with Brahman and have sprung out of it, and after the fulfilment of their career of individuality and destiny will again be merged in it, and even during their mundane career have an aspect of undividedness with Brahman inasmuch as they are the powers or energies of it². The difference that exists between the individuals and Brahman is most apparent during the mundane career on account of the fact that the world of nature has a separate existence in the consciousness of the individual centres and each one of them is limited to his own experiences. But at the time of dissolution, when the world of nature merges in the Brahman as a potential level of its energies, the individuals are

¹ *bhedā-bhedau vibhāgā-vibhāga-rūpau kāla-bhedena aviruddhau anyonyā-bhāvaś ca jīva-brahmaṇor ātyantika eva. Vijñānā-mṛta-bhāṣya*, 1. 1. 2.

² *ata idam brahmā-tma-jñānam vivikta-jīva-jñānāt sāmkyo-ktād api śreṣṭham. Ibid.* 1. 1. 2.

also merged in it and have no separate spheres of experience for themselves and thus cease to have any descriptive definition of themselves.

The nature of the relation of part and whole that exists between the individuals and Brahman is regarded as that subsisting between the son and the father. The father is reborn in the son. Before birth the son lies in a state of undivided unity in the vital energy of the father and yet when he separates out of him it is the same vital energy of the father that repeats itself in its new career and has a sphere of activity which is definitely its own. Again, when it is said that the individuals are parts of Brahman, it should not be interpreted to mean that they have any share in the existence of Brahman as God or world-creator. God is not homogeneous in His nature, but the element of individuation and differentiation always exists in Him. Had He been a homogeneous being His parts would have no specific differentiation and they would be like the parts of space which are always indistinguishable from one another. But the fact that God has within Him the principle of differentiation explains the fact that the individuals resemble Brahman only in the aspect of their consciousness but have no share in His creative functions or omnipotence. The Sāṃkhyaists hold that salvation is attained through dissociation of attachment as "mine" to one's experiences, mental faculties, senses, understanding and body, owing to one's knowledge of the fact that the self is the self-shining entity to which all experiences appear and within which they are held together as one with it though they are all different from it. But the Vedānta as herein interpreted holds that the attachment as "mine" vanishes with the knowledge of self as pure consciousness, with the knowledge of God as the being from which they come into being, by which they are maintained and into which they ultimately return, and with the knowledge that they all exist in the consciousness of God as parts of it; and that the self is not the real enjoyer of the experiences but is only the consciousness in which the universe and its experiences shine forth. Thus, though both in the Sāṃkhya and in the Vedānta as herein interpreted salvation is attained through the dissolution of the false attachment as "mine-ness," the dissolution of "mine-ness" is here due to an entirely different philosophic conception¹.

¹ *Vijñāna-mṛta-bhāṣya*, p. 56.

Consciousness is not a quality but it is the very substance of the self. Just as light is a substance which illuminates other things, so consciousness is also a substance which illuminates other things. When one says "I know it," knowledge appears to be a quality of "I" which is neither self nor a homogeneous entity. The "I" is a complex of sense-faculties, understanding, etc., to which a quality can be attributed; the self is not a complex entity, but a homogeneous simple substance—the consciousness. The complex entity, the "I," expresses all things by a manifestation of consciousness. Bliss or happiness, however, cannot be regarded as a self-revealing substance, but it is an independent substance like sorrow which is revealed by consciousness. Neither the Brahman nor the self can therefore be regarded as being of the nature of bliss or happiness as this is a modification of *prakṛti* and has therefore to be regarded as expressible (*dṛśya*) and not as expressing (*darśana*). The consciousness requires the intermediary of intellectual functions for the illumination of objects, but consciousness in itself does not require the intermediary of any other functions, as such a view would lead only to an infinite regressus without solving the point at issue. It is also wrong to suppose that the principle of consciousness exercises any operation in order to reveal itself, for an entity cannot operate on itself (*karma-kartr-virodhāt*). If for the above reasons the self cannot be regarded as being of the nature of bliss, then at the time of salvation also there cannot be any bliss in the self. There is only a cessation of sorrow at that time, or rather a cessation of both happiness and sorrow which is technically called a state of happiness or *sukha* (*sukhaṃ duḥkha-sukhā-tyayaḥ*)¹. At the time of emancipation all conditioning factors such as the intellectual functions and the like are dissolved and as a consequence thereof all experiences of pleasure and pain also vanish, for these are substances belonging to objects which were presented to the self through these conditions. When the Upaniṣads say that the self is dearest to us, it need not necessarily be supposed that it is the pleasure that is dearest to us, for the self may be regarded as being valued for its own sake; it may also be supposed that pleasure here means the cessation of pain². The desire for immortality or con-

¹ *Vijñānā-mṛtā-bhāṣya*, 1. 1. 2.

² *ātmatvasyā'pi prema-prayojakatvāt duḥkha-nivṛtti-rūpattvād vā bodhyam.*
Ibid.

tinued existence of the self illustrates the feeling of fondness that we all have for ourselves. The other view, that the ultimate object of realization is extermination of all sorrow is also not open to any objection on the ground that pleasure and pain never belonged to the selves; for the association of pleasure and pain is only with reference to their enjoyment and suffering and not directly as a bond of attachment to the self. The term "*bhoga*," which may be translated only semi-accurately as "experience," has a twofold application as referring to *buddhi* or psychosis and to *puruṣa*. The *prakṛti* is composed of *sukha*, *duḥkha* and *moha* substances, and *buddhi* is an evolute of the *prakṛti*; therefore, when the *buddhi* is in association with *sukha* or *duḥkha*, such an association supplies the *buddhi* with the stuff of which it is made and thus sustains and maintains its nature and constitution. But when the word *bhoga* has a reference to *puruṣa*, it means that the pleasure or sorrow held in the *buddhi* is reflected on it and is thereby intuited. It is this intuition of pleasure and pain through their reflection in the *puruṣa* that is regarded as their *bhoga* or experience by *puruṣa*. The *buddhi* cannot have any *bhoga* or experience, even in a remote sense of the term, for the simple reason that it is unconscious. But it may well be argued that since the *puruṣa* is not in reality the ego, it cannot have any experience in any real sense of the term; and since it cannot in reality have any experience of sorrow, it cannot in reality regard its cessation as being of the utmost value to it. The reply to such an objection is that the realization of the fact that the cessation of sorrow is of ultimate value to the experiencer, the *puruṣa*, leads the *suddhi* on its onward path of progress. Had it not been so there would be no movement of the *buddhi* on lines of utility. So though pleasure and pain do not belong to *puruṣa*, they may yet be experienced by it and the *buddhi* may be guided by such experiences.

When the Upaniṣad says "that art thou," the idea at the back of it is that the self is not to be identified with any of the elements of the psychosis—the *buddhi*—or with any of the evolutes of the *prakṛti*. The self is part of the pure consciousness—the Brahman. When a man learns from the Upaniṣad text or one's teacher that he is a part of Brahman he tries to realize it through a process of meditation. The difference of the Vedāntic view from that of Sāṃkhya is that the latter rests with the individual selves as the ultimate entities whereas the former emphasizes the Brahman as

the ultimate reality, and also the fact that the reality of all other things, the selves and the matter, depends ultimately on their participation in it.

Brahma-Experience and Experience.

Cause may be defined as the productivity due to direct and immediate perception of the material cause. The *buddhi* is regarded as an effect because, like jugs and other things, it is produced through some direct and immediate intuition of its causal material. This naturally implies that the *buddhi* has a causal material which is directly perceived by some Being and to which His creative activity is directed and this Being is God. It is said in the *Brahma-sūtras* that Brahman can be known by the testimony of the scriptures. But this cannot be true, for the Upaniṣads say that the Brahman cannot be expressed by words or known by intellect. The reply to this is that the denial contemplated in such passages refers only to the fact that Brahman cannot be known in entirety or in its uniqueness by the scriptural texts, but these passages do not mean that it is not possible to have a generic knowledge of the nature of Brahman. It is only when we have such a generic knowledge from the scriptures that we enter the sphere from which we may proceed further and further through the processes of Yoga and have ultimately a direct intuitive apperception of it. The specific nature of God as devoid of any quality or character only means that His nature is different from the nature of all other things, and though such a nature may not be realized by ordinary perception, inference or other sources of knowledge, there cannot be any objection to its being apprehended by the intuition of Yoga meditation. There are some Vedāntists who think that the Brahman cannot be felt or apprehended intuitively, but there is a mental state or function (*vyrtti*) which has the Brahman as its object. Such a mental state destroys the nescience and as a result of this the Brahman shines forth. But Bhikṣu objects to this and says that the *vyrtti* or mental function is admitted for relating the consciousness or the self with the objects, but once this connection is effected the objects are directly apprehended; so, in order to bring Brahman within the sphere of knowledge, the intuitive apperception is in itself sufficient for the purpose. It cannot be held that, since Brahman is itself of

the nature of pure illumination, no special intuitive apprehension is necessary and that the existence of the mental function or *ṛtti* was admitted for explaining the dissolution of *ajñāna*; for Brahman, being of the nature of consciousness, can be realized only through intuitive apprehension which is itself of the nature of knowledge. Since all apprehension is direct and immediate, self-knowledge must also be of the same kind. There is also no necessity to assume a principle of obstruction which has to be overcome as a condition of the rise of knowledge. In the state of deep dreamless sleep a principle of obstruction in the shape of the function of *tamas* has to be admitted in order to explain the absence of knowledge which leads to the absence of all cognitive or practical behaviour. To the opponent's idea that since Brahman is self-luminous it cannot have any relation with anything else, and that since Brahman and the self are identical there cannot be any self-knowledge of Brahman, for the Brahman cannot be both the knower and the known, Bhikṣu's reply is that self-luminousness does not mean unrelatedness; and the absolute identity of the self and the Brahman cannot also be admitted, and even if it be admitted we can explain the method of Brahma-knowledge by the same manner in which our experiential knowledge or self-consciousness can be explained.

Bhikṣu thinks that since we do not find in the *Brahma-sūtras* any account of the origin and growth of knowledge, the Sāṃkhya-Yoga account of knowledge may well be accepted on account of the general affinity of the Sāṃkhya-Yoga ideas with the Vedānta. According to the Sāṃkhya-Yoga there is first a contact of the senses with their respective objects and as a result the *tamas* aspect of the *buddhi* is subordinated at the time; and the *buddhi* as pure *sattva* assumes the form of the object. This state of *buddhi* is called an objective state of the *buddhi* or a sensory idea or state (*sā buddhya-vasthā viśayā-kārā buddhi-ṛttir ity ucyate*). During dreams and contemplative states images of external objects arise in the mind and are directly perceived and therefore valid. The connection of the *puruṣa* with the external objects is thus effected through the intermediary of the *buddhi*. So long as the *buddhi* remains impure the *puruṣa* cannot get itself related to objects through it. It is for this reason that during deep sleep when the *buddhi* is dominated by *tamas* the *puruṣa*-consciousness cannot manifest itself or make itself related with other objects. As soon as the *buddhi* is

modified into a sensory or image-state it is reflected in the *puruṣa*, which then reveals it as a flash of conscious state. It is in this manner that the pure infinite consciousness can manifest itself into finite forms of objects. As the *buddhi* is constantly transforming itself into various forms and reflecting them on the *puruṣa* from beginningless time there is a continuous flow of conscious states only occasionally punctuated by dreamless sleep. The *puruṣa* in its turn is also reflected in the *buddhi* and thereby gives rise to the notion of ego. In this connection Bhikṣu criticizes the view of Vācaspati that the reflection of the *puruṣa* in the *buddhi* is sufficient to explain the cognitive situation, and says that a reflection of consciousness cannot itself be conscious and hence cannot explain why the states of *buddhi* should appear as conscious. But the assumption that the states of *buddhi* are reflected in the consciousness explains their real connection with consciousness. It may be said that since it is only the reflections that are associated with consciousness, the things as they exist are not known. The reply to such an objection is that the *buddhi*-states are but copies of the external objects; and if the copies are intelligized, we have in the validity of such direct acquaintance of the copies the guarantee of their application to objects. It may be said again that when the reflections of the *buddhi*-states in the consciousness appear as one with it and therefore produce the phenomenon of knowledge we have in such phenomena an illusory unity of the consciousness with the states; our knowledge then becomes illusory. The reply to such an objection is that even if there is an element of illusion in knowledge, that does not touch the reality and validity of the objects to which such knowledge refers. Valid knowledge (*pramā*) thus consists of this reflection of the *buddhi*-states in the *puruṣa*. The fruit of the cognitive process (*pramāṇa-phala*) belongs to the pure consciousness or the *puruṣa* who thus behaves as the knower, though he is absolutely unattached to all experiences. The Vaiśeṣikas lay stress on the appearance of knowledge as produced and destroyed and therefore regard knowledge as being produced or destroyed by the collocation of causes. The reflection of the mental states to *puruṣa* is explained by them as if the knowledge belonged to the self. The Vedāntic epistemological process in which the *puruṣa* appears to be the knower and the enjoyer is explained by them as being due to a separate cognitive process called *anu-vyavasāya*.

The transcendental experience of God has also to be explained on the basis of the origin of ordinary experiential knowledge. Through the understanding of the meaning of the scriptural texts and by the processes of Yoga there arises in the *buddhi* a modification of the form "I am Brahman." This valid form of modification, being reflected in the *puruṣa*, is revealed as an intuitive apperception of the fact as true self-knowledge belonging to *puruṣa*. The difference between ordinary experiential knowledge and this knowledge is that it destroys egoism (*abhimāna*). In such a conception of self-knowledge the objection that the self cannot be both the knower and the known does not hold good; for the self that is known, being a mental state, is different in character from the transcendent self which knows it. The transcendent self as such is the knower, while its reflection in the *buddhi* as coming back to it is the self that is known¹. The objection that the admission of the possibility of self-knowledge stands against the doctrine of the self-luminosity of the self is not valid. The self-luminosity of the self simply means that it shines by itself and does not require the aid of any conditions to manifest itself.

Self-Luminosity and Ignorance.

Citsukha has defined self-luminosity as that which not being knowable may yet be treated or felt as immediate (*avedyatve sati aparokṣa-vyavahāra-yogyatvam*). Bhikṣu argues that such a definition of self-luminosity (*svaprakāśatva*) is quite inadmissible. It is nowhere so defined in the Upaniṣads and it does not follow from the etymology of the word *svaprakāśatva*. The etymology only indicates the meaning "known by itself." Again, if a thing is not known or cognized, it cannot for that simple reason have any relation to us; and such a meaning would be directly against the scriptural testimony which affirms that the ultimate truth can be apprehended or intuited. It may be suggested that though the Brahma-state of the mind cannot be directly known yet it will have the effect of removing the *avidyā* in the *puruṣa*. But this is open to various objections. Firstly, the self-luminous is a valid means of knowledge—a *pramāṇa*; but the mere removal of the *avidyā* from

¹ *ātmā'pi bimba-rūpeṇa jñātā bhavati svagata-sva-pratibimba-rūpeṇa ca jñeyah. Vijñāna-mṛta-bhāṣya*, I. 1. 3.

the *puruṣa* cannot be regarded as valid knowledge or a *pramāṇa*. In this connection it is also relevant to ask the meaning of the term "*avidyā*." If it means an illusory mental state, it must be a state of the *buddhi*, and its destruction must also belong to the *buddhi* and not to the *puruṣa*. If it means the psychical instincts or root-inclinations which are the cause of errors, then also since such root-instincts belong to the *guṇas* of the *prakṛti* the destruction of such root-instincts must also qualify the *prakṛti*. If it is regarded as a *tamas*—substance which covers the self, the supposition would be inadmissible, for if the *tamas* inherent in the *buddhi* is not removed there cannot be any modification of the *buddhi* copying the object in it, and if the *tamas* in the *buddhi* is once so removed then there cannot be any reflection of it in the *puruṣa*. Thus the view that knowledge leads to the dissolution of the veil of ignorance cannot be supported. The veil is only related to the instruments of knowledge, such as the eye, and cannot therefore be regarded as having anything to do with the pure consciousness. The explanation of the rise of knowledge as being due to the removal of the veil in the pure consciousness cannot therefore be justified. There cannot be any veil in the self. If the self be of the nature of pure consciousness, there cannot be any veil of ignorance inherent in it as the two suppositions are self-contradictory. Again, if it is supposed that the world-appearance is due to the operation of the principle of ignorance or *avidyā* in the mind and if it is supposed that true knowledge dispels such ignorance, then we are led to the absolutely unwarrantable conclusion that the world may be destroyed by knowledge, or that when one self attains true knowledge the world-appearance as such ceases, or that when emancipation is attained during the lifetime of a saint he will have no experience of the world around him. If it is held that the emancipated saint has still an element of ignorance in him, then the theory that knowledge destroys ignorance has to be given up. Moreover, if the self be regarded as being absolutely unattached to anything (*a-saṅga*), it is wrong to suppose that it would be associated with *avidyā* or ignorance. The veil can have reference only to the mental states, but it cannot have any relation to pure and unchangeable consciousness; for we have no analogy for such a thing. Again, if it is held that there is natural association of ignorance with pure consciousness, such an association can never be broken off. If such an

association be regarded as the consequence of some causal condition, it may well be said that such causality may be found in the mental states themselves. At least this would be a much simpler supposition than the primary assumption of a relationship of *avidyā* with pure consciousness and then to assume the operation of the mental states to dissolve it. The association of a veil with the mental states has to be admitted at least in the case of deep sleep, swoon or senility. Thus, if the veil has to be associated with the mental states, as the instrument of knowledge, it is quite unnecessary to assume it with reference to the self or pure consciousness. Patañjali, in his *Yoga-sūtra*, has defined *avidyā* as a mental state which apprehends the non-eternal as the eternal, the impure as the pure, the pleasure as sorrow. It is not, therefore, to be regarded as a separate substance inseparably associated with pure consciousness. In the same way it is wrong to define knowledge as the cessation of *avidyā*, which belongs to the *puruṣa* in this capacity. The proper way of representing it would be to say that knowledge arises in the *puruṣa* with the cessation of *avidyā* in the mental states. With the rise of the final knowledge as "I am Brahman" towards which the whole teleological movement of the *prakṛti* for the *puruṣa* was tending, the ultimate purpose of the *prakṛti* for the sake of the *puruṣa* is realized, and that being so the teleological bond which was uniting or associating the *buddhi* with the *puruṣa* is torn asunder and the mind or the *buddhi* ceases to have any function to discharge for the sake of the *puruṣa*. With the destruction of false knowledge all virtue and vice also cease and thus there is the final emancipation with the destruction of the integrity of the *buddhi*. *Avidyā* (false knowledge), *asmitā* (egoism), *rāga* (attachment), *dveṣa* (antipathy), *abhiniveśa* (self-love) may all be regarded as *avidyā* or false knowledge which is their cause, and *avidyā* may also be regarded as *tamas* which is its cause. This *tamas* obstructs the manifestation of *sattva* and it is for this reason that there is false knowledge. When the *tamas* is dominated by the *sattva*, the *sattva* manifests through its instrumentality the ultimate self. The words "knowledge" (*jñāna*) and "ignorance" (*ajñāna*) are used in the scriptures to denote *sattva* and *tamas*. The word *tamas* is used to denote *ajñāna* and there is no such *ajñāna* as indescribable or indefinite entity as is supposed by the Śāṅkarites. In ordinary experiential knowledge this *tamas* is only temporarily removed, but

in the case of the rise of true and ultimate knowledge the power of the *guṇas* to undergo modification for the sake of the relevant *puruṣa* is destroyed. Before the *sattva* can show itself in its own *ṛtti* or state, it must dominate the *tamas* which would have resisted the *sattva* state. Thus the ontological opposition of the *sattva* and the *tamas* must settle their differences before a psychological state can make its appearance.

Relation of Sāṃkhya and Vedānta according to Bhikṣu.

Bhikṣu thinks that the Sāṃkhya and Yoga philosophies are intimately connected with the Vedānta and are referred to in the Upaniṣads. For this reason when certain topics, as for example the problem of experiential knowledge, are not described in the Vedānta, these are to be supplemented from the Sāṃkhya and Yoga. If there is any seeming antagonism between the two, these also have to be so explained that the opposition may be reconciled. Bhikṣu takes this attitude not only towards Sāṃkhya-yoga but also towards Nyāya-Vaiśeṣika, and the *Pañcarātra*. According to him all these systems have their basis in the Vedas and the Upaniṣads and have therefore an internal affinity which is not to be found in the Buddhists. The Buddhists are therefore the only real opponents. Thus he attempts to reconcile all the *āstika* systems of philosophy as more or less supplementary to one another or at least presenting differences which can be reconciled if they are looked at from the proper angles of vision. Bhikṣu collects his materials from the Upaniṣads, the Purāṇas and the *smṛtis* and tries to build his system of interpretation on that basis. It may, therefore, be regarded on the whole as a faithful interpretation of the theistic Vedānta which is the dominant view of the Purāṇas in general and which represents the general Hindu view of life and religion. Compared with this general current of Hindu thought, which flows through the Purāṇas and the *smṛtis* and has been the main source from which the Hindu life has drawn its inspiration, the extreme Sāṃkhya, the extreme Vedānta of Śaṅkara, the extreme Nyāya, and the extreme dualism of Madhva may be regarded as metaphysical formalisms of conventional philosophy. Bhikṣu's philosophy is a type of *bhedā-bheda* which has shown itself in various forms in Bharṭṛ-prapañca,

Bhāskara, Rāmānuja, Nimbārka and others. The general viewpoint of this *bhedā-bheda* philosophy is that it believes in the reality of the universe as well as in its spirituality, the distinctness of the individual souls as well as in their being centres of the manifestation of God, moral freedom and responsibility as well as a spiritual determinism, a personal God as well as an impersonal reality, the ultimate spirit in which matter and pre-matter are dissolved into spirituality, an immanent teleology pervading through matter and souls both in their origin and mutual intercourse as well as in the holiness of the divine will, omnipotence and omniscience, in the superior value of knowledge as well as of love, in the compulsoriness of moral and social duties as well as in their abnegation.

The ordinary classical Sāṃkhya is well known to be atheistic and the problem arises as to how this may be reconciled with theism and the doctrine of incarnations. In interpreting *sūtra* 1. 1. 5, of the *Brahma-sūtra*, Bhikṣu says that since the scriptures say that "it perceived or desired," Brahman must be a Person, for desire or perception cannot be attributed to the inanimate pre-matter (*prakṛti*). Śaṅkara, in interpreting this *sūtra*, asserts that the purport of the *sūtra* is that *prakṛti* is not the cause of the world because the idea of a *prakṛti* or *pradhāna* is unvedic. Bhikṣu quotes a number of passages from the Upaniṣads to show that the idea of a *prakṛti* is not unvedic. *Prakṛti* is spoken of in the Upaniṣads as the cause of the world and as the energy of God. *Prakṛti* is also spoken of as *māyā* in the *Śvetāśvatara*, and God is spoken of as *māyāvī* or the magician who holds within Himself the magic power. The magician may withhold his magic, but the magic power lies all the same in him (*māyāyā vyāpāra-nivṛttir evā'vagamyate na nāśah*)¹. The ordinary *prakṛti* is always undergoing change and transformation and it is only the special *sattva*-stuff associated with God that is always regarded as unchanging.

A question that may naturally arise in this connection is, if God is Himself unchangeable and if the *sattva*-body with which He is always associated is also always unchangeable, how is it that God can have a desire to produce the world at any particular time? The only explanation of this is that the attribution of will to God at a particular creative moment is only a loose usage of language. It

¹ *Vijñāna-mṛta-bhāṣya*, 1. 1. 5.

means only that when the proper collocation of the causal conditions is ready for emergence into creative production at any particular point of time, it is designated as the manifestation of the creative will of God. God's knowledge and will cannot have a beginning in time¹. But if God's creative will be regarded as the cause of the movement of the *prakṛti*, then the Sāṃkhya view that the movement of the *prakṛti* is solely due to its inherent teleology to be of service to the *puruṣas* becomes indefensible. The *sattva*, *rajas* and *tamas* in the *mahat* are indeed regarded in Sāṃkhya as the triad of three persons, Brahmā, Viṣṇu and Maheśvara—the three created gods as it were (*janye-śvara*). But the Sāṃkhya does not believe in any eternal God (*nitye-śvara*). According to Yoga the *sattva* part of *mahat* associated with eternal powers and existing eternally in the emancipated state is the person called *Īśvara*. His *sattva* body is, however, of the nature of an effect as it is derived from the *sattva* part of *mahat* and His knowledge is also not timeless.

In justification of Sāṃkhya, Bhikṣu maintains that the denial of God by the Sāṃkhya may be interpreted to mean that there is no necessity of admitting God for salvation. Salvation may be achieved by self-knowledge also. If this process is to be adopted, then it becomes quite unnecessary to prove the existence of God. It may, however, be remarked in this connection that this explanation of Bhikṣu can hardly be regarded as correct, for the *Sāṃkhya-sūtra* is not merely silent about God, but it makes a positive effort to prove the non-existence of God, and there is not one redeeming statement that can be interpreted to mean that Sāṃkhya was not antagonistic to theism. Bhikṣu, however, further reiterates that Sāṃkhya was not atheistic and refers to the statement in the *Śvetāśvatara* (vi. 16) that salvation can be obtained by knowing the ultimate cause as declared in the Sāṃkhya-yoga and to the statement of the *Gītā* where atheism is regarded as a demonic view.

In referring to Yoga, Bhikṣu says that it is curious that though the Yoga admitted the existence of God yet it did not make any effort to repudiate the idea that He might be partial or cruel; and instead of giving God His true cosmological place accepted a naturalistic view that *prakṛti* of itself passes through the transformatory changes, being determined by its own inherent teleology in relation to the *puruṣas*. *Īśvara*, in Patañjali's *Yoga-sūtra*, is an

¹ *Vijñāna-mṛta-bhāṣya*, I. 1. 5.

object of Yoga meditation and He shows His mercy to his devotees and other beings. Bhikṣu, however, thinks that unless God is made to serve a cosmological purpose the association of *prakṛti* with the *puruṣas* cannot be explained.

The *Īśvara* is not conditioned in His activities by any entities which are associated with *rajas* or *tamas* which are of a fluctuating nature but with an entity which is always the same and which is always associated with eternal knowledge, will and bliss¹. The natural implication of this is that the will of God behaves like an eternal and unchangeable law. This law, however, is not a constituent of God but a constituent of *prakṛti* itself. It is through this part, an eternal unchangeable law which behaves as the eternal will and knowledge of God, that the phenomenal or the changeable part of *prakṛti* is determined.

In the *Gītā* Śrī Kṛṣṇa says that He is the highest *puruṣa* and that there is nothing higher than Him. Bhikṣu gives two explanations of such statements which seem to be in opposition to the concept of God explained above. One explanation is that the reference of Kṛṣṇa as God to Himself is only a relative statement, made in a popular manner which has no reference to the nature of absolute God who is unrelationable to ordinary experience. The other explanation is that Kṛṣṇa calls Himself God by feeling Himself as identified with God. There is thus a distinction between *para-brahma* and *kārya-brahma*; and Śrī Kṛṣṇa, being the *kārya-brahman*, popularly describes Himself as the *kāraṇa-brahma*. When other beings identify themselves with *brahma*, such identification is true only with reference to *kārya-brahma*, Śrī Kṛṣṇa or Nārāyaṇa. They therefore have no right to speak of themselves as the absolute God. Beginningless absolute Brahman is unknown and unknowable, even by the gods and the sages. It is only the Nārāyaṇa who can know Him in His absolute nature. Nārāyaṇa is therefore to be regarded as the wisest of all beings². Those beings who in the previous creation became one with God by *sāyujya-mukti* exist in the *Īśudeva-tyūha*. In the *Īśudeva-tyūha* Vāsudeva alone is the

¹ *rajas-tamah-sambhinnatayā malinaṃ kārya-tattvaṃ parama-śvarasya no' pādhiḥ kintu kevalaṃ nitya-jñāne-ccā-nandā-dimat-sada-ka-rūpaṃ kāraṇa-sattvaṃ eva tasyo' pādhiḥ. Īśvara-gītā. MS.*

² *anādyam taṃ paraṃ brahma na devā
narāyaṇa viduḥ
ekas tad vedu bhagavān dhātā nārāyaṇaḥ
prabhuh. Viṣṇāna-mṛta-bhāṣya, 1. 1. 5.*

eternal God; the other beings are but His parts. The other *vyūhas*, such as the Saṃkarṣaṇa, Pradyumna and Aniruddha, are but the manifestations of Vāsudeva (*vibhūti*) and they are to be regarded as partial creation of God or as Brahmā, Viṣṇu and Rudra. The power of the lesser gods, Viṣṇu or Śiva, is limited, since they cannot produce any change in the regulation of the cosmic affairs. When they speak of themselves as the Supreme God they do so only by a process of self-identification with the absolute God. The mahattatva, with its threefold aspect as *sattva*, *rajas* and *tamas*, forms the subtle body of Brahmā, Viṣṇu and Śiva or Saṃkarṣaṇa, Pradyumna and Aniruddha. These three gods, therefore, are supposed to have the one body, the “*mahat*,” which forms the basic foundation and substratum of all cosmic evolution. It is for this reason that they are said to have the cosmos or the universe as their body. These three deities are regarded as mutually interdependent in their operations, like *vāta*, *pitta* and *kapha*. It is for this reason that they are said to be both different from one another and yet identical¹. These three deities are identical with “*mahat*” which again is the unity of *puruṣa* and *prakṛti*. It is for this reason that Brahmā, Viṣṇu and Maheśvara are to be regarded as the partial manifestations (*aṃśāvatam*) of Gods and not direct incarnations².

The penetration of *Īśvara* into *pradhāna* and *puruṣa* is through His knowledge, will and effort by which He rouses the *guṇas* and helps the production of the *mahat*. Bhikṣu takes great pains to show that Bhagavān or absolute God is different from Nārāyaṇa or Viṣṇu who are direct manifestations of Him just as sons are of the father. Bhikṣu here differs from the opinion of the *Pañcarātra* school and of other thinkers such as Madhva, Vallabha and Gauḍīya Vaiṣṇavas who regard Nārāyaṇa, Viṣṇu and Kṛṣṇa as identical with God. The other *avatāras*, such as the Matsya, Kūrma, etc., are regarded by Bhikṣu as the *līlā-vatāra* of Viṣṇu and the *āveśā-vatāra* of God as *bhagavān* or *parameśvara*.

¹ *Vijñāna-mṛta-bhāṣya*, I. 1. 5.

² In this connection Bhikṣu quotes the famous verse of the *Bhāgavata*, *ete cā mśa-kalāḥ puṃsaḥ kṛṣṇas tu bhagavān sryam*. I. 1. 5. He, however, paraphrases Kṛṣṇa as Viṣṇu and explains *svayaṃ bhagavān* as being the part of God just as the son is the part of the father: *atra kṛṣṇo viṣṇuḥ svayaṃ parameśvaras tasya putravat sākṣād aṃśa ity arthaḥ*. *Ibid*. This, however, goes directly against the interpretation of the verse by the Gauḍīya school of Vaiṣṇavas who regard Kṛṣṇa as being the absolute God.

Māyā and Pradhāna.

Śaṅkara, in his commentary on the *Vedānta-sūtra*, I. 1. 4, discusses the meaning of the term *avyakta* and holds that it has no technical meaning but is merely a negation of *vyakta* or manifested form. He says that the word *avyakta* is compounded of the negative particle *na* and *vyakta*. He points out that since the term *avyakta* has thus a mere etymological meaning and signifies merely the unmanifested, it cannot be regarded as having a technical application to the *Pradhāna* of Sāṃkhya. The *avyakta* according to Śaṅkara thus means the subtle cause, but he does not think that there is an independent subtle cause of the world corresponding to the *Pradhāna* of the Sāṃkhya¹. He holds that this primal state of the existence of the universe is dependent upon God and is not an independent reality. Without the acceptance of such a subtle power abiding in God, God cannot be a creator. For without power God cannot move Himself towards creation; it is the seed power called *avidyā* which is denoted by the term *avyakta*. It is the great sleep of *māyā* (*māyāmayī mahā-supti*) depending upon God. In it all the *jīvas* lie without any self-awakening. The potency of the seed power is destroyed by knowledge in the case of emancipated beings and for that reason they are not born again². Vācaspati, in commenting on it in his *Bhāmātī*, says that there are different *avidyās* with reference to different selves. Whenever an individual attempts to gain wisdom, the *avidyā* associated with him is destroyed, though the *avidyā* associated with other individuals remains the same. Thus, even though one *avidyā* is destroyed, the other *avidyās* may remain in an operative condition and may produce the world. In the case of the Sāṃkhyaists, however, who admit one *pradhāna*, its destruction would mean the destruction of all. Vācaspati says further that if it is held that though the *pradhāna* remains the same yet the *avidyā* as non-distinction between *puruṣa* and the *buddhi* is responsible for bondage, then there is no necessity of admitting the *prakṛti* at all. The existence and the non-existence of *avidyā* would explain the problem of bondage and emancipation.

¹ *yadi rayam sva-tantram kāñcit prāg-avasthām jagataḥ kṛāṇatvenā' bhyupagacchema praśaṅjayema tadā pradhāna-kāraṇa-vādam. Vedānta-sūtra, I.*

4. 3.

² *muktānām ca punar an utpattiḥ; kutaḥ vidyayā tasyā vīja-śakter dāhāt. Ibid.*

The objection that the distinction of selves depends upon *avidyā* and the distinction of *avidyā* upon the distinction of the selves is invalid, for the process is beginningless. The term *avyakta* refers to *avidyā* in a generic sense as including all *avidyās*. The *avidyā* rests in the individual but is yet dependent upon God as its agent and object. The *avidyā* cannot come into operation without having the Brahman as its support, though the real nature of the selves is Brahman; yet, so long as they are surrounded by *avidyā*, they cannot know their real nature.

In reply Bhikṣu says that since without power God alone is unable to create the manifold universe it has to be admitted that God does so by a power distinct from Him, and this power is the *prakṛti* and the *puruṣa*. If it is said that this power is *avidyā*, then also since it is a dual factor separate from Brahman that may as much nullify the monistic doctrine as the admission of *prakṛti* and *puruṣa*. It cannot also be said that in the time of *pralaya* the *avidyā* is non-existent, for in that case there being only Brahman the world would have to be admitted as coming into being from Brahman alone, and the selves that lie identified with Brahman and one with Him would, even though emancipated, undergo the world-process (*saṃsāra*). If it is held that bondage and emancipation are all imaginary, then there is no reason why people should undergo so much trouble in order to attain an imaginary emancipation. If it is held that *avidyā* may be said to have a secondary or *vyavahārika* existence at the time of *pralaya*, and if it is argued that under the circumstances bondage and emancipation may also be regarded as having a merely secondary existence, the view of monism would be unexceptional. But if such an *avidyā* be admitted which has mere *vyavahārika* or secondary existence, the same may be supposed with regard to *pradhāna*. If we inquire into the meaning and significance of the term *vyavahārika*, we find that its connotation is limited to the power of effectuation and service towards the fulfilment of the purpose. If that is so, then *prakṛti* may also be admitted to have a similar kind of existence¹. It is true no doubt that the *pradhāna* is regarded as eternal, but this eternality is an eternality of ceaseless change. *Avidyā* is regarded by the Vedāntists as *apāramārthikā*, that is, *avidyā* is not true

¹ *pradhāne' pīdaṃ tulyaṃ pradhāne artha-kriyā-kāritva-rūpa-vyavahārika-sattvasyaivā'smākam iṣṭattvāt. Vijnāna-mṛta-bhāṣya*, 1. 4. 3.

absolutely. This negation of absolute truth may mean that it is not immediate and self-apparent or that it cannot manifest itself as being or that it has no existence in all times. But such limitations are true also of *pradhāna*. The *pradhāna* is eternal as changeful, but it is non-eternal in all its products. All the products of *prakṛti* are destructible; being unintelligent by nature they can never be self-apparent. Again, though *pradhāna* may be said to be existent in any particular form at any particular time, yet even at that time it is non-existent in all its past and future forms. Thus, since *vyavahārikatva* cannot mean absolute non-existence (like the hare's horn) and since it cannot also mean absolute existence it can only mean changefulness (*pariṇāmittva*); and such an existence is true of the *pradhāna*. Thus Śāṅkarites do not gain anything in criticizing the doctrine of *pradhāna*, as a substitute of the *avidyā* is supposed by them to be endowed with the same characteristics as those of the *prakṛti*.

It is thus evident that Śāṅkara's criticism against *prakṛti* may well apply to the *prakṛti* of Īśvara Kṛṣṇa, but it has hardly any application to the doctrine of *prakṛti* as conceived in the Purāṇas as interpreted by Bhikṣu, where *prakṛti* is regarded as a power of Brahman. If *avidyā* is also so regarded, it becomes similar to *prakṛti*. As it is believed to be existent in a potential form in God, even in the *pralaya*, most of the connotations of *avidyā* that distinguish it from the absolute reality in the Brahman are also the connotations of *prakṛti*.

According to the view propounded by Bhikṣu *pradhāna* is not regarded as having a separate and independent existence but only as a power of God¹.

In explaining *Brahma-sūtra* 1. 4. 23, Bhikṣu points out that *Īśvara* has no other *upādhi* than *prakṛti*. All the qualities of *Īśvara* such as bliss, etc., proceed from *prakṛti* as is shown in *Patañjali-sūtra*. *Prakṛti* is to be regarded as the characteristic nature of Brahman, which is not directly the material cause of the world, but is only the abiding or the ground cause (*adhiṣṭhāna-kāraṇa*), and *prakṛti*, as it were, is its own character or part (*sṛīyo bhāvaḥ padārtha upādhir ity arthah*). The relation between this *upādhi* and *prakṛti* is one of the controller and the controlled or the possessor

¹ *Prakṛtasya tad-upapattaye pradhānam kāraṇatva-svīritavac chakṛtvīdhava-*
vo'cyate na svatantryeṇa'ity aṇ adhiyāta ity arthah *Viṅṇāna-mṛta-bhāṣya*, 1. 4. 4.

and the possessed. The fact that God can think or will also testifies to the fact that God must have as His instrument the *prakṛti* which can make such thinking possible for Him. For God is in Himself only pure consciousness. *Prakṛti*, however, behaves as the *upādhi* of God with its purer parts of the eternally pure *sattva*. *Kāla* and *adr̥ṣṭa* also form part of the *prakṛti* and as such are not regarded as the separate powers of God.

Bhikṣu's criticism of the Sāṃkhya and Yoga.

In commenting on the *Brahma-sūtra*, II. 1. 1, 2, 3, Bhikṣu says that Manu speaks of the original cause as being the *prakṛti*, and so also does the Sāṃkhya, and both of them are regarded as authoritative¹. But since the Sāṃkhya doctrine of atheism is contradicted by the opinions of Patañjali and Parāśara, the view of the *Brahma-sūtras* cannot be interpreted merely on the atheistic suggestion of Sāṃkhya. It has also to be admitted that the atheistic portion of Sāṃkhya has no authoritative support either in the Vedas or in the Purāṇas and has therefore to be regarded as invalid².

It is wrong, however, to suppose that Kapila really intended to preach atheism. He quoted atheistic arguments from others and showed that even if God were not accepted emancipation could be obtained by differentiation of *prakṛti* from *puruṣa*. The Sāṃkhya also emphasizes the fact that emancipation can be obtained merely by knowledge. This, however, should not be interpreted as being in conflict with the Upaniṣadic texts which declare that emancipation can be obtained only by the true knowledge of God. For these signify only that there are two ways of obtaining emancipation, the inferior one being through knowledge of the distinction of *prakṛti* and *puruṣa*, and the superior one through the true knowledge of God. The Yoga also shows two ways of emancipation, the inferior one being through the ordinary Yoga processes, and the superior one through the renunciation to God of all actions and through devotion to Him. It is also wrong to suppose that the Sāṃkhya is traditionally atheistic, for in the *Mahābhārata* (*Śānti-parvan* 318. 73) and *Matsya Purāṇa* (4. 28) we hear of a twenty-sixth category,

¹ *sāṃkhyam yogam pañca-rātram vedāḥ pāsupatam tathā* 1. *paras-parāṇy aṅgāny etāni hetubhir na virodhayet. Vijñāna-mṛta-bhāṣya*, II. 1. 1.

² *itaś ce'śvara-pratiṣedhā-mśe kapila-smṛteḥ mūlānām anupalabdheḥ a-pratyakṣatvāt durvalatvam ity āha. Ibid.*

the God. So the difference between the theistic and the atheistic Sāṃkhya is due to the difference of representation as the true Sāṃkhya doctrine and the Sāṃkhya doctrine which proposes to ensure emancipation even for those who are not willing to believe in God. In this connection Bhikṣu admits the probability of two different schools of Sāṃkhya, one admitting *Īśvara* and the other not admitting it, and it is only the latter which he thinks to be invalid¹. He also refers to the *Kūrma Purāṇa* in which the Sāṃkhyaists and the Yogins are said to be atheistic. The chief defect of the Śāṅkara school is that instead of pointing out the invalidity of theistic Sāṃkhya, Śāṅkara denies all theistic speculations as non-vedic and misinterprets the *Brahma-sūtras* accordingly. Bhikṣu refers to *Praśna*, 4. 8, where the twenty-three categories of Sāṃkhya are mentioned and only *prakṛti* has been omitted. The *mahat-tattva* is not mentioned directly, but only as *buddhi* and *citta*. The fourfold division of the *buddhi-tattva* as *manas*, *buddhi* *ahaṃkāra* and *citta* is also admitted there. In the *Garbha Upaniṣad* eight *prakṛtis* and sixteen *vikāras* are mentioned. In the *Maitreya-upaniṣad* we hear of the three *guṇas* and their disturbance by which creation takes place. We hear also that the *puruṣas* are pure consciousness. In *Maitrī Upaniṣad*, v. 2, it is said that the *tamas*, being disturbed by the supreme being, gives rise to *rajas* and that to *sattva*². In the *Cūlikā Upaniṣad* the categories of the Sāṃkhya doctrine are also mentioned in consonance with the monistic doctrine of the Vedānta. It also says that there are various schools of the Sāṃkhya, that there are some who admit twenty-six categories, others twenty-seven, and again others who admit only twenty-four categories. There is also said to be a monistic and also a dualistic Sāṃkhya and that they find expression in three or five different ways. Thus Vijñāna Bhikṣu says that the Sāṃkhya doctrine is definitely supported by the Upaniṣadic texts.

Concerning the Yoga also it can be said that only that part of it may be regarded as opposed by the Upaniṣads which holds a separate and independent existence of *prakṛti* as apart from *Īśvara*. In the *Sūtras* of Patañjali it is said that God helps the movement of the *prakṛti* only by removing the obstacles, just as a ploughman enables

¹ *athavā kapilai-ka-deśasya prāmānyam astu. Vijñāna-mṛta-bhāṣya*, II. 1. 2.

² *tamo vā idm ekamagre āsti vai rajasas tat pure syāt tat pareṇ'ritam viśamatvaṃ prayāty etad rūpaṃ tad rajasḥ khalv i-ritam viśamatvaṃ prayāty etad vai sattvasya rūpaṃ tat sattvaṃ eva. Maitrī Upaniṣad*, v. 2.

water to pass from one field to another. But the Upaniṣads definitely say that God is the generator of the movement and the disturbance of the *prakṛti*. The *sattva* body of God is thus there held to be a product of *prakṛti* as it comes into being from the *prakṛti* through desire in a previous creative cycle. The *sattva* body of God is thus derived from the *prakṛti*, through the will of God serving as the vehicle of the will of God for the removal of the obstructions in the course of the evolutionary process of the *prakṛti*. *Prakṛti* in itself therefore is not regarded by Patañjali as the *upādhi* of *Īśvara*¹. Bhikṣu seeks to explain this part of the Yoga doctrine also in the same manner as he did with the Sāṃkhya by accepting the so-called *abhyūpagama-vāda*. He maintains that the Yoga holds that even if it is considered that the *prakṛti* is independent and runs into evolutionary activity by herself, undetermined by the eternal knowledge and will of God, and even if it be admitted that the eternal God has no eternal knowledge and will and that the movement of *prakṛti* is due to an inner teleology in accordance with *karma*, and that in the beginning of the creation *prakṛti* is transformed into the *sattvo'pādhi* of God, even then by self-abnegation to God *kaivalya* can be attained. Thus, in the Yoga view the *upādhi* of *Īśvara* is a product and not the material or the instrumental cause of the world, whereas in the Vedānta view as propounded by Bhikṣu the *upādhi* of *Īśvara* is both the material and the instrumental cause of the world, and this *upādhi* which forms the material stuff of the world is *prakṛti* herself and not her product. In the Yoga view God is eternal, but His thought and will are not eternal. This thought and will are associated with the *sattva* part of *prakṛti* which lies embedded in it at the time of *pralaya* which only shows itself at the beginning of a new creative cycle through the potency left in it by the will of God in the previous creative cycle. God, in the view of Yoga, is thus not both the material and the instrumental cause of the world as the Vedānta holds. According to the Vedānta as explained by Bhikṣu, the *prakṛti* plays her dual part; in one part she remains as the eternal vehicle of the eternal knowledge and will of God, and through the other part she runs through an evolutionary process by producing disturbances of *sattva*, *rajas* and

¹ *yogā hi'śvarasya jagan-nimittatvaṃ prakṛtitenā'bhyupagacchanti Īśvaro-pādheh sattva-viśeṣasya purva-sargīya-tat-saṃkalpa-vaśāt sargā-dau sva-tantra-prakṛtita utpaty-āṅgikārāt. Vijñāna-mṛta-bhāṣya*, II. 1. 2.

tamas. This also explains the Purāṇic view of the gradual derivation of *sattva*, *rajas* and *tamas* as stages in the evolution of *prakṛti* through which at a later stage the cosmic evolution takes place. Thus the *prakṛti* which remains associated with God as the vehicle of His knowledge and will is unchangeable and eternal¹.

Īśvara-gītā, its Philosophy as expounded by Vijñāna Bhikṣu.

In the second part (*uttara-vibhāga*) of the *Kūrma Purāṇa* the first eleven chapters are called *Īśvara-gītā*. In the first chapter of this section Suta asks Vyāsa about the true knowledge leading to emancipation as originally instructed by Nārāyaṇa in his incarnation as a tortoise. It is reported by Vyāsa that in Vadarikāśrama in an assembly of the sages Sanat-kumāra, Sanandana, Sanaka, Aṅgirā, Bhṛgu, Kaṇāda, Kapila, Garga, Valadeva, Śukra, and Vasiṣṭha Ṛṣi Nārāyaṇa appeared and later on Śiva also came there. Śiva then at the request of the sages gave a discourse regarding the ultimate nature of reality, the world and God. The real discourse begins with the second chapter. Vijñāna Bhikṣu wrote a commentary on the *Īśvara-gītā*; he thought that since the *Īśvara-gītā* contains the main purport of the *Bhagavad-gītā* it was unnecessary for him to write any commentary on the latter. Apart from the Sāṃkhya and Yoga works, Vijñāna Bhikṣu wrote a commentary on the *Brahma-sūtra*, a commentary on the Upaniṣads, and a commentary on the *Īśvara-gītā* of the *Kūrma Purāṇa*. In his commentary on the *Brahma-sūtra* he quotes a passage from Ācārya of the thirteenth century. He himself probably flourished some time in the fourteenth century. Bhikṣu's other works are *Sāṃkhya-pravacana-bhāṣya*, *Yoga-vārtika*, *Yoga-sūtra*, *Sāṃkhya-sāra*, and the *U'padeśa-ratnamālā*. In his interpretation of the *Brahma-sūtra* and of the *Īśvara-gītā* he has followed the line of interpretation of Vedānta as adopted in the Purāṇas, where the Sāṃkhya-yoga and Vedānta appear to be welded together into one indivisible harmonious system. The philosophy of the *Īśvara-gītā* as dealt with here is based upon Bhikṣu's commentary, called the *Īśvara-gītā-bhāṣya* which was available to the present writer as a manuscript by courtesy of M. M. Gopīnātha Kavirāja, of the Benares Sanskrit College.

¹ *Vijñāna-mṛta-bhāṣya*, pp. 271, 272.

The main questions that were asked by the sages which led to the discourse of Śiva are the following: (1) What is the cause of all? (2) Who suffers rebirth? (3) What is the soul? (4) What is emancipation? (5) What is the cause of rebirth? (6) What is the nature of rebirth? (7) Who can realize all? (8) What is the ultimate reality, the Brahman? The answers to these questions are not given serially, but the most important topics as they appeared to the instructor, Śiva, were handled by him in his own order of discourse. Thus the eighth question was taken up for answer before all other questions. This answer begins with a description of the nature of *Ātman* not as the individual soul, but as the highest self.

Vijñāna Bhikṣu seems to acknowledge the doctrine of absolute absorption or assimilation of the individual soul within the universal and infinite soul. And even during his existence in this world, the soul is said to be merely a witness.

He explains that in the answer to the eighth question in the *Kūrma Purāṇa*, II. l. 7, p. 453¹, the word *ātmā* refers to the God-head, though in ordinary usage it stands only for the finite souls, and suggests the self-sameness of the finite and infinite souls. The reference here is thus to the *prākṛtā-tmā* and not to the *jīvā-tmā*². God is called *sarvā-ntara* as He has already entered the hearts (*antaḥ*) of the diverse living beings and exists there in the capacity of being only a witness (*sarveṣāṃ sva-bhinnānām antaḥ-sākṣitvena' nugataḥ*)³. A *sākṣī* (witness) is he who illuminates (*sva-prati-vimbīta-vastu-bhāsaḥ*), without any efforts on his part (*vyāpāram vinai' va*). He is called *antaryāmi* on account of his association with finite intelligences and through this association even the individual soul shares the greatness of the highest self.

Vijñāna Bhikṣu says that the line "*asmād vijāyate viśvam atraī' va pravīṇiyate*" occurs here by way of giving a reason for the *śakti-śaktimad-a-bhedatva* doctrine so ably put forth by calling the ultimate Reality or *paramā-tman*, *antaryāmin* and then explaining the doctrine a little by giving him a few adjectives more to bring out the significance of the esoteric doctrine or suggestion of *śakti-śaktimad-abhedatva*. Now it is said that as it is from Him that the inverse-effects are created, in Him they exist and in Him they are

annihilated. He is non-different (or better, inseparable) from *puruṣa* and *prakṛti*, because of His being the support and the ground of the whole universe beginning from *puruṣa* and *prakṛti*; i.e. of the effects right down from *puruṣa* and *prakṛti* and inclusive of them. If like the body He had not superintended all the causal agencies, then the cause, like the *dravya*, *guṇa*, *karma*, etc., could not have effected any causal function (*yadi hi paramā-tmā dehavat sarvaṃ kāraṇaṃ nā'dhitiṣṭheta tarhi dravya-guṇa-karmā-di-sādhāraṇā-khila-kriyā-rtha-mūla-kāraṇaṃ na syād iti*)¹. If it is said that the sentence speaks of effectedness (or causality) as common to all tangible manifestations, then the idea of the previous sentence maintaining the identity between Brahman and the world would not be admissible².

Brahman is the *upādāna-kāraṇa* of the universe, but this universe is a *pariṇāmi-rūpa* of Brahman. His is not therefore the *pariṇāmi-rūpa*, because that will contradict the statements made by the scriptures declaring the Brahman to be unchangeable (*kūṭastha*). Then Vijñāna Bhikṣu defines that God being the ultimate substratum of all, the functioning of all types of causes is helped in its operation by Him and it is this that is called the *adhīṣṭhāna-kāraṇatā* of God.

Then he maintains his doctrine of *jīvātma-paramā-tmanor aṃśāṃśy-abheda* by the line “*sa māyī māyayā baddhaḥ karoti vividhās tanūḥ*” and says further that *Yājñavalkya-smṛti* and *Vedānta-sūtra* also preach the same doctrine. *Śrīmad-bhagavad-gītā* says the same thing. Then comes the elaboration of the same idea. A reference to Śaṅkara by way of criticizing him is made³. *Māyā-vāda* is called a sort of covert Buddhism and for support a passage from *Padma-purāṇa* has also been quoted.

Adhīṣṭhāna-kāraṇatva, or the underlying causality, is defined as that in which, essence remaining the same, new differences emerge just as a spark from the fire. This is also called the *aṃśāṃśi-bhāva*, for, though the *niravayava* Brahman cannot be regarded as having parts, yet it is on account of the emergence of different characters from a common basis that the characterized units are called the parts of the common basis. It should be noted that Vijñāna Bhikṣu is against the view that the Brahman undergoes any transformatory

¹ *Īśvara-gītā-bhāṣya*. MS.

² *Ibid.*

³ *Ibid.*

change. Though the Brahman does not undergo any transformatory change, yet new differences emerge out of it. In the sentence "*Sa māyī māyayā baddhaḥ*" the idea is that the *māyā* itself is an integral part of the Divine entity and not different from it. The *māyā* is like an *amśa* which is identical with the *amśin*.

Though in the scriptures both the distinction and the identity of the individual with the Brahman have often been mentioned, yet it is by the realization of the difference of the individual with the Brahman that ultimate emancipation can be attained¹.

The self is of the nature of pure consciousness and is not in any way bound by its experiences. The assertion of Śaṅkara that *ātma* is of the nature of joy or bliss is also wrong; for no one can always be attached to himself, and the fact that everyone seeks to further his own interest in all his actions does not imply that the soul is of the nature of bliss. Moreover, if the soul is of the nature of pure consciousness, it cannot at the same time be of the nature of pure bliss; at the time of acquiring knowledge we do not always feel pleasure.²

Egoism (*abhimāna*) also does not belong to the soul but like *sukha* and *duḥkha* belongs to *prakṛti*, which are wrongly attributed to the self.³ The soul is, however, regarded as an enjoyer of its experiences of pleasure and pain, a reflection of them on it through the *vr̥tti*, and such a reflection of pleasure and pain, etc., through the *vr̥tti* is regarded as the realization (*sākṣātkāra*) of the experiences. Such an enjoyment of experiences, therefore, is to be regarded as *anaupādhika* (or unconditional). This is also borne out by the testimony of the *Bhagavad-gītā* and Sāṃkhya. Such an enjoyment of the experiences does not belong to the *prakṛti* (*sākṣātkāra-rūpa-dharmasya dṛṣya-dharmatva-sambhavāt*)⁴. The passages which say that the experiences do not belong to the *puruṣa* refer to the modifications of *vr̥tti* in connection with the experiences. The assertion of Śaṅkara, therefore, that the *ātman* is as incapable of experiences (*bhoga*) as of the power of acting (*kar̥tr̥tva*) is therefore false.

Ajñāna, according to Vijñāna Bhikṣu, means *anyathā-jñāna*. *Pradhāna* is so called because it performs all the actions for the sake of the *puruṣa*; and it is through the fault of his association with *pradhāna* that the *puruṣa* is associated with false knowledge.

¹ *Īśvara-gītā-bhāṣya*.

² *Ibid.*

³ *Ibid.*

⁴ *Ibid.*

The *ātman* remains unchanged in itself and the differences are due to the emergence of the association of *buddhi* and other faculties which give rise to experience. At the time of emancipation *jīvas* remain undifferentiated with Brahman. *Prakṛti*, *puruṣa*, and *kāla* are ultimately supported in Brahman and yet are different from it.

There are indeed two kinds of scriptural texts, one emphasizing the monistic side, the other the dualistic. A right interpretation should, however, emphasize the duality-texts, for if everything were false then even such a falsity would be undemonstrable and self-contradictory. If it is argued that one may accept the validity of the scriptural texts until the Brahman is realized and when that is done it matters little if the scriptural texts are found invalid, the reply to such an objection is that, whenever a person discovers that the means through which he attained the conclusion was invalid, he naturally suspects the very conclusion arrived at. Thus the knowledge of Brahman would itself appear doubtful to a person who discovers that the instruments of such knowledge were themselves defective.

The individual soul exists in the *paramā-tman* in an undifferentiated state in the sense that the *paramā-tman* is the essence or ground-cause of the *jīvas*; and the texts which emphasize the monistic side indicate this nature of *paramā-tman* as the ground-cause. This does not imply that the individual souls are identical with Brahman.

Pleasure and pain do not belong to the self; they really belong to the *antaḥkaraṇa* and they are ascribed to the self only through the association of the *antaḥkaraṇa* with the self. In the state of emancipation the self is pure consciousness without any association of pleasure and pain. The ultimate end is the cessation of the suffering of sorrow (*duḥkha-bhoga-nivṛtti*) and not the cessation of sorrow (*na duḥkha-nivṛttiḥ*); for when one has ceased to suffer sorrow, sorrow may still be there and the avoidance of it would be the end of other persons. The assertion of Śaṅkara that there is bliss in the stage of emancipation is wrong. For during that stage there is no mental organ by which happiness could be enjoyed. If the self be regarded as of the nature of bliss, then also the self would be both the agent and the object of the enjoyment of bliss, which is impossible. The ascription of *ānanda* in the state of emancipation only refers to it in a technical sense, i.e., *ānanda* means the absence of pleasure and pain.

Bhikṣu admits a gradation of realities. He holds further that when one entity is stabler than another, the former is more real than the latter. Since *paramā-tman* is always the same and does not undergo any change or transformation or dissolution, He is more real than the *prakṛti* or *puruṣa* or the evolutes of *prakṛti*. This idea has also been expressed in the view of the Purāṇas that the ultimate essence of the world is of the nature of knowledge which is the form of the *paramā-tman*. It is in this essential form that the world is regarded as ultimately real and not as *prakṛti* and *puruṣa* which are changing forms.

The *prakṛti* or *māyā* has often been described as that which can be called neither existent nor non-existent. This has been interpreted by the Śāṅkarites as implying the falsity of *māyā*. But according to Vijñāna Bhikṣu it means that the original cause may be regarded as partly real and partly unreal in the sense that while it is unproductive it is regarded as unreal, and when it passes through the course of evolutionary changes it is regarded as real (*kīñcit sad-rūpā kiñcit asad-rūpā ca bhavati*).

Now coming to *sādhana* he says that by *āgama*, *anumāna* and *dhyāna* one should attain self-knowledge. This self-realization leads to the *asamprajñāta-yoga* which uproots all the *vāsanās*. It is attained not only by the cessation of *ajñāna* but also by the destruction of the *karmas*. He also maintains that the emphasis of Śāṅkara on the understanding of the Upaniṣadic texts as a means to the attainment of self-realization is also wrong.

In the state of *mukti*, self having dissociated itself from the *liṅga-śarīra* becomes one with Brahman, just as the river becomes one with the sea. This is not a case of identity, but one of non-difference (*liṅga-śarīrā-tmaka-ṣoḍaśa-kala-sūnyena ekatām avi-bhāga-lakṣanā-bhedam atyantam vrajet*). Here in the state of *mukti* the identity and difference of *jīva* and Brahman have been indicated on the analogy of the river and the sea.

Bhikṣu says that there is a difference between the Sāṃkhya and Yoga regarding the attainment of emancipation. The followers of the Sāṃkhya can attain emancipation only by the cessation of their *prārabdha karmas*. Since *avidyā* has been destroyed, the realization of emancipation has only to wait till the *prārabdhās* exhaust themselves. The followers of Yoga, however, who enter into a state of *asamprajñāta-samādhi* have not to suffer the fruits of the *prārabdha*,

because being in a state of *asamprañāta* meditation the *prārabdha* can no longer touch them. They can, therefore, immediately enter into a state of emancipation at their own sweet will.

According to Bhikṣu, though *Īśvara* transcends the *guṇas*, yet through his body as pure *sattva* he carries on the creative work and the work of superintending and controlling the affairs of the universe. Though his agency is manifested through his body as pure *sattva* as a directive activity, yet it is without any association of passions, antipathies, etc.

In the third chapter of the *Kūrma Purāṇa* it is said that *pradhāna*, *puruṣa* and *kāla* emerge from *avyakta*, and from them the whole world came into being. Bhikṣu says that the world did not emanate directly from Brahman but from *pradhāna*, *puruṣa* and *kāla*. There cannot be any direct emanation from Brahman; for that would mean that Brahman undergoes a change. A direct emanation would imply that evil and hell also sprang from Brahman. The emanation of *prakṛti*, *puruṣa* and *kāla* from Brahman is explained on the supposition that Brahman is a kind of ground-cause of *prakṛti*, *puruṣa*, and *kāla* (*abhivyakti-kāraṇa* or *ādhāra-kāraṇa*). But this emanation of *prakṛti*, *puruṣa* and *kāla* is not through modificatory processes in the manner in which curd is produced from milk. In the time of dissolution *prakṛti* and *puruṣa* are unproductive of any effects and may therefore be regarded as it were as non-existent. It is through the will of God that the *prakṛti* and *puruṣa* are drawn out and connected together, and the point of motivation is started for the processes of modification of the *prakṛti*. This point of motivation is called *kāla*. It is by such a course that all these three may be regarded as producing an effect and therefore as existent. It is in this sense that *prakṛti*, *puruṣa* and *kāla* are regarded as brought into being by God¹.

Avyakta as God is so called because it transcends human knowledge. It is also so called because it is a state of non-duality, where there is no difference between energy and its possessor, and where everything exists in an undifferentiated manner. *Avyakta* used in

¹ *na tu sākṣād eva brahmaṇaḥ... atra kālā-di-trayaśca brahma-kāryatvaṃ abhivyakti-rūpaṃ eva vivakṣitam... prakṛti-puruṣayoś ca mahad-ādi-kāryo-nmukhatañ ca parame-śvare-kytād anyonya-samyogād eva bhavati, evaṃ kālasya prakṛti-puruṣa-samyogā-khya-kāryo-nmukhatvaṃ parame-śvare-cch ayuḥ'va bhavati. Īśvara-gītā-bhāṣya. MS.*

the sense of *prakṛti* is the basis of change, or change as such; and *puruṣa* denotes the knower.

The *paramā-tman* is spoken of as the soul of all beings. This should not, however, be taken to mean that there is only the *paramātman* which exists and that all things are but false impositions on his nature. The *paramā-tman* or *Parameśvara* is both different and identical with *kāla*, *pradhāna* and the *puruṣa*. The existence of the *prakṛti* and the *puruṣa* has to be regarded as less ultimate than the existence of God, because the existence of the former is relative as compared with the existence of God (*vikāra-pekṣayā sthiraṭvena apekṣakam etayos tattvam*, p. 44). Time is regarded as an instrumental cause of the connection of *prakṛti* and *puruṣa*. Time is a superior instrumental agent to deeds, for the deeds are also produced by time (*karmā-dīnam api kāla-janyatvāt*). Though the time is beginningless, yet it has to be admitted that it has a special function with reference to each specific effect it produces. It is for that reason that at the point of dissolution time does not produce the evolutes of *mahat*, etc. *Mahat-tatva* is in itself a combination of the conscious centres and the material element.

When the word *puruṣa* is used in the singular number, such a use should not be interpreted to mean a denial of the individual *puruṣas*. It only means that in such instances of scriptural texts the word *puruṣa* has been used in a generic sense. *Puruṣas* are also of two kinds—the *apara* and the *para*. Both are in themselves devoid of any qualities and of the nature of pure consciousness. But there is this difference between the *para puruṣa* and the *apara puruṣa*, that while the former never has any kind of association with any experience of pleasure and pain, the latter may sometimes be associated with pleasure and pain which he at that time feels to be his own (*anye guṇā-bhimānāt saguṇā iva bhavanti paramātmā tu guṇā-bhimāna-śūnyaḥ*, p. 46). It must be understood, however, that the experiencing of pleasure and pain is not an indispensable part of the definition of *puruṣa*, for at the stage of *jīvan-mukti* the *puruṣas* do not identify themselves with the experiences of pleasure and pain, but they are still *puruṣas* all the same. God, however, who is called the superior *puruṣa*, does not associate Himself with the experiences that proceed as a fruit of *karma* and which are enjoyed in a spatial-temporal manner. But God continues to enjoy eternal bliss in association with His own special *upādhi* or conditions

(*svo-pādhistha-nityā-nanda-bhokṛtvaṃ tu paramā'tmano'pi asti*). When the scriptural texts deny the enjoyment of the experiences of pleasure and pain with regard to the Supreme *puruṣa*, the idea is that though the Supreme *puruṣa* underlies the ordinary *puruṣas* as their ground yet he is not in any way affected by their experiences (*ekasminn eva buddhāv avasthānena jīva-bhogataḥ prasaktasya paramā-tma-bhogasyai'eva pratiśedhaḥ*). So the Supreme *puruṣa* has in common with ordinary *puruṣas* certain experiences of his own. These experiences of pure eternal bliss are due to the direct and immediate reflection of the bliss in the *puruṣa* himself, by which this bliss is directly and immediately experienced by him. By such an experience the *puruṣas* cannot be admitted to suffer any change. He can, however, be aware of the mental states of ordinary persons as well as their experiences of pleasure and pain in a cognitive manner (such as that by which we know external objects) without being himself affected by those experiences. This enjoyment of experience is of course due to the action of God's mind through the process of reflection.

The monism of such a view becomes intelligible when we consider that the *puruṣa*, the *mahat*, the *ahamkāra* and all its products exist in an undifferentiated condition in the very essence of God. The ultimate *puruṣa* as the supreme cognitive principle underlies the very being of *puruṣas* and the faculties such as the *buddhi* and the *ahamkāra*, and also all in later material products. For this reason, by the underlying activity of this principle all our cognitions become possible, for it is the activity of this principle that operates as the faculties of the origins of knowledge. In the case of the experience of pleasure and pain also, though these cannot subsist outside the mind and may not apparently be regarded as requiring any separate organ for their illumination, yet in their case also it is the mind, the *buddhi*, that behaves as the internal organ. So though pleasures and pains cannot be regarded as having an unknown existence, yet their experiences are also interpreted as being due to their reflection in the mind.

When the *mahat* becomes associated with the *puruṣa* and no distinction is felt between it, the *puruṣas* and the original ground-cause, it is then that the cycle of world-existence appears. It is the super-consciousness of God that holds together the objective and the subjective principles. The objective principle, the *prakṛti*, and

the subjective centres, the *puruṣas*, are held together in a state of non-distinction. It is this that gives rise to all experiences of sorrow and bondage with reference to the conscious centres. It may be asked how it is that the *buddhi* and the *puruṣa* are held in non-distinction instead of being distinguished from one another. The reply is that distinction and non-distinction are both possible elements in the *buddhi*, and the function of Yoga is to destroy the obstruction in the way of the realization of such a mutual distinction (*yogā-dinā tu pratibandha-mātram apākriyate*).

Love of God proceeds in two stages: first, from the notion of God as satisfying our highest needs; and, secondly, in the notion of Him as being one with the self of the devotee. These highest needs find their expression firstly in our notion of value as pleasure and satisfaction in our experiences; secondly, in our notion of value in our emancipation; thirdly, in our notion of value in the satisfaction that we achieve in our realization of the sublimity in experiencing the greatness of God (*Prema ca anurāga-viśeṣaḥ paramā-tmani iṣṭa-sādhana-tā-jñānāt ātmatva-jñānāc ca bhavati. iṣṭam api dvi-vidhaṁ bhogā-pavargau tan-mahimā-darśano-ttha-sukhaṁ ca iti tad evaṁ mātmya-pratipādanasya phalaṁ prema-lakṣaṇā bhaktiḥ*).

Māyā, as identified with *prakṛti*, should be regarded as substantive entity. The *prakṛti* has two elements in it, *sattva* and *tamas*. Through *sattva*, wisdom or true knowledge is produced; through *tamas* is produced delusion or false knowledge. It is this aspect of *prakṛti* as producing false knowledge that is called *māyā*. *Māyā* is described as being *triguṇā-tmikā prakṛti* or the *prakṛti* with three *guṇas*. But though the *māyā* is identified with *prakṛti*, yet this identification is due to the fact that the *tamas* side of *prakṛti* cannot be taken as apart from the *prakṛti* as a whole. When it is said in the scriptures that God destroys the *māyā* of Yogins, it does not mean that the *triguṇā-tmikā prakṛti* as a whole is destroyed, but only that the operation of the *tamas* side is suspended or destroyed or ceases only with reference to the Yogin. *Māyā* is also described as that which cannot produce an illusion in Him on whom it has to depend for its existence, i.e. God, but that it can produce illusion or false knowledge in others (*svā-śraya-vyāmohakatve sati para-vyāmohakatvam*).

It is further said that God creates the world by his *māyā-śakti* as composed of the three *guṇas*. The significance of the designation

māyā in this connection implies that it is by the false identification of the *prakṛti* and the *puruṣa* that the latter evolutionary process of the formation of the world and world-experience becomes possible. The term *māyā* is generally restricted to *prakṛti* in its relation to God, whereas it is called *avidyā* as a delusive agent with reference to individuals.

True knowledge does not consist in a mere identification with Brahman as pure consciousness, but it means the knowledge of Brahman, his relationship with *pradhāna*, *puruṣa*, and *kāla*, and the manner in which the whole cosmic evolution comes into being, is maintained, and is ultimately dissolved in Brahman; and also in the personal relationship that he has with the individuals, and the manner in which he controls them and the ultimate ways of attaining the final realization. *Kāla* is, again, here referred to as the conditional *upādhi* through which God moves the *prakṛti* and *puruṣa* towards the evolution of the cosmic process.

The great difficulty is to explain how God who is regarded in essence of the nature of pure consciousness and therefore absolutely devoid of desire or will can be the cause of the great union of *prakṛti* with the *puruṣas*. The answer proposed by Bhikṣu is that in God's nature itself there is such a dynamization that through it He can continue the actualizing process and the combining activities of the *prakṛti* and *puruṣa* lying dormant in Him. Though *prakṛti* and *puruṣa* may also be regarded as the causes of the world, yet since the combination happens in time, time may be regarded primarily as a dynamic agent; the condition existing in God through which He renders the union is made possible (*mama svīyo bhāvaḥ padārthah sva-bhāva upādhiḥ tatas tasya preraṇāt bhagavān a-pratihato mahā-yogasya prakṛti-puruṣa-di-saṃyogasya īśvaras tatra samarthah ... prakṛti-prati-kṣaṇa-pariṇāmānam eva kālo-pādhivāt*). Since God moves both the *prakṛti* and the *puruṣa* through His own dynamic conditions, the whole universe of matter and spirits may be regarded as His body in the sense that they are the passive objects of the activity of God. God is thus conceived as dancing in his activity among his own energies as *prakṛti* and *puruṣas*. It may be argued that *puruṣa* being itself absolutely static, how can these be moved into activity consists of the fact that they are turned to the specific operations or that they are united with the *prakṛti*. Sometimes it is also suggested that the *prakṛti* is the condition of

the *puruṣas* and that the movement of the *prakṛti* in association with the *puruṣas* is interpreted as being the movement of the *puruṣas*.

In the seventh chapter of *Īśvara-gītā* Brahman is defined as the Universal. Thus any cause may be regarded as Brahman in relation to its effect. So there may be a hierarchy of Brahman as we proceed from a lesser universal to a higher universal. The definition of Brahman is: “*yad yasya kāraṇaṃ tat tasya brahma tad-apekṣayā vyāpakatvāt.*” As God contains within Himself all the universals, He is called *brahma-māyā*. God is always associated with the *puruṣas*. But yet His dynamic activity in association with the *puruṣas* consists in bringing about such an association with *prakṛti* that the objects of the world may be manifested to them in the form of knowledge.

The *jīva* or individual is regarded as being a part of God, the relation being similar to that of a son and father. When the *jīvas* dedicate all their actions to God with the conviction that if it is God who works through them, then virtues and vices lose their force and become inefficacious to cause any bondage to them. As all *jīvas* are the parts of God, there is a great similarity between them in spite of their diversity. God exists in the *jīvas* just as the whole exists in the parts.

Vijñāna Bhikṣu conceives of the *adhiṣṭhāna-kāraṇa* as the ground cause, as one which in itself remains the same and yet new differences emerge out of it. This is also his doctrine of the part and the whole. The parts are thus supposed to be emergents from the whole which does not itself participate in any change. The relation is thus not organic in the sense that the dissolution of the parts would mean the dissolution of the whole. In the *pralaya* the parts are dissolved, yet pure Brahman remains just as it was in the stage of creation. So, again, when the parts are affected pleasures and pains are experienced, but the affection of the parts does not involve in the least the affection of the whole. But the whole is not affected by the sufferings that exist in the emergents. It is further stated that it is through the function of the ground-cause that the emergents, e.g. substance, quality and action, can express themselves or operate in their specific forms. The underlying whole, the ground-cause, has really no parts in itself. Yet from this common basis various emergents of appearances as characterized units show themselves, and since they are seen to emerge from it they are in

this specific technical sense called the parts of the underlying ground cause.

It will thus be seen that the Brahman, the ground-cause, always remains unchangeable in itself, but it is said that the Brahman is associated with *māyā* and is united by it (*sa māyī māyayā baddhah*). The idea is that the *māyā* is an integral part of the divine entity and not different from it. *Māyā* is like a part which is identical with the whole.

Though in the scriptures both the distinction and the identity of the individual with the Brahman have often been mentioned, yet it is by the realization of the difference of the individual from the Brahman that the ultimate emancipation can be attained¹.

In the *Brhad-āraṇyaka Upaniṣad*, II. 4. 5, it is stated that all other things are desired because we desire the self. Śaṅkara infers from it that we are primarily attached to the self, and since all attachments imply attachment to pleasure, it follows that the self is of the nature of pleasure or bliss. Other things are desired only when they are falsely regarded as ourselves or parts of ourselves. Bhikṣu denies this proposition. He says that firstly it is not true that we are always attached to our own selves; nor, therefore, is it true that seeking of happiness from other sources is always the seeking of the selves. It is, therefore, wrong to suppose that self is of the nature of bliss. If the soul is of the nature of pure consciousness, it cannot be the nature of pure bliss. If bliss and consciousness were the same, all knowledge would imply pleasure, but our knowledge is as much associated with pleasure as with pain. Pleasure and pain, as also egoism (*abhimāna*), belong to *prakṛti* or its product *buddhi* and are transferred through its function (*vytti*) to the self, which is the real enjoyer and sufferer of pleasure and pain. The self is thus the real experiencer and the experiences therefore do not belong to the *prakṛti* but to the self². Through the operation of the sense-contact with the object and light the mental states are generated. These mental states are called *vytti* and belong to *buddhi* and therefore to *prakṛti*, but corresponding to each such mental state there is an intuition of them on the part of the *puruṣa* (*vytti-sākṣātkāra*)

¹ *yady api bheda-bhedā-vubhāv eva śruti-smṛtyoruktau tathā'pi ya'hokta-bheda-jñāna-rūpa-vivekad eva sarvā-bhimāna-nivṛtyā sākṣāt mokṣaḥ. Śvara-gītā. MS.*

² *sākṣāt-kāra-rūpa-dharmasya drśya-dharmatva-sambhavāt. Bhikṣu's commentary on Śvara-gītā. MS.*

and it is this intuition that constitutes the real experience of the *puruṣa*. The word *bhoga* has an ambiguity in meaning. It sometimes refers to the mental states and at other times to their intuition and it is as the former state that the *bhoga* is denied of the *puruṣa*.

The *ajñāna* (ignorance) in this system means false knowledge. When the *puruṣa* intuits the *vyttis* of the *buddhi* and thereby falsely regards those *vyttis* as belonging to itself there is false knowledge which is the cause of the bondage. The intuition in itself is real, but the associations of the intuitive characters with the self are erroneous. When the self knows its own nature as different from the *vyttis* and as a part of Brahman in which it has an undifferentiated reality, we have what is called emancipation. The existence of the self as undifferentiated with Brahman simply means that the Brahman is the ground-cause, and as such an unchangeable ground-cause Brahman is of the nature of pure consciousness. It is in its nature as pure consciousness that the whole world may be regarded as existing in the Brahman of which the *prakṛti* and the *puruṣa*, the one changing by real modifications and the other through the false ascription of the events of *prakṛti* to itself, may be regarded as emergents. The world is ultimately of the nature of pure consciousness, but matter and its changes, and the experience itself are only material and temporary forms bubbling out of it. But since these emergent forms are real emanations from Brahman an over-emphasis on monism would be wrong. The reality consists of both the ground-cause and the emergent forms. Śaṅkara had asserted that the duality was true only so long as the one reality was not reached. But Bhikṣu objecting to it says that since the monistic truth can be attained only by assuming the validity of the processes that imply duality, ultimate invalidation of the dualistic processes will also nullify the monistic conclusion.

CHAPTER XXIII

PHILOSOPHICAL SPECULATIONS OF SOME OF THE SELECTED PURĀṆAS

THE readers who have followed the philosophy of the Vedānta as interpreted by Vijñāna Bhikṣu in his commentary on the *Brahma-sūtra* and the *Īśvara-gītā* section of the *Kūrma Purāṇa* must have noticed that, according to him, the Vedānta was associated with the Sāṃkhya and Yoga, and in support of his view he referred to many of the Purāṇas, some of which are much earlier than Śaṅkara. Vijñāna Bhikṣu, therefore, quotes profusely from the Purāṇas and in the writings of Rāmānuja, Madhva, Vallabha, Jīva Goswamī and Baladeva we find profuse references to the Purāṇas in support of their views of the philosophy of the Vedānta.

It is highly probable that at least one important school of ideas regarding the philosophy of the Upaniṣads and the *Brahma-sūtra* was preserved in the Purāṇic tradition. Śaṅkara's interpretation of the Upaniṣads and the *Brahma-sūtra* seems to have diverged very greatly from the semi-realistic interpretation of them as found in the Purāṇas. It was, probably, for this reason that Śaṅkara seldom refers to the Purāṇas; but since Śaṅkara's line of interpretation is practically absent in the earlier Purāṇas, and since the extreme monism of some passages of the Upaniṣads is modified and softened by other considerations, it may be believed that the views of the Vedānta, as found in the Purāṇas and the *Bhagavad-gītā*, present, at least in a general manner, the oldest outlook of the philosophy of the Upaniṣads and the *Brahma-sūtra*.

It seems, therefore, desirable that the treatment of the philosophy of Rāmānuja and Vijñāna Bhikṣu should be supplemented by a short survey of the philosophy as found in some of the principal Purāṇas. All the Purāṇas are required to have a special section devoted to the treatment of creation and dissolution, and it is in this section that the philosophical speculations are largely found¹. In the present section I shall make an effort to trace the philosophical speculations as contained in the *sarga-pratisarga* portions

¹ *sargaś ca pratisargaś ca vaṃśo manv-antarāṇi ca | vaṃśā-nucaritaṃ cai'va purāṇaṃ pañca-lakṣaṇaṃ. || Kūrma Purāṇa, 1. 12.*

of some of the selected Purāṇas so as to enable readers to compare this Purāṇic philosophy with the philosophy of Bhāskara Rāmānuja, Vijñāna Bhikṣu, and Nimbārka.

The first manifestation of Brahman according to the *Viṣṇu Purāṇa* is *puruṣa*; then come the other manifestations as *vyaktā-vyakta* and *kāla*. The original cause of *pradhāna*, *puruṣa*, *vyakta* and *kāla* is regarded as the ultimate state of Viṣṇu. Here then we find Brahma-Viṣṇu¹.

In *Viṣṇu Purāṇa*, 1. 2. 11, it is said that the Ultimate Reality is only pure existence, which can be described only as a position of an eternal existence. It exists everywhere, and it is all (this is Pantheism), and everything is in it (this is Panentheism) and therefore it is called Vāsudeva². It is pure because there is no extraneous entity to be thrown away³. It exists in four forms: *vyakta*, *avyakta*, *puruṣa* and *kāla*. Out of His playful activity these four forms have come out⁴. *Prakṛti* is described here as *sadasad-ātmaka*⁵ and as *triguṇa*⁶. In the beginning there are these four categories: Brahman, *pradhāna*, *puruṣa* and *kāla*⁷, all these being different from the unconditional (*Trikālika*) Viṣṇu. The function of *kāla* is to hold together the *puruṣa* and the *pradhāna* during the creational period, and to hold them apart at the time of dissolution. As such it (*kāla*) is the cause of sensibles. Thus there is a reference to the ontological synthetic activity and the ontological analytical activity of *kāla*⁸. ("Ontological" in the sense that *kāla* appears here not as instrumental of the epistemological aspect of experience, but as something "being" or "existing," i.e. ontological.) As all manifested things had returned to the *prakṛti* at the time of the last dissolution, the *prakṛti* is called *pratisaṅcara*⁹. *Kāla* or time is beginningless

¹ Brahman is also regarded as *sraṣṭā*, Hari as *pātā* (Protector), and Maheśvara as *saṃhartā*.

*āpo nārā iti proktā, āpo vai nara-sūnavah

⁹ *Ibid.* 1. 2. 25.

and so exists even at the time of dissolution, synthesizing *prakṛti* or *puruṣa* together and also holding them out as different at the time of creation. At that time God enters by His will into *prakṛti* and *puruṣa* and produces a disturbance leading to creation¹. When God enters into *prakṛti* and *puruṣa* His proximity alone is sufficient to produce the disturbance leading to creation; just as an odorous substance produces sensation of odour by its proximity without actually modifying the mind². He (God) is both the disturber (*kṣobha*) or disturbed (*kṣobhya*), and that is why, through contradiction and dilation, creation is produced³. Here is once again the Pantheistic view of God, its first occurrence being manifested ultimately in four main categories, all of which are, so to speak, participating in the nature of God, all of which are His first manifestations, and also in which it is said that all is God, and so on. *Anu* means *jīvā-tman*⁴. Viṣṇu or *Īśvara* exists as the *vikāra*, i.e. the manifested forms, the *puruṣa* and also as Brahman⁴. This is clear Pantheism.

The commentator says that the word “*kṣetrajñā*” in “*kṣetrajñā-dhiṣṭhānāt*” means *puruṣa*. But apparently neither the context nor the classical Sāṃkhya justifies it. The context distinctly shows that *kṣetrajñā* means *Īśvara*; and the manner of his *adhiṣṭhān* by entering into *prakṛti* and by proximity has already been described⁵. From the *pradhāna* the *mahat-tattva* emerges and it is then covered by the *pradhāna*, and being so covered it differentiates itself as the *sāttvika*, *rājasa* and *tāmasa mahat*. The *pradhāna* covers the *mahat* just as a seed is covered by the skin⁶. Being so covered there spring from the threefold *mahat* the threefold *ahamkāra* called *vaikārika*, *taijasa* and *bhūtā-di* or *tāmasa*. From this *bhūtā-di* or *tāmasa ahamkāra* which is covered by the *mahat* (as the *mahat* itself was covered by *pradhāna*) there springs through its spontaneous self-modification the *śabda-tanmātra*, and by the same process there springs from that *śabda-tanmātra* the *ākāśa*—the gross element. Again, the *bhūtā-di* covers up the *śabda-tanmātra* and the *ākāśa* differentiated from it as the gross element. The *ākāśa*, being thus conditioned, produces spontaneously by self-modification the

¹ *Viṣṇu Purāṇa*, 1. 2. 29.

⁴ *Ibid.* 1. 2. 32.

⁵ *guṇa-sāmyāt tatas tasmāt kṣetrajñā-dhiṣṭhānāt mune*
guṇa-vyañjana-sambhūtiḥ sarga-kāle dvījo-ttama. *Ibid.* 1. 2. 33.

⁶ *pradhāna-tattvena samam tvacā bijam ivā'vrtam.* *Ibid.* 1. 2. 34.

sparśa-tanmātra, which produces immediately and directly the gross *vāyu*. The *bhūtādi* again covers up the *ākāśa*, *śabda-tanmātra*, *sparśa-tanmātra* and the differentiated *vāyu* which later then produces the *rūpa-tanmātra* which immediately produces the gross light-heat (*jyoti*)¹. The *sparśa-tanmātra* and the *vāyu* cover up the *rūpa-tanmātra*. Being thus conditioned, the differentiated gross *jyoti* produces the *rasa-tanmātra* from which again the gross water is produced. In a similar manner the *rasa-tanmātra* and the *rūpa-tanmātra*, being covered up, the differentiated gross water produces the *gandha-tanmātra*, from which again the gross earth is produced. The *tanmātras* are the potential conditions of qualities and hence the qualities are not manifested there. They are, therefore, traditionally called *aviśeṣa*. They do not manifest the threefold qualities of the *guṇas* as *śānta*, *ghora* and *mūḍha*. It is for this reason also that they are called *aviśeṣa*².

From the *taijasa-ahamkāra* the five conative and cognitive senses are produced. From the *vaikārika-ahamkāra* is produced the *manas*³. These elements acting together in harmony and unity, together with the *tanmātras*, *ahamkāra* and *mahat*, form the unity of the universe under the supreme control of God. As the universe grows up, they form into an egg which gradually expands from within like a water-bubble; and this is called the materialistic body of Viṣṇu as Brahman. This universe is encircled on the outer side by water, fire, air, the *ākāśa* and the *bhūtā-di* and then by the *mahat* and the *avyakta*, each of which is ten times as large as the earth. There are thus seven coverings. The universe is like a cocoanut fruit with various shell-coverings. In proper time, again by causing a preponderance of *tamas*, God eats up the universe in His form as Rudra, and again creates it in His form as Brahmā. He maintains the world in His form as Viṣṇu. Ultimately, however, as God holds the universe within Him, He is both the creator and the created, the protector and the destroyer.

Though the Brahman is qualityless, unknowable and pure, yet

¹ The commentator notes that when the *ākāśa* is said to produce *sparśa-tanmātra*, it is not the *ākāśa* that does so but the *bhūtā-di* manifesting itself as *ākāśa*, i.e. it is through some accretion from *bhūtā-di* that the *ākāśa* can produce the *sparśa-tanmātra*. *Ākāśaḥ ākāśamayo bhūtā-diḥ sparśa-tanmātraṃ sasarja*.

² See the commentary to śloka. *Viṣṇu Purāṇa*, 1. 2. 44.

³ The commentator notes that the word *manas* here means *antaḥkāraṇa*, including its four functions as *manas*, *buddhi*, *citta* and *ahamkāra*.

it can behave as a creative agent by virtue of its specific powers which are incomprehensible to us. As a matter of fact the relation between the powers or energies and the substance is unthinkable. We can never explain how or why fire is hot¹. The earth, in adoring Hari, described Him as follows: "Whatever is perceived as having visible and tangible forms in this world is but your manifestation. The ordinary people only make a mistake in thinking this to be a naturalistic universe. The whole world is of the nature of knowledge, and the error of errors is to regard it as an object. Those who are wise know that this world is of the nature of thought and a manifestation of God, who is pure knowledge. Error consists in regarding the world as a mere naturalistic object and not as a manifestation of the structure of knowledge."²

In the *Viṣṇu Purāṇa*, I. 4. 50-52, it is said that God is only the dynamic agent (*nimitta-mātram*), the material cause being the energies of the objects of the universe which are to be created. These energies require only a dynamic agent to actualize them in the form of the universe. God is here represented to be only a formative agent, whereas the actual material cause of the world is to be found in the energies which constitute the objects of the world, through the influence and presence of God. The commentator notes that the formative agency of God consists merely in his presence (*sānnidhya-mātreinai'va*)³.

In the *Viṣṇu Purāṇa*, I. 4, we find another account of creation. It is said that God in the beginning thought of creation, and an unintelligent creation appeared in the form of *tamas*, *moha*, *mahā-moha*, *tāmisra* and *andha-tāmisra*. These were the five kinds of *avidyā* which sprang from the Lord. From these there came a creation of the five kinds of plants as *vyksa*, *gulma*, *latā*, *virūt* and

¹ *Viṣṇu Purāṇa*, I. 3. 1-2.

In this passage it is hinted that the will of God and His power to create is helped by the energies of the objects to be created.

tr̥ṇa (to which are to be added the mountains and the hills) which have no inner or outer consciousness and may be described as having, as it were, closed souls (*saṃvṛtā-tman*). Not being satisfied with this He created the animals and birds, etc., called *tiryak-srota*. The animals, etc., are called *tiryag*, because their circulation is not upwards but runs circularly in all directions. They are full of *tamas*, and are described as *avedinaḥ*. The commentator notes that what is meant by the term *avedin* is that the animals have only appetitive knowledge, but no synthetic knowledge, i.e. cannot synthesise the experience of the past, the present and the future and cannot express what they know, and they have no knowledge about their destinies in this world and in the other, and are devoid of all moral and religious sense. They have no discrimination regarding cleanliness and eating; they are satisfied with their ignorance as true knowledge, i.e. they do not seek the acquirement of certain knowledge. They are associated with the twenty-eight kinds of *vādhā*¹. They are aware internally of pleasure and pain but they cannot communicate with one another². Then, being dissatisfied with the animal creation, God created "the gods" who are always happy and can know both their inner feelings and ideas, and also the external objects, and communicate with one another. Being dissatisfied with that creation also He created "men," which creation is called *arvāk-srotas* as distinguished from the creation of gods which is called *ūrddhva-srotas*. These men have an abundance of *tamas* and *rajas*, and they have therefore a preponderance of

¹ In the *Sāṃkhya-kārikā*, 49, we hear of twenty-eight *vādhās*. The reference to *vādhās* here is clearly a reference to the technical *vādhās* of the Sāṃkhya philosophy, where it also seems certain that at the time of *Viṣṇu Purāṇa* the technical name of the Sāṃkhya *vādhās* must have been a very familiar thing. It also shows that the *Viṣṇu Purāṇa* was closely associated with the Sāṃkhya circles of thought, so that the mere allusion to the term *vādhā* was sufficient to refer to the Sāṃkhya *vādhās*. The *Viṣṇu Purāṇa* was probably a work of the third century A.D.; and the *Kārikā* of Īśvara Kṛṣṇa was composed more or less at the same time. In the *Mārkaṇḍeya Purāṇa* (Venkatesvara edition, ch. 44, v. 20) we have the reading *Aṣṭāvimśad-vidhātmikā*. In the B. 1. edition of *Mārkaṇḍeya* by K. M. Banerji we have also in ch. 47, v. 20, the same reading. The reading *vādhānveitā* occurs neither in the *Mārkaṇḍeya* nor in the *Padma Purāṇa* 13, 65. The supposition, therefore, is that the twenty-eight kinds in *Mārkaṇḍeya* were changed into twenty-eight kinds of *vādhā* through the Sāṃkhya influence in the third century. The *Mārkaṇḍeya* is supposed to have been written in the first half of the second century B.C. It is not easy to guess what twenty-eight kinds of animal creation were intended by Mārkaṇḍeya. But the identification of them with the twenty-eight kinds of Sāṃkhya *vādhā* seems to be quite inappropriate.

² *antaḥ prakāśās te sarva āvṛtās tu paras-param. Viṣṇu Purāṇa*, 1. 5. 10.

suffering. There are thus nine creations. The first three, called the unintelligent creation (*avuddhi-pūrvaka*), is the naturalistic creation of (i) *mahat*, (ii) the *tannātras*, and (iii) the *bhūtas*, the physiological senses. The fourth creation, called also the primary creation (*mūkhya-varga*), is the creation of plants; fifth is the creation of the *tiryag-srotas*; sixth the *ūrdha-srotas*; seventh the *arvāk-srotas* or men. The eighth creation seems to be the creation of a new kind. It probably means the distinctive characteristic of destiny of each of the four creations, plants, animals, gods and men. The plants have, for their destiny, ignorance; the animals have mere bodily energy; the gods have pure contentment; and the men have the realization of ends. This is called the *anugraha-sarga*¹. Then comes the ninth *sarga*, called the *kaumāra-sarga*, which probably refers to the creation of the mental children of God such as *Sanatkumāra*, etc.

There are four kinds of *pralayas*: they are called the *naimittika* or *brāhma*, the *prākṛtika*, the *ātyantika* and the *nitya*. The *naimittika-pralaya* takes place when Brahmā sleeps; the *prākṛtika* occurs when the universe merges in *prakṛti*; the *ātyantika-pralaya* is the result of the knowledge of God, i.e. to say, when Yogins lose themselves in *paramā-tman*, then occurs the *ātyantika-pralaya*; and the fourth, viz. the *nitya-pralaya*, is the continual destruction that takes place daily.

In the *Vāyu Purāṇa* we hear of an ultimate principle which is associated with the first causal movement of God. This is regarded as the transcendental cause (*kāraṇam aprameyam*) and is said to be known by various names, such as Brahman, *pradhāna*, *prakṛti*, *prasūti* (*prakṛti-prasūti*), *ātman*, *guha*, *yoni*, *cakṣus*, *kṣetra*, *amṛta*,

¹ The *Vāyu Purāṇa*, vi. 68, describes it as follows:

*sthāvaṛeṣu viparyāsaḥ tiryag-yoniṣu śaktitā
siddhā-tmāno manuṣyāḥ tu tuṣṭir deveṣu kṛtsnaśaḥ.*

The sixth *sarga* is there described as being of the ghosts.

bhūtā-dikānāṃ sattvānāṃ śaṣṭhaḥ sargah sa ucyate.

Ibid. vi. 58-59.

te parigrahiṇaḥ sarve samvibhāga-ratāḥ punaḥ.

khādanāś cā'py aśilāś ca jñeyā bhūtā-dikāś ca te. *Ibid.* vi. 30.

In the *Mārkaṇḍeya Purāṇa*, *anugraha-sarga* is described as being the fifth

In the *Kūrma Purāṇa*, 7. 11, these *bhūtas* are regarded as being the fifth *sarga*. The *Kūrma Purāṇa* describes the first creation as the *mahat-sarga*, the second as *bhūta-sarga*, the third as *Vaikārike'-ndriya-sarga*, the fourth as the *mukhya-sarga*, and the fifth as *tiryak-sarga*. There is thus a contradiction, as the fifth *sarga* was described in the eleventh verse in the same chapter as the creation of ghosts. This implies the fact that probably two hands were at work at different times, at least in the seventh chapter of the *Kūrma Purāṇa*.

akṣara, śukra, tapas, satyam, atiprakāśa. It is said to cover round the second *puruṣa*. This second *puruṣa* is probably the *loka-pitā-maha*. Through the association of time and preponderance of *rajas* eight different stages of modification are produced which are associated with *kṣetrajñā*¹. In this connection the *Vāyu Purāṇa* speaks also of the *prākṛtika*, the *naimittika* and the *ātyantika-pralaya*². It also says that the categories of evolution have been discovered both by the guidance of the *śāstras* and by rational argument³, and that *prakṛti* is devoid of all sensible qualities. She is associated with three *guṇas*, and is timeless and unknowable in herself. In the original state, in the equilibrium of *guṇas*, everything was pervaded by her as *tamas*. At the time of creation, being associated with *kṣetrajñā*, *mahat* emerges from her. This *mahat* is due to a preponderance of *sattva* and manifests only pure existence. This *mahat* is called by various names, such as *manas, mahat, mati, brahmā, pur, buddhi, khyāti, Īśvara, citi, prajñā, smṛti, samvit, vipura*⁴. This *mahat-prajñā*, being stirred by desire to create, begins the work of creation and produces *dharma, adharma* and other entities⁵. Since the cause of the gross efforts of all beings exists always as conceived in a subtle state in the *mahat*, it is called “*manas*.” It is the first of all categories, and of infinite extent and is thus called *mahān*. Since it holds within itself all that is finite and measurable and since it conceives all differentiations from out of itself and appears as intelligent *puruṣa*, by its association with experience it is called *mati*. It is called *brahman* since it causes all growth. Further, as all the later categories derive their material from it, it is called *pur*. Since the *puruṣa* understands all things as beneficial and desirable and since it is also the stuff through which all understanding is possible, it is called *buddhi*. All experience and integration of experience and all suffering and enjoyment depending upon knowledge proceed from it; therefore it is called *khyāti*. Since it directly knows everything as the great Soul it is called *Īśvara*. Since all sense-perceptions are produced from it, it is called *prajñā*. Since all states of knowledge and all kinds of

¹ *Vāyu Purāṇa*, 3. 11, and compare the *Pañcarātra* doctrine as elaborated in *Ahīrbudhnyā*.

² *Vāyu Purāṇa*, 3. 23.

³ *tac-chāstra-yuktyā sva-mati-prayatnāt samastam āviṣkṛta-dhī-dhṛtibhyaḥ*. *Ibid.* 3. 24.

⁴ *Ibid.* 4. 25.

⁵ *Ibid.* 4. 24.

karman and their fruits are collected in it for determining experience, it is called *citi*. Since it remembers the past, it is called *smṛti*. Since it is the storehouse of all knowledge, it is called *mahā-tman*. Since it is the knowledge of all knowledge, and since it exists everywhere and everything exists in it, it is *saṃvit*. Since it is of the nature of knowledge, it is called *jñāna*. Since it is the cause of all desideratum of conflicting entities, it is called *vipura*. Since it is the Lord of all beings in the world, it is called *Īśvara*. Since it is the knower in both the *kṣetra* and the *kṣetrajña*, and is one, it is called *ka*. Since it stays in the subtle body (*ṣūyām śete*) it is called *puruṣa*. It is called *svayambhu*, because it is uncaused and the beginning of creation. *Mahān* being stirred up by the creative desire manifests itself in creation through two of its movements, conception (*saṃkalpa*) and determination (*adhyavasāya*). It consists of three *guṇas*, *sattva*, *rajas*, and *tamas*. With the preponderance of *rajas*, *ahaṃkāra* emerged from *mahat*. With the preponderance of *tamas* there also emerges from *mahat*, *bhūtā-di*, from which the *bhūtas* and *tanmātras* are produced. From this comes the *ākāśa* as vacuity which is associated with sound. From the modification of the *bhūtā-di* the sound-potential (*śabdatanmātra*) has been produced. When the *bhūtādi* covers up the sound-potential, then the touch-potential was produced. When the *ākāśa* covers up the sound-potential and the touch-potential, the *vāyu* is produced. Similarly the other *bhūtas* and qualities are produced. The *tanmātras* are also called *aviśeṣas*. From the *vaikārika* or *sāttvika-ahaṃkāra* are produced the five cognitive and the five conative senses and the *manas*¹.

These *guṇas* work in mutual co-operation, and thereby produce the cosmic egg like a water-bubble. From this cosmic egg, the *kṣetrajña* called *Brahmā*—also called *Hiranyagarbha* (the four-faced God)—is produced. This god loses His body at the time of each *pralaya* and gains a new body at the time of a new creation². The cosmic egg is covered by water, light, heat, air, *ākāśa*, *bhūtādi*, *mahat*, and *avyakta*. The eight *prakṛtis* are also spoken of, and probably the cosmic egg is the eighth cover³.

¹ This is different from other accounts. No function is ascribed to the *rājas ahaṃkāra*, from which the conative senses are generally derived.

² *Vāyu Purāṇa*, 4. 68.

³ The passage is obscure, as it is difficult to find out exactly what these eight *prakṛtis* are. *Ibid.* 4. 77-78.

In Chapter VIII it is said that *rajas* remains as the dynamic principle inherent in *sattva* and *tamas*, just as oil remains in seas *amum*. It is further said that Maheśvara entered the *pradhāna* and *puruṣa*, and with the help of the dynamic principle of *rajas* produced a disturbance in the equilibrium of the *prakṛti*¹. By the disturbance of the *guṇas* three gods are produced, from *rajas* Brahmā, from *tamas* Agni, and from *sattva* Viṣṇu. The Agni is also identified with *kāla* or Time.

The *Vāyu Purāṇa* also describes the nature of *māheśvara-yoga*². This is said to be constituted of five elements or *dharma*s, such as *prāṇāyāma*, *dhyāna*, *pratyāhāra*, *dhāraṇā*, and *smaraṇa*. *Prāṇāyāma* is of three kinds, *manda*, *madhyama*, and *uttama*. *Manda* is of twelve *mātrās*, *madhyama* of twenty-four, and *uttama* of thirty-six. When the *vāyu* is once controlled by gradual practice, then all sins are burnt and all bodily imperfections are removed. By *dhyāna* one should contemplate the qualities of God. Then *prāṇāyāma* is said to bring about four kinds of results: (i) *śānti*, (ii) *praśānti*, (iii) *dīpti*, and (iv) *prasāda*. *Śānti* means the washing away of sins derived from impurities from parents and from the association of one's relations. *Praśānti* means the destruction of personal sins, as greed, egotism, etc. *Dīpti* means the rise of a mystical vision by which one can see past, present and future and come in contact with the wise sages of the past and become like Buddha. *Prasāda* means the contentment and pacification of the senses, sense-objects, mind, and the five *vāyus*.

The process of *prāṇāyāma* beginning with *āsana* is also described. *Pratyāhāra* is regarded as the control of one's desires and *dharma* is regarded as the fixing of the mind on the tip of the nose, or the middle of the eyebrows, or at a point slightly higher than that. Through *pratyāhāra* the influence of external objects is negated. By *dhyāna* one perceives oneself like the sun or the moon, i.e. there is an unobstructed illumination. The various miraculous powers that the *yogī* attains are called the *upasargas* and it is urged that one should always try to keep oneself free from the callings of these miraculous powers. The various objects of *dhyāna*

¹ It has been noted before that the creation of the material world proceeded from the *tāmasa ahaṁkāra*, and that of the cognitive and conative senses from the *sāttvika ahaṁkāra*. The *rājasa ahaṁkāra* was not regarded as producing anything, but merely as a moment leading to disturbance of equilibrium. See also *Vāyu Purāṇa*, 5. 9.

² *Ibid.* chap. 11-15.

are regarded as being the elements originating from the earth, *manas* and *buddhi*. The Yogin has to take these objects one by one, and then to leave them off, so that he may not be attached to any one of them. When he does so and becomes unattached to any one of these seven and concentrates on Maheśvara associated with omniscience, contentment, beginningless knowledge, absolute freedom (*svātantrya*), unobstructed power, and infinite power, he attains Brahman. So the ultimate object of Yoga realization is¹ the attainment of Brahmahood as Maheśvara which is also called *apavarga*².

In the *Mārkaṇḍeya Purāṇa*, yoga is described as a cessation of *ajñāna* through knowledge, which is, on the one hand, emancipation and unity with Brahman, and, on the other, dissociation from the *gunas* of *prakṛti*³. All sorrows are due to attachment. With the cessation of attachment there is also the cessation of the feeling of identifying all things with oneself (*mamatva*); and this leads to happiness. True knowledge is that which leads to emancipation, all else is *ajñāna*. By experiencing the fruits of virtues and vices through the performance of duties and other actions, through the accumulation of fruits of past *karman* (*apūrvā*), and through the exhaustion of certain others, there is the bondage of *karma*. The emancipation from *karma*, therefore, can only result from an opposite procedure. The *prāṇāyāma* is supposed to destroy sins⁴. In the ultimate stage the *yogī* becomes one with Brahman, just as water thrown in water becomes one with it⁵. There is no reference here to *chitta-vṛtti-nirodha* as *yoga*.

Vāsudeva is described here as the ultimate Brahman, who by His creative desire has created everything through the power of time. Through this power He separated the two entities of *pra-*

¹ There is no reference in the chapters on *yoga* of the *Vāyu Purāṇa* to *vṛtti-nirodha* and *kaivalya*.

² There is a chapter both in the *Vāyu Purāṇa* and in the *Mārkaṇḍeya Purāṇa* on *aṛiṣṭa*, similar to what is found in the *Jayākhya-saṃhitā* where signs are described by which the *yogin* is to know the time of his death, though the description of his death is entirely different from that given in the other two works.

³ *jñāna-pūrvā viyogo yo'jñānena saha yoginaḥ | sā muktir brahmaṇā cai'kyaṃ anāikyam prakṛtair guṇaih. || Mārkaṇḍeya Purāṇa, 39. 1.*

⁴ The method of *prāṇāyāma* and other processes of *yoga* is more or less the same as that found in the *Vāyu Purāṇa*.

⁵ *Mārkaṇḍeya Purāṇa, 40. 41.*

The *Mārkaṇḍeya Purāṇa*, in this connection, says that the *yogin* should know the approach of his death by the signs described in ch. 40, so that he may anticipate it and may not get dispirited.

dhāna and *puruṣa* from within Himself and connected them both. The first entity that emerged from *prakṛti* in this creative process was *mahat*, from which emerged *ahamkāra*, and from which again emerged *sattva*, *rajas* and *tamas*. From *tamas* came the five *tan-mātras* and the five *bhūtas*; from *rajas* came the ten senses and the *buddhi*. From *sattva* came the presiding gods of the senses and the *manas*¹. It is further said that Vāsudeva exists in the *prakṛti* and the *puruṣas* and all the effects, both as pervading through them and also separate from them, that is, He is both immanent and transcendent. Even when He exists as pervading through them, He is not in any way touched by their limitations and impurities. True knowledge is that which takes account of the nature of all those which have emanated from Vāsudeva in their specific forms as *prakṛti*, *puruṣa*, etc., and also of Vāsudeva in His pure and transcendent form².

It should be noted that in the *Padma Purāṇa* there is a mention of *brahma-bhakti*, which is either *kāyika*, *vācika* and *mānasika* or *laukikī*, *vaidikī* and *ādhyātmikī*. This *ādhyātmikī-bhakti* is further subdivided into the *sāṃkhya-bhakti* and *yoga-bhakti*³. The knowledge of twenty-four principles and of their distinction from the ultimate principle called *puruṣa*, as also of the relation among *puruṣa* and *prakṛti* and the individual soul, is known as *sāṃkhya-bhakti*⁴. Practice of *prāṇayāma* and meditation upon the Lord Brahma constitute the *yoga-bhakti*⁵. The term *bhakti* is here used in a very special sense.

In *Nāradiya Purāṇa* Nārāyaṇa is said to be the Ultimate Reality, that is, if seen in theological perspective it may be said to create from itself Brahmā the creator, Viṣṇu the protector and preserver, and Rudra the destroyer⁶. This Ultimate Reality has also been called *Mahā-viṣṇu*⁷. It is through his characteristic power that the universe is created. This *śakti* or power is said to be both of the type of existence and non-existence, both *vidyā* and *avidyā*⁸. When the universe is seen as dissociated from *Mahā-viṣṇu*, the vision is clearly due to *avidyā* ingrained in us; when, on the other hand, the consciousness of the distinction between the knower and the known disappears and only the consciousness of

¹ *Skanda Purāṇa*, II. 9. 24, verses 1-10.

³ *Padma Purāṇa*, I. 15, verses 164-177.

⁵ *Ibid.* verses 187-190.

⁷ *Ibid.* verse 9.

² *Ibid.* verses 65-74.

⁴ *Ibid.* verses 177-186.

⁶ *Nāradiya Purāṇa*, I. 3. 4.

⁸ *Ibid.* verse 7.

unity pervades, it is due to *vidyā* (it is *vidyā* itself)¹. And just as Hari permeates or pervades through the universe, so also does His *śakti*². Just as the quality of heat exists by pervading, i.e. as in and through Agni its support, even so the *śakti* of Hari can never be dissociated from Him³. This *śakti* exists in the form of *vyaktā-vyakta*, pervading the whole universe. *prakṛti*, *puruṣa* and *kāla* are her first manifestations⁴. As this *śakti* is not separate from *Mahā-viṣṇu*, it is said that at the time of first or original creation *Mahā-viṣṇu*, being desirous of creating the universe, becomes, i.e. takes the forms of *prakṛti*, *puruṣa* and *kāla*. From *prakṛti*, disturbed by the presence of the *puruṣa*, comes out *mahat*, and from *mahat* comes into existence *buddhi*, and from *buddhi*, *ahaṃkāra*⁵.

This Ultimate Principle has also been called Vāsudeva, who is said to be the ultimate knowledge and the ultimate goal⁶.

Sorrow or misery of three kinds is necessarily experienced by all beings born in the universe—and the only remedy that sets them free from misery is the final obtaining of the Lord (or God)⁷. The ways to find God are two, the way of knowledge (*jñāna*) and that of action (*karma*). This *jñāna* springs up either from the learning of scriptural texts or from *viveka* (discriminative knowledge)⁸.

¹ *Nāradya Purāṇa*, 1. 3, verses 7–9.

² *Ibid.* verse 12.

It should be distinctly noted here that the creation of the universe has been attributed to Hari through the *upādhi avidyā*, which is His own *śakti*. The whole account sounds the note of the Vedānta philosophy. The following line should be particularly noted:

avidyo-pādhi-yogena tathe'dam akhilaṃ jagat. Ibid. 3. 12.

And this line should be read with the previous verse—

*viṣṇu-śakti-samudbhūtam etat sarvaṃ carā-caṇam
yasmād bhinnam idam sarvaṃ yacce'gaṃ yacca teṅgati
upādhibhir yathā'kāśo bhinnatvena pratiyate.*

Ibid. verses 10–11.

³ *Ibid.* verse 13.

⁴ *Ibid.* verse 17.

⁵ *Ibid.* verses 28, 31.

⁶ *Ibid.* verse 80.

⁷ For the concept of *antaryāmin* see verse 26 of *Adhyāya* 3 and also verse 48 of *Adhyāya* 33.

⁸ *Nāradya Purāṇa*, verses 4, 5.

*utpattim pralayaṃ caivā bhūtānām agatim gatim
vetti vidyām avidyāṃ ca sa vācya bhagavān iti
jñāna-śakti-balai-śvarya-īrya-tejāmsy aśeṣataḥ
bhagavac-śabda-vācya'yaṃ vinā heyair guṇā-dibhiḥ
sarvaṃ hi tatra bhūtāni vasanti paramā-tmani
bhuteṣu vasate sāntar vāsudevas tataḥ smṛtaḥ.
bhūteṣu vasate sāntar vasanty atra ca tāni yat
dhātā vidhātā jagatām vāsudevas tatas smṛtaḥ.*

Ibid. 1. 46, verses 21–24.

The attributes of Vāsudeva are described in following four verses. It should also be noted that Bhagavān means Vāsudeva. (*Ibid.* verse 19.)

yoga is also defined in the next chapter. It is described as *Brahma-laya*. The *manas* is the cause of bondage and emancipation. Bondage means association with sense-objects, and emancipation means dissociation from them. When, like a magnet, the self draws the mind inside and directs its activities in an inward direction and ultimately unites with Brahman, that is called *yoga*¹.

Viṣṇu is described as having three kinds of *śakti* (power): *parā* or ultimate, the *aparā* (which is identical with individual efforts), and a third power which is called *vidyā* and *karma*². All energies belong to Viṣṇu, and it is through His energies that all living beings are moved into activity³.

The word *bhakti* has also been used in another chapter in the sense of *śraddhā*, and is held to be essential for all the various actions of life⁴.

According to the *Kūrma Purāṇa* it seems that God exists firstly as the unmanifested, infinite, unknowable and ultimate director. But He is also called the unmanifested, eternal, cosmic cause which is both being and non-being and is identified with *prakṛti*. In this aspect He is regarded as *para-brahman*, the equilibrium of the three *guṇas*. In this state the *puruṣa* exists within Himself as it were, and this is also called the state of *prākṛta-pralaya*. From this state of unmanifestedness God begins to assert Himself as God and enters into *prakṛti* and *puruṣa* by His own inner intimate contact. This existence of God may be compared with the sex-impulse in man or woman which exists within them and manifests itself only as a creative impulse although remaining one and the same with them all the while. It is for this reason that God is regarded as both passive (*kṣobhya*) and dynamic (*kṣobhaka*). It is therefore said that God behaves as *prakṛti* by self-contraction and dilatation. From the disturbed *prakṛti* and the *puruṣa* sprang up the seed of *mahat*, which is of the nature of both *pradhāna* and *puruṣa* (*pradhāna*

¹ *ātma-prayatna-sāpekṣā viśiṣṭā yā mano-gatiḥ
tasyā brahmaṇi samyogo yoga ity abhidhīyate.*

Nārādīya Purāṇa, 47. 7.

There is also a description of *prāṇāyāma*, *yama*, and *niyama*, etc., from v. 8 to v. 20.

² *Ibid.* 1. 47, verses 36-38.

³ *Ibid.* verses 47-49.

⁴ *Ibid.* 1, verse 4.

⁵ *Kūrma Purāṇa* contains the following verse:

*maheśvaraḥ paro'vyaktaś catur-vyūhaḥ sanātanaḥ
anantaś cā'prameyaś ca niyantaḥ sarvato-mukhaḥ.*

(4. 5.)

Two points should be noted here. Firstly, that the Ultimate Reality has been called *Maheśvara* and not *Viṣṇu*. Secondly, *catur-vyūha* is one of the adjectives mentioned in this verse to explain the nature of that Ultimate Reality.

puruṣāt-makam). From this came into existence *mahat*, also called *ātman*, *matī*, *brahmā*, *prabuddhi*, *khyāti*, *Īśvara*, *prajñā*, *dhṛti*, *smṛti*, *saṃvit*. From this *mahat* came out the threefold *ahamkāra-vaikārika*, *taijasa* and *bhūtādi* (also called *tāmasa ahamkāra*). This *ahamkāra* is also called *abhimāna*, *kartā*, *mantā*, and *ātman*, for all our efforts spring from this.

It is said that there is a sort of cosmic mind called *manas* which springs directly from the *avyakta* and is regarded as the first product which superintends the evolution of the *tāmasa ahamkāra* into its products¹. This *manas* is to be distinguished from the *manas* or the sense which is the product of both the *taijasa* and *vaikārika ahamkāra*.

Two kinds of views regarding the evolution, the *tanmātras* and the *bhūtas*, are given here in succession, which shows that the *Kūrma Purāṇa* must have been revised; and the second view, which is not compatible with the first, was incorporated at a later stage. These two views are as follows:

(1) *Bhūtādi* has, in its development, created the *śabda-mātra*, from which sprang into existence the *ākāśa*, which has sound as its quality. The *sparsa-mātra* was created from the *ākāśa*, developing itself; and from the *sparsa-tanmātra* came out *vāyu*, which, consequently has *sparsa* as its quality. *Vāyu*, in the state of development, created the *rūpa-mātra* from which came into existence *jyoti* (light-heat), which has colour (*rūpa*) as its quality. From this *jyoti*, in the condition of development, sprang up *rasa-mātra* (taste-potential), which created water, which has taste for its quality. The water, in the state of development, created the smell-potential (*gandha-mātra*), from which came into existence the conglomeration, which has smell as its quality.

(2) *Ākāśa* as the sound-potential covered up the touch-potential, and from this sprang up *vāyu*, which has therefore two qualities—the sound and touch. Both the qualities, *śabda* and *sparsa*, entered the colour-potential, whence sprang up the *vahni* (fire), with three qualities—the *śabda*, the *sparsa*, and the *rūpa*. These qualities, viz. *śabda*, *sparsa* and *rūpa*, entered the taste-potential, whence came into existence water having four qualities

¹ *manas tv avyakta-jaṃ prō'ktuṃ vikārah prathamah smṛtaḥ
yenā'sau jāyate kartā bhūtā-diṃś cā'nupaśyati.*

—*śabda*, *sparsa*, *rūpa* and *rasa*. These four qualities entered smell-potential, from which sprang into existence gross *bhūmi* (the earth), which has all the five qualities of *śabda*, *sparsa*, *rūpa*, *rasa*, and *gandha*.

Mahat, *ahamkāra* and the five *tanmātras* are in themselves unable to produce the orderly universe, which is effected through the superintendence of the *puruṣa* (*puruṣā-dhiṣṭhitatvāc ca*) and by the help of *avyakta* (*avyaktā-nugraheṇa*). The universe thus created has seven coverings. The production of the universe, and its maintenance and ultimate dissolution, are all effected through the playful activity (*sva-līlayā*) of God for the benefit of his devotees¹.

¹ The God is called Nārāyaṇa, because He is the ultimate support of all human beings:

narāṇām ayaṇaṇi yasmāt tena nārāyaṇas smṛtaḥ.

Kūrma Purāṇa, iv. 62.

APPENDIX TO VOLUME I

THE *LOKĀYATA*, *NĀSTIKA* AND *CĀRVĀKA*

THE materialistic philosophy known as the *Lokāyata*, the *Cārvāka* or the *Bārhaspatya* is probably a very old school of thought. In the *Śvetāśvatara Upaniṣad* a number of heretical views are referred to and among these we find the doctrine which regarded matter or the elements (*bhūtāni*) as the ultimate principle. The name *Lokāyata* is also fairly old. It is found in Kauṭilya's *Artha-śāstra*, where it is counted with Śamkhya and Yoga as a logical science (*ānvikṣikī*)¹. Rhys Davids has collected a number of Pāli passages in which the word *Lokāyata* occurs and these have been utilized in the discussion below². Buddhaghoso speaks of *Lokāyata* as a *vitandā-vāda-sattham*³. *Vitandā* means tricky disputation and it is defined in the *Nyāya-sūtra*, I. 2. 3, as that kind of tricky logical discussion (*jalpa*) which is intended only to criticize the opponent's thesis without establishing any other counter-thesis (*sā pratipakṣa-sthāpanā-hinā vitandā*), and it is thus to be distinguished from *vāda* which means a logical discussion undertaken in all fairness for upholding a particular thesis. *Vitandā*, however, has no thesis to uphold, but is a kind of *jalpa* or tricky argument which seeks to impose a defeat on the opponent by wilfully giving a wrong interpretation of his words and arguments (*chala*), by adopting false and puzzling analogies (*jāti*), and thus to silence or drive him to self-contradiction and undesirable conclusions (*nigraha-sthāna*) by creating an atmosphere of confusion. But *vitandā* cannot then be a *vāda*, for *vāda* is a logical discussion for the ascertainment of truth, and thus the word *vitandā-vāda* would be self-contradictory. Jayanta, however, points out that the Buddhists did not make any distinction

¹ Kauṭilya, *Artha-śāstra*, I. 1.

² *Dialogues of the Buddha*, vol. I, p. 166. In recent times two Italian scholars, Dr Pizzagalli and Prof. Tucci, have written two works called *Nāstika*, *Cārvāka Lokāyatika* and *Linee di una storia del Materialismo Indiano* respectively in which they attempt to discover the meaning of the terms *nāstika*, *cārvāka* and *lokāyata* and also the doctrines of the sects. Most of the Pāli passages which they consider are those already collected by Rhys Davids.

³ *Abhidhāna-ppadīpikā*, v. 112, repeats Buddhaghoso's words "*vitandā-sattham viññeyam yaṃ taṃ lokāyatam*."

between a pure logical argument and a tricky disputation and used the same word *vāda* to denote both these forms of argument¹. This explains why *Lokāyata*, though consisting merely of *vitandā*, could also be designated as *vāda* in Buddhist literature. A few examples of this *vitandā* are given by Buddhaghosa in the same commentary in explaining the term “*loka-khāyikā*” (lit. “popular story,” but “popular philosophy” according to P.T.S. Pāli Dictionary) —the crows are white because their bones are white, the geese are red because their blood is red². Such arguments are there designated as being *vitandā-sallāpa-kathā*, where *sallāpa* and *kathā* together mean conversational talk, *sallāpa* being derived from *sam* and *lap*. According to the definitions of the *Nyāya-sūtra*, 2. 18, these would not be regarded as instances of *vitandā* but of *jāti*, i.e. inference from false analogies where there is no proper concomitance, and not *vitandā* as just explained. Rhys Davids quotes another passage from the *Sadda-nīti* of the *Aggavaṃsa* (early twelfth century) which, in his translation, runs as follows: “*Loka* means ‘the common world’ (*bāla-loka*). *Lokāyata* means ‘*āyatanti*, *ussāhanti* *vāyamanti* *vādassadenāti*’; that is, they exert themselves about it, strive about it, through the pleasure they take in discussion. Or perhaps it means ‘the world does not make any effort (*yatati*) by it,’ that it does not depend on it, move on by it (*na yatati na ihati vā*). For living beings (*sattā*) do not stir up their hearts (*cittaṃ na uppādentī*) by reason of that book (*taṃ hi gandhaṃ nissāya*)³.” Now the *Lokāyata* is the book of the unbelievers (*titthia-satthaṃ yaṃ loke vitandā-satthaṃ uccati*), full of such useless disputations as the following: “All is impure; all is not impure; the crow is white, the crane is black; and for this reason or for that”—the book which is known in the world as the *vitandā-sattha*, of which the Bodhisattva, the incomparable leader, Vidhura the Pundit, said: “Follow not the *Lokāyata*, that works not for the

¹ *ity udāhṛtam idaṃ kathā-trayaṃ yat paraṣpara-vivikta-lakṣaṇam sthūlam apy anavalokya kathyate vāda eka iti śākya-śiṣyakaiḥ.*

Nyāya-mañjarī, p. 596.

² *Sumaṅgala-vilāsinī*, I. 90, 91.

³ This translation is inexact. There is no reference to any book in the Pāli passage; in the previous sentence there was a word *vādassādāna* which was translated as “through the pleasure they take in discussion,” whereas the literal translation would be “by the taste (*assāda*) of the disputation,” and here it means “pursuing that smell” people do not turn their minds to virtuous deeds.

progress in merit¹." Thus, from the above and from many other passages from the Pāli texts it is certain that the *Lokāyata* means a kind of tricky disputation, sophistry or casuistry practised by the non-Buddhists which not only did not lead to any useful results but did not increase true wisdom and led us away from the path of Heaven and of release. The common people were fond of such tricky discourses and there was a systematic science (*śāstra* or *sattha*) dealing with this subject, despised by the Buddhists and called the *viṭaṇḍā-sattha*². *Lokāyata* is counted as a science along with other sciences in *Dīghanikāya*, III. 1. 3, and also in *Aṅguttara*, I. 163, and in the *Diṅyāvadāna* it is regarded as a special branch of study which had a *bhāṣya* and a *pravacana* (commentaries and annotations on it)³.

There seems to be a good deal of uncertainty regarding the meaning of the word *Lokāyata*. It consists of two words, *loka* and *āyata* or *ayata*; *āyata* may be derived as *ā + yaṃ + kta* or from *ā + yat* (to make effort) + *a* either in the accusative sense or in the sense of the verb itself, and *ayata* is formed with the negative particle *a* and *yat* (to make effort). On the passage in the *Agga-vamsa* which has already been referred to, it is derived firstly as *a + yatanti* (makes great effort) and the synonyms given are *ussāhanti vāyamanti*, and secondly as *a + yatanti*, i.e. by which people cease to make efforts (*tena loko na yatati na ihati vā lokā-yatam*). But Prof. Tucci quotes a passage from Buddhaghosa's *Sārattha-pakāsinī* where the word *āyata* is taken in the sense of

¹ See *Dialogues of the Buddha*, I. 168. The translation is inexact. The phrase "All is impure; all is not impure" seems to be absent in the Pāli text. The last passage quoted from *Vidhura-pañḍita-jātaka* (Fausboll, VI, p. 286) which is one of the most ancient of the *jātakas* runs as follows: "na seve lokāyatikaṃ na' etam paññāya vaddhanam." The unknown commentator describes the *lokāyatika* as "lokāyātikan ti anattā-nissitam sagga-maggānām adāyakam aniyyānikam viṭaṇḍa-sallāpam lokāyatika-vādam na seveyya." The *Lokāyata* leads to mischievous things and cannot lead to the path of Heaven or that of release and is only a tricky disputation which does not increase true wisdom.

² Rhys Davids seems to make a mistake in supposing that the word *Vidaddha* in *Vidaddharādi* is only the same word as *viṭaṇḍā* wrongly spelt (*Dialogues of the Buddha*, I. 167) in the *Aṭṭhasālinī*, pp. 3, 90, 92, 241. The word *vidaddha* is not *viṭaṇḍā* but *vidaggha* which is entirely different from *viṭaṇḍā*.

³ *lokāyatam bhāṣya-pravacanam*, *Diṅyāvadāna*, p. 630; also *chandasi vā vyākaraṇe vā lokāyate vā pramāṇa-mīmāṃsāyām vā na cai-śam ūhā-pohaḥ prajñāyate*. *Ibid.* p. 633.

It is true, however, that *lokāyata* is not always used in the sense of a technical logical science, but sometimes in its etymological sense (i.e. what is prevalent among the people, *lokeṣu āyato lokā-yataḥ*) as in *Diṅyāvadāna*, p. 619, where we find the phrase "*lokāyata-yajña-mantreṣu niṣṇātaḥ*."

āyatana (basis), and *lokāyata* according to this interpretation means "the basis of the foolish and profane world¹." The other meaning of *lokāyata* would be *lokeṣu āyata*, i.e. that which is prevalent among the common people, and this meaning has been accepted by Cowell in his translation of *Sarva-darśana-saṃgraha* and here the derivation would be from *a + yam + kta* (spreading over)². The *Amara-koṣa* only mentions the word and says that it is to be in the neuter gender as *lokāyatam*. It seems that there are two *lokāyata* words. One as adjective meaning "prevalent in the world or among the common people" and another as a technical word meaning "the science of disputation, sophistry and casuistry" (*vitāṇḍā-vāda-sattham*); but there seems to be no evidence that the word was used to mean "nature-lore," as suggested by Rhys Davids and Franke, or "polity or political science" as suggested by other scholars. The *Śukra-nīti* gives a long enumeration of the science and arts that were studied and in this it counts the *nāstika-śāstra* as that which is very strong in logical arguments and regards all things as proceeding out of their own nature and considers that there are no Vedas and no god³. Medhātithi, in commenting upon *Manu*, VII. 43, also refers to the *tarka-vidyā* of the Cārvākas, and all the older references that have been discussed show that there was a technical science of logic and sophistry called the *Lokāyata*. Fortunately we have still further conclusive evidence that the *Lokāyata-śāstra* with its commentary existed as early as the time of Kātyāyana, i.e. about 300 B.C. There is a *Vārtika* rule associated with VII. 3. 45 "*varṇaka-tāntave upasaṃkhyānam*," that the word *varṇaka* becomes *varṇakā* in the feminine to mean a blanket or a wrapper (*prāvarana*), and Patañjali (about 150 B.C.), in interpreting this *vārtika sūtra*, says that the object of restricting the formation of the word *varṇaka* only to the sense of a cotton or woollen wrapper is that in other senses the feminine form would

¹ *Linee di una storia del Materialismo Indiano*, p. 17. *Sārattha-pakāṣint* (Bangkok), II. 96.

² Rhys Davids describes *lokāyata* as a branch of Brahmanic learning, probably Nature-lore, wise sayings, riddles, rhymes and theories, handed down by tradition, as to the cosmogony, the elements, the stars, the weather, scraps of astronomy, of elementary physics, even of anatomy, and knowledge of the nature of precious stones, and of birds and beasts and plants (*Dialogues of the Buddha*, I. 171). Franke translates it as "logische beweisende Naturerklärung," *Digha*, 19.

³ *yuktir valiyasi yatra sarvaṃ svābhavikaṃ mataṃ-kasya'pi ne'śvaraḥ kartā na vedo nāstikaṃ hi tat*. *Śukra-nīti-sāra*, IV. 3. 55.

be *varṇikā* or *varttikā* (e.g. meaning a commentary) as in the case of the *Bhāguri* commentary on the *Lokāyata*—*varṇikā bhāguri-lokāyatasya*, *varttikā bhāguri lokāyatasya*¹. Thus it seems to be quite certain that there was a book called the *Lokāyata* on which there was at least one commentary earlier than 150 B.C. or even earlier than 300 B.C., the probable date of Kātyāyana, the author of the *vārttika-sūtra*. Probably this was the old logical work on disputation and sophistry, for no earlier text is known to us in which the *Lokāyata* is associated with materialistic doctrines as may be found in later literature, where *Cārvāka* and *Lokāyata* are identified². Several *sūtras* are found quoted in the commentaries of Kamalaśīla, Jayanta, Prabhācandra, Guṇaratna, etc. from the seventh to the fourteenth century and these are attributed by some to *Cārvāka* by others to *Lokāyata* and by Guṇaratna (fourteenth century) to Bṛhaspati³. Kamalaśīla speaks of two different commentaries on these *sūtras* on two slightly divergent lines which correspond to the division of *dhūrta* Cārvāka and *śuśikṣita* Cārvāka in the *Nyāya-mañjarī*. Thus it seems fairly certain that there was at least one commentary on the *Lokāyata* which was probably anterior to Patañjali and Kātyāyana; and by the seventh century the *lokāyata* or the *Cārvāka-sūtras* had at least two commentaries representing two divergent schools of interpretation. In addition to this there was a work in verse attributed to Bṛhaspati, quotations from which have been utilized for the exposition of the Cārvāka system in the *Sarva-darśana-saṃgraha*. It is difficult, however, to say how and when this older science of sophistical logic or of the art of disputation became associated with materialistic theories and revolutionary doctrines of morality, and came to be hated by Buddhism, Jainism and Hinduism alike. Formerly it was hated only by the Buddhists, whereas the Brahmins are said to have learnt this science as one of the various auxiliary branches of study⁴.

It is well known that the cultivation of the art of disputation is very old in India. The earliest systematic treatise of this is to be found in the *Caraka-saṃhitā* (first century A.D.) which is only a

¹ Patañjali's *Mahā-bhāṣya* on *Pāṇini*, VII. 3. 45, and Kaiyaṭa's commentary on it.

² *tan-nāmāni cārvāka-lokāyate-ty-ādini*. Guṇaratna's commentary on *Ṣaḍ-darśana-samuccaya*, p. 300. *Lokāyata* according to Guṇaratna means those who behave like the common undiscerning people—*lokā nirvicārāḥ sāmānyā lokās tadvad ācaranti sma iti lokāyatā lokāyatikā ity api*.

³ *Ibid.* p. 307, *Tattva-saṃgraha*, p. 520.

⁴ *Āṅguttara*, I. 163.

revision of an earlier text (*Agniveśa-saṃhitā*), which suggests the existence of such a discussion in the first or the second century B.C. if not earlier. The treatment of this art of disputation and sophistry in the *Nyāya-sūtras* is well known. Both in the Āyur-veda and in the Nyāya people made it a point to learn the sophisticated modes of disputation to protect themselves from the attacks of their opponents. In the *Kathā-vatthu* also we find the practical use of this art of disputation. We hear it also spoken of as *hetu-vāda* and copious reference to it can be found in the *Mahābhārata*¹. In the *Aśva-medha-parvan* of the *Mahābhārata* we hear of *hetu-vādins* (sophists or logicians) who were trying to defeat one another in logical disputes². Perhaps the word *vākovākya* in the *Chāndogya Upaniṣad*, VII. 1. 2, VII. 2. 1, VII. 7. 1, also meant some art of disputation. Thus it seems almost certain that the practice of the art of disputation is very old. One other point suggested in this connection is that it is possible that the doctrine of the orthodox Hindu philosophy, that the ultimate truth can be ascertained only by an appeal to the scriptural texts, since no finality can be reached by arguments or inferences, because what may be proved by one logician may be controverted by another logician and that disproved by yet another logician, can be traced to the negative influence of the sophists or logicians who succeeded in proving theses which were disproved by others, whose findings were further contradicted by more expert logicians³. There were people who tried to refute by arguments the Vedic doctrines of the immortality of souls, the existence of a future world either as rebirth or as the *pitṛ-yāna* or the *deva-yāna*, the efficacy of the Vedic sacrifices and the like, and these logicians or sophists (*haituka*) who reviled the Vedas were called *nāstikas*. Thus, Manu says that the Brahmin who through a greater confidence in the science of logic (*hetu-śāstra*) disregards the authority of the Vedas and the *smṛti* are but *nāstikas* who should be driven out by good

¹ *Mahābhārata*, III. 13034, v. 1983; XIII. 789, etc.

² *Ibid.* XIV. 85. 27.

³ Compare *Brahma-sūtra* "tarkā-pratiṣṭhānād apy anyathā-numānam iti ced evam api avimokṣa-prasaṅgaḥ." II. 1. 11.

Śaṅkara also says: *yasmān nirāgamāḥ puruṣo-prekṣā-mātra-nibandhanāḥ tarkāḥ a pratiṣṭhitā bhavanti utprekṣāyāḥ niranakuṣatoāt kair apy utprekṣitāḥ santaḥ tato'nyair ābhāsyante iti na pratiṣṭhitatvaṃ tarkānam śakyam āsrayitum*.

Vācaspati, commenting on the commentary of Śaṅkara, quotes from *Vākya-padīya*: *yatnenā' numito' py arthaḥ kuśalair anumātrbhiḥ abhiyuktatarair anyair anyathai'vo'pādīyate*.

men¹. The *Bhāgavata-purāṇa* again says that one should neither follow the Vedic cult, nor be a heretic (*pāṣaṇḍī*, by which the Buddhists and Jains were meant), nor a logician (*haituka*) and take the cause of one or the other party in dry logical disputations². Again, in *Manu*, iv. 30, it is said that one should not even speak with the heretics (*pāṣaṇḍino*), transgressors of caste disciplines (*vikarmasthān*), hypocrites (*vaidāla-vratika*), double-dealers and sophists (*haituka*)³. These *haitukas*, sophists or logicians thus indulged in all kinds of free discussions and controverted the Vedic doctrines. They could not be the Naiyāyikas or the Mīmāṃsists who were also sometimes called *haitukā* and *tarkī* because they employed their logical reasonings in accordance with the Vedic doctrines⁴. Thus we reach another stage in our discussion in which we discover that the *haitukas* used sophistical reasonings not only in their discussions, but also for repudiating the Vedic, and probably also the Buddhistic doctrines, for which they were hated both by the Vedic people and the Buddhists; and thus the sophistical or logical science of disputation and criticism of Vedic or Buddhistic doctrines grew among the Brahmanic people and was cultivated by the Brahmins. This is testified by *Manu*, ii. 11, where Brahmins are said to take this *hetu-śāstra*, and this also agrees with *Aṅguttara*, i. 163, and other Buddhistic texts.

But who were these *nāstikas* and were they identical with the *haitukas*? The word is irregularly formed according to Paṇini's rule, iv. 460 (*asti-nāsti-diṣṭam matih*). Patañjali, in his commentary, explains the word *āstika* as meaning one who thinks "it exists" and *nāstika* as one who thinks "it does not exist." Jayāditya, in his *Kāśikā* commentary on the above *sūtra*, explains *āstika* as one who believes in the existence of the other world (*para-loka*), *nāstika* as one who does not believe in its existence, and *diṣṭika* as one who believes only what can be logically demonstrated⁵. But we have the

¹ *yo'vamanyeta te mūle hetu-śāstrā-śrayād dvijaḥ | sa sādhubhir vahiṣ-kāryo nāstiko veda-nindakaḥ*. *Manu*, ii. 11.

² *veda-vāda-rato na syān na pāṣand īna haitukāḥ | śuṣka-vāda-vivāde na kañ cit pakṣam samāśrayet*. *Bhāgavata*, xi. 18. 30.

³ Medhātithi here describes the *haitukas* as *nāstikas*, or those who do not believe in the future world (*para-loka*) or in the sacrificial creed. Thus he says, *haitukā nāstikā nāsti paraloko, nāsti dattam, nāsti hutam ity evaṃ sthita-prajñāḥ*.

⁴ *Manu*, xii. 111.

⁵ *paralokaḥ asti'ti yasya matir asti sa āstikaḥ, tadviparīto nāstikaḥ; pramāṇa-nūpātīt yasya matih sa diṣṭikaḥ*. *Kāśikā* on Paṇini, iv. 4. 60. Jayāditya lived in the first half of the seventh century.

definition of *nāstika* in Manu's own words as one who controverts the Vedic doctrines (*veda-nindaka*¹). Thus the word *nāstika* means, firstly, those who do not believe in the existence of the other world or life after death, and, secondly, those who repudiate the Vedic doctrines. These two views, however, seem to be related to each other, for a refusal to believe in the Vedic doctrines is equivalent to the denial of an after-life for the soul and also of the efficacy of the sacrifice. The *nāstika* view that there is no other life after the present one and that all consciousness ceases with death seems to be fairly well established in the Upaniṣadic period; and this view the Upaniṣads sought to refute. Thus, in the *Kaṭha Upaniṣad* Naciketa says that there are grave doubts among the people whether one does or does not exist after death, and he was extremely anxious to have a final and conclusive answer from Yama, the lord of death². Further on Yama says that those who are blinded with greed think only of this life and do not believe in the other life and thus continually fall victims to death³. Again, in the *Bṛhad-āraṇyaka Upaniṣad* (II. 4. 12, IV. 5. 13) a view is referred to by Yājñavalkya that consciousness arises from the elements of matter and vanishes along with them and that there is no consciousness after death⁴. Jayanta says in his *Nyāya-mañjarī* that the *Lokāyata* system was based on views expressed in passages like the above which represent only the opponent's (*pūrvu-pakṣa*) view⁵. Jayanta further states in the same passage that no duties are prescribed in the *lokāyata*; it is only a work of tricky disputation (*vaitaṇḍika-kathai'vā'sau*) and not an *āgama*⁶.

References to the *nāstikas* are found also in the Buddhist litera-

¹ *Manu*, II. 11. Medhātithi in explaining *nāstikā'-krāntam* (*Manu*, VIII. 22) identifies *nāstikas* with *lokāyatas* who do not believe in the other world. Thus he says, *yathā nāstikāḥ para-lokā-pavādibhir lokāyatikā-dyair ākrāntam*. But in *Manu*, IV. 163, *nāstikya* is explained by him as meaning the view that the Vedic doctrines are false: *veda-pramāṇakānām arthānām mīthyātvā-dhyavasāyasya nāstikya-sābdena pratipādanam*.

ture. The P.T.S. Pāli Dictionary explains the meaning of the word *natthika* as one who professes the motto of “*natthi*,” a sceptic, nihilist, and *natthika-diṭṭhi* as scepticism or nihilistic view. It may, however, seem desirable here to give brief accounts of some of the heretics referred to in Buddhistic literature who could in some sense or other be regarded as sceptics or nihilists. Let us first take up the case of Pūraṇa Kassapa described in *Dīgha Nikāya*, II. 16, 17. Buddhaghoso, in commenting on the *Dīgha Nikāya*,¹ I. 2, in his *Sumaṅgala-vilāsinī*, says that, in a family which had ninety-nine servants, Kassapa was the hundredth servant and he having thus completed (*pūraṇa*) the hundredth number was called by his master *pūraṇa* (the completer), and Kassapa was his family name. He fled away from the family and on the way thieves robbed him of his cloth and he somehow covered himself with grass and entered a village. But the villagers finding him naked thought him to be a great ascetic and began to treat him with respect. From that time he became an ascetic and five hundred people turned ascetics and followed him. King Ajātaśatru once went to this Pūraṇa Kassapa and asked him what was the visible reward that could be had in this life by becoming a recluse, and Pūraṇa Kassapa replied as follows: “To him who acts, O king, or causes another to act, to him who mutilates or causes another to mutilate, to him who punishes or causes another to punish, to him who causes grief or torment, to him who trembles or causes others to tremble, to him who kills a living creature, who takes what is not given, who breaks into houses, who commits dacoity, or robbery, or highway robbery, or adultery, or who speaks lies, to him thus acting there is no guilt. If with a discus with an edge sharp as a razor he should make all the living creatures on the earth one heap, one mass of flesh, there would be no guilt thence resulting, no increase of guilt would ensue. Were he to go along the south bank of the Ganges giving alms and ordering gifts to be given, offering sacrifices or causing them to be offered, there would be no merit thence resulting, no increase of merit. In generosity, in self-mastery, in control of the senses, in speaking truth, there is neither merit, nor increase of merit. Thus, Lord, did Pūraṇa Kassapa, when asked what was the immediate advantage in the life of a recluse, expound his theory of non-action (*akiriyam*)¹.” This theory definitely repudiates the doctrine of *karma* and holds

¹ *Dialogues of the Buddha*, I. 69-70.

that there is neither virtue nor vice and thus no action can lead to any fruit¹. This is what is here called the doctrine of *akiriya* and it is in a way an answer to the question what may be the visible reward in this life of being a recluse. Since there is neither virtue nor vice, no action can produce any meritorious or evil effect—this is one kind of *nāttikavāda*. But it is wrong to confuse this *akiriya*² doctrine with the doctrine of inactivity (*akāraka-vāda*) attributed to Sāṃkhya by Śilāṅka in his commentary on *Sūtra-kṛtāṅga-sūtra*, I. 1. 13. That *akāraka* doctrine refers to the Sāṃkhya view that the souls do not participate in any kind of good or bad deeds³.

Let us now turn to another nihilistic teacher, viz. Ajita Keśakambalī. His doctrines are briefly described in *Dīgha*, II. 22–24, where Ajita says: “There is no such thing as alms or sacrifice or offering. There is neither fruit nor result of good or evil deeds. There is no such thing as this world or the next (*n’atthi ayam loka na paro loka*). There is neither father nor mother, nor beings springing into life without them. There are in the world no recluses or Brahmins who have reached the highest point, who walk perfectly and who, having understood and realized, by themselves alone, both this world and the next, make their wisdom known to others. A human being is built up of the four elements; when he dies the earth in him returns and relapses to the earth, the fluid to the water, the heat to the fire, his wind to the air, and his faculties pass into space. The four bearers, with the bier as the fifth, take the dead body away; till they reach the burning ground men utter eulogies, but there his bones are bleached and his offerings end in ashes. It is a doctrine of fools, this talk of gifts. It is an empty lie, mere idle talk, when men say there is profit therein. Fools and wise alike, on the dissolution of the body, are cut off, annihilated and after death they are not.”⁴ Ajita Keśakambalī was so called because he used to wear a garment made of human hair which was hot in summer and cold in winter and was thus a source of suffering.⁴ It is easy to see that Ajita Keśakambalī’s views were very similar to

¹ Buddhaghoso, in commenting on it says, *sabbathāpi pāpaṇṇānam kiriyam eva paṭikkhipati. Sumaṅgala-vilāsini*, I. 160.

² This has been interpreted by Dr Barua as representing the doctrine of Pūraṇa Kassapa, which is evidently a blunder. *Prebuddhist Indian Philosophy*, Calcutta, 1921, p. 279.

³ *bāle ca paṇḍite kāyassa bheda ucchijjanti vinassanti, na honti param maraṇā ti. Dīgha*, II. 23. *Dialogues of the Buddha*, pp. 73–74.

⁴ *Sumaṅgala-vilāsini*, I. 144.

the views of the Cārvākas as known to us from the fragments preserved as quotations and from accounts of them given by other people. Thus, Ajita did not believe in the other world, in virtue or vice, and denied that *karmas* produced any fruits. He, however, believed in the view that the body was made up of four elements, that there was no soul separate from the body, that with the destruction of the body everything of this life was finished, and that there was no good in the Vedic sacrifices.

Let us now turn to the doctrine of Makkhali Gosāla or Mankhali-putta Gosāla or Makkhali Gosāla who was a contemporary of the Buddha and Mahāvīra. Buddhaghoso says that he was born in a cow-shed (*go-sāla*). As he grew up he was employed as a servant; while going in the mud to bring oil he was cautioned by his master to take care not to let his feet slip (*mākhali*) in the mud; but in spite of the caution he slipped and ran away from his master, who, following him in a rage, pulled the ends of his *dhōti*, which was left in his hands, and Makkhali ran away naked. Thus left naked he afterwards became an ascetic like Pūraṇa Kassapa¹. According to the *Bhagavatī-sūtra*, xv. 1, however, he was the son of Makkhali who was a *mankha* (a mendicant who makes his living by showing pictures from house to house) and his mother's name was Bhaddā. He was born in a cow-shed and himself adopted the profession of a *mankha* in his youth. At his thirtieth year he met Mahāvīra and after two years he became his disciple and lived with him for six years practising penances. Then they fell out, and Makkhali Gosāla, after practising penances for two years, obtained his Jina-hood while Mahāvīra became a Jina two years after the attainment of Jina-hood by Gosāla. After this Gosāla continued to be a Jina for sixteen years and Mahāvīra met him at the end of that period in Sāvattthi where there was a quarrel between the two and Gosāla died through fever by the curse of Mahāvīra. Hoernlé shows in his edition of the text and translation of *Uvāsagadasāo*, pp. 110-111, that Mahāvīra died in 450-451 B.C. at the age of 56. Makkhali was the founder of the *Ājīvaka* sect. *Ājīvakas* are mentioned in the rock-hewn cave (which was given to them) on Barabar hills near Gaya, in the seventh Pillar Edict of Asoka in 236 B.C. and in the rock-hewn caves on Nāgārjuni hill in 227 B.C. in the reign of Asoka's successor Dāśaratha. They are also mentioned in the

¹ *Sumaṅgala-vilāsini*, I. 143, 144.

Bṛhaj-jātaka (xv. 1) of Varāha Mihira in the middle of the sixth century A.D. Śilāṅka (ninth century) also refers to them in his commentary on the *Sūtra-kṛtāṅga-sūtra* (I. 1. 3. 12 and I. 3. 3. 11), in which the *Ājīvakas* are mentioned along with *Trai-rāśikas* as being followers of Makkhali Gosāla¹. Halāyudha also mentions the *ājīvas* as being the same as the Jains in general; but does not distinguish the *nirgranthas* from the *Digambaras* or identify the latter with the *Ājīvakas* as Hoernlé says in his article on the *Ājīvakas*. Hoernlé further points out in the same article that in the thirteenth-century inscriptions on the walls of the Perumāl Temple at Poygai near Virinchipuram reference is made to the taxes imposed on the *Ājīvakas* by the Chola king Rājārāja in the years A.D. 1238, 1239, 1243 and 1259. Thus it is clear that the *Ājīvaka* school of Makkhali which was started by Makkhali in the fifth century B.C. continued to exist and spread not only in North India but also in South India, and other schools also have developed out of it such as the *Trai-rāśikas*. Pāṇini's grammar has a rule (iv. 1. 154), *maskara-maskariṇau veṇuparivṛājakayoḥ*, which signifies that *maskara* means a bamboo and *maskarin* a travelling ascetic. Patañjali, however, in commenting on it, says that *maskarins* were those who advised the non-performance of actions and held that cessation (*śānti*) was much better (*māskṛta karmāṇi śāntir vah śreyasī ityāha ato maskarī parivṛājakaḥ*). The word, therefore, does not necessarily mean *ekadaṇḍins* or those who bore one bamboo staff. The identification of Makkhali with *maskarins* is therefore doubtful¹. It is also very doubtful whether the *Ājīvakas* can be regarded as the same as *Digambara* Jains, as Hoernlé supposes, for neither Varāha nor Bhoṭṭolpala identifies the *Ājīvakas* with the Jains, and Śilāṅka treats them as different and not as identical². Halāyudha also does not speak of the *Digambaras*

¹ The *Trai-rāśikas* are those who think that the self by good deeds becomes pure and free from *karma* and thus attains *mokṣa*, but seeing the success of its favourite doctrines it becomes joyous and seeing them neglected it becomes angry, and then being born again attains purity and freedom from *karma* by the performance of good deeds and is again born through joy and antipathy as before. Their canonical work is one containing twenty-one *sūtras*. In commenting on I. 3. 3. 11 Śilāṅka mentions also the *Digambaras* along with the *Ājīvakas*, but it does not seem that he identifies them in the way Hoernlé states in his scholarly article on the *Ājīvakas* in the *Encyclopaedia of Religion and Ethics*. The exact phrase of Śilāṅka is *ājīvakā-dīnām para-tīrthikānām digamvarāṇām ca asad-ācaranair upaneyā*.

² Hoernlé, in his article on the *Ājīvakas* in the *Encyclopaedia of Religion and Ethics*, says: "From this fact that Gosāla is called Makkhaliputta or Mankhali (*Maskarin*), i.e. the man of the bamboo staff, it is clear that originally he belonged

as *Ājīvakas*¹. It is, therefore, very doubtful whether the *Ājīvakas* could be identified with the *Digambara* Jains unless by a confusion in later times, probably on account of the fact that both the *Digambaras* and the *Ājīvakas* went about naked².

The fundamental tenet of Gośāla appears in more or less the same form in *Uvāsagadasāo*, I. 97, 115, II. 111, 132, *Samyutta Nikāya*, III. 210, *Aṅguttara Nikāya*, I. 286 and the *Dīgha Nikāya*, II. 20. In the last-mentioned work Gośāla is reported to say to king Ajātaśatru: "There is no cause for the sufferings of beings; they therefore all suffer without any cause; there is no cause for the purity (*viśuddhi*) of beings; they all become pure without any cause; there is no efficiency in one's own deeds or in the deeds of others (*n'atthi atta-kāre na'tthi parakāre*) or in one's free efforts (*purīṣa-kāre*); there is no power, no energy, no human strength or heroic endeavours (*parākkama*)³. All vertebrates (*sabbe sattā*), all animals with one or more senses (*sabbe pāṇā*), all lives emanating from eggs or ovaries (*sabbe bhūtā*), all vegetable lives, are without any power or efficiency. They become transformed in various forms by their inherent destiny, by their manifestation in various life-forms, and by their different natures (*niyati-saṅgati-bhava-pariṇati*), and it is in accordance with their six kinds of life-states that they suffer pains and enjoy pleasures." Again, in the *Sūtra-kṛtāṅga sūtra*, II. 6. 7, Gośāla is reported to say that there is no sin for ascetics in having intercourse with women⁴. These doctrines of Gośāla

to the class of *eka-danḍins* (or *danḍin*) ascetics; and, though he afterwards joined Mahāvīra and adopted his system, he held some distinguishing tenets of his own, and also retained his old distinguishing mark, the bamboo staff." This is all very doubtful, for firstly *mankha* and *maskarin* cannot be identified; secondly, *mankha* means a beggar who carried pictures in his hands—*mankha's citra-phalaka-vyagra-karo bhikṣuka-viśeṣaḥ* (Abhayadeva Sūri's comment on the *Bhagavati-sūtra*, p. 662. Nirṇaya Saṅgāra ed.). Gośāla's father was a *mankha* and his name was Mankhali from which Gośāla was called Makkhaliputta. Both Jacobi (*Jaina Sūtras*, II. 267 footnote) and Hoernlé (*Ājīvaka, Encyclopaedia of Religion and Ethics*, p. 266) are here wrong, for the passage referred to is Śīlāṅka's commentary on *Sūtra-kṛtāṅga-sūtra*, III. 3. 11 (*ājīvakā-dīnām para-tīrthikānām digamvarāṇām ca*), and the "ca" in the passage which is to be translated as "and" and not as "or" distinguishes the *Ājīvakas* from the *Digamvaras*.

¹ *nagnā ṭo dig-vāsāḥ kṣapaṇaḥ śramaṇaś ca jīvako jainah, ājīvo mala-dhārī nirgranthaḥ kathyate śadbhiḥ*. II. 190.

² *Dīvyaavadāna*, p. 427, refers to an episode where a Buddha image was dishonoured by a *nirgrantha* and in consequence of that 8000 *Ājīvakas* were killed in the city of Puṇḍravardhana. Dr Barua also refers to this passage in his small work, *The Ājīvakas*.

³ As Buddhaghosho says, these are all merely specifications of *purīṣa-kāra* (*sarvaiva purīṣa-kāra-viv'ecanam eva*). *Sumaṅgala-vilāsinī*, II. 20.

⁴ There is another passage in the *Sūtra-kṛtāṅga-sūtra*, III. 4. 9 (*evamege u asattha paṇṇavanti anāriyā; itthivāsam gayā bālā jinasāsana-parāmmuhā*), where

interest us only so far as they may be considered similar to the other *nāstika* teachings. But unlike other *nāstikas*, Gosāla believed not only in rebirths but also introduced a special doctrine of re-animation¹. Several other doctrines which are not of philosophical, ethical or eschatological interest but which refer only to *Ājīvaka* dogmatics are related both in the *Dīgha Nikāya*, II. 20, and in the *Bhagavati-sūtra*, xv, and have been elaborately dealt with by Hoernlé in his article on the *Ājīvaka* and his translation of the *Uvāsagadasāo*. The two important points that we need take note of here are that the *Ājīvakas* who were an important sect did not believe in the efficiency of our will or our *karma* and regarded sex-indulgence as unobjectionable to recluses. Other heretics are also alluded to in the *Sūtra-kṛtāṅga sūtra*, I. III. 4. 9-14, where they also are alluded to as having similar tendencies². Thus it is said: "Some unworthy heretics, slaves of women, ignorant men who are averse to the Law of the Jainas, speak thus: 'As the squeezing of a blister or boil causes relief for some time, so it is with (the enjoyment of) charming women. How could there be any sin in it? As a ram

it is said that some wrongdoers and others who belong to the Jaina circle have turned their faces from the laws imposed upon them by Jina and are slaves of women. Hoernlé says (*Ājīvaka, Encyclopaedia of Religion and Ethics*, p. 261) that this passage refers to the followers of Gosāla. But there is no evidence that it is so, if at least we believe in Śīlāṅka's commentary. Śīlāṅka explains "ege" or "eke" as *bauddha-vīśeṣa mila-paṭādayaḥ nātha-vādika-maṇḍala-praviṣṭā vā śaiva-vīśeṣaḥ* and *pasattha* as *sad-amuṣṭhānāt pārśve tiṣṭhanti iti parśvasthāḥ* *sva-yūthyā vā pārśvasthā-vasanna-kuṣa-lā-dayaḥ* *strī-pariśaha-parājitāḥ*. Thus, according to him, it refers to some Buddhists wearing blue garments, the *nātha-vādins*, the *Śaivas*, or some Jains with bad characters, or bad people in general.

¹ Gosāla thought that it was possible that one person's soul could reanimate other dead bodies. Thus, when he was challenged by Mahāvīra, who forbade his disciples to hold any intercourse with him, he is reported to have said that the Makkhaliputta Gosāla who was the disciple of Mahāvīra was long dead and born in the abode of the gods while he was in reality Udāyī-kuṇḍiyyāṇiya, who in the seventh and the last change of body through reanimation had entered Gosāla's body. According to Gosāla, a soul must finish eighty-four thousand *mahā-kalpas* during which it must be born seven times in the abode of the gods and seven times as men, undergoing seven reanimations, exhausting all kinds of *karmas*. See *Bhagavati-sūtra*, xv. 673, Nirṇaya Sagaraed. See also Hoernlé's two Appendices to his translation of *Uvāsagadasāo* and the article on *Ājīvika, Encyclopaedia of Religion and Ethics*, p. 262. A *mahā-kalpa* is equal to 300,000 *saras* and one *sara* is the time required to exhaust the sands of the seven Ganges (each Ganges being 500 *yojanas* or 2250 miles in length, 2½ miles in breadth, and 50 *dhanus* or 100 yards in depth), at the rate of putting 100 years for the removal of one grain of sand. See *ibid.*; also Rockhill's Appendix 1 to his *Life of the Buddha*.

² According to Śīlāṅka they were a sect of Buddhists wearing blue garments, Śaivas, the Nāthas, and some degraded Jains also.

drinks the quiet water, so it is with (the enjoyment of) charming women. How can there be any sin in it?' So say some unworthy heretics who entertain false doctrines and who long for pleasures as the ewe for her kid. Those who do not think of the future but only enjoy the present will repent of it afterwards when their life or their youth is gone¹."

Again, some heretics (identified by Śīlāṅka with the *Lokāyata*) are reported in the *Sūtra-kṛtāṅga-sūtra*, II. 1. 9-10, as instructing others as follows: Upwards from the sole of the feet up to the bottom of the tips of hair and in all transverse directions the soul is up to the skin; so long as there is the body there is the soul and there is no soul apart from this body, so the soul is identical with the body; when the body is dead there is no soul. When the body is burnt no soul is seen and all that is seen is but the white bones. When one draws a sword from a scabbard, one can say that the former lies within the latter, but one cannot say similarly of the soul that it exists in the body; there is in reality no way of distinguishing the soul from the body such that one may say that the former exists in the latter. One can draw the pith from a grass stalk, or bones from flesh or butter from curd, oil from sesamum and so forth, but it is not possible to find any such relation between the soul and the body. There is no separate soul which suffers pains and enjoys pleasures and migrates to the other world after the death of the body, for even if the body is cut into pieces no soul can be perceived, just as no soul can be perceived in a jug even when it is broken to pieces, whereas in the case of a sword it is found to be different from the scabbard within which it is put. The *Lokāyatas* thus think that there is no fault in killing living beings, since striking a living body with a weapon is like striking the ground. These *Lokāyatas*, therefore, cannot make any distinction between good and bad deeds as they do not know of any principle on which such a distinction can be made, and there is thus no morality according to them. Some slight distinction is made between the ordinary nihilists and the haughty nihilists (*pragalbha nāstika*) who say that if the soul was different from the body then it would have some specific kind of colour, taste or the like, but no such separate entity is discoverable, and therefore it cannot be believed that there is a separate soul. The *Sūtra-kṛtāṅga-sūtra*, II. 1. 9 (p. 277), speaks

¹ See Jacobi's translation of *Sūtra-kṛtāṅga-sūtra*. *Jaina Sūtras*, II. 270.

of these *Pragalbha Nāstikas* as renouncing (*niṣkramya*) the world and instructing other people to accept their doctrines. But Śīlāṅka says that the *Lokāyata* system has no form of initiation and thus there cannot be any ascetics of that school; it is the ascetics of other schools such as the Buddhists who sometimes in their ascetic stage read the *Lokāyata*, became converted to *lokāyata* views, and preached them to others¹.

After the treatment of the views of the *lokāyata nāstikas* the *Sūtra-kṛtāṅga-sūtra* treats of the Sāṃkhyas. In this connection Śīlāṅka says that there is but little difference between the *lokāyata* and the Sāṃkhya, for though the Sāṃkhyas admit souls, these are absolutely incapable of doing any work, and all the work is done by *prakṛti* which is potentially the same as the gross elements. The body and the so-called mind is therefore nothing but the combination of the gross elements, and the admission of separate *puruṣas* is only nominal. Since such a soul cannot do anything and is of no use (*akimcītkara*), the *Lokāyatas* flatly deny them. Śīlāṅka further says that the Sāṃkhyists, like the *Lokāyatikas*, do not find anything wrong in injuring animal lives, for after all the living entities are but all material products, the so-called soul being absolutely incapable of taking interest or part in all kinds of activities². Neither the *nāstikas* nor the Sāṃkhyists can, therefore, think of the distinction between good and bad deeds or between Heaven and Hell, and they therefore give themselves up to all kinds of enjoyments. Speaking of the *lokāyata nāstikas*, the *Sūtra-kṛtāṅga-sūtras* say as follows: "Thus some shameless men becoming monks propagate a law of their own. And others believe it, put their faith in it, adopt it (saying): 'Well you speak the truth, O Brahmaṇa (or) O Śramaṇa, we shall present you with food, drink, spices and sweetmeats, with a robe, a bowl, or a broom.' Some have been induced to honour them, some have made (their proselytes) to honour them. Before (entering an order) they were determined to become Śramaṇas,

¹ *yady api lokāyatikānām nāsti dikṣādikaṃ tathā'pi apareṇa śākyā-dīnā pravrajyā-vidhānena pravrajyā paścāt lokāyatikam adhiyānasya tathāvidha-parīṇateḥ tad eva'bhīrucitam*. Śīlāṅka's commentary on the *Sūtra-kṛtāṅga-sūtra*, p. 280 a (Nirṇaya Sagaraed).

In pp. 280-281 Śīlāṅka points out that the *Bhāgavatas* and other ascetics at the time of their renouncement of the world take the vow of all kinds of self-restraint, but as soon as they become converted to the *lokāyata* views they begin to live an unrestrained life. They then wear blue garments (*mīla-paṭa*).

² *Ibid.* pp. 281, 283.

houseless, poor monks, who would have neither sons nor cattle, to eat only what should be given them by others, and to commit no sins. After having entered their Order they do not cease (from sins), they themselves commit sins and they assent to another's committing sins. Then they are given to pleasures, amusements and sensual lust; they are greedy, fettered, passionate, covetous, the slaves of love and hate¹."

But we find references to the *lokāyata* doctrines not only in the *Sūtra-kṛtāṅga-sūtra* but also in the *Bṛhad-āranyaka*, the *Kaṭha* as described above and in the *Chāndogya Upaniṣad*, VIII. 7, 8, where Virocana, the representative of the demons who came to Prajāpati for instruction regarding the nature of self, went away satisfied with the view that the self was identical with the body. Prajāpati asked both Indra and Virocana to stand before a cup of water and they saw their reflections, and Prajāpati told them that it was that well dressed and well adorned body that was the self and both Indra and Virocana were satisfied; but Indra was later on dissatisfied and returned for further instructions, whereas Virocana did not again come back. The *Chāndogya Upaniṣad* relates this as an old story and says that it is for this reason that those, who at the present time believe only in worldly pleasures and who have no faith (in the efficiency of deeds or in the doctrine of the immortality of the soul) and who do not perform sacrifices, are called demons (*asura*); and it is therefore their custom to adorn the dead body with fine clothes, good ornaments and provide food for it with which they probably thought that the dead would conquer the other world.

This passage of the *Chāndogya* seems to be of special importance. It shows that there was a race different from the Aryans, designated here as *asuras*, who dressed their dead bodies with fine clothes, adorned them with ornaments, provided them with food, so that when there was a resurrection of these dead bodies they might with that food, clothes and ornaments prosper in the other world and it is these people who believed that the body was the only self. The later *Lokāyatas* or *Cārvākas* also believed that this body was the self, but the difference between them and these *dehātma-vādins* referred to in the *Chāndogya* is that they admitted "another world" where the bodies rose from the dead and prospered in the fine clothes, ornaments and food that were given to

¹ See Jacobi, *Jaina Sūtras*, II. 341-342.

the dead body. This custom is said to be an *asura* custom. It seems possible, therefore, that probably the *lokāyata* doctrines had their beginnings in the preceding Sumerian civilization in the then prevailing customs of adorning the dead and the doctrine of bodily survival after death. This later on became so far changed that it was argued that since the self and the body were identical and since the body was burnt after death, there could not be any survival after death and hence there could not be another world after death. Already in the *Kaṭha* and the *Bṛhad-āraṇyaka* we had proof of the existence of people who did not believe in the existence of any consciousness after death and thought that everything ended with death; and in the *Chāndogya* we find that Virocana believed in the doctrine that the body was the *ātman* and this doctrine is traced here to the custom of adorning the dead body among the *asuras*.

The tenets and doctrines of these *asuras* are described in the *Gītā*, xvi. 7-18, as follows: The *asuras* cannot distinguish between right and wrong conduct; they do not have any purity, truthfulness and proper behaviour. They do not think that the world is based on any truth and reality; they do not believe in God and consider all beings to have come out from the desires of the sexes and from nothing more than from mutual sex-relations. These foolish people with such views do harm to the world, engage themselves in ferocious deeds and destroy their own selves (as they have no faith in the other world or in the means thereto)¹. Full of insatiable desire, egoism, vanity and pride, they take the wrong course through ignorance and live an impure life. They think that existence ends finally at death and that there is nothing beyond this world and its enjoyments, and they therefore give themselves up to earthly enjoyments. Bound with innumerable desires, anger, attachment, etc., they busy themselves in collecting materials of earthly enjoyments through wrong means. They always think of their riches, which they earn daily, and which they accumulate, with which they fulfil their desires in the present or wish to fulfil in the future; of the enemies whom they have destroyed, or whom they wish to destroy; of their powers, their success, their joys, their strength, and so forth.

A doctrine similar to that of the *Lokāyatikas* is preached by Jābāli in *Rāmāyaṇa*, II. 108, where he says that it is a pity that there

¹ Śrīdhara says that these refer to the *Lokāyatikas*. *Gītā*, xvi. 9.

should be some people who prefer virtue in the other world to earthly goods of this world; the performance of the different sacrifices for the satisfaction of the dead is but waste of food, for being dead no one can eat. If food eaten by people here should be of use to other bodies, then it is better to perform *śrāddhas* for people who make a sojourn to distant countries than to arrange for their meals. Though intelligent men wrote books praising the merit of gifts, sacrifices, initiation and asceticism, in reality there is nothing more than what is directly perceived by the senses.

In the *Viṣṇu Purāṇa* (I, 6. 29-31) certain people are alluded to who did not believe in the efficacy of the performance of sacrifices and spoke against the Vedas and the sacrifices; and in the *Mahābhārata*, XII. 186, it has been urged by Bharadvāja that life-functions can be explained by purely physical and physiological reasons and that the assumption of a soul is quite unnecessary. In the *Mahābhārata* references are made also to *haitukas* who did not believe in the other world; they were people with strong old convictions (*dṛḍha-pūrve*) who could hardly change their views; they were learned in the Vedas (*vahusṛuta*), were well read in older *śāstras*, made gifts, performed sacrifices, hated falsehood, were great orators in assemblies, and went among the people explaining their views. This passage reveals a curious fact that even in the Vedic circles there were people who performed sacrifices, made gifts and were well read in the Vedas and in older literature, who despised falsehood, were great logicians and speakers and yet did not believe in anything except what exists in this world (*nai'tad asti'ti-vādinah*). We know from the Buddhistic sources that the Brahmins were well versed in the *lokāyata* learning; we know also that in the Upaniṣadic circles the views of those who did not believe in life after death are referred to and reproached, and the *Chāndogya* refers to people among whom the doctrine that the self and the body were identical was current as a corollary underlying their custom of adorning the dead. In the *Rāmāyaṇa* we find that Jāvali taught the doctrine that there was no life after death and that the ritualistic offerings for the satisfaction of the dead were unnecessary. In the *Gītā* we find also the holders of such views referred to, and they are there reported as performing sacrifices only in name, as they did not adhere to the proper ritualistic course¹. But in the

¹ *yajante nāma-jajñais te dambhenā'vidhi-pūrvakam. Gītā, XVI. 17.*

Mahābhārata certain people are referred to who were well read in the Vedas and other older literature and yet did not believe in the other world and in the immortality of the soul. This shows that this heterodox view (that there was no life after death) was gradually spreading amongst certain sections of the Vedic people, and that though some of them were worthless people who utilized the doctrine only to indulge in sense-gratifications and to live in a lower plane of life, there were others who performed the Vedic practices, were well read in Vedic and other literature and yet did not believe in the doctrine of immortality or in a world beyond the present. Thus, even in those early times, on the one hand there were in the Vedic circle many moral and learned people who believed in these heretical views, whereas there were also immoral and bad people who lived a vicious life and held such heretical views either tacitly or openly¹.

We thus know that the *lokāyata* views were very old, probably as early as the Vedas, or still earlier, being current among the Sumerian people of pre-Aryan times. We know further that a commentary on the *Lokāyata-śāstra* by Bhāgurī was very well known in 200 or 300 B.C., but it is exceedingly difficult to say anything regarding the author of the *Lokāyata-śāstra*. It is attributed to Brhaspati or to Cārvāka². But it is difficult to say who this Brhaspati may have been. One *Brhaspati-sūtra*, a work on polity, has been edited with translation by Dr F. W. Thomas and published from Lahore. In this work the *lokāyatas* have been mentioned in II. 5, 8, 12, 16, 29, and III. 15. Here they are very severely abused as thieves who regard religion as a mere means of advantage and who are destined to go to Hell. It is therefore absolutely certain

¹ The *Maitrāyaṇa Upaniṣad*, VII. 8, 9, says that there are many others who by adopting useless arguments, illustrations, false analogies and illusory demonstrations wish to oppose the Vedic ways of conduct; they do not believe in the self and are like thieves who would never go to Heaven and with whom no one should associate. One sometimes forgets that the doctrine of these people is nothing new but is only a different kind of Vedic science (*veda-vidyā'ntaran tu tat*). Brhaspati became Śukra and taught the *Asuras* this doctrine so that they might be inclined to despise the Vedic duties and consider bad to be good and good to be bad.

² The *Maitrāyaṇīya* attributes these doctrines to Brhaspati and Śukra; the *Prabodha-candro-daya* of Kṛṣṇa Miśra says that these were first formulated by Brhaspati and then handed over to Cārvāka who spread them among people through his pupils.

See also Mr D. Śāstri's *Cārvāka-śaṣṭi*, pp. 11-13, where he refers to a number of authorities who attribute this to Brhaspati.

that the Bṛhaspati who was the author of these *sūtras* on polity could not have been the author of the *lokāyata* science. Nor could it have been the legal writer Bṛhaspati. In Kauṭilya's *Artha-śāstra* a Bṛhaspati is referred to as a writer on polity, but this must be a different one from the *Bārhaspatya-sūtra* published by Dr Thomas¹. The Bṛhaspati of Kauṭilya's *Artha-śāstra* is reported there as admitting agriculture, trade and commerce (*vārtā*), law and statecraft (*daṇḍa-nīti*), as the only sciences; in the next passage of the same chapter (*Vidyā-samuddeśa*) *daṇḍa-nīti* is regarded as the one subject of study by Uśanas. In the *Prabodha-candro-daya* Kṛṣṇa Miśra makes Cārvāka hold the view that law and statecraft are the only sciences and that the science of *vārtā* (i.e. agriculture, commerce, trade, dairy, poultry, etc.) falls within them. According to this report the Cārvākas took only *daṇḍa-nīti* and *vārtā* into account, and thus their views agreed with those of Bṛhaspati and Uśanas, and more particularly with those of the latter. But we cannot from this assume that either Bṛhaspati or Uśanas mentioned by Kauṭilya could be regarded as the author of the original *lokāyata*. Bṛhaspati, the author of the *Lokāyata-śāstra*, is thus a mythical figure, and we have practically no information regarding the originator of the *lokāyata* system. It is probable that the original *lokāyata* work was written in the form of *sūtras* which had at least two commentaries, the earliest of which was probably as early as 300 or 400 B.C. There was at least one metrical version of the main contents of this system from which extracts are found quoted in Mādhava's *Sarva-darśana-saṃgraha* and in other places.

It is difficult to say whether Cārvāka was the name of a real person or not. The earliest mention of the name is probably to be found in the *Mahābhārata*, XII. 38 and 39, where Cārvāka is described as a Rākṣasa in the garb of an ascetic Brahmin with three staffs (*tridaṇḍī*), but nothing is said there about the doctrine that he professed. In most of the early texts the *lokāyata* doctrines are either mentioned as the *lokāyata* view or attributed to Bṛhaspati. Thus, in the *Padma Purāṇa* in the *Sṛṣṭ-khaṇḍa*, XII. 318-340, some of the *lokāyata* doctrines are described as being the instructions of Bṛhaspati. Kamalaśīla, of the eighth century, refers to the Cārvākas as being the adherents of the *lokāyata* doctrine; the *Prabodha-candro-daya* speaks of Cārvāka as being the great teacher who

¹ Kauṭilya's *Artha-śāstra*, pp. 6, 29, 63, 177, 192, Mysore ed. 1924.

propagated through a succession of pupils and pupils of pupils the *Lokāyata-śāstra* written by Vācaspati and handed over to him. Mādhava, in his *Sarva-darśana-saṃgraha*, describes him as one who follows the views of Bṛhaspati and the chief of the nihilists (*bṛhaspati-matā-nusāriṇā nāstika-śiromaṇinā*). Guṇaratna, however, in his commentary on the *Ṣaḍ-darśana-samuccaya*, speaks of the Cārvākas as being a nihilistic sect who only eat but do not regard the existence of virtue and vice and do not trust anything else but what can be directly perceived. They drank wines and ate meat and were given to unrestricted sex-indulgence. Each year they gathered together on a particular day and had unrestricted intercourse with women. They behaved like common people and for this reason they were called *lokāyata* and because they held views originally framed by Bṛhaspati they were also called *Bārhaspatya*. Thus it is difficult to say whether the word Cārvāka was the name of a real personage or a mere allusive term applied to the adherents of the *lokāyata* view.

Both Haribhadra and Mādhava have counted the Lokāyata or Cārvāka philosophy as a *darśana* or system of philosophy. It had a new logic, a destructive criticism of most of the cherished views of other systems of Indian philosophy, a materialistic philosophy, and it denied morality, moral responsibility and religion of every kind.

Let us, therefore, first take up the Cārvāka logic. The Cārvākas admitted the validity only of perception. There is nothing else but what can be perceived by the five senses. No inference can be regarded as a valid means of knowledge, for inference is possible only when the universal concomitance of the reason (*hetus*) with the probandum is known, and such a reason is known to be existing in the object of the minor term (*vyāpti-pakṣa-dharmatā-śāli hi lingaṃ gamakam*). Such a concomitance is possible when it is known not only to be unconditional but when there is no doubt in the mind that it could be conditional. Such a concomitance must first be known before an inference is possible; but how can it be known? Not by perception, for concomitance is not an objective entity with which the senses can come in contact. Moreover, the concomitance of one entity with another means that the entities are associated with each other in the past, present and future (*sarvo-pasamhārayatṛi vyāptiḥ*), and the sense-organs can have no

scope with regard to future associations or even with regard to all past time. If it is urged that the concomitance is between the class-character (*sāmānya-gocaram*) of the probandum (e.g. fire) and the class-character of the reason (e.g. smoke), then it is not necessary that the concomitance of the reason with the probandum should have actually to be perceived at all times by the sense-organs. But if the concomitance is between the class-character of smoke and fire, why should any individual fire be associated with every case of smoke? If the concomitance cannot be perceived by the sense-organs, it cannot be perceived by the mind either, for the mind cannot associate itself with the external objects except through the sense-organs. The concomitance cannot be known through inference, for all inference presupposes it. Thus, there being no way of perceiving concomitance, inference becomes impossible. Again, a concomitance which can lead to a valid inference must be devoid of all conditions; but the absence of such conditions in the past or in the future cannot be perceived at the time of making the inference. Moreover, a condition (*upādhi*) is defined as that which, having an unfailing concomitance with the probandum, has not the same concomitance with the reason (*sādhana-vyāpakatve sati sādhyasama-vyāptih*)¹.

Again it is said that an inference is possible only when the reason (e.g. smoke) is perceived to be associated with the object denoted by the minor term (*pakṣa*, e.g. hill), but in reality there is no association of the smoke with the hill nor can it be a character of it, for it is a quality of fire. There is no universal agreement between smoke and hill so that one can say that wherever there is a hill there is smoke. Nor can it be said that wherever there is smoke there is both the hill and the fire. When the smoke is first seen it is not perceived as the quality of fire associated with a hill; therefore it is not enough to say that the reason (e.g. smoke) belongs to the minor term (*pakṣa*, e.g. hill) as its character (*pakṣa-dharma*), but that the reason belongs to the minor term associated with the probandum. The assertion that in an inference the reason must be known as a quality of the minor term (*pakṣa*) has therefore to be interpreted as being a quality of a part of the minor term as associated with the probandum.

A valid inference can be made when the two following con-

¹ *Sarva-darśana-saṃgraha*, I.

ditions are satisfied: (1) An invariable and unconditional concomitance is known between the reason and the probandum such that in every case when the reason is present the probandum must also be present in all places and in all times, without the association of any determining condition. (2) That a reason having such a concomitance with the probandum must be known to exist in the minor term (*pakṣa*) in which the probandum is asserted. Now the Cārvāka contention is that none of these conditions can be fulfilled and that therefore valid inference is impossible. Firstly, concomitance is ascertained through an experience of a very large number of cases (*bhūyo-darśana*) of agreement between the reason (*hetu*) and the probandum (*sādhya*). But according to the difference of circumstances, time and place, things differ in their power or capacity and thus since the nature and qualities of things are not constant it is not possible that any two entities should be found to agree with each other under all circumstances in all times and in all places¹. Again, an experience of a large number of cases cannot eliminate the possibility of a future failure of agreement. It is not possible to witness all cases of fire and smoke and thus root out all chances of a failure of their agreement, and if that were possible there would be no need of any inference². The Cārvākas do not admit "universals," and therefore they do not admit that the concomitance is not between smoke and fire but between smoke-ness (*dhūmatva*) and fire-ness (*vahnitva*)³. Again, it is impossible to assure oneself that there are no conditions (*upādhi*) which would vitiate the concomitance between the *hetu* and the *sādhya*, for though they may not now be perceivable they may still exist imperceivably⁴. Without a knowledge of agreement in absence (i.e. in a case where there is no fire there is no smoke), there cannot be any assurance of concomitance. It is impossible to exhaust in

experience all cases of absence of fire as being also the cases of the absence of smoke. Thus since without such a joint method of agreement in presence and absence the universal invariable concomitance cannot be determined, and since it is not possible to assure oneself of the universal agreement in presence or in absence, the concomitance itself cannot be determined¹.

Purandara, however, a follower of Cārvāka (probably of the seventh century), admits the usefulness of inference in determining the nature of all worldly things where perceptual experience is available; but inference cannot be employed for establishing any dogma regarding the transcendental world, or life after death or the laws of *Karma* which cannot be available to ordinary perceptual experience². The main reason for upholding such a distinction between the validity of inference in our practical life of ordinary experience, and in ascertaining transcending truths beyond experience, lies in this, that an inductive generalization is made by observing a large number of cases of agreement in presence together with agreement in absence, and no cases of agreement in presence can be observed in the transcendent sphere; for even if such spheres existed they could not be perceived by the senses. Thus, since in the supposed supra-sensuous transcendent world no case of a *hetu* agreeing with the presence of its *sādhya* can be observed, no inductive generalization or law of concomitance can be made relating to this sphere³. In reply to this contention Vādideva says that such a change may be valid against the Mīmāṃsists who depend upon the joint method of agreement and difference for making any inductive generalization, but this cannot

apply against the Jaina view of inference which is based on the principle of necessary implication (*anyathā-nupapattāveva tat-svarūpatvena svīkārāt*).

Other objections also made against the possibility of a valid inference are as follows: (1) impressions made by inferential knowledge are dim and not so vivid (*aspaṣṭatvāt*) as those produced by perception; (2) inference has to depend on other things for the determination of its object (*svārtha-mīscaye parā-pekṣatvāt*); (3) inference has to depend on perception (*pratyakṣa-pūrvakatvāt*); (4) inferential cognitions are not directly produced by the objects (*arthād anupajāyamānatvāt*); (5) inference is not concrete (*avastuviṣayatvāt*); (6) it is often found contradicted (*bādhyamānatvāt*); (7) there is no proof which may establish the law that every case of the presence of the *hetu* should also be a case of the presence of the *sādhya* (*sādhya-sādhanayoḥ pratibandha-sādhaka-pramāṇa-bhāvād vā*)¹. None of these can be regarded as a reason why inference should be regarded as invalid from the Jaina point of view. For in reply to the first objection it may be pointed out that vividness has never been accepted as a definition of *pramāṇa*, and therefore its absence cannot take away the validity of an inference; illusory perceptions of two moons are vivid, but are not on that account regarded as valid. Again, an inference does not always depend on perception, and even if it did, it utilized its materials only for its own use and nothing more. Perception also is produced from certain materials, but is not on that account regarded as invalid. The inference is also produced from objects and is as concrete as perception since like it it involves universals and particulars. Again, false inferences are indeed contradicted, but that is no charge against right inferences. The invariable relationship between a *hetu* and a *sādhya* can be established through mental reasoning (*tarka*)².

Jayanta points out in this connection that a law of universal agreement of the *sādhya* with the *hetu* has to be admitted. For an inference cannot be due to any mere instinctive flash of intelligence (*pratibhā*). If a knowledge of invariable and unconditional agreement was not regarded as indispensable for an inference, and if it was due to a mere instinctive flash, then the people of the Coconut

² *Ibid.*

island who do not know how to make fire would have been able to infer fire from smoke. Some say that the invariable association of the *hetu* with the *sādhya* is perceived by mental perception (*mānasa-pratyakṣa*). They hold that in perceiving the association of smoke with fire and the absence of the former when the latter is absent, the mind understands the invariable association of smoke with fire. It is not necessary in order to come to such a generalization that one should perceive the agreement of smoke and fire in all the infinite number of cases in which they exist together, for the agreement observed in the mind is not between smoke and fire but between smoke-ness and fire-ness (*jvalanatvā-di-sāmānya-puraḥsaratayā vyāpti-grahṇāt*). The objection against this view would be the denial of class-concepts as held by the Cārvākas, Buddhists, and others. There are others, again, who say that even if universals are admitted, it is impossible that there should be universals of all cases of absence of fire as associated with the absence of smoke, and under the circumstances unless all positive and negative instances could be perceived the inductive generalization would be impossible. They, therefore, hold that there is some kind of mystic intuition like that of a yogin (*yogi-pratyakṣa-kalpam*) by which the invariable relation (*pratibandha*) is realized. Others hold that an experience of a large number of positive instances unaccompanied by any experience of any case of failure produces the notion of concomitance. But the Nyāya insists on the necessity of an experience of a large number of instances of agreement in presence and absence for arriving at any inductive generalization of concomitance¹. The Cārvākas, of course, say to this that in determining the unconditional invariable agreement of every case of a *hetu* with its *sādhya* the absence of visible conditions may be realized by perception; but the possibility of the existence of invisible conditions cannot be eliminated even by the widest experience of agreement in presence, and thus there would always be the fear that the invariable concomitance of the *hetu* with the *sādhya* may be conditional, and thus all inference has the value of more or less probability but not of certainty, and it is only through perceptual corroboration that the inferences come to be regarded as valid². The reply of Nyāya to this is that the assertion that in-

¹ Nyāya-mañjarī, p. 122.

² *athā-numānaṃ na pramāṇaṃ yogyo-pādhinām yogyā-nupalabdhyā'bhāva-nis-caye' py' ayogyo-pādhi-saṅkayā vyabhicāra-samśayāt śataśaḥ saḥacaritayor api vyabhicāro-palabdheś ca loke dhūmā-di-darśanā-ntaraṃ vahnayā'di-vyarahāraś ca*

ference is not valid is itself an inference based on the similarity of inferential processes with other invalid mental processes. But this does not properly refute the Cārvāka position that inductive generalizations are only probable, and that therefore (as Purandara says) they acquire some amount of validity by being corroborated by experience and that they have no force in spheres where they cannot be corroborated by perceptual experience.

Since the Cārvākas do not attribute any more validity to inference than probability, other forms of *pramāṇas*, such as the testimony of trusty persons or the scriptures, analogy or implication, also were not regarded as valid. According to Udayana's statement, the Cārvākas denied the existence of anything that was not perceived, and Udayana points out that if this doctrine is consistently applied and people begin to disbelieve all that they do not perceive at any particular time, then all our practical life will be seriously disturbed and upset¹. The school of *dhūrta Cārvākas*, in their *Sūtra* work, not only denied the validity of inference but criticized the Nyāya categories as enunciated in the *Nyāya-sūtra*, I. 1. 1, and tried to establish the view that no such enumeration of categories was possible². It is no doubt true that the Cārvākas admitted perception as the only valid *pramāṇa*, but since illusions occurred in perception also, ultimately all *pramāṇas* were regarded as indeterminable by them.

The Cārvākas had to contend on the one hand with those who admitted a permanent soul, such as the Jains, the Naiyāyikas, the Sāṃkhya-yoga and the Mīmāṃsā, and on the other hand with the idealistic Buddhists who believed in a permanent series of conscious states; for the Cārvākas denied all kinds of existence after death. Thus they say that since there is no permanent entity that abides after death, there is no existence after death. As the body, understanding and sense-functions, are continually changing, there cannot be any existence after death, and hence no separate soul can be admitted. According to some, Cārvākas consciousness is pro-

duced (*utpadyate*) from the four elements, and according to others it is manifested (*abhivyajyate*) from them like fermenting intoxication (*surā*) or acids. It is on account of diverse kinds of arrangements and rearrangements of the atoms of air, water, fire and earth that consciousness is either produced or manifested and the bodies and senses are formed or produced. There is nothing else but these atomic arrangements, and there is also no further separate category¹.

The school of *Suśīkṣita Cārvākas* holds that, so long as the body remains, there is an entity which remains as the constant perceiver and enjoyer of all experiences. But no such thing exists after the destruction of the body. If there was anything like a permanent self that migrated from one body to another, then it would have remembered the incidents of the past life just as a man remembers the experiences of his childhood or youth². Arguing against the Buddhist view that the series of conscious states in any life cannot be due to the last conscious state before death in a previous life, or that no state of consciousness in any life can be the cause of the series of conscious states in another future life, the Cārvākas say that no consciousness that belongs to a different body and a different series can be regarded as the cause of a different series of conscious states belonging to a different body. Like cognitions belonging to a different series, no cognition can be caused by the ultimate state of consciousness of a past body³. Again, since the last mental state of a saint cannot produce other mental states in a separate birth, it is wrong to suppose that the last mental state of a dying man should be able to produce any series of mental states in a new birth. For this reason the Cārvāka teacher Kambalāśvatara says that consciousness is produced from the body through the operation of the vital functions of *prāṇa*, *apāna* and other bio-motor faculties. It is also wrong to suppose that there is any dormant consciousness in the early stages of the foetal life, for consciousness means the cognition of objects, and there cannot be any consciousness in the foetal state when no sense-organs are properly developed; so also there is no consciousness in a state of swoon, and

¹ *tat-samudāye viśaye-ndriya-saṃjñā. Cārvāka-sūtra* quoted in Kamalaśīla's *Pañjikā*, p. 520.

² *Nyāya-mañjari*, p. 467.

³ *yadi jñānam na tad vivakṣitā-tīta-deha-varti-caram ajñāna-janyam. jñānatvāt yathā'nya-santāna-varti-jñānam. Kamalaśīla's Pañjikā*, p. 521.

it is wrong to suppose that even in these stages consciousness exists as a potential power, for power presupposes something in which it exists and there is no other support for consciousness excepting the body, and, therefore, when the body is destroyed, all consciousness ceases with it. It cannot also be admitted that at death consciousness is transferred to another intermediary body, for no such body is ever perceived and cannot therefore be accepted. There cannot also be the same series of consciousness in two different bodies; thus the mental states of an elephant cannot be in the body of a horse.

The Buddhist reply to this objection of the Cārvākas is that if by discarding after-life the Cārvākas wish to repudiate the existence of any permanent entity that is born and reborn, then that is no objection to the Buddhists, for they also do not admit any such permanent soul. The Buddhist view is that there is a beginningless and endless series of states of conscious states which, taken as a period of seventy, eighty or a hundred years, is called the present, past or future life. It is wrong on the part of the Cārvākas to deny the character of this series as beginningless and endless; for if it is so admitted, then a state of consciousness at birth has to be regarded as the first and that would mean that it had no cause and it would thus be eternal, for since it existed without any cause there is no reason why it should ever cease to exist. It could not also have been produced by some eternal consciousness or god, for no such eternal entities are admitted; it cannot be admitted as being eternal by itself; it cannot be produced by eternal atoms of earth, water, etc., for it may be shown that no eternal entities can produce anything. Thus, the last alternative is that it must have been produced by the previous states of consciousness. Even if the atoms are regarded as momentary it would be difficult to prove that consciousness was produced by them. The principle which determines causation is, firstly, that something is the cause which, being present, that which was worthy of being seen but was not seen before becomes seen¹. Secondly, when two instances are such that though all the other conditions are present in them both, yet with the introduction of one element there happens a new phenomenon in the one which does not happen in the other, then that element is the cause of that

¹ *yeṣāṃ upalambhe sati upalabdhi-lakṣaṇa-prāptam pūrvam anupalabdham sad upalabhyate ity evam āśrayaṇtyam.* Kamalaśīla, *Pañjikā*, p. 525.

phenomenon¹. The two instances, which differ from each other only in this that there is the effect in the one and not in the other, agree with each other in all other respects excepting that that in which there is the effect has also a new element which is not present in the other, and it is only in such a case that that element may be regarded as the cause of that effect. Otherwise, if the cause is defined as that which being absent the effect is also absent, then there is the alternative possibility of the presence of another element which was also absent, and it might be that it was on account of the absence of this element that the effect was absent. Thus, the two instances where an effect occurs and where it does not occur must be such that they are absolutely the same in every respect, except the fact that there is one element in the case where there is the effect which was absent in the other instance. The causal relation between body and mind cannot be established by such a rigorous application of the joint method of agreement and difference. It is not possible to employ the method of agreement to determine the nature of relation between one's own body and mind, for it is not possible to observe the body in the early foetal stage before the rise of mind, for without mind there cannot be any observation. In other bodies also the mind cannot be directly observed and so it is not possible to say that the body is prior to mind. The method of difference also cannot be employed, for no one can perceive whether with the cessation of the body his mind also ceases or not; and since the minds of other people cannot be directly perceived, such a negative observation cannot be made with reference to other people, and no assertion can therefore be made as to whether with the cessation of other people's bodies their minds also ceased or not. No inference can be drawn from the immobility of the body at death that it must be due to the destruction of mind, for it may still exist and yet remain inoperative in moving the body. Moreover, the fact that a particular body is not moved by it, is due to the fact that the desires and false notions which were operative with reference to that body were then absent.

Again, there are other reasons why the body cannot be regarded as the cause of mind: for if the body as a whole was the cause of

¹ *satṣu tad-anyeṣu samartheṣu ta-dhetuṣu yasyai'kasyā'bhāve na bhavati'ty evam āśrayaṇīyam anyathā hi kevalam tad-abhāve na bhavati'ty upadāśane sandigdham atra tasya sāmāthyam syāt anyasyā'pi tat-samarthasyā'bhāvāt.* Kamalaśīla, *Pañjikā*, p. 526.

mind, then slight deformities of the body would have changed the character of the mind, or minds associated with big bodies like those of elephants would be greater than those of men. If with the change of one there is no change in the other, the two cannot be said to be related as cause and effect. Nor can it be said that the body with the complete set of senses is the cause of mind, for in that case with the loss of any sense the nature and character of the mind would also be changed. But we know that this is not so, and when by paralysis all the motor organs are rendered inoperative, the mind may still continue to work with unabated vigour¹. Again, though the body may remain the same, yet the mental temperament, character or tone might considerably change, or sudden emotions might easily unhinge the mind though the body might remain the same. Even if instances are found which prove that the conditions of the body affect the conditions of the mind, yet that is no reason why the mind or soul should cease to exist with the destruction of the body. If on account of co-existence (*saha-sthiti-niyama*) of body and mind they may be said to be connected with each other in bonds of causation, then since body is as much co-existent with mind as mind with body, the mind may as well be said to be the cause of body. Co-existence does not prove causation, for co-existence of two things may be due to a third cause. Heated copper melts, so through heat the foetal elements may be supposed to produce on the one hand the body and on the other hand to manifest mind or consciousness. So the co-existence of body and mind does not necessarily mean that the former is the material cause of the latter.

It is said that though the later mental states are perceived to be produced by the previous ones, yet the first manifested consciousness has a beginning and it is produced by the body, and thus the theory of the Buddhists that the series of conscious states is without beginning is false. But if the mental states are in the first instance produced by the body, then these could not in later cases be produced in other ways through the visual or other sense organs. If it is urged that the body is the cause of the first origin of knowledge, but not of the later mental states, then the later mental states ought to be able to raise themselves without being in any way dependent

¹ *prasūptikā-di-rogā-dīnā kārye-ndriyā-dīnām upaghāte'pi mano-dhūr avikṛtaikā-vikalām sva-sattām anubhavati*. Karmalaśīla, *Pañjikā*, p. 527.

on the body. If it is held that a mental state can produce a series of other mental states only with the help of the body, then each of them would produce an infinite series of such mental states, but such an infinite number of infinite series is never experienced. It cannot also be said that the body generates consciousness only at the first stage and that in all later stages the body remains only as an accessory cause, for that which once behaves as a generating cause cannot behave as an accessory cause. Thus, even if the physical elements be admitted to be impermanent, they cannot be regarded as the cause. If the mental states be regarded as having a beginning, it may be asked whether by mental states the sense-knowledge or the mental ideas are meant. It cannot be the former, for during sleep, swoon or inattentive conditions there is no sense-knowledge, even though the sense-organs are present, and it has therefore to be admitted that attention is the necessary pre-condition of knowledge, and the sense-organs or the sense-faculties cannot be regarded as the sole cause of sense-knowledge. The mind cannot also be regarded as the sole cause, for unless the sense-data or the sense-objects are perceived by the senses, the mind cannot work on them. If the mind could by itself know objects, then there would have been no blind or deaf people. Admitting for argument's sake that mind produces the cognitions, it may be asked whether this cognition is *savikalpa* or *nirvikalpa*; but there cannot be any *savikalpa* unless the association of names and objects (*saṅketa*) is previously learnt. It cannot be also *nirvikalpa* knowledge, for *nirvikalpa* represents the objects as they are in their unique character, which cannot be grasped by the mind alone without the help of the sense-organs. If it is held that even the sense-data are produced by the mind, then that would be the admission of extreme idealism and the giving up of the Cārvāka position. Thus, the conscious states are to be regarded as beginningless and without any origin. Their specific characters are determined by experiences of past lives, and it is as a reminiscence of these experiences that the instincts of sucking or fear show themselves even with the newly-born baby¹. It has therefore to be admitted that the conscious states are produced neither by the body nor by the mind, but that they are beginningless and are generated by the previous

¹ *tasmāt pūrvā-bhyāsa-kṛta evā'yaṃ bālānām iṣṭā-niṣṭo-pādāna-parityāga-lakṣaṇo vyavahāra iti siddhā buddher anādītā.* Kamalaśīla, *Pañjikā*, p. 532.

states, and these by other previous states, and so on. The parental consciousness cannot be regarded as being the cause of the consciousness of the offspring, for the latter are not similar in nature, and there are many beings which are not of parental origin. It has, therefore, to be admitted that the conscious states of this life must be produced by the states of another life previous to it. Thus, the existence of a past life is proved. And since the mental states of this life are determined by the mental states of other lives, the mental states of this life also are bound to determine other mental states, and this establishes the existence of future lives; provided, however, that these mental states are associated with the emotions of attachment, anger, antipathy, etc. For the mental states can produce other mental states only when they are affected by the emotions of attachment, anger, etc., and these are inherited by the new-born baby from the mental states of his previous life which determined the series of experiences of his present life. Though the past experiences are transferred to the present life, yet owing to a severe shock due to the intervention of the foetal period these experiences do not at once show themselves in infancy, but reveal themselves gradually with age. One does not always remember what one experienced before; thus, in dreams and deliriums, though the elements of the past experience are present, yet they are reconstructed in a distorted form and do not present themselves in the form of memory. So the past experiences cannot ordinarily be remembered by the infant, though there are some gifted beings who can remember their past lives. It is wrong to suppose that the mind is supported by the body or inheres in it, for the mind is formless. Again, if the mind inhered in the body and was of the same stuff as the body, then the mental states should be as perceptible by the visual organ as the body itself. The mental states can be perceived only by the mind in which they occur, but the body can be perceived both by that mind as well as by others; therefore, these two are of entirely different character and are hence entirely different. The body is continually changing, and it is the unitary series of conscious states that produces the impression of the identity of the body. For though the individual consciousnesses are being destroyed every moment, yet the series remains one in its continuity in the past lives, the present life and the future. When the series is different, as in that of a cow and a horse or between two different

persons, the states of the one series cannot affect those in the other. One conscious state is thus admitted to be determining another conscious state, and that another, and so on, within the series. Thus it has to be admitted that consciousness exists, even in the unconscious state; for had it not been so, then there would be a lapse of consciousness at that time and this would mean the breaking up of the series. States of consciousness are independent of the sense-organs and the sense-objects, as they are determined by the previous states; in dreams, when the sense-organs are not operating and when there is no sense-object contact, the conscious states continue to be produced; and in the case of the knowledge of past or future events, or the knowledge of chimerical things like the hare's horn, the independence of conscious states is clearly demonstrated. Thus it is proved that consciousness is neither produced by the body nor is in any way determined or conditioned by it, and it is determined only by its past states and itself determines the future states. Thus also the existence of the past and the future lives is proved.

The arguments of the Jains and of the Naiyāyikas against the Cārvākas are somewhat of a different nature from those of the idealistic Buddhists just described, as the former admitted permanent souls which the latter denied. Thus Vidyānandi, in his *Tattvārtha-śloka-vārtika*, says that the chief reason why the soul cannot be regarded as a product of matter is the fact of undisputed, unintermittent and universal self-consciousness unlimited by time or space. Such perceptions as "this is blue" or "I am white" depend upon external objects or the sense-organs, and cannot therefore be regarded as typical cases of self-consciousness. But such perceptions as "I am happy" which directly refer to the self-perception of the ego do not depend on the operation of any external instruments such as the sense-organs or the like. If this self-consciousness were not admitted to be established by itself, no other doctrine, not even the Cārvāka doctrine which seeks to demolish all attested convictions, could be asserted, for all assertions are made by virtue of this self-consciousness. If any consciousness required another consciousness to have itself attested, then that would involve a vicious infinite and the first consciousness would have to be admitted as unconscious. Thus, since the self manifests itself in self-consciousness (*sva-samvedana*), and since the body is perceived

through the operation of the senses like all other physical things, the former is entirely different from the latter and cannot be produced by the latter, and because it is eternal it cannot also be manifested by the latter. Again, since consciousness exists even without the senses, and since it may not exist even when there is the body and the senses (as in a dead body), the consciousness cannot be regarded as depending on the body. Thus, the self is directly known as different from the body by the testimony of self-consciousness. The other arguments of Vidyānandi are directed against the idealistic Buddhists who do not believe in a permanent self but believe in the beginningless series of conscious states, and this discussion had better be omitted here¹.

Jayanta argues in the *Nyāya-mañjarī* that the body is continually changing from infancy to old age, and therefore the experiences of one body cannot belong to the new body that has been formed through growth or decay, and therefore the identity of the ego and recognition which form the essential constitutive elements of knowledge cannot belong to the body². It is true no doubt that good diet and medicine which are helpful to the body are also helpful to the proper functioning of the intellect. It is also true that curds and vegetable products and damp places soon begin to germinate into insects. But this is no proof that matter is the cause of consciousness. The selves are all-pervading, and when there is appropriate modifications of physical elements they manifest themselves through them according to the conditions of their own *karmas*. Again, consciousness cannot also be admitted to belong to the senses, for apart from the diverse sense-cognitions there is the apperception of the ego or the self which co-ordinates these diverse sense-cognitions. 'Thus I feel that whatever I perceive by the eyes I touch by the hand, which shows distinctly that apart from the sense-cognitions there is the individual perceiver or the ego who co-ordinates these sensations, and without such a co-ordinator the unity of the different sensations could not be attained. The *Suśikṣita Cārvākas*, however, hold that there is one perceiver so long as the body exists, but that this perceiver (*pramāṭṛ-tattva*) does not transmigrate, but is destroyed with the destruction of the body; the soul is thus not immortal, and there is no after-world after the destruction of this body³. To this Jayanta's reply is that if

¹ *Tattvārtha-śloka-vārtika*, pp. 26-52.

² *Nyāya-mañjarī*, pp. 439-441.

³ *Ibid.* pp. 467, 468.

a self is admitted to exist during the lifetime of this body, then since this self is different from the body, and since it is partless and non-physical by nature, there cannot be anything which can destroy it. No one has ever perceived the self to be burnt or torn to pieces by birds or animals as a dead body can be. Thus, since it has never been found to be destroyed, and since it is not possible to infer any cause which can destroy it, it is to be regarded as immortal. Since the self is eternal, and since it has a present and past association with a body, it is not difficult to prove that it will have also a future association with a body. Thus, self does not reside either in any part of the body or throughout the body, but is all-pervading and behaves as the possessor of that body with which it becomes associated through the bonds of *karma*. *Para-loka* or after-life is defined by Jayanta as rebirth or the association of the soul with other bodies after death. The proofs that are adduced in favour of such rebirths are, firstly, from the instinctive behaviour of infants in sucking the mother's breast or from their unaccountable joys and miseries which are supposed to be due to the memory of their past experiences in another birth; and, secondly, from the inequalities of powers, intelligence, temper, character and habits, inequalities in the reaping of fruits from the same kind of efforts. These can be explained only on the supposition of the effects of *karma* performed in other births¹.

Śaṅkara, in interpreting the *Brahma-sūtra*, III. 3. 53, 54, tries to refute the *lokayatika* doctrine of soullessness. The main points in the *lokayatika* argument here described are that since consciousness exists only when there is a body, and does not exist when there is no body, this consciousness must be a product of the body. Life-movements, consciousness, memory and other intellectual functions also belong to the body, since they are experienced only in the body and not outside of it². To this Śaṅkara's reply is that life-movements, memory, etc., do not sometimes exist even when the body exists (at death), therefore they cannot be the products of the body. The qualities of the body, such as colour, form, etc., can be

¹ *Nyāya-mañjarī*, pp. 470-473.

² *yad dhi yasmīn sati bhavaty asati ca na bhavati tat tad-dharmatvena adhyavasyate yathā'gni-dharmāv auṣṇya-prakāśau; prāṇa-ceṣṭā-caitanya-smṛtyā-dayaś cā'tma-dharmatvenā'bhimatā ātma-vā-dinām te' py antar eva deha upalabhyamānā bahiḥ cā'nupalabhyamānā asiddhe deha-vyat irikte dharmiṇi deha-dharmā eva bhavitum arhanti; tasmād avyatyireko dehād ātmāna iti. Śaṅkara-bhāṣya on Brahma-sūtra, III. 3. 53.*

perceived by everyone, but there are some who cannot perceive consciousness, memory, etc. Again, though these are perceived so long as the living body exists, yet there is no proof that it does not exist when this body is destroyed. Further, if consciousness is a product of the body, it could not grasp the body; no fire can burn itself and no dancer can mount his own shoulders. Consciousness is always one and unchangeable and is therefore to be regarded as the immortal self. Though ordinarily the self is found to manifest itself in association with a body, that only shows that the body is its instrument, but it does not prove that the self is the product of the body, as is contended by the Cārvākas. The Cārvākas criticized the entire social, moral and religious programme of orthodox Hindus. Thus Śrīharṣa, in representing their views in his *Naiṣadha-carita*, says as follows: "The scriptural view that the performance of sacrifices produces wonderful results is directly contradicted by experience, and is as false as the Purāṇic story of the floating of stones. It is only those who are devoid of wisdom and capacity for work who earn a livelihood by the Vedic sacrifices, or the carrying of three sticks (*tridaṇḍa*), or the besmearing of the forehead with ashes. There is no certainty of the purity of castes, for, considering the irrepressible sex-emotions of men and women, it is impossible to say that any particular lineage has been kept pure throughout its history in the many families on its maternal and paternal sides. Men are not particular in keeping themselves pure, and the reason why they are so keen to keep the women in the harem is nothing but jealousy; it is unjustifiable to think that unbridled sex-indulgence brings any sin or that sins bring suffering and virtues happiness in another birth; for who knows what will happen in the other birth when in this life we often see that sinful men prosper and virtuous people suffer?" The Vedic and the *smṛti* texts are continually coming into conflict with one another, and are reconciled only by the trickery of the commentators; if that is so, why not accept a view in which one may act as one pleases? It is held that the sense of ego is associated with the body, but when this body is burnt, what remains there of virtue or vice, and even if there is anything that will be experienced by another ego and in another body and as such that cannot hurt me. It is ridiculous to suppose that any one should remember anything after death, or that after death the fruits of *karma* will be reaped, or that by feeding Brahmins after death the so-called departed soul will have any

satisfaction. The image-worship, or the worship of stones with flowers, or of bathing in the Ganges as a religious practice is absolutely ridiculous. The practice of performing *śrāddha* ceremonies for the satisfaction of the departed is useless, for if the offering of food could satisfy the dead then the hunger of travellers could also be removed by their relations offering them food at home. In reality with death and destruction of the body everything ends, for nothing returns when the body is reduced to ashes. Since there is no soul, no rebirth, no god and no after-life, and since all the scriptures are but the instructions of priests interested in cheating the people, and the Purāṇas are but false mythical accounts and fanciful stories, the one ideal of our conduct is nothing but sense-pleasures. Sins and virtues have no meaning, they are only the words with which people are scared to behave in a particular manner advantageous to the priests. In the field of metaphysics the Cārvākas are materialists and believe in nothing beyond the purely sensible elements of the atoms of earth, water, air and fire and their combinations; in the field of logic they believe in nothing but what can be directly perceived; they deny *karma*, fruits of *karma*, rebirth or souls. The only thing that the Cārvākas cared for was the momentary sense-pleasures, unrestrained enjoyment of sensual joys. They did not believe in sacrificing present joys to obtain happiness in the future, they did not aim at increasing the total happiness and well-being of the whole life as we find in the ethical scheme of Caraka; with them a pigeon to-day was better than a peacock to-morrow, better to have a sure copper coin to-day than a doubtful gold coin in the future¹. Thus, immediate sense-pleasures were all that they wanted and any display of prudence, restraint, or other considerations which might lead to the sacrifice of present pleasures was regarded by them as foolish and unwise. It does not seem that there was any element of pessimism in their doctrine. Their whole ethical position followed from their general metaphysical and logical doctrine that sense-objects or sense-pleasures were all that existed, that there was no supra-sensible or transcendent reality, and thus there was no gradation or qualitative difference between the pleasures and no reason why any restraint should be put upon our normal tendency to indulge in sense-pleasures.

INDIA AT ITS BEST AND HIGHEST, IS
DEDICATED WITH SINCEREST
REVERENCE AND
HUMILITY

PREFACE

THE third volume of the present series was published in 1940. The manuscript of the fourth volume was largely ready at that time and it would have been possible to send it for publication at least by 1942. But the second world-war commenced in 1939 and although the Cambridge University Press was prepared to accept the manuscript even during war-time, the despatch of the manuscript from Calcutta to Cambridge and the transmission of proofs to and fro between England and India appeared to me to be too risky. In 1945, after retiring from the Chair of Philosophy in the Calcutta University, I came to England. But shortly after my arrival here I fell ill, and it was during this period of illness that I revised the manuscript and offered it to the University Press. This explains the unexpected delay between the publication of the third volume and the present one. The promises held out in the preface to the third volume, regarding the subjects to be treated in the present volume, have been faithfully carried out. But I am not equally confident now about the prospects of bringing out the fifth volume. I am growing in age and have been in failing health for long years. The physical and mental strain of preparing a work of this nature and of seeing it through the Press is considerable, and I do not know if I shall be able to stand such a strain in future. But I am still collecting the materials for the fifth volume and hope that I may be able to see it published in my life-time.

The present volume deals with the philosophy of the *Bhāgavata-purāṇa*, the philosophy of Madhva and his followers, the philosophy of Vallabha and the philosophy of the Gauḍīya school of Vaiṣṇavism. So far as I know, nothing important has yet been published on the philosophy of the *Bhāgavata-purāṇa* and that of Vallabha. Two important works by Mr Nāgarāja Śarmā of Madras and by Professor Helmuth von Glasenapp on the philosophy of Madhva have been published in English and German respectively. But so far nothing has appeared about the philosophy of the great teachers of the Madhva school such as Jaya-tīrtha and Vyāsa-tīrtha. Very little is known about the great controversy between the eminent followers of the Madhva school of thought and of the followers of the

Śaṅkara school of Vedānta. In my opinion Jaya-tīrtha and Vyāsa-tīrtha present the highest dialectical skill in Indian thought. There is a general belief amongst many that monism of Śaṅkara presents the final phase of Indian thought. The realistic and dualistic thought of the Sāṃkhya and the *yoga* had undergone a compromise with monism both in the Purāṇas and in the hands of the later writers. But the readers of the present volume who will be introduced to the philosophy of Jaya-tīrtha and particularly of Vyāsa-tīrtha will realize the strength and uncompromising impressiveness of the dualistic position. The logical skill and depth of acute dialectical thinking shown by Vyāsa-tīrtha stands almost unrivalled in the whole field of Indian thought. Much more could have been written on the system of Madhva logic as explained in the *Tarka-tāṇḍava* of Vyāsa-tīrtha. In this great work Vyāsa-tīrtha has challenged almost every logical definition that appears in the *Tattva-cintāmaṇi* of Gaṅgeśa, which forms the bed-rock of the new school of Nyāya logic. But this could have been properly done only in a separate work on the Madhva logic. Of the controversy between the monists of the Śaṅkara school and the dualists of the Madhva school, most people are ignorant of the Madhva side of the case, though there are many who may be familiar with the monistic point of view. It is hoped that the treatment of the philosophy of Madhva and his followers undertaken in the present volume will give new light to students of Indian thought and will present many new aspects of dialectical logic hitherto undiscovered in Indian or European thought.

The treatment of the philosophy of Vallabha which is called *viśuddhādvaita* or pure monism, presents a new aspect of monism and also gives us a philosophical analysis of the emotion of devotion. Though readers of Indian philosophy may be familiar with the name of Vallabha, there are but few who are acquainted with the important contributions of the members of his school.

I have not devoted much space to the philosophy of the *Bhāgavata-purāṇa*. Much of its philosophical views had already been anticipated in the treatment of the Sāṃkhya, *yoga* and the Vedānta. As regards the position of God and His relation to the world the outlook of the *Bhāgavata-purāṇa* is rather ambiguous. The *Bhāgavata-purāṇa* has therefore been referred to for support by the Madhvas, Vallabhas and thinkers of the Gauḍīya school.

The Gauḍīya school seems to make the *Bhāgavata-purāṇa* the fundamental source of its inspiration.

The chief exponent of the Gauḍīya school of thought is Caitanya. He, however, was a religious devotee and very little is known of his teachings. He did not produce any literary or philosophical work. But there were some excellent men of letters and philosophers among his disciples and their disciples. The treatment of the Gauḍīya school of Vaiṣṇavism thus gives a brief exposition of the views of Rūpa Gosvāmī, Jīva Gosvāmī and Baladeva Vidyābhūṣaṇa. Dr S. K. De has contributed a number of important articles on the position of Jīva Gosvāmī, though it does not seem that he cared to put an emphasis on the philosophical perspective.

In writing the present volume I have been able to use the huge amount of published materials in Sanskrit as well as a number of rare manuscripts which I collected from South India on my journeys there on various occasions.

My best thanks are due to my old friend, Dr F. W. Thomas, who, in spite of his advanced age and many important pre-occupations, took the trouble to revise some portions of the manuscript and of revising and correcting the proofs, with so much care and industry. But for his help the imperfections of the present work would have been much greater. I also have to thank Dr E. J. Thomas for the many occasional helps that I received from him from the time of the first inception of the present series. My best thanks are also due to my wife, Mrs Surama Dasgupta, M.A., Ph.D. (Cal. et Cantab), Śāstrī, for the constant help that I received from her in the writing of the book and also in many other works connected with its publication. I am also grateful to Dr Satindra Kumar Mukherjee, M.A., Ph.D., my former pupil, for the help that I received from him when I was preparing the manuscript some years ago. I wish also to thank the Syndics of the University Press for undertaking the publication of this volume at a time when the Press was handicapped by heavy pressure of work, and by great difficulties of production.

CHAPTER XXIV

THE BHĀGAVATA-PURĀṆA

The Bhāgavata-purāṇa.

THE *Bhāgavata-purāṇa* shares with the *Bhagavad-gītā* a unique position in the devotional literature of India. It cannot however claim the same antiquity: before the tenth century A.D. no references to it have been discovered by the present writer. Even Rāmānuja (born in A.D. 1017) had not mentioned its name or made any quotations from it. But by the time of Madhva the work had become famous: one of the principal works of Madhva (thirteenth century A.D.) is called the *Bhāgavata-tātparya*, in which he deals with the principal ideas of the *Bhāgavata-purāṇa*, and lays emphasis on them so far as they support his views. The thoughts of the *Bhāgavata-purāṇa* are loftily poetic, but the style is more difficult. The present writer is of opinion that it must have been composed by a Southerner, as it makes references to the Ālvars, who have probably never been referred to by any writer in Northern or Upper India. The *Bhāgavata-purāṇa*, however, was so much appreciated that immediately commentaries were written upon it. Some of these commentaries are:

Amṛta-raṅgiṇī, *Ātmapriyā*, *Kṛṣṇa-padī*, *Caitanya-candrikā*, *Jaya-maṅgalā*, *Tattva-pradīpikā*, *Tātparya-candrikā*, *Tātparya-dīpikā*, *Bhagavallīlā-cintāmaṇi*, *Rasa-mañjarī*, *Śukapakṣīyā Prabodhinī*, a *ṭikā* by Janārdana Bhaṭṭa, a *ṭikā* by Narahari, *Prakāśa* by Śrīnivāsa, *Tattva-dīpikā* by Kalyāṇa Rāya, a *ṭikā* by Kṛṣṇa Bhaṭṭa, a *ṭikā* by Kaura Sādhū, a *ṭikā* by Gopāla Cakravartī, *Anvaya-bodhinī* by Cūḍāmaṇi Cakravartī, *Bhāva-prakāśikā* by Narasiṃhācārya, a *ṭikā* by Yadupati, *Subodhinī* by Vallabhācārya, *Pada-ratnāvalī* by Vijayadhva-jā-tīrtha, a *ṭikā* by Viṭṭhala Dikṣita, *Sārārtha-darśinī* by Viśvanātha Cakravartī, a *ṭikā* by Viṣṇusvāmin, *Bhāgavata-candrikā* by Vīrarāghava, *Bhāvārtha-dīpikā* by Śivarama, *Bhāvārtha-dīpikā* by Śrīdhara-svāmī, *Sneha-pūraṇī* by Keśavadāsa, a *ṭikā* by Śrīvāsācārya, a *ṭikā* by Satyābhinava-tīrtha, a *ṭikā* by Sudarśana Sūri, a *ṭikā* by Braja-bhūṣaṇa, *Bhāgavata-purāṇārka-prabhā* by Hari-bhānu, *Bhāgavata-purāṇa-prathama-śloka-ṭikā* by Jayarāma and

Madhusūdana Sarasvatī, *Pañcama-skandha-tīkā* by Vallabhācārya, *Subodhinī* by Bālakṛṣṇa Yati, *Vaiṣṇava-toṣiṇī* by Sanātana Gosvāmī, *Budharañjini* by Vāsudeva, *Nibandha-prakāśa* by Viṭṭhala Dikṣita, *Anukramaṇikā* by Vallabhācārya, *Ekādaśa-skandha-tātparya-candrikā* by Brahmānanda, *Anukramaṇikā* by Vopadeva. Many other works also have been written on the diverse subjects of the *Bhāgavata-purāṇa* and some have also summarized it. Some of these works are by Rāmānanda-tīrtha, Priyādāsa, Viśveśvara, Puruṣottama, Śrīnātha, Vṛndāvana Gosvāmī, Viṣṇu Purī and Sanātana.

Dharma.

The word *dharma*, ordinarily translated as “religion” or “virtue,” is used in very different senses in the different schools and religious traditions of Indian thought. It will be useful to deal with some of the more important of these notions before the reader is introduced to the notion of *dharma* as explained in the *Bhāgavata-purāṇa*. The *Mīmāṃsā-sūtra* begins with an enquiry regarding the nature of *dharma*, and defines it as that good which is determinable only by the Vedic commands.¹ According to Śabara’s and Kumārila’s interpretation, the good that is called *dharma* means the Vedic sacrifices that lead to good results—the attainment of Heaven and the like. The fact that the Vedic sacrifices may bring about desirable results of various kinds can neither be perceived by the senses nor inferred from other known data: it can be known only from the testimony of the Vedic commands and directions. *Dharma*, therefore, means both the good results attainable by the Vedic sacrifices and the sacrifices themselves, and, as such, it is determinable only by the Vedic injunctions. Desirable results which are attained by rational and prudent actions are not *dharma*: for by definition *dharma* means only those desirable results which are attainable by operations which are performed strictly in accordance with Vedic injunctions. But in the Vedas are described various kinds of sacrifices by the performance of which one may take revenge on his enemies by destroying them or causing grievous injuries of various kinds to them, but action causing injury to any fellow-being is undesirable, and such action cannot be *dharma*.

¹ *athāto dharma-jijñāsā. Mīmāṃsā-sūtra*, I. 1. 1. 1.
codanā-lakṣaṇa’rtho dharmah. Ibid. I. 1. 2.

Dharma in this sense has nothing to do with God, or with ordinary or customary morality, or any kind of mystical or religious fervour as we understand it now. It simply means Vedic rituals and the good results that are supposed to follow from their performances; it has but little religious or moral application; and such a *dharma* can only be known through scriptural injunctions¹. It contains however just a little germ of the idea of non-injury, inasmuch as the performance of rituals for injuring others is not included within its content. *Dharma* also definitely rules out all kinds of emotion, mystic feeling, and exercise of intellect or thought of any description, and merely presupposes a strict loyalty to external scriptural commands; there is not the slightest trace here of any internal spiritual law, or rational will, or loyalty to God's will. The scriptural command however is categorically imperative in some cases, whereas in others it is only conditionally imperative, i.e. conditioned by one's desire for certain good things. Kumārila, in interpreting this idea, says that any substance (*dravya*), action (*kriyā*) or quality (*guṇa*) which may be utilized to produce happiness, by a particular kind of manipulation of them in accordance with Vedic commands, is called *dharma*². Though these substances, qualities etc. may be perceived by the senses yet the fact that their manipulation in a particular ritualistic manner will produce happiness for the per-

¹ *ya eva śreyas-karah, sa eva dharma-śabdena ucyate; katham avagamyatām; yo hi yāgam amutiṣṭhati, taṁ dhārmika iti samācakṣate; yaśca yasya kartā sa tena vyapadiṣyate; yathā pāvakah, lāvaka iti. tena yaḥ puruṣaṁ niḥśreyasena saṁyunnakti, sa dharma-śabdena ucyate...ko'rthah—yo niḥśreyasāya jyotiṣtomādiḥ. ko'narthah—yaḥ pratyavāyāyah. Śabara-bhāṣya on Mīmāṃsā-sūtra, 1. 1. 2.*

Prabhākara however gives a different interpretation of this rule, and suggests that it means that every mandate of the Vedas is always binding, and is called *dharma* even when by following it we may be led to actions which are injurious to other people:

tataḥ sarvasya vedārthasya kīryatvam arthatvaṁ ca vidhīyata iti śyenādīnīyogānām api arthatvaṁ syāt.

Śāstra-dīpikā, p. 17, Nirṇaya-sāgara Press, Bombay, 1915.

Kumārila, further interpreting it, says that an action (performed according to the Vedic commands) which produces happiness and does not immediately or remotely produce unhappiness is called *dharma*.

² *phalaṁ tāvādharmo'sya śyenādeḥ sampradhāryate yadā yeneṣṭa-siddhiḥ syād anuṣṭhānābandhinī tasya dharmatvam ucyeṭa tataḥ śyenādi-varjanam yadā tu codanā-gamyah kāryākāryānapekṣayā dharmah prīti-nimittam syāt tadā śyene'pi dharmatā yadā tvapriti-hetur yaḥ sāksād vyavahito'pi vā so'dharmaś codanātaḥ syāt tadā śyene'py adharmatā.*

Śloka-vārttika, on *sūtra* 2, *śloka* 270-273.

former can be known only by Vedic injunctions; and it is only with regard to this knowledge that the *dharma* is dependent on the Vedas¹. Doing an injury to one's enemy may immediately give one happiness, but by its nature it is bound to produce unhappiness in the future, since it is prohibited by the Vedic injunctions. [But injury to the life of animals in the performance of sacrifices does not produce any sin, and must be regarded as being included within *dharma*.]

On the other hand, there are actions performed with the motive of injuring one's enemies, which are not *commanded* by the Vedas, but the methods of whose performance are *described* in the Vedas only in the case of those who are actuated by such bad motives; these actions alone are called *adharma*. Thus not all injury to life is regarded as sinful, but only such as is prohibited by the Vedas: whereas those injuries that are recommended by the Vedas are not to be regarded as sin (*adharma*) but as virtue (*dharma*). By nature there are certain powers abiding in certain substances, actions or qualities which make them sinful or virtuous, but which are sinful and which can only be known by the dictates of the scriptures². *Dharma* and *adharma* are thus objective characters of things, actions, etc., the nature of which is only revealed by the scriptures. It has already been noted above that Prabhākara gave an entirely different meaning of *dharma*. With him *dharma* means the transcendental product (*apūrva*) of the performance of Vedic rituals which remains in existence long after the action is completed and produces the proper good and bad effects at the proper time³.

The *smṛti* literature is supposed to have the Vedas as its sources, and therefore it is to be regarded as authoritative; even when its contents cannot be traced in the Vedas it is inferred that such Vedic

texts must have existed¹. It is only when the *smṛti* is directly contradicted by the Vedas in any particular injunction or statement of fact that the former is to be regarded as invalid. The *smṛti* works are therefore generally regarded as a continuation of the Vedas, though as a matter of fact the *smṛti* works, written at different times at a later age, introduce many new concepts and many new ideals; in some of the *smṛtis*, however, the teachings of the *Purāṇas* and *Smṛtis* are regarded as possessing a lower status than those of the Vedas². On the relation of the *Smṛtis* and the Vedas there are at least two different views. The first view is that, if the *Smṛtis* come into conflict with the Vedas, then the *smṛti* texts should be so interpreted as to agree with the purport of the Vedic texts; and, if that is not possible, then the *smṛti* texts should be regarded as invalid. Others hold that the conflicting *smṛti* text should be regarded as invalid. Mitra Miśra, commenting on the above two views of the Śāvara and Bhaṭṭa schools, says that, on the first view, it may be suspected that the author of the conflicting *smṛti* texts is not free from errors, and as such even those non-conflicting *smṛti* texts which cannot be traced in the Vedas may be doubted as erroneous. On the second view, however, *smṛti* is regarded as valid, since no one can guarantee that the non-conflicting texts which are not traceable to the Vedas are really non-existent in the Vedas. Even in the case of irreconcilably conflicting texts, the *smṛti* directions, though in conflict with the Vedic ones, may be regarded as optionally valid³. The Vedic idea of *dharma* excludes from its concept all that can be known to be beneficial, to the performer or to others, through experience or observation; it restricts itself wholly to those ritualistic actions, the good effects of which cannot be known by experience, but can only be known through Vedic commands⁴. Thus the digging of wells, etc., is directly known by experience to be of public good (*paropakārāya*) and therefore is not *dharma*. Thus nothing that is *drṣṭārtha*, i.e. no action, the

beneficial effects of which may be known through experience, can be called *dharma*. The *Āṅgirah smṛti* echoes this idea when it says that, excepting efforts for attaining self-knowledge, whatever one does out of his own personal desire or wish is like child's play and unnecessary¹.

Many of the important *Smṛtis* however seem to extend the limits of the concept of *dharma* much further than the pure Vedic commands. As Manu's work is based entirely on the purport of the Vedas, he is regarded as the greatest of all *smṛti* writers; whatever *smṛti* is in conflict with Manu's writings is invalid². Manu defines *dharma* as that which is always followed by the learned who are devoid of attachment and antipathy, and that to which the heart assents³. In another place Manu says that *dharma* is of four kinds; the observance of the Vedic injunctions, of the injunctions of *smṛti*, the following of the customary practices of good people, and the performance of such actions as may produce mental satisfaction (*ātmanas tuṣṭiḥ*) to the performer⁴. But the commentators are very unwilling to admit any such extension of the content and meaning of *dharma*. Thus Medhātithi (9th century), one of the oldest commentators, remarks that *dharma* as following the Vedic injunctions is beginningless; only the Vedic scholars can be said to know *dharma*, and it is impossible that there should be other sources from which the nature of *dharma* could be known. Other customs and habits and disciplines of life which pass as religious practices are introduced by ignorant persons of bad character (*mūrkha-duṣṣīla-puruṣa-pravarttitāḥ*): they remain in fashion for a time and then die out. Such religious practices are often adopted out of greed (*lobhān mantra-tantrādiṣu pravarttate*)⁵. The wise and the good are

⁵ Medhātithi says that such practices as those of besmearing the body with ashes, carrying human skulls, going about naked or wearing yellow robes, are adopted by worthless people as a means of living. *Ibid.* II. 1.

only those who know the injunctions of the Vedas, who carry them into practice out of reverence for the law, and who are not led astray into following non-Vedic practices out of greed or antipathy to others. And, though a man might be tempted in his mind to perform many actions for his sense-gratification, real contentment of the heart can come only through the performance of Vedic deeds¹. Consistently with his own mode of interpretation Medhātithi discards not only the Buddhists and the Jains as being outside the true Vedic *dharma*, but also the followers of Pāñcarātra (i.e. the Bhāgavatas) and the Pāsupatas as well, who believed in the authority of the authors of these systems and in the greatness of particular gods of their own choice. He held that their teachings are directly contrary to the mandates of the Vedas: and as an illustration he points out that the Bhāgavatas considered all kinds of injury to living beings to be sinful, which directly contradicts the Vedic injunction to sacrifice animals at particular sacrifices. Injury to living beings is not in itself sinful: only such injury is sinful as is prohibited by the Vedic injunctions. So the customs and practices of all systems of religion which are not based on the teachings of the Vedas are to be discarded as not conforming to *dharma*. In interpreting the phrase *smṛti-śīle ca tad-vidām*, Medhātithi says that the word *śīla* (which is ordinarily translated as "character") is to be taken here to mean that concentration which enables the mind to remember the right purports of the Vedic injunctions². By customary duties (*ācāra*) Medhātithi means only such duties as are currently practised by those who strictly follow the Vedic duties, but regarding which no Vedic or *smṛti* texts are available. He supposes that minor auspices and other rituals which are ordinarily

¹ In interpreting the meaning of the word *hṛdaya* (heart) in the phrase *hṛdayena abhyamujñāta* Medhātithi says that the word *hṛdaya* may mean "mind" (*manas*, *antar-hṛdaya-vartīni buddhyādi-tattvāni*); on this supposition he would hold that contentment of mind could only come through following the Vedic courses of duties. But, dissatisfied apparently with this meaning, he thinks that *hṛdaya* might also mean the memorized content of the Vedas (*hṛdayam vedah, sa hy adhīto bhāvanā-rūpeṇa hṛdaya-sthito hṛdayam*). This seems to mean that a Vedic scholar is instinctively, as it were, led to actions which are virtuous, because in choosing his course of conduct he is unconsciously guided by his Vedic studies. A man may be prompted to action by his own inclination, by the example of great men, or by the commands of the Vedas; but in whichever way he may be so prompted, if his actions are to conform to *dharma*, they must ultimately conform to Vedic courses of duties.

² *samādhiḥ śīlam ucyate...yac cetaso'nya-viśaya-vyākṣepa-parihāreṇa śāstrārtha-nirūpaṇa-pravaṇatā tac chīlam ucyate.* Medhātithi's commentary, II. 6.

performed by the people of the Vedic circle have also ultimately originated from the Vedic injunctions. Similarly it is only the feeling of self-contentment of those persons who are habituated to work in accordance with the Vedas that can be regarded as indicating the path of *dharma*. It simply means that the instinctive inclination of the true adherents of the Vedas may be relied on as indicating that those actions to which their minds are inclined must be consistent with the Vedic injunctions, and must therefore conform to *dharma*. Other commentators however take a more liberal view of the meaning of the words *śīla*, *ātmanas tuṣṭi* and *hṛdayeṇa abhyānujñāta*. Thus Govindarāja explains the last phrase as meaning “absence of doubt” (*antaḥ-karaṇa-cikitsā-sūnya*), and Nārāyaṇa goes so far as to say that, unless the heart approves of the action, it cannot be right: Rāmānanda says that, when there is any doubt regarding two conflicting texts, one should act in a way that satisfies his own mind. The word *śīla* has been interpreted as “character” (*vr̥tta* or *caritra*) by Rāmānanda in his *Manvarthacandrikā* and as dissociation of attachment and antipathy by Govindarāja: Kullūka takes it according to Hārīta’s definition of *śīla* as involving the qualities of non-injury to others, absence of jealousy, mildness, friendliness, gratefulness, mercy, peace, etc. Self-satisfaction can in practice discern the nature of *dharma*, but only when there are no specified texts to determine it. Thus, though the other later commentators are slightly more liberal than Medhātithi, they all seem to interpret the slight concession that Manu had seemed to make to right character and self-contentment or conscience as constituent elements of *dharma*, more or less on Medhātithi’s line, as meaning nothing more than loyalty to scriptural injunctions.

It has been pointed out that Medhātithi definitely ruled out the Pāncarātra and the Pāsupata systems as heretical and therefore invalid for inculcating the nature of *dharma*. But in later times these too came to be regarded as Vedic schools and therefore their instructions also were regarded as so authoritative that they could not be challenged on rational grounds¹.

¹ Thus *Yogi-yājñavalkya* says: *Sāṃkhyam yogam pañca-rātram vedāḥ pāsupatam tathā ati-pramāṇānyetāni hetubhir na virodhayet*, quoted in *Vīramitrodaya*, p. 20, but not found in the printed text, Bombay. This *Yogi-yājñavalkya* is a work on *yoga* and the other a work on *smṛti*, and it is the former text

It is however a relief to find that in some of the later *Smṛtis* the notion of *dharma* was extended to morality in general and to some of the cardinal virtues. Thus Bṛhaspati counts kindness (*dayā*, meaning a feeling of duty to save a friend or foe from troubles), patience (*kṣamā*, meaning fortitude in all kinds of difficulty), the qualities of appreciating others' virtues and absence of elation at others' faults (*anasūyā*), purity (*śauca*, meaning avoidance of vices, association with the good and strict adherence to one's caste duties), avoidance of vigorous asceticism (*sannyāsa*), performance of approved actions and avoidance of disapproved ones (*maṅgala*), regular charity even from small resources (*akārpaṇya*), contentment with what little one may have and want of jealousy at others' prosperity (*asprhā*), as constituting the universal *dharma* for all¹. Viṣṇu counts patience (*kṣamā*), truthfulness for the good of all beings (*satya*), mind-control (*dama*), purity (*śauca* as defined above), making of gifts (*dāna*), sense-control (*indriya-samyama*), non-injury (*ahiṃsā*), proper attendance to teachers (*guru-śuśrūṣā*), pilgrimage, kindness (*dayā*), straightforwardness (*ārjava*), want of covetousness, adoration of gods and Brahmins, as constituting universal *dharma*. Devala considers purity (*śauca*), gifts (*dāna*), asceticism of the body (*tapas*), faith (*śraddhā*), attendance to teachers (*guru-sevā*), patience (*kṣamā*), mercifulness in the sense of pity for others' sufferings, showing friendliness as if these were one's own (*dayā*), acquirement of knowledge, Vedic or non-Vedic (*vijñāna*), mind-control and body-control (*vinaya*), truthfulness (*satya*), as constituting the totality of all *dharma*s (*dharma-samuccaya*). Yājñavalkya speaks of *ahiṃsā*, *satya*, *asteya* (avoidance of stealing), *śauca*, *indriya-nigraha* (sense-control), *dāna*, *dama*, *dayā*, and *kṣānti* as constituting universal *dharma* for all. The *Mahābhārata* counts truthfulness (*satya*), steadiness in one's caste duties (*tapas* as *sva-dharma-varjitva*), purity (*śauca*), con-

that has been printed. The present writer has no knowledge whether the latter text has been published anywhere.

Viṣṇudharmottara also speaks of Pañcarātra and Pāśupata as means of enquiry into Brahman:

sāṃkhyam yogaṃ pañcarātram vedāḥ pāśupatam

tathā kṛtānta-pañcakam viddhi brahmaṇaḥ parimārgaṇe. Ibid. p. 22.

But Mitra Miśra on the same page distinguishes between Pāśupata as a Vedic *āgama* and as a non-Vedic *āgama*. Similarly there was a Vedic and non-Vedic Pañcarātra too. *Ibid. p. 23.*

¹ *Ibid. pp. 32-4.*

tentment, meaning sex-restriction to one's own wife and also cessation from sense-attractions (*viṣaya-tyāga*), shame at the commission of evil deeds (*hrī*), patience as capacity in bearing hardships (*kṣamā*), evenness of mind (*ārjava*), philosophic knowledge of reality (*jñāna*), peace of mind (*śama* as *citta-praśāntatā*), desire to do good to others (*dayā*), meditation, meaning withdrawal of the mind from all sense objects (*dhyāna* as *nirviṣaya*), as universal *dharma*s. Yājñavalkya says that the highest of all *dharma*s is self-knowledge through *yoga*.

These universal *dharma*s are to be distinguished from the special *dharma*s of the different castes, of the different stages of life (*āśrama*), or under different conditions. We have thus three stages in the development of the concept of *dharma*, i.e. *dharma* as the duty of following the Vedic injunctions, *dharma* as moral virtues of non-injury, truthfulness, self-control etc., *dharma* as self-knowledge through *yoga*.

But the *Bhāgavata* presents a new aspect of the notion of *dharma*. *Dharma* according to the *Bhāgavata* consists in the worship of God without any ulterior motive—a worship performed with a perfect sincerity of heart by men who are kindly disposed towards all, and who have freed themselves from all feelings of jealousy. This worship involves the knowledge of the absolute, as a natural consequence of the realization of the worshipfulness of the spirit, and naturally leads to supreme bliss¹. The passage under discussion does not directly refer to the worship of God as a characteristic of the definition of *dharma* as interpreted by Śrīdhara². The *dharma* consists of absolute sincerity—absolute cessation of the spirit from all motives, pretensions and extraneous associations of every description: and it is assumed that, when the spirit is freed from all such extraneous impurities, the natural condition of the spirit is its natural *dharma*. This *dharma* is therefore not a thing that is to be attained or achieved as an external acquirement, but it is man's own nature, which manifests itself as soon as the impurities are removed. The fundamental condition of *dharma* is not therefore something positive but negative, consisting of the dissociation (*projjhita*) of extraneous elements (*kitava*). For, as soon as the extraneous elements are wiped out, the spirit shows itself in its own

¹ *Bhāgavata-purāṇa*, 1. 1. 2, interpreted according to Śrīdhara's exposition.

² *komalam īśvarārādhanā-lakṣaṇo dharmo nirūpyate*. Śrīdhara's comment on the above passage.

true nature, and then its relation to absolute truth and absolute good is self-evident: the normal realization of this relationship is what is called *dharma* or worship of God, or what Śrīdhara calls the tender worshipfulness towards God. The primary qualifications needed for a person to make a start towards a true realization of the nature of *dharma* in himself are, that he should have no jealousy towards others, and that he should have a natural feeling of friendliness towards all beings. The implications of this concept of *dharma* in the *Bhāgavata*, which breaks new ground in the history of the development of the notion of *dharma* in Indian Philosophy, are many, and an attempt will be made in the subsequent sections to elucidate them. That this dissociation from all extraneous elements ultimately means motiveless and natural flow of devotion to God by which the spirit attains supreme contentment, and that it is supreme *dharma*, is very definitely stated in I. 2. 6: If anything which does not produce devotion to God can be called *dharma*, such a *dharma* is mere fruitless labour¹. For the fruits of *dharma* as defined by the Vedic injunctions may lead only to pleasurable consequences which are transitory. The real *dharma* is that which through devotion to God leads ultimately to self-knowledge, and as such *dharma* cannot be identified with mere gain or fulfilment of desires. Thus *dharma* as supreme devotion to God is superior to the Vedic definition of *dharma*, which can produce only sense-gratification of various kinds.

Brahman, Paramātmān, Bhagavat and Parameśvara.

The opening verse of the *Bhāgavata* is an adoration of the ultimate (*param*) truth (*satya*). The word *para* however is explained by Śrīdhara as meaning God (*parameśvara*). The essential (*sva-rūpa*) definitive nature of God is said to be truth (*satya*). Truth is used here in the sense of reality; and it is held that by virtue of this supreme reality even the false creation appears as real, and that on account of this abiding reality the entire world of appearance attains its character of reality. Just as illusory appearances (e.g. silver) appear as real through partaking of the real character of the real object (e.g. the conch-shell) or the substratum of the illusion, so in this world-appearance all appears as real on account of the underlying reality of God. The fact that the world is produced from

¹ *Ibid.* I. 2. 7.

God, is sustained in Him and is ultimately dissolved in Him, is but an inessential description of an accidental phenomenon which does not reveal the real nature of God.

God is called by different names, e.g. Brahman, Paramātman and Bhagavat, but, by whatever name He may be called, His pure essence consists of pure formless consciousness (*arūpasya cidātmanah*)¹. He creates the world by His *māyā*-power, consisting of the three *guṇas*. Underlying the varied creations of *māyā*, He exists as the one abiding principle of reality which bestows upon them their semblance of reality. The *māyā* represents only His external power, through which He creates the world with Himself as its underlying substratum. But in His own true nature the *māyā* is subdued, and as such He is in His pure loneliness as pure consciousness. Śrīdhara in his commentary points out that God has two powers called *vidyā-śakti* and *avidyā-śakti*. By His *vidyā-śakti* God controls His own *māyā-śakti* in His own true nature as eternal pure bliss, as omniscient and omnipotent. The *jīva* or the individual soul can attain salvation only through right knowledge obtained through devotion. On this point Śrīdhara tries to corroborate his views by quotations from Viṣṇusvāmin, who holds that Īśvara a being, intelligence, and bliss (*saccid-ānanda īśvara*) is pervaded with blissful intelligence (*hlādinī samvit*), and that the *māyā* is under his control and that his difference from individual souls consists in the fact of their being under the control of *māyā*. The individual souls are wrapped up in their own ignorance and are therefore always suffering from afflictions (*kleśa*)². God in His own nature as pure consciousness transcends the limits of *māyā* and *prakṛti* and exists in and for Himself in absolute loneliness; and it is this same God that dispenses all the good and bad fruits of virtue and vice in men under the influence of *māyā*³. That God in His own true

¹ *Bhāgavata-purāṇa*, 1. 3. 30.

² *Ibid.* 1. 7. 6 (Śrīdhara's comment):

*tad uktaṁ viṣṇu-svāminā
hlādinī samvidāśliṣṭaḥ sac-cid-ānanda īśvaraḥ
svāvidyā-saṁvṛto jīvaḥ saṁkleśa-nikarākarāḥ*

tathā sa īśo yad-vaśe māyā sa jīvo yas tayārditaḥ, etc.

Jīva quotes the same passage and locates it in *Sarvajña-śukti Śaṭ-sandarbha*, p. 191.

³ *tvam ādyaḥ puruṣaḥ sāṅśād īśvaraḥ prakṛteḥ paraḥ
māyāṁ vyudasya cic-chaktyā kaivalye sthita ātmani
sa eva jīva-lokasya māyā-mohita-cetaso*

vidhatse svena vīryeṇa śreyo dharmādi-lakṣaṇam.

Ibid. 1. 7. 23, 24.

nature is pure consciousness and absolutely devoid of all duality and all distinctions is emphasized again and again in numerous passages in the *Bhāgavata*. In this He is ultimate and transcendent from all: the individual souls also lie dormant, and in this stage all the *guṇa* reals exist only in their potential forms; and it is by His own power that He rouses the *prakṛti* which is His *māyā* by which the individual souls are being always led into the experience of diverse names and forms. God in His own nature is therefore to be regarded as absolutely formless pure consciousness; by His power of consciousness (*cic-chakti*) He holds the individual souls within Him and by His power of materiality He spreads out the illusion of the material world and connects it with the former for their diverse experiences¹.

It is thus seen that God is admitted to have three distinct powers, the inner power as forming His essence (*antaraṅga-svarūpa-śakti*), the external power (*bahiraṅga-śakti*) as *māyā* and the power by which the individual souls are manifested. This conception however may seem to contradict the view already explained that Brahman is one undifferentiated consciousness. But the interpreters reconcile the two views by the supposition that from the ultimate point of view there is no distinction or difference between "power" and "possessor of power" (*śakti* and *śaktimān*). There is only one reality, which manifests itself both as power and possessor of power². When this one ultimate reality is looked at as the possessor of power, it is called God; when, however, emphasis is laid on the power, it is called the great power which is mythologically represented as Mahā lakṣmī³. Thus the terms Brahman, Bhagavat and Paramātman are used for the same identical reality according as the emphasis is laid on the unity or differencelessness, the possessor of power, or the transcendent person. The *antar-aṅga*, or the essential power, contains within it the threefold powers of bliss (*hlādinī*), being (*sandhinī*) and consciousness (*saṁvīt*), of which the two latter are regarded as an elaboration or evolution or

³ *yasya śakteḥ svarūpa-bhūtatvaṁ nirūpitam tac-chaktimattva-prādhānyena virājamānam bhagavat-saṁjñām āpnoti tac ca vyākhyātam; tad eva ca śaktitva-prādhānyena virājamānam lakṣmī-saṁjñām āpnoti. Ibid.*

manifestation of the former (the *hlādinī* power, or bliss). This threefold power is also called *cic-chakti* or *ātma-māyā* (essential *māyā*), and, as such, is to be distinguished from God's external power of *māyā* (*bahiraṅga-māyā*), by which He creates the world. His other power, by which He holds the individual souls (which are but parts of Himself) within Himself and yet within the grasp and influence of His external power of *māyā*, is technically called *taṭastha-śakti*. The individual souls are thus to be regarded as the parts of God as well as manifestations of one of His special powers (*taṭastha-śakti*). Though the individual souls are thus contained in God as His power, they are in no way identical with Him, but are held distinct from Him as being the manifestations of one of His powers. The unity or oneness (*advaya-tattva*) consists in the facts that the ultimate reality is self-sufficient, wholly independent, and standing by itself; and that there is no other entity, whether similar (e.g. the individual souls) or dissimilar to it (e.g. the matrix of the world, the *prakṛti*), which is like it; for both the *prakṛti* and the *jīvas* depend upon God for their existence, as they are but manifestations of His power. God exists alone with His powers, and without Him the world and the souls would be impossible¹. The nature of His reality consists in the fact that it is of the nature of ultimate bliss (*parama-sukha-rūpatva*), the ultimate object of all desires (*parama-puruṣārthatā*) and eternal (*nitya*). It is this ultimate eternal reality which has formed the content of all Vedānta teachings. Thus the *Bhāgavata-purāṇa* points out that it is this reality which is the cause of the production, maintenance and destruction of all; it is this that continues the same in deep sleep, dreams and in conscious life; it is this that enlivens the body, senses, life and mind, yet in itself it is without any cause. It is neither born, nor grows, nor decays, nor dies, yet it presides over all changes as the one constant factor—as pure consciousness; and even in deep sleep, when all the senses have ceased to operate, its own self-same experience continues to be just the same².

Now this reality is called Brahman by some, Bhagavat by some and Paramātmān by others. When this reality, which is of the nature

¹ *advayatvaṃ ca asya svayaṃ-siddha-tādṛśātādṛśa-tattvāntarābhāvāt śva-śaktyeka-sahāyatvāt, paramāśrayaṃ taṃ vinā tāsāṃ asiddhatvāc ca.*

² *Bhāgavata-purāṇa*, xi. 3. 35-39.

of pure bliss, is experienced by sages as being identical with their own selves, and when their minds are unable to grasp its nature as possessing diverse powers, and when no distinction between itself and its powers is realized, it is called Brahman. In such experiences this reality is only grasped in a general featureless way in its abstractness¹. But when this reality is realized by the devotees in its true nature as being possessed of diverse powers in their distinction from the former, He is called by the name Bhagavat. In this it is the pure bliss which is the substance or the possessor, and all the other powers are but its qualities. So, when the reality is conceived in its fulness in all its proper relations, it is called Bhagavat: whereas, when it is conceived without its specific relations and in its abstract character, it is called Brahman². So far as this distinction between the concepts of Brahman and Bhagavat is concerned it is all right. But in this system philosophy is superseded at this point by mythology. Mythologically Kṛṣṇa or the lord Bhagavān is described in the *Purāṇas* as occupying His throne in the transcendent Heaven (*Vaikuṇṭha*) in His resplendent robes, surrounded by His associates. This transcendent Heaven (*Vaikuṇṭha*) is non-spatial and non-temporal; it is the manifestation of the essential powers (*svarūpa-śakti*) of God, and as such it is not constituted of the *guṇas* which form the substance of our spatio-temporal world. Since it is non-spatial and non-temporal, it is just as true to say that God exists in *Vaikuṇṭha* as to say that He Himself is *Vaikuṇṭha*. Those who believed in this school of religion were so much obsessed with the importance of mythological stories and representations that they regarded God Himself as having particular forms, dress, ornaments, associates etc. They failed to think that these representations could be interpreted mythically, allegorically or otherwise. They regarded all these intensely anthropomorphic descriptions as being literally true. But such admissions would involve the irrefutable criticism that a God with hands, feet,

¹ *tad ekam eva akhaṇḍānanda-rūpaṁ tattvaṁ...parama-hamsānāṁ sādhanavaśāt tādātmyaṁ anupapāmyaṁ satyāṁ api tadīya-svarūpa-śakti-vaicitryāṁ tad-grahaṇa-sāmarthyē cetasi yathā sāmānyato lakṣitaṁ tathaiṣa sphuraḍ vā tad-vad eva avivikta-śakti-śaktimattābhedaṭayā pratipādyamānaṁ vā brahmeti śabdyate.*

and dream would be destructible. To avoid this criticism they held that God's forms, abode, etc., were constituted of non-spatial and non-temporal elements of His non-material essential power. But forms involve spatial notions, and non-spatial forms would mean non-spatial space. They had practically no reply to such criticism, and the only way in which they sought to avoid it was by asserting that the essential nature of God's powers were unthinkable (*acintya*) by us, and that the nature of God's forms which were the manifestations of this essential power could not therefore be criticized by us on logical grounds, but must be accepted as true on the authoritative evidence of the *Purāṇas*.

This notion of the supra-logical, incomprehensible or unthinkable (*acintya*) is freely used in this school to explain all difficult situations in its creeds, dogmas, and doctrines. *Acintya* is that which is to be unavoidably accepted for explaining facts, but which cannot stand the scrutiny of logic (*tarkāsaham yaj-jñānam kāryānyathānupapatti-pramāṇakam*), and which can account for all happenings that may be deemed incomprehensible or impossible (*durghaṭa-ghaṭakatvam*). How the formless Brahman may be associated with the three powers by which it can stay unchanged in itself and yet create the world by its external power of *māyā* or uphold the individual souls by its other power is a problem which it is attempted to explain by this concept of incomprehensibility (*acintya*)¹. The *māyā* which is the manifestation of the external power of God is defined in the *Bhāgavata* as that which cannot manifest itself except through the ultimate reality, and which yet does not appear in it, i.e. *māyā* is that which has no existence without Brahman and which, nevertheless, has no existence in Brahman². This *māyā* has two functions, viz. that with which it blinds the individual souls, called *jīva-māyā*, and the other by which the world transformations take place, called the *guṇa-māyā*.

Jīva Gosvāmī argues in his *Sarva-saṁvādinī*, which is a sort of a running commentary on *Tattva-sandarbhā*, that the followers of Śāṅkara consider ultimate reality to be pure consciousness, one and

¹ In the *Viṣṇu-purāṇa* these three powers are called *parā*, *avidyā-karma-saṁjñā* and *kṣetrajñākhya*. This *parā māyā* or the *śvarūpa-śakti* is also sometimes called *yoga-māyā*.

² *ṛte'rtham yat pratīyeta na pratīyeta cātmani
tad vidyād ātmano māyām yathābhāso yathā tamaḥ.*

Bhāgavata, II. 9. 33.

undifferentiated. There exists no other entity similar or dissimilar to it, and it is this fact that constitutes its infinitude and its reality. According to them such a reality cannot have any separate power or even any power which may be regarded as its essence (*svarūpa-bhūta-śakti*). For, if such a power were different from reality, it could not be its identical essence; and if it were not different from reality, it could not be regarded as being its power. If such an essential power, as distinct from reality, be admitted, such a power must be of the same nature as reality (i.e. of the nature of pure consciousness); and this would make it impossible to conceive of this power as contributing God's diverse manifestations, His transcendent forms, abode and the like, which are admitted to be the principal creed of the Vaiṣṇavas. But against the views of the followers of Śāṅkara it may be urged that even they have to admit that the Brahman has some power by which the world-appearance is manifested; if the world is wholly a creation of *māyā* and Brahman has nothing to do in it, there is no good in admitting its existence, and the *māyā* would be all in all. This power cannot be different in nature from the reality that possesses it, and, since the nescience or *avidyā* cannot exist without Brahman, it is an additional proof that the *avidyā* is also one of his powers. The power of any entity always exists in it as its own self even when it is not manifested. If it is argued that the Brahman is self-shining and that it does not require any power, it may be replied that the very reason by virtue of which it is self-shining may be regarded as its power. In this way Jīva follows some of the fundamental points in Rāmānuja's argument in favour of the doctrine that ultimate reality, the Brahman, is not formless and qualityless, but a qualified being, having its powers and qualities. In attempting to prove this view Jīva follows briefly the central argument of Rāmānuja. But Jīva introduces the notion that the relation of the qualities and powers of ultimate reality is supra-logical, inexplorable on logical grounds, and that therefore in a mysterious manner the powers are different from reality and yet one with it; so that in spite of the manifestation of ultimate reality as concrete God with human forms, dress etc., He is, at the same time, unchanged in His own changeless existence as Brahman. The introduction of the mystic formula of incomprehensibility seems to discharge the Vaiṣṇavas of this school from all responsibility of logically explaining

their dogmas and creeds, and, thus uncontrolled, they descend from the domain of reason to the domain of the *purāṇic* faith of a mythological character.

In describing the special excellences of God, Jīva follows Rāmānuja in holding that He has none of the evil qualities that are found in the world, but possesses all the excellent characters that we can conceive of. In the light of the concept of incomprehensibility (*acintya*) all these excellent characters are regarded as somehow manifestations of His essential power and therefore identical with Him. The introduction of the supra-logical concept of *acintya* enables Jīva and other interpreters of the *Bhāgavata* of his school to indulge in eclecticism more freely than could otherwise have been possible; and thus it is that, though Jīva follows Rāmānuja in admitting ultimate reality to be qualified, he can in the same breath assert that ultimate reality is formless and characterless. Thus he says that, though the followers of Rāmānuja do not accept the view of Brahman as characterless, yet admission of characters naturally presupposes the admission of the characterless also¹. The idea of introducing the concept of the supra-logical in order to reconcile the different scriptural texts which describe reality as characterless (*nirviśeṣa*), qualified (*viśiṣṭa*) and many, can be traced to the introduction of the concept of *viśeṣa* in the philosophy of Madhva, already described in a previous chapter, by which Madhva tried to reconcile the concept of monism with that of plurality. The Bengal school of Vaiṣṇavism, introduced by Caitanya, is based principally on the *Bhāgavata-purāṇa*, and of the many writers of this school only two are prominent as authors of philosophical treatises, Baladeva Vidyābhūṣaṇa and Jīva Gosvāmī. Of these Baladeva has again and again referred to the indebtedness of this school to the philosophy of Madhva, and to the initiation of Caitanya as an ascetic by a follower of the Madhva school of Vaiṣṇavism. Though he was a junior contemporary of Jīva Gosvāmī and a commentator of the latter's *Tattva-sandarbha*, yet he often reverts to Madhva's doctrine of *viśeṣa* in reconciling the monistic position with the positions of qualified monism and pluralism. Had he adhered to Jīva's concept of the supra-logical, the

¹ *yadyapi śrī-Rāmānujyair nirviśeṣaṁ brahma na manyate tathāpi savīṣeṣaṁ manyamānair viśeṣātiriktaṁ mantavyam eva.*

Jīva's *Sarva-saṃvādinī*, p. 74 (Nityasvarūpa Brahmācārī's edition).

concept of *viśeṣa* would have been entirely unnecessary. Baladeva, however, uses not only the concept of *viśeṣa*, but also the concept of the supra-logical (*acintya*), and he characterizes the concept of *viśeṣa* as being itself the concept of the supra-logical. Thus in his *Siddhānta-ratna* he says that the qualities of consciousness, bliss, etc., do not differ from the nature of Brahman, and yet Brahman is consistently described as possessing these different qualities because of the supra-logical functions of *viśeṣa* (*acintya-viśeṣa-mahimnā*). This assertion does not involve the doctrine that reality is from a particular point of view different from its qualities and from another point of view identical with them (*na caivam bhedabhedau syātām*), and the only solution of the difficulty is to assume the doctrine of the supra-logical (*tasmād avicintyataiva śaraṇam*). In this connection Baladeva further says that the doctrine of *viśeṣa* must be accepted as something which even in the absence of difference can explain the phenomena of difference¹. This concept of *viśeṣa*, however, is to be applied only in reconciling the simultaneous plurality and unity of ultimate reality. But so far as the relation between reality and individual souls is concerned, their difference is well known, and therefore the application of the principle of *viśeṣa* would be unjustifiable. The principle of *viśeṣa* is, however, applied not only in reconciling the unity of Brahman with the plurality of his qualities and powers, but also with his divine body, divine dress, his divine abode and the like, so that though these appear to be different from him they are at the same time identical with him².

Speaking on the same topic, Jīva holds that God Viṣṇu's power of consciousness (*cic-chakti*) is identical with His own essence. When this essence is on the way to produce effects, it is called power (*sva-rūpam eva kāryyonmukhaṃ śakti-śabdena uktam*). Now this special state of reality cannot be regarded as different from it, and can have no separate existence from it, since it can never be regarded (*cintayitum aśakyatvād*) as different from the essence of reality; since moreover difference itself cannot be regarded as being in any way different, the difference between the power and its possessor is unthinkable, incomprehensible and supra-logical. This view is not that of Rāmānuja and his followers, who regard the

¹ *Siddhānta-ratna*, pp. 17-22 (Benares, 1924).

² *tathā ca vīgrahādeḥ sva-rūpānatireke'pi viśeṣād eva bheda-vyavahārah*. *Ibid.* p. 26.

power as different from its possessor; yet, since they also believe that God's powers are essentially contained in Him, there is a good deal of similarity between the Rāmānuja school and the Bengal school of Vaiṣṇavism¹. Arguing against the followers of Śāṅkara, Jīva says that even in the Upaniṣad passage on pure consciousness, bliss, the Brahman (*vijñānam ānandaṁ Brahma*), the consciousness and the bliss cannot be identical, for then the two words would be mere repetition; they cannot be different, for then Brahman would have two conflicting qualities within himself. If the two words *vijñāna* and *ānanda* mean the negation of ignorance and of sorrow, then these two negations, being two different entities, are co-existent in Brahman. If the two negations mean one entity, how can one entity be the negation of two different things? If it is said that only agreeable consciousness is called bliss, then again the quality of agreeableness stands out as a separate quality. Even if these words stood merely as negations of ignorance or sorrow, then these also would be specific characters; if it is urged that these are not specific characters, but represent only special potencies (*yogyatā*) by virtue of which ignorance and sorrow are negated, then nonetheless those special potencies would be special characters. Thus the theory that ultimate reality is characterless is false. The characters of Brahman are identically the same as his powers, and these are all identical with his own self.

On the subject of the nature of self, Jīva says that individual selves are not pure consciousness, but entities which are characterized by self-consciousness as "ego" or "I." Individual souls are on no account to be regarded as being identical with God or Paramātmān, and each individual self is different from every other². These individual souls are of atomic size and therefore partless. The atomic self resides in the heart, whence it pervades the whole body by its quality of consciousness, just as sandal paste pervades the whole neighbourhood by its sweet smell. Just so, individual selves are atomic, but they pervade the bodies in which they are located by their power of consciousness. Consciousness is called a quality of the self because it is always dependent on that and serves its purpose (*nitya-tad-āśrayatva-tac-cheṣatva-nibandhanah*)³. Again,

¹ *Sarva-saṃvādinī*, pp. 29, 30.

² *tasmāt prati-kṣetram bhinna eva jīvaḥ*. *Ibid.* p. 87.

³ *Ibid.* p. 94.

consciousness, being thus dependent on the self, expands and contracts in order to pervade the different bodies in which it may be operating at the time. Being thus different from God, individual selves, even in emancipation, remain separate and distinct. They are thus produced from the highest self (Paramātman or God), and they are always under His absolute control and pervaded by Him. It is on this account that God is called Paramātman as distinguished from individual souls (*ātman*). They are like rays emanating from Him and are therefore always entirely dependent on Him and cannot exist without Him¹. They are also regarded as God's disengaged power (*taṭastha-śakti*), because, though they are God's power, yet they are in a way disengaged and separately situated from Him, and therefore they are under the delusion of God's other power, *māyā*, which has no influence on God Himself; and therefore, though individual selves are suffering under the blinding operation of ignorance (*avidyā*), the highest self (paramātman) is absolutely untouched by them. As individual souls are the powers of God, they are sometimes spoken of as identical with Him and sometimes as different from Him. Of these individual selves some are always naturally devoted to God, and others are dominated by ignorance and are turned away from Him; it is the latter that are the denizens of this world and suffer rebirth.

Māyā, the external power (*bahiraṅga-śakti*) has two functions, creative (*nimitta*) and passive (*upādāna*); of these, time (*kāla*), destiny (*daiva*), and actions (*karma*) represent the former, and the three *guṇas* the latter. Individual selves contain within them as integral parts elements of both these functions of *māyā*. The creative function of *māyā* has again two modes, which operate either for the bondage or for the liberation of man. This creative *māyā* also typifies the cosmic knowledge of God, His will and His creative operation³. Knowledge of God is also regarded as twofold—that which is His own self-knowledge and which forms a part of His essential power (*svarūpa-śakti*), and that which is turned

¹ *tadīya-raśmi-sthānīyatve'pi nitya-tad-āśrayitvāt, tadvyatirekeṇa vyatirekāt. Śaṭ-sandarbhā, p. 233.*

² *tad evaṃ śaktitve'pi anyatvam asya taṭasthatvāt, taṭasthatvaṃ ca māyā-śakti-atītatvāt, asya avidyā-parābhavādi-rūpeṇa doṣeṇa paramātmāno lopābhāvāc ca. Ibid. p. 234.*

³ *nimittāṃśa-rūpayā māyākhyayaiva prasiddhā śaktis tridhā dṛśyate jñāne-cchā-kriyā-rūpatvena. Ibid. p. 244.*

towards cosmical operation for the good of the individual selves. It is this cosmic knowledge of God that falls within the creative function of His power of *māyā*. This cosmic knowledge is again twofold—that which abides in God as His omniscience, His desire of creation, and his effort of creation (otherwise called time (*kāla*)); and that which He passes over to individual selves as their desire for enjoyment or liberation from their works (*karma*), etc.; these in their turn are regarded as their ignorance (*avidyā*) and wisdom (*vidyā*)¹. *Māyā* according to this view does not mean ignorance, but power of manifold creation (*mīyate vicitrām nirmīyata anayā iti vicitrārtha-kara-śakti-vaicitvam eva*), and therefore the world is to be regarded as a transformation of Paramātman (*paramātma-pariṇāma eva*)². By the supra-logical power of God, He remains unchanged in Himself and is yet transformed into the manifold creations of the world. According to Jīva, *pariṇāma* does not mean the transformation of reality (*na tattvasya pariṇāma*), but a real transformation (*tattvato pariṇāmah*)³. The manifestation of God in Himself in His own essential power (*svarūpa-śakti*) remains however always untouched by His transformations through His supra-logical *māyā* power unto the world. This does not mean that God has two distinct forms, but merely that what appears contradictory to our ordinary reason may yet be a transcendental fact; and in the transcendental order of things there is no contradiction in supposing God as unchanged and as at the same time changeable by the operation of His two distinct powers. *Māyā* in this system is not something unreal or illusory, but represents the creative power of God, including His omniscience and omnipotence, the entire material substance of the world in the form of the collocation and combination of the *guṇas*, and also the totality of human experience for good and for evil in all its diverse individual centres of expression. But in spite of all these transformations and manifestations of Himself through His supra-logical power of *māyā*, He remains entirely complete and unchanged in the manifestations of His supra-logical essential power. On the one side we have God as the creator and upholder of the universe, and on the other we have the God of religion, the object of the mystic raptures of His

¹ *Ṣaṭ-sandarbhā*, p. 244.

² *Ibid.* p. 247.

³ *tattvato'nyathā-bhāvaḥ pariṇāma ityeva lakṣaṇam na tu tattvasya.*

Sarva-saṃvādinī, p. 121.

devotees. The world is produced by the *māyā* power of God and is therefore not identical with Him. The gross and the impure selves and the world, all that is conscious and unconscious, the cause and the subtle pure element of the self—none of them are different from God, because the subtler ones are of the nature of His power, and the grosser ones are the modification or effects of His power; and though the world is one with Him, yet the defects and impurities of the world do not affect Him in the least, for in spite of these transformations He is untouched by them; such is the supra-logical character of His power¹.

Jīva then proceeds to show that the ultimate substance of the gross physical world, of the five elements and their modifications, is none other than the highest self, Paramātman or God. There is nothing in gross physical objects which can explain their appearance of unity as concrete wholes. For these wholes cannot be wholes in the same sense as forests made up of trees; these latter, indeed, cannot properly be called wholes, for, if one pulls a tree, the forest is not pulled; whereas in the case of a concrete object, when one pulls at one end, the object itself is pulled. If it is argued that there is a whole distinct from the parts, then its relation to the latter would be incomprehensible, for it is never experienced as entirely different from the parts; if the whole is supposed to be connected with each of the parts, then even a finger may be felt as a whole body; if it is supposed that a whole exists in parts only, in parts, then the same difficulty will again arise, and there will be a vicious infinite. So no concrete whole as distinct from the parts can be admitted to exist, and for the same reason the separate concrete existence of the elements may be denied. If the existence of wholes is denied in this way, then the existence of parts must also be denied; for, if there are no wholes, then there cannot be any parts, since it is only the wholes that are directly experienced, and parts are only admitted to account for the experience of the wholes. So the only assumption that remains is that God is the ultimate substance. Jīva refers to the *Bhāgavata-purāṇa*, III. 6. 1-3, which seems to hold that the discrete elements of God's own powers form the twenty-three Sāṃkhya categories, which are combined and united into wholes through the element of time, which is but another name for His transcendent effort. The curious doctrine here put forth is

¹ *Ibid.* p. 251.

rather very new in the history of Indian philosophy, though it is unfortunate that it has not been further developed here. It seems to maintain that the discrete elements of the substantial part (*upādānāmśa*) of *māyā* derive their appearance of reality from God, and that through God's *élan* or activity as time these elements are held together and produce the notion of wholes, since there is no other whole than God. How time is responsible for the combination of atoms into molecules and of molecules into wholes is not explained.

Kapila's philosophy in the Bhāgavata-purāṇa.

The *Bhāgavata-purāṇa* gives an account of Sāṃkhya which is somewhat different from the account that can be got from the classical Sāṃkhya works. There is one beginningless qualityless *puruṣa*, which shines forth as all the individual souls, self-shining, which transcends the sphere of the *prakṛti*¹. It is this *puruṣa* that playfully (*līlayā*) accepts the *prakṛti* that approaches it of its own accord; it is this *puruṣa* that is probably regarded as Īśvara or God². He however, having perceived the *prakṛti* as producing diverse kinds of creation out of its own stuff, was Himself blinded (*vimūḍha*) by the veiling power of ignorance (*jñāna-gūhaya*) of this *prakṛti*³. By a false imposition the *puruṣa* conceives itself to be the agent in the changes that take place by the natural movement of the *guṇas* of *prakṛti*; and hence it exposes itself to births and rebirths and becomes bound by the laws of *karma*. In reality the *prakṛti* itself is the cause and agent of all its own self-abiding effects, and *puruṣa* is only the passive enjoyer of all pleasures and pains. In describing the evolution of the categories we have the five gross elements or *mahābhūtas*, the five *tanmātras*, the ten senses and the microcosm (*antarātmaka*)—consisting of *manas*, *buddhi*, *ahaṃkāra* and *citta*.

¹ *anādīr ātmā puruṣo nirguṇaḥ prakṛteḥ parah
pratyaḡ-dhāmā svayaṃ-jyotir viśvaṃ yena samanvitam.*

Bhāgavata-purāṇa, III. 26. 3.

² *ayam īśvara ity ucyate.* Subodhinī commentary on *ibid*.

³ Subodhinī points out here that in this state, in which the *puruṣa* blinds himself, he is called *jīva*. Vijaya-dhvājī, however, takes it in the sense that the transcendent *puruṣa* or *īśvara* which had accepted the *prakṛti* as its own thus blinds the individual souls through it. Śrīdhara says that there are two kinds of *puruṣa*, *īśvara* and *jīva*; and, further, that according to its blinding power (*āvaraṇa-śakti*) and creative power (*vikṣepa-śakti*) *prakṛti* is twofold; and that *puruṣa* also is twofold, according as it behaves as individual souls or as God.

In addition to these there is the twenty-fifth category, called time (*kāla*), which some regard as a separate category, not as an evolute of *prakṛti*, but as the transcendental effort of *puruṣa* (used in the sense of God)¹. It is said that God manifests Himself in man internally, as his inner self, as the controller of all his experiences, and externally, as time in the manifold objects of experience. Thus there are twenty-five categories if time, individual soul, and God are taken as one; if time is taken separately and God and *puruṣa* are taken as one, there are twenty-six categories; and if all the three are taken separately, there are twenty-seven categories². It is the *puruṣa* which is to be taken as being under the influence of *prakṛti* and as free of it in its transcendent capacity as God (in an implicit manner). It is by the influence of time (*kāla*) that the equilibrium of the *guṇas* in the *prakṛti* is disturbed and that their natural transformations take place; and through the direction of laws of *karma* superintended by God the category of *mahat* is evolved³. It is curious that, though *mahat* is mentioned as a stage of *prakṛti*, it is only regarded as a creative state (*vr̥tti*) or *prakṛti*, and not as a separate category. In another passage in the *Bhāgavata* it is said that in the beginning God was alone in Himself with His own dormant powers, and not finding anything through which He could reflect Himself and realize Himself, He disturbed the equilibrium of His *māyā* power through the functioning of time and through His own self (*puruṣa*), impregnating it with consciousness; and thus the process of creation started through the transformations of the *prakṛti*³. In another passage the question is raised how, if God is free in Himself, can He put Himself in bondage to *māyā*; and the reply given is that in reality there is no bondage of God, but, just as in dreams a man may perceive his own head to be struck off his body, or may perceive his own reflection shaking in water on account of its ripples, so it is but the reflection of God that appears as individual souls suffering bondage to world-experiences. It follows therefore, according to this view, that individual souls are illusory creations, and that both they and their world-experience must consequently be false⁴. In another passage which immediately

¹ *prabhavaṃ pauraṣaṃ prāhuḥ kālam eke yato' bhayam. Ibid.* III. 26. 16.

² *Prakṛti* is not included in this enumeration; if it were, there would be twenty-eight categories.

³ *Ibid.* II. 5. 22, 23.

⁴ *Ibid.* III. 5. 22-27.

follows the previous one it is definitely stated that the world only appears in consciousness, but that in reality it does not exist¹. It is clear that these passages of the *Bhāgavata* distinctly contradict the interpretation of its philosophy given by Jīva in the previous section, as they deny the reality of individual souls and the reality of world-appearance.² But this is just what we may expect if we remember that the *Bhāgavata* is a collection of accretions from different hands at different times and not a systematic whole. If the Sāṃkhya theory described in II. 5, III. 5, III. 7 and III. 26 be interpreted consistently, then the result is that there are two fundamental categories, God and His own *māyā*, the *prakṛti*; that God, in His desire to realize Himself, reflects Himself in the *prakṛti*, which is but His own power, and it is through this impregnation of Himself in His own power that He appears as individual souls suffering the bondage of *prakṛti*; it is again through this impregnation of Himself that *prakṛti* is enlivened by consciousness; and then, through His creative effort, which is designated as time, the equilibrium of the *guṇas* of *prakṛti* is disturbed, the transformatory movement is set up in the *prakṛti*, and the categories are evolved.

In a passage in the fifth chapter (v. 12. 6-9) the existence of wholes is definitely described as illusory. There are no entities but the partless atoms, and even these atoms are imaginary constructions without which it would not be possible to conceive of wholes. All our conceptions of the external world start with atoms, and all that we see or feel gradually grows through a series of accretions. This growth in accretion is not a real growth, but is only an application of the time-sense. Time is therefore co-pervasive with the universe. The conception of an atom is but the conception of the smallest moment, and the entire conception of wholes of atoms as developing into dyad molecules, grosser specks and so on is nothing but advancing temporal construction and the growing combination of time-moments. The ultimate reality underlying all these changes is one all-pervasive unchanging whole, which through the activity of time appears as moments and their accretions (corresponding to atoms and their combinations)³. Time is

¹ *Bhāgavata-purāṇa*, III. 7. 9-12.

² *arthābhāvaṃ vimāścītya pratītyāyāpi nātmanah. Ibid.* III. 7. 18.
anātmanah prapañcasya pratītyāyāpi arthābhāvaṃ artho'tra nāsti kintu
pratīti-mātram. (Śrīdhara's comment on Bhāgavata, III. 7. 18).

³ *Ibid.* III. 11. 1-5.

thus not a product of *prakṛti* but the transcendent activity of God, through which the unmanifested *prakṛti* is transformed into the gross world and by which all the discrete entities appear as wholes¹. In God this time exists as His inherent power of activity. It has been pointed out in the last section how Jīva considered time to be the active element of the *māyā* and the *guṇas* the passive element.

The first category evolved from the *prakṛti* is *mahat*, which contains the germs of the entire universe; it is pure translucent *sattva* (also called *citta* and *Vāsudeva* according to the terminology of the Bhāgavata cult). From the category of *mahat* the threefold *ahamkāra*, viz. *vaikārika*, *taijasa* and *tāmasa*, was produced. In the terminology this *ahamkāra* is called *Samkarṣaṇa*. All activity, instrumentality and transformatory character as effect is to be attributed to this *ahamkāra*. The category of *manas* is produced from the *vaikārika ahamkāra*, and it is called *Aniruddha* in the terminology of the Bhāgavata cult. The Bhāgavata cult here described believed in three *vyūhas* of *Vāmadeva*, *Samkarṣaṇa* and *Aniruddha*, and therefore there is no mention here of the production of the *Pradyumna-vyūha*. *Pradyumna* in this view stands for desire; desires are but functions of the category of *manas* and not a separate category². From the *taijasa-ahamkāra* the category of *buddhi* is evolved. It is by the functions of this category that the functioning of the senses, the cognition of objects, doubts, errors, determinateness, memory and sleep are to be explained³. Both the conative and cognitive senses are produced from the *taijasa-ahamkāra*. From the *tāmasa-ahamkāra* the sound-potential (*śabda-tanmātra*) is produced, and from it the element of *ākāśa* is produced. From the element of *ākāśa* the heat-light-potential (*rūpa-tanmātra*) is produced, and from that the element of light, and so on.

The *puruṣa* is immersed in the *prakṛti*, but nevertheless, being unchangeable, qualityless and absolutely passive, it is not in any way touched by the qualities of *prakṛti*. It has already been pointed

¹ This view of time is different from the *yoga* view of time as moments (as explained by Vijñāna-bhikṣu in his *Yoga-vārttika*, III. 51). There a moment is described as the movement of a *guṇa* particle through a space of its own dimension, and the eternity of time is definitely denied. Time in that view can only be the discrete moments.

² *Ibid.* III. 26. 27. *yasya manasaḥ saṅkalpa-vikalpābhyāṃ kāma-sambhavo varitata iti kāma-rūpā vyatīlakṣaṇatvena uktā na tu pradyumna-vyūhotpattiḥ tasya saṅkalpādi-kāryatvābhāvāt.* (Śrīdhara's comment on the above.)

³ Those who believe in four *vyūhas* call this the *pradyumna-vyūha*.

out that the influence of the *prakṛti* is limited to the image of *puruṣa* in the *prakṛti*, and that, being reflected in the *prakṛti*, the one *puruṣa* throws a shadow of infinite selves. These selves are deluded by egoism and consider themselves to be active agents, and, though there are no real births and rebirths, yet they continue to suffer the bondage of the *saṃsāra* cycle like a man who suffers from bad dreams.

Those who wish to be emancipated should therefore steadily practise disinclination from worldly joys and keen devotion. They should take to the path of self-control, make their minds free of enmity to all beings, practise equality, sex-control and silence, should remain contented with anything that comes in their way, and should have a firm devotion to God. When they leave their false self-love and egoism and can realize the truth about *prakṛti* and *puruṣa*, viz. that the latter is the unconditioned and underlying reality of all, as the one Sun which creates illusions like its reflections in the water; when they understand that the real self, the ultimate reality, is always experienced as the underlying being which manifests our biological, sensory and psychical personality or egohood, and that this reality is realized in deep dreamless sleep (when this egohood temporarily ceases to exist), they attain their real emancipation¹. The well-known *yoga* accessories mentioned by Patañjali, such as non-injury, truthfulness, non-stealing, contentment with the bare necessities of life, purity, study, patience, control of the senses, are also regarded as a necessary preparation for self-advancement. The practice of postures (*āsana*), breath-control (*prāṇāyāma*), and that of holding the mind steadily on particular objects of concentration, are also advised as methods of purifying the mind. When the mind is thus purified and concentration practised, one should think of God and His great qualities². Devotion to God is regarded as the second means of attaining right knowledge and wisdom about the oneness of the ultimate and the relation between the *prakṛti* and the illusory individual selves. Thus it is said that, when one meditates upon the beautiful transcendent and resplendent form of Hari and is intoxicated with love for Him, one's heart melts through devotion, through excess of emotion one's hair stands on end, and one floats in tears of excessive delight through yearning after God; it is thus that the hook of the

¹ *Bhāgavata-purāṇa*, III. 27.

² *Ibid.* III. 28.

mind is dislodged from the sense-objects to which it was attached¹. When through such excess of emotion one's mind becomes disinclined to all other objects, and thus there is no object of meditation, the mind is destroyed like a flame extinguished, and the self, returning from the conditions imposed upon it by the transformations of the *guṇas*, finds itself to be one with the transcendent and the highest self². Devotion is said to be of four kinds, *sāttvika*, *rājasa*, *tāmasa* and *nirguṇa*. Those who want God's grace and are devoted to Him in order to satisfy their personal jealousy, pride or enmity are called *tāmasa*, those who seek Him for the attainment of power, fame, etc. are called *rājasa*, and those who are devoted to Him or who renounce all their *karmas* and their fruits to Him through a sense of religious duty or for the washing away of their sins are called *sāttvika*. But those who are naturally inclined towards Him without any reason save deep attachment, and who would not desire anything but the bliss of serving Him as His servants, it is they who may be said to possess the *nirguṇa* devotion (*bhakti*). But this *nirguṇa* devotion must manifest itself in realizing God as pervading all beings: devotees of this type would consider all beings as their friends, and with them there is no difference between a friend and a foe. No one can claim to possess this high devotion merely by external adorations of God; he must also serve all humanity as a friend and brother³. Thus either by *yoga* methods of self-purification and concentration of the mind on God and His super-excellent qualities, or by a natural love for Him, one may attain the ultimate wisdom, that the one reality is God and that individual selves and their experiences are but mere reflections in *prakṛti* and its transformations.

It may however be pointed out that even the first method of *yoga*

is associated with some kind of *bhakti* or devotion, as it involves meditation upon God and the blissful feeling associated with it. The word *yoga* is not used in this connection in Patañjali's technical sense (from the root *yuj samādhau*), but in the more general sense of *yoga* (*yoga* as "connection," from the root *yujir yoge*). Though this system involves most of the accessories of *yoga* for the purification of mind and as preparation for concentration, yet the ultimate aim is the realization of unity of the phenomenal self with God, which is entirely different from the *yoga* of Patañjali. So, as this *yoga* essentially aims at a unification with God through meditation upon Him, it may also be called a sort of *bhakti-yoga*, though it in its turn is different from the other *bhakti-yoga*, in which all the purposes of *yoga* discipline are served by an excess of emotion for God¹.

Kapila has been described as an incarnation of God, and the philosophy that is attributed to him in the *Bhāgavata* forms the dominant philosophy contained therein. All through the *Bhāgavata* the philosophy of theistic Sāṃkhya as described by Kapila is again and again repeated in different passages in different contents. Its difference from the classical Sāṃkhya as expounded by Īśvara-kṛṣṇa or by Patañjali and Vyāsa is too patent to need explanation at any length. In the *Bhāgavata*, XI. 22 a reference is made to different schools of Sāṃkhya which count their ultimate categories as three, four, five, six, seven, nine, eleven, thirteen, fifteen, sixteen, seventeen, twenty-five and twenty-six, and it is asked how these differences of view can be reconciled. The reply is that these differences do not involve a real difference of Sāṃkhya thought; it is held that the difference is due to the inclusion of some of the categories within others (*parasparānupraveśāt tattvānām*); for instance, some of the effect categories are included within the cause categories, or some categories are identified from particular considerations. Thus, when one thinks that the *puruṣa*, being always under the influence of beginningless ignorance (*anādyavidyā-yuktasya*), cannot by itself attain the knowledge of ultimate reality, it becomes necessary to conceive the existence of a super-person, different from it, who could grant such knowledge; according to

1

yataḥ sandhāryamānāyām yogino bhakti-lakṣaṇaḥ
 āśu sampadyate yoga āśrayam bhadrām iṣṭataḥ.

Bhāgavata-purāṇa, II. 1. 21.

this view there would be twenty-six categories. But, when one thinks that there is not the slightest difference between the *puruṣa* (or the individual soul) and God, the conception of the latter as separate from the former becomes quite unnecessary; on this view there would be only twenty-five categories. Again, those who reckon nine categories do so by counting *puruṣa*, *prakṛti*, *mahat*, *ahaṁkāra* and the five *tanmātras*. In this view knowledge (*jñāna*) is regarded as a transformation of the *guṇas*, and (*prakṛti* being nothing more than the equilibrium of the *guṇas*) knowledge may also be regarded as identical with *prakṛti*; similarly actions are to be regarded as being only transformations of *rajas* and ignorance as transformation of *tamas*. Time (*kāla*) is not regarded here as a separate category, but as the cause of the co-operative movement of the *guṇas*, and nature (*svabhāva*) is identified with the *mahat-tattva*. The cognitive senses are here included within the cognitive substance of *sattva*, the conative senses within the *rajas*, and the cognitions of touch, taste, etc. are regarded as the fields of the manifestations of the senses and not as separate categories. Those who reckon eleven categories take the cognitive and conative senses as two additional categories and, considering the sensations of touch, taste, etc. as being manifestations of the senses, naturally ignore their claim to be considered as categories. In another view *prakṛti*, which is moved into activity by the influence of *puruṣa*, is regarded as different from it, and thus there are the two categories of *puruṣa* and *prakṛti*, then are the five *tanmātras*, the transcendental seer and the phenomenal self; thus there are nine categories in all. Upon the view that there are six categories, only the five elements and the transcendent self are admitted. Those who hold that there are only four categories admit only the three categories of light-heat (*tejas*), water and earth, and accept the transcendent self as the fourth. Those who hold that there are seventeen categories admit the five *tanmātras*, five elements and five senses, *manas* and the self. Those who hold that there are sixteen categories identify *manas* with the self. Those who hold that there are thirteen categories admit the five elements (which are identified with the *tanmātras*), the five senses, *manas*, and the transcendent and the phenomenal selves. Those who admit only eleven categories accept only the five elements, five senses and the self. There are others, again, who admit eight *prakṛtis* and the *puruṣa*, and thus reduce the

number to nine. The eclectic spirit of the *Bhāgavata* tried to reconcile the conflicting accounts of the Sāṃkhya categories by explaining away the differences; but to an impartial observer these differences are sometimes fundamental, and at least it is evident that, though these different lines of thought may all be called in some sense Sāṃkhya, they signify the existence of a good deal of independent thinking, the exact value of which, however, cannot be determined for want of detailed and accurate information regarding the development of these schools¹.

The fundamental difference of the Bhāgavata school of Sāṃkhya from that of the classical Sāṃkhya is that it admits one *puruṣa* as the real all-pervading soul, which is the real seer of all our experiences and the basic universal being that underlies all things of this universe. The individual phenomenal selves appear as real entities only by the delusive confusion of the universal *puruṣa* with the transformations of the *prakṛti* and by the consequent false attribution of the movements and phenomena of the *prakṛti* to this universal *puruṣa*. The false individual selves arise out of such false attribution and there is thus produced the phenomenon of birth and rebirth, though there is no association of the *prakṛti* with the universal *puruṣa*. All our world-experiences are mere illusions, like dreams, and are due to mental misconceptions. The emphasis on the illusory character of the world is very much stronger in the passages that are found in the *Bhāgavata*, xi. 22 than in the passages that deal with Kapila's philosophy of Sāṃkhya just described; and though the two treatments may not be interpreted as radically different, yet the monistic tendency which regards all worldly experiences as illusory is so remarkably stressed that it very nearly destroys the realistic note which is a special feature of the Sāṃkhya schools of thought².

¹ In Aśvaghoṣa's *Buddha-carita* there is an account of Sāṃkhya which counts *prakṛti* and *vikāra*. Of these *prakṛti* consists of eight categories—the five elements, egoism (*ahaṃkāra*), *buddhi* and *avyakta*, and the *vikāra* consists of seventeen categories—the five cognitive and the five conative senses, *manas*, *buddhi* and the five kinds of sense-knowledge. In addition to these there is a category of *kṣetrajña* or self or *ātman*.

² *yathā mano-ratha-dhiyo viśayānubhavo mṛṣā

dhyāyato viśayān asya svapne'narthāgamo yathā.*

Bhāgavata, xi. 22. 55, 56.

IN XI. 13 this monistic interpretation or rather this monistic transformation of Sāṃkhya reaches its culmination; it is held that ultimate reality is one, and that all differences are but mere differences of name and form. Whatever may be perceived by the senses, spoken by words or conceived in thought is but the one reality, the Brahman. The *guṇas* are the product of mind and the mind of the *guṇas*, and it is these two illusory entities that form the person; but one should learn that both of them are unreal and that the only reality, on which both of them are imposed, is Brahman. Waking experiences, dreams, and dreamless sleep are all functions of the mind; the true self is the pure seer (*sākṣin*), which is entirely different from them. So long as the notion of the "many" is not removed by philosophical reasonings, the ignorant person is simply dreaming in all his waking states, just as one feels oneself awake in one's dreams. Since there is nothing else but the self, and since all else is mere illusion like dreams, all worldly laws, purposes, aims and works are necessarily equally false. One should observe that we have the notion of the identity of our selves, in our wakeful and dream experiences and in our experiences of dreamless deep sleep, and one should agree that all these experiences in all these three stages of life do not really exist, they are all but the manifestations of *māyā* on the ultimate reality, the Brahman; and thus by such inferences and considerations one should remove all one's attachments and cut asunder all one's fetters by the sword of knowledge. One should regard the entire world and its experiences as nothing more than the imagination of the mind—a mere appearance which is manifested and lost; all experiences are but *māyā* and the only underlying reality is pure consciousness. Thus it is through right knowledge that true emancipation comes, though the body may hold on so long as the fruits of *karma* are not exhausted through pleasurable and painful experiences. And this is said to be the secret truth of Sāṃkhya and Yoga. It may generally appear rather surprising to find such an extreme idealistic monism in the *Bhāgavata*, but there are numerous passages which show that an extreme form of idealism recurs now and then as one of the principal lines of thought in the *Bhāgavata*¹.

The first adoration verse is probably the most important passage in the *Bhāgavata*. And even in this passage it is said (in one of its

¹ *Ibid.* XI. 13.

prominent and direct interpretations) that the creation through *guṇas* is false and that yet, on account of the all-pervading reality that underlies it, it appears as real; that the production, maintenance and destruction of the universe all proceed from the ultimate reality, Brahman, and that it is through the light of this reality that all darkness vanishes¹. In another passage, in VI. 4. 29-32, it is said that Brahman is beyond the *guṇas*, and that whatever may be produced in the world, or as the world, has Brahman for its ground and cause, and that He alone is true; and that both the atheistic Sāṃkhya and the theistic Yoga agree in admitting Him as the ultimate reality.

It was pointed out in a previous section that according to Jīva the *māyā* had two parts, formative and constitutive, and it was the latter that was identified with *prakṛti* or the three *guṇas*. But this *māyā* was regarded as an external power of God as distinguished from His essential power. The *Viṣṇu-purāṇa*, however, does not seem to make any such distinction; it says that the great Lord manifests Himself through His playful activity as *prakṛti*, *puruṣa*, the manifold world and time, but yet it considers the *prakṛti* and the *puruṣa* to be different from the essential nature of the Lord, and time as that which holds these two together and impels them for the creational forms². Thus, since time is the cause which connects the *prakṛti* and the *puruṣa*, it exists even when all creational modes have shrunk back into the *prakṛti* in the great dissolution. When the *guṇas* are in equilibrium, the *prakṛti* and the *puruṣa* remain disconnected, and it is then that the element of time proceeds out of the Lord and connects the two together³. But the *prakṛti* in both its unmanifested and manifested forms or its contraction and dilation (*saṃkoca-vikāśābhyām*) is a part of God's nature; so in disturbing the equilibrium of *prakṛti* it is God who disturbs His

own nature (*sa eva kṣobhako brahman kṣobhyaś ca puruṣottamah*), and this He does through the instrumentality of time. Through His will He penetrates into the *prakṛti* and the *puruṣa*, and sets off the creative operation of the *prakṛti*, though this operation of the will does not involve any notion of ordinary physical activity¹. Time is thus regarded as the spiritual influence of God, by which the *prakṛti* is moved though He remains unmoved Himself. From *prakṛti* there is the threefold evolution of *mahat* (*sāttvika*, *rājasa* and *tāmasa*) by a process of differentiation and development of heterogeneity². By the same process the differentiation of *mahat* into *vaikārika*, *taijasa* and *bhūtādi* takes place as integrated within the *mahat* as integrated within the *prakṛti*³. Being similarly integrated in the *mahat*, the *bhūtādi* is further differentiated into the *tanmātric* stage and produces first the sound-potential (*śabda-tanmātra*). From the *śabda-tanmātra* the element of *ākāśa* was produced from the relevant matter of *bhūtādi*; this *śabda-tanmātra* and *ākāśa* was further integrated in *bhūtādi* and in this integrated state the element of *ākāśa* transformed itself into the touch-potential (*sparsa-tanmātra*); then from this touch-potential air was produced by its transformation (through accretion from *bhūtādi*). Then in association of the integration of the element of *ākāśa* and *śabda-tanmātra* with the touch-potential (*sparsa-tanmātra*) the element of air produced the heat-light-potential (*rūpa-tanmātra*) in the medium of the *bhūtādi*, and from that the element of heat-light was produced by an accretion from *bhūtādi*. Again in association of the integration of touch-potential, the element of air and the heat-light-potential, the element of heat-light transformed itself into the taste-potential in the medium of the *bhūtādi*, and in a similar way water was produced by an accretion from the *bhūtādi*. Again, from the integration of taste-potential, heat-light potential and water, the smell-potential was produced by a transformation of the element of water in the medium of the *bhūtādi*, and out of this smell-potential in integration with the above the element of earth was produced by an accretion from *bhūtādi*. Out of the

¹ *pradhānam puruṣam cāpi praviśyātmecchayā hariḥ
kṣobhayāmāsa saṃprāpte sarga-kāle vyayāvayau Ibid. 29.*

² This view of the evolution of three different kinds of *mahat* is peculiar to the *Viṣṇu-purāṇa*, which is different from the classical Sāṃkhya.

³ This second stage is in agreement with the doctrine of Sāṃkhya as explained in the *Vyāsa-bhāṣya* on the *Yoga-sūtra*, II. 19 of Patañjali.

taijasa-ahamkāra the ten conative and cognitive senses were produced, and *manas* was produced out of the *vaikārika-ahamkāra*. The five *tanmātras* are called the unspecialized modifications (*aviśeṣa*), and the senses and the gross elements are regarded as fully specialized modifications (*viśeṣa*)¹.

It will appear from the above and also from what has already been said in the chapter on the Kapila and Patañjala school of Sāṃkhya in the first volume of the present work that the system of Sāṃkhya had undergone many changes in the hands of various writers at different times. But it is difficult to guess which of these can be genuinely attributed to Kapila. In the absence of any proof to the contrary it may be assumed that the account of Sāṃkhya attributed to Kapila in the *Bhāgavata* may generally be believed to be true. But Īśvarakṛṣṇa also gives us an account of what can be called the classical Sāṃkhya in his *Sāṃkhya-kārikā*, which he says was first taught by Kapila to Āsuri and by him to Pāñcaśikha, and that his account of Sāṃkhya was a summary of what was contained in the *Ṣaṣṭi-tantra* with the exception of the polemical portions and fables; also that he himself was instructed in the traditional school of Sāṃkhya as carried down from Āsuri through generations of teachers and pupils. But the *Bhāgavata* account of Kapila's Sāṃkhya materially differs from the Sāṃkhya of the *Sāṃkhya-kārikā*, for, while the former is definitely theistic, the latter is at least tacitly atheistic, for it is absolutely silent about God; apparently God has no place in this system. But the theistic Sāṃkhya as described in the *Bhāgavata*, which is of course quite different and distinct from the theistic Sāṃkhya of Patañjali and *Vyāsa-bhāṣya*, is not an isolated instance which can easily be ignored; for most of the *Purāṇas* which have a Vaiṣṇava tradition behind them generally agree in all essential features with the theistic element of the Kapila Sāṃkhya of the *Bhāgavata*, and some of the important Pāñcarātra *āgamas* also in some ways support it. Thus the *Ahīrbudhnya-saṃhitā* describes the Sāṃkhya system as that which believes the *prakṛti* to be the cause of the manifold world and that this *prakṛti* is moved into creative transformations through the

¹ *Viṣṇu-purāṇa*, 1. 2. See also Dr Sir B. N. Seal's interpretation of this passage in P. C. Ray's *Hindu Chemistry*, Vol. II, pp. 90-5.

The same verses occur in the *Padma-purāṇa* (*Svarga-khaṇḍa*) regarding the evolution of the Sāṃkhya categories.

influence of time by the will of Lord Viṣṇu. There is but one *puruṣa*, who is the sum-total of all *puruṣas* and who is absolutely changeless (*kūṭastha*); there is the *prakṛti*, constituted of the three *guṇas* in equilibrium; and there is also the element of time (*kāla*), through which by the will of the Lord (*viṣṇu-saṃkalpa-coditāt*) the *puruṣa* and the *prakṛti* are connected and the creative movement of the *prakṛti* set up. The *puruṣa*, *prakṛti* and *kāla* are in their turn but special manifestations of Lord Viṣṇu¹. The evolution of the gross elements is also described here as being directly from their respective *tanmātras*. It also believes that the powers of the Lord are supra-logical (*acintya*), and therefore cannot be contested on purely formal grounds of reason or logical principles of self-contradiction. It holds however the rather unique view that from time the *sattva-guṇa* springs into being and from *sattva rajas* and from *rajas tamas*, and it also gives a different interpretation of the *vyūha* doctrine—but these have already been discussed in the chapter on the Pañcarātra philosophy. The *Ahīrbudhnya*, however, ascribes this Sāṃkhya philosophy to Kapila (the incarnation of Viṣṇu) who wrote the *Ṣaṣṭi-tantra*, and it also enumerates the names of the chapters or *tantras* of this work². The work is divided into two books; in the first book there is one chapter (*tantra*) on Brahman, one on *puruṣa*, three on power (*śakti*), destiny (*niyati*) and time (*kāla*), three on the *guṇas*, one on the changeless (*akṣara*), one on *prāṇa* and one on the agent (*kartr*), one on the Lord, five on cognition, five on actions, five on *tanmātras* and five on the five gross elements; thus altogether there are thirty-two chapters in the first book. In the second book there are twenty-eight chapters—five on duties, one on experience, one on character, five on afflictions, three on the *pramāṇas*, one on illusions, one on *dharma*, one on disinclination, one on miraculous powers, one on *guṇa*, one on *līṅga* or signs, one on perception, one on Vedic performances, one on sorrow, one on final achievement, one on removal of passions, one on customs and one on emancipation³. Thus we have a theistic

³ *Ibid.* xii. 20-30.

and an atheistic account of Sāṃkhya, both alleged to be based on the *Ṣaṣṭi-tantra Śāstra*, both described as the philosophy of Kapila and both derived from authoritative ancient texts. Not only does the *Bhāgavata* refer to Kapila as an incarnation of God, but many of the Pañcarātra texts also allude to him as an incarnation of God Viṣṇu; the *Mahābhārata* describes him as Bhagavān Hari and Viṣṇu (III. 47. 18), with Vasudeva (III. 107. 31) and with Kṛṣṇa, and also describes him as a great *ṛsi* who reduced the sons of Sagara into ashes by his wrath. In the *Bhagavad-gītā* also Kṛṣṇa says that of the seers he is the sage Kapila (x. 26), but in the *Mahābhārata* (III. 220. 21) Kapila is identified with the Fourth Fire. A sage Kapila is also mentioned in the *Śvetāśvatara Upaniṣad* (v. 2), and Śaṅkara says in the commentary on the *Brahma-sūtra* that this Kapila must be different from the Kapila (who reduced the sons of Sagara to ashes) and the Kapila who wrote the Sāṃkhya philosophy cannot be ascertained. Thus we have at least three Kapilas, the Kapila who reduced the sons of Sagara into ashes, and who is regarded by the *Mahābhārata* as an incarnation or manifestation of Viṣṇu, Hari or Kṛṣṇa, a Kapila who is regarded as an incarnation of Fire, and the Upaniṣadic sage Kapila, who is regarded there as mature in wisdom. The first two are definitely reputed to be authors of Sāṃkhya philosophy, and Nīlakaṇṭha, the commentator on the *Mahābhārata*, says that it is Kapila (=the incarnation of Fire) who was the author of the atheistic Sāṃkhya¹. In the *Mahābhārata* (XII. 350. 5) it is said that the sage Kapila based his Sāṃkhya philosophy on the doctrine that it is the one *puruṣa*, the great Nārāyaṇa, who in himself is absolutely qualityless and untouched by all worldly conditions and is yet the superintendent of all phenomenal selves associated with their subtle and gross bodies, and is the ultimate ground of all the cognitional and sense-experiences enjoyed by them, the absolute and ultimate reality which appears as the subjective and the objective world and yet behaves as the cosmic creator and ruler in his four-fold personality as Vāsudeva, Saṃkarṣaṇa, Aniruddha and Pradyumna². Before examining other accounts of Sāṃkhya as found in the *Mahābhārata* we may point out that Pañcaśikha himself was not only called Kapileya from his sucking the breasts of a woman called

¹ Nīlakaṇṭha's commentary on the *Mahābhārata*, III. 220. 21.

² See the *Mahābhārata*, XII. 351. See also the commentary of Nīlakaṇṭha on it.

Kapilā while an infant, but was also called *Paramarṣi Kapila*¹. It seems practically certain that there had been a number of pantheistic, theistic and atheistic varieties of Sāṃkhya. Since the *Ahīrbudhnya-saṃhitā* gives the names of the chapters of the *Śaṣṭi-tantra*, it is almost certain that the author had seen this work, and that his account of Sāṃkhya is in the main in agreement with it. The table of subjects enumerated shows that the work contained a chapter on Brahman, *puruṣa*, *śakti* (power), *niyati* (destiny), and *kāla* (time), and it is these elements that occur in the *Ahīrbudhnya* account of Sāṃkhya. It therefore seems very probable that the *Ahīrbudhnya* account of Sāṃkhya is largely faithful to the *Śaṣṭi-tantra*. We know that the Sāṃkhya philosophy of Kapila had begun to change its form in some of its most important features, and it is quite probable that it had changed considerably by the time it was traditionally carried to Īśvarakṛṣṇa. It might still have been regarded as containing the essential instructions of the *Śaṣṭi-tantra* and yet be very different from it; there is no proof that Īśvarakṛṣṇa had a chance of reading this original *Śaṣṭi-tantra*, and it is reasonable to suppose that he had access only to a later version of it or to a revised compendium supposed to be based on it; it may be that the *Śaṣṭi-tantra*, being an ancient work, was probably so loosely worded that it was possible to get different interpretations from it—like the *Brahma-sūtra* of Bādarāyaṇa—or even that there were two *Śaṣṭi-tantras*².

¹ *yam āhuḥ Kāpilam sāmṅhyam paramarṣim prajāpatim. Ibid. xii. 218. 9.*

This Pañcaśikha is also described as *pañca-rātra-viśārada*, well-versed in the *pañca-rātra* rites.

² In the *Māthara-vṛtti* of Mātharācārya on the *Sāṃkhya-kārikā* of Īśvarakṛṣṇa it is said that *Śaṣṭi-tantra* means a *tantra* or work dealing with sixty subjects and not a work containing sixty chapters (*tantrayante vyutpādyante padārthā iti tantram*). These sixty subjects are: five *viparyayas* or errors, twenty-eight defects (*aśakti*), nine false satisfactions (*tuṣṭi*), and eight miraculous achievements (*siddhi*)—altogether fifty items (*kārikā* 47)—the other ten subjects being the existence of *prakṛti* as proved by five reasons (called the category of *astitva*), its oneness (*ekatva*), its teleological relation to *puruṣas* (*arthavattva* and *pārārthya*), the plurality of the *puruṣas* (*bahutva*), the maintenance of the body even after *jīvan-mukti* (*sthiti*), association and dissociation of *prakṛti* with *puruṣa* (*yoga* and *viyoga*), difference of *prakṛti* and *puruṣa* (*anyatva*), and final cessation of *prakṛti* (*niṛvṛti*). Māthara quotes a *Kārikā* enumerating the latter ten subjects: *astitvam, ekatvam, arthavattvam, pārārthyam, anyatvam, arthamivṛttiḥ. yoga viyogo, bahavaḥ pumāṃsaḥ, sthitiḥ, śarīrasya viśeṣa-vṛttiḥ. Māthara-vṛtti, 72.*

This enumeration, however, seems to be entirely arbitrary, and apparently there is nothing to show that the *Śaṣṭi-tantra* was so called because it treated of these sixty subjects.

According to the interpretation of the *Ahīrbudhnya-saṃhitā* God or Īśvara is above all, and then there is the category of the unchangeable, the Brahman (consisting of the sum-total of the *puruṣas*), the *prakṛti* as the equilibrium of the *guṇas*, and time (*kāla*), as has already been explained¹. Time is regarded as the element that combines the *prakṛti* with the *puruṣas*. It is said that the *prakṛti*, the *puruṣas* and time are the materials which are led to their respective works in producing the manifold universe by the development of the categories through the will-movement of God (*Sudarśana*).² It is thus one unchangeable *puruṣa* that appears as the many individuals or parts of the Lord Viṣṇu or Īśvara³. The will of Īśvara, otherwise called *Sudarśana* or *saṃkalpa*, which is regarded as a vibratory (*parispanda*) thought movement (*jñāna-mūla-kriyātma*), is the dynamic cause of the differentiation of *prakṛti* into the categories (*mahat* and the rest). Time is not identified here with this power, but is regarded as a separate entity, an instrument through which the power acts. Yet this "time" has to be regarded as of a transcendental nature, co-existent with *puruṣa* and *prakṛti*, and distinguished from "time" as moments or their aggregates, which is regarded as the *tamas* aspect of the category of *mahat*. The *sattva* aspect of the *mahat* manifests itself as definite understanding (*buddhir adhyavasāyinī*), and the *rajas* aspect as life-activity (*prāṇa*). The *sattva* aspect of *mahat* as *buddhi* also manifests itself as virtue, wisdom, miraculous powers and as disinclination from worldly joys (*vairāgya*), and the *tamas* aspect as vice (*adharma*), ignorance, attachment and weakness. In the category of *mahat* the general sense-power is generated, by which objects are discerned as cognitional modes; the ego (*ahaṃkāra*) is also generated in the *mahat*, involving the notion of integrating all experience which

belongs to a person (*abhimāna*) as a cognizer and enjoyer of all experiences. The implication seems to be that the category of *mahat* manifests itself as the sense-faculties and the person who behaves as the cognizer, because these are the modes through which thought must interpret itself in order to realize its own nature as thought. The *sāttvika* aspect of the *ahamkāra* is called *vaikārika*, the *rājasa* character *taijasa* and the *tāmasa* aspect *bhūtādi*. It is well to point out here that this account greatly differs from the classical Sāṃkhya in this respect, that the sense-power is here generated prior to *ahamkāra* and not from *ahamkāra*, and that, while the evolution of *ahamkāra* is regarded as the evolution of a separate category by the thought-movement of God, the sense-power is regarded only as modes or aspects of *buddhi* or *mahat* and not as separate categories. The only sense-faculty that is evolved through the thought-activity of God out of *ahamkāra* is *manas*, the reflective sense (*cintanātmakam ahamkārikam indriyam*). From the *tamas* aspect of *ahamkāra* as *bhūtādi* the infra-atomic sound-potential (*śabda-tanmātra*) is produced and from this the element of *ākāśa*. *Ākāśa* here is supposed to be of two kinds, as the maintainer of sound and as manifesting vacuity, unoccupation or porosity (*avakāśa-pradāyi*). From the *vaikārika ahamkāra* the organs of hearing and speech are produced as categories through the thought-activity of God. In a similar manner the infra-atomic touch-potential (*sparsa-tanmātra*) is produced from the *bhūtādi*, and from this again air, as that which dries up, propels, moves and conglomerates, is produced; again, through the thought-activity of God the organ of touch and the active organ of grasping are produced, and in a similar manner the infra-atomic heat-light-potential (*rūpa-tanmātra*) is produced from *bhūtādi* and from that the element of heat-light; from the *vaikārika* also the visual organ and the conative organs of the two feet are produced, from the *bhūtādi* the infra-atomic taste-potential (*rasa-mātra*) is produced and from it water, and from the *vaikārika ahamkāra* the organ of taste and the genitals are produced; from the *bhūtādi* true infra-atomic smell-potential (*gandha-mātra*) is produced, and from it earth; from the *vaikārika-ahamkāra* the organs of smell and of excretion are produced. Will, energy, and the five kinds of bio-motor activities (*prāṇa*) are produced jointly from *manas*, *ahamkāra* and *buddhi*. The power (*śakti*) of Hari or Viṣṇu or Īśvara is one,

but it is not a physical power, a power that involves mechanical movement, but it is in a sense homogeneous with God, and is of the nature of pure self-determined thought (*svacchanda-cinmaya*); it is not however thought in the ordinary sense of thought—with particular contents and object—but it is thought in potentiality, thought that is to realize itself in subject-object forms, manifesting itself as a spiritual thought movement (*jñāna-mūla-kriyātma*). It is this spiritual movement of that which by self-diremption splits itself up (*dvidhā-bhāvam ṛcchati*) as the thought of God (*saṃkalpa*), the determiner (*bhāvaka*) and the passive objectivity (*bhāvya*) called the *prakṛti*, and it is through the former that the latter developed and differentiated itself into the categories mentioned above. What is meant by the vibratory movement of the thought of God is simply its unobstructed character, its character of all potentiality for actuality without any obstruction. It is the pure unobstructed flow of God's thought-power that is regarded as His will, idea or thought (*sudarśanatā*)¹. The *prakṛti* is thus as much spiritual as God's thought; it represents merely objectivity and the content of the thought of God, and it only has an opportunity of behaving as an independent category of materiality when by the self-diremption of God's power the thought-energy requires an objective through which it can realize itself.

In another chapter of the *Ahīrbudhnya-saṃhitā* it is said that the power in its original state may be conceived to be pure stillness (*staimitya-rūpa*) or pure vacuity (*śūnyatva-rūpiṇī*), and it is out of its own indescribable spontaneity that it begins to set itself in motion². It is this spontaneity, which springs out of itself and is its own, that is described as the thought of God or its self-diremption activity, its desire for being many. All creation proceeds out of this spontaneity; creation is not to be described as an event which happened at a particular time, but it is the eternal spontaneity of this power of God that reveals itself as eternal creation, as eternal and continuous self-manifestation³. Whatever is described as movement (*kriyā*), energy (*vīrya*), self-completeness (*tejas*) or strength (*bala*) or God are but different aspects of this power. The strength

¹ *avyāghātas tu yas tasya sā sudarśanatā mune

Ahīrbudhnya-saṃhitā, vii. 67.

² *svātantryād eva kasmāccit kvacit sonmeṣam ṛcchati. Ibid. v. 4.*

³ *satataṃ kurvato jagat. Ibid. ii. 59.*

(*bala*) of God consists in the fact that He is never tired or fatigued in spite of His eternal and continuous operation of creation; His energy (*vīrya*) consists in this, that, though His own power is split up as the material on which His power acts, He does not suffer any change on that account¹. His lustre of self-completeness (*tejas*) consists in this, that He does not await the help of any instrument of any kind for His creative operations²: and it is the self-spontaneity of this power that is described as His agency (*kartrtva*) as the creator of the world. God is described as being both of the nature of pure consciousness and of the nature of power. It is the all-pervasive consciousness of Himself that constitutes the omniscience of God, and, when this stillness of omniscience and self-complete steady consciousness as pure differenceless vacuity dirempts itself and pulsates into the creative operation, it is called His power. It is on this account that the power (*śakti*) of God is described as thought-movement (*jñāna-mūla-kriyātmaka*). This power or consciousness may be regarded both as a part of God, and therefore one with Him, and also as His specific character or quality; it is this power which dirempts itself as consciousness and its object (*cetya-cetana*), as time and all that is measured by time (*kalya-kāla*), as manifest and unmanifest (*vyaktāvyakta*), as the enjoyer and that which is enjoyed (*bhoktr-bhogyā*), as the body and that which is embodied (*deha-dehin*)³. The conception of *puruṣa* seems to indicate the view of a conglomeration of the individual selves into a colony or association of individual selves, like the honeycomb of the bees⁴. They are regarded as unchangeable in themselves (*kūṭastha*), but yet they are covered over with the dusty impurities of beginningless root-desires (*vāsanā*), and thus, though pure in themselves, they may be also regarded as impure⁵. In themselves they are absolutely unaffected by any kind of affliction, and, being parts of God's nature, are omniscient and eternally emancipated beings. These *puruṣas* are, however, through the will of God or rather of necessity through the creative operation of His power, differently affected by ignorance

⁴ *sarvātmanām samaṣṭir yā kośo madhu-kṛtām iva. Ibid. VI. 33.*

⁵ *śuddhyasuddhimayo bhāvo bhūteḥ sa puruṣaḥ smṛtaḥ anādi-vāsanā-reṇu-kunṭhitair ātmabhiḥ citaḥ. Ibid. VI. 34.*

(*avidyā*), which makes them subject to various kinds of affliction, and, as a result thereof, their own natures are hidden from themselves and they appear to be undergoing all kinds of virtuous and sinful experiences of pleasures and pains; and, being thus affected, they are first associated with the creative power (*śakti*) of God, and then, as this power first evolves itself into its first category of time as the all-determining necessity (*niyati*), they become associated with it; and then, as the third movement posits itself as all-grasping time, they become associated with that category, and then, as the *sattva-guṇas* gradually evolve from *kāla*, the *rājasa guṇas* from *sattva* and the *tāmasa guṇas* from *rajas*, the colony of *puruṣas* is associated first with *sattva*, then with *rajas* and then with *tamas*. When all the *guṇas* are evolved, though the three *guṇas* are then all disturbed for further creative operation, they are not disturbed in all their parts; there are some parts of the *guṇa* conglomeration which are in equilibrium with one another; and it is this state of equilibrium of the *guṇas* that is called *prakṛti*¹. The account of the evolution of the various categories from the creative will of God up to the *prakṛti* does not occur in the seventh chapter of the *Ahīrbudhnya*, which is definitely described as the Sāṃkhya philosophy of Kapila; it is only a Pāñcarātra account given to supplement that of the Sāṃkhya, which starts from the evolution of the categories from the *prakṛti*—the equilibrium of the *guṇas*. According to the Pāñcarātra account of the *Ahīrbudhnya-saṃhitā* the colony or the honeycomb of the *puruṣas* thus forms a primal element, which is associated with the self-evolving energy of God from the first moment of its movement, continues to be so associated with each of the evolving stadiums of categories up to the evolution of the *prakṛti*, and later on with all the other categories that are evolved from the *prakṛti*. In the account of Kapila Sāṃkhya as found in the *Ahīrbudhnya-saṃhitā* this conglomeration of the *puruṣas* is admitted to be the changeless category that is associated with the evolution of the categories and descends gradually through the successive stages of their evolution until we come to the complete human stage with the evolution of the different senses and the gross elements. Unlike the account of *puruṣa* that is found in the classical Sāṃkhya

1

*codyamāne'pi sṛṣṭyartham pūrṇaṃ guṇa-yugaṃ tadā
amśataḥ sāmyam āyāti viṣṇu-saṃkalpa-coditam.*

Ahīrbudhnya-saṃhitā, VI. 62.

treatises, which regards the *puruṣas* as being absolutely untouched by the instinctive root-desires (*vāsanā*) and the afflictions, it considers (like the Jains) that the *puruṣas* are coated with the impurities of *vāsanās* and *kleśas*, though in themselves they are essentially pure; again, the classical Sāṃkhya considers that the *vāsanās* are produced in a beginningless way, through *karma*, through an endless series of births and rebirths, whereas the Pañcarātra holds that different *puruṣas* are originally associated with different *vāsanās* according to the will of God. Unlike the account of the classical Sāṃkhya, where the *vāsanās* are regarded as a part of *prakṛti* as *buddhi* or *citta*, in this it is an original extraneous impurity of the *puruṣas*. It is probable, however, that this account of *vāsanās* and their original association with the *puruṣas* through the will of God did not form any part of the philosophy of Kapila's *Ṣaṣṭi-tantra*, but was a supplementary doctrine introduced by the author of the *Ahīrbudhnya*, as it is not mentioned in the seventh chapter of the work, which is definitely devoted to the account of Sāṃkhya.

The Sāṃkhya thought described in the *Gītā* has been explained in the second volume of the present work, and it will be seen that, though the *Gītā* account is unsystematic and nebulous, with significant details missing, it is essentially theistic and intimately associated with this *Ahīrbudhnya* account of Kapila Sāṃkhya; and as such is fundamentally different from the classical Sāṃkhya of the *Sāṃkhya-kārikā*.

In Chapter 22 of the 11th book of the *Bhāgavatā* a reference is made to various schools of Sāṃkhya admitting different categories of being or evolutes¹. Thus some Sāṃkhyists admitted nine categories, some eleven, some five, some twenty-six, some twenty-five, some seven, some six, some four, some seventeen, some sixteen and some thirteen. Uddhava requested Lord Kṛṣṇa to reconcile these diverse opposing views. In reply Lord Kṛṣṇa said that the different enumeration of the categories is due to the varying kinds of subsumption of the lower categories into the higher or by the omission of the higher ones, i.e. by ignoring some of the effect-entities (as

1

*kati tattvāni viśveśa saṃkhyātāny ṛṣibhiḥ prabho

kecit ṣaḍvīṃśatiṃ prāhur apare pañcaviṃśatiṃ
saptaīke nava-ṣaṭ kecit catvāry ekādaśāpare
kecit saptaśa prāhuḥ ṣoḍaśaīke trayodaśa. Śloka 1, 2.*

being already contained in the cause) or by ignoring some of the successive causal entities (as being present in the effect)¹. Thus, there may be systems of Sāṃkhya schools where the *tanmātras* are not counted or where the gross elements are not counted as categories. The explanation in all such cases is to be found in the principle that some thinkers did not wish to count the *tanmātras*, as they are already contained in the gross elements (*ghaṭe mṛdvat*); whereas others did not count the gross elements, as these were but evolutes in the *tanmātras* (*mṛdi ghaṭavat*). But there are differences of opinion not only as regards the evolutionary categories of *prakṛti*, but also as regards the souls or the *puruṣas* and God. Thus there are twenty-four evolutionary categories (including *prakṛti*); *puruṣa* is counted as the twenty-fifth category, and according to the theistic Sāṃkhya God or Īśvara is counted as the twenty-sixth. It may be objected that the above principle of reconciliation of the diverse counting of categories by subsuming the effect under the cause, or by ignoring the former, cannot apply here. The theistic Sāṃkhya admits Īśvara on the ground that there must be some being who should communicate self-knowledge to individual souls, as they cannot, by themselves, attain it. If on such a view the theistic school of twenty-six categories is regarded as valid, the other school of twenty-five categories becomes irreconcilable. To this the reply is that there is no intrinsic difference in the nature of *puruṣa* and Īśvara, as they are both of the nature of pure consciousness. The objection that even on the above supposition the self-knowledge communicated by Īśvara has to be counted as a separate category is invalid, for self-knowledge, being knowledge, is only the heightening of the *sattva* quality of the *prakṛti* and as such falls within *prakṛti* itself. Knowledge is not a quality of the *puruṣa*, but of the *prakṛti*. The state of equilibrium in which the *guṇas* are not specifically manifested is called *prakṛti*. An upsetting of the equilibrium leads to the manifestation of the *guṇas*, which have, therefore, to be regarded as attributes of the *prakṛti*. The *puruṣa*, not being an agent, cannot possess knowledge as an attribute of its own. So, all activity being due to *rajas* and all ignorance being due to *tamas*, activity and ignorance are also to be regarded as con-

¹ *anupraveśaṃ darśayati ekasminnāpiti pūrvarmin kāraṇabhūte tattve sūkṣma-rūpeṇa praviṣṭāni mṛdi ghaṭavat. aparasmīn kārya-tattve kāraṇa-tattvāni amagatatvena praviṣṭāni ghaṭe mṛdvat.* Śrīdhara's commentary on sloka 8.

stituents of *prakṛti*. Time (*kāla*) also is to be identified as God, because it is by the agency of God that the *guṇas* combine, that He is regarded as the cause of the combination of the *guṇas*. The view which regards *kāla* as the cause of the combination of the *guṇas* is grounded on this fact, and it is for that reason that in the scriptures *kāla* has been regarded as the name of *Īśvara*. As everything proceeds from the category of *mahat*, that itself is called *svabhāva* or nature. Thus the two apparently conflicting views that *kāla* and *svabhāva* are to be regarded as the ultimate causes of the world may well be reconciled with the Sāṃkhya according to the above interpretation.

The school of Sāṃkhya which reckons nine categories counts merely *puruṣa*, *prakṛti*, *mahat*, *ahamkāra* and the five elements. Those who reckon eleven count the five cognitive and conative senses and the *manas* only. Those who reckon five categories count the five sense objects only. Those who reckon seven count the five sense-objects, the soul and God. Those who reckon six include within them the five sense-objects and the *puruṣa*. There are others, however, who regard earth, water, fire and the soul as four categories. Others take the five sense-objects, the eleven sense-organs and the *puruṣa* as categories. By excluding *manas* some hold that there are only sixteen categories. Others take the five sense-objects, the five cognitive senses, *manas*, soul and God, and thus arrive at the thirteen categories. Others take the five sense-objects, the five cognitive senses and the sense as the eleven categories. Others count *prakṛti*, *mahat*, *ahamkāra*, the five *tanmātras* and the *puruṣa* as the nine categories.

It is regrettable that apart from a reference to the above schools of Sāṃkhya and the attempts at their reconciliation found in the *Bhāgavata*, it is not possible to trace these doctrines to the original works, which must have long preceded the period of the composition of the *Bhāgavata*. The *Bhāgavata* is interested in the theistic Sāṃkhya doctrine, as has already been shown, and attempts to reconcile the conflicting schools of Sāṃkhya as being substantially one school of thought. It further holds that the *prakṛti* and its manifestations are produced through the operation of the diverse power of the *māyā* of *Īśvara*. At the time of dissolution (*pralaya*) God remains in absolute identity with Himself, and the *guṇas*, which are the various manifestations of His *māyā* power, remain in

equilibrium—a state in which all His energies are sleeping as it were. By His own inherent energy He breaks the equilibrium of His sleeping energy and sets Himself to the work of the creation—the *prakṛti* with its evolutes—and thereby associates them with *jīvas*, which are merely His parts, and which thus are deluding the dualistic experience of the world, which they enjoy and for which they suffer; and He also shows them the right way by instructing them through the Vedas¹. The self in its transcendent nature is pure experience and as such is devoid of and is absolutely un-associated with any kind of objective form. The association of objectivity and of content is as illusory as creations in dreams, and must be regarded as products of *māyā*².

Puruṣa as pure experience (*anubhava-svarūpa*) is to be differentiated and comprehended as different from passing mental states, as the content of the waking, dream and dreamless stages by the method of agreement and difference (*anvaya-vyatireka*). For, through the contents of experience in the various constituents involved in the mental states, that which remains constant, like a thread in a garland of pearls, is the pure experiencer, the self. Self is therefore to be regarded as different from the contents of the mental states which it illuminates³.

Eschatology.

In the *Bhāgavata-purāṇa*, III. 32, it is held that those who perform sacrifices and make offerings to gods and forefathers pass after death to the lunar world, from which they return to earth again. Those, however, who follow their own duties and surrender all their actions to gods, pure in mind and heart and unattached to worldly things, pass after death to the solar sphere and thence to the Universal Being Who is the cause of the world. Those, however, who are obsessed with the notion of duality pass into the nature of qualified Brahman, and are then born again in the world in accordance with their past deeds. Those again who lead an ordinary life of desires and make offerings to their forefathers have first to go by the southern way of smoky path to the land of the forefathers, and are again born in the line of their own progenies.

In XI. 22. 37, however, we find a more rational view. It is said there that the *manas* of men is permeated by their deeds and their causes, and it is this *manas* that passes from one body to another. The *ātman*, the soul, follows this *manas*. Śrīdhara, the well-known commentator on the *Bhāgavata-purāṇa*, regards *manas* here as the *liṅga-śarīra*, and holds that the self follows the *manas* infested by egoism. The *Bhāgavata-purāṇa* further holds that through the destiny of *karma* the *manas* meditates over the things seen and heard and gradually loses its memory with regard to them. This *manas* entering into another body thus ceases to remember all the experiences of the previous bodies and thus death may be defined as absolute forgetfulness (*mṛtyuratyanta-vismṛtiḥ*, XI. 22. 39). Birth is regarded as the acceptance of new experiences. Śrīdhara points out that this takes place with the cessation of the functioning of egoism with reference to the experiences of past bodies and the extension of the function of egoism with reference to the experiences of the new body. Just as one does not remember one's dreams, so one ceases to remember one's past experiences, and this is conditioned by death. At birth the self that was always existent appears to be born anew. By identifying the self with the body one divides one's experiences as internal and external. As a matter of fact the body is being continually destroyed and generated, but such changes, being of a subtle nature, are overlooked. Just as

there cannot be the same flame in two moments, or one flowing river in two different moments, so the body also is different in two different moments, though on account of our ignorance we suppose that the same body is passing through various stages and conditions. But in reality no one is born and no one dies through the agency of *karma*. It is all a panorama of illusions, just as the fire, as heat, exists eternally and yet appears to be burning in association with logs of wood. All the phenomena of birth, infancy, youth, old age and death as different stages of the body are but mere fancies. They are but stages of primal matter, the *prakṛti*, which are regarded through illusion as different stages of our life. One notices the death of one's father and the birth of a son and so may speak of the destruction and generation of bodies, but no one experiences that the experiencer himself undergoes birth and death. The self thus is entirely different from the body. It is only through inability to distinguish properly between the two that one becomes attached to sense-objects and seems to pass through the cycle of birth and death. Just as a man seeing another man dance or sing imitates his action, so does the *puruṣa*, which has no movement of itself, seem to imitate the qualities of *buddhi* in the operation of these movements. Again, just as when one looks at the images of trees in flowing water, the trees themselves seem to be many, so does the self regard itself as implicated in the movement of the *prakṛti*. This gives us the world-experience and the experience of the cycles of birth and death, though none of them really exists. Thus we see that the *Bhāgavata-purāṇa* agrees with the general Sāṃkhya and the Vedānta view regarding birth and death. It no doubt accepts the ordinary view of the Upaniṣads that a man, like a caterpillar, does not leave one body without accepting another at the same time (*Bhāgavata-purāṇa*, x. 1. 38-44); but at the same time it holds that such birth and re-birth are due to one's own illusion or *māyā*.

CHAPTER XXV

MADHVA AND HIS SCHOOL

Madhva's Life.

BHANDARKAR in *Vaiṣṇavism, Śaivism and Minor Religious Systems* says that in the *Mahābhārata-tātparyā-nirṇaya*, Madhva has given the date of his birth as *Kali* 4300. The *Kali* age, according to Bhāskarācārya, begins with the year 3101 B.C. The date of Madhva's birth would thus be A.D. 1199 or 1121 *śaka*. Bhandarkar says that, as some use the current year of an era and some the past, the *śaka* era 1121 may be regarded as equivalent to 1119. But the present writer has not been able to discover it in the only printed edition of the text of *Mahābhārata-tātparyā-nirṇaya* (1833 *śaka*, published by T. R. Kṛṣṇācārya). Bhandarkar, however, approaches the problem by another path also. He says that the list preserved in several of the Maṭhas gives the date of Madhva as *śaka* 1119, and, as Madhva lived for 79 years, the date of his birth was 1040 *śaka*. Bhandarkar, however, regards *śaka* 1119 as the date of his birth, and not of his death as given in the Maṭha list. He says that the inscription in the Kūrmeśvara temple at Śrīkūrma is in a Tāluka of the Ganjam district in which Narahari-tīrtha is represented to have constructed a temple and placed in it an idol of Narasiṃha dated *śaka* 1203 (*Epigraphica Indica*, Vol. VI, p. 260). The first person therein mentioned is Puruṣottama-tīrtha, who is the same as Acyutaprekṣa, then his pupil Ānanda-tīrtha, then Narahari-tīrtha, the pupil of Ānanda-tīrtha. Narahari-tīrtha was probably the same as Narasiṃha, the ruler of the Tāluk mentioned above, from *śaka* 1191 to 1225. He is mentioned in inscriptions at Śrīkūrman bearing the date *śaka* 1215, which is represented as the eighteenth year of the king's reign. He was Narasiṃha II, who was panegyricized in the *Ekāvalī*. From other inscriptions we get Narahari's date as between 1186 and 1212 *śaka*. These records confirm the tradition that Narahari-tīrtha was sent to Orissa by Ānanda-tīrtha. Now Narahari-tīrtha's active period ranged between 1186 to 1215. His teacher Madhva could not have died in *śaka* 1119, i.e. sixty-seven years before him. Bhandarkar therefore takes 1119 (as mentioned in the Maṭha list)

as the date of the birth of Madhva, not as the date of his death. This date of Madhva's birth, *śaka* 1119 or A.D. 1197, has been accepted by Grierson and Krisnasvami Aiyar, and has not so far been challenged.

We have no authentic information about the life of Madhva. All that we can know of him has to be culled from the legendary and semi-mythical lives of Madhva, called the *Madhva-vijaya*, and the *Maṇi-maṇjarī* of Nārāyaṇa Bhaṭṭa, son of Trivikrama, who was an actual disciple of Madhva. Some information can also be gathered from the adoration hymn of Trivikrama Paṇḍita. Madhva seems to have been a born enemy of Śaṅkara. In the *Maṇi-maṇjarī*, Nārāyaṇa Bhaṭṭa gives a fanciful story of a demon, Maṇimat, who interpreted the Vedānta. Maṇimat was born as a widow's bastard, and therefore he was called Śaṅkara; with the blessing of Śiva he mastered the *śāstras* at Saurāṣṭra, invented the doctrine of *sūrya-mārga*, and was welcomed by persons of demoralized temperament. He really taught Buddhism under the cloak of Vedānta. He regarded Brahman as identified with Sūrya. He seduced the wife of his Brahmin host, and used to make converts by his magic arts. When he died, he asked his disciples to kill Satyaprajña, the true teacher of the Vedānta; the followers of Śaṅkara were tyrannical people who burnt down monasteries, destroyed cattle and killed women and children. They converted Prajñā-tīrtha, their chief opponent, by force. The disciples of Prajñā-tīrtha, however, were secretly attached to the true Vedāntic doctrine, and they made one of their disciples thoroughly learned in the Vedic scriptures. Acyutaprekṣa, the teacher of Madhva, was a disciple of this true type of teachers, who originated from Satyaprajña, the true Vedic teacher, contemporary with Śaṅkara.

Madhva was an incarnation of Vāyu for the purpose of destroying the false doctrines of Śaṅkara, which were more like the doctrines of the Lokāyatas, Jainas and Pāsupatas, but were more obnoxious and injurious.

Madhva was the son of Madhyageha Bhaṭṭa, who lived in the city of Rajatapīṭha, near Udipi, which is about 40 miles west of Śrīṅgeri, where there was a celebrated *maṭha* of Śaṅkara. Udipi is even now the chief centre of Madhivism in South Kanara. The ancient name of the country, which now comprises Dharwar, the North and the South Kanara, and the western part of the State of Mysore, was Tuluva (modern Tulu), which is mostly inhabited

by the Madhvas. Grierson, writing in 1915, says that there are about 70,000 Madhvas in the locality. Elsewhere they are more distributed. It must, however, be noted that from the South of Hyderabad to Mangalore, that is, the whole of the North and the South Kanara, may also be regarded as the most important centre of Vīra-Śaivism, which will be dealt with in the fifth volume of the present work. The village of Rajatapīṭha, where Madhva was born, may probably be identified with the modern Kalyāṇapura. He was a disciple of Acyutaprekṣa, and received the name of Pūrṇaprajña at the time of initiation and later on another name, Ānanda-tīrtha; he is known by both these names. He at first studied the views of Śaṅkara, but soon developed his own system of thought, which was directly opposed to that of Śaṅkara. He refuted twenty-one *Bhāṣyas* which were written by other teachers who preceded him; and Śeṣa, the disciple of Chalāri-nṛsiṃhācārya, the commentator on the *Madhva-vijaya* of Nārāyaṇa Bhaṭṭa, enumerates the designations of these commentators on the *Brahma-sūtra* as follows; Bhāratīvijaya; Saṃvidānanda; Brahmaghoṣa; Śatānanda; Vāgbhaṭa; Vijaya; Rudra Bhaṭṭa; Vāmana; Yādavaprakāśa; Rāmānuja; Bhartṛprapañca; Draviḍa; Brahmadatta; Bhāskara; Piśāca; Vṛttikāra; Vijaya Bhaṭṭa; Viṣṇukrānta; Vādīndra; Mādhavadeśaka; Śaṅkara. Even in Rajatapīṭhapura he once defeated a great scholar of the Śaṅkara school who came to visit Madhva's teacher Acyutaprekṣa. He then went to the South with Acyutaprekṣa and arrived at the city of Viṣṇumaṅgala¹. From here he went southwards and arrived at Anantapura (modern Trivandrum). Here he had a long fight with the Śaṅkarites of the Śṛṅgeri monastery. Thence he proceeded to Dhanuṣkoṭi and Rāmeśvaram, and offered his adoration to Viṣṇu. He defeated on the way there many opponents and stayed in Rāmeśvaram for four months, after which he came back to Udipi. Having thus established himself in the South as a leader of a new faith, Madhva started on a tour to North India, and, crossing the Ganges, went to Hardwar, and thence to Badarikā, where he met Vyāsa. He was here asked by Vyāsa to write a commentary on the *Brahma-sūtra* repudiating the false *Bhāṣya* of Śaṅkara. He then returned to Udipi, converting many Śaṅkarites on the way, such as Śobhana Bhaṭṭa and others residing near the banks of the Godāvārī². He at last converted Acyutaprekṣa to his own doctrines. In the

¹ *Madhva-vijaya*, v. 30.

² *Ibid.* ix. 17.

eleventh and the thirteenth chapters of the *Madhva-vijaya* we read the story of the persecution of Madhva by Padma-tīrtha, the head of the Śrīgeri monastery, who tried his best to obstruct the progress of the new faith initiated by Madhva and even stole away Madhva's books, which were, however, returned to him through the intercession of the local Prince Jayasīmha of Viṣṇumaṅgala; the faith continued to grow, and Trivirama Paṇḍita, the father of Nārāyaṇa Bhaṭṭa, the author of *Maṇi-mañjarī* and *Madhva-vijaya*, and many other important persons were converted to the Madhva faith. In his last years Madhva again made a pilgrimage to the North and is said to have rejoined Vyāsa, and to be still staying with him. He is said to have lived for seventy-nine years and probably died in 1198 śaka or A.D. 1276. He was known by various names, such as Pūrṇaprajña, Ānanda-tīrtha, Nandī-tīrtha and Vāsudeva¹.

The treatment of the philosophy of Madhva which is to follow was written in 1930; and so the present writer had no opportunity of diving into Mr Śarmā's excellent work which appeared some time ago, when the manuscript of the present work was ready for the Press. Padmanābhasura's *Madhva-siddhānta-sāra* contains a treatment of Madhva's doctrines in an epitomized form. Madhva wrote thirty-seven works. These are enumerated below²;

- (1) *The Ṛg-bhāṣya* a commentary to the *Ṛg-veda*, 1. 1-40;
- (2) *The Krama-nirṇaya*, a discussion on the proper reading and

¹ A few works in English have appeared on Madhva. The earliest accounts are contained in "Account of the Madhva Gooroos" collected by Major MacKenzie, 24 August 1800, printed on pp. 33 ff. of the "Characters" in the *Asiatic Annual Register*, 1804 (London, 1806); H. H. Wilson's "Sketch of the religious sects of the Hindus," reprinted from Vols. xvi and xvii of *Asiatic Researches*, London, 1861, 1, pp. 139 ff.; Krishnaswami Aiyar's *Śrī Madhva and Madhvaism*, Madras; R. G. Bhandarkar's *Vaiṣṇavism, Śaivism and Minor Religious Systems*; *Bombay Gazetteer*, Vol. xxii, "Dharwar," Bombay, 1884; G. Venkoba Rao's "A sketch of the History of the Madhva Āchāryas," beginning in *Indian Antiquary*, xliii (1914), and C. M. Padmanābhacārya's *Life of Madhvācārya*. S. Subba Rao has a complete translation of the commentary of Śrī Madhvācārya on the *Brahma-sūtra* and a translation in English of the *Bhagavad-gītā* with the commentary according to Śrī Madhvācārya's *Bhāṣya*. The preface of this *Bhagavad-gītā* contains an account of Madhva's life from an orthodox point of view. There is also P. Ramchandra Roo's *The Brahma Sutras*, translated literally according to the commentary of Śrī Madhvācārya (Sanskrit, Kumbakonam, 1902); G. A. Grierson has a very interesting article on Madhva in the *Encyclopaedia of Religion and Ethics*, Vol. viii; Mr Nāgarāja Śarmā has recently published a recondite monograph on the philosophy of Madhva.

² See Helmuth von Glasenapp's *Madhvas Philosophie des Viṣṇu-Glaubens*, p. 13.

order of the *Aitareya-Brāhmaṇa*, IV. 1-4, *Aitareya-Āraṇyaka*, IV. 1, and the Vedic hymns cited therein; (3) The *Aitareya-upaniṣad-bhāṣya*; (4) The *Bṛhadāraṇyaka-upaniṣad-bhāṣya*; (5) *Chāndogya-upaniṣad-bhāṣya*; (6) *Taittirīya-upaniṣad-bhāṣya*; (7) *Īśāvāsyā-upaniṣad-bhāṣya*; (8) *Kāṭhaka-upaniṣad-bhāṣya*; (9) *Muṇḍaka-upaniṣad-bhāṣya*; (10) *Māṇḍūkya-upaniṣad-bhāṣya*; (11) *Praśnopaniṣad-bhāṣya*; (12) *Kenopaniṣad-bhāṣya*; (13) *Mahābhārata-tātparya-nirṇaya*; (14) *Bhagavad-gītā-bhāṣya*; (15) *Bhagavad-gītā-tātparya-nirṇaya*; (16) *Bhāgavata-tātparya-nirṇaya*; (17) *Brahma-sūtra-bhāṣya*; (18) *Brahma-sūtrānubhāṣya*; (19) *Brahma-sūtrānuvyākhyāna*; (20) *Brahma-sūtrānuvyākhyāna-nirṇaya*; (21) *Pramāṇa-lakṣaṇa*; (22) *Kathā-lakṣaṇa*; (23) *Upādhi-khaṇḍana*; (24) *Māyāvāda-khaṇḍana*; (25) *Prapañca-mithyātānumāna-khaṇḍana*; (26) *Tattvodyota*; (27) *Tattva-viveka*; (28) *Tattva-saṃkhyāna*; (29) *Viṣṇu-tattva-nirṇaya*; (30) *Tantra-sāra-saṃgraha*; (31) *Kṛṣṇā-mṛta-mahārṇava*; (32) *Yati-praṇava-kalpa*; (33) *Sadacāra-smṛti*; (34) *Jayantī-nirṇaya* or the *Jayantī-kalpa*; (35) *Yamaka-bhārata*; (36) *Nṛsiṃha-nakha-stotra*; (37) *Dvādaśa-stotra*.

In the list given in the *Grantha-mālikā-stotra* of Jaya-tīrtha we have *Sanmyāsa-paddhati* instead of *Brahma-sūtrānuvyākhyānyāya-nirṇaya*. The *Catalogus Catalogorum* of Aufrecht refers to the report on the search for Sanskrit Manuscripts in the Bombay Presidency during the year 1882-3 by R. G. Bhandarkar, and enumerates a number of other books which are not mentioned in the *Grantha-mālikā-stotra*. These are as follows:

Ātmajñāna-pradeśa-ṭikā, *Ātmopadeśa-ṭikā*, *Ārya-stotra*, *Upadeśasahasra-ṭikā*, *Upaniṣat-prasthāna*, *Aitareyopaniṣad-bhāṣya-ṭippanī*, *Kāṭhakopaniṣad-bhāṣya-ṭippanī*, *Kenopaniṣad-bhāṣya-ṭippanī*, *Kauṣītakyopaniṣad-bhāṣya-ṭippanī*, *Khapuṣpa-ṭikā*, *Guru-stuṭi*, *Govindabhāṣya-pīṭhaka*, *Govindāṣṭaka-ṭikā*, *Gauḍapāḍīya-bhāṣya-ṭikā*, *Chāndogyopaniṣad-bhāṣya-ṭippanī*, *Taittirīyopaniṣad-bhāṣya-ṭippanī*, *Taittirīya-śruti-vārttika-ṭikā*, *Tripuṭīprakaraṇa-ṭikā*, *Nārāyaṇopaniṣad-bhāṣya-ṭippanī*, *Nyāya-vivaraṇa*, *Pañcikaṇa-prakriyā-vivaraṇa*, *Praśnopaniṣad-bhāṣya-ṭippanī*, *Bṛhajjābālopaniṣad-bhāṣya*, *Bṛhadāraṇyaka-bhāṣya-ṭippanī*, *Bṛhadāraṇyaka-vārttika-ṭikā*, *Brahma-sūtra-bhāṣya-ṭikā*, *Brahma-sūtra-bhāṣya-nirṇaya*, *Brahmānanda*, *Bhakti-rasāyana*, *Bhagavad-gītā-prasthāna*, *Bhagavad-gītā-bhāṣya-vivecana*, *Māṇḍūkyopaniṣad-bhāṣya-ṭippanī*, *Mitabhāṣiṇī*, *Rāmottara-tāpanīya-bhāṣya*, *Vākyasudhā-ṭikā*, *Viṣṇusaha-*

sranāma-bhāṣya, Vedānta-vārttika, Śaṅkara-vijaya, Śaṅkarācārya-avatāra-kathā, Śataśloka-ṭikā, Saṃhitopaniṣad-bhāṣya, Saṃhitopaniṣad-bhāṣya-ṭippanī, Śattattva, Sadācāra-stuti-stotra, Smṛti-vivaraṇa, Smṛti-sāra-samuccaya, Svarūpa-nirṇaya-ṭikā, Harimīde-stotra-ṭikā.

Succession List of Madhva Gurus.

Bhandarkar in his search for Sanskrit MSS. in 1882-3 gives the names of teachers with the dates of their deaths. Thus Ānanda-tīrtha or Madhva was succeeded by Padmanābha-tīrtha 1126 *śaka*, and he by Narahari-tīrtha 1135 *śaka*; Mādhava-tīrtha 1152; Akṣobhya-tīrtha 1169; Jaya-tīrtha 1190; Vidyādhirāja-tīrtha 1254; Kavīndra-tīrtha 1261; Vāgīśa-tīrtha 1265; Rāmachandra-tīrtha 1298; Vidyānidhi-tīrtha 1306; Raghunātha-tīrtha 1364; Raghuvarya-tīrtha 1419; Raghūttama-tīrtha 1457; Vedavyāsa-tīrtha 1481; Vidyādhīśa-tīrtha 1493; Vedanidhi-tīrtha 1497; Satyavrata-tīrtha 1560; Satyanidhi-tīrtha 1582; Satyanātha-tīrtha 1595; Satyābhinava-tīrtha 1628; Satyapūrṇa-tīrtha 1648; Satyavijaya-tīrtha 1661; Satyapriya-tīrtha 1666; Satyabodha-tīrtha 1705; Satyasannidhāna-tīrtha 1716; Satyavara-tīrtha 1719; Satyadhāma-tīrtha 1752; Satyasāra-tīrtha 1763; Satyaparāyaṇa-tīrtha 1785; Satyakāma-tīrtha 1793; Satyeṣṭi-tīrtha 1794; Satyaparāyaṇa-tīrtha 1801; Satyavit-tīrtha was living in 1882, when the *Search for Sanskrit MSS.* was being written. Thus we have a list of thirty-five Gurus, including Madhva, from 1198 *śaka* (the year of the death of Madhva) to Satyavit-tīrtha, who was living in *śaka* 1804 or A.D. 1882. This list was drawn up in consonance with the two lists procured at Belgaum and Poona. It is largely at variance with the list given in the introduction to the commentary on the *Brahma-sūtra* by Baladeva. Baladeva gives the list as follows:

Madhva, Padmanābha, Nṛhari, Mādhava, Akṣobhya, Jaya-tīrtha, Jñānasīmha, Dayānidhi, Vidyānidhi, Rājendra, Jayadharma, Puruṣottama-tīrtha, Brahmāṇḍa-tīrtha, Vyāsa-tīrtha, Lakṣmīpati, Mādhavendra, Īśvara. Īśvara was a teacher of Caitanya. We see that the list given by Baladeva is right as far as Jaya-tīrtha; but after Jaya-tīrtha the list given by Baladeva is in total discrepancy with the two lists from the Madhva Maṭhas in Belgaum and Poona. Under the circumstances we are unable to accept the list of Gurus given by Baladeva, which has many other discrepancies into details whereof we need not enter.

Important Madhva Works.

The *Mahābhārata-tātparya-nirṇaya*. This work of Madhva consists of thirty-two chapters and is written in verse. In the first chapter Madhva begins with a very brief summary of his views. He says there that the four Vedas, the *Pañcarātras*, the *Mahābhārata*, the original *Rāmāyaṇa*, and the *Brahma-sūtras* are the only authoritative scriptural texts, and that anything that contradicts them is to be regarded as invalid. The *Vaiṣṇava Purāṇas*, being essentially nothing more than an elaboration of the *Pañcarātras*, should also be regarded as valid scriptures. The *smṛti* literature of Manu and others is valid in so far as it does not come into conflict with the teachings of the Vedas, the *Mahābhārata*, the *Pañcarātras* and the *Vaiṣṇava Purāṇas*¹. Other *śāstras* such as those of Buddhism were made by Viṣṇu to confuse the *Asuras*, and Śiva also produced the *Śaiva Śāstra* for the same object at the command of Viṣṇu. All the *śāstras* that speak of the unity of the self with Brahman either in the present life or at liberation are false. Viṣṇu is the true Lord, and is also called Nārāyaṇa or Vāsudeva. The process of the world is real and is always associated with five-fold differences, viz. that between the self and God, between the selves themselves, between matter and God, between matter and matter, and between matter and self². It is only the gods and the best men that may attain salvation through knowledge and grace of God; ordinary men pass through cycles of births and rebirths, and the worst are cursed in hell. Neither the demons nor those who are eternally liberated have to go through a cycle of birth and rebirth. The demons cannot

under any circumstances attain salvation. The theory of eternal damnation is thus found only in Madhva, and in no other system of Indian philosophy. Men can attain salvation when they worship God as being associated with all good qualities and as being blissful and omniscient. Even in the state of liberation there are individual differences between the selves, and the perfect and desireless (*niṣkāma*) worship of God is the only means of salvation. It is only through devotion (*bhakti*) that there can be liberation; even the emancipated enjoy the eternal flow of pleasure through devotion; *bhakti*, or devotion, is here defined as an affection with the full consciousness of the greatness of the object of devotion¹, and it is regarded as the universal solvent. Even the performance of all religious duties cannot save a man from hell, but *bhakti* can save a man even if he commits the worst sin. Without *bhakti* even the best religious performances turn into sin, and with *bhakti* even the worst sins do not affect a man. God is pleased only with *bhakti* and nothing else, and He alone can give salvation.

In the second chapter Madhva says that in the *Mahābhārata-tātparya-nirṇaya* he tries to summarize the essential teachings of the *Mahābhārata*, the text of which in his time had become thoroughly corrupt; and that, difficult as the *Mahābhārata* itself is, it had become still more difficult to get to the root of it from these corrupt texts. He further says that in order to arrive at the correct reading he had procured the text of the *Mahābhārata* from various countries and that it is only by comparison of these different texts that he made his attempt to formulate its essential teachings in consonance with the teachings of other *śāstras* and the Vedas². According to Madhva the *Mahābhārata* is an allegory, which shows a struggle between good and evil; the good representing the Pāṇḍavas, and the evil representing the sons of Dhṛtarāṣṭra. The object of the *Mahābhārata* is to show the greatness of Viṣṇu. Madhva does not follow the order of the story as given in the *Mahābhārata*, he omits most of the incidental episodes, and supplements the story with others culled from other *Purāṇas* and

¹ *bhaktiyarthāny akhilāny eva bhaktir mokṣāya kevalā

the *Rāmāyaṇa*. Thus he gives a summary of the *Rāmāyaṇa* and also the story of Kṛṣṇa in the *Bhāgavata-purāṇa* as being a part of the *Mahābhārata*. In his treatment of the general story also he insists on the super-excellence of Bhīma and Kṛṣṇa.

There are several commentaries on this work of Madhva, viz., that by Janārdana Bhaṭṭa, called the *Padārtha-dīpikā*; by Varadarāja, called the *Mahāsubodhinī* or the *Prakāśa*; by Vādirājasvāmī; by Viṭṭhalācārya-sūnu; by Vyāsa-tīrtha; the *Durghaṭārthaprakāśikā*, by Satyābhinava Yati: the *Mahābhārata-tātparya-nirṇaya-vyākhyā* (called also the *Padārthadīpikā*); the *Mahābhārata-tātparya-nirṇaya-vyākhyā* (called also *Bhāvacandrikā*), by Śrīnivāsa; and the *Mahābhārata-tātparya-nirṇayānukramaṇikā*, which is a small work giving a general summary of the work in verse. There were also other commentaries by Kṛṣṇācārya, Lakṣmaṇa Siṃha and Jayakhaṇḍin Siṃha.

In the *Bhāgavata-tātparya-nirṇaya* Madhva selects some of the important verses from the twelve *skandhas* of the *Bhāgavata-purāṇa*, and adds short annotations with the selected verses from the selected chapters of each of the *skandhas*. These are not continuous, and many of the chapters are sometimes dropped altogether; they are also brief, and made in such a manner that his own dualistic view may appear to be the right interpretation of the *Bhāgavata*. He sometimes supports his views by reference to the other *Purāṇas*, and in conclusion he gives a short summary of his view as representing the true view of the *Bhāgavata*. The *Bhāgavata-tātparya-nirṇaya* is commented upon by various writers; some of the commentaries are *Bhāgavata-tātparya-vyākhyā* (called also *Tātparya-bodhinī*), *Bhāgavata-tātparya-nirṇaya-vyākhyā-vivarana*, *Bhāgavata-tātparya-nirṇaya-vyākhyā-prabodhinī*, *Bhāgavata-tātparya-nirṇaya-vyākhyā-padya-ratnāvalī*, *Bhāgavata-tātparya-nirṇaya-vyākhyā-prakāśa*, by Śrīnivāsa (a brief work in prose), and *Bhāgavata-tātparya-nirṇaya-ṭīkā*, by Jadupati, Chalāri and Veda-garbhanārāyaṇācārya.

The *Gītā-tātparya* of Madhva is a work in prose and verse, giving a summary of the essence of the *Gītā* as understood by Madhva. It is a continuous summary of all the eighteen chapters of the *Gītā* in serial order. The summary, however, often quotes verses from the *Gītā*, which, however, are sometimes interrupted by small prose texts serving as links, sometimes of an explanatory

nature, sometimes referring to *purāṇic* and other texts in support of Madhva's interpretations, and sometimes introducing the context and the purpose of the verses of the *Gītā*—they sometimes introduce also discussions in prose against the monistic interpretation of the *Gītā* by Śaṅkara. The *Tātparya*, a work of about 1450 *granthas*, is commented upon by the famous Madhva author Jayatīrtha; the commentary is called *Bhagavad-gītā-tātparya-nirṇaya-vyākhyā* or *Nyāya-dīpikā*. This *Nyāya-dīpikā* was commented upon by Viṭṭhala-suta-śrīnivāsācārya or Tāmraparṇī-śrīnivāsācārya in a work called *Tātparya-dīpikā-vyākhyā-nyāya-dīpa-kiraṇāvalī*. The *Bhagavadgītā-tātparya* had at least two other commentaries, the *Tātparya-ṭippanī*, by Padmanābha-tīrtha, and the *Nyāya-dīpa-bhāva-prakāśa*, by Satyaprajña-bhikṣu. In addition to this Madhva wrote also a work styled *Gītā-bhāṣya*, in which he takes up the important *ślokas*, chapter by chapter, and in the course of commenting on them discusses many important problems of a controversial nature. Thus, following Kumārila, he says that it is because the *śāstra* is *aparījñeya* (of transcendent origin) that there is an absolute validity of the *śāstras*. Regarding the performance of *karmas* he says that they are to be performed because of the injunctions of the *śāstras*, without any desire for fruit. The only desires that should not be abandoned are for greater knowledge and a greater rise of *bhakti*; even if the *karmas* do not produce any fruit, they will at least produce the satisfaction of the Lord, because in following the injunctions of the *śāstras* the individual has obeyed the commands of God. He also controverts the Śaṅkara-view of monism, and says that, if God reflects Himself in men, the reflection cannot be identified with the original. The so-called *upādhi* or condition is supposed to make the difference between the Brahman and the individual. It is not also correct to say that, as water mixes with water, so also the individual at the time of salvation meets with God and there is no difference between them; for even when water mixes with water, there is difference, which explains the greater accumulation of water. So, in the state of salvation, the individual only comes closer to God, but never loses his personality. His state of *mokṣa* is said to be the most desirable because here one is divested of all sorrowful experiences, and has nothing to desire for oneself. It is in accordance with the difference in personality of different individuals; the state of

salvation differs with each person. The common element in the state of salvation is the fact that no emancipated person has to suffer any painful experience. Madhva also takes great pains to show that Nārāyaṇa or Viṣṇu is the greatest or the highest Lord. In dealing with the third chapter he says that in the beginningless world even one *karma* may lead to many births and the accumulated store of *karmas* could never have yielded their full fruits to any person ; therefore, even if one does not do any *karma*, he cannot escape the fruits which are in store for him as the result of his past *karmas*; consequently no good can be attained by the non-performance of *karma*. It is only the *karma* performed without any motive or desire that associates with knowledge and leads to salvation ; so the non-performance of *karma* can never lead to salvation by itself. Madhva repudiates the idea that salvation can be attained by death in holy places, as the latter can only be attained by knowledge of Brahman. One is forced to perform the *karmas* by the force of one's internal *saṃskāras* or sub-conscious tendencies. It is unnecessary to show in further detail that in this way Madhva interprets the *Gītā* in support of his own doctrines; and he also often tries to show that the view propounded by him is in consonance with the teachings of other *Purāṇas* and the Upaniṣads. There is a number of works on Madhva's interpretation of the *Gītā*: *Gītārtha-saṃgraha* by Rāghavendra, *Gītā-vivṛti* by Rāghavendra Yati, *Gītā-vivṛti* by Vidyādhiraṇḍa Bhaṭṭopādhyāya, and *Prameya-dīpikā* by Jaya-tīrtha, which has a further commentary on it, called *Bhāva-prakāśa*. Madhva wrote another commentary on the *Brahma-sūtra*, the *Brahma-sūtra-bhāṣya*. It is a small work of about 2500 *granthas*, and the commentary is brief and suggestive¹. He wrote also another work, the *Anubhāṣya*, which is a brief summary of the main contents and purport of the *Brahma-sūtra*. This has also a number of commentaries, by Jaya-tīrtha, Ananta Bhaṭṭa, Chalāri-nṛsiṃha, Rāghavendra-tīrtha and Śeṣācārya. There is also a work called *Adhikaraṇārtha-saṃgraha*, by Padmanābhācārya. The *Brahma-sūtra-bhāṣya* of Ānanda-tīrtha has a commentary by Jaya-tīrtha, called *Tattva-prakāśikā*. This has a number of commentaries: the *Tātparya-prakāśikā-bhāva-bodha* and the *Tātparya-prakāśikā-gata-nyāya-vivarana* by Raghūttama Yati, and *Bhāva-dīpikā* or *Tattva-prakāśikā-ṭīpaṇī*, the *Tantra-dīpikā*,

¹ A verse containing thirty-two letters is called a *grantha*.

by Rāghavendra Yati, *Tātparya-candrikā*, by Vyāsa-tīrtha, which had other commentaries, viz. the *Tātparya-candrikā-prakāśa* by Keśava Yati, *Tātparya-candrikā-nyāya-vivaraṇa* by Timman-nācārya (or Timmapura-raghunāthācārya), and *Tātparya-candriko-dāharaṇa-nyāya-vivaraṇa*. Besides these the *Tattva-prakāśikā* had other commentaries; the *Abhinava-candrikā* by Satyanātha Yati, one by Śrīnivāsa called *Tattva-prakāśikā-vākyārtha-mañjarī*, and also the *Vākyārtha-muktāvalī* by the same author. The *Tātparya-candrikā* had another commentary, by Gururāja, and the *Tattva-prakāśikā* had another, the *Tantra-dīpikā*. The *Bhāṣya* of Madhva was also commented upon by Jagannātha Yati (the *Bhāṣya-dīpikā*), by Viṭṭhala-suta-śrīnivāsa (the *Bhāṣya-ṭippanī-prameya-muktāvalī*), by Vādirāja (the *Gurvartha-dīpikā*), by Tāmraparṇī-śrīnivāsa, and by Sumatīndra-tīrtha. There are also two others, the *Brahma-sūtra-bhāṣyārtha-saṃgraha* and the *Brahma-sūtrārtha*. The *Anubhāṣya* of Madhva was commented upon by Nṛsiṃha, Jaya-tīrtha, Ananta Bhaṭṭa, Chalāri-nṛsiṃha, Rāghavendra-tīrtha and Śeṣācārya. Further, Madhva wrote another work on the *Brahma-sūtra* called the *Anuvyākhyāna*. This was commented upon by Jaya-tīrtha in his *Pañjikā* and *Nyāya-sudhā*, and also by Jadupati and Śrīnivāsa-tīrtha. There is also another commentary on it, called *Brahma-sūtrānuyākhyāna-nyāya-saṃbandha-dīpikā*. Of these the *Nyāya-sudhā* of Jaya-tīrtha is an exceedingly recondite work of great excellence. *Anuvyākhyāna* is commented upon by Raghūttama in his *Nyāya-sūtra-nibandha-pradīpa* and also in his *Anuvyākhyāna-ṭikā*. The *Nyāya-sudhā* itself was commented on by several writers. Thus we have commentaries by Śrīnivāsa-tīrtha, Jadupati, Viṭṭhala-sutānanda-tīrtha, by Keśava Bhaṭṭa (the *Śeṣa-vākyārtha-candrikā*), by Rāmacandra-tīrtha, Kuṇḍalagirisūri, Vidyādhiśa, Timmannārya, Vādirāja, and Rāghavendra Yati. We have also the *Nyāyasudhopyāsa*, by Śrīpadarāja. The *Anuvyākhyāna* is a small work in verse which follows chapter by chapter the essential logical position of all the *Brahma-sūtras*. Madhva says there that in rendering the interpretations he followed the trustworthy scriptural texts—the Vedas—and also logical reasoning¹. He further says in the introduction that it is for the purpose of clearing his views in a proper manner that

1

ātma-vākyatayā tena śruti-mūlatayā tathā
yukti-mūlatayā caiva prāmāṇyaṃ trividhaṃ mahat.

Anuvyākhyāna, I. 1.

he writes the *Anuvyākhyāna*, though he had already written a *bhāṣya* on the *Brahma-sūtra*. He says in the first chapter that the Omkāra which designates the Brahman and which is also the purport of Gāyatri is also the purport of all the Vedas and one should seek to know it. Those who seek to know the Brahman please God by such an endeavour, and by His grace are emancipated. The existence of all things, actions, time, character and selves depends upon God, and they may cease to exist at His will. God gives knowledge to the ignorant and salvation to the wise. The source of all bliss for the emancipated person is God Himself. All bondage is real, for it is perceived as such; nor is there any means by which one can prove the falsity of bondage, for if there were any proofs of its falsity, the proofs must be existent, and that would destroy the monistic view. The mere one cannot split itself into proof and the object of proof. So all experiences should be regarded as real. That which we find in consonance with practical behaviour should be regarded as real. The monists assert that there are three kinds of existence, but they cannot adduce any proofs. If the universe were really non-existent, how could it affect anybody's interests in a perverse manner? Brahman cannot be regarded as being only pure "being," and the world-appearance cannot be regarded as false, for it is never negated in experience. If this world is to be known as different from pure non-being or the non-existent, then the non-existent has also to be known, which is impossible. It has been suggested that illusion is an example of non-existence, viz., the appearance of a thing as that which it is not. This virtually amounts to the assertion that appearance consists only of a being which does not exist, and this is also said to be indefinable. But such a position leads to a vicious infinite, because the reality of many entities has to depend on another and that on another and so on. Existence of a thing depends upon that which is not being negated, and its not being negated depends upon further experience and so on. Moreover, if the pure differenceless entity is self-luminous, how can it be covered by *ajñāna*? Again, unless it is possible to prove the existence of *ajñāna*, the existence of falsehood as a category cannot be proved. It is needless, however, for us to follow the whole argument of the *Anuvyākhyāna*, as it will be dealt with in other forms as elaborated by Vyāsa-tīrtha in his *Nyāyāmṛta* in controversy with the *Advaita-siddhi*.

Madhva also wrote a *Pramāṇa-lakṣaṇa*, *Kathā-lakṣaṇa*, *Mithyātvānumāna-khaṇḍana*, *Upādhi-khaṇḍana*, *Māyā-vāda-khaṇḍana*, *Tattva-saṃkhyāna*, *Tattvodyota*, *Tattva-viveka*, *Viṣṇu-tattva-nirṇaya*, *Karma-nirṇaya*¹. The *Pramāṇa-lakṣaṇa* has a number of commentaries: *Nyāya-kalpalatā*, by Jaya-tīrtha, *Sanmyāya-dīpikā*, and others by Keśava-tīrtha, Pāṇḍuraṅga, Padmanābha-tīrtha, and Caṇḍakeśava. The *Nyāya-kalpalatā* of Jaya-tīrtha is a work of 1450 *granthas*; it has a commentary called *Nyāya-kalpalatā-vyākhyā*, by two other authors. One of them is a pupil of Vidyādhiśa Yati, but nothing is known about the author of the other work. There are also two other commentaries, the *Prabodhini* and the *Nyāya-mañjarī*, by Caṇḍakeśavācārya. Other works relating to the same subject (the Madhva logic) are the *Nyāya-muktāvalī*, by Rāghavendra Yati, *Nyāya-mauktikā-mālā*, by Vijayīndra, and *Nyāya-ratnāvalī*, by Vādirāja. Jaya-tīrtha himself wrote a work called *Pramāṇa-paddhati*, which has a large number of commentaries (by Ananta Bhaṭṭa, Vedeśa-bhikṣu, Vijayīndra, Viṭṭhala Bhaṭṭa, Satyanātha Yati, Nṛsiṃha-tīrtha, Rāghavendra-tīrtha, Nārāyaṇa Bhaṭṭa, Janārdana Bhaṭṭa, and two others by unknown authors, the *Bhāva-dīpa* and the *Padārtha-candrikā*). The *Kathā-lakṣaṇa* of Madhva was commented on by Padmanābha-tīrtha, Keśava Bhaṭṭāraka, and Jaya-tīrtha. The *Mithyātvānumāna-khaṇḍana* of Madhva has at least four commentaries, by Jaya-tīrtha, the fourth being the *Mandāra-mañjarī*. The *Upādhi-khaṇḍana* has at least three commentaries, by Jaya-tīrtha, Ananta Bhaṭṭa and Śrīnivāsa-tīrtha. Both Śrīnivāsa-tīrtha and Padmanābha-tīrtha wrote commentaries on Jaya-tīrtha's commentary named *Upādhi-khaṇḍana-vyākhyā-vivaraṇa*. The *Māyā-vāda-khaṇḍana* of Madhva was commented upon by Jaya-tīrtha, Śrīnivāsa-tīrtha, Vyāsa-tīrtha, Keśavamīśra, Ananta Bhaṭṭa and Padmanābha-tīrtha. The *Tattva-saṃkhyāna* of Madhva was commented upon by Jaya-tīrtha, Śrīnivāsa-tīrtha, Ananta Bhaṭṭa, Veṅkaṭādrisūri, Satyaprajña Yati, Satyaprajña-tīrtha, Maudgala Narasiṃhācārya, Timmannācārya, Gururāja and Yadupati. The commentary of Jaya-tīrtha, the *Tattva-saṃkhyāna-vivaraṇa*, was commented upon by Satyadharma Yati (*Satya-dharma-tippaṇa*). The *Tattvodyota* of Madhva

¹ These ten works of Madhva are called the *daśaprakaraṇa*. Sometimes, however, the *Mithyātvānumāna-khaṇḍana* is replaced by *R̥gveda-brahma-pañcīkā*.

was commented upon by Jaya-tīrtha, Yadupati, Vedeśa-bhikṣu, Padmanābha-tīrtha, Śrīnivāsa-tīrtha, Narapaṇḍita, Rāghavendra-tīrtha, Vijayindra, Gururāja (or Keśava Bhaṭṭāraka). The *Tattva-viveka* of Madhva was commented upon by Jaya-tīrtha, Ananta Bhaṭṭa and Śrīnivāsa-tīrtha.

In the *Kathā-lakṣaṇa*, Madhva tries to give an estimate of the nature of various wholesome discussions (*vāda*) as distinguished from unwholesome discussions (wrangling, *vitāṇḍā*). *Vāda* is discussion between the teacher and the pupil for the elucidation of different problems or between two or more pupils who are interested in the discovery of truth by reasoning. When this discussion, however, takes place through egotism, through a spirit of emulation, for the sake of victory through controversy, or for the attainment of fame, the discussion is called *jalpa*. Unwholesome discussion, *vitāṇḍā*, is undertaken for the purpose of discrediting the true points of view by specious argument. There may be one or more presidents (*praśnika*) in a discussion, but such a person or persons should be strictly impartial. All discussions must be validly based, on the scriptural texts, and these should not be wrongly interpreted by specious argument¹. The *Kathā-lakṣaṇa* of Madhva seems to have been based on a work called *Brahma-tarka*. The nature of *vāda*, *jalpa*, and *vitāṇḍā* according to the Nyāya philosophy has already been treated in the first volume of the present work².

It is unnecessary to enter into the *Prapañca-mithyātva-numāna-khaṇḍana*, *Upādhi-khaṇḍana* and *Māyāvāda-khaṇḍana*, because the main subject-matter of these tracts has been dealt with in our treatment of Vyāsa-tīrtha's *Nyāyāmṛta* in controversy with the *Advaita-siddhi*.

The *Tattva-saṃkhyāna* is a small tract of eleven verses which relates in brief some of the important tenets of Madhva's doctrines. Thus it says that there are two categories—the independent and the dependent; Viṣṇu alone is independent. The category of the dependent is of two kinds—the existent and the non-existent. The non-existent or the negation is of three kinds—negation before production (*prāgabhāva*), negation by destruction (*dhvaṃsā-*

¹ Mr Nāgarāja Śarma has summarized the contents of the *Kathā-lakṣaṇa*, utilizing the materials of the commentators Jaya-tīrtha, Rāghavendrasvāmī and Vedeśa-tīrtha, in the *Reign of Realism*.

² On the subject of the nature of *kathā* and the conditions of disputation see also *Khaṇḍana-khaṇḍa-khāḍya*, pp. 20 ff., Benares, 1914.

bhāva), and universal negation (*atyantābhāva*). The existents are again conscious or unconscious. The conscious entities are again twofold, those who are associated with sorrows and those who are not so. Those who are associated with sorrows are again twofold, viz., those who are emancipated and those who are in sorrow. Those who are in sorrow are again twofold, viz., those who are worthy of salvation and those who are not. There are others who are not worthy of salvation at any time. The worst men, the demons, the *rākṣasas* and the *piśācas* are not worthy of salvation at any time. Of these there are two kinds, viz., those who are already damned in hell and those who pursue the course of *saṃsāra* but are doomed to hell. The unconscious entities are again threefold, the eternal, the non-eternal, and the partly eternal and partly non-eternal. The Vedas alone are eternal. The sacred literature of the *Purāṇas*, time and *prakṛti* are both eternal and non-eternal; for, when in essence the teachings of the *Purāṇas* are eternal, time and *prakṛti* are eternal; in their evolution they are non-eternal. The non-eternal again is twofold—the created and the uncreated (*saṃśliṣṭa* and *asaṃśliṣṭa*). The uncreated ones are *mahat*, *aham*, *buddhi*, *manas*, the senses, the *tanmātras* and the five *bhūtis*. The world and all that exists in the world are created. Creation really means being prompted into activities, and as such the created entities undergo various stages: God alone is the inward mover of all things and all changes. The *Tattva-viveka* of Madhva is as small a work as the *Tattva-saṃkhyāna*, consisting only of a dozen *granthas*, and deals more or less with the same subject: it is therefore unnecessary to give a general summary of its contents.

The *Tattvodyota*, however, is a somewhat longer work in verse and prose. It starts with a question, whether there is a difference between the emancipated souls, and Madhva says that the emancipated souls are different from God because they had been emancipated at a particular time. They cannot be both different and non-different from God, for that would be meaningless. The concept of *anirvacanīya* of the Vedāntists has no illustration to support it. Madhva takes pains to refute the theory of *anirvacanīya* with the help of scriptural texts, and he holds that the so-called falsity of the Śāṅkarites cannot be supported by perception, inference or implication. There is no reason to think that the world-appearances

as such cannot be negated¹. He further says that, if everything in the world were false, then the allegation that the world would be contradicted in experience would also be false. If the contradiction of the world be false, then virtually it amounts to saying that the world-experience is never contradicted. If it is said that the world-appearance is different from being and if the predicate "being" means the class-concept of being, then it is a virtual admission of a plurality of existents, without which the class-concept of being is impossible. If however the predicate "being" means pure being, then, since such a pure "being" is only Brahman, its difference from the world would be an intelligible proposition, and it would not prove the so-called *anirvacanīya*. It is said that falsity is that which is different from both being and non-being, and that would virtually amount to saying that that which is not different is alone true². On such a supposition the plurality of causes or of effects or the diversities of grounds in inferences must all be discarded as false, and knowledge would be false. Knowledge implies diversity; for the knower, the knowledge and the object of knowledge cannot be the same. Again, it is wrong to hold that ignorance rests in the object of knowledge or the Brahman; for the ignorance always belongs to the knowledge. If on the occasion of knowledge it is held that the ignorance belonging to the objects is removed, then, the ignorance being removed in the object by one person's knowledge of it, all persons should be able to know the object. If any knowing of the jug means that the ignorance resting in the jug is removed, then, the ignorance being removed, the jug should be known even by persons who are not present here³. Again, if by the knowledge of any object the ignorance resting in another object be removed, then by the knowledge of the jug the ignorance in other objects could be removed.

Again, a material object is that which never can be a knower.

¹ *na ca bādhyam jagad ity atra kiñcin mānam.*

Tattvodyota, p. 242.

² *sad-vilakṣaṇatvam a-sad-vilakṣaṇatvam ca mithyā ity a-vilakṣaṇam eva satyam syāt. Ibid. p. 242(a).*

³ *nahī jñāna-jñeyayor ekākārātā nahi
ajñāsya ghaṭāśrayatvam brahmāśrayatvam vā
asti; puṅgavatam eva hi tamojñānena
nivartate; viśayāśrayamced ajñānam
nivartate tarhi ekena jñātasya ghaṭasya
anyair ajñātatvam na syāt. Ibid. p. 242.*

For that reason the self, as a knower, can never be regarded as material. But according to the monists the *ātman* which is equalized with Brahman, being without any quality, can never be a knower, and, if it cannot be a knower, it must be of the nature of a material object, which is impossible. Also the self, or the *ātman*, cannot be a false knower, for the category of falsehood as the indefinable (or *anirvacanīya*) has already been refuted. If materiality means non-luminousness (*aprakāśatva*), then we have to admit that the self, which is differenceless, is unable to illumine itself or anything else; and thus the self would be non-luminous. The self cannot illumine itself, because then it would itself be the subject and object of its work of illumination, which is impossible. The other objects, being false (according to the monists), cannot be illuminated either. If they are no objects and if they are only false, they cannot be illuminated. Thus the monists fail to explain the nature of the self-luminousness of Brahman. Again, the argument that things which are limited in time and space are false does not hold either; for time and the *prakṛti* are not limited by time and space, and therefore they cannot be regarded as false, as the monists wish to think. Again, if it *did* hold, things which are limited by their own nature and character would consequently be false. Thus, the selves would be false, since they are different from one another in their character.

Moreover, the world is perceived as true and real, and there is no one who has experienced it to be false (the perception of the smallness of the sun or of the moon is an illusion, due to the distance from which they are seen; such conditions do not hold regarding the world as we perceive it). There is no reason which supports the view that the world is the product of ignorance. Again, the analogy of a magician and his magic is inapplicable to the world; for the magician does not perceive his magic creation, nor is he deluded by it. But in the case under discussion God (the *Īśvara*) perceives His own creation. Therefore the world cannot be regarded as magic or *māyā*; for God perceives everything directly. Thus, from whatever point of view one may discuss the doctrine of *māyā*, one finds it untenable, and there are no proofs which can support it.

Madhva further holds that in the *Brahma-sūtra*, Book II, not only are various other philosophies refuted but that even the monistic doctrine has been refuted. The refutation of Buddhism

is in reality also a refutation of the monists, who are in reality nothing but crypto-Buddhists or Buddhists in disguise¹. The *śūnyavādi* Buddhists hold that truth is of two kinds, that which is *saṃvṛta*, or of limited or practical importance only, and that which is *pāramārtha*, or ultimately real. If one truly discusses the nature of things, there is no reality, and what is perceived as real is only an appearance. What is called the *pāramārthika* reality means only the cessation of all appearance². There is no difference between the qualityless Brahman and the *śūnya* of the Buddhists. The qualityless Brahman is self-luminous and eternal; the *śūnya* of the Buddhists is unknowable by mind or speech, and is also differenceless, self-luminous, and eternal. It is opposed to materiality, to practicality, to pain and suffering, and to cessation and the defects of bondage³. It is not actually a real-positive entity, though it supports all positive appearance; and, though in itself it is eternal, from the practical point of view it appears in manifold characters. It is neither existent nor non-existent, neither good, nor bad—it is not a thing which one should either leave aside or take, for it is the eternal *śūnya*⁴. It may be observed in this connection that the monists also do not believe in the reality of the characters of being and non-being, because the Brahman is devoid of all characters and qualities. Like *śūnya* of the Buddhists, it is unspeakable, though it is referred to by all words, and it is unknowable, though all knowledge refers to it. Neither the Śāṅkarites nor the Śūnyavādins believe in the category of being or positivity as characters. The

Śūnyavādin does not regard the *śūnya* or the void as a character. The view of the Śāṅkarites, therefore, is entirely different from belief in a personal God, endowed with characters and qualities (which is the general purport of all valid scriptural texts). If the Brahman be void of all characters, it is beyond all determination. The monists think that the Brahman is absoluteless, differenceless, and this precludes them from resorting to any argument in support of their view; for all arguments presuppose relativity and difference. In the absence of any valid argument, and in the face of practical experience of the reality of the world, there is indeed nothing which can establish the monistic view. All arguments that would prove the falsity of the world will fall within the world-appearance and be themselves false. If all selves were identical, then there would be no difference between the emancipated and the un-emancipated ones. If it is held that all difference is due to ignorance, then God, who has no ignorance, would perceive Himself as one with all individual selves, and thus share their sufferings; but the scriptural text of the *Gītā* definitely shows that God perceives Himself as different from ordinary individual selves. The experience of suffering cannot also be due to *upādhi* (or condition) which may act as a limit; for in spite of diversity of conditions the experiencer remains the same. Moreover, since God is free from all conditions, the difference of conditions ought not to prevent Him from perceiving His equality with all beings in sharing their sufferings. Those also who hold that there is only one individual and that all misconceptions are due to Him are wrong; for at his death there should be cessation of the differences. There is also no proof in support of the view that all notion of difference and the appearance of the world is due to the misconception of only one individual. Thus there are no proofs in support of the monistic view as held by the Śāṅkarites. It is therefore time that the upholders of the *māyā* doctrine should flee, now that the omniscient Lord is coming to tear asunder the darkness of specious arguments and false interpretations of spiritual texts¹.

The *Karma-nirṇaya* of Madhva deals with the nature of *karma* or scriptural duties, which forms the subject-matter of the

1

*palāyadhvaṃ palāyadhvaṃ tvarayā māyi-dānavāḥ
sarvajño harir āyāti tarkāgama-darāribhid.*

Tattvodyota, p. 245(a).

Pūrva-mīmāṃsā. The *Pūrva-mīmāṃsā* not only practically ignores the existence of God but also denies it. Madhva was himself a great believer in a personal God and therefore wished to interpret the *Mīmāṃsā* in an authentic manner. He held that the various gods, e.g., Indra or Agni, stood for Viṣṇu or Nārāyaṇa. The *Pūrva-mīmāṃsā* was satisfied with providing for heaven as the object of all performance of sacrifices, but with Madhva the ultimate goal was true knowledge and the attainment of emancipation through the grace of God. He disliked the idea that the scriptural sacrifices are to be performed with the object of attaining heaven, and he emphasized his notion that they should be performed without any motive; with him they should be performed merely because they are religious injunctions or the commands of God. He further held that it is only by such motiveless performance of actions that the mind could be purified for the attainment of the grace of God. The motiveless performance of sacrifices is therefore in a way preliminary and accessory to the attainment of wisdom and the grace of God.

Thus, as usual, Madhva tries to refute the argument of the monists against the possibility of possession by God of infinite attributes and in favour of a differenceless Brahma. He further says that the texts such as *satyam*, *jñānam*, *anantam*, *Brahma*, which apparently inspires a qualityless Brahman, are to be subordinated to other texts which are of a dualistic nature. Proceeding by way of inference, he says that the world, being of the nature of an effect, must have an intelligent cause—a maker—and this maker is God. The maker of this world must necessarily be associated with omniscience and omnipotence. Madhva cites the evidence of the *Bhāgavata-purāṇa* in favour of a *saguṇa* Brahma, a Brahma associated with qualities. Where the texts refer to Brahman as *nirguṇa*, the idea is that the Brahman is not associated with any bad qualities. Also the Brahman cannot be devoid of all determination, *viśeṣa*; the denial of determination is itself a determination, and as such would have to be denied by the monists; and this would necessarily lead to the affirmation of the determination. Madhva then resorts to his old arguments against *māyā*, *mithyā*, and *anirvacanīya*, and points out that the logic of excluded middle would rule out the possibility of a category which is neither *sat* nor *asat*. There is really no instance of a so-called *anirvacanīya*. An

illusion, after it is contradicted, is sometimes pointed out as an instance of *anirvacanīya*, but this is wholly wrong; for in the case of an illusion something was actually perceived by the senses but interpreted wrongly. The fact that something was actually in contact with the visual sense is undisputed; and, when the illusion is contradicted, the contradiction means the discovery that an object which was believed to be there is not there. The object that was erroneously perceived—e.g., a snake—was a real object, but it did not exist where it was thought to exist. To say that the illusion is false (*mithyā*) only means that the object illusorily perceived does not exist there. The mere fact that an object was illusorily perceived cannot mean that it was really existent; and nevertheless its non-existence was contradicted; so it was neither existent nor non-existent. The only legitimate point of view is that the illusorily perceived object did not exist while it was perceived, i.e. it was *asat*. The rope which was perceived as “snake” is later on contradicted, when the perception of “snake” disappears; but the world as such has never been found to disappear. Thus there is no similarity between the perception of the world and the perception of the illusory snake. Moreover that which is *anirvacanīya* is so called because it is hard to describe it on account of its uniqueness, but that does not prove that it is a category which is neither existent nor non-existent. Though it may be sufficiently described, still one may not exhaust its description. A jar is different from a cloth and also different from the merely chimerical hare’s horn, viz., a jar is different from an existent cloth and a non-existent hare’s horn; but that does not make a jar *anirvacanīya*, or false. The jar as shown above is *sadasad-vilakṣaṇa*, but it is not on that account non-existent.

Again, the meaning of the phrase *sadasad-vilakṣaṇa* is very vague. In the first place, if it means the conception of a difference (*bheda*), then the meaning is inconsistent. The monists hold that only the Brahman exists, and therefore, if the difference between the existent and the non-existent exists, there will be dualism. But in reply it may be held that the affirmation of dualism is only possible as a lower degree of reality which is called the *vyāvahārika*. The meaning of this word is not clear. It cannot mean a category which is different from both being and non-being, since such a category is logically invalid. If it means only conditional being, then

even the conception of the highest reality is conditioned by human knowledge, and is therefore conditional (*vyāvahārika*); and the application of the term to illusory perception or normal perception alone is doubtful. In the second place, the term *sadasad-vilakṣaṇa* also cannot mean identity between the Brahman and the world; for such identity is open to contradiction. The monists can therefore affirm neither the reality of difference nor the reality of absolute identity between the world and Brahman.

The view of the monists that there are different degrees of reality, and that there is identity between them in essence and difference only in appearance, cannot be established, unless the truth of degrees of reality can be established. They hold that the world (which has an inferior degree of reality) is superimposed on the Brahman, or that Brahman has manifested Himself as the world; but such an expression is invalid if there is absolute identity between the world and the Brahman. The phrase "absolute identity" would be merely a tautology, and the scriptural texts so interpreted would be tautological. The monists argue that even identical expressions have *satyaṃ jñānaṃ anantaṃ*, and are not tautological, because they serve to exclude their negatives. To style Brahman "*satya*" or "*jñāna*" means that Brahman is not *asatya* and *ajñāna*. But such an interpretation would destroy their contention that all the scriptural epithets have an *akhaṇḍārtha*, i.e., refer to one differenceless Brahman; for according to their own interpretation the scriptural epithets do not have only one significance (viz., the affirmation of pure differenceless being), but also the negation of other qualities; and in that case the final significance of all scriptural epithets as referring to the differenceless Brahman is contradicted. Again, the *anirvacanīyatā* of the world depends upon a false analysis of illusion; and so the statement that the differencelessness of Brahman depends on the very illusoriness of the world is not established by any monist by any valid argument. The difference between the world-appearance and Brahman cannot be regarded by the monists as ultimately real; for in that case "difference" is a category having a co-existent reality with Brahman. Again, the concept of difference between the existent and the non-existent requires classification; and, unless this is done, the mere assertion that the world-appearance is both identical with and different from Brahman would have no meaning.

That which is different from the non-existent is existent and that which is different from the existent is non-existent or chimerical. The non-existent has no determination; for it cannot be known by any means, and as such its difference from the existent cannot be known either, since to know the difference between two entities one must know the two entities fully. No one can argue about whether the hare's horn is different or not different from a tree. Again, if *sat* or "existent" means the ultimately differenceless real, then, since such a difference has no character in it, it is not possible to form any concept of its difference from any other thing. Thus it is not possible to form any concept of anything which is different from the existent and also from the non-existent; if the world is different from the non-existent, it must be real; and if the world is different from the existent, it must be the hare's horn. The law of excluded middle again rules out the existence of anything which is neither existent nor non-existent; in a pair of contradictory judgments one must be right. Thus the reality of Brahman is endowed with all qualities and as a creator and sustainer of the world He cannot be denied.

Madhva then contends with the Prabhākaras, who hold that the ultimate import of propositions must lead to the performance of an action. If that were the case, the Vedic propositions would never have any import implying the reality of Brahman; for Brahman cannot be the object of the activity of man. Madhva holds that the purpose of all Vedic texts is the glorification of God; and, further, that what is effected by activity among finite human beings is already pre-established with infinite God. All actions imply *iṣṭasāadhanatā* (pleasurable motive) and not mere activity. Nothing will be put into action by any man which is distinctly injurious to him. If the chief emphasis of all actions thus be *iṣṭasāadhanatā*, then the assertion of the Mimāṃsā school, that the import of all possibilities is *kāryatā*, is false; *iṣṭasāadhanatā* includes *kāryatā*. The supreme *iṣṭasāadhanatā* of all actions is the attainment of emancipation through the grace of God. It is therefore necessary that all sacrificial actions should be performed with devotion, since it is by devotional worship alone that one can attain the grace of God. The *Karma-nirṇaya* is a small work of less than 400 *granthas*.

In the *Viṣṇu-tattva-nirṇaya*, a work of about 600 *granthas*,

Madhva discusses a number of important problems. He declares that the Vedas, the *Mahābhārata*, the *Pañcarātras*, the *Rāmāyaṇa*, the *Viṣṇu-purāṇa* and all other sacred literature that follows them are to be regarded as valid scriptures (*sad-āgama*). All other texts that run counter to them are to be counted as bad scriptures (*dur-āgama*), and by following them one cannot know the real nature of God. It is neither by perception nor by inference that one can know God; it is only by the Vedas that one can know the nature of God. The Vedas are not produced by any human being (*apauruṣeya*); unless the transcendental origin of the Vedas is admitted, there can be no absolute validity of religious duties; all ethical and religious duties will be relative. No human commands can give the assurance of absence of ignorance or absence of false knowledge; nor can it be supposed that these commands proceed from an omniscient being, for the existence of an omniscient being cannot be known apart from the scriptures. It will be too much to suppose that such an omniscient being is not interested in deceiving us. But, on the other hand, if the Vedas are regarded as not having emanated from any person, we are not forced to make any other supposition; the impersonal origin of the Vedas is valid in itself, because we do not know of any one who has written them. Their utterances are different from other utterances of an ordinary nature, because we know the authors of the latter. The Vedas exist in their own nature and have been revealed only to the sages, and their validity does not depend on anything else; for, unless this is admitted, we can have no absolute criterion of validity and there will be infinite regress. Their validity does not depend on any reasoning; for good reasoning can only show that the process of thought is devoid of logical defects, and cannot by itself establish validity for anything. Since the Vedas are impersonal, the question of the absence of logical defects does not arise. All validity is self-evident; it is non-validity which is proved by later experience. Nor can it be said that the words of Vedic utterances of one syllable are produced at the time of utterance; for in that case they would be recognized as known before. Such recognition cannot be due to similarity; for in that case all recognitions would have to be considered as cases of similarity, which would lead us to the Buddhist view; recognitions are to be considered as illusory. Thus the self-validity of the Vedas has to be accepted as the absolute determinant

of all important problems¹. These Vedas were originally perceived by God; He imparted them to sages, who at the beginning of each creation, remembered the instructions of their previous birth. The alphabets and words are also eternal, as they are always apparent in the mind of the eternal God; so, though the syllables appear in the *ākāśa*, and though the Vedas consist of a conglomeration of them, the Vedas are eternal. The Mimāṃsā view that the acquirement of words is associated with activity is wrong; for words and their meanings are already definitely settled, and it is only by physical gestures that meanings are acquired by individual people. The purpose of a proposition is finished when it indicates its meaning, and the validity of the proposition is in the realization of such a meaning. While one is acquainted with such a meaning and finds that the direction involved in it, if pursued, will be profitable, one works accordingly, but when one finds it to be injurious one desists from it. All grammars and lexicons are based on the relation already existent between words and their meanings, and no action is implied therein.

All the scriptures refer to Nārāyaṇa as omniscient and the creator of all things. It is wrong to suppose that the scriptures declare the identity of the individual selves with God; for there is no proof for such an assertion.

The existence of God cannot be proved by any inference; for inference of equal force can be adduced against the existence of God. If it is urged that the world, being an effect, must have a creator or maker just as a jug has a potter for its maker, then it may also be urged on the contrary that the world is without any maker, like the self; if it is urged that the self is not an effect and that therefore the counter-argument does not stand, then it may also be urged that all makers have bodies, and since He has no body, God cannot be a creator. Thus the existence of God can only be proved on the testimony of the scriptures, and they hold that God is different from the individual selves. If any scriptural texts seem to indicate the identity of God and self or of God and the world, this will be contradicted by perceptual experience and inference, and consequently the monistic interpretations of these texts would

¹

*vijñeyaṃ paramaṃ Brahma jñāpikā paramā śrutiḥ
anādi-nityā sā tac ca vinā tām na ca gamyate.*

Viṣṇu-tattva-vinirṇaya, p. 206.

be invalid. Now the scriptures cannot suggest anything which is directly contradicted by experience; for, if experience be invalid, then the experience of the validity of the scriptures will also become invalid. The teaching of the scriptures gains additional strength by its consonance with what is perceived by other *pramāṇas*; and, since all the *pramāṇas* point to the reality of diversity, the monistic interpretation of the scriptural texts cannot be accepted as true. When any particular experience is contradicted by a number of other *pramāṇas*, that experience is thereby rendered invalid. It is in this manner that the falsity of the conch-shell-silver is attested. What was perceived as silver at a distance was contradicted on closer inspection and by the contact of the hand, and for that reason the conch-shell-silver perceived at a distance is regarded as invalid. An experience which is contradicted by a large number of other *pramāṇas* is by reason of that very fact to be regarded as defective¹. The comparative value of evidence can be calculated either by its quantity or its quality². There are two classes of qualitative proofs, viz., that which is relative (*upajīvaka*) and that which is independent (*upajīvyā*); of these the latter must be regarded as the stronger. Perception and inference are independent sources of evidence, and may therefore be regarded as *upajīvyā*, while the scriptural texts are dependent on perception and inference, and are therefore to be regarded as *upajīvaka*. Valid perception precedes inference and is superior to it, for the inference has to depend on perception; thus, if there is a flat contradiction between the scriptural texts and what is universally perceived by all, the scriptural texts have to be so explained that there may not be any such contradiction. By its own nature as a support of all evidence, perception or direct experience, being the *upajīvyā*, has a stronger claim to validity³. Of the two classes of texts, viz., those which are monistic and those which are dualistic, the latter is supported by perceptual evidence. If it is urged that the purpose of the *śruti*

¹ *bahu-pramāṇa-viruddhānāṃ doṣajanyatva-niyamāt; doṣa-janyatvaṃ ca balavat-pramāṇa-virodhād eva jñāyate.*

āgamo' duṣṭavākyaṃ ca tādṛk cānubhavaḥ smṛtaḥ*
balavat-pramāṇataś caiva jñeyā doṣā na cānyathā. Ibid. p. 262 a (4).

² *dvi-vidham balavatvaṃ ca bahutvāc ca svabhāvataḥ. Ibid.*

³ Madhva here states the different kinds of *pramāṇas* according to *Brahma-tarka*. The account of the *pramāṇas* is dealt with in a separate section.

texts is to transcend perception and that it is by perception alone that we realize pure being, then it follows that the dualistic texts, which contradict ordinary perception, are to be regarded as more valid on the very ground that they transcend perception. So, whichever way we look at it, the superiority of the duality texts cannot be denied. Again, when a particular fact is supported by many evidences that strengthens the validity of that fact. The fact that God is different from the individual and the world, is attested by many evidences and as such it cannot be challenged; and the final and ultimate import of all the Vedic texts is the declaration of the fact that Lord Viṣṇu is the highest of all. It is only by the knowledge of the greatness and goodness of God that one can be devoted to Him, and it is by devotion to God and by His grace that one can attain emancipation, which is the highest object of life. Thus it is through the declaration of God and His goodness that the *śruti* serves to attain this for us.

No one can have any attachment to anything with which he feels himself identical. A king does not love his rival; rather he would try to inflict defeat on him by attacking him; but the same king would give away his all to one who praised him. Most of the ascriptions of the texts endow God with various qualities and powers which would be unexplainable on monistic lines. So Madhva urges that the ultimate aim of all *śruti* and *smṛti* texts is to speak of the superexcellence of Viṣṇu, the supreme Lord.

But his opponents argue that ascription or affirmation of qualities to reality depends upon the concept of difference; the concept of difference again depends upon the separate existence of the quality and the qualified. Unless there are two entities, there is no conception of difference; and, unless there is a conception of difference, there cannot be a conception of separate entities. Thus these two conceptions are related to each other in a circular manner and are therefore logically invalid¹. Madhva in reply says that the above argument is invalid, because things are in themselves of the nature of difference. It is wrong to argue that differences are meaningless because they can only be realized with reference to

¹ *na ca viśeṣaṇa-viśeṣyatayā bheda-siddhiḥ, viśeṣaṇa-viśeṣya-bhāvaś ca bhedāpekṣaḥ dharmi-pratīyogy-apekṣayā bheda-siddhir bhedāpekṣaḥ ca dharmi-pratīyogitvam ity anyonyāśrayatayā bhedasyāyuktiḥ. Viṣṇu-tattva-vinirṇaya, p. 264.*

certain objects; for, just as unity has a separate meaning, so the difference is also realized by itself. It is wrong to think that first we have the notion of the differing objects in themselves in their unity and that then the differences are realized; to perceive the object is to perceive the difference. Difference is as simple and analysable as unity. Unity is also a simple notion, yet it can be expressed in the form of a relation of identity—such as that of Brahman and individual self, as the monists say. In the same way difference is a simple notion, though it may be expressed as subsisting between two entities. It is true that in cases of doubt and illusion our notion of difference is arrested, but so it is also in the case of our notion of unity. For to perceive an object is not to perceive its unity or identity; to perceive objects is to perceive their uniqueness, and it is this uniqueness which constitutes difference¹. The expression “its difference” signifies the very uniqueness of the nature of the thing; for, had it not been so, then the perception of the object would not have led us to realize its separateness and difference from others. If such a difference was not realized with the very perception of the object, then one might easily have confused oneself with a jug or with a piece of cloth; but such a confusion never occurs, the reason being that the jug, as soon as it is perceived, is perceived as different from all other things. Difference therefore is realized as the very nature of things that are perceived; doubts occur only in those cases where there is some similarity, while in most other cases the difference of an entity from other entities is realized with the very perception of the entity. Just as, when a number of lights are seen at a glance, they are all known in a general manner, so difference is also known in a general manner, though the particular difference of the object from any other specific object may not be realized immediately upon perception. When a number of articles is perceived, we also perceive at once that each article is different, though the specific difference of each article from the other may not be realized at once. We conclude therefore that perception of difference is dependent upon a prior perception of multiplicity as a series of units upon which the notion

¹ *padārtha-sva-rūpatvād bhedasya na ca dharmi-pratīyogy-apekṣayā bhedasya svarūpatvam aikyaavat-svarūpasyaiva tathātvāt, sva-rūpa-siddhā vai tad asiddhiś ca jīveśvaraikaṃ vadataḥ siddhaiva, bhedas tu sva-rūpa-darśana eva siddhiḥ, prāyaḥ sarvato vilakṣaṇaḥ hi padārtha-sva-rūpaḥ dṛśyate. Ibid.*

of difference is superimposed. That in the perception of each entity its specific nature and uniqueness is perceived cannot be denied even by the Vedāntists, even by the monists, who regard each entity as being different from the Brahman. Thus the circular reasoning with which the monists associate the perception of difference is a fallacy and is untenable. If an object in the very revelation of its nature did not also reveal its special difference or uniqueness, then the perception of all things would be identical. Moreover each difference has its own unique character; the difference from a jug is not the same as the difference from a cloth. Thus the perception of difference cannot be challenged as invalid; to say that what is perceived in a valid manner is false is a denial of experience, and is invalid. The illusory perception of the conch-shell silver is regarded as illusory only because it is contradicted by a stronger perceptual experience. No syllogistic reasoning has the power to challenge the correctness of valid perceptual experience. No dialectical reasoning can prove the invalidity of direct and immediate experience. Upon this reasoning all arguments denying the differences of things are contradicted by the scriptural texts, by perception and by other arguments; the arguments of those who challenge the reality of difference are absolutely specious in their nature. It is idle to say that in reality there is no difference though such difference may be realized in our ordinary practical experience (*vyāvahārika*). It has already been demonstrated that falsehood defined as that which is different from both the existent and the non-existent is meaningless. To attempt to deny the non-existent because it is unworthy of experience is meaningless; for, whether it was or was not experienced, there would be no need to deny it. The difference of anything from the non-existent would not be known without the knowledge of the non-existent. The appearance of the silver in the conch-shell cannot be described as something different from the existent and the non-existent; for the silver appearance is regarded as non-existent in the conch-shell; it cannot be argued that, since such an appearance was realized, therefore it could not have been non-existent. The perception of the non-existent as the existent is the perception of one thing as another: it is of the nature of illusion. It cannot be said that the non-existent cannot be perceived even in illusion; for it is admitted by the monists that the *anirvacanīya*, which has no real existence, can be

perceived. Nor can it be held that such a perception is itself *anirvacanīya* (or indefinable); for in that case we should have a vicious infinite, since the first *anirvacanīya* has to depend on the second and that on the third and so on. If the silver appearance was in reality *anirvacanīya* by nature, it would have been perceived as such, and that would have destroyed the illusion; for, if the silver-appearance was known at the time of perception as being *anirvacanīya* (or indefinable), no one would have failed to realize that he was experiencing an illusion. The word *mithyā*, “false”, does not in reality mean *anirvacanīya*; it should mean non-existence. Now there cannot be anything which is neither existent nor non-existent; everyone perceives that either things are existent or they are not; no one has perceived anything which is neither existent nor non-existent. Thus the supposition of the so-called *anirvacanīya* and that of the perception of the non-existent are alike invalid; the perception of difference is valid, and the monistic claim falls to the ground.

The scriptures also assert difference between the individual selves and the Brahman; if even the scriptural texts are false, then it is idle to preach monism on scriptural grounds. It is on scriptural grounds that we have to admit that Brahman is the greatest and the highest; for the purport of all the valid scriptures tends to such an assertion—yet no one can for a moment think that he is one with Brahman; no one feels “I am omniscient, I am omnipotent, I am devoid of all sorrows and all defects”; on the contrary our common experience is just the opposite, and it cannot be false, for there is no proof of its falsity. The scriptures themselves never declare the identity of the self with the Brahman; the so-called identity text (*tat tvam asi*, “That art thou”) is proclaimed with illustrations which all point to a dualistic view. The illustration in the context of every “identity” (or monistic) text shows its real purport, viz., that it asserts the difference between Brahman and the selves. When it is said that, when one is known, everything is known, the meaning is that the chief object of knowledge is one, or that one alone is the cause; it does not mean that other things are false. For, if that one alone were the truth and everything else were false, then we should expect the knowledge of all falsehood to be derived from the knowledge of the truth, which is impossible (*nahi satya-jñānena mithyā-jñānam bhavati*). It cannot be said that the know-

ledge of the conch-shell leads to a knowledge of the silver; for the two awarenesses are different. It is only by knowing "this is not silver" that one knows the conch-shell; so long as one knows the silver (which is false), one does not know the conch-shell (which is true). By knowing an entity one does not know the negation of the entity. The knowledge of the non-existence of an entity is preceded by the knowledge of its existence elsewhere. It is customary for people to speak of other things as being known when the most important and the most essential thing is known; when one knows the principal men of a village, one may say that one knows the village. When one knows the father, one may say that he knows the son; "O! I know him, he is the son of so and so, he is known to me"; from one's knowledge of one person one may affirm the knowledge of other persons like him; by knowing one woman one may say "O! I know women." It is on the basis of such instances that the scriptural texts affirm that by the knowledge of one everything else is known. There is no reason for saying that such affirmations declare the falsity of all other things except Brahman. When the texts assert that by knowing one lump of earth one knows all earthen-wares, the idea is that of similarity, since surely not all earthen-wares are *made* out of one lump of earth; the text does not say that by knowing earth we know all earthen-wares; what it does say is that by knowing one lump of earth we know all earthen-wares. It is the similarity between one lump of earth and all other earthen-wares that justifies the text. The word "*vācārambhaṇam*" does not mean falsehood, generated by words, for in that case the word *nāmadheya* would be inapplicable. We conclude that the scriptures nowhere declare the falsehood of the world; on the contrary, they abound in condemnation of the view that the world is false¹.

The highest self, the Brahman, is absolutely independent, omniscient, omnipotent and blissful, whereas the ordinary self, though similar to Him in character, is always under His control, knows little and has little power. It is wrong to suppose that self is one but appears as many because of a false *upādhi* or condition,

1

*asatyam apratiṣṭhaṃ te jagad āhur anīśvaram
a-paras-para-sambhūtaṃ kim anyat kāma-haitukam
etāṇi dr̥ṣṭim avaṣṭabhya naṣṭātmāno'ṛpa-buddhayaḥ.*

Gītā, xvi. 8. 9, as quoted by Madhva.

and impossible to conceive that the self could be misconceived as not-self. The so-called creation of illusory appearance by magic, in imitation of real things, is only possible because real things exist; it is on the basis of real things that unreal illusions appear. Dreams also occur on the basis of real experiences which are imitated in them. Dream creations can take place only through the functioning of the subconscious impressions (*vāsanā*); but there is no reason to suppose that the world as such, which is never contradicted and which is truly experienced, is illusory, like dream creations. Moreover the Lord is omniscient and self-luminous, and it is not possible that He should be covered by ignorance. If it is argued that the one Brahman appears as many through a condition (or *upādhi*) and that He passes through the cycles of birth and rebirth, then, since these cycles are never-ending, Brahman will never be free from them and He will never have emancipation because His association with *upādhi* will be permanent. It is no defence to say that the pure Brahman cannot have any bondage through conditions; that which is already associated with *upādhi* or condition cannot require a further condition for associating the previous condition with it; for that will lead to a vicious infinite. Again, the thesis of the existence of a false *upādhi* can be proved only if there is a proof for the existence of ignorance as an entity; if there is no ignorance, there cannot be any falsehood. Again, as *upādhi* cannot exist without ignorance, nor ignorance without *upādhi*, this would involve a vicious circle. According to the hypothesis omniscience can be affirmed only of that which is unassociated with a false *upādhi*; so that, if the pure Brahman is itself associated with ignorance, there can never be emancipation; for then the ignorance will be its own nature, from which it cannot dissociate itself. Moreover, such a permanent existence of ignorance would naturally lead to a dualism of the Brahman and ignorance. If it is held that it is by the *ajñāna* of the *jīva* (soul) that the false appearance of the world is possible, then it may be pointed out that there is a vicious circle here also; for without the pre-existence of *ajñāna* there is no *jīva*, and without *jīva* there cannot be *ajñāna*; without *ajñāna* there is no *upādhi*, and without *upādhi* there is no *ajñāna*. Nor can it be held that it is the pure Brahman that appears as ignorant through illusion; for, unless *ajñāna* is established, there cannot be illusion, and, unless there is illusion, there

cannot be *ajñāna*. From another point of view too it may be urged that the monists support an impossible proposition in saying that, when all the individuals are emancipated, the Brahman will be emancipated, since the living units or the souls are far more numerous than even the atoms; on the tip of an atom there may be millions of living units, and it is impossible to conceive that they should all attain salvation through the knowledge of Brahman. It also cannot be said that there is nothing to be surprised at the logical certainty of falsehood; for it must be a very strong argument against our opponent, that they cannot prove the falsehood of all things which are immediately and directly perceived; and, unless such proofs are available, things that are perceived through direct experience cannot be ignored. We all know that we are always enjoying the objects of the world in our experience, and in view of this fact how can we say that there is no difference between an experience and the object experienced? When we perceive our food, how can we say that there is no food? A perceptual experience can be discarded only when it is known that the conditions of perception were such as to vitiate its validity. We perceive a thing from a distance; we may mistrust it in certain respects, since we know that when we perceive a thing at a distance the object appears small and blurred; but, unless the possibility of such distorting conditions can be proved, no perception can be regarded as invalid. Moreover, the defects of a perception can also be discovered by a maturer perception. The falsehood of the world has never been proved as defective by any argument whatever. Moreover the experience of knowledge, ignorance, pleasure and pain cannot be contradicted; so it has to be admitted that the experience of the world is true, and, being true, it cannot be negated; therefore it is impossible to have such an emancipation as is desired by the monists. If that which is directly experienced can be negated merely by specious arguments without the testimony of a stronger experience, then even the perception of the self could be regarded as false. There is no lack of specious arguments about the existence of the self; for one may quite well argue that, since everything is false, the experience of the self also is false, and there is no reason why we should distinguish the existence of other things from the experience of the self, since as experience they are of the same order. It will be an insupportable assumption that the experience of the self belongs to a different

order, wherefore its falsity cannot be affirmed. Nor is it possible to affirm that all illusions occur on the basis of self-experience; for, in order to assert that, one must first prove that the experience of the self is not illusory, while all other experiences are so—which is exactly the point contested by the Madhvas. If it is urged that illogicality only shows that the experience is false, then it may also be urged that the illogicality or the inexplicable nature of the experience of the self in association with the objective experience only proves the falsity of the experience of the self and can lead to nothing; for the monists urge that all experiences may be mere semblances of experience, being only products of *avidyā*. The *avidyā* itself is regarded as inexplicable, and all reality is supposed to depend not on experience, but on the logical arguments; in which case one may as well say that objects are the real seers and the subject that which is seen. One may say too that there may be false appearances without a seer; the illogicality or inexplicability of the situation is nothing to shy at, since the *māyā* is illogical and inexplicable; a fact which makes it impossible to indicate in what manner it will create confusion. Creating confusion is its sole function, and therefore one may say that either there are appearances without any seer, illusions without a basis, or that the objects are the so-called seers and the self, the so-called seer, is in reality nothing but an object.

Again, if all differences are regarded as mere false appearances due to *upādhi*, why should there not on the same analogy be experience of reality? Though feelings of pleasure and pain appear in different limbs of one person, yet the experiencer is felt as the same. Why should not experiences in different bodies or persons be felt as belonging to the same individual?—the analogy is the same. In spite of the difference of *upādhis* (such as the difference between the limbs of one person), there is the feeling of one experiencer; so in the different *upādhis* of the bodies of more than one person there may be the appearance of one experiencer. And again, the destruction of one *upādhi* cannot liberate the Brahman or the self; for the Brahman is associated with other *upādhis* and is suffering bondage all the same.

Again, one may ask whether the *upādhi* covers the whole of the Brahman or a part of it. The Brahman cannot be conceived as made up of parts; if the association of *upādhi* were due to another *upādhi*, then there would be a vicious infinite. Again, since the Brahman

is all-pervading, there cannot be any difference through *upādhi*, and no conception of a part of the Brahman is possible; *upādhi* is possible only of things that are limited by time or place. Again, for the same reason experiences through different *upādhis* must be of one and the same Brahman, and in that case there ought to be the appearance of one experience through all the different bodies, just as the experience of pleasure and pain in the different limbs of a person are attributed to him alone.

Again, the pure Brahman cannot pass through cycles of births and rebirths, because it is pure. Then the birth, rebirth and bondage of the monists must be of Brahman as associated with *upādhi* and *māyā*. Now the question is: is the Brahman associated with *māyā* different from pure Brahman or identical with it? If it be identical with pure Brahman, then it cannot suffer bondage. If it is not identical, then the question is whether it is eternal or non-eternal: if it is not eternal, then it will be destroyed, and there will be no emancipation; if it is eternal, then one has to admit that the *māyā* and Brahman remain eternally associated, which virtually means the ultimate reality of two entities. If it is urged that Brahman in pure essence is one, though He appears as many in association with the *upādhi*, the simple reply is that, if the pure essence can be associated with *upādhi*, the essence in itself cannot be regarded as pure. To say that the *upādhi* is false is meaningless, because the concepts of falsehood and *upādhi* are mutually interdependent. Nor can it be said that this is due to beginningless *karma*; for, unless the plurality of the *upādhis* can be proved, the plurality of the *karma* cannot be proved either, as the two concepts are interdependent. So the monistic view is contradicted by all our means of knowledge; and all the *śruti* texts support the pluralistic view. Both the *māyā* and the Brahman are incapable of description on a monistic view; it is difficult too to realize how the Brahman or the monist can express Himself; for, if He is one and there is no activity, He ought not to be able to express Himself. If He cannot express Himself to others who do not exist, He cannot express Himself to Himself either; for self-action is impossible (*na ca svenāpi jñeyatvam tair ucyate karṭṛ-karma-virodhāt*). There cannot be any knowledge without a knower; the knowledge that is devoid of the knower and the known is empty and void, since none of us has experienced any knowledge where there is no knowledge and the knower.

The *Viṣṇu-tattva-nirṇaya* of Madhva had a comment called the *Viṣṇu-tattva-nirṇaya-ṭikā* by Jaya-tīrtha, *Viṣṇu-tattva-nirṇaya-ṭikā-ṭippanī* by Keśavasvāmin, *Viṣṇu-tattva-nirṇaya-ṭippanī* by Śrīnivāsa and Padmanābha-tīrtha, *Bhaktabodha* by Raghūttama; it had also another commentary, called *Viṣṇu-tattva-nirṇaya-ṭikopanyāsa*. Besides these there were independent works on the lines of *Viṣṇu-tattva-nirṇaya* called *Viṣṇu-tattva-nirṇaya-vākyārtha* and Vanamālī Miśra's *Viṣṇu-tattva-prahāsa*¹.

The *Nyāya-vivaraṇa* of Madhva is a work of more than six hundred granthas, which deals with the logical connection of the different chapters of the *Brahma-sūtra*. A number of commentaries was written on it, by Viṭṭhala-sutānanda-tīrtha, Mudgalānanda-tīrtha, and Raghūttama; Jaya-tīrtha also wrote on it the *Nyāya-vivaraṇa-pañjikā*. Rāghavendra, Vijayīndra and Vādirāja wrote respectively *Nyāya-muktāvalī*, *Nyāya-mauktikamālā*, and *Nyāya-ratnāvalī*, on the lines of Madhva's *Nyāya-vivaraṇa*. Madhva wrote it after he had finished his *Bhāṣya*, *Anubhāṣya* and *Anuvyākhyāna*; it is needless for us to follow the work in detail, but we may briefly indicate Madhva's manner of approach. He says that the *Brahma-sūtra* was written in order to discredit the monistic interpretations of the Upaniṣads. Thus with the monist Brahman cannot be a subject of enquiry, because He is self-luminous; in opposition to this view the *Brahma-sūtra* starts with the thesis that Brahman, being the supreme person who is full of all qualities, can hardly be known by our finite minds. There is then a natural enquiry regarding the extent of the greatness of the supreme being, and in the second *sūtra* it is shown that Brahman cannot be identical with the individual selves, because He is the source from which the world has come into being and it is He who supports the world also. In the third *sūtra* we learn that the Brahman-causality of the world cannot be known except through scripture; in the fourth we read that the scriptures from which we can know the Brahman cannot be any other than the Upaniṣads. In this way, all through his first chapter, Madhva tries to show that, if we interpret the doubtful *śruti* texts on the basis of those whose meanings are clear and definite, we find that they too declare the superiority and transcendence of the supreme Lord. The same process of reconciling the *śruti* texts with

¹ *ato jñātṛ-jñeyābhāvāt jñānam api śūnyataiva; ataḥ śūnya-vādān na kaścid viśeṣaḥ; na ca jñātṛ-jñeya-rahitaṃ jñānam kvacid dṛṣṭam. Op. cit. p. 275 (17).*

the idea of showing the transcendence of God over individual selves goes on through the remaining chapters of the first book. In dealing with the fourth book Madhva discusses his pet view that not all persons can be liberated, since only a few can be worthy of liberation¹. He further says that God must be worshipped continually by chanting His excellent qualities every day. The scriptural duties as well as meditation (*dhyāna*) and its accessories (postures, etc.) are to be carried out; without meditation there cannot be a direct intuition of God². It cannot be urged that with the rise of knowledge all *karmas* are destroyed and salvation comes by itself; for knowledge can remove only the unripe (*aprārabdha*) *karmas*. The fruit of the *prārabdha* or ripe *karmas* has to be enjoyed till they are exhausted. Thus Madhva favours the doctrine of *jīvanmukti*. Though it has been said that the rise of true knowledge removes the *aprārabdha karmas*, yet the real agency belongs to God; when the true knowledge rises in a man, God is pleased, and He destroys the unripe *karmas*³. At the time of death all wise persons pass on to fire and from there to *vāyu*, which takes them to Brahman, since it is only through *vāyu* that one can approach Brahman. Those who return to the world pass through smoke; and there are others who because of their sinful character pass on to the lowest world. Even in the state of salvation the emancipated beings enjoy devotion as pure bliss.

The *Tantra-sāra-saṃgraha* of Madhva is a work of four chapters on ritual, which deals with the methods of worshipping Viṣṇu by the use of mantras; and various processes of ritualistic worship are described. It is commented upon by Chalāri-nṛsiṃhācārya, Chalāri-śeṣācārya, Raghunātha Yati and Śrinivāsācārya. Jaya-tīrtha wrote in verse a small work called *Tantra-sāroka-pūjāvaidhi*; Śrinivāsācārya also wrote a small work on the same lines, the *Tantra-sāra-mantroddhāra*.

Madhva wrote also another small work, called *Sadācāra-smṛti*, in forty verses; this too is a work on rituals, describing the normal duties of a good *vaiṣṇava*. There is a commentary by Droṇācārya (*Sadācāra-smṛti-vyākhyā*).

¹ *mahā-phalatvāt sarveṣāṃ aśaktyā eva upapannatvāt; anyathā sarva-puruṣāṣa-kyasyaiva sādhanatayā sarveṣāṃ mokṣāpatteḥ. Nyāya-vivaraṇa, p. 16(a).*

² *dhyānam vinā aparokṣa-jñānākhyā-viśeṣa-kāryānupapatteḥ. Ibid.*

³ *karmāṇi kṣapayed viṣṇur aprārabdhāni vidyayā prārabdhāni tu bhogena kṣapayan svam padam nayet. Ibid. 16.*

He wrote also another small work, called *Kṛṣṇāṃṛta-mahārṇava*. The present writer has not been able to trace any commentary on it. It consists of two hundred and forty-two verses, describing the forms of worshipping Viṣṇu, and emphasizes the indispensable necessity of continual meditation on the super-excellent nature of God and of worshipping Him; it speaks also of repentance and meditation on God's name as a way of expiation of sins. Madhva further says that in this present Kali age *bhakti* of God is the only way to emancipation. Meditation on God alone can remove all sins¹; no ablutions, no asceticism are necessary for those who meditate on God; the name of God is the only instrument for removing sins. So the whole of the *Kṛṣṇāṃṛta-mahārṇava* describes the glory of God, as well as the methods of worshipping Him; and, further, the duties of the good *vaiṣṇavas* during the important *tithis*.

Madhva wrote another small work, the *Dvādaśa-stotra*, consisting of about one hundred and thirty verses. No commentary on this has been traced by the present writer.

He wrote also another very small work, in two verses, the *Narasimha-nakha-stotra*, and another, the *Yamaka-bhārata*, of eighty-one verses. This latter was commented upon by Yadupati and Timmaṇṇa Bhaṭṭa; and in it Madhva describes the story of Kṛṣṇa in brief, including the episodes of Vṛndāvana and that of Hastināpur in association with the Pāṇḍavas.

He wrote also the *Rg-bhāṣya*, i.e., a commentary on some selected verses of the *Rg-veda*, which was commented upon by Jaya-tīrtha, Śrinivāsā-tīrtha, Venkaṭa, Chalāri-nṛsiṃhācārya, Rāghavendra, Keśavācārya, Lakṣmīnārāyaṇa and Satyanātha Yati. Two anonymous works are known to the present writer which were written on the lines of the *Rg-bhāṣya*; they are *Rg-artha-cūḍāmaṇi* and *Rg-arthoddhāra*. Rāghavendra Yati also wrote a work on the same lines, called *Rg-artha-mañjarī*. Madhva's commentary on the *Īsoṇiṣat* was commented on by Jaya-tīrtha, Śrinivāsa-tīrtha, Raghunātha Yati, Nṛsiṃhācārya and Satyaprajña Yati, and Rāghavendra-tīrtha wrote a separate work on *Īśa*, *Kena*, *Kaṭha*, *Praśna*, *Muṇḍaka* and *Māṇḍūkya Upaniṣads*, which follows Madhva's line of interpretation of these Upaniṣads. Madhva's

1

Kṛṣṇāṃṛta-mahārṇava, verse 46.

commentary on the *Aitareyopaniṣad* was commented upon by Tāmraparṇī Śrīnivāsa, Jaya-tīrtha, Viśveśvara-tīrtha and Nārāyaṇa-tīrtha; and Narasiṃha Yati wrote a separate treatise, the *Aitareyopaniṣad-khaṇḍārtha*, on which a commentary, the *Khaṇḍārtha-prakāśa*, was written by Śrīnivāsa-tīrtha. The *Kāthopaniṣad-bhāṣya* of Madhva was commented upon by Vedeśa. Vyāsa-tīrtha wrote a commentary, the *Kenopaniṣad-bhāṣya-ṭīkā*, on Madhva's *Kenopaniṣad-bhāṣya*, while Rāghavendra-tīrtha wrote a separate work (the *Kenopaniṣad-khaṇḍārtha*). The *Chāndogyopaniṣad-bhāṣya* of Madhva was commented upon by Vyāsa-tīrtha; Vedeśa and Rāghavendra-tīrtha wrote a separate work, the *Chāndogyopaniṣad-khaṇḍārtha*. The *Talavakāra-bhāṣya* of Madhva had the following commentaries: the *Talavakāra-bhāṣya-ṭīkā*, by Vyāsa-tīrtha, and *Talabavāra-tippaṇī*, by Vedeśa-bhikṣu; Nṛsiṃha-bhikṣu wrote the *Talavakāra-khaṇḍārtha-prakāśikā*. The *Praśnopaniṣad-bhāṣya* of Madhva was commented upon by Jaya-tīrtha in the *Praśnopaniṣad-bhāṣya-ṭīkā*, which had two commentaries, the *Praśnopaniṣad-bhāṣya-ṭīkā-tippaṇa* by Śrīnivāsa-tīrtha. The *Bṛhadāraṇyaka-bhāṣya* of Madhva had commentaries (*Bṛhadāraṇyaka-bhāṣya-ṭīkā*) by Raghūttama, Vyāsa-tīrtha and Śrīnivāsa-tīrtha, and Raghūttama Yati wrote a separate work on it, called the *Bṛhadāraṇyaka-bhāva-bodha*. The *Māṇḍūkyopaniṣad-bhāṣya* of Madhva had two commentaries on it, by Vyāsa-tīrtha and Kṛṣṇācārya, and Rāghavendra Yati wrote a separate work on it, the *Māṇḍūkyakhaṇḍārtha*. The *Muṇḍakopaniṣad-bhāṣya* of Madhva has the following commentaries: the *Muṇḍakopaniṣad-bhāṣya-ṭīkā* by Vyāsa-tīrtha and Nārāyaṇa-tīrtha; *Muṇḍakopaniṣad-bhāṣya-ṭīkā-tippaṇī* by Kṛṣṇācārya; and *Muṇḍakopaniṣad-bhāṣya-vyākhyā* by Nṛsiṃha-bhikṣu.

Teachers and Writers of the Madhva School.

Historical enquiry about the Madhvas was probably first started by Kṛṣṇasvāmī Ayer, with a paper in which he tried to solve the question of the age of Madhva¹: but he was not in a position to utilize the archaeological data as was done by H. Kṛṣṇa Śāstri². The conclusions at which he arrived were in some

¹ *Madhvācārya, a Short Historical Sketch*, by C. N. Kṛṣṇasvāmī Ayer, M.A.

² See his article, *Epigraphica Indica*, vol. vi, pp. 260-8.

cases against the records of the Madhva *maṭhas*, and the Madhva-Siddhānta Unnāhīnī Sabhā, which is annually held at a place near Tirupati, took serious objections to his statements; Subba Rao, in the introduction to his translation of the *Gītā-bhāṣya* of Madhva, severely criticized Kṛṣṇa Śāstrī for his orthodox bias, stating that he was not posted in all the facts of the question¹. Later on C. M. Padmanābhācārya also tried to deal with the subject, utilizing the epigraphical data, but only partially²; his book deals with all the central facts of Madhva's life according to the traditional accounts.

We have already dealt with the outline of Madhva's life. Madhva, on his way from Badarikāśram to South India, had met Satya-tīrtha and had journeyed together with him through the Vaṅga and Kalinga countries. In the Telugu country Madhva was challenged by Śobhana Bhaṭṭa, a famous monist, who was defeated and converted to Madhva faith. This Śobhana Bhaṭṭa was then styled Padmanābha-tīrtha. Madhva had dispute with another scholar who was a prime minister in the Kalinga country; he too was converted by Madhva, and was called Narahari-tīrtha. In the meantime the Kalinga king had died, leaving an infant son, and Narahari-tīrtha was asked to take charge of the child and administer the state on his behalf. At the instance of Madhva Narahari carried on the regency for twelve years and brought out for him the images of Rāma and Sītā which were in the treasury of the Kalinga kingdom. Madhva at one time had a hot discussion leading to a dispute with Padma-tīrtha, a prominent monist of the locality, who, upon being defeated, fled, carrying with him the library of Madhva; at the intercession, however, of a local chieftain, Jayasiṃha, the books were restored. Later on Madhva defeated another monist, Trivikrama Paṇḍita, who became converted to the Madhva faith, and wrote the *Madhva-vijaya*. After the death of Madhva Padmanābha-tīrtha became pontiff and was succeeded by Narahari-tīrtha; we have already given the list of the pontiffs in succession, with their approximate dates as far as they are available from the list of the Madhva *gurus* in the Madhva *maṭhas* of the South. In an article on the outline history of the Madhvācāryas

¹ See *The Bhagavadgītā*, by Subba Rao, M.A., printed at the Minerva Press, Madras.

² *The Life of Madhvācārya*, by C. M. Padmanābhācārya, printed at the Progressive Press, Madras.

G. Venkoba Rao gives the following chronology of the principal facts of Madhva's life: birth of Madhva, śaka 1118; assumption of holy orders, śaka 1128; tour to the South; pilgrimage to Badari; conversion of Śobhana Bhaṭṭa, Śyāmasāstrī and Govinda Bhaṭṭa; second tour to Badari; beginning of Narahari's regency, śaka 1186; end of Narahari's regency, śaka 1197; death of Madhvācārya and accession of Padmanābha, śaka 1197; death of Padmanābha-tīrtha, śaka 1204; Narahari's pontificate, śaka 1204-5.

Grierson, in his article on the *Madva-charita* in the *Encyclopaedia of Religion and Ethics* (vol. VIII), thinks that the influence of Christianity on Madhvaism is very apparent; he says that Madhva's birth-place was either in the ancient city of Kalyānapura or close to it. Kalyānapura has always been reputed one of the earliest Christian settlements in India; these Christians were Nestorians. Again, among the legends described in Nārāyaṇa's *Madhva-vijaya* there is one which holds that the spirit of the deity Anantēśvara appeared to a Brahman and made him a messenger of good news to proclaim that the kingdom of Heaven was at hand. The child, Madhva, was being led through a forest by his parents when their passage was obstructed by evil spirits, who, being rebuked by Madhva, fled away. The child Madhva was at one time missed by his parents at the age of five and he was found teaching the way to worship Viṣṇu according to the śāstras. In his tour in the Southern districts Madhva is said to have increased the store of food to meet the needs of his followers. In his Northern tour he walked over water without wetting his feet, and on another occasion he pacified the angry sea by his stern look. From these miracles attributed to him, and from the facts that there is great similarity between the *bhakti* doctrine of Madhva and the devotionism of the Christians, and that Madhva flourished in a place where there were Christians, Grierson thinks that Madhvaism had an element of Christian influence. The fact also that according to Madhva salvation can be secured only through the intermediary of the wind god *Vāyu* has been interpreted in favour of the above thesis. I think, however, that there is not sufficient ground in these arguments for tracing a Christian influence on Madhva. The doctrine of *bhakti* is very old, and can be traced in a fairly developed form even in some of the Vedic and Upaniṣadic verses, the *Gītā*, the *Mahābhārata* and the earlier *Purāṇas*. There may have been some Christians in

Kalyānapura, but there is no evidence that they were of such importance as to influence the orthodox faith of Madhva. He, like all other teachers, urges again and again that his doctrines are based on the Vedas, the *Gītā*, the *Pañcarātras* and the *Mahābhārata*; nor do we find any account of discussion between Madhva and the Christians; and he is never reported to have been a polyglot or to have had access to Christian literature. Though occasionally *vāyu* is accepted as an intermediary, yet the main emphasis is on the grace of God, depending upon the knowledge of God; there is not the slightest trace of any Trinity doctrine in Madhva's school of thought. Thus the suggestion of a probable Christian influence seems to be very far-fetched. Burnell, however, supports the idea in his paper in *The Indian Antiquary*, 1873-4; but Garbe considers it probable that Kalyānapura might have been another Kalyāna, in the north of Bombay, while Grierson thinks that it must have been the Kalyāna in Udipi, which is close to Malabar.

Burnell again points out that before the beginning of the ninth century some Persians had settled at Manigramma, and he further suggests that these Persians were Manicheans. But Burnell's view was successfully controverted by Collins, though he could not deny the possibility that "Manigramma" was derived from the name Manes (*manī*). Grierson supports the idea of Burnell, and co-relates it with the peculiar story of Maṇimat, the demon supposed to have been born as Śaṅkara, a fabulous account of whom is given in the *Maṇimañjarī* of Nārāyaṇa. It cannot be denied that the introduction of the story of Maṇimat is rather peculiar, as Maṇimat plays a very unimportant part as the opponent of Bhīma in the *Mahābhārata*; but there is practically nothing in the philosophy or theology of Śaṅkara, which is a form of dualism wherein two principles are acknowledged, one light (God) and the other darkness.

Padmanābha-tīrtha succeeded Madhva in the pontificate in A.D. 1197 and died in 1204; he wrote a commentary on the *Amuvyāk-hāna*, the *Ṣaṇṇyāya-ratnāvalī*. Narahari-tīrtha, who is said to have been a personal disciple of Madhva, held the pontificate from 1204 to 1213¹; he wrote a *ṭippanī* on the *Brahma-sūtra-bhāṣya* of Madhva. We do not know of any work by Mādhava-tīrtha, the next pontiff

¹ For a discussion on Narahari's career and date see *Epigraphica Indica*, vol. vi, p. 206, etc.

(1213-30). Akṣobhya-tīrtha held the pontificate from 1230 to 1247, and then Jaya-tīrtha from 1247 to 1268. It is held by some that he was a pupil not only of Akṣobhya-tīrtha, but also of Padmanābha-tīrtha¹; he was the most distinguished writer of the Madhva school, and composed many commentaries of a very recondite character, e.g., *Rg-bhāṣya-ṭīkā* on Madhva's *Rg-bhāṣya*, *Vyākhyāna-vivaraṇa* on Madhva's *Īsopaniṣad-bhāṣya*, *Praśnopaniṣad-bhāṣya-ṭīkā*, *Prameya-dīpikā* on the *Gītā-bhāṣya*, *Nyāya-dīpikā* on the *Gītā-tātparyā-nirṇaya*, and *Tattva-prakāśikā* on the *Brahma-sūtra-bhāṣya*. His most learned and incisive work, however, is his *Nyāya-sudhā*, which is a commentary on the *Anuvyākhyāna* of Madhva; it is a big work. He begins by referring to Akṣobhya-tīrtha as his teacher. The work forms the principal source-book of most of the writers of the Madhva school; it was commented upon by Rāghavendra Yati in a work called *Nyāya-sudhā-parimala*. C. M. Padmanābhacārya says of the *Nyāya-sudhā* that in the whole range of Sanskrit literature a more masterly commentary is unknown.

Rāmānuja and Madhva.

We know that the system of Madhva, being a defence of dualism and pluralism, regarded Śaṅkara and his followers as its principal opponents, and therefore directed its strongest criticism against them. Madhva flourished in the thirteenth century, and by that time many of the principal exponents of monism, like Vācaspati, Prakāśātman, Sureśvara and others, had written scholarly treatises in support of the monistic philosophy of Śaṅkara. Madhva and his followers, Jaya-tīrtha, Vyāsa-tīrtha and others, did their best to refute the monistic arguments for the falsity of the world, and to establish the reality and the plurality of the world and the difference between self and Brahman, which latter was conceived as a personal God. They in their turn were attacked by other writers of the Śaṅkara school, and we have a long history of attacks and counter-attacks between the members of these two important schools of thought. But readers may naturally be curious about the relation between the school of Madhva and the school of Rāmānuja. Madhva himself says little or nothing

¹ Helmuth von Glasenapp, *Madhva's Philosophie des Viṣṇu-Glaubens*, 1923, p. 52.

which may be interpreted as a direct attack upon his predecessor Rāmānuja; but in later times there is evidence of recondite disputes between the followers of the Rāmānuja school and those of the Madhva. For instance, Parakāla Yati, in the sixteenth century, wrote *Vijayīndra-parājaya*, which is evidently a treatise containing refutations of some of the most important doctrines of the Madhva philosophy. It seems desirable to give a short account of this treatise, which is rare and available only in a manuscript form.

Parakāla Yati takes his views from Venkṭa's *Tattva-muktā-kalāpa*, and often quotes verses from it in support of his own views. His attack is made upon Madhva's view which discards the Rāmānuja division of categories (*dravya*, "substance," and *adravya*, "non-substance") and his view of the qualities as constituents of the substance; and this forms the subject-matter of the first two sections of the *Vijayīndra-parājaya*.

In describing Madhva's position upon the question of difference between substance and qualities, the writer says that the Madhvas think that the expression "the blue jug" is justified by the fact that the "blueness" enters into the "sufficient description" of the jug and has no separate existence from it. It is wrong, they say, to affirm that the qualities of the jug stood apart from the jug and entered into it at any particular moment; the conception of the jug carries with it all of its qualities, and these have no separate existence, that is, they are *a-prthak-siddha* from the jug. Parakāla Yati points out that, since we know that the unqualified jug assumes a blue colour by heat, the blue colour may be regarded as different from the jug¹. The qualities, colour etc., have the substance as their support, and they may flow into it or not according to circumstances or conditions. It cannot be said that the determining condition for the influx of qualities is nothing but the nature of the substance, consisting of inseparability from the qualities; for the possibility of such an inseparable association is the matter under dispute and cannot therefore be taken as granted; moreover, the existence of an *upādhi* is relevant only when the entities are different and when the association of the *hetu* with the *sādhya* is true only under certain

¹ *ghaṭe pākena nailyam utpannam ityananyathā-siddha-pratyakṣam ca tatra pramāṇam kiñca rūpādi svādhikaraṇād bhīnam svāsthye sphāre asya āgamopādhi-dharmatvāt. Vijayīndra-parājaya, p. 3 (MS.).*

circumstances; in which case these circumstances are called the determining condition of association (*upādhi*)¹.

But, if the Madhvas argue that even the Rāmānujas admit the inseparable nature of substance and qualities, to this the reply would be that according to Rāmānuja *a-prthak-siddhatva* or “inseparability” only means that at the time of the union (of the quality and the substance) the constituent elements cannot be separated². The mere fact that the expression “blue jug” apparently means the identity of the blueness and the jug without any qualifying suffix denoting “possession” should not be regarded as actually testifying to the identity of “blue” and the jug. The Madhvas themselves do not regard the blueness and jugness as the same and so they have to admit that blueness somehow qualifies the jug. Such an admission would repudiate their own theory³. If blueness as something different from blue be associated with lotus-ness, then the admission of the fact that, when the words blue and lotus are used adjectivally and substantively with the same suffix, they mean one and the same identical thing is by itself no sound logic. If they are understood as different, then one is substance and the other is not.

As a matter of fact our perceptual experience discloses a qualified character of all substances and qualities. No true follower of the Upaniṣads can believe that perception reveals the pure indeterminate nature of being. If no distinction can be made out between characters and substances, then it will not be possible to distinguish one substance from another; for one substance is distinguished from another only by reason of their characters.

Moreover, the distinction between substance and qualities is evident from other *pramāṇas* also. Thus a blind man can dispute about the touch-feeling of an object, but he cannot do so about the colour. So the colour and touch-feeling have to be regarded as distinct from the object itself. Moreover, we speak of a jug as having colour, but we do not say that a jug is colour. So it must be

¹ *na ceha aprthak-siddhatvam upādhistasya sādhyarūpatve sādhana-vyāpakatvād bheda-ghaṭito hi vyāpya-vyāpaka-bhāvah.*

Vijayindra-parājaya.

² *rūpāder madīyam aprthak-siddhatvaṃ saṃsaktam paṭe anyatra netum aśakyatvam eva. tac ca tadrūpābhāve'pi rūpāntareṇa dharma-sattayā avirodhitayā na prthaksiddhatvena virudhyate. Ibid.*

³ *tasya tvayā'pi akhaṇḍārthatvānabhyupagamāt viśiṣṭārthatve tvad-abhimata-siddheḥ. Ibid. p. 4.*

admitted that a denial on Madhva lines of the classification of categories as *dravya* and *adravya* is illogical; it must be held that the *adravya*, though entirely different from *dravya*, remains in association with it and expresses its nature as characters of qualities. Parakāla Yati then takes up a number of Upaniṣad passages and tries to show that, if distinction of qualities and substances is not admitted, then most of the *śruti* texts are inadmissible.

There are some Madhvas who hold that there is both difference and identity, and that even with careful observation the *dravya* and the *adravya* cannot be distinguished, and therefore no distinction can be made between *dravya* and *adravya* as the Rāmānujas make. To this Parakāla Yati replies that the rule that determines the reality of anything must be based upon the principle of non-contradiction and then unconditional invariability¹. The expression "blue jug," wherein the "jugness" and "blueness" may appear in one, may be contradicted by other equally valid expressions, such as "blueness in jug," "blue-coloured jug," and it would thus be ineffective to determine the nature of reality merely by following the indication of the expression "blue jug", which may show an apparent identity between the blue and the jug. The very fact that the jug appears as qualified shows that it has a distinction in the quality that qualifies it. Nor can it be said that because a particular colour is always associated with a particular substance that colour and substance are one and the same; for a conch-shell associated with white colour may also sometimes appear as yellow. Moreover, when one substance carries with it many qualities, it cannot be regarded as being at the same time identical with all the manifold qualities². The distinction of substances on the basis of qualities will also be erroneous, if, like qualities, the special natures of the substances be themselves naturally different³. If a thing can be at the same time identical with many qualities, then that involves acceptance of the Jaina view of *saptabhaṅgī*. Thus, from whatever point of view the Madhva attempt to refute the classification of *dravya* and *adravya* is examined, it is found to be faulty and invalid.

One of the important doctrines in which Madhva differs from others is that the experience in emancipation is not the same with all saints or emancipated persons. This view is supported by some of the *Purāṇas* and also accepted by the Vaiṣṇavas of the Gauḍīya school; but the Rāmānujas as well as the Śāṅkarites were strongly against it, and therefore the followers of the Rāmānuja school criticized Madhva strongly on this point. Thus Śrīnivāsa Ācārya wrote a separate *prakaraṇa* work called *Ānanda-tāratamya-khaṇḍana*. But a much longer and more critical attempt in this direction was made by Parakāla Yati in the fourth chapter of his *Vijajindra-parājaya*. Both these works exist in manuscript.

In the fourth chapter of the fourth book of the *Brahma-sūtra* the question of how the emancipated ones enjoy their experience after emancipation is discussed. It is said here that it is by entering into the nature of the supreme Lord that the emancipated beings participate in the blissful experiences by their mere desire (*samkalpa*). There are however others who hold that the emancipated enjoy the blissful experiences directly through themselves, through their bodies, as mere attempts of intelligence. It is because in the emancipated state one is entitled to all kinds of blissful experiences that one can regard it as a state of *summum bonum* or the highest good. But the emancipated persons cannot have all the enjoyable experiences that the supreme Lord has; each individual soul is limited by his own rights and abilities, within which alone his desires may be rewarded with spontaneous fruition. Thus each emancipated person is entitled to certain types of enjoyment, limited by his own capacity and rights.

Again, in the third chapter of the third book of the *Brahma-sūtra* different types of worship are prescribed for different people: and such a difference of worship must necessarily mean difference in the attainment of fruits also. Thus it must be admitted that in the state of emancipation there are grades of enjoyment, experienced by emancipated persons of different orders.

This view is challenged by the Rāmānujas, who refer to the textual quotations of the Upaniṣads. The passages in the *Brahmā-nanda-vallī* of the *Taittirīya Upaniṣad*, where different kinds of pleasures are associated with men, *gandharvas* and other beings, are not to be interpreted as different kinds of pleasures enjoyed by different kinds of emancipated beings. According to the Rāmānuja

view individuals in an unemancipated state are under the complete control of the supreme Lord. But in the emancipated state, when they become free, they are all in harmony with God and share and participate in all His joys; they are parts of Him. The emancipated person is like a good wife who has no separate will from her husband and enjoys with her husband all that he does or feels. Thus the emancipated souls, being completely associated with God, enjoy and participate in all His joys: and there cannot be any degrees of enjoyment among the different emancipated persons¹. Sense-enjoyment, however, is not possible, as such enjoyment of Brahman at the time of emancipation would have to be the experience of the nature of Brahman, and Brahman Himself also has the self-realizing experience; this enjoyment, therefore, being only of the nature of the self-realizing experience of Brahman, cannot have any degrees or grades in it. The enjoyment of ordinary men, being of a sensuous nature, is only the contraction and expansion of their intelligence, and is therefore distinguishable into higher or lower, greater or smaller grades or degrees of enjoyment. The Madhvas think that in the stage of emancipation there are many diverse kinds of experiences, and consequently that there are degrees or grades of enjoyment associated with such experience in accordance with the capacity of the saint; but all the scriptural texts indicate that at the time of salvation one has the experience of the nature of Brahman, and, if this were admitted, there could not possibly be degrees or grades in emancipation.

In the fifth chapter Parakāla Yati, continuing the discussion, says that there is no difference in the enjoyment attained at emancipation on the ground that the methods of approaching God may be different with different persons; for, however different the methods may be, the results attained are the same, viz., the realization of the nature of Brahman. There may be some beings who are capable of greater *bhakti* or devotion and some who are capable of less, but that does not make any difference in the attainment of the final

¹ *pāratantryam pare pumsī prāpya nirgata-bandhanah
svātantryam atulam prāpya tenaiva saha modate

nyāyāt. Vijayindra-paraṇaya, p. 43.*

mukti, and, *mukti* being the same for all, its enjoyment must also be the same. The analogy of the different kinds of sacrifices leading to different results does not apply to this case; for these sacrifices are performed by external means and therefore their results may be different; but emancipation is attained by spiritual means, viz., *bhakti*. The argument that the bliss of the emancipated, being the bliss of an individual self, cannot be of the same nature is not valid either; for in the emancipated state the individuals enjoy the bliss of the realization of Brahman, which is homogeneous and ubiquitous. It is wrong too to argue that the bliss of the emancipated, being like the bliss that we experience in our worldly lives, must be capable of degrees of enjoyment. The argument that, since we have a sufficient description or definition of Brahman in regarding it as superlatively blissful, individuals cannot in the same sense be regarded as superlatively blissful, is invalid; for, since the Brahman is limitless (*ananta*), it will be wrong to limit it by such a definition as the above, since it is inapplicable to Him. The question of its conflict with the individuals who are superlatively blissful in the state of emancipation does not arise. It is also wrong to say that the bliss of Brahman, being possessed by Brahman, cannot be enjoyed by anybody else, since enjoyment (*bhoga*) really means favourable experience; the wife may thus enjoy the good qualities of her husband, the teacher of his pupil, the parents of their son. The emancipated person realizes the identity of Brahman in himself, and this realization of the nature of Brahman in himself is bliss in the superlative degree. It does not imply any decrease of qualities of Brahman, but it means that in realizing the qualities in oneself one may find supreme bliss¹.

CHAPTER XXVI

MADHVA'S INTERPRETATION OF THE BRAHMA-SŪTRAS

MADHVA not only wrote a *Bhāṣya* on the *Brahma-sūtras*, but also described the main points of his views regarding the purport of the *Brahma-sūtras* in a work called the *Anuvyākhyāna*. Jaya-tīrtha wrote a commentary on the *Bhāṣya* of Madhva, known as *Tattva-prakāśikā*. Vyāsa Yati wrote another commentary on the *Tattva-prakāśikā*, the *Tātparya-candrikā*, in which he draws attention to and refutes the views of the Vedānta writers of other schools of interpretation and particularly of the Śāṅkara school¹. Rāghavendra Yati wrote a commentary on the *Tātparya-candrikā*, the *Candrikā-prakāśa*. Keśava Bhaṭṭāraka, a pupil of Vidyādhiśa, wrote another commentary on it, the *Candrikā-vākyārtha-vivṛti*, but it extends only to the first book. Rāghavendra Yati wrote another commentary on the *Tattva-prakāśikā*, the *Bhāva-dīpikā*, in which he answered the criticisms of his opponents and explained the topics in a simpler manner. In the present section I shall try to trace the interpretation of the *Brahma-sūtras* by Madhva in the light of these commentaries, noting its difference from the interpretation of Śāṅkara and his commentators. There are, of course, several other commentaries on the *Brahma-sūtra-bhāṣya* and its first commentaries, as also on the *Anuvyākhyāna*. Thus Trivikrama Paṇḍitācārya wrote a commentary, the *Tattva-pradīpikā*, on Madhva's *Bhāṣya*. Nṛsiṃha wrote a *Bhāva-prakāśa* and Vijayindra Yati a *Nyāyādhva-dīpikā* thereon. Again, on the *Tattva-prakāśikā* of Jaya-tīrtha there are at least five other commentaries, e.g., *Bhāva-candrikā*, *Tattva-prakāśikā-bhāva-bodha*, *Tattva-prakāśikā-gatanyāya-vivaraṇa*, *Nyāya-mauktikā-mālā* and *Prameya-muktāvalī* by Narasiṃha, Raghūttama Yati, Vijayindra Yati and Śrīnivāsa. On the *Tātparya-candrikā* there are at least two other commentaries, by Timmanācārya and Vijayindra Yati, called *Candrikā-nyāya-vivaraṇa* and *Candrikādarpaṇa-nyāya-vivaraṇa*. On the *Anuvyākhyāna* there is the *Nyāya-sudhā* of Jaya-tīrtha and *Sudhā*

¹ See Helmuth von Glasenapp's *Madhva's Philosophie des Vishnu-Glaubens*, Bonn and Leipzig, 1923, pp. 51-64.

of Vijayindra Yati; and on the *Nyāya-sudhā* there is a number of commentaries such as that by Nārāyaṇa, *Nyāya-sudhā-tippaṇī* by Yadupati, *Vākyārtha-candrikā* by Vidyādhiraṇṇa, and the commentary by Śrīnivāsa-tīrtha¹.

Interpretation of Brahma-sūtra I. I. I.

In commenting on the first *sūtra* of Bādarāyaṇa's *Brahma-sūtra* (*athāto brahma-jijñāsā*, "now therefore Brahma-enquiry"), Śaṅkara holds that the word "now" (*atha* in Sanskrit) does not refer to any indispensable necessity for previous ritualistic performances of Vedic observances in accordance with Vedic injunctions as interpreted by the Mīmāṃsā canons, but that it refers only to the previous possession of moral qualifications, such as self-control, etc., after which one becomes fit for the study of Vedānta. The word "therefore" refers to the reason, consisting in the fact that the knowledge of Brahman alone brings about the superior painless state of all-blessedness, and justifies the enquiry of Brahman. As Brahman is the self, and as the self stands immediately revealed in all our perceptions, Brahman is also always directly known to us. But, as there are divergences of opinion regarding the nature of self, there is scope for Brahma-enquiry. So, though by the general knowledge of self, Brahman is known, the enquiry is necessary for the special knowledge of Brahman or the nature of self.

Madhva explains the reason (*ataḥ*) for Brahma-enquiry as being the grace of the Lord Viṣṇu—as greater favours from the Lord Viṣṇu can be acquired only by proper knowledge of Him, Brahma-enquiry, as a source of Brahma-knowledge, is indispensable for securing His favours. Brahma-enquiry is due to the grace of the great Lord; for He alone is the mover of all our mental states². There are, according to Madhva, three stages of fitness for the study of Vedānta. A studious person devoted to the Lord Viṣṇu is in the third, a person endowed with the sixfold moral qualifications of self-control, etc., is in the second, and the person who is solely attached to the Lord and, considering the whole world to be

¹ See Helmuth von Glasenapp's *Madhva's Philosophie des Viṣṇu-Glaubens*, Bonn and Leipzig, 1923, pp. 51-64.

² *atha-śabdasyātaḥ-śabdo hetu-arthe samudiritaḥ.*
parasya brahmaṇo Viṣṇoḥ prasādād iti vā bhavet.
sa hi sarva-mano-vṛtti-prerakaḥ samudāhṛtaḥ.

transitory, is wholly unattached to it, is in the first stage of fitness¹. Again, the performance of the Vedic observances can entitle us only to the inferior grace of the Lord, listening to the scriptural texts to a little higher degree of grace; but the highest grace of the Lord, leading to *mukti*, can be secured only through knowledge². Right knowledge can be secured only through listening to scriptural texts (*śravaṇa*), reflection (*manana*), meditation (*nididhyāsana*) and devotion (*bhakti*); no one acquires right knowledge without these. The word "Brahman", Madhva holds, means the great Lord Viṣṇu. One of the most important points which Madhva wishes to emphasize against Śaṅkara in regard to the first *sūtra*, as he brings out clearly in his *Nyāya-vivaraṇa*, consists in his belief that even the root meaning of Brahman means "the great" or "endowed with all qualities of perfection", and hence it cannot be identified with the imperfect individual souls, since we know from the Upaniṣads that the world sprang forth from it³. Our object in getting ourselves employed in Brahma-enquiry is the attainment of knowledge of Viṣṇu as the all-perfect One, from whom we imperfect beings are in a sense so different; Lord Viṣṇu will be pleased by this our knowledge of Him, and He will release us from our bondage. In the *Anuvyākhyāna* Madhva tries to emphasize the fact that our bondage is real, and that the release is also real, as effected by the grace of the Lord Viṣṇu. Madhva argues that, if sorrow, pain, etc.—all that constitutes bondage—were false and unreal, there would be some proof (*pramāṇa*) by which this is established. If such a proof exists, the system naturally becomes dualistic. The form-less and difference-less Brahman (according to Śaṅkara's view) cannot itself participate in any demonstration of proof. Also the falsehood of the world-appearance cannot be defined as that which is contradicted by knowledge (*jñāna-bādhyatva*); for, if the concept of Brahman is pure and differenceless intelligence, it cannot involve within it the notion that it is different from the world-appearance (*anyathātva*) or that it negates it, which is necessary if the Brahma-knowledge is said to

¹ *Ibid.*

² *karmaṇātrādhamaḥ proktaḥ

³ *Brahma-śabdena pūrṇa-guṇatvoktenānubhava-siddhālpaguno jīvaḥhedah.
Nyāya-vivaraṇa of Madhva, 1. 1. 1.*

contradict the world-appearance. When the Brahman is considered to stand always self-revealed, what is the *ajñāna* of Śaṅkara going to hide? If it is said that it hides the false differences of an objective world, then a further difficulty arises—that the false differences owe their existence to *ajñāna*, but, in order that *ajñāna* might hide them, they must be proved to have a separate existence independent of *ajñāna*, so that it may hide them. Here is then a clear case of a vicious circle; the very name *ajñāna* shows that it can yield no knowledge of itself and it is therefore false; but even then such a false entity cannot have any existence, as the want of knowledge and *ajñāna* are so related that we have either a vicious infinite (*anavasthā*) or a vicious circle (*anyonyāśraya*); for in any specific case ignorance of any entity is due to its *ajñāna*, and that *ajñāna* is due to a particular ignorance, and so on. Śaṅkara's interpretation thus being false, it is clear that our sorrow and bondage are real, and the Vedas do not hold that the Brahman and the individual souls are identical—for such an explanation would openly contradict our experience¹.

The *Tātparya-candrikā*, a recondite commentary by Vyāsa Yati on the *Tattva-prakāśikā* of Jaya-tīrtha, not only explains the purport of the *Bhāṣya* of Madhva, but always refers to and tries to refute the views of opponents on most of the disputed points². It raises a few important philosophical problems, in which it criticizes the views of the followers of Śaṅkara—Vācaspati, Prakāśātman and others—which could hardly be overlooked. Thus it refers to the point raised by Vācaspati in his *Bhāmatī*, a commentary on the *Bhāṣya* of Śaṅkara, viz., that there is no validity in the objection that there is no necessity of any Brahma-enquiry on the ground that the individual soul, which is identical with Brahman, is directly and immediately experienced by us, and that even the extinction of nescience (*avidyā*) cannot be considered as the desired end, since, though the self is always experienced as self revealed, such an experience does not remove the *avidyā*; and that, since the notion of the ego is implied even in studying and understanding Vedāntic

¹ *satyatvāt tena duḥkḥhādeḥ pratyakṣeṇa virodhataḥ
na brahmatvaṃ vaded vedo jīvasya hi kathamcāna.*

Anuvyākhyāna, I. I. I.

² *prati-sūtram prakāśyeta ghaṭanāghaṭane mayā
svīyānya-pakṣayoḥ samyag vidāṃkurvantu sūrayaḥ.*

Op. cit. verse 10.

texts, the Vedāntic passages which seem to describe Brahman as the pure identity of subject-objectless intelligence, being and blessedness, have to be otherwise explained to suit our ordinary experience. For it is certain that the self-revealed Vedānta passages denote the Brahman of the above description, and, since these cannot have any other meaning, our so-called experience, which may easily be subject to error, has to be disbelieved. The result arrived at according to the *Bhāmati* then is that the unmistakable purport of the Vedānta texts is the differenceless reality, the Brahman, and that, since this pure Brahman is not directly revealed in experience (*śuddho na bhāti*), an enquiry regarding the nature of pure Brahman is justified¹.

The objection which Vyāsa-tīrtha raises against the above view of Vācaspati is that, if in our ordinary experience the “pure” does not reveal itself, what could this mean? Does it mean that that which does not reveal itself is a difference from the body, the negation of our character as doer and enjoyer, or non-difference between Brahman and *ātman*, or the negation of mere duality? But is this non-revealing entity different from the self? If so, then it is contrary to the general monistic Vedāntic conclusion; and, if it is urged that the existence of a negative entity will not involve a sacrifice of the monistic principle, it can be pointed out that such a view of negation has already been refuted in the work called *Nyāyāmṛta*. If such a non-revealing entity is false, then it cannot for the scriptures be the subject of instruction. If, again, it is held that it is the self (*ātman*) that does not reveal itself in experience, then this can be held only in the sense that *ātman* has two parts, that one part is revealed while the other is not, and that there is some imaginary or supposed difference (*kalpita-bheda*) between the two, such that, though the self is revealed (*grhīta*), its non-revealing (*abhāsamāna*) part (*aṁśa*) does not seem to have been revealed and experienced (*agrhīta iva bhāti*). But, if even this is the case, it is acknowledged that there is no real difference between any two supposed parts of the self; the non-appearing part must be endowed with an unreal and illusory difference (*kalpita-bheda*), and no Vedānta can undertake the task of instructing in the nature of such an illusory and non-appearing self. The non-appearing part may be either real or unreal; if it is unreal, as it must be on such a supposition, it cannot

¹ *Ibid.* pp. 15-17.

be an object of the Vedānta to instruct about its nature. For, if the illusory non-appearing remains even when the self is known, this illusion can never break; for all illusory images break with the true knowledge of the locus or the support (*adhiṣṭhāna*) of such illusions (e.g. with the knowledge of the conch-shell the illusory image of silver vanishes)¹. Moreover, the *ātman* is self-revealed, and so it cannot be said that it does not appear in experience as self-revealed (*svaprakāśatvena bhāvayogāt*). If it is argued that, though self-revealed, yet it may be covered by *avidyā*, the answer to such an objection is that, if the *avidyā* could cover the revelation of the self, the *avidyā* itself and its products such as pain, sorrow, etc., could not be revealed by it; for it is acknowledged that the revelation of these is effected by the self-revealing self². It is also evident that intelligence (*cit*) or the being self-revealed (*sphuratī*) cannot also remain not-revealed (*asphuratī*). Nor can it be held that, though pure intelligence is itself in its purity self-revealed (*sva-prakāśa*), yet, since it is opposed to *ajñāna* only through the mental states (*vyrtti*) and not by itself, and since ordinarily there is no *vyrtti* for itself, it can lie covered by the *ajñāna* and, being thus hidden in spite of its self-revealing character, can become a fit subject of enquiry. Such a supposition is not true; for, if the pure intelligence is not opposed to nescience (*ajñāna*), the sorrow, etc. which are directly known by pure intelligence should have remained covered by *ajñāna*. The view is that pleasure, pain, etc. cannot be considered to have a reality even while they are not perceived. A mental state or *vyrtti* of the form of an object is only possible when the object is already existent; for according to Vedānta epistemology the *antaḥkaraṇa* or mind must rush out through the senses and get itself transformed into the form of the object, and for this the object must exist previously; but feelings such as pleasure, pain, etc., have no existence except when they are felt; and, if it is said that a *vyrtti* is necessary to apprehend it, then it must be admitted to have a previous objective existence, which is impossible³. It must be admitted, therefore, that feelings are directly known by

¹ *adhiṣṭhāna-jñānasyaiva bhrama-virodhitayā tasmīn satyāpi bheda-bhramasya tan-nimittakāgrhātārōpasya vā abhyupagame nirvartakāntarasyābhāvāt tad-anivṛtti-prasaṅgāt. yad uktam abhāsamāno'ṁśa ātmātrikṭas cet satyo mithyā vā iti tatra mithyā-bhūta iti brūmaḥ. Candrikā-vākyārtha-vivṛti*, p. 18.

² *sva-prakāśasyāpi avidyā-vaśād abhāne avidyāder duḥkhaś ca prakāśo na syāt, tasya caitanyaprakāśādāhina prakāśāc copagamāt. Tātparya-candrikā*, p. 19.

³ *sukhāder jñātaikasattvābhāvāpātāt. Op. cit.* p. 20.

pure intelligence, without the intervention of a *vr̥tti* or mind-state, and that would be impossible if the *cit* had no opposition of *ajñāna*; for then the *cit* by itself would always have remained hidden, and there could not have been any apprehension of pain, etc.¹ Another point also arises in this connection in our consideration of the theory of perception of ordinary objects according to the Śaṅkara school of Vedānta. For it is held there that even in the mind-states corresponding to the perception of objects (such as "this jug") there is the revelation of pure intelligence as qualified by the mind-state-form of a jug; but if this is so, if our perception of jug means only the shining of pure intelligence (*cit*) with the mind-state-form of a jug added to it, then it cannot be denied that this complex percept necessarily involves the self-revelation of pure intelligence².

Further, it cannot be suggested that there is an appearance of an element of non-self (*anātman*) and that this justifies our enquiry; for, if this non-self shines forth as an extraneous and additional entity along with the self-revealing intelligence, then, since that does not interfere with the revelation of this pure intelligence, there is no occasion for such an enquiry. It is evident that this non-self cannot appear as identical (*tādātmya*) with the self; for, when the pure intelligence shines as such, there is no room for the appearance of any element of non-self in this manner (*adhiṣṭhāne tattvataḥ sphurati anātmāropāyogāc ca*). An analogy has been put forth by Vācaspati in his *Bhāmātī*, where he wishes to suggest that, just as the various primary musical tones, though intuitively apprehended in our ordinary untutored musical perception, can only be properly manifested by a close study of musical science (*gandharva-śāstra*), so the true Brahma-knowledge can dawn only after the mind is prepared by realizing the purport of the Vedānta texts and their discussions, and so, though in the first instance in our ordinary experience there is the manifestation of the self-revealing *cit*, yet the Brahma-enquiry is needed for the fuller realization of the nature of Brahman. But this analogy does not apply; for in the case of our knowledge of music it is possible to have a general apprehension which becomes gradually more and more differenti-

¹ *sva-rūpa-cito'jñāna-virodhitve tad-vedye duḥkhādāv ajñāna-prasaṅgāt.*

Candrikā, p. 20.

² *tvan-mate ayam ghaṭa ityādy-āparokṣa-vṛtteriṇi ghaṭādyavacchinna-cid-viśayatvāc ca. Ibid.*

ated and specially manifested with the close study of the musical science; but in the case of our knowledge of Brahman, the self-revealing intelligence, the self, this is not possible; for it is absolutely homogeneous, simple and differenceless—it is not possible to have a general and a special knowledge. It is the flash of simple self-revelation, absolutely without content, and so there cannot be any greater or lesser knowledge. For the very same reason there is no truth in the assertion contained in the *Bhāmātī*, that, though by a right understanding of the great Vedāntic text “that art thou” one may understand one’s identity with Brahman, yet owing to the objections of disputants there may be doubt about Brahman which might justify a Brahma-enquiry. For, when the simple contentless pure intelligence is once known, how can there be any room for doubt? So, since the pure monistic interpretations of certain Upaniṣad texts are directly contradicted by ordinary experience, some other kinds of suitable interpretations have to be made which will be in consonance with our direct experience.

The general result of all these subtle discussions is that the Śaṅkara point of view (that we are all identical with Brahma, the self-revealing *cit*) is not correct; for, had it been so, this self-revealing must be always immediately and directly known to us, and hence there would have been no occasion for the Brahma-enquiry; for, if the Brahman or the self is always directly known to us, there is no need for enquiry about it. As against the Śaṅkara point of view, the Madhva point of view is that the individual souls are never identical with Brahman; the various ordinary concepts of life are also real, the world is also real, and therefore no right knowledge can destroy these notions. If we were identical with Brahman, there would be no necessity for any Brahma-enquiry; it is only because we are not identical with Brahman that His nature is a fit subject of enquiry, because it is only by such knowledge that we can qualify ourselves for receiving His favour and grace, and through these attain emancipation. If the self is identical with Brahman, then, such a self being always self-revealed, there is no need of enquiry for determining the meaning of the Brahma part (*Brahma-kāṇḍa*) of the Vedas, as there is for determining the meaning of the *karma* part (*karma-kāṇḍa*) of the Vedas; for the meaning of the *Brahma-kāṇḍa* does not depend on anything else for its right comprehension (*dharmavad brahma-*

kāṇḍārthasyātmanah paraprakāśyatvābhāvāt)¹. Though such a Brahman is always self-revealed in our experience, yet, since by the realization of such a Brahman we are not in any way nearer to liberation (*mokṣa*), no benefit can be gained by this *Brahma*-enquiry. So the explanations of this *sūtra*, as given by Śāṅkara, are quite out of place. By Brahman is meant here the fullness of qualities (*guṇa-pūrṭti*), which is therefore different from *jīva*, which is felt as imperfect and deficient in qualities (*apūrṇa*)².

Madhva also disapproves of the view of Śāṅkara that *Brahma*-enquiry must be preceded by the distinction of eternal and non-eternal substances, disinclination from enjoyments of this life or of the other life, the sixfold means of salvation, such as self-control, etc., and desire for liberation. For, if we follow the *Bhāmatī*, and the eternal (*nitya*) and not-eternal (*anītya*) be understood as truth and falsehood, and their distinction, the right comprehension of Brahman, as the truth, and everything else as false (*brahmaiva satyam anyad anṛtam iti vivekaḥ*), then it may very well be objected that this requirement is almost the ultimate thing that can be attained—and, if this is already realized, what is the use of *Brahma*-enquiry? Or, if the self is understood as *nitya* and the non-self as *anītya*, then again, if this distinction is once realized, the non-self vanishes for good and there is no need to employ ourselves in discussions on the nature of Self. The explanation of the *Pañcapādikā-vivaraṇa* is that the word *nityānītya-viveka* means the comprehension that the result of *Brahma*-knowledge is indestructible, whereas the result of *karma*, etc. is destructible (*dhvaṃsa-pratīyogī*). But this is not justifiable either; for the appearance of silver in the conch-shell being always non-existent (*atyantābhāva*), the word “destructible” is hardly applicable to it. If it is said that in reality the conch-shell-silver is non-existent (*pāramārthikatvā-kāreṇa atyantābhāvaḥ*), but in its manifested form it may be said to be destroyed (*svarūpeṇa tu dhvaṃsaḥ*), this is not possible either; for no definite meaning can be attached to the word “in reality” (*pāramārthika*), which is explained as being “non-contradiction” (*abādhyatva*); “non-contradiction” means “in reality”; and thus we have an argument in a circle (*anyonyāśraya*). *Brahma*, being

¹ *Tātparya-candrikā*, p. 36.

² *jijñāśya-brahma-śabdena guṇa-pūrty-abhidhāyinā apūrṇatvenānubhūtā jīvād bhinnam pratīyate. Ibid.* p. 46.

formless (*nirākāra*), might itself be considered as non-existent (*atyantābhāva-pratīyogitvasya nirākāre brahmany api sambhavāt*)¹.

Again, if, as the *Vivaraṇa* has it, even sense-objects (*viśaya*) serve only to manifest pleasure, which is but the essence of self (*ātma-svarūpa*), then there is no reason why the enjoyment of sense-objects should be considered different from the enjoyment of liberation. Again, the desire for liberation is also considered as a necessary requirement. But whose is this desire for liberation (*mumukṣutva*)? It cannot belong to the entity denoted by ego (*aham-artha*); for this entity does not remain in liberation (*aham-arthasya muktān ananvayāt*). It cannot be of the pure intelligence (*cit*); for that cannot have any desire. Thus the interpretations of the word "now" (*atha*), the first word of the *sūtra*, were objected to by the thinkers of the Madhva school. Their own interpretation, in accordance with the *Bhāṣya* of Madhva as further elaborated by Jaya-tīrtha, Vyāsa-tīrtha, Rāghavendra Yati and others, is that the word *atha* has, on the one hand, an auspicious influence, and is also a name of Nārāyaṇa². The other meaning of the word *atha* is that the enquiry is possible only after the desired fitness (*adhikārānantaryārthaḥ*)³. But this fitness for Brahma-enquiry is somewhat different from that demanded by the Śāṅkara school, the views of which I have already criticized from the Madhva point of view. Madhva and his followers dispense with the qualifications of *nityānitya-vastu-viveka*, and they also hold that desire for liberation must be illogical, if one follows the interpretation of Śāṅkara, which identifies *jīva* and Brahman. The mere desire for liberation is not enough either; for the *sūtras* themselves deny the right of Brahma-enquiry to the Śūdras⁴. So, though any one filled with the desire for liberation may engage himself in Brahma-enquiry, this ought properly to be done only by those who have studied the Upaniṣads with devotion, and who also possess the proper moral qualities of self-control, etc. and are disinclined to ordinary mundane enjoyments⁵.

¹ *Tātparya-candrikā*, p. 69.

Ibid.* p. 77. The same view is also expressed in the *Tattva-pradīpa*, a commentary on Madhva's *Bhāṣya* by Trivikrama Paṇḍitācārya.

³ *Anubhāṣya*.

⁴ *Brahma-sūtra*, I. 3. 34-8.

⁵ *mukti-yogyatva-bhakti-pūrvakādhyayana-śama-damādi-vairāgya-sampattirūpādhikārāpanena, etc. Tattva-prakāśikā-bhāva-dīpikā*, p. 12.

The word “therefore” (*ataḥ*) in the *sūtra* means “through the grace or kindness of the Lord Viṣṇu”; for without His grace the bondage of the world, which is real, cannot be broken or liberation attained. Jaya-tirtha in his *Nyāya-sudhā* on the *Anuvyākhyāna* of Madhva here anticipates an objection, viz., since liberation can be attained in the natural course through right knowledge, as explained by Śaṅkara and his followers on the one hand and the *Nyāya-sūtra* on the other, what is the usefulness of the intervention of Īśvara for producing liberation? All sorrow is due to the darkness of ignorance, and, once there is the light of knowledge, this darkness is removed, and it cannot therefore wait for the grace of any supposed Lord¹. The simplest answer to such an objection, as given in the *Nyāya-sudhā*, is that, the bondage being real, mere knowledge is not sufficient to remove it. The value of knowledge consists in this, that its acquirement pleases the Lord and He, being pleased, favours us by His grace so as to remove the bondage².

The word “Brahman” (which according to Śaṅkara is derived from the root *br̥hati-*, “to exceed” (*atīśayana*), and means eternity, purity and intelligence) means according to the Madhva school the person in whom there is the fullness of qualities (*br̥hanto hy asmin guṇāḥ*). The argument that acceptance of the difference of Brahman and the souls would make Brahman limited is not sound; for the objects of the world are not considered to be identical with Brahman nor yet as limiting the infinitude of Brahman; and the same sort of answer can serve in accepting the infinitude of Brahman as well as in accepting His difference from the souls³. The infinitude of Brahman should not therefore be considered only in the negative

¹ *tathā ca jñāna-svabhāva-labhyāyām muktau kim īśvara-prasādena; na hi andhakāra-nibandhana-duḥkha-nivṛttaye pradīpam upādadanāḥ kasyacit prabhok prasādam apeksante. Nyāya-sudhā*, p. 18.

² The *Tattva-prakāśikā* says that the letter *a* means Viṣṇu, and *ataḥ* therefore means through the grace of Viṣṇu: *akāra-vācyād viṣṇos tat-prasādāt*, p. 4. The *Bhāmāṇī*, however, following Śaṅkara, explains the word *ataḥ* as meaning “since the Vedas themselves say that the fruits of sacrifices are short-lived, whereas the fruits of Brahma-knowledge are indestructible and eternal”. So that through the Vedas we have disinclination from mundane and heavenly joys (*ihāmutra-phala-bhoga-virāgaḥ*), and these through Brahma-enquiry. But the *Candrikā* points out that such a connection with *vairāgya*, as signified by *ataḥ*, is remote and, moreover, the connection with *vairāgya* was already expressed by the word *atha*.

³ *Tātparyā-ṅkā*, pp. 89-93.

way, as not being limited by difference, but as being fullness in time, space and qualities; for otherwise even the Buddhist momentary knowledge would have to be considered as equal to Brahman, since it is limited neither by time nor by space¹.

Coming to the formation of the compound Brahma-enquiry (*brahma-jijñāsā*), the *Candrikā* points out that neither Śaṅkara nor his followers are justified in explaining Brahman as being in the objective case with reference to the verb implied in "enquiry" (*jijñāsā*); for Brahma—being pure and absolute intelligence, open only to direct intuition—cannot be the fit object of any enquiry which involves discussions and arguments². But, of course, in the Madhva view there cannot be any objection to Brahma being taken as the object of enquiry. According to both the *Nyāya-sudhā* and the *Tātparya-candrikā* the word "enquiry" (*jijñāsā*) in Brahma-enquiry (*brahma-jijñāsā*) means directly (*rūdhī*) argumentative reasoning (*manana*) and not desire to know, as the followers of Śaṅkara would suggest³. The object of Brahma-enquiry involving reasoned discussions is the determination of the nature of Brahman, whether He possesses the full perception of all qualities, or has only some qualities, or whether He has no qualities at all⁴.

Not only did the followers of Madhva try to refute almost all the points of the interpretation of this *sūtra* by Śaṅkara and his followers, but Madhva in his *Anuvyākhyāna*, as interpreted in the *Nyāya-sudhā* and *Nyāya-sudhā-parimala*, raised many other important points for consideration, which seem to strike the position of Śaṅkara at its very root. A detailed enumeration of these discussions cannot be given within the scope of a single chapter like the present; and I can refer to some only of the important points. Thus the very possibility of illusion, as described by Śaṅkara, is challenged by Jaya-tīrtha, following the *Anuvyākhyāna*.

¹ *bauddhābhīmatā-kṣaṇika-vijñānāder api vastutaḥ kālādy abhāvena aparicchinmatva-prasaṅgāc ca; tasmād deśataḥ kālataś caiva guṇataś cāpi pūrṇatā brahmatā, na tu bhedasya rāhityaṁ brahmateṣyate. Tātparya-ṭīkā, p. 94.*

² *para-pakṣe vicāra-janya-jñāna-karmaṇo brahmaṇo vicāra-karmatvāyogāt, aparokṣa-vṛtti-vyāpyasya phala-vyāpyatva-niyamāc ca. Ibid. p. 95.*

³ The *Bhāmati*, however, holds that the primary meaning of the word *jijñāsā* is "desire to know"; but, since desire to know can only be with reference to an object which is not definitely known (*jñātum icchā hi sandigdha-viṣaye nirṇayāya bhavati*), it means by implication reasoned discussion (*vicāra*), which is necessary for coming to any decided conclusion.

⁴ *tasmād vedāntādīnāṁ pāta-pratīte brahmaṇi saguṇa-nirguṇālpaguṇatvādinā vipratīpatteḥ jijñāsyatvam. Tātparya-candrikā, p. 109.*

He says that the individual is by nature free in himself in all his works and enjoyments, and is dependent only on God. That such an individual should feel at any time that he was being determined by some other agent is certainly due to ignorance (*avidyā*)¹. Ignorance, so far as it may be said to be existent as such in the self, has real being (*avidyādikam ca svarūpeṇātma-sambandhitvena sad eva*). So the intellect (*buddhi*), the senses, the body and external sense-objects (*viśaya*) are really existent in themselves under the control of God; but, when through ignorance they are conceived as parts of my self, there is error and illusion (*avidyādi-vaśād ātmīyatayā adhyāsyante*). The error does not consist in their not having any existence; on the contrary, they are truly existent entities, and sorrow is one of their characteristics. The error consists in the fact that what belongs distinctly to them is considered as belonging to an individual self. When through ignorance such a false identification takes place, the individual thinks himself to be under their influence and seems to suffer the changes which actually belong to them; and, being thus subject to passions and antipathy, suffers rebirth and cannot get himself absolutely released except by the worship of God. Those who believe in the *māyā* doctrine, like Śaṅkara and his followers, however, hold that the sorrow does not exist in itself and is false in its very nature (*duḥkhādikam svarūpeṇāpi mithyā*). Śaṅkara says that we falsely identify the self with the non-self in various ways; that may be true, but how does that fact prove that non-self is false? It may have real existence and yet there may be its false identification with the self through ignorance. If the very fact that this non-self is being falsely identified with the self renders it false, then the false identification, on the other side, of the self with the non-self ought to prove that the self also is false². As the selves, which are bound, are real, so the sense-objects, etc., which bind them, are also real; their false identification through ignorance is the chain of bondage, and this also is

¹ *tasya parāyattatvābhāso'vidyā-nimittako bhramah. Nyāya-sudhā*, p. 26.

² *atra hi pramātr-pramāna-prameya-kartr-karma-kārya-bhoktr-bhoga-lakṣaṇa-vyavahāra-trayaśya śārirendriyādiṣu aham-mamādhyāsa-puraḥsaratva-pradarśanena vyavahāra-kārya-līṅgakam anumānam vyavahārānyathānupapattir vā adhyāse pramānam uktam. na cānenāntaḥkaraṇa-śārirendriya-viśayāṇām tad-dharmānām dukkhādinām ca mithyātvam sidhyati svarūpa-satām api tādātmya-tatsambandhitvābhīyam āropeṇaiva vyavahāropapatter. na ca āropitvatmātrena mithyātvam; ātmano'pi antaḥkaraṇādiṣu āropitvatena mithyātvā-prasaṅgāt.*

real, and can be removed only through knowledge by the grace of God.

The idea suggested by the Śāṅkara school, that the notion of an individual as free agent or as one enjoying his experiences is inherent in the ego (*aham-kāra*), and is simply associated with the self, is also incorrect; for the notion of ego (*aham-kāra*) really belongs to the self and it is present as such even during deep sleep (*susupti*), when nothing else shines forth excepting the self, and we know that the experience of this state is "I sleep happily". This notion "I," or the ego, therefore belongs to the self¹.

If everything is false, then the very scriptures by which Śāṅkara would seek to prove it would be false. The answer to such an objection, as given by Śāṅkarites, is that even that which is false may serve to show its own falsehood and the truth of something else, just as in the case of acquired perception, e.g. in the case of *surabhi-candana*, "fragrant sandal," the sense of sight may reveal the smell as well as the colour. But the counter-reply to this answer naturally raises the question whether the false scriptures or other proofs are really existent or not; if they are, then unqualified monism fails; for their existence would necessarily mean dualism. If, on the other hand, they do not exist at all, then they cannot prove anything. The answer of Śāṅkara, that even the false can prove the true, just as a line (a unit) by the side of zeros might signify various numbers, is incorrect; for the line is like the alphabet signs in a word and like them can recall the number for which it is conventionally accepted (*saṅketita*), and is therefore not false (*rekhāpi varṇe padām-iva arthe saṅketite taṁ smārayatīti no kiṁcid atra mīthyā asti*)².

Nor can it be maintained that the bondage of sorrow, etc. is not real; for it is felt to be so through the direct testimony of the experience of the spirit (*sākṣin*)³. Its unreality or falsehood cannot be proved by the opponent; for with him truth is differenceless (*nirviśeṣa*): but any attempt to prove anything involves duality between that which is to be proved and that whereby it is to be

¹ *aham-pratyayasya ātma-viśayatvāt. Nyāya-sudhā*, p. 27. It also distinguishes two words of the same form, *aham*, though one is an *avyaya* word and the other the nominative singular of the word *asmad*. It is the former that is used to denote an evolutionary product of *prakṛti*, whereas the latter denotes the self.

² Several other examples of this type furnished by Śāṅkara and his followers are here given and refuted in the same manner.

³ *duḥkhādi-bandha-satyatāyāṁ sākṣi-pratyakṣam eva upanyastam. Ibid.* p. 30.

proved, and that a differenceless entity may be the proof cannot be established by the differenceless entity itself; for this would involve a vicious circle. If the world were false, then all proofs whereby this could be established would also by the same statement be false; and how then could the statement itself be proved?

As has just been said, the opponents, since they also enter into discussions, must admit the validity of the means of proof (*pramāṇa* or *vyavahṛti*); for without these there cannot be any discussion (*kathā*); and, if the proofs are admitted as valid, then what is proved by them as valid (*prameya* or *vyāvahārika*) is also valid¹. In this connection Jaya-tīrtha raises the points contained in the preliminary part of the *Khaṇḍana-khaṇḍa-khāḍya* of Śrīharṣa, where he says that it is, of course, true that no discussions are preceded by an open non-acceptance of the reality of logical proofs, but neither is it necessary to accept the validity of any proof before beginning any discussion. Those who begin any discussion do so without any previous forethought on the subject; they simply do not pay any attention to the ultimate existence or non-existence of all proofs, but simply begin a discussion as if such a question did not need any enquiry at the time². In a discussion what is necessary is the temporary agreement (*samaya-bandha*) or the acceptance for the purpose of the discussion of certain canons of argument and proofs; for that alone is sufficient for it. It is not necessary in these cases that one should go into the very nature of the validity or invalidity, existence or non-existence of the proofs themselves³. So even without accepting the ultimate existence and validity of the *pramāṇas* it is possible to carry on a discussion, simply through a temporary mutual acceptance of them as if they did exist and were valid. So it is wrong to say that those who do not believe in their existence cannot legitimately enter into a proper discussion. After referring to the above method of safeguarding the interests of the upholders of the *māyā* doctrine, Jaya-tīrtha says that, whatever may be mutual agreement in a discussion, it remains an undeniable fact

¹ *vyavahārikam vyavahāra-viśayo duḥkhādi. Ibid. p. 31.*

² *na brūmo vayaṃ na santi pramāṇādini iti svīkṛtya kathārabhyeti kiṃ nāma santi na santi pramāṇādini ityasyāṃ cintāyāṃ udāśinaiḥ yathā svīkṛtya tāni bhavatā vyavahriyante tathā vyavahāribhir eva kathā pravartyatām. Ibid. p. 32.*

³ *tac ca vyavahāra-niyama-bandhād eva...sa ca pramāṇena tarkeṇa ca vyavahartavyam ityādi-rūpaḥ; na ca pramāṇādīnāṃ sattāpi ittham eva tubhyam āṅgikartum ucītā, tādṛśa-vyavahāra-niyama-mātrenaiva kathā-pravṛtteḥ. Ibid.*

that, if the proofs do not exist, nothing at all can be proved by such non-existing entities. Either the *pramāṇas* exist or they do not; there is no middle course. If they are not admitted to be existent, they cannot prove anything. You cannot say that you will be indifferent with regard to the existence or non-existence of *pramāṇas* and still carry on a discussion merely as a passive debater; for our very form of thought is such that they have either to be admitted as existent or not. You cannot continue to suspend your judgment regarding their existence or non-existence and still deal with them in carrying a discussion¹. You may not have thought of it before starting the discussion; but, when you are carrying on a discussion, the position is such that it is easy to raise the point, and then you are bound to admit it or to give up the discussion. Dealing with the *pramāṇas* by mutual agreement necessarily means a previous admission of their existence².

The Śāṅkarites generally speak of three kinds of being, real (*pāramārthika*), apparent (*vyāvahārika*) and illusory (*prātibhāsika*). This apparent being of world-appearance (*jagat-prapañca*) is neither existent nor non-existent (*sad-asad-vilakṣaṇa*). The scriptures call this false, because it is not existent; and yet, since it is not absolutely non-existent, the proofs, etc. which are held within its conception can demonstrate its own falsehood and the absolute character of the real³. Such a supposition would indeed seem to have some force, if it could be proved that the world-appearance is neither existent nor non-existent; which cannot be done, since non-existence is nothing but the simple negation of existence (*tasya sattvābhāvāvrya tirekāt*). So that which is different from existent must be non-existent, and that which is different from non-existent must be existent; there is no middle way. Even the scriptures do not maintain that the world-appearance has a character which is different from what is existent and what is non-existent (*sad-asad-vilakṣaṇa*).

With regard to the question what may be the meaning of the

³ *tatra vyāvahārikasya prapañcasya sad-asad-vilakṣaṇasya sad-vilakṣaṇatvād upapannam śrutyādinā mithyātva-samarthanam asad-vilakṣaṇatvāt tad-antar-gatasya pramāṇādeḥ sādhatvam ca iti. Ibid. p. 35.*

phrase “different from existents” (*sad-vilakṣaṇa*), after suggesting numerous meanings and their refutations, Jaya-tīrtha suggests an alternative interpretation, that the phrase might mean “difference (*vailakṣaṇya*) from existence in general (*sattā-sāmānya*)”. But surely this cannot be accepted by the opponent; for the acceptance of one general existence would imply the acceptance of different existents, from which the abstraction can be made¹. This cannot be accepted by a Śāṅkarite, and, as for himself, he does not accept any general existence apart from the individual existents (*dravyādy-atirikta-sattva-sāmānyasyaiva anaṅgikārāt*). The Śāṅkarites say that the indefinable nature of this world-appearance is apparent from the fact that it is ultimately destructible by right knowledge and that this world-appearance is destructible by right knowledge and that this world-appearance is destructible is admitted even by the Madhvas. To this objection Jaya-tīrtha replies that, when the Madhvas say that the world is destroyed by the Lord, it is in the same sense in which a jug is reduced to dust by the stroke of a heavy club². But even such a destruction, in our view, is not possible with regard to *prakṛti*; and this destruction is entirely different from what a Śāṅkarite would understand by the cessation (*bādhā*) through knowledge (*jñāna*). For that, as Prakāśātman writes in his *Vivaraṇa*, means that the nescience (*ajñāna*) ceases with all its effects through knowledge (*ajñānasya sva-kāryeṇa vartamānena pravilīnena vā saha jñānena nivṛttir bādhah*). Cessation (*bādhā*), according to the Madhvas, proceeds through right knowledge (*samyag-jñāna*) regarding something about which there was a different knowledge (*anyathā-jñāna*). The existence of any such category as “different-from-existent and non-existent” (*sad-asad-vilakṣaṇa*) cannot be defined as corresponding to that which ceases through right knowledge; only that which you falsely know about anything can cease through right knowledge: the example of conch-shell-silver does not prove anything; for we do not admit that there is anything like conch-shell-silver which existed and was destroyed through right knowledge, since in fact it never existed at all. Not only in the case of conch-shell-silver, but in the case of the

¹ *sattā-sāmānyāṅgikāre ca sad-bhedo durvāra eva; na hy ekāśrayaṃ sāmānyam asti. Ibid. p. 38.*

² *mudgara-prahārādina ghaṭasyeva īśvarasya jñānecchā-prayatna-vyāpārair vināśa eva. Ibid. p. 39.*

ākāśa, etc., too, the assertion that it is *sad-asad-vilakṣaṇa* is utterly wrong; for, being eternal, it can never cease.

Error or illusion consists in knowing a thing differently from what it is (*anyathā-vijñānam eva bhrāntiḥ*). Now conch-shell-silver is a simple case of *anyathā-vijñāna* or *anyathā-khyāti*, and there is nothing here of *sad-asad-vilakṣaṇatva* or *jñāna-nivartyatva* (possibility of being removed by knowledge); for it does not exist. It may be objected that, if it did not exist, one could not have the notion (*pratīti*) of it: no one can have any notion of that which does not exist; but the conch-shell-silver is to all appearance directly perceived. The answer to this is that even the opponent does not admit that there is any such concomitance that what does not exist cannot yield any notion of it; for when the opponent speaks of anything as being *asad-vilakṣaṇa*, i.e. different-from-the-non-existent, he must have a notion of what is non-existent; for, if any one is to know anything (e.g., a jug) as being different from some other thing (e.g., a piece of cloth), then, previously to this, in order to know this difference he must have known what that thing (a jug) is¹. This again raises the epistemological problem, whether it is possible to have knowledge of the non-existent. Thus it may be asked whether the sentence "There are horns on the head of the man" conveys any meaning; and, if it does, whether it is of any existing or of a non-existing entity. It cannot be the first; for then we should have actually seen the horns; there must be notion of the non-existent entity of the horn, and so it has to be admitted that we can know non-existent entities. It cannot be said that this is not non-existent, but only that it is indefinable (*anirvacanīya*); for, if even entities like the hare's horn or man's horn should not be regarded as non-existent, then from what is it intended to distinguish conch-shell-silver? for *asad-vilakṣaṇa* must be admitted to have some meaning; *asat* cannot mean "indefinable"; for in that case conch-shell-silver, which is described as being different from *asat*, would be definable². Not only can the non-existent be the object of knowledge, but it can also be the subject or the object of a verb. Thus, when it is said "the jug is being produced, *ghaṭo jāyate*," this refers

¹ *yo yadvilakṣaṇam pratyeti sa tat-pratītimān yathā ghaṭa-vilakṣaṇaḥ paṭa iti pratītimān devadatto ghaṭa-pratītimān ityanumānāt. Nyāya-sūdhā, p. 57.*

² *nirupākhyād iti cet tarhi tad-vilakṣaṇyaṁ nāma sopākhyānatvam eva. Ibid. p. 58.*

to the non-existent jug, as being the subject of the verb “to be produced, *jāyate*”; for it will be shown later that Śaṅkara’s theory of the previous or simultaneous existence of effects, even before the causal operation (*sat-kārya-vāda*), is false. Therefore, since the non-existent may be known, the objection that conch-shell-silver cannot be non-existent, because it is known, is invalid.

But a further objection is raised, that, while it is not denied that the non-existent may be known, it is denied that the non-existent cannot appear as directly perceived and as existent (*aparokṣatayā sattvena ca*); as if one should find horns on the head of a man, as he finds them on the head of a cow. But in the case of the conch-shell-silver what is perceived is directly perceived as existent; so the conch-shell-silver must be non-existent. In answer to this the following may be urged: those who do not regard conch-shell-silver as non-existent, but as indefinable (*anīrvacanīya*), have to accept the appearance of identity of “this” and the silver (*iḍam-rajatayoḥ*). Illusion, according to these Śaṅkarites, is the appearance of something in that which is not so (*atasmins tad iti pratyaya iti*). This is not, of course, *anyathā-khyāti* (a different appearance from the real); for the basis of the illusion (*adhiṣṭhāna*, as the conch-shell of the illusory silver) is not here false in itself, but only false in its appearance as silvery or associated with a false appearance (*saṁsṛṣṭa-rūpa*); but the illusory appearance (*adhyāsta*) is false both in itself (*svarūpa*) and also as associated with the object before the observer; this is admitted by the holders of the *māyā* doctrine. The holders of the *anyathā-khyāti* view of illusion think that both the conch-shell and the silver are real, only the appearances of identity of conch-shell with silver and of silver with conch-shell are false¹. This appearance of the false or the non-existent is both immediate (*aparokṣa*), as is well known to experience, and endowed with real existence; for otherwise no one could be moved by it (*sattvenā-pratītau pravṛtṭyanupapattē ca*). Until the illusion is broken this association of the non-existent silver with the “this” does not differ in the least from the perception of real silver before the observer. The opponents would say that this is not a false and non-existent association (*anyathātvam yady asat syāt*), as the Madhvas hold; but it is difficult to understand what they can mean by such an objec-

¹ *anyathā-khyāti-vādibhir adhiṣṭhānāropyaḥ ubhayaḥ api saṁsṛṣṭa-rūpeṇaiva asattvam svarūpeṇa tu sattvam ity aṅgīkṛtam. Ibid. p. 58.*

tion; for such an association of silver with the conch-shell cannot be real (*sat*), since, if it was so, why should it appear only in the case of illusions (*bhrānti*), where the first perception is contradicted, as in "this is not silver"? Again, those who think that in the case of illusion the silver is indefinable (*anirvacanīya*) may be asked what is the nature of that which appears as indefinable. Does it appear as non-existent or as illusory? It cannot be so; for then no one would trouble about it and try to pick it up, knowing it to be non-existent or illusory. So it has to be admitted that it appears as existent. This agrees with our experience of the illusion ("this silver"). The mere notion of silver is not enough to draw us towards it, apart from our notion of it as existing. But this has no real existence, since then it cannot be indefinable; if this is non-existent, then it has to be admitted that the non-existent appears in immediate perceptual experience and as endowed with existence. The opponents however may point out that this is not a right analysis of the situation as they understand it. For in their view the true "this" in the conch-shell and its association with silver is as indefinable as the indefinable silver itself, and so the silver in the appearance of silver is indefinable, and so their mutual connection also is indefinable. It is the reality in the conch-shell that becomes indefinably associated with the silver. The answer to this is that such a view is open to the serious defect of what is known as the vicious infinite (*anavasthā*). For, when it is said that the mutual association (*samsarga*) of "thisness" and "silverness" and the association of the reality of the conch-shell with the silver are both indefinable, it may be asked what exactly is meant by calling them indefinable. It is not of the nature of ordinary phenomenal experience (*vyāvahārika*); for the illusory silver is not of any ordinary use. If it is illusory (*prātibhāsika*), does it appear to be so or does it appear as if it was of the nature of ordinary phenomenal experience? If it did appear as illusory, no one would be deluded by it, when he knows it to be illusory, and he would not trouble to stoop down to pick it up. If it did appear as if it was of the nature of ordinary phenomenal experience, then it could not be really so; for then it could not be illusory. If it was not so and still appeared to be so, then the old point, that the non-existent can appear to immediate perception as existent, has to be admitted. If this appearance of silver as being of the nature of an object of ordinary

phenomenal experience is itself considered as being indefinable, then the same sorts of questions may again be asked about it, and the series will be infinite; this would be a true case of a vicious infinite, and not like the harmless infinite of the seed and the shoot; for here, unless the previous series is satisfactorily taken as giving a definite solution, the succeeding series cannot be solved, and that again depends in a similar way on another, and that on another and so on, and so no solution is possible at any stage¹. Therefore the old view that even the unreal and the non-existent may appear as the real and the existent has to be accepted; and the world-appearance should not be considered as indefinable (*anirvacanīya*).

Interpretation of *Brahma-sūtra* I. I. 2.

The literal translation of the second *sūtra*, *janmādy asya yataḥ*, is "from which production, etc., of this". The purport of Śāṅkara's commentary on this *sūtra* may briefly be stated as follows: "Production, etc." means production, existence and destruction. Production, existence and destruction of this world-appearance, which is so great, so orderly and so diversified, is from that ultimate cause, God (Īśvara); and neither the *paramāṇus* nor the inanimate *prakṛti* can be its cause. This rule is not intended to stand as an inference in favour of the existence of God, but is merely the description of the purport of the Upaniṣad texts on the nature of Brahman²; for the ultimate grasp of the nature of Brahman, which is beyond the range of our sense-organs, can only come through the right comprehension of the meaning of Upaniṣad texts.

Jaya-tīrtha, in commenting on the *Bhāṣya* of Madhva and the *Anuvyākhyāna*, follows Madhva in explaining this *sūtra* as a definition (*lakṣaṇa*) of Brahman, intended to differentiate Him from beings of His class, viz., the souls (*jīva*), and inanimate objects, which belong to a different class. The idea is that that from which the production, etc., of the world takes place is Brahman, and there are important *śruti* texts which say that the world was produced from Brahman³. It has already been pointed out that by "pro-

¹ *Nyāya-sudhā*, p. 59.

² *janmādi-sūtram nānumānopanyāsārthaṁ kiṁ tarhi vedānta-vākya-pradarśanārthaṁ.*

³ Jaya-tīrtha refers to another interpretation of the *sūtra* as *janma ādyasya hiraṇyagarbhasya yatas tad brahma*. The *Tātparya-candrikā* discusses the points of view raised in the *Nyāya-sudhā* and elsewhere with regard to the meaning of

duced, etc.” in the *sūtra* Śaṅkara understood production (*śṛṣṭi*), existence (*sthiti*) and destruction (*laya* or *bhaṅga*), and he there reconciled the six stages of existent things (*bhāva-vika*) referred to by Yāska in the *Nirukta*, such as being produced, to continue to exist, to grow, to change, to decay and to be destroyed, as being included within the three stages referred to by him; for growth and change are included within production (*janma*), and decay is included within destruction. Madhva, however, includes eight different categories in the term “production, etc.”; these with him are production (*śṛṣṭi*), existence (*sthiti*), destruction (*saṃhāra*), control (*niyama*), knowledge (*jñāna*), ignorance (*ajñāna*), bondage (*bandha*) and release (*mokṣa*)¹. The existence of all these qualities implies the fullness of qualities signified by the name Brahman. That single being in whom all the above-mentioned eightfold qualities exist is called Brahman.

Generally two kinds of definitions are distinguished from each other, viz., essential (*svarūpa-lakṣaṇa*) and accidental (*taṭastha-lakṣaṇa*). Prakāśātman, the writer of the *Pañca-pādikā-vivaraṇa*, speaks of this definition of Brahman as being of the latter type, since it is only in association with *māyā* that Brahman can be said to be the cause of the production, etc., of the world-appearance. In itself

Brahman as referred to by the word *yataḥ*. *Bṛha*, a constituent of the word *brahman*, has several technical meanings (*rūḍhi*), such as *jāti* (class-notion), *jīva*, *Kamalāsana* or *Brahmā*. But the word is not used here in its technical sense, but in the etymological sense, which signifies the entity in which there is a fullness of qualities; for it is only in this sense that the Upaniṣad texts alluded to in connection with this *sūtra* and the previous one become significant. Again, on the basis of other texts, which speak of Him (from which everything is produced) as lying in the ocean, Brahman here means Viṣṇu (as in the *Samākhya-śruti*, *dyāvāpṛthivī param mama yonir apsu antaḥ samudre*), because it is only in Him that there is the fullness of all qualities. This characteristic would not apply to any of the other technical (*rūḍhi*) senses, such as *jāti* or *jīva*; and so it is that, though the *rūḍhi* sense is stronger than the etymological sense (*yaugika*), yet the latter has preference here: *brahma-śabdasya jīve rūḍhatve'pi bādha-sadbhāvāt tad brahma iti śruty-uktaṃ brahma viṣṇur eva (Tattva-prakāśikā)*. It may also be added that, according to the *Tattva-prakāśikā*, *Tātparya-candrikā* and other Madhva works, it is held that, though ordinarily *brahma* has the technical sense of *jīva*, yet with scholars the word always has the technical meaning of Viṣṇu. Thus a distinction is drawn between the ordinary technical sense (*rūḍhi*) and the technical sense with scholars (*vidvad-rūḍhi*), and preference is given to the latter: *viduṣāṃ brahma-śabdena viṣṇu-vyakti-pratīteḥ (Tātparya-candrikā, p. 120)*.

¹ *Anubhāṣya* of Madhva or *Brahma-sūtra*, 1. 1. 2. Madhva quotes for his authority a passage from the *Skanda-purāṇa*:

*utpatti-sthiti-saṃhāra-niyatir jñānam āvṛtiḥ
bandha-mokṣaṇi ca puruṣād yasmāt sa harir ekarāt.*

it is of the nature of pure bliss (*ānanda*), which is also identical in its nature with pure knowledge¹. Madhva and his followers, however, consider the characteristics mentioned in the *sūtra* as essential and do not think that the essences of *ānanda* and *jīva* are in any sense anything else but qualities, in which case they would not be essences identical with Brahman, as would be required by what may be called a *svarūpa-lakṣaṇa*; for *ānanda* is as much a characteristic as any other characteristic is, and, if *ānanda* could be regarded as a defining essence, then the characteristic of being the cause of the world might also be regarded as a defining essence². If His being the cause involves qualities unessential to Himself, then in His purity He could neither be *ānanda*, whether as a class notion, as a desirable feeling (*anukūla-vedanā*), as being the dearest one (*parama-premāspada*), or as being opposed to sorrow; for, if these be the nature of *ānanda*, it must by its very nature be associated with inessential traits (*sopādhikatvāt*). So knowledge also must express something and must therefore by its very nature be connected with something outside of itself (*artha-prakāśātmakatvena sopādhikam eva*); for knowledge is inseparably connected with the knower and the known (*jñānasya jñātṛ-jñeya-sāpekṣatvāt*). It has been urged in the *Pañca-pādikā-vivaraṇa* that the knowledge which forms the essential defining characteristic of Brahman is all-illuminating revelation which is not in any way conditioned by its being dependent on, or its being inseparably connected with, objects³. But the fact that it can reveal everything implies possession of power, and this power is necessarily connected with the object with reference to which it is effective. Moreover, if any power can be considered as being an essential defining characteristic, then the power of producing the world and of affecting it in other ways (as referred to in the *sūtra*) might also be considered as an essential defining characteristic⁴. The objection, that the essence (*svarūpa*) of anything cannot be expressed by a reference to anything other than itself, is not valid; for a thing wholly unrelated

⁴ *sāmartyasya śakti-rūpatvād, viśaya-nirūpyatvāc ca, jagaj-jananādi-sāmartyasyaiva svarūpa-lakṣaṇatvopapattē ca. Tātpariyā-candrikā*, p. 141.

to, and devoid of all reference to, any other thing cannot be known (*svārūpasya sva-vedyatvāt*). It is further held by the opponents that an accidental defining characteristic like that of the Brahman being the cause of the world (*taṭastha-lakṣaṇa*)—as, for example, indicating a house by a temporary association, as that of a crow sitting on the roof of it—is not an inherent and intrinsic characteristic (*ananvayī*), whereas an essential characteristic like *ānanda* is an inherent and intrinsic constituent (*kāryānvayī*) of the thing. But such an objection cannot rule out the causality, etc., of Brahman as being inessential; for we want to know Brahman in its essence as the cause or *kāraṇa* of the world, as much as by any other characteristic. The essential feature of Brahman is its fullness of qualities, as the ultimate cause of production, etc., and these are in no sense less essential than His nature as *ānanda*. Like the power of burning in fire, these powers of world-creation, etc., are coextensive with the essence of Brahman. It is indeed surprising, says Vyāsa-tīrtha, that the Śāṅkarites should enter into any long discussion with regard to the distinction of essential and accidental definitions; for all definitions mean the making known of object by its distinctive characteristics such as are well known¹. But, as the Śāṅkarites believe in absolutely unqualified Brahman, how do they undertake to define it? All definitions must proceed through the means of known qualities². Whether a definition (*lakṣaṇa*) be *svārūpa* or *taṭastha*, it must proceed by way of enumerating distinctive characteristic qualities; and, as the Brahman of the opponents has no qualities, it cannot be defined at all.

Rāmānuja in his interpretation of this *sūtra* asserted that the characteristic qualities and powers of Brahman referred to in the *sūtra* belong to Brahman as He is immanent; but the Upaniṣads also define Him in His essential characteristic features, as transcendent, by speaking of Him as being truth, knowledge, the infinite (*satyaṃ jñānam anantaṃ brahma*); and this distinguishes Him from the souls and inanimate objects, which also are held within Him. But Vyāsa-tīrtha points out that Madhva has by implication denied this in his *Anuvyākhyāna*, where he distinctly asserted the causality of

¹ *prasiddhasya asādhāraṇa-dharmasya lakṣaṇatvena*; also *asādhāraṇa-dharmo hi lakṣaṇam parikīrtiyate*. *Tātparya-candrikā*, pp. 140, 143.

² *svārūpaṃ vā taṭasthaṃ vā lakṣaṇaṃ bhedaḥ katham*. *Ibid.* p. 143.

Brahman as its own intrinsic constitutive definition¹. Vyāsa-tīrtha says that in defence of the Rāmānuja point of view it may be urged that, as a special form of a jug would differentiate it from all other things, yet its possession of smell constitutes its nature as earth, so, though causality, etc., differentiate Brahman from others, yet it is His nature as truth, knowledge and infinite that really differentiates Him from souls and inanimate objects. But Vyāsa-tīrtha contends that this is wrong, since the special form of a jug differentiates it from cloth, etc., and not from earth; an earthen jug is itself earth; but the special form which distinguishes an earthen jug from other objects (such as cloth, etc.) also by that very fact shows that it belongs to a class different from them. Here also the causality which differentiates Brahman from souls, etc., also shows that He is different in nature from them. So the fact that Brahman is the ultimate cause of production, etc., constitutes its essential defining characteristic. He, Brahman, not only possesses these qualities, but in reality His qualities are infinite, and their possession forms His defining characteristic (*ananta-guṇa-sattvam eva brahmano lakṣaṇam*)².

The two principal Vedānta texts by which the Śāṅkarites seek to establish their theory of absolute monism (*advaita*) are "that art thou" (*tat tvam asi*) and "Brahma is truth, knowledge, infinite" (*satyaṃ jñānam anantam brahma*). Now Madhva urges that, since these may also be otherwise interpreted directly (*mukhyārtha*) on the basis of difference, it is not proper to explain them on the basis of non-difference with an indirect and distant meaning (*lakṣaṇa*)³. The *Nyāya-sudhā* points out that with the monistic interpretation the difficulty arises, how to identify the qualityless (*nirguṇa*) with the qualified (*saguṇa*), as in the case of the souls; the qualityless is indeterminable by itself (*nirguṇa syaiva nirūpayitum aśakyatvāt*)⁴. If this *nirguṇa brahma* were entirely different from the *saguṇa* Brahman or Īśvara acknowledged by the Śāṅkarites, then there would be a duality; if the relation is held to be indefinable (*anirvacanīya*),

¹ *asyodbhavādi-hetutvaṃ sākṣād eva sva-lakṣaṇam. Op. cit.*

² *Nyāya-sudhā*, p. 107.

³ *bhedenaiva tu mukhyārtha-sambhave lakṣaṇam kutaḥ. Amvyaḥkhyāna*, p. 5. *namu abhedam upādāya sūtra-lakṣaṇam vā āśrayanīya-bhedam upādāya mukhya-vṛttir na iti sandihyate; vayaṃ tu brūmaḥ, dvitīya eva pakṣaḥ śreyān. Nyāya-sudhā*, p. 101.

⁴ *Ibid.* p. 102.

then the criticisms against the indefinable suggested in the first *sūtra* apply to it¹. If, however, it is urged that the unity or identity referred to in the above passages is with regard to the Brahman as pure self-revealing intelligence and the same element as forming the principal reality of *jīva*, then it becomes difficult to understand how the Upaniṣads can have the presumption of revealing the self-revealing intelligence². Moreover, it may be objected that, if the Brahman is nothing else but pure intelligence, then its "unity" with *jīva* as taught by the Upaniṣads, being different from Brahman, is false; for "unity" is not pure intelligence, and, if unity is false, then duality becomes true. If the "unity" was identical with pure intelligence, then with the self-shining of pure intelligence there would be the self-shining of "unity" too, and even for expressing the "unity" it would not be necessary to take the help of the Upaniṣads or of anything else.

Another question of importance arises in connection with the attribution of the epithets "truth," "knowledge," "infinite" to Brahman. Is Brahman, to whom all these qualities are attributed, a simple unity in Himself, or is He a complex of many qualities, truth, knowledge, infinite, etc., which have different connotations and are not synonymous? Pure intelligence (*caitanya*) is one, but these epithets are many. How can we conceive the one *caitanya* to coexist in itself with the many attributes which are said to belong to it? How is the plurality of these attributes to be implied in the unity of the one³? To this the answer that Madhva gives in his *Anuvyākhyāna*, which is further explained by Jaya-tīrtha, is that it has to be admitted that in the unity of Brahman there is some special virtue (*atiśaya*) which represents difference and serves its purpose; there is no other way of solving the difficulty, and this is the only solution left (*gatya-antarābhāvād arthāpattiyā*). This special virtue, which serves to hold and reconcile plurality without sacrificing its

¹ In such Upaniṣad passages as *sākṣī cet kevalo nirguṇaś ca* (*Śvet.* vi. 11) the word *nirguṇa*, "qualityless," could be given a modified meaning, in view of the fact that the strict direct meaning is not possible even in the context of the sentence; for in the very passage itself the *brahman* is said to be not only *nirguṇa*, but *sākṣī* (direct perceiver) also, and this is evidently a *guṇa*. It is not possible to attribute a *guṇa* and to call it *nirguṇa* at the same time. *Nyāya-sudhā*, p. 102.

² *svaprakāśa-caitanyaṁ brahmaṁ ca śāstra-pratipādyam ceti vyāhatam.*

Ibid. p. 103.

³ *caitanyaṁ ekaṁ satyatvādīny anekāni iti saṁkhyā-vailakṣaṇyam ityādi-bhedakāryāṇi cāvagamyante.* *Ibid.* p. 106.

unity, is called by the Madhvas *viśeṣa*; this *viśeṣa* exists not only in Brahman, but in all other things. Thus, for example, a cloth is not different from its whiteness, since both of them form one indissoluble whole. So it has to be admitted that there is in cloth such a special virtue, a *viśeṣa*, by which it remains one with itself and yet shows the plurality of qualities with which it is sure to form a whole. These *viśeṣas* are infinite in number in the infinite number of objects, though there is no intrinsic difference in the nature of these *viśeṣas*. Each whole or unity may be said to possess as many *viśeṣas* as there are qualities through which it expresses itself, and each of these *viśeṣas* is different from the others according to the difference of the quality with which it is associated; but these *viśeṣas* are not considered as requiring other *viśeṣas* for their connection with the thing, and so there is no vicious infinite (*anavasthā*). So there is not only one *viśeṣa* in each thing, but there are as many *viśeṣas* as there are different qualities unified with it¹.

The result attained by the first two *sūtras*, then, is that Brahman, as defined by the second *sūtra*, is the object of enquiry for those who seek release.

Interpretation of Brahma-sūtra 1. 1. 3-4.

Śaṅkara gives two interpretations of this *sūtra*, *śāstra-yonitvāt* ("because of its being scripture-cause"), expounding the compound "scripture-cause" in two ways, first, as "the cause of the scriptures," secondly as "that of which the scripture is the cause or source of revelation or *pramāṇa*." The force of the first meaning is that Brahman is omniscient not only as being the cause of the production, etc., of the world, but also as being the cause of the revelation of the Vedas, since no one but an omniscient being could be the source of the Vedas, which are the greatest repository of knowledge unfathomable by human intellect. The second meaning suggests that it is the Vedas only which can prove to us that Brahman is the cause of the production, etc., of the world².

¹ *tepy ukta-lakṣaṇa-viśeṣā aśeṣato'pi vastuṣu pratyekam anantāḥ santy ato nokta-doṣāvakāśaḥ; anantā iti upalakṣaṇam; yatra yāvanto vyavahārās tatra tāvanto viśeṣā iti jñātavyam. Ibid. p. 106.*

It may be noted in this connection that the Madhvas were more or less forced to this position of accepting the *viśeṣas*, as they could not accept the *samavāya* relation of the *Nyāya-vaiśeṣika*, which is rejected by the *Brahma-sūtras*.

² *śāstrād eva pramāṇāj jagato janmādi-kāraṇam brahma adhiḡgamyate.*

Bhāṣya of Śaṅkara, 1. 1. 3.

The Madhvas accept the second meaning and object to the first, on the ground that His being the source of the Vedas does not in any way add anything to His omniscience beyond what was implied in His being the cause of the production, etc., of the world, as described in the first *sūtra*¹. The commentators on Madhva's *Bhāṣya* and *Anuvyākhyāna*, Jaya-tirtha, Vyāsa-tirtha and others, following Madhva's explicit statements, argue in detail that the word "scripture" (*śāstra*) in the *sūtra* means the Vedas *R̥k*, *Sāman*, *Yajus* and *Atharva*, and not the *Śaiva āgamas*, which hold that Śiva is the cause of the production, etc., of the world². The Madhva commentators try to emphasize the fact that inference by itself is helpless to prove Brahman to be the cause of the production, etc., of the world.

Sūtra I. 1. 4. Śāṅkara here supposes a *mīmāṃsā* objection that the Vedas cannot have for their purport the establishing of Brahman, since they are always interested in orders and prohibitions with reference to some kind of action. He refutes it by saying that a proper textual study of the Upaniṣads shows that their principal purport is the establishing of pure Brahman, and that it has no connection whatever with the performance of any action.

Madhva holds that this *sūtra* (*tat tu samanvayāt*, "that however through proper relationing") means that it is intended to indicate that all the scriptures (*śāstra*) agree in holding Viṣṇu as Brahman and the ultimate cause, and not Śiva or any other gods, as held by

¹ *katham ca ananta-padārthakasya prapañcasya kartṛtvena na sphuṭam tad-eka-deśa-veda-kāraṇatvena sphuṭibhaviṣyati sarvajñam*. Jaya-tirtha further argues that there is no such concomitance whereby from the authorship of the Vedas omniscience can be inferred. Again, if the authorship of the Vedas means the literary composition representing facts known by sense experience or inference, it must be admitted that the Vedas have been composed like any other ordinary book (*pauruṣeya*); and, if the authorship means only utterance like that by a teacher, that may not mean even a thorough knowledge of the contents of the Vedas. *Nyāya-sudhā*, pp. 111, 112.

² The other scriptures which the Madhvas admitted as authoritative are the *Pañcarātra*, *Mahābhārata* and *Rāmāyaṇa* and not the *Sāṃkhya*, *Yoga* or *Pāṇupata*. Thus Madhva says in his *Bhāṣya*: *R̥g-yajuh-sāmātharvaś ca bhārataṃ pañca-rātrakam, mūla-rāmāyaṇam caiva śāstrāṇṭīty abhidhīyate*. Whatever else agrees with these has to be accepted as valid, and the other so-called scriptures have to be rejected. The *Pañcarātra* and the Vedas are in thorough agreement, and therefore the word *śāstra* in the *sūtra* refers to the *Pañcarātra*; so that by declaring the validity of the *Pañcarātra* alone the Vedas, which agree with it, are also accepted as valid, but everything else which is in disagreement with it is rejected. Thus Madhva says in his *bhāṣya* on this *sūtra*: *veda-pañcarātrayor aikyābhīprāyeṇa pañca-rātrasyaiva prāmāṇyam uktam*.

others. The *mīmāṃsā* objection and Śaṅkara's own views are, of course, all rejected on grounds similar to those already dealt with in the first *sūtra*¹.

A general review of the other important topics of the *Brahma-sūtras*.

On the topic (*adhikaraṇa*) contained in *sūtras* 5-11 Śaṅkara suggests the following argument against the supposed Sāṃkhya claim that the ultimate causality is attributed in the Upaniṣads to *prakṛti* and not to Brahman: he says that *prakṛti* is foreign to the Upaniṣads; for they speak of perceiving (*īkṣater nāśabdā*)², and perceiving can only be true of an intelligent agent. Brahman being all-revealing eternal intelligence, omniscience and perceiving (*īkṣati*) can very well be attributed to it. The word "perceiving" (*īkṣati*) of the text cannot be otherwise explained; for its reference to an intelligent agent is further emphasized by its being called *ātman* (self), a word whose application to conscious agents is well known³; and we are certain that the word *ātman* cannot mean *prakṛti*; for the instruction of liberation is given to it⁴. Moreover, the whole chapter ends in the same vein, and there is no further correction of the sense in which the *ātman*, etc., have been used, as might have been the case, if this *ātman* had been rejected later on as bearing a meaning irrelevant to the teaching of release⁵. Moreover, the cause referred to in the above passages is also spoken of in the same textual connection as being the last place of dissolution, to which everything returns⁶. Moreover, there is in all Vedānta texts⁷ a complete agreement in regard to such an interpretation, and there are also explicit statements of the Upaniṣads (*śrutatvāc ca Brahma-sūtra*, I. 1. 11), which declare an Īśvara to be the ultimate cause of the world⁸. So according to Śaṅkara the purport of this topic is that according to these *sūtras* Brahman is the ultimate cause and not *prakṛti*.

¹ See *Tātparyā-candrikā* (on I. 1. 4), pp. 201-4.

² The Upaniṣad passage referred to is *tad aikṣata bahu syām*, etc. *Chāndogya*, VI. 2. 3.

³ *gauṇas' cet nātma-śabdāt*, *Brahma-sūtra*, I. 1. 6; see also *anena jīvena ātmanā anupraviśya* (*Chāndogya*, VI. 3. 2).

⁴ *tan-miṣṭhasya mokṣopadeśāt*. *Ibid.* I. 1. 7; also text referred to. *Chāndogya*, VI. 14. 2.

⁵ *heyatva-vacanāc ca*. *Ibid.* I. 1. 8.

⁶ *svāpyayāt*, *ibid.* I. 1. 9; also *Chāndogya*, VI. 8. 1.

⁷ *gati-sāmānyāt*. *Ibid.* I. 1. 10.

⁸ *Śvetāśvatara*, VI. 9.

Madhva and his followers do not find any reference to a refutation of the Sāṃkhya doctrine, but a simple assertion of the fact that Brahman is not undescribed by the *śāstras*, because they themselves enjoin that He should be perceived¹. Unless Brahman could be described by the *śāstras*, there would be no meaning in their reference to the possibility of discussing it. This refers to the highest soul, Brahman, and not only to the lower and qualified soul, because it is said that liberation depends on it, and it is also said that the final return of all things in the great dissolution takes place in it; the *nirguṇa* Brahman is also definitely described in the Upaniṣad texts.

On the sixth topic (*sūtras* 12–19) Śaṅkara tries to prove, by a comparison of the several passages from the *Taittirīya Upaniṣad* and the supposed objections from the other Upaniṣads, that the word “blissful,” *ānandamaya* (in *Taittirīya*, II. 5) refers to the supreme soul or Brahman; Madhva and his followers contend that the word *ānandamaya* refers to Viṣṇu and to him alone, and not to any other deity. All the other *sūtras* of this *adhikaraṇa* are explained as giving contextual references and reasons in support of this interpretation².

¹ *Brahma-sūtra*, I. 1. 5. This is quite a different interpretation of the rule and surely not less cogent. The objection raised against Śaṅkara's interpretation is that his reference to the Sāṃkhya as being foreign to the Vedas (*aśabda*) is not accepted by the adherents of the Sāṃkhya, and there are certainly passages in the Upaniṣads (e.g. *Śvet.* IV. 51) which have to be taken as distinct references to the Sāṃkhya. Moreover, if Brahman could not be grasped and described by any of the *pramāṇas*, there would be hardly any proof of its existence; it would be like the hare's horn.

² The *Nyāya-sudhā* points out that Śaṅkara's commentary is based on an untenable hypothesis that two kinds of Brahman are referred to in the Upaniṣads, Brahman as under the cover of *avidyā*, and as pure Brahman. Of the Upaniṣad passages (those which refer to the former), some are said to be for purposes of worship and consequent material advantage (*upāsanāni abhyudayārthāni*), some for attaining gradually the progressive stages towards liberation (*krama-muktyarthāni*), etc. Jayatīrtha says that this theory is wholly wrong, since it is quite unwarrantable to hold that Brahman is of two kinds (*brahmaṇo dvairūpyasya aprāmāṇikatvāt*); for all the Vedānta texts refer to Nārāyaṇa, the repository of all qualities, but some describe him as being endowed with omniscience, omnipotence, all-controlling power, beauty, etc., some with the negative qualities of being devoid of sin, sorrow, ordinary elemental bodies (*prākṛta-bhāntikaravigraha-rahitatva*), and others describe Him as unspeakable and beyond speech and thought (to show His deep and mysterious character); others again leave out all the qualities and describe Him as the one, and yet others as the soul of all (*sarvātmaka*); but these are all but different descriptions of the supreme person Viṣṇu (*parama-puruṣa*), and do not in any way refer to two different kinds of Brahman. It is only through a misconception (that Brahman has only a unitary

On the seventh topic (*sūtras* 20, 21) Śaṅkara discusses the meaning of a passage (*Chāndogya*, I. 6. 6, 7, 8), and comes to the conclusion that the person referred to as being in the orb of the sun and the eye is supreme Brahman. But Madhva refers to a quite different passage and quite a different relation of contexts; and he holds that the indwelling person referred to in that passage is Nārāyaṇa, the supreme lord¹. On the eighth topic (*sūtra* 22) Śaṅkara discusses *Chāndogya*, I. 9. 1, and concludes that the word *ākāśa* there does not mean elemental *ākāśa*, but supreme Brahman. Madhva also takes the same passage as being indicated by the *sūtra* and comes to the same conclusion; but with him supreme Brahman always means Viṣṇu. On the ninth topic (*sūtra* 23) Śaṅkara discusses *Chāndogya*, I. 11. 4, 5, and concludes that the word *prāṇa* there is used to denote Brahman and not the ordinary *prāṇa*, which is a modification of *vāyu*. Madhva, however, comes to the same conclusion with reference to the use of the word *prāṇa* in another passage of the *Taittirīya Āraṇyaka*². On the tenth topic (*sūtras* 24-27) Śaṅkara discusses *Chāndogya*, III. 13. 7, and concludes that the word *jyotiḥ* there means Brahman and not ordinary light. Madhva does not discuss this topic in the *Anuvyākhyāna*; in his *Bhāṣya* he comes to the same conclusion, but with reference to a quite different text. The 25th *sūtra*, which according to Śaṅkara belongs to the tenth topic, is considered by Madhva as forming a separate topic, where the word *chandas*, meaning *gāyatrī* (*Chāndogya*, III. 12. 1, *gāyatrī vā idaṃ sarvaṃ bhūtam*, “*gāyatrī* is all this”), means Viṣṇu and not the metre of that name or the combination of letters forming that metre. The next and last topic of the first chapter of the first book (*sūtras* 28-31) is explained by Śaṅkara as referring to the *Kauṣītaki* passage III. 1. 2, 3, where the word *prāṇa* is said by him to refer to Brahman, and not to any air current. Madhva, however, takes this topic in reference to a

nature) that these have been so interpreted by Śaṅkara, who had no previous teachers who knew the Vedas to guide him (*tato vyākula-buddhayo guru-sampradāya-vikalāśrūta-veda-vyākhyātāraḥ sarvatrāpi veda-rūpatām amusandadhānā vedam chindanti*). *Nyāya-sudhā*, p. 124.

¹ According to Madhva doubt occurs in regard to the following passage of the *Taittirīya*, whether the word *antaḥ-praviṣṭa* in it refers to the supreme self or to some other being: *antaḥ-praviṣṭaṃ kartāraṃ etaṃ antaś candramasi manasā carantaṃ sahaiva santaṃ na vijānanti devāḥ*. *Taittirīya Āraṇyaka*, III. 11. 5.

² *tad vai tvam prāṇo' bhavaḥ; mahān bhagati; prajāpateḥ; bhujāḥ kariṣya-māṇaḥ; yaddevān prāṇayanneveti*. *Ibid*.

number of other passages occurring in the *Aitareya*, where the word *prāṇa* occurs, and holds that textual comparisons show that the word in those passages refers to Viṣṇu and not to ordinary air currents, or souls, etc.

The second chapter of the first book has altogether seven topics or subjects of discussion according to both Śaṅkara and Madhva. On the first topic Madhva, referring to certain Vedic passages, seeks to establish that they refer to Nārāyaṇa as the culmination of the fullness of all qualities¹. Though He is capable of rousing all the powers of all objects even from a distance, yet He in a sportive way (*līlayā*) is present everywhere and presides over the budding energies of all objects. It is further pointed out that the succeeding passages distinguish the all-pervading Brahman from *jīvas*, or souls, by putting the former in the accusative and the latter in the nominative case in such a way that there ought not to be any doubt that the references to the qualities of all-pervadingness, etc., are to Brahman and not to the *jīvas*². Śaṅkara, however, refers to an altogether different text (*Chāndogya*, III. 14. 1) as hinted at by the topic and concludes, after a discussion of textual comparisons, that the passage alludes to Īśvara and not to *jīva*. On the second topic Madhva raises with reference to *Bṛhad-āraṇyaka*, 1. 2. 5, the doubt whether the “eats” (*atti*) refers to the destructive agency of Viṣṇu or of Aditi, and decides in favour of the former, and states that Viṣṇu is also often called by the name Aditi³. Śaṅkara, how-

¹ *Aitareya-Āraṇyaka*, III. 2. 3.

² *Ibid.*

³ Some interesting points on this topic are here noted by Jaya-tīrtha in his *Nyāya-sūdhā* on the *Anuvyākhyāna*. Thus Jaya-tīrtha says that an objection may be made that God, being the producer and the destroyer of the universe, is consequently eternal, but actions (*kriyā*) are non-eternal: and how then can the two contradictory qualities reside in God (*nityānityayoḥ katham abhedah syāt*)? The answer to the objection is that even actions in God are static (*na kevalam īśvaraḥ sthiraḥ api tu sa tadya-viśeṣa-dharmo'pi kṛyā-rūpaḥ sthiraḥ*); and this is not impossible, since there is no proof that all actions must be of a vibratory (*pariṣpanda*) nature (which may not exist in God). Again, there can be no objection to admitting vibrations to be eternally existing in God. As motion or action can as a result of continuous existence for many moments produce contacts and so forth, so eternally existing motion or action could produce contacts and separations at particular moments (*yathā aneka-kāla-vartiny api kriyā kadācit saṁyogādī ārabhate na yāvat sattvam, tathā nityāpi kadācit saṁyogādī ārabhatām ko virodhah*). All actions exist eternally in God in potential form as *śakti*, and it is only when this is actualized (*vyakti*) that real transformations of energy and performance of work happen (*śakti-rūpeṇa sthiraḥ sa yadā vyajyate, tadā vyavahārāl-ambanam*); actuality is but a condition or special state of potential power (*vyakti-śabdena śakter eva avasthāviśeṣasya vivakṣitatvāt*). In this connection Jaya-tīrtha

ever, holds that the topic relates to *Kaṭha*, I. 2. 24, and concludes that the “eater” there alluded to is *Īśvara* and not *jīva* or *agni*¹. The third topic relates according to both Madhva and Śaṅkara to *Kaṭha*, I. 3. 1, and the dual agents alluded to there are according to Madhva two forms of *Īśvara*, while according to Śaṅkara they are *jīva* and *Īśvara*. Madhva wishes to lay stress on what he thinks the most important point in relation to this topic, viz., that *brahma* and *jīva* are, upon the cumulative evidence of the Upaniṣad texts, entirely distinct². On the fourth topic Madhva alludes to a passage in *Chāndogya*, IV. 15, where a doubt seems to arise about the identity of the person who is there alluded to as being seen in the eye, i.e., whether this person is fire (*agni*) or Viṣṇu, and Madhva concludes on textual grounds that it is Viṣṇu³. Śaṅkara also alludes to the same passage here; he comes to a similar conclusion, and holds that the person referred to is *Īśvara*. The fifth topic is said, according to both Śaṅkara and Madhva, to allude to *Bṛhad-āraṇyaka*, III. 7. 1. 2, where an inner controller (*antar-yāmin*) of the world is referred to, and it is concluded that this inner controller is Viṣṇu (*Īśvara* according to Śaṅkara) or *jīva*. One of the *sūtras* of this topic (*śārīraś-cobhayē’pi hi bhedenainam adhīyate*) points out clearly that in both recensions of the *Bṛhad-āraṇyaka*, III. 7. 22 (the Kaṇvas and the Mādhyandinas), the soul (*śārīra*) is distinctly said to be different from the inner controller. Śaṅkara could not ignore this; but he, of course, thinks that the difference is due to the fact that the *jīva* is limited by the limitation of *ajñāna*, as the unlimited *ākāśa* is by a jug (*ghaṭākāśavad upādhi-paricchinnatvāt*). Vyāsa-tīrtha, in his *Tātparyā-candrikā*, makes this an occasion for a severe criticism of the adherents of the theory of Advaita Vedānta.

also indulges in a long argument and discussion to prove that *karma* or actions are directly perceived and not merely inferred (*pratyakṣāśritam karma pratyakṣam eva*).

¹ The *Tātparyā-candrikā* objects to Śaṅkara’s interpretation, pointing out that the word *carācara* in the *sūtra* is not mentioned in the text referred to, and the word *odana* in the text ought to mean destruction (*saṃhārya*). Madhva quotes the *Skanda* and *Brahma-vaivarta purāṇas* in support of his view.

² Madhva quotes in support of his view *Brahma-purāṇa*, *Pañgi-śruti*, *Bhāllaveya-śruti*, etc. Śaṅkara, however, seems to be fighting with an opponent (*ākṣeptr*) who held that the dual agents alluded to in the passage cannot be either *buddhi* and *jīva* or *Jīva* and *Īśvara*.

³ Jaya-tīrtha, in his *Nyāya-sudhā* on this topic, points out that the quality that we possess of being controlled by God and the necessity that He should always remain as the controller have also been so ordained by God.

He says that, if, in spite of such manifest declarations of duality, these *sūtras* are otherwise explained, then even the Buddhists may be considered to be making a right interpretation of the *sūtras*, if they explain their purport to be the unreality of everything except the *śūnya* ("the Void"). The Buddhists make their opposition from outside the Vedas, but the holders of the *māyā* doctrine do it from within the Vedas and are therefore the more dangerous¹. The sixth topic is said to relate to the *Muṇḍaka*, I. 1. 6 (according to both Madhva and Śaṅkara), and it is held by both that *bhūta-yoni* there and *akṣara* in *Muṇḍaka*, I. 1. 7, refer to Viṣṇu (Īśvara according to Śaṅkara) and not to *prakṛti* or *jīva*. In *sūtra* 26 (*rūpōpanyāsāc ca*) of this topic Śaṅkara first tries to refute a previous interpretation of it, attributed to Vṛttikāra, who is supposed to hold here (on the ground of the contents of the *Muṇḍaka* passages (II. 1. 4) immediately following it) the view that Īśvara has for His self the entire changing universe (*sarva-vikārātmakam rūpam upanyasyamānam paśyāmaḥ*). With reference to *sūtra* 21 of this topic, Vyāsatīrtha points out in his *Tātparya-candrikā* that, in opposing the supposition that, since only inanimate things can be the cause of other immediate things, it is only *prakṛti* that can be the cause of this immediate world; Vācaspati points out that in the occurrence of illusions through illusory superimpositions without real change (*vivarta*) there is no condition that there should be any similarity between the basis of illusion (*adhiṣṭhāna*) and the illusion imposed (*āropya*) on it. There is nothing to prevent illusions taking place through the perceiver's mental deficiencies, his ignorance or passions, without any similarity. The world is an illusory imposition on Brahman, the pure and unchangeable:

*vivartas tu prapañco'yam brahmaṇo pariṇāmināḥ
anādi-sāadhanodbhūto na sārūpyam apekṣate.*

Vyāsa-tīrtha, of course, cannot agree to this interpretation of Śaṅkara, and tries to argue on the basis of other Upaniṣad texts,

¹ *advaitibhir vyākriyate katham vā dvaitadūṣaṇam sūtrayatām savsiddhānta-tyāgam vinaiva tu yadi mithyārthavādinī sūtranāṭyeva kartavyam, sūtra-vyākhyā tarhi veda-bādhyā-mithyātva-bodhako bauddhāgamo'pi vedasya vyākhyā-rūpaḥ prasajyate, bauddho'pi brahma-sūtram vyākhyāyate yathā tathā bhavamiva mithyaiśo'rthāḥ kimtu tattvam śūnyameveti kīrttayet, asād-vetyādivacanam tasya syāt tattva-vedakam. svoktam śrutibhiḥ sūtre yatnena sādhitam mithyārthatām katham brūyāt sūtranām bhāṣyakṛt svyam. saugatā veda-bāhyā hi vedāprāmānya-vādināḥ, avaidikā iti jñātvā vaidikāḥ parivarjitāḥ. vedān praviśya vedānām aprāmānyam prasādhayan māyī tu yatnatas tyajyah.*

and also on the analogy of creation given there as of a spider (and not of the rope-snake, as would be the case with *vivarta*), that it should be admitted that the qualified Viṣṇu is referred to here¹. The seventh topic is said to relate to *Chāndogya*, v. 11, and the doubt arises whether the word *Vaiśvānara* used there refers to fire or to Viṣṇu; Madhva, upon a comparison of contextual passages, decides in favour of the latter (Śaṅkara prefers Īśvara)².

The first topic of the third chapter of the first book is said to allude to *Muṇḍaka*, II. 11. 5, and it is held by Madhva that the "abode of Heaven and earth" (*dyu-bhṛv-ādy-āyatana*) refers to Viṣṇu and not to Rudra. Śaṅkara holds that it signifies Īśvara and not *prakṛti*, *vāyu* or *jīva*³. The second topic is said to relate to certain passages in the *Chāndogya* (such as VII. 23, 24, VII. 15, 1, etc.), where *prāṇa* is described as great, and the conclusions of Madhva and Śaṅkara respectively are that *prāṇa* here means Viṣṇu and Īśvara. The third topic is said to relate to *Bṛhad-āranyaka*, III. 8, 7, 8, where the word *akṣara* is said to mean Viṣṇu according to Madhva and Brahman according to Śaṅkara, not "alphabetic sign," which also is ordinarily meant by that word. The fourth topic alludes, according to Madhva, to *Chāndogya*, VI. 2. 1, and it is held that the word *sat*, there used, denotes Viṣṇu and not *prakṛti*, as the word *aikṣata* ("perceived") occurs in the same context. With Śaṅkara the topic alludes to *Praśna*, v. 2, 5. This is opposed by Vyāsa-tīrtha in his *Tātparyā-candrikā* on textual grounds⁴. The fifth topic is said to allude to *Chāndogya*, VIII. 1. 1, and the word *ākāśa* there used is said to refer to Viṣṇu⁵. The sixth topic is said to relate to the *Muṇḍaka*, and the light there alluded to is said to be the light of *brahman* and not some other light or soul. The seventh topic is

¹ Jaya-tīrtha discusses on this topic, in accordance with the discussions of the *Anuvyākhyāna*, the reality of negative qualifications, and argues that negation, as otherness from, has a full substantive force. Thus such qualifications of Brahman as *adṛśya*, etc., are real qualities of Him.

² With reference to rule 26 of this topic (I. 2. 26) Śaṅkara notes a different reading (*puruṣavidham api cainam adhiyate*) for that which he accepts (*puruṣam api cainam adhiyate*). The former, however, is the reading accepted by Madhva.

³ In the concluding portions of the first rule of this topic Śaṅkara refers to the views of some other interpreter as *apara āha*. It is hard to identify him; no clue is given by any of the commentators on Śaṅkara.

⁴ *Tātparyā-candrikā*, pp. 610-12. In the first rule of this topic Śaṅkara quotes the view of some other interpreter, which he tries to refute.

⁵ In *sūtra* 19 of this topic a different interpretation of *Chāndogya*, VIII. 11, by some other interpreter is referred to by Śaṅkara. He also refers in this *sūtra* to more than one interpretation of the *Brahma-sūtra*.

said to allude to *Kaṭha*, II. 4. 13, and Madhva holds that the word "Lord" (Īśvara), there used, signifies not air, but Viṣṇu. Śaṅkara, however, thinks that the difficulty is with regard to another word of the sentence, viz., *puruṣa*, which according to him means Īśvara and not *jīva*. The eighth topic purports to establish that even the gods are entitled to higher knowledge. The tenth topic is said to allude to *Kaṭha*, II. 6. 2, and it is held that the *prāṇa*, which is there referred to as shaking the world, is neither thunder nor wind, but God. The eleventh topic, according to Madhva, alludes to *Bṛhad-āranyaka*, IV. 3. 7, and it is held that the word *jyotiḥ* used there refers to Viṣṇu and not to Jīva. Śaṅkara, however, thinks that the topic alludes to *Chāndogya*, VIII. 12. 3, and maintains that the word *jyotiḥ* used there means Brahman and not the disc of the Sun. The twelfth topic is said to allude to *Chāndogya*, VIII. 14. 1, and *ākāśa*, as there used, is said to refer to Viṣṇu according to Madhva and to Brahman according to Śaṅkara. The thirteenth topic, according to Madhva, alludes to *Bṛhad-āranyaka*, IV. 3. 15, and it is held that *asaṅga* ("untouched") in this passage refers to Viṣṇu and not to Jīva. Śaṅkara, however, thinks that the allusion is to *Bṛhad-āranyaka*, IV. 3. 7, and that *vijñānamaya* ("of the nature of consciousness") refers to Brahman and not to Jīva.

The fourth chapter of the first book is divided into seven topics. Of these the first topic discusses the possible meaning of *avyakta* in *Kaṭha*, I. 3. 11, and Śaṅkara holds that it means "human body," while Madhva says that it means Viṣṇu and not the *prakṛti* of the Sāṃkhya¹. The second topic, containing three *sūtras*, is supposed to allude to *Śvetāśvatara*, IV. 5, according to Śaṅkara, who holds that it refers to the material principles of fire, water and earth and not to

¹ The word *avyakta*, ordinarily used to denote *prakṛti* on account of its subtleness of nature, can very aptly be used to denote Brahman, who is the subtlest of all and who by virtue of that subtlety is the ultimate support (*āśraya*) of *prakṛti*. Śaṅkara's interpretation of *avyakta* as the subtle material causes of the body is untenable; for, if the direct meaning of *avyakta* is forsaken, then there is nothing to object to in its referring to the *prakṛti* of the Sāṃkhya. The supposed Sāṃkhya argument—that the assertion contained in the passage under discussion (that *avyakta* is superior (*parā*) to *mahat* and *puruṣa* is superior to *avyakta*) can be true only if by *avyakta prakṛti* is meant here—is not true; for since all qualities of *prakṛti* are dependent on God, attributes which could be applied to *prakṛti* could also be applied to God its master (*pradhānādīgata-parāvaratvādi-dharmāṇāṃ bhagavad-adhīnatvāt*). *Tāttva-prakāśikā*, p. 67.

In this topic the *sūtra*, *avadatīti cen na prājño hi prakaraṇāt* (I. 4. 5), as read by Śaṅkara, is split up by Madhva into two *sūtras*, *avadatīti cen na prājño hi* and *prakaraṇāt*, which are counted as I. 4. 5 and I. 4. 6 respectively.

*prakṛti*¹; according to Madhva it is more an extension of the previous topic for the purpose of emphasizing the fact that, like many other words (*camasa*, etc.), *avyakta* here means Viṣṇu and not *prakṛti*.

With Madhva, however, the second topic begins with *sūtra* I. 4. 9, and not with I. 4. 8 as with Śaṅkara. With Madhva the second topic is restricted to I. 4. 9 and I. 4. 10, and it alludes to a passage beginning *vasante vasante jyotiṣā yaja*, which is regarded by others as alluding to the *Jyotiṣtoma* sacrifice; Madhva holds that the word *jyotiṣ* here used does not refer to the *Jyotiṣtoma* sacrifice, but to Viṣṇu. The third topic with both Madhva and Śaṅkara consists of *sūtras* 12, 13 and 14, and they both allude here to the same passage, viz., *Bṛhad-āraṇyaka*, IV. 4. 17; Śaṅkara thinks that it refers to the five *vāyus*, not to the twenty-five categories of the *Sāṃkhya*, but Madhva holds that it refers to Viṣṇu. He has been called “five” (*pañca-janāḥ*), possibly on account of the existence of five important qualities, such as of seeing (*caṅkṣuṣṭva*), of life (*prāṇatva*), etc. The fourth topic according to Śaṅkara conveys the view that, though there are many apparently contradictory statements in the Upaniṣads, there is no dispute or contradiction regarding the nature of the creator. Madhva, however, holds that the topic purports to establish that all the names, such as *ākāśa*, *vāyu*, etc., of things from which creation is said to have been made, refer to Viṣṇu. Madhva contends that the purport of the *Samanvaya-sūtra* (I. 1. 4) is that all words in the Upaniṣads refer to Viṣṇu and Viṣṇu alone, and it is in accordance with such a contention that these words (*ākāśa*, etc.), which seem to have a different meaning, should prove to refer to Viṣṇu and Viṣṇu alone. These proofs are, of course, almost always of a textual character. Thus, in support of this contention Madhva here quotes *Bṛhad-āraṇyaka*, III. 7. 12, etc. The fifth topic, consisting of I. 4. 16 (I. 4. 15 according to Śaṅkara), 23 (I. 4. 24 according to Śaṅkara) according to Madhva, is to the effect that there is no difficulty in the fact that words which in the Upaniṣads are intended to mean Viṣṇu are seen to have in ordinary linguistic usage quite different meanings. Śaṅkara, however, counts the topic from I. 4. 15–18 and holds that it alludes to *Kauṣītaki Brāhmaṇa*, IV. 19, and that the being who is there sought to be known is not Jīva, but Īśvara; this is opposed by Vyāsa Yati in his

¹ *ajam ekam lohita-śukla-kṛṣṇam*, etc. *Svetāśvatara*, IV. 5.

Tātparya-candrikā on grounds of *sūtra* context, which according to him does not justify a reference to the meanings of passages after the concluding remarks made shortly before in this very chapter¹. The sixth topic, consisting with Śaṅkara of I. 4. 19–22, alludes to *Bṛhād-āraṇyaka*, IV. 5. 6 and concludes that *ātman* there refers to Brahman and not to *jīva* enduring the cycles of *saṃsāra*. Madhva, however, thinks that the sixth topic (I. 4. 24–28) concludes after textual discussions that even those words, such as *prakṛti*, etc., which are of the feminine gender, denote Viṣṇu; for, since out of Viṣṇu everything is produced, there cannot be any objection to words of feminine gender being applied to him. With Śaṅkara, however, the seventh topic begins with I. 4. 23–27 (Śaṅkara's numbering), and in this he tries to prove that Brahman is not only the instrumental cause, but also the material cause (*upādāna-kāraṇa*) of the world. To this the obvious Madhva objections are that, if the material cause and the instrumental cause of the universe could be identical, that could also have been the case with regard to a jug; one could assume that the potter and the mud are identical. Stray objections are also taken against the *Bhāmatī*, which supposes that material cause here means "the basis of illusion" (*bhramā-dhīṣṭhāna*). Śaṅkara, however, has an eighth topic, consisting of only the last *sūtra* of I. 4, which corresponds to the seventh topic of Madhva. Madhva holds that the import of this topic is that such words as *asat* ("non-existent") or *sūnya* also denote Viṣṇu, since it is by His will that non-existence or even the hare's horn is what it is. Śaṅkara, however, holds that the topic means that so far the attempts at refutation were directed against the Sāṃkhya doctrine only, because this had some resemblance to the Vedānta doctrines, in that it agreed that cause and effect were identical and also in that it was partly accepted by some lawgivers, for instance Devala and others—while the other philosophical doctrines such as the Nyāya, Vaiśeṣika, etc., which are very remote from the Vedānta, do not require any refutation at all.

The first chapter of the second book contains thirteen topics. The whole chapter is devoted to refuting all objections from the point of view of the accepted works of other schools of thinkers. Madhva holds that the first topic is intended to refute the objections

¹ *Tātparya-candrikā*, p. 821. Other objections also are made to Śaṅkara's interpretation of this topic.

of other schools of believers, such as the Pāsupata, etc., who deny that Viṣṇu is the ultimate cause of the world¹. But these views have no validity, since these teachings are not in consonance with the teaching of the Vedas; all such doctrines are devoid of validity. The Vedas are not found to lend any support to the traditional canonical writings (*smṛti*) known as the *Pañcarātra* or to those of the Pāsupatas or of the Yoga, except in certain parts only. Śaṅkara, however, takes this topic as refuting the opinion that the Vedic texts are to be explained in consonance with the Sāṃkhya views on the ground that the Sāṃkhya represents some traditional canonical writings deserving of our respect; if models of interpretation were taken from the Sāṃkhya, that would come into conflict with other canonical writings such as Manu, the *Gītā*, etc., which deserve even greater respect than the Sāṃkhya. That the Sāṃkhya is entitled to respect is due to the fact that it is said to represent Kapila's view; but there is no proof that this Kapila is the great sage praised in the Upaniṣads; and, if this is not so, the Sāṃkhya's claim to respect vanishes.

The second topic of Madhva (third of Śaṅkara) is supposed by him to import that no one could, on account of the unfruitfulness of certain Vedic sacrifices in certain cases, doubt the validity of the Vedas, as one could the validity of the Pāsupata texts; for the Vedas are eternal and uncreated and, as such, are different from other texts. The authority of the Vedas has to be accepted on their own account and is independent of reference to any other text². If under the circumstances, in spite of the proper performance of any sacrifice, the desired results are not seen to follow, that must be explained as being due to some defects in the performance³. The

¹ According to Madhva the topic consists of the first three *sūtras*, while Śaṅkara has one topic for the first two *sūtras* and another for the third *sūtra* (*etena yogaḥ pratyuktaḥ*), and the latter merely asserts that the arguments given in the first topic against the Sāṃkhya refute the Yoga also.

² Madhva mentions here the following text as being alone self-valid, quoting it from the *Bhaviṣyat-purāṇa* in his *Bhāṣya* (II. 1. 5).

*rg-yajus-sāmātharvāś ca mūla-rāmāyaṇam tathā
bhāratam pañca-rātram ca veda ity eva śabditaḥ
purāṇāni ca yānīha vaiṣṇavā nivido, viduḥ
svataḥ-prāmāṇyam eteṣāṃ nātra kimcid vicāryate.*

³ There is not only a discrepancy in the division of topics, and the order of *sūtras*, between Madhva and Śaṅkara, but also addition of a new *sūtra* in Madhva's reading of the text of the *Brahma-sūtras*. Thus the second topic with Madhva consists of the fourth and the fifth *sūtras* only, and the third topic of the sixth and the seventh *sūtras*. But the fifth *sūtra* is the sixth in the Śaṅkara's text and the

main points of the third topic of Śaṅkara (*sūtras* 4–12) are as follows : It may be objected that the unconscious and impure world could not have been produced from the pure Brahman of the pure intelligence, and that this difference of the world as impure is also accepted in the Vedas; but this is not a valid objection; for the Upaniṣads admit that even inanimate objects like fire, earth, etc., are presided over by conscious agents or deities; and such examples as the production of hair, nails, etc., from conscious agents and of living insects from inanimate cow-dung, etc., show that it is not impossible that the unconscious world should be produced from Brahman, particularly when that is so stated in the Upaniṣads. There cannot be objection that this would damage the doctrine of coexistence or pre-existence of effects (*sat-kārya-vāda*); for the reality of the world, both in the present state and even before its production, consists of nothing but its nature as Brahman. In the state of dissolution everything returns to Brahman, and at each creation it all joins the world cycle, except the emancipated ones, as in the awakened state after dreams; and such returns of the world into Brahman cannot make the latter impure, just as a magician is not affected by his magic creations or just as the earth-forms of jug, etc., cannot affect their material, earth, when they are reduced thereto. Moreover, such objections would apply also to the objectors, the Sāṃkhya. But, since these difficult problems which cannot be settled by experience cannot be solved by inference—for, however strongly any inference is based, a clever logician may still find fault with it—we have to depend here entirely on Vedic texts.

The third topic of Madhva (*sūtras* 6, 7) is supposed to raise the objection that the Vedas are not trustworthy, because they make impossible statements, e.g., that the earth spoke (*mṛd abravīt*); the objection is refuted by the answer that references to such conscious actions are with regard to their presiding deities (*abhimāni-devatā*). The fourth topic of Madhva (*sūtras* 8–13) is intended to refute other supposed impossible assertions of the Vedas, such as that concerning the production from non-existence (*asat*); it is held that,

sixth of Madhva is the fifth of Śaṅkara. The seventh *sūtra* of Madhva is altogether absent in Śaṅkara's text. The third topic of Śaṅkara consists of *sūtras* 4–11. But the topics of Madhva are as follows: second topic, *sūtras* 4, 5; third topic, *sūtras* 5, 6, 7; fourth topic, *sūtras* 8–13, the thirteenth being the twelfth of Śaṅkara's text. Śaṅkara has for his fourth topic this *sūtra* alone.

if it is urged as an answer that there may be some kind of non-existence from which on the strength of Vedic assertions production is possible (though it is well-known that production is impossible from all kinds of non-existence, e.g., a hare's horn), yet in that case the state of dissolution (*pralaya*) would be a state of absolute non-existence (*sarvā sattva*), and that is impossible, since all productions are known to proceed from previous states of existence and all destructions must end in some residue¹. The answer given to these objections is that these questions cannot be decided merely by argument, which can be utilized to justify all sorts of conclusions. Śaṅkara's fourth topic consists of only the twelfth *sūtra*, which says that the objections of other schools of thought which are not generally accepted may similarly be disregarded.

The fifth topic of Śaṅkara (*sūtra* II. 1. 13) is supposed by him to signify that the objection that the enjoyer and the enjoyable cannot be identified, and that therefore in a similar way Brahman cannot be considered as the material cause of the world, cannot hold, since, in spite of identity, there may still be apparent differences due to certain supposed limitations, just as, in spite of the identity of the sea and the waves, there are points of view from which they may be considered different. According to Madhva, however, this topic means that those texts which speak of the union of *jīva* with Brahman are to be understood after the analogy of ordinary mixing of water with water; here, though the water is indistinguishably mixed, in the sense that the two cannot be separated, still the two have not become one, since there has been an excess in quantity at least. By this it is suggested that, though the *jīva* may be inseparably lost in Brahman, yet there must be at least some difference between them, such that there cannot be anything like perfect union of the one with the other².

The sixth topic, consisting of the same *sūtras* in Śaṅkara and Madhva (*sūtras* 14-20), is supposed by Śaṅkara to affirm the identity of cause and effect, Brahman and the world, and to hold that the apparent differences are positively disproved by scriptural texts and arguments. Śaṅkara holds that *Chāndogya*, VI. 1. 1,

¹ *sata utpattiḥ saśeṣa-vināśaś ca hi loke dr̥ṣṭaḥ*. *Madhva-bhāṣya*, II. 1. 10.

² It is pointed out by Vyāsa-tīrtha that Śaṅkara's interpretation is wrong, both with regard to the supposed opponent's view (*pūrva-pakṣa*) and as regards the answer (*siddhānta*). The illustration of the sea and the waves and foam (*phena-taraṅga-nyāya*) is hardly allowable on the *vivarta* view. *Tātparyā-candrikā*, p. 872.

definitely asserts the identity of Brahman with the world after the analogy of clay, which alone is considered to be real in all its modifications as jug, etc. So Brahman (like clay) alone is real and the world is considered to be its product (like jug, etc.). There are many Upaniṣad texts which reprove those who affirm the many as real. But this again contradicts ordinary experience, and the only compromise possible is that the many of the world have existence only so long as they appear, but, when once the Brahma-knowledge is attained, this unreal appearance vanishes like dream-experiences on awaking. But even from this unreal experience of the world and from the scriptures true Brahma-knowledge can be attained; for even through unreal fears real death might occur. The practical world (*vyāvahārika*) of ordinary experience exists only so long as the identity of the self with Brahman is not realized; but, once this is done, the unreal appearance of the world vanishes. The identity of cause and effect is also seen from the fact that it is only when the material cause (e.g. clay) exists that the effect (e.g. *ghaṭa*) exists, and the effects also ultimately return to the cause. Various other reasons are also adduced in II. 1. 18 in favour of the *sat-kārya-vāda*. Madhva, however, takes the topic in quite a different way. Brahman creates the world by Himself, without any help from independent instruments or other accessories; for all the accessories and instruments are dependent upon Him for their power. Arguing against Śaṅkara's interpretation, Vyāsa-tīrtha says that the unreal world cannot be identified with Brahman (*anṛtasya viśvasya satya-brahmābheda-yogāt*). Moreover, *abheda* cannot be taken in the sense in which the *Bhāmatī* takes it, namely, as meaning not "identity", but simply "want of difference"; for want of difference and identity are the same thing (*bhedābhāve abhedadhranūyāt*). Moreover, if there is no difference (*bheda*), then one cannot be called true and the other false (*bhedābhāve satyānṛta-vyavasthāyogāc ca*). The better course therefore is to admit both difference and non-difference. It cannot be said that *ananyatva* ("no-other-ness") is the same as imposition on Brahman (*brahmany āropitatvam*). What Vyāsa-tīrtha wants to convey by all this is that, even if the Upaniṣads proclaim the identity of Brahman and the world, not only does such an identity go against Śaṅkara's accepted thesis that the world is unreal and untrue and hence cannot be identified with Brahman, but his explanation that "identity" means illusory imposition

(*āropa*) is unacceptable, since no one thinks the conch-shell to be identical with its illusory imposed silver. There are no grounds for holding that knowledge of the basis should necessarily involve knowledge of the imposed, and so the former cannot be considered as the essence of the latter; and the knowledge of earth does not remove the knowledge of jug, etc., nor does knowledge of earth imply knowledge of its form as jug¹. Jaya-tīrtha in his *Nyāya-sudhā* on this topic formulates the causal doctrine of the Madhva school as being *bhedābheda* theory, which means that effect is in some ways identical with cause and in other ways different. Thus it opposes both the extremes—the complete difference of cause and effect as in Nyāya, and their complete identity as in Śaṅkara or the Sāṃkhya. He argues that, if the effect were already existing identical with the cause, then that also would be existent previously in its cause, and so on till the original root cause is reached. Now, since the root cause is never produced or destroyed, there could be no production or destruction of ordinary things, such as cloth, jug, etc., and there could be no difference between eternal entities, such as soul, etc., and non-eternal entities, such as jug, etc., and causal operations also would be useless. Moreover, if the effect (e.g., cloth) is previously existent in the cause (e.g., threads), it ought to be perceptible; if the existence of anything which is in no way perceptible has to be accepted, then even the existence of a hare's horn has to be admitted. If the effect (e.g., cloth) were already existent, then it could not be produced now; the effect, again, is largely different from the cause; for, even when the effect is destroyed, the cause remains; the causes are many, the effect is one; and the utility, appearance, etc., of them both also widely vary. It is urged sometimes that production of the effect means its manifestation (*vyakti*) and its destruction means cessation of manifestation (*avyakti*). This manifestation and non-manifestation would then mean perception (*upalabdhi*) and non-perception (*anupalabdhi*). That would mean that whatever is perceived at a particular time is produced at that time. If the effect were previously existent, why was it not perceived at that time? In case everything must exist, if it is to appear as produced, then it may be asked whether the manifestation (*abhivyakti*) was also existent before the appearance

¹ *mṛt-tattva-jñāne'pi tat-saṃsthāna-viśeṣatva-rūpa-ghaṭatvā-jñānena ghaṭas tattvato na jñāta iti vyavahārāt. Tātparya-candrikā, p. 879.*

of the effect; if so, then it ought to have been visible at the time; if the manifestation also requires another manifestation and that another, then there is infinite regress. The point of view of causal conception accepted by Jaya-tīrtha is that, if the cause of production exists, there is production, and if sufficient cause of destruction exists, there is destruction. A hare's horn is not produced, because there is not a sufficient cause for its production, and *ātman* is not destroyed, because there is not a sufficient cause for its destruction¹.

The seventh topic with Śaṅkara (*sūtras* 21–23) is said to answer the objection that, if Brahman and *jīva* are identical, then it is curious that Brahman should make Himself subject to old age, death, etc., or imprison Himself in the prison-house of this body, by pointing out that the creator and the individual souls are not one and the same, since the latter represent only conditional existence, due to ignorance; so the same Brahman has two different forms of existence, as Brahman and as *jīva*. According to Madhva the topic is intended to introduce a discussion in favour of Īśvara being the creator, as against the view that individuals themselves are the creators. According to him this topic consists of *sūtras* 21–26; with Śaṅkara, however, of *sūtras* 24 and 25, which according to him mean that, on account of the existence of diverse powers, it is possible that from one Brahman there should be the diversified creation. Again, *sūtras* 26–28 form according to Śaṅkara the ninth topic, which purports to establish that it is possible that the world should be produced from the bodiless Brahman. The eighth topic begins with Madhva from the 28th *sūtra*, as counted by him, and extends to the 32nd. According to Madhva the object of this topic is to refute the arguments urged against the all-creatorship of Viṣṇu. Thus it refutes the objections that, if Brahman worked without any instrument, His whole being might be involved even in creating a single straw, etc. Everything is possible in God, who possesses diverse kinds of power. According to Śaṅkara *sūtras* 30, 31, forming the tenth topic, maintain that Brahman possesses all powers and can perform everything without the aid of any sense organs. *Sūtras* 33 and 34 (32 and 33 of Śaṅkara's counting) form a new topic, which maintains that, though all His wishes are always fulfilled, yet He

¹ *yasya ca vināśa-kāraṇaṃ vidyate tat sad api nirudhyate, na ca khara-viṣāṇa-janmani ātmanvināśe vā kāraṇaṃ asti iti tayoṛ janana-vināśābhāvah.*

creates this world only in play for the good of all beings. The same is also here the purport of Śaṅkara's interpretation of this topic. The tenth topic, consisting of *sūtras* 34-36, is said to maintain that the rewards and punishments bestowed by God upon human beings are regulated by Him in accordance with the virtuous and sinful deeds performed by them, and that He does so out of His own sweet will to keep Himself firm in His principle of justice, and therefore He cannot be said to be in any way controlled in His actions by the *karma* of human beings, nor can He be accused of partiality or cruelty to anyone. The same is also the purport of Śaṅkara's interpretation of this topic. The chapter ends with the affirmation that the fact of Viṣṇu's being the fullness of all good qualities (*sadā-prāpta-sarva-sad-guṇam*) is absolutely unimpeachable.

In the second chapter of the second book, which is devoted to the refutation of the views of other systems of Indian thought, Madhva and Śaṅkara are largely in agreement. It is only in connexion with the twelfth topic, which Śaṅkara interprets as a refutation of the views of the Bhāgavata school, that there is any real divergence of opinion. For Madhva and his followers try to justify the authority of the *Pañcarātra* and interpret the topic accordingly, while Śaṅkara interprets it as a refutation of the Bhāgavata school.

The third chapter of the second book begins with a topic introducing a discussion of the possibility of the production of *ākāśa*, since two opposite sets of Upaniṣad texts are available on the subject. Madhva's followers distinguish two kinds of *ākāśa*, *ākāśa* as pure vacuity and *ākāśa* as element; according to them it is only the latter that is referred to in the Upaniṣad texts as being produced, while the former is described as eternal. The second, third, fourth, fifth and sixth topics relate to the production of air, the being (*sat*) or Brahman, fire and earth, and it is held that Brahman alone is originless and that everything else has come out of Him. These topics are almost the same in Śaṅkara and Madhva. The seventh topic maintains according to Madhva that Viṣṇu is not only the creator, but also the destroyer of the world. According to Śaṅkara, however, this topic asserts that the successive production of the elements from one another is due not to their own productive power, but to the productive power of God Himself. The eighth

topic holds that the destruction of elements takes place in an order inverse to that in which they were produced. Madhva accepts the same meaning of the topic. The ninth topic, according to Madhva, discusses whether it is true that all cases of destruction must be in inverse order to their production, and it is decided in the affirmative; the objection that, since *viññāna* is produced from *manas* and yet the latter is destroyed first, these two must be considered as exceptions, is not correct, since in reality *viññāna* is not produced out of *manas*. *Manas* has two senses, as "category" and as "inner organ" (*antaḥkaraṇa*), and the word *viññāna* also means "category" and "understanding" (*avabodha*). Where *viññāna* is said to rise from *manas*, it is used only in a general way, in the sense of understanding as arising from grasping (*ālocana*); Śaṅkara, however, interprets this topic as consisting only of the 16th *sūtra* (while Madhva takes the 15th and 16th *sūtras* from this topic), asserting that the production of the sense faculties does not disturb the order of the production of the elements. The tenth topic of Madhva, the 17th *sūtra*, is supposed to hold that there cannot be any destruction of Viṣṇu. With Śaṅkara this topic, the 16th *sūtra*, is said to hold that birth and death can be spoken of only with regard to body and not with regard to the soul. The eleventh topic (the 17th *sūtra* with Śaṅkara) means that the birth of *jīva* is true only in a special sense, since in reality *jīva* has neither birth nor death. The eleventh topic, consisting of the 18th and 19th *sūtras*, gives according to Madhva the view that the individual souls have all been produced from God. According to Madhva the twelfth topic (*sūtras* 20–27) deals with the measure of *jīvas*. The topic gives, according to him, the view that the *jīva* is atomic in size and not all-pervading. Being in one place, it can vitalize the whole body, just as a lamp can illuminate a room by its light, which is a quality of the lamp; for a substance may be pervading by virtue of its quality¹. The thirteenth topic (27th *sūtra*), according to Madhva, is supposed to affirm the plurality of souls. The fourteenth topic (*sūtras* 28, 29) demonstrates that Brahman and *jīva* are different. The fifteenth topic of Madhva shows that, though the souls are produced from God, yet they are not destructible. The souls are like reflections from the Brahman, and they therefore must persist as long as the Brahman remains and

¹ A discussion is raised here by Jaya-tirtha regarding the nature of light, and it is held that light is of the nature of a quality and not a substance.

must therefore be eternal. The conditions (*upādhi*) through which these reflections are possible are twofold, external (*bāhya*) and essential (*svarūpa*). The external condition is destroyed, but not the essential one¹. The souls are thus at once one with the Brahman and different; they depend on God for their existence and are similar to Him in nature. The sixteenth topic seeks to establish the nature of souls as consciousness and pure bliss, which are however revealed in their fullness only in the state of emancipation by the grace of God, while in our ordinary states these are veiled, as it were by ignorance (*avidyā*)². The seventeenth topic seeks to reconcile the freedom of action of the *jīva* with the ultimate agency of God. It is God who makes the *jīvas* work in accordance with their past *karmas*, which are beginningless (*anādi*). Thus, though God makes all *jīvas* perform all their works, He is guided in His directorship by their previous *karmas*. The eighteenth topic seeks to establish that, though the *jīvas* are parts of God, they are not parts in the same sense as the part-incarnations, the fish-incarnation, etc., are; for the latter are parts of essential nature (*svarūpāmśa*), whereas the former are not parts of an essential nature (*jīvānām asvarūpāmśatvam*); for, though parts, they are different from God. The nineteenth topic asserts that the *jīvas* are but reflections of God.

With Śāṅkara, however, these *sūtras* yield quite different interpretations. Thus the twelfth topic (*sūtra* 18) is supposed to assert that even in deep sleep there is consciousness, and the circumstance that nothing is known in this state is due to the fact that there is no object of which there could be any knowledge (*viśayābhāvād iyaṃ acetayamānatā na caitanyābhāvāt*). The thirteenth topic (*sūtras* 19–32) discusses upon his view the question whether, in accordance with the texts which speak of the going out of self, the self should be regarded as atomic, or whether it should be regarded as all-pervasive; and he decides in favour of the latter, because of its being identical with Brahman. The fourteenth topic (*sūtras* 33–39), after considering the possible agency of mind, senses, etc., denies them and decides in favour of the agency of soul, and holds that the

¹ *jīvopādhīr dvidhā proktaḥ svarūpaṃ bāhya eva ca,
bāhyopādhīr layaṃ yāti muktāu anyasya tu sthitiḥ.*

Tattva-prakāśikā, p. 119.

² *evaṃ jīva-svarūpatvena mukteḥ pūrvam api sato jñānānanden īśvara-prasādenābhivyakti-nimittena ānandī bhavati; prāg anābhivyaktatvena amubhāvā-bhāva-prasaṅgāt. Ibid.* p. 120.

buddhi and the senses are only instruments and accessories. Yet in the fifteenth topic (*sūtra* 40) Śaṅkara tries to establish this agency of the self, not as real, but as illusory in presence of the conditions of the sense-organs, intellect, etc. (*upādhi-dharmā-dhyāsenaiṣa ātmanaḥ kartṛtvam na svābhāvikam*). Upon the sixteenth topic (*sūtras* 41–42) Śaṅkara tries to establish the fact that God helps persons to perform their actions in accordance with their previous *karma*. The seventeenth topic (*sūtras* 43–53) is interpreted by Śaṅkara as stating the view that the difference between the selves themselves and between them and Brahman can be understood only by a reference to the analogy of reflection, spatial limitations or the like; for in reality they are one, and it is only through the presence of the limiting conditions that they appear to be different.

In the fourth chapter of the first book the first topic of both Śaṅkara and Madhva describes the origin of the *prāṇas* from Brahman¹. The second topic of Madhva, containing the 3rd *sūtra* of Śaṅkara's reading, describes the origin of *manas* from Brahman. The 4th *sūtra*, forming the third topic of Madhva, holds the view that speech (*vāk*) also is produced from Brahman, though we sometimes hear it spoken of as eternal, when it is applied to the Vedas. The 5th and the 6th *sūtras*, forming the fourth topic, discuss the purports of various texts regarding the number of the *prāṇas*, and hold the view that they are twelve in number. The fifth topic of Madhva, consisting of the 7th *sūtra*, states the view that the *prāṇas* are atomic by nature and not all-pervasive, and that hence there cannot be any objection to the idea of their being produced from Brahman. The *sūtras* 8 and 9, forming the sixth topic, show the production of *prāṇas* from Brahman. The *sūtras* 10 and 11, forming the seventh topic, show that even the principal (*mukhya*) *prāṇa* is dependent on Brahman for its production and existence. In the eighth topic, consisting of the 12th *sūtra*, it is held that the modifications (*ṛtti*) of the principal *prāṇa* are like servants, so their functions are also in reality derived from Brahman. The ninth topic, consisting of the 13th *sūtra*, repeats textual proofs of the atomic character of *prāṇa*. The tenth topic, consisting of *sūtras* 14–

¹ This topic consists according to Śaṅkara of only four *sūtras*, and according to Madhva of the first three *sūtras*. Of these the third *sūtra* (*pratijñānuparodhā ca*) happens to be absent in Śaṅkara's reading of the *Brahma-sūtras*.

16, states the view that the senses are instruments of Brahman, though in a remote way they may also be regarded as instruments of the *jīva*. The eleventh topic, consisting of the 17th to the 19th *sūtras*, states the view that all the other twelve *prāṇas*, excepting the thirteenth or the principal (*mukhya*) *prāṇa*, are so many senses. The difference between these and the principal *prāṇa* consists in this, that the work of these other *prāṇas*, though depending principally on Brahman, also depends on the effort of *jīva* (*īśvara-paravaśā hi indriyāṇām pravṛttir jīva-prayatnāpekṣaiva*), but the functioning of the *mukhya prāṇa* does not in any way depend on the individual souls (*mukhyaprāṇasya pravṛttir na puruṣa-prayatnāpekṣayā*). The twelfth topic (20th *sūtra*) shows that all our bodies also are derived from Brahman. The last topic (21st *sūtra*) instils the view that our bodies are made up not of one element, but of five elements.

According to Śaṅkara, however, the chapter is to be divided into nine topics, of which the first has already been described. The second topic (*sūtras* 5-6) holds the view that there are eleven senses, and not seven only as some hold, after the analogy of seven *prāṇas*. The third topic (7th *sūtra*) states that the senses are not all-pervasive, as the adherents of Sāṃkhya hold, but are atomic by nature. The fourth topic (8th *sūtra*) states that the *mukhya prāṇa* is a modification of Brahman, like any other *prāṇa*. The fifth topic (*sūtras* 9-12) states that *prāṇa* is not simply *vāyu*, but a subjective modification of it in the fivefold form, and its general function cannot be properly explained by reference to the individual actions of the separate *prāṇas*, like the movement of a cage by a concerted effort of each one of the birds encaged therein; for the actions of the *prāṇas* do not seem to be in any way concerted. As there are five states of mind, desire, imagination, etc., so the five *prāṇas* are but modifications of the principal *prāṇa*. The sixth topic (13th *sūtra*) states that this principal *prāṇa* is atomic by nature. The seventh topic (*sūtras* 14-16) states that the *prāṇas* in their functioning are presided over by certain deities for their movement and yet these can only be for the enjoyment of the *jīvas*. The eighth topic (*sūtras* 17-19) states that the senses (conative and cognitive) are different categories (*tattvāntara*) from the principal *prāṇa*. The ninth topic (*sūtras* 20-22) states that the *jīva* is not the creator, who is *Īśvara*.

CHAPTER XXVII

A GENERAL REVIEW OF THE PHILOSOPHY OF MADHVA

Ontology.

THE philosophy of Madhva admits the categories, viz., substance (*dravya*), quality (*guṇa*), action (*karma*), class-character (*sāmānya*), particularity (*viśeṣa*), qualified (*viśiṣṭa*) whole (*aṁśī*), power (*śakti*), similarity (*sādrśya*) and negation (*abhāva*)¹. *Dravya* is defined as the material cause (*upādāna-kāraṇa*)². A *dravya* is a material cause with reference to evolutionary changes (*pariṇāma*) and manifestation (*abhivyakti*) or to both. Thus the world is subject to evolutionary changes, whereas God or souls can only be manifested or made known, but cannot undergo any evolutionary change; again, ignorance (*avidyā*) may be said to undergo evolutionary changes and to be the object of manifestation as well. The substances are said to be twenty, viz., the highest self or God (*paramātmān*), *Lakṣmī*, souls (*jīva*), unmanifested vacuity (*avyākṛtākāśa*), *prakṛti*, the three *guṇas*, *mahat*, *ahamkāra*, *buddhi*, *manas*, the senses (*indriya*), the elements (*bhūta*), the element-potentials (*mātra*), ignorance (*avidyā*), speech-sounds (*varṇa*), darkness (*andha-kāra*), root-impressions (or tendencies) (*vāsanā*), time (*kāla*), reflection (*pratibimba*).

The qualities of Madhva are of the same nature as those of the Vaiśeṣika; but the inclusion of mental qualities, such as self-control

¹ In the *Tattva-saṃkhyāna* (p. 10) it is said that reality (*tattva*) is twofold, independent (*svatantra*) and dependent (*asvatantra*), and elsewhere in the *Bhāṣya* it is said that there are four categories (*padārtha*), viz., God, *prakṛti*, soul (*jīva*) and matter (*jaḍa*):

*iśvaraḥ prakṛtir jīvo jaḍam ceti catuṣṭayam
padārthānāṃ sannidhānāt tatteṣo viṣṇurucyate.*

But the present division of Madhva's philosophy, as admitting of ten categories, is made in view of similar kinds of division and classification used by the Vaiśeṣika and others.

² There is another definition of *dravya*, when it is defined as the object of a competitive race in the second canto of *Bhāgavata-tātparya*, also referred to in the *Madhva-siddhānta-sāra*. Thus it is said: *dravyaṃ tu dravaṇa-prāpyaṃ dvayor vivadamānayoḥ pūrvam vegābhisambandhādākāśas tu, pradeśataḥ*. But this does not seem to have been further elaborated. It is hardly justifiable to seek any philosophical sense in this fanciful etymological meaning.

(*śama*), mercy (*kṛpā*), endurance (*titikṣā*), strength (*bala*), fear (*bhaya*), shame (*lajjā*), sagacity (*gāmbhīrya*), beauty (*saundarya*), heroism (*śaurya*), liberality (*audārya*), etc., is considered indispensable, and so the qualities include not only the twenty-four qualities of the syncretist Vaiśeṣika, but many more.

Actions (*karma*) are those which directly or indirectly lead to merit (*puṇya*) or demerit (*pāpa*). There are no actions which are morally absolutely indifferent; even upward motion and the like—which may be considered as indifferent (*udāsīna*) *karmas*—are indirectly the causes of merit or demerit. *Karmas* are generally divided into three classes, as *vihita*, i.e., enjoined by the *śāstra*, *niṣiddha*, prohibited by it, and *udāsīna*, not contemplated by it or indifferent. The latter is of the nature of vibration (*pariṣpanda*), and this is not of five kinds alone, as the Vaiśeṣika supposes, but of many other kinds¹. Actions of creation, destruction, etc., in God are eternal in Him and form His essence (*svarūpa-bhūtāḥ*); the contradictory actions of creation and destruction may abide in Him, provided that, when one is in the actual form, the other is in the potential form². Actions in non-eternal things are non-eternal and can be directly perceived by the senses.

The next question is regarding *jāti*, or universals, which are considered by the Nyāya-Vaiśeṣika as one and immutable. These are considered in the Madhva school as eternal only in eternal substances like the *jīvas*, whereas in non-eternal substances they are considered to be destructible and limited specifically to the individuals where they occur. There are in destructible individuals no such universals, which last even when the individuals are destroyed. An objection is raised that, if the existence of permanent universals is not agreed to, then the difficulty of comprehending concomitance (*vyāpti*) would be insurmountable, and hence inference would be impossible. The answer that is given on the side of Madhva is that inference is possible on the basis of similarity (*sādṛśya*), and that the acceptance of immutable universals is not

¹ The syncretistic Vaiśeṣika view, that action is of five kinds, is described here; for it is held that the Vaiśeṣika view that by simple rectilinear motion (*gamana*), circular motion (*bhramana*) or other kinds of motion could be got, is strongly objected to, because circular motion is not a species of rectilinear motion; and hence the Vaiśeṣika classification of *karma* into five classes is also held to be inadequate.

² *sṛṣṭi-kāle sṛṣṭi-kriyā vyakty-ātmanā vartate, anyadā tu śakty-ātmanā, evaṃ saṃhāra-kriyāpi. Madhva-siddhānta-sāra*, p. 4.

necessary for that purpose; and this also applies to the comprehension of the meaning of words: when certain objects are pointed out as having any particular name, that name can be extended to other individuals which are extremely similar to the previous objects which were originally associated with that name¹. A difference is also drawn between *jāti* ("universal") and *upādhi* ("limiting condition") in this, that the latter is said to be that which depends for its comprehension upon the comprehension of some other primary notion, while the former is that whose comprehension is direct and does not depend upon the comprehension of some other notion². Thus the universal of cow (*gotva*) is known immediately and directly, whereas the notion of the universal of "cognizability" (*prameyatva*) can only be known through the previous knowledge of those things which are objects of knowledge. So the universal of cognizability is said to be *upādhi*, and the former *jāti*. It is further objected that, if objections are taken against an immutable universal existing in all individuals of a class at one and the same time, then the same objection may be taken against the acceptance of similarity, which must be supposed to exist at one time in a number of individuals. The answer to this is that the relation of similarity between two or three individuals is viewed in Madhva philosophy as existing uniformly between the number of individuals so related, but not completely in any one of them. When two or three terms which are said to be similar exist, the relation of similarity is like a dyadic or triadic relation subsisting between the terms in mutual dependence³; the relation of similarity existing between a number of terms is therefore not one, but many, according as the relation is noted from the point of view of one or the other of the terms. The similarity of A to B is different from the similarity of B to A, and so forth (*bhinnābhinnam sādṛśyam iti siddham*).

¹ *anugata-dharmaṃ vināpi sādṛśyena sarvatra vyāpti-ādi-graha-sambhavāt, ayaṃ dhumaḥ etat-sadṛśaś ca vahnī-vyāptya ity evaṃ-krameṇa vyāpti-grahah*, "even without the basis of the existence of identical characteristics, comprehension of *vyāpti* is possible on the basis of similarity, e.g., 'This is smoke and entities similar to these are associated with fire, etc.'" *Madhva-siddhānta-sāra*, p. 6.

² *itara-nirūpaṇādhīna-nirūpaṇakatvam upādhi-lakṣaṇam and anya-nirūpaṇādhīna-nirūpaṇatvam jātitvam. Ibid.* p. 7.

³ *eka-nirūpitāparādhikarāṇa-vṛttitvena tri-vikrama-nyāyena tat-svikārāt, pratiyogitvānyuyogitvādvat. Ibid.* p. 6.

We next come to the doctrine of specific particulars (*viśeṣa*) in the Madhva school. It supposes that every substance is made up of an infinite number of particulars associated with each and every quality that it may be supposed to possess. Thus, when the question arises regarding the relation of qualities to their substances (e.g., the relation of colour, etc., to a jug) if any quality was identical with the substance, then the destruction of it would mean destruction of the substance, and the words denoting the substance and the quality would mutually mean each other; but that is not so, and this difficulty can be solved only on the supposition that there are specific particulars corresponding as the basis to each one of the qualities. As to the exact relation of these to their substance there are divergences of view, some holding that they are identical with the substance (*abheda*), others that they are different (*bheda*), and others that they are both identical and different (*bhedābheda*). Whatever view regarding the relation of the qualities to the substance is accepted, the doctrine of specific particulars (*viśeṣa*) has to be accepted, to escape the contradiction. Thus *viśeṣas* in each substance are numberless, corresponding to the view-points or qualities intended to be explained; but there are no further *viśeṣas* for each *viśeṣa*, as that would lead to an infinite regress. For a satisfactory explanation of the diverse external qualities of God it is necessary to admit eternal *viśeṣas* in Him. In order to explain the possibility of a connection of the continuous eternal space or vacuity (*ākāśa*) with finite objects like jug, etc. it is necessary to admit the existence of *viśeṣas* in *ākāśa*¹. It will be seen from the above that the acceptance of *viśeṣas* becomes necessary only in those cases where the unity and difference of two entities, such as the substance and the qualities or the like, cannot otherwise be satisfactorily explained. For these cases the doctrine of *viśeṣas* introduces some supposed particulars, or parts, to which the association of the quality could be referred, without referring to the whole substance for such association. But this does not apply to the existence of *viśeṣa* in the atoms; for the atoms can very well be admitted to have parts, and the contact with other atoms can thus be very easily explained without the assumption of any *viśeṣa*. An atom may be admitted to be the smallest unit in comparison with

¹ *ato gaganādi-vibhu-dravyasya ghaṭādinā saṃyoga-tadabhāvobhaya-nirvāhako viśeṣo'anya-gatyā svīkaraṇīyaḥ. Ibid. p. 9.*

everything else: but that is no reason why it should not be admitted to be bigger than its own parts. If the atoms had not parts, they could not be held to combine on all their ten sides¹. So the Vaiśeṣika view, admitting *viśeṣas* in atoms, has to be rejected. It is well worth remembering here that the Vaiśeṣikas held that there were among the atoms of even the same *bhūta*, and also among the souls, such specific differences that these could be distinguished from one another by the *yogins*. These final differences, existing in the atoms themselves, are called *viśeṣas* by the Kaṇāda school of thinkers. This conception of *viśeṣa* and its utility is different from the conception of *viśeṣa* in the Madhva school².

Samavāya, or the relation of inherence accepted in the Nyāya-Vaiśeṣika school, is discarded in the system of Madhva on almost the same grounds as in Śaṅkara's *Bhāṣya* on the *Brahma-sūtras*. The view is that the appearance of the cause in the effect and of the qualities in the substance is manifestly of the nature of a relation and, as this relation is not contact (*saṃyoga*), it must be a separate relation, viz., the relation of inherence (*samavāya*). But in the same way *samavāya* (e.g., in the sentence *iha tantuṣu paṭa-samavāyāḥ*) itself may have the appearance of existing in something else in some relation, and hence may be in need of further relations to relate it. If without any such series of relations a relation of inherence can be related in the manner of a quality and a substance, then that sort of relatedness or qualifiedness (*viśiṣṭatā*) may serve all the purposes of *samavāya*. This brings us to the acceptance of "related" or "qualified" as a category separate and distinct from the categories of quality (*guṇa*) and substance (*dravya*) and the relation involved between the two³. So also the whole (*aṃśī*) is not either the relations or the parts or both, but a separate category by itself.

Power (*śakti*), as a separate category, exists in four forms: (i) as mysterious—*acintya-śakti*—as in God, (ii) causal power

¹ *anyāpekṣayā paramāṇutve'pi svāvayavāpekṣayā mahattvopapatteḥ: ... kim ca paramāṇor avayavānāṅgikāre tasya daśadikṣv abhisambandho na syāt. Madhva-siddhānta-sāra*, p. 10.

² *asmad-viśiṣṭānām yoginām nityeṣu tulyākṛti-guṇa-kriyeṣu paramāṇuṣu muktātmasu ca anya-nimittāsaṃbhavād yebhyo nimittabhyāḥ pratyādhāraṃ vilakṣaṇo'yaṃ vilakṣaṇo'yaṃ iti pratyaya-vyāvṛtīḥ, deśa-kāla-viprakarṣe ca paramāṇau sa evāyaṃ iti pratyabhijñānaṃ ca bhavati te antyā viśeṣāḥ.*

Prasāsta-pāda-bhāṣya, pp. 321-2.

³ *viśiṣṭaṃ viśeṣaṇa-viśeṣya-tatsambandhātiriktaṃ avāśyaṃ āṅgikartavyam. Madhva-siddhānta-sāra*, p. 11.

(*kāraṇa-śakti* or *sahaja-śakti*), which naturally exists in things and by virtue of which they can produce all sorts of changes, (iii) a power brought about by a new operation in a thing called the *ādheya-śakti*, as in an idol through the ritual operations of the installation ceremony (*pratiṣṭhā*), and (iv) the significant power of words (*pada-śakti*). Negation is said to be of three kinds: (i) the negation preceding a production (*prāg-abhāva*), (ii) that following destruction (*dhvaṃsābhāva*), (iii) as otherness (*anyonyābhāva*), e.g., there is the negation of a jug in a pot and of a pot in a jug: this is therefore the same as differences, which are considered as the essence of all things¹. When things are destroyed, their differences are also destroyed. But the five differences between God and souls, between souls themselves, between inanimate objects themselves, between them and God, and between them and the souls, are all eternal; for the differences in eternal things are eternal and in non-eternal things non-eternal². The fourth kind of negation, *atyantābhāva*, is the non-existence belonging to impossible entities like the hare's horn.

God, or Paramātman, is in this system considered as the fullness of infinite qualities. He is the author of creation, maintenance, destruction, control, knowledge, bondage, salvation, and hiding (*āvṛti*). He is omniscient, and all words in their most pervading and primary sense refer to Him. He is different from all material objects, souls and *prakṛti*, and has for His body knowledge and bliss, and is wholly independent and one, though He may have diverse forms (as in *Vāsudeva*, *Pradyumna*, etc.); all such forms of Him are the full manifestation of all His qualities.

The souls (*jīva*) are naturally tainted with defects of ignorance, sorrow, fear, etc., and they are subject to cycles of transformation. They are infinite in number. They are of three kinds, viz., those who are fit for emancipation (*mukti-yogya*), e.g., gods such as Brahmā, Vāyu, etc., or sages, like Nārada, etc., or like the ancestors (*pitṛ*), or kings like Ambarīṣa, or advanced men; these advanced

¹ *bhedas tu sarva-vastūnām svarūpaṃ naijam avyayam. Ibid. p. 20.*

² Jaya-tīrtha, however, in his *Nyāya-sudhā*, I. 4. 6 (*adhikaraṇa*, p. 222), holds that differences (whether in eternal or in non-eternal things) are always eternal: *na ca kadāpi padārthānām anyonya-tādātmyam asti iti anityānām api bhedo nitya eva ity āhuḥ*. Padmanābha-tīrtha also in his *San-nyāya-ratnāvalī* or *Anuvyākhyāna* holds exactly the same view on the same topic (I. 4. 6): *vināśino'pi ghaṭāder dharma-rūpo bhedaḥ para-vādy-abhyupagataghaṭatvādi-jātivan nityo'-bhyupagantarvyaḥ*.

souls think of God as being, bliss, knowledge and *ātman*. It is only the second class of souls that are subject to transmigration and suffer the pleasures of Heaven and the sufferings of Earth and Hell. There is a third class of beings, the demons, ghosts and the like. Each one of these souls is different from every other soul, and even in emancipation the souls differ from one another in their respective merits, qualifications, desires, etc.

Next comes the consideration of unmanifested space (*avyākṛta ākāśo dig-rūpaḥ*), which remains the same in creation and destruction. This is, of course, different from *ākāśa* as element, otherwise called *bhūtākāśa*, which is a product of the *tāmasa* ego and is limited. *Ākāśa* as space is vacuity and eternal¹.

Prakṛti also is accepted in the Madhva system as the material cause of the material world². Time is a direct product of it, and all else is produced through the series of changes which it undergoes through the categories of *mahat*, etc. *Prakṛti* is accepted here as a substance (*dravya*)³ and is recognized in the Madhva system as what is called *māyā*, a consort of God, though it is called impure (*doṣa-yukta*) and material (*jaḍa*), evolving (*parīṇāminī*), though under the full control of God, and may thus be regarded almost as His will or strength (*Harer icchāthavā balam*). This *prakṛti* is to the world the cause of all bondage (*jagabhandhātmikā*)⁴. The subtle bodies (*līṅga-śarīra*) of all living beings are formed out of the stuff of this *prakṛti*. It is also the source of the three *guṇas* (*guṇa-trayādy-upādāna-bhūta*). It is held that during the time of the great creation *prakṛti* alone existed and nothing else. At that time God out of His creative desire produced from *prakṛti* in three masses *sattva*, *rajas* and *tamas*⁵. It is said that *rajas* is double of *tamas* and *sattva* is double of *rajas*. *Sattva* exists by itself in its pure form: *rajas* and *tamas* are always mixed with each other and with *sattva*. Thus *sattva* exists not only in this pure form, but also as an element in the mixed *rajas* variety and *tamas* variety. In the mixed *rajas* there are for each part of *rajas* a hundred parts of *sattva* and one hundredth part of *tamas*. In the *tamas* mixture there are for

² *sākṣāt paramparayā vā viśvopādānam prakṛtiḥ. Padārtha-saṃgraha*, 93.

³ *Nyāya-sudhā* and *San-nyāya-ratnāvali* on the *Anuśākhāyāna*, II. 1. 6 (p. 21).

⁴ *Bhāgavata-tātparyā*, III. 10. 9 (p. 29). ⁵ *Madhva-siddhānta-sāra*, p. 36.

each part of *tamas* ten parts of *sattva* and one-tenth part of *rajas*. At the time of the world-dissolution (*vilaya*) ten parts return to *sattva* and one part to *rajas* with one part in *tamas*. The evolution of the *mahat-tattva* takes place immediately after the production of the three *guṇas*, when the entire amount of the produced *rajas* becomes mixed with *tamas*; the *mahat-tattva* is constituted of three parts of *rajas* and one part of *tamas*. With reference to the later derivatives this *mahat-tattva* is called *sattva*¹. In the category *ahamkāra* (that which is derived immediately after *mahat*) there is for every ten parts of *sattva* one part of *rajas* and a tenth part of *tamas*. From the *sattva* of the *tamas* part of it the *manas*, etc., are produced, out of the *rajas* part of it the senses are produced, and out of the *tamas* the elements are produced. They are at first manifested as *tan-mātras*, or the powers inherent in and manifested in the elements. As *ahamkāra* contains within it the materials for a threefold development, it is called *vaikārika*, *taijasa* and *tāmasa* accordingly. In the *Tattva-saṃkhyāna buddhi-tattva* and *manas-tattva* are said to be two categories evolving in succession from *ahamkāra*. The twenty-four categories counted from *mahat* are in this enumeration *mahat*, *ahamkāra*, *buddhi*, *manas*, the ten *indriyas* (senses), the five *tan-mātras* and the five *bhūtas*². As *buddhi* is of two kinds, viz., *buddhi* as category and *buddhi* as knowledge, so *manas* is also regarded as being of two kinds, *manas* as category and *manas* as sense-organ. As sense-organ, it is both eternal and non-eternal; it is eternal in God, Lakṣmī, Brahmā and all other souls,

¹ *Bhāgavata-tātparya*, III. 14, by Madhvācārya. In this passage the original *sattva* is spoken of as being the deity *Śrī*, the original *rajas* as *Bhū*, and the original *tamas* as *Durgā*, and the deity which has for her root all the three is called *Mahā-lakṣmī*. The Lord *Janārdana* is beyond the *guṇas* and their roots.

² There seems to be a divergence of opinion regarding the place of the evolution of *buddhi-tattva*. The view just given is found in the *Tattva-saṃkhyāna* (p. 41): *asaṃśṛṣṭam mahān aham buddhir manas khāni daśa mātra-bhūtāni pañca ca*, and supported in its commentary by Satyadharma Yati. This is also in consonance with *Kaṭha*, I. 3. 10. But in the passage quoted from Madhva's *Bhāṣya* in the *Madhva-siddhānta-sāra* it is said that the *vijñāna-tattva* (probably the same as *buddhi-tattva*) arises from the *mahat-tattva*, that from it again there is *manas*, and from *manas* the senses, etc.:

*vijñāna-tattvaṃ mahataḥ samutpannam caturmukhāt,
vijñāna-tattvāc ca mano manas-tattvācca khādikam.*

The way in which Padmanābha Sūri tries to solve the difficulty in his *Padārtha-saṃgraha* is that the *buddhi-tattva* springs directly from the *mahat-tattva*, but that it grows in association with *taijasa ahamkāra* (*taijasāhamkāreṇa upacita*). This explains the precedence of *ahamkāra* as given in the *Tattva-saṃkhyāna*. *Buddhi*, of course, is of two kinds, as knowledge (*jñāna-rūpa*) and as category (*tattva*).

as their own essence (*svarūpa-bhūtam*) or self. The non-eternal *manas*, as belonging to God, *brahma*, individual souls, etc., is of five kinds; *manas*, *buddhi*, *ahaṁkāra*, *citta* and *cetana*, which may also be regarded as the *vṛttis* or functions of *manas*. Of these *manas* is said to be that to which is due imagination (*saṁkalpa*) and doubt (*vikalpa*); *buddhi* is that to which is due the function of coming to any decision (*niścayātmikā buddhi*); *ahaṁkāra* is that through the functioning of which the unreal is thought of as real (*asvarūpe svarūpa-matīḥ*), and the cause of memory is *citta*. The senses are twelve, including five cognitive, five conative, *manas* and the *sākṣīndriya*, as *buddhi* is included within *manas*. The senses are considered from two points of view, viz., from the point of view of their predominantly *tejas* materials, and as being sense-organs. In their aspects as certain sorts produced in course of the evolution of their materials they are destructible; but as sense-organs they are eternal in God and in all living beings. As regards the bodily seats of these organs, these are destructible in the case of all destructible beings. The internal sense of intuition (*sākṣī*) can directly perceive pleasure and pain, ignorance, time and space. The sense-data of sounds, colours, etc., appearing through their respective sense-organs, are directly perceived by this sense of intuition. All things that transcend the domain of the senses are intuited by the sense of intuition (*sākṣī*), either as known or unknown. To consider the *sākṣī-jñāna* as a special source of intuitive knowledge, indispensable particularly for the perception of time and space, is indeed one of the important special features of Madhva's system. In Śaṅkara Vedānta *sākṣī* stands as the inextinguishable *brahma*-light, which can be veiled by *ajñāna*, though *ajñāna* itself is manifested in its true nature, ignorance, by the *sākṣī*¹. Madhva holds that it is through the intuitive sense of *sākṣī*

¹ *yat-prasādād avidyādi sphuraty eva divā-nisam tam apy apahmūte'vidyā nājñānasyāsti duṣkaram.*

Advaita-brahma-siddhi, p. 312.

As this work also notices, there are in Śaṅkara Vedānta four views on the status of *sākṣī*. Thus the *Tattva-sūddhi* holds that it is the light of Brahman, appearing as if it were in the *jīva*; the *Tattva-pradīpikā* holds that it is Īśvara manifesting Himself in all individual souls; the *Vedānta-kaumudī* holds that it is but a form of Īśvara, a neutral entity which remains the same in all operations of the *jīva* and is of direct and immediate perception, but is also the nescience (*avidyā*) which veils it. The *Kūṭastha-dīpa* considers it to be an unchangeable light of pure intelligence in *jīva*, which remains the same under all conditions and is hence called *sākṣī*.

that an individual observes the validity of his sense-knowledge and of his own self as the ego (*aham*). Our perception of self, on this view, is not due to the activity of mind or to mental perception (*manonubhava*); for, had it been so, one might as a result of mind activity or mental functioning have doubted his own self; but this never happens, and so it has to be admitted that the perception of self is due to some other intuitive sense called *sākṣī*. *Sākṣī* thus always leads us to unerring and certain truths, whereas, wherever in knowledge there is a discriminating process and a chance of error, it is said to be due to mental perception¹.

The *tan-mātras* are accepted in Madhvaism as the subtler materials of the five grosser elements (*bhūtas*). It must be noted that the categories of *ahamkāra* and *buddhi* are considered as being a kind of subtle material stuff, capable of being understood as quantities having definite quantitative measurements (*parimāṇa*)².

Ignorance (*avidyā*) is a negative substance (*dravya*), which by God's will veils the natural intelligence of us all³. But there is no one common *avidyā* which appears in different individuals; the *avidyā* of one individual is altogether different from the *avidyā* of another individual. As such, it seems to denote our individual ignorance and not a generalized entity such as is found in most of the Indian systems; thus each person has a specific (*prāṭisviki*) *avidyā* of his own.

Time (*kāla*) is coexistent with all-pervading space (*avyākṛta ākāśa*), and it is made directly from *prakṛti* stuff having a more primeval existence than any of the derived kinds⁴. It exists in itself

¹ *yat kvacid vyabhicāri syāt darśanam mānasam hi tat. Amuvyākhyana. evam sa devadatto gauro na vā paramāṇuḥ gurutvādhikaraṇam na vā iti saṁśayo mānasah. Madhva-siddhānta-sāra, p. 44.*

² *Manu-byhaspaty-ādayas tu ahamkāraṭ parimāṇato hīnena buddhi-tattvena svocita-parimāṇena parimita-deśa-paryantam avasthitam viṣṇum paśyanti soma-sūryam tu buddhi-tattvāt parimāṇato hīnena manas-tatvena parimita-deśa-paryantam avasthitam viṣṇum paśyataḥ varuṇādayas tu ākāśa-vāyuv-ādi-bhūtaiḥ krameṇa parimāṇato daśāhinaḥ parimita-deśa-paryantam avasthitam viṣṇum yogyatāmusāreṇa paśyanti.*

San-nyāya-ratnāvalī and Madhva-siddhānta-sāra, p. 49.

³ *ataḥ paramēśvara eva sattvādi-gunamay-āvidyāvirodhitvena avidyayā svādhīnayaḥ prakṛtyā acintyādbhutayā svaśaktyā jīvasya sva-prakāśam api svarūpa-caitanyam apy ācchādayati. Nyāya-sudhā on the topic of jīṇāsa.*

⁴ The objection that, if time is made out of *prakṛti* stuff, from whence would *mahat*, etc., be evolved, is not valid; for it is only from some parts of *prakṛti* that time is evolved, while it is from other parts that the categories are evolved: *sarvatra vyāptānām katipaya-prakṛti-sūkṣmānām kālopādānatvam, katipayānām mahad-ādy-upādānatvam katipayānām ca mūla-rūpeṇa avasthānam. Madhva-siddhānta-sāra, p. 64.*

(*sva-gata*) and is, like space, the vehicle (*ādhāra*) of everything else, and it is also the common cause of the production of all objects.

Darkness (*andhakāra*) is also considered as a separate substance and not as mere negation of light. A new conception of *pratibimba* ("reflection") is introduced to denote the *jīvas*, who cannot have any existence apart from the existence of God and who cannot behave in any way independent of His will, and, being conscious entities, having will and feeling, are essentially similar to him; though reflections, they are not destructible like ordinary reflections in mirrors, but are eternal (*pratibimbā tu bimbāvinābhūta-sat-sadrśaḥ*)¹.

The system of Madhva admits the qualities (*guṇa*) more or less in the same way as the Nyāya-Vaiśeṣika does; the points of difference are hardly ever of any philosophical importance. Those which deserve to be mentioned will be referred to in the succeeding sections.

Pramāṇas (ways of valid knowledge).

Pramāṇa is defined as that which makes an object of knowledge cognizable as it is in itself (*yathārtham pramāṇam*)². The function of *pramāṇa* consists both in making an entity object of knowledge through the production of knowledge (*jñāna-jananad vāva jñeyatā-sampādakatvena*), either directly (*sākṣāt*) or indirectly (*asākṣāt*)³. There are two functions in a *pramāṇa*, viz. (1) to render an entity an object of knowledge (*jñeya-viśayīkaraṇa*) and (2) to make it cognizable (*jñeyatā-sampādana*)³. So far as the function of making an entity an object of knowledge is concerned, all *pramāṇas* directly perform it; it is only with reference to the second function that there is the distinction between the two kinds of *pramāṇas*, *kevala* and *anu*, such that it is only the former that performs it directly and only the latter that performs it indirectly (*paramparā-krama*)⁴. These two functions also distinguish a *pramāṇa* from the *pramātā* ("subject") and the *prameya* ("object"), since neither the subject

¹ *Padārtha-saṃgraha*, 193.

² Madhva's definition of *pramāṇa* in his *Pramāṇa-lakṣaṇa* is elaborated by Jaya-tīrtha in his *Pramāṇa-paddhati* as *jñeyam anatikramya vartamānaṃ yathā-vasthitam eva jñeyam yad viśayīkaroti nānyathā tat pramāṇam* (p. 8).

³ *Jaya-tīrtha-vijaya-ṭīpanī* on the *Pramāṇa-paddhati* by Janārdana.

⁴ *Ibid.* Also *kevalam viśayasya jñeyatvaṃ jñānam upādhitayā karanam tu taj-janakatayā sampādayanti ity etāvantaṃ viśeṣam āsṛitya kevalānu-pramāṇa-bhedaḥ samarthitah. Nyāya-sudhā*, II. 1. 2 (p. 249).

nor the object can be called the instrumental causes of knowledge, though they may in some sense be admitted as causes, and they do not cause an entity to be an object of knowledge either. Our knowledge does not in any way modify an object of knowledge, but an entity becomes known when knowledge of it is produced. Truth, by which is understood exact agreement of knowledge with its object, belongs properly to knowledge alone (*jñānasyaiva mukhyato yāthārtham*). The instruments of knowledge can be called true (*yathārtha*) only in an indirect manner, on the ground of their producing true knowledge (*yathārtha-jñāna-janaka yathārtha*)¹. But yet the definition properly applies to the instruments as well, since they are also *yathārtha* in the sense that they are also directed to the object, just as knowledge of it is. So far as they are directed towards the right object of which we have right knowledge, their scope of activity is in agreement with the scope or extent of the object of knowledge. So it is clear that *pramāṇa* is twofold: *pramāṇa* as true knowledge (*kevala pramāṇa*) and *pramāṇa* as instrument (*sādhana*) of knowledge (*anu pramāṇa*). This *kevala pramāṇa* is again twofold, as consciousness (*caitanya*) and as states (*ṛtti*). This consciousness is described by Jaya-tīrtha as superior, middling and inferior (*uttama-madhyamādhama*), as right, mixed, and wrong; the *ṛtti* is also threefold, as perception, inference, and scriptures (*āgama*). The *anu pramāṇa* also is threefold, as perception, inference and scriptures. A question arises, whether the term *pramāṇa* could be applied to any right knowledge which happens to be right only by accident (*kākatālīya*) and not attained by the proper process of right knowledge. Thus, for example, by a mere guess one might say that there are five shillings in one's friend's pocket, and this knowledge might really agree with the fact that one's friend has five shillings in his pocket; but, though this knowledge is right, it cannot be called *pramāṇa*; for this is not due to the speaker's own certain knowledge, since he had only guessed, which is only a form of doubt (*vaktur jñānasya saṁśayatvena aprasaṅgāt*)². This also applies to the case where one makes an inference on the basis of a misperceived *hetu*, e.g., the inference of fire from steam or vapour mistaken for smoke.

The value of this definition of *pramāṇa* as agreement with objects of knowledge (*yathārtha*) is to be found in the fact that it

¹ *Ibid.*

² *Ibid.* p. 250.

includes memory (*smṛti*) of previous valid experience as valid, whereas most of the other systems of Indian philosophy are disposed so to form their definition as purposely to exclude the right of memory to be counted as *pramāṇa*¹. Śālikanāṭha's argument, as given in his *Prakarāṇa-ṣaṅkikā*, on the rejection of memory from the definition of *pramāṇa* is based on the fact that memory is knowledge produced only by the impressions of previous knowledge (*pūrva-vijñāna-samskāra-mātrajam jñānam*); as such, it depends only on previous knowledge and necessarily refers to past experience, and cannot therefore refer independently to the ascertainment of the nature of objects². He excludes recognition (*pratyabhijñā*) from memory, as recognition includes in its data of origin direct sense contact; and he also excludes the case of a series of perceptions of the same object (*dhārā-vāhika jñāna*); for though it involves memory, it also involves direct sense contact, but the exclusion of memory from the definition of *pramāṇa* applies only to pure memory, unassociated with sense contact. The idea is that that which depends on or is produced only by previous knowledge does not directly contribute to our knowledge and is hence not *pramāṇa*.

The reason why Jaya-tīrtha urges the inclusion of memory is that memory may also agree with an object of knowledge and hence may rightly be called *pramāṇa*. It may be that, while I am remembering an object, it may not still be there or it may have ceased to exist, but that does not affect the validity of memory as *pramāṇa*, since the object did exist at the time of previous experience referred to by memory, though it may not be existing at the time when the memory is produced. If it is argued that, since the object is not in the same condition at the time of memory as it was at the time of experience, memory is not valid, in that case all knowledge about past and future by inference or scriptures would be invalid, since the past and future events inferred might not exist at the time of

¹ Here Jaya-tīrtha refers to the definitions of the Mīmāṃsā as *anadhigatārthagantvā pramāṇam* and as *anubhūtiḥ pramāṇam*. The first refers to Kumārila's definition and the second to that of Prabhākara. Kumārila defines *pramāṇa* (as found in the *Codanā-sūtra* 80, *Śloka-vārttika*) as firm knowledge (*dṛḍham vijñānam*) produced (*utpannam*) and unassociated with other knowledge (*nāpi jñānāntareṇa samvādam yacchati*). The second definition is that of Prabhākara as quoted in Śālikanāṭha's *Prakarāṇa-ṣaṅkikā*, p. 42: *pramāṇam anubhūtiḥ*.

² *smṛtir hi tad-ity-upajāyamānā prācīṃ praṭītiṃ anurūḍhyamānā na svātantryeṇa artham paricchinatti iti na pramāṇam*. *Prakarāṇa-ṣaṅkikā*, p. 42.

experience. If it is argued that the object of previous knowledge changes its state and so cannot in its entirety be referred to as the object of memory, then that destroys the validity of all *pramāṇas*; for nothing can be made an object of all the *pramāṇas* in its entirety. Also it cannot be objected that, if the thing does not change its state, then memory should grasp it as an entity which has not changed its state. This is not valid either; for memory does not grasp an object as if it had not changed its state, but as "it was so at that time" (*tadāsan tadṛśa iti*). Memory is absolutely indifferent with regard to the question whether an object has changed its state or not. Since memory agrees with real objective facts it has to be considered valid, and it is the special feature of the present definition that it includes memory as a valid definition, which is not done in other systems. The validity of memory as a *pramāṇa* is proved by the fact that people resort to it as valid knowledge in all their dealings, and only right knowledge is referred to by men (*loka-vyavahāra*). There is no way of establishing the validity of the *pramāṇas* of perception, etc., except the ultimate testimony of universal human experience¹.

Moreover, even the validity of the sacred writings of Manu is based on the remembered purport of the Vedas, and thence they are called *smṛti*². Again, the argument that memory has no validity because it does not bring us any fruit (*niṣphalā*) is not right; for the validity depends on correctness of correspondence and not on fruitfulness. Want of validity (*aprāmāṇya*) is made evident through the defect of the organs or the resulting contradiction (*bādhaka-pratyaya*). It may also be noted that memory is not absolutely fruitless; thus the memory of happy things is pleasant and strengthens the root impressions also (*saṃskāra-patana*). Again, it is argued that that alone could be called *pramāṇa* which involves the knowledge of something new, and that therefore memory, which does not involve new knowledge, cannot be counted as *pramāṇa*. If it is required that an object of knowledge should be *pramāṇa*, then the eternal entities about which there cannot be any new knowledge cannot be the objects of *pramāṇa*. If the require-

¹ na hy asti pratyakṣādi-prāmāṇya-sādhakam anyad loka-vyavahārāt. Nyāya-sudhā, II. 1. 2 adhikaraṇa, p. 251.

² te hi śrutyādināmubhūtārthaṃ smṛtvā tat-pratipādam grantham āracayati. Ibid. p. 252.

ment of new knowledge is not considered to refer to objects of knowledge, but only to the method or process of knowledge, then the knowledge involved in continuous perception of an object (*dhārāvāhika jñāna*) could not be considered as *pramāṇa*. The Buddhists might, of course, answer that each new moment a new object is produced which is perceived; the Sāṃkhya might hold that at each new moment all objects suffer a new change or *pariṇāma*; but what would the Mīmāṃsaka say? With him the object (e.g., the jug) remains the same at all successive moments. If it is argued that in the knowledge of an object abiding in and through successive moments we have at each particular moment a new element of time involved in it and this may constitute a newness of knowledge in spite of the fact that the object of knowledge has been abiding all through the moments, the same may be argued in favour of memory; for it manifests objects in the present and has reference to the experience as having happened in the past (*smṛtir api vartamāna-tat-kālatayā anubhūtam artham atīta-kālatayā avagāhate*). Jaya-tīrtha maintains that it is not possible to show any necessary connection between *prāmāṇya* (validity), and the requirement that the object should be previously unacquired (*anadhigatārtha*) either through association (*sāhacārya*), or through that and the want of any contradictory instance; for on the first ground many other things associated with *prāmāṇya* would have to be claimed to be *anadhigata*, which they are not, and the second ground does not apply at least in the case of continuous knowledge (*dhārā-vāhika jñāna*). For in the case of continuous knowledge successive moments are regarded as *pramāṇa* in spite of there being in them no new knowledge.

If it is objected "how could it be the function of *pramāṇa* to make an already-known object known to us" (*adhigatam evārtham adhigamayatā pramāṇena piṣṭam piṣṭam syāt*), what does the objection really mean? It cannot mean that in regard to a known object no further cognition can arise; for neither is knowledge opposed to knowledge, nor is want of knowledge a part of the conditions which produce knowledge. The objection to the rise of a second knowledge of a known object on the ground of fruitlessness has already been answered. Nor can it be said that a *pramāṇa* should not be dependent on anything else or on any other knowledge; for that objection would also apply to inference, which is admitted by all

to be a *pramāṇa*. So *pramāṇa* should be so defined that memory may be included within it. Chāḷari-śeṣācārya quotes an unidentified scriptural text in support of the inclusion of memory in *pramāṇa*¹. Jaya-tīrtha, in a brief statement of the positive considerations which according to him support the inclusion of memory in *pramāṇa*, says that memory is true (*yathārtha*). When an object appears in consciousness to have a definite character in a particular time and at a particular place and has actually that character at that time and at that place, then this knowledge is true or *yathārtha*. Now memory gives us exactly this sort of knowledge; "it was so there at that time." It is not the fact that at that time it was not so. Memory is directly produced by the *manas*, and the impressions (*saṃskāra*) represent its mode of contact with the object. It is through the impressions that mind comes in contact with specific objects (*saṃskāras tu manasas tad-artha-sannikarṣa-rūpa eva*). It may be objected that, the object referred to by memory having undergone many changes and ceased in the interval to exist in its old state, the present memory cannot take hold of its object; the answer is that the objection would have some force if *manas*, unaided by any other instrument, were expected to do it; but this is not so. Just as the sense-organs, which are operative only in the present, may yet perform the operation of recognition through the help of the impressions (*saṃskāra*), so the *manas* also may be admitted to refer by the help of the impressions to an object which has changed its previous state².

The conception of *pramāṇa* is considered a subject of great importance in Indian philosophy. The word *pramāṇa* is used principally in two different senses, (i) as a valid mental act, as distinguished from the invalid or illusory cognitions; (ii) as the instruments or the collocations of circumstances which produce knowledge. Some account of *pramāṇa* in the latter sense has already been given in Vol. I, pp. 330-2. The conflicting opinions regarding the interpretation of *pramāṇa* as instruments of know-

yāṇi mano-vṛtti-jñānaṇi janayanti. Pramāṇa-paddhati, p. 24.*

ledge is due to the fact that diverse systems of philosophy hold different views regarding the nature and origin of knowledge. Thus the Nyāya defines *pramāṇa* as the collocation of causes which produces knowledge (*upalabdhi* or *pramā*). The causes of memory are excluded from *pramāṇa* simply on verbal grounds, namely that people use the word *smṛti* (memory) to denote knowledge produced merely from impressions (*saṃskāra-mātra-janmanah*) and distinguish it from *pramā*, or right knowledge, which agrees with its objects¹.

The Jains, however, consider the indication of the object as revealed to us (*arthopadarśakatva*) as *pramā*, and in this they differ from the Buddhist view which defines *pramā* as the actual getting of the object (*artha-prāpakatva*). The Jains hold that the actual getting of the object is a result of *pravṛtti*, or effort to get it, and not of *pramāṇa*². Though through an effort undertaken at the time of the occurrence of knowledge and in accordance with it one may attain the object, yet the function of *jñāna* consists only in the indication of the object as revealed by it³. *Pramā* is therefore according to the Jains equivalent to *svārtha-paricchitti*, or the outlining of the object, and the immediate instrument of it, or *pramāṇa*, is the subjective inner flash of knowledge, leading to such objective *artha-paricchitti*, or determination of objects⁴. Of course *svārtha-paricchitti* appears to be only a function of *jñāna* and thus in a sense identical with it, and in that way *pramāṇa* is identical with *jñāna*. But it is because the objective reference is considered

¹ *pramā-sādhanam hi pramāṇam na ca smṛtiḥ pramā lokādhīnāvadhāraṇo hi śabdārtha-sambandhaḥ. lokaś ca saṃskāra-mātra-janmanah smṛter anyām upalabdhim arthavyābhicāriṇīm pramām ācaṣṭe tasmāt tad-dhetuḥ pramāṇam iti na smṛti-hetu-prasaṅgaḥ. Tātparyā-ṭīkā, p. 14.*

² *pravṛtti-mūlā tūpādeyārtha-prāptir na pramāṇādhīnā tasyaḥ puruṣecchādhīna-pravṛtti-prabhavavāt. Prameya-kamala-mārtanda, p. 7.*

³ *yady apy anekasmāt jñāna-kṣaṇāt pravṛtttau artha-prāptiḥ tathāpi paryālocyamānam artha-pradarśakatvam eva jñānasya prāpakatvam nānyat. Ibid.*

The reflection made here against the Buddhists is hardly fair; for by *pravartakatva* they also mean *pradarśakatva*, though they think that the series of activities meant by *pramāṇa-vyāpāra* is finally concluded when the object is actually got. The idea or *viñāna* only shows the object, and, when the object is shown, the effort is initiated and the object is got. The actual getting of the object is important only in this sense, that it finally determines whether the idea is correct or not; for when the object which corresponds exactly to the idea is got the idea can be said to be correct. *Nyāya-bindu-ṭīkā*, pp. 3, 4.

⁴ *anya-nirapekṣatayā svārtha-paricchittisādhakatamatvād jñānam eva pramāṇam. Prameya-kamala-mārtanda, p. 5.*

here to be the essence of *pramā*, that *jñāna*, or the inner revelation of knowledge, is regarded as its instrument or *pramāṇa* and the external physical instruments or accessories to the production of knowledge noted by the Nyāya are discarded. It is the self-revelation of knowledge that leads immediately to the objective reference and objective determination, and the collocation of other accessories (*sākalya* or *sāmagrī*) can lead to it only through knowledge¹. Knowledge alone can therefore be regarded as the most direct and immediately preceding instrument (*sādhakatama*). For similar reasons the Jains reject the Sāṃkhya view of *pramāṇa* as the functioning of the senses (*aindriya-vṛtti*) and the Prabhākara view of *pramāṇa* as the operation of the knower in the knowing process beneath the conscious level².

It is interesting to note in this connection that the Buddhist view on this point, as explained by Dharmottara, came nearer the Jain view by identifying *pramāṇa* and *pramāṇa-phala* in *jñāna* ("knowledge"). Thus by *pramāṇa* Dharmottara understands the similarity of the idea to the object, arising out of the latter's influence, and the idea or *jñāna* is called the *pramāṇa-phala*, though the similarity of the idea to the object giving rise to it is not different from the idea itself³. The similarity is called here *pramāṇa*, because it is by virtue of this similarity that the reference to the particular object of experience is possible; the knowledge of blue is possibly only by virtue of the similarity of the idea to the blue.

The Madhva definition of *pramāṇa* as *yathārthaṃ pramāṇam* means that by which an object is made known as it is. The instrument which produces it may be external sense-contact and the like, called here the *anupramāṇa* corresponding to the *sāmagrī* of the Nyāya, and the exercise of the intuitive function of the intuitive sense (*kevala pramāṇa*) of *sākṣī*, which is identical with self. Thus it combines in a way the subjective view of Prabhākara and the Jains and the objective view of the Nyāya.

¹ For other Jain arguments in refutation of the *sāmagrī* theory of *pramāṇa* in the Nyāya see *Prameya-kamala-mārtaṇḍa*, pp. 2-4.

Svataḥ-prāmāṇya (self-validity of knowledge).

In the system of Madhva the doctrine of self-validity (*svataḥ-prāmāṇya*) means the consideration of any knowledge as valid by the intuitive agent (*sākṣī*) which experiences that knowledge without being hindered by any defects or any other sources of obstruction¹. The *sākṣī* is an intelligent and conscious perceiver which can intuitively perceive space and distance, and when the distance is such as to create a suspicion that its defect may have affected the nature of perception, the intelligent intuitive agent suspends its judgment for fear of error, and we have then what is called doubt (*saṃśaya*)². Vyāsa Yati, in his *Tarka-tāṇḍava*, expresses the idea in the language of the commentator of the *Tattva-nirṇaya* by saying that it is the *sākṣī* that is capable of comprehending both the knowledge and its validity, and even when obstructed it still retains its power, but does not exercise it³. When there is an illusion of validity (*prāmāṇya-bhrama*), the *sākṣī* remains inactive and the *manas*, being affected by its passions of attachment, etc., makes a mis-perception, and the result is an illusory perception. The operation of the *sākṣī* comprehending the validity of its knowledge is only possible when there is no obstruction through which its operation may be interfered with by the illusory perceptions of *manas*. Thus, though there may be doubts and illusions, yet it is impossible that the *sākṣī*, experiencing knowledge, should not at the same time observe its validity also, in all its normal operations when there are no defects; otherwise there would be no certainty anywhere. So the disturbing influence, wherever that may be, affects the natural power (*sahaja śakti*) of the *sākṣī*, and the doubts and illusory perceptions are created in that case by the *manas*. But,

śakti-viśayatvaṃ pratibandha-sthale yogyatā asti.*

wherever there are no distracting influences at work, the *sākṣī* comprehends knowledge and also its validity¹.

The problem of self-validity of knowledge in Mimāṃsā and Vedānta has already been briefly discussed in the first volume of the present work². A distinction is made between the way in which the notion that any knowledge is valid arises in us or is cognized by us (*svataḥ-prāmāṇya-jñapti*) and we become aware of the validity of our awareness, and the way in which such validity arises by itself from considerations of the nature of objective grounds (*svataḥ-prāmāṇyotpatti*). The former relates to the subjective and spontaneous intuitive belief that our perceptions or inferences are true; the latter relates to the theory which objectively upholds the view that the conditions which have given rise to knowledge also by its very production certify its truth. The word *prāmāṇya* in *svataḥ-prāmāṇya* is used in the sense of *pramātva* or true certainty.

According to the difference of epistemological position the nature of the subjective apperception of the validity of our knowledge differs. Thus, the followers of Prabhākara regard knowledge as self-luminous, meaning thereby that any moment of the revelation of knowledge involves with it the revelation of the object and the subject of knowledge. Any form of awareness (*jñāna-grāhaka*), such as "I am aware of the jug," would according to this view carry with it also the certainty that such awareness is also true, independent of anything else (*jñāna-grāhakātiriktānapekṣatvam*). The followers of Kumārila, however, regard knowledge (*jñāna*) as something transcendent and non-sensible (*atīndriya*) which can only be inferred by a mental state of cognition (*jñātātā*), such as "I am aware of the jug," and on this view, since the mental state is the only thing cognized, knowledge is inferred from it and the validity attaching to it can be known only as a result of such inference. Since there is a particular form of awareness (*jñātātā*) there must be valid knowledge. The validity attaching to knowledge can only be apparent, when there is an inference; it is, therefore, dependent on an inference made by reason of the awareness (*jñātātā*) of the particular form (*yāvat-svāśrayānumiti-grāhyatvam*).

² *A History of Indian Philosophy*, Vol. 1, pp. 268 n., 372-5, 484.

The analysis of the situation produced when we know an object as it appears consists on this view in this, that it distinguishes knowledge as a permanent unit which in association with the proper sense-contact, etc., produces the particular kinds of awareness involving specific and individual objectivity (*viṣayatā* or *karmatā*), such as "I know a jug." In this view objectivity, being the product of knowledge, cannot be identified with knowledge. It should be noted that, objectivity (*viṣayatā*) remaining the same (e.g., "a jug on the ground" is not the same as "ground on the jug," though the objectivity of the connected jug and ground is the same), there may be important differences in the nature of such objectivity through a difference of relations. In such cases the view held is that objectivity is different from knowledge; knowledge is the invariant (*nitya*) entity; objectivity remaining the same, a difference of relations (*prakāratā*) may give rise to a difference in the nature of awareness (*jñātātā*); each *jñātātā* or awareness means therefore each specific objectivity with its specific relations; it is only this *jñātātā* that is directly and immediately perceived. Knowledge is therefore a transcendent entity which cannot be intuited (*atīndriya*), but can only be inferred as a factor conditioning the awareness. The rise of an awareness gives rise to the notion of its validity and the validity of knowledge (*jñāna*) which has conditioned it¹. The necessity of admitting a transcendent existence of *jñāna*, apart from the varying states of awareness, is due probably to the desire to provide a permanent subjective force, *jñāna*, which, remaining identical with itself, may ultimately determine all states of awareness. Another important Mīmāṃsā exponent, Murāri Miśra, thinks that the objective knowledge (e.g., knowledge of a jug) is followed by the subjective self-consciousness, associating the knowledge of the object with the self (*anuvyavasāya*), and it is this *anuvyavasāya* which determines the final form of knowledge resulting in the intuition of its own validity². A general definition to

¹ *Bhāṭṭa-cintāmaṇi*, by Gāgā Bhaṭṭa, pp. 16-18. The inference, however, as Mathurānātha points out in his commentary on the *Tattva-cintāmaṇi* on *prāmānya-vāda* (p. 144), is not of the form, as *iyam jñātātā ghaṭatvavati ghaṭatva-prakāra-ka-jñāna-janyā ghaṭatvavati ghaṭatva-prakāra-ka-jñātātātvāt*, but as *ahaṃ jñānavān jñātātātvāt*.

² *jñānasyātīndriyatayā pratyakṣa-sambhavenasva-janya-jñātātā-lingakāmuniti-sāmagrī sva-niṣṭha-prāmānya-niscayitā iti Bhāṭṭāḥ; jñātātā ca jñāta iti pratiti-siddho jñānoqjanya-viśaya-samavetaḥ prakātyāparanāmā atirikta-padārthaviśeṣaḥ*. Mathurānātha on *Pramāṇa-vāda-rahasya* of the *Tattva-cintāmaṇi*, p. 126 (Asiatic Society's edition).

cover all these three types of *svataḥ-prāmāṇya* of Prabhākara, Kumārila Bhaṭṭa and Murāri Miśra is given by Gaṅgeśa in his *Tattva-cintāmaṇi* as follows: the validity of any knowledge (except in the case where a knowledge is known to be false, e.g., this knowledge of silver is false) is communicated by the entire system of collocations giving rise to that knowledge and by that alone¹. Vyāsa-tīrtha, in discussing the value of this definition, points out several defects in its wording and criticizes it by saying that the condition imposed, that the knowledge should be communicated by the same system of collocating circumstances that produces the validity, is defective in defining the *svataḥ-prāmāṇya* position, since the condition is fulfilled even on the *parataḥ-prāmāṇya* theory; for there also the conditioning circumstances which communicate to us the validity of any knowledge are the same which make the rise of knowledge possible². The definition of self-validity proposed by Vyāsa-tīrtha agrees with the second alternative definition given by Gaṅgeśa in his *Tattva-cintāmaṇi*: it dispenses with the necessity of admitting the collocating circumstances or conditions as producing knowledge; it defines self-validity of knowledge as that characteristic of it which is not grasped by any knowledge having for its object the matter of which the validity is grasped, i.e., the same knowledge which grasps an object does in the same act, without entering into any further mediate process, grasp its validity as well³. It will be seen that such a view is different from that of the Bhāṭṭa and Miśra views of self-validity; for on the Bhāṭṭa view self-validity is affirmed of knowledge which can be inferred only and not directly taken with a specific awareness (as “I know this jug”), and in the Miśra view self-validity is affirmed only as a result of *anuvyavasāya*, associating the cognition with the self (as “I know”)⁴.

¹ *tad-aprāmāṇya-grāhaka-yāvaj-jñāna-grāhaka-sāmagrī-grāhyatvam. Ibid.* p. 122. The *jñāna-grāhaka-sāmagrī* is, however, different with the three Mīmāṃsā views, viz., self-luminous knowledge in the case of Prabhākara, inference in the case of Bhāṭṭas and self-consciousness as *anuvyavasāya* in the case of Murāri Miśra.

² *tathā ca yāvati prāmāṇyaviśayikā sāmagrī tad-grāhyatvam svatastvam ity uktam syat; tathā ca etādṛśasvatastvasya paratastvapakṣayā sattvāt siddha-sādhnam. Tarka-tāṇḍava*, p. 12.

³ *taj-jñāna-viśayaka-jñānājanya-jñāna-viśayatvam eva svatastvam. Tarka-tāṇḍava*, p. 15, and *Tattva-cintāmaṇi*, p. 122.

⁴ The above definition of *svataḥ-prāmāṇya*, agreed to by Vyāsa-tīrtha, has been given in the *Tattva-cintāmaṇi* as a definition in which there is a general agreement in the views of the three schools of Mīmāṃsā (*mata-traya-sādhāraṇa*); it involves a special interpretation of the word *jñāna-viśaya* in *taj-jñāna-viśayaka* as *jñānāmubandhi-viśayatāśraya* (see Mathurānātha's commentary, p. 144).

Vyāsa-tīrtha emphasizes the view that in the absence of faults and doubts (*doṣa-śaṅkādinā anāskanditaḥ*) the subjective realization of an objective fact carries validity with it. He points out that it is not correct to say that sense-contact with a larger surface of the object can be regarded as the cause why the knowledge so produced is considered as valid; for it is well known that in spite of such sense-contact there may be error, if there are the defects (*doṣa*) which render mal-observation possible. So it is better to hold that the validity of knowledge arises from the datum of knowledge (*jñāna-sāmagrī*) itself. Sense-contact is useful only when there are doubts and other obstructions in the production of knowledge; but it does not by itself produce validity of knowledge¹. Even the absence of defects is not the cause of the validity of knowledge; for the absence of defects is only a negative factor, which is no doubt necessary, but is not by any means the constitutive element of the positive realization of self-validity, which proceeds immediately and directly from the datum of knowledge². Even in spite of the presence of defects there might by chance be true knowledge³. All illusory knowledge, however, is due to the presence of defects (*doṣa*); for in that case the object of which a knowledge is produced is not before us, and there is no actual sense contact with it. So the followers of Madhva hold the theory of *parataḥ-aprāmānya*, which in their view means that all cases of invalid knowledge are due to sources (namely *doṣas* or defects) other than the datum of knowledge⁴. Vādirāja points out in this connection in his *Yukti-mallikā* that the absence of defect, being a qualifying characteristic of the datum of knowledge, cannot by itself be regarded as an independent cause of right knowledge. In most cases of perception under normal conditions we have right knowledge, and it is only in special circumstances that there comes doubt and the necessity of scrutiny is realized. If in every step of knowledge there were doubt regarding its validity, then there would be an infinite regress (*anavasthā*), and hence we could never feel the validity and certainty of any knowledge⁵. Vyāsa-tīrtha also emphasizes the infinite regress on any

¹ *Tarka-tāṇḍava*, pp. 83-90.

⁴ *Ibid.* p. 98. Also *Viṣṇu-tattva-nirṇaya*, p. 2.

⁵ *Yukti-mallikā*, śl. 343-70 and *Bhāva-vilāsinī* of Surottama-tīrtha on the same.

view like that of the Nyāya, where the validity of knowledge has to be determined by subsequent tests from without (*paratastvā-numāna*). He points out that the realization of the validity of our knowledge leads us to action (*prāmānya-niścayasya pravartakatvam*)¹. But, if the validity of each knowledge has to be tested by another, we have naturally an infinite regress². The self-conscious self (*sākṣī*), however, knows its states, its pleasures and pains directly and immediately, and there is no possibility of doubt in such cases of undoubted self-validity of knowledge.

Illusion and Doubt.

The above discussion of self-validity of knowledge naturally leads us to enquire concerning the Madhva theory of illusion and the way in which it refutes the other theories of illusion accepted by other schools of Indian Philosophy. Illusion is in Madhva's system of Philosophy knowing of an object in a manner different from what it is (*anyathā-vijñānam eva bhrāntiḥ*), and the contradiction (*bādha*) of illusion consists in the knowing of the illusory form as false through the rise of the right knowledge (*samyag-jñāna*). What this means is that this illusion is a knowledge in which one entity appears as another; that which is non-existent appears as existent, and that which is existent appears as non-existent³. The illusions are produced by the senses affected by the defects. The defects do not only obstruct; they can also cause a wrong representation of the object, so they are not only responsible for non-observation, but also for mal-observation. Now the point arises that that alone can be an object of knowledge which can in some way affect its production; in an illusory knowledge of silver in respect of conch-shell, the silver, being non-existent, cannot have any part in producing the knowledge and therefore cannot be an object of knowledge. To this Jaya-tīrtha replies that even a non-existent entity may be an object of knowledge; we all infer past events and refer things to persons who have long ceased to exist. In such cases the non-existent entities may be said not to have produced the knowledge, but to have determined (*nirūpaka*) it⁴. Such determination, it may be held, does not presuppose the immediate existence of that entity, since it may well be considered as

¹ *Tarka-tāṇḍava*, pp. 41-6.

³ *Nyāya-sudhā*, p. 46.

² *Ibid.* pp. 46-50.

⁴ *Ibid.* p. 48.

limited to the idea, concept or knowledge produced, without having reference to the presence or existence of any corresponding objective entity. It may be objected that in the case of the visual perception of an object, it is definite that it is produced by the object through sense-contact; but in the case of illusion of silver in the conch-shell the silver is really absent, and therefore it cannot have any sense-contact, and consequently no visual perception of it is possible. The answer given to this objection is that it is the affected visual organ that, being in contact with conch-shell, causes the rise of a cognition representing it as a piece of silver which did not exist at all¹. It ought not to be argued, says Jaya-tīrtha, that, if there can be knowledge without an object, then no knowledge can be trustworthy; for as a rule knowledge is self-valid (*autsargikam jñānānām prāmāṇyam*). The self-conscious agent (*sākṣī*) perceives and certifies to itself the validity of the mental states without the mediation of any other process or agent. This direct certitude or "belief as true," realized by ourselves in our capacities as conscious perceivers in every case where the knowledge produced is not affected or influenced by defects which cause mal-observation and non-observation, is what is understood as the self-validity of knowledge². In the case of an illusory perception (e.g., of a piece of conch-shell as silver) there is an appearance of one thing as another, and that this is so is directly perceived or felt (*anubhava*); had it not been that a piece of conch-shell was perceived as silver, why should a man who sought silver stoop to pick up the conch-shell? The illusory perception of silver does not differ in appearance from a case of a real perception of silver.

Jaya-tīrtha, in arguing against the Mīmāṃsā view of illusion of conch-shell-silver as consisting of the memory of silver and the perception of conch-shell and the inability to distinguish between them, says that the appearance of silver in such cases has none of the characteristics of memory, and the activity generated by this false belief cannot be explained merely by the supposition of a non-distinction of difference between a memory-image and a visual percept. A mere negation involving the non-distinction of two entities cannot lead anyone to any definite choice. Moreover, if one

¹ *śūktikā-sannikṛṣṭam duṣṭam indriyam tam eva atyantāsadrajatātmena avagrāhamānam jñānam janayati. Nyāya-sudhā*, p. 48.

² *Ibid.* p. 48.

is conscious of the memory-image as what it is and of the percept as what it is, then how is it that their difference is not realized?

Against the explanation of illusion by the Śāṅkara school Jaya-tīrtha urges that the view that conch-shell-silver is indescribable or indefinite (*anirvācya*) is also not correct, for such an indescribable character would mean that it is neither existent, nor non-existent, nor neither existent-nor-existent. Of these the first and the last alternatives are accepted on the Madhva view also. The second view cannot be correct; for it cannot be denied that even the non-existent silver did appear to us as being before us. It can be replied that such an appearance was due to the presence of the defect; for that which was non-existent could not be the object of knowledge, and, as the followers of Śāṅkara think that the knowledge of the locus (*adhiṣṭhāna*), the "this," is a true mental state, how can any defect interfere?¹ If it is indescribable, why should conch-shell-silver appear as existent at the time of perception and non-existent later on, and why should it not appear as indescribable at any time? Moreover, the Śāṅkarite will find it immensely difficult to explain what non-existence is.

Vādirāja points out in his *Yukti-mallikā* that in ordinary perception the eye comes into contact with an entity, the "this" before it, which may be regarded as the substantive (*viśeṣya*), and by grasping the substantive, the entity, its character as "jug" is also grasped, because the one is associated in a relation of identity with the other. But in illusory perception the character "silver" is not associated with the substantive "this," and hence through sense-contact with the "this," the conch-shell, the silver cannot be known; and hence such illusory knowledge can only be explained by supposing it to be due to the presence of defects. So the data of knowledge (*jñāna-sāmagrī*) in the case of right knowledge and illusory knowledge are different; in the case of the former we have the ordinary datum of knowledge, whereas in the case of the latter we have an extraneous influence, namely that of *doṣa*. And absence of *doṣa*, being but the natural characteristic of any datum of knowledge, cannot be regarded as an extraneous cause of right knowledge².

¹ *māyā-vādi-mate adhiṣṭhāna-jñānasya antaḥkaraṇa-vṛttitvena satyatvān na doṣa-janyatvam. Ibid. p. 55.*

² *Yukti-mallikā, Guṇa-saurabha, śloka 460-500.*

Right knowledge, it should be observed, is distinguished from two other kinds of knowledge, namely illusory knowledge (*viparyaya*) and doubt (*saṁśaya*), by virtue of the fact that it alone can lead to a definite and settled action¹. Some say that doubt may be considered to be of five kinds². The first is due to the observation of common characteristics of two objects; thus, finding an object at some distance to be as high as a man, one might be led to remember both the stump of a tree and a man, and, not being able to distinguish the special features of each, viz., the holes, the rough and hard surface, etc. (in the case of the tree) and the movement of the head, hands and feet (in the case of a man), one would naturally doubt "is it the stump of a tree, or a man?" Again, seeing that the special characteristic (*asādhāraṇa dharma*) of *ākāśa* is sound, one might doubt if sound (*śabda*) is eternal as sound. Again, seeing that followers of Sāṃkhya and Vaiśeṣika quarrel (*vipratipatti*) regarding the physical nature (*bhautikatva*) of the senses, there may be doubt whether the senses are physical or not. Again, when after digging a well we find (*upalabdhi*) water, there may be a doubt whether the water was already there and only manifested by the digging operation, or whether it was non-existent but produced by the digging operation. Again there may be a rumour that a ghost resides in a certain tree, but, when we go to it and do not see (*anupalabdhi*) it, there may be a doubt whether the ghost really was there and was not seen by reason of its power of rendering itself invisible, or whether it did not exist at all in the tree. Others, however, include the fourth and the fifth views, those of finding and not finding (*upalabdhi* and *anupalabdhi*), within the first type, viz., that of the

¹ *avadhāraṇatvaṃ ca niṣkampa-pravṛtti-janana-yogyatvaṃ*. Janārdana's *Jaya-tīrtha-vijaya* (a commentary on the *Pramāṇa-paddhati*), p. 10.

² Vātsyāyana, in interpreting *Nyāya-sūtra*, I. 1. 23, thinks that doubt is of five kinds, viz., through *saṁāna-dharma*, *aneka-dharma*, *vipratipatti*, *upalabdhi* and *anupalabdhi*, the first two being objective occurrences of common and uncommon features, and the last two subjective conditions of presence and absence of knowledge. The examples as given by him are the same as have been given below. Uddyotakara, however, interprets the above rule to refer only to the first three types of doubt, viz., *saṁāna-dharmopapatti*, *aneka-dharmopapatti* and *vipratipatti* (*Nyāya-vārttika*, pp. 87, 96-9). Kaṇāda, in his *Vaiśeṣika-sūtras*, (II. 11. 17, 18, 19, 20) speaks of doubt as being of two kinds, internal¹ (e.g., when anyone doubts whether the predictions of the astrologer, which were found true in some cases and false in others, are likely to be correct in any particular case) and external (e.g., when one doubts whether a stump before him is a tree or a man). External doubt is again of two kinds, (i) when the object is seen in totality, and (ii) when a part of it only is seen. *Nyāya-kandali*, pp. 175-6.

perception of common characteristics (*sādhāraṇa dharma*), and thus hold that there are only three kinds of doubt¹. Jaya-tīrtha, however, thinks that the other two varieties, that of the special characteristics (*asādhāraṇa dharma*) and that of conflicting views (*vipratipatti*) may also be included in the first type; for a special characteristic cannot by itself lead to the remembering of two objects leading to doubt. To know that sound is the special characteristic of *ākāśa* is not to remember any two objects between which there may be doubt, and doubt must be preceded by the remembering of two objects. Common characteristics may either be positive or negative. Thus space (*ākāśa*) has a set of characteristics which are not to be found in eternal things and a set of characteristics which are not to be found in non-eternal things (*nitya-vyāvṛttatva-viśiṣṭam ākāśa-guṇatvam* and *anitya-vyāvṛttatva-viśiṣṭam ākāśa-guṇatvam*). There may be doubt whether sound, which is a special characteristic of *ākāśa*, is one of those qualities which the *ākāśa* has in common with eternal things or with non-eternal things. Thus, this doubt also is to be classed with doubts of the first type, viz., that of the perception of common features. The followers of Madhva, by virtue of their theory of specific particulars (*viśeṣa*), can agree to the existence of two opposite sets of qualities in a thing. So, in the case of conflicting views (*vipratipatti*) also, the doubt may be said to rise through perception of the common qualities in physical and non-physical objects, so that one might very well doubt whether the senses, on account of certain qualities which they have in common with physical objects, are physical or whether, on account of the other qualities which they have in common with non-physical objects, are non-physical. So on Madhva's system doubt is of one kind only. Jaya-tīrtha says that the followers of the Vaiśeṣika think that apart from doubt and illusion (*viparyaya*) there are two kinds of false knowledge, viz., uncertainty (*anādhyavasāya*) and dreams. Uncertainty is different from doubt; for it is not an oscillation between two entities, but between an infinite number of possibilities, e.g., what is this tree called? Jaya-tīrtha says that uncertainty in such cases cannot be called knowledge at all; it is a mere enquiry (*saṃjñā-viśayam jñānāsā-mātram*): thus, though I know that this tree is different from many other trees

¹ This is Uddyotakara's view of *Nyāya-sūtra*, I. 1. 23, as has been mentioned before.

which I know, I still do not know its name and enquire about it. Most dreams are due to sub-conscious memory impressions and so far as these are there they are not false; the error consists in our conceiving these, which are mere memory images, as actually existing objectively at the time; and this part is therefore to be considered as illusion (*viparyaya*). Probability (*saṃbhāvanā*, also called *ūha*) is also to be considered as a kind of doubt, in which the chance of one of the entities is greater than that of the other (e.g., "it is very probable that that is the man who was standing outside the house")¹.

It is evident from the above that doubt is here considered only as a mental state of oscillation; its importance in stimulating philosophical enquiry and investigation, its relations to scepticism and criticism are wholly missed. The classifications of Vātsyāyana, Uddyotakara and Kaṇāda are of hardly any philosophical importance. This being so, it is much better to take doubt in the way in which Jaya-tīrtha has done.

Defence of Pluralism (Bheda)².

The difference between God and the individual (*jīva*) is perceived on our side by us and on God's side by Him. We know we are different from Him, and He knows that He is different from us; for, even though we may not perceive God, we may perceive our difference in relation to Him; the perception of difference does not necessarily mean that that from which the difference is perceived should also be perceived; thus even without perceiving a ghost one can say that he knows that a pillar is not a ghost³.

Again, the difference of the individuals from Brahman can also be argued by inference, on the ground that the individuals are objects of sorrow and suffering, which the Brahman is not⁴. And, since the Brahman and the individuals are permanent eternal entities, their mutual difference from each other is also eternal and real. It is argued that the suffering of sorrow belongs to the limited

¹ *Pramāṇa-paddhati*, pp. 10-13; also *Jaya-tīrtha-vijaya* thereon.

² The materials of this section are taken from Vyāsa-tīrtha's *Bhedojjīvana* and the *Vyākhyā-śārkārā* of Śrīnivāsa.

³ *sapratyogika-padārtha-pratyakṣe na pratiyogi-pratyakṣaṃ tantram... stambhaḥ piśāco na ity ādau vyabhicārāt. Bhedojjīvana*, p. 13.

⁴ *jīvo brahma-pratiyogika-dharmi-sattā-samāna-sattāka-bhedādhikaraṇaṃ brahmaṇyanusamhita-duḥkḥānusaṃdhātṛtvād vyatirekeṇa brahmavat. Ibid.* p. 15.

soul and not to the pure consciousness; it is this pure consciousness which is the individual (*jīva*), and, since the suffering exists only so long as there is limitation, the difference ultimately vanishes when the limitation vanishes, and cannot therefore be real. But the Madhvas do not consider such individuals, limited in nature, to be false, and hence the difference depending on their nature is also not false. There being an eternal and real difference between the nature of the individuals and that of God, namely that the former suffer pain while the latter does not, the two can never be identical. The individual souls are but instances of the class-concept "soulhood," which is again a sub-concept of substance, and that of being. Though the souls have not the qualities of substances, such as colour, etc., yet they have at least the numerical qualities of one, two, three, etc. If this is once established, then that would at once differentiate this view from the Śāṅkara view of self as pure self-shining consciousness, leading to differenceless monism. The self as a class-concept would imply similarity between the different selves which are the instances or constituents of the concept, as well as difference among them (insomuch as each particular self is a separate individual numerically different from all other selves and also from God). The supposition of the adherents of the Śāṅkara school is that there is no intrinsic difference among the selves, and that the apparent difference is due to the limitations of the immediately influencing entity, the minds or *antahkaraṇas*, which is reflected in the selves and produces a seeming difference in the nature of the selves, though no such difference really exists; but Vyāsa-tīrtha urges that the truth is the other way, and it is the differences of the selves that really distinguish the minds and bodies associated with them. It is because of the intrinsic difference that exists between two individual selves that their bodies and minds are distinguished from each other. The Upaniṣads also are in favour of the view that God is different from the individual souls, and the attempt to prove a monistic purport of the Upaniṣad texts, Vyāsa-tīrtha tries to demonstrate, may well be proved a failure¹.

This defence of difference appears, however, to be weak when compared with the refutations of difference by Citsukha in his *Tattva-pradīpikā*, Nṛsiṃhāśrama muni in his *Bheda-dhikkāra*, and

¹ He refers to the Upaniṣad text *dvā suparṇā*, etc.

others. Citsukha goes directly into the concept of difference and all the different possible ways of conceiving it: difference as the nature of things (*svarūpa*), difference as mutual negation (*anyonyā-bhāva*, e.g., the jug is not cloth, the cloth is not a jug), difference as distinctness (*prthaktva*), difference as separateness of qualities (*vaidharmya*), and difference as manifested in the variety of categories, each of which has its own separate definition (*bhinna-lakṣaṇa-yogitva-bheda*); but Vyāsa-tīrtha does not make any attempt squarely to meet these arguments. A typical example of how the notion of difference is refuted by these writers has already been given in the first volume of the present work¹.

¹ *A History of Indian Philosophy*, Vol. I, p. 462.

CHAPTER XXVIII

MADHVA LOGIC

Perception.

PRAMĀṆA has already been defined as true correspondence with objects, and it has also been mentioned that it is divided into two kinds, *kevala-pramāṇa* and *anu-pramāṇa*. *Kevala-pramāṇa* is that by which direct and immediate intuition of objects of cognition is made; in fact it is both the intuitive process and the intuition. Four kinds of such direct intuition are admitted in the Madhva school of thought, viz., God's intuition, intuition of His consort *Lakṣmī*, intuition of sages (Yogins), intuition of ordinary persons¹. God's intuition is always correct, independent (*svatantram*), beginningless and eternal, perfectly clear and has its scope or field everywhere (*sarvārtha-viṣayakam*). *Lakṣmī*'s intuition is dependent on *Īśvara* and inferior in clearness to His knowledge; it is equally beginningless, eternal, and correct, and has for its object everything except the entire extent of God Himself.

The specially efficient knowledge attained by *yoga* is that which belongs to Yogins: these are of three kinds. The first is of those straight sages (*ṛju-yogin*) who deserve Brahmahood. Excepting that this kind knows *Īśvara* and *Lakṣmī* only partially, it knows everything; this knowledge increases with the increase of *yoga*, until *mukti* is attained. These sages know of God more than other individual souls can do. Next to these comes the knowledge of Gods (*tāttvika-yogi-jñānam*); it is inferior in scope to the knowledge of Yogins. Next comes the knowledge of ordinary persons, and of these also there are three classes in a descending order of merit; first, those that deserve liberation, secondly those that suffer rebirth, thirdly those who are in a still lower state of existence. *Pramāṇa* as intuition (*kevala*) is to be distinguished from *anu-pramāṇa*, as means of such intuition, which may be of three kinds, perception, inference, and testimony of the scriptures (*āgama*). The contact of any faultless sense-organ with a faultless object.

¹ *īśvara-jñānam lakṣmī-jñānam yogi-jñānam ayogi-jñānam ceti. Nyāya-paddhati*, p. 16.

Objects become faulty through excessive remoteness, excessive nearness, excessive smallness, intervening obstruction, being mixed up with things similar to them, being manifested, and being similar to other things (*sādrśya*). Cognitive senses are of two kinds, the intuitive faculty of the cognitive agent which is identical with himself, and the ordinary cognitive senses of smell, taste, eye, touch, ear and *manas*; by the power of the intuitive faculty are perceived the self and its qualities, ignorance, *manas* and its faculties, and all sense-knowledge, pleasure, pain, etc., time and space¹. The visual organ is supposed to perceive large objects having colour, and *manas* is the superintendent of all sense-organs and the faculty of memory. The faults of *manas*, in consequence of which errors are committed, are the passions and attachments, and those of the other senses are diseases like jaundice, etc., and the distracting influence of intervening medium, such as glass, etc. The ordinary cognitive senses produce the states of *manas*. The sense-organs are like so many instruments which have contact with the objects of cognition. The intuitive faculty also by virtue of its functions (existing as identical with itself and yet separately by virtue of *viśeṣa*) may be considered to be in contact. The verdict of intuitive faculty need not necessarily always be objectively valid, though it is always capable of correctly intuiting the contents of sense-observations. In God and Yogins it is both subjectivity and objectivity in agreement with facts; in ordinary persons it may or may not in any particular case be in agreement with the objective parts, or, in other words, its contents may or may not correspond to objective facts, but it is always correct in intuiting what is brought to it by the senses².

Jaya-tīrtha dispenses with the necessity of sixfold contact as advocated by the followers of the Nyāya³. This has to be so, because the *samavāya* relation is not admitted in the system of Madhva, nor is it admitted that there is any difference between things and their qualities (*guṇa-guṇy-abheda*). Sense-contact therefore takes place according to Jaya-tīrtha as one event; on the one

¹ *indriya-śabdena jñānendriyaṃ grhyate, tad dvi-vidhaṃ, pramāṭṛ-svarūpaṃ prākṛtaṃ ca tatra svarūpendriyaṃ sāksity ucyate; tasya viśaya ātma-svarūpaṃ tad-dharmaḥ avidyā-manas-tad-vṛttayah bāhyendriya-jñāna-sukhādayaḥ kālavyā-rtākāśaś ca. Pramāṇa-paddhati, p. 22.*

² *Ibid.* p. 26.

³ See *A History of Indian Philosophy*, Vol. I (first edition), p. 334.

hand, because there is no difference between qualities and things, on the other because the self and its qualities are directly perceived by the intuitive entity and there is no necessity of admitting the contact of *manas*, and hence no need to admit a sixfold contact as is proposed by the followers of the Nyāya.

Again, we know that the Nyāya draws a distinction between indeterminate (*nirvikalpa*) and determinate (*savikalpa*) knowledge; according to this system, indeterminate knowledge means the simple cognition of the object in itself without any of the eightfold conceptual determinations as regards substance-concept (*dravya-vikalpo yathā daṇḍī*), as “the possessor of a stick,” as regards quality-concept (*guṇa-vikalpo yathā śuklah*), as “white”, as regards action-concept (*kriyā-vikalpo yathā gacchati*), as “he goes”, as regards class-concept (*jāti-vikalpo yathā gauḥ*), as “cow”, as regards ultimately distinguishing characteristic (*viśeṣa-vikalpo yathā viśiṣṭaḥ paramāṇuḥ*), as “the atoms have ultimate characteristics by virtue of which the sages can distinguish one atom from another”, as regards the concept of relation of inseparable inherence (*samavāya-vikalpo yathā paṭa-samavāyavantās tantavaḥ*), as “the threads in a piece of cloth”, as regards the concept of name (*nāma-vikalpo yathā Devadatta*), as “the man Devadatta”, as regards the concept of negation (*abhāva-vikalpo yathā ghaṭā-bhāvavad bhū-talam*), as in “there is no jug on the ground”. But Jaya-tīrtha says that none of these distinctions between determinate and indeterminate perceptions can be accepted, as they are based on the assumption of the two categories of specific ultimate characteristics (*viśeṣa*) and the relation of inseparable inherence (*samavāya*), both of which are invalid. The name of a percept is also known by memory operating at a later moment, and the negation of an entity is known to depend on the memory of the entity itself. Though not all these concepts are produced at the first moment of perception, yet, since some of the concepts, such as substance, quality, action, etc., are grasped at the first moment of perception, there is no reason to suppose the existence of indeterminate perception (*nirvikalpa pratyakṣa*). All perception is determinate. The Nyāya view that the feeling of usefulness of an object or of its being undesirable is the result of perception is not correct: for these are obtained by inference¹. When a man avoids

¹ *Nyāya-mañjarī*, pp. 67-71.

a thorn, it is because of his past experience that he judges that it would cause him pain; when he turns to something which is desirable, it is from the inference of the experience of it as having felt desirable in the past.

Inference (Anumāna).

The cause of inference is a faultless reason (through which by virtue of its association anything can be ascertained). The nature of this association or concomitance is described by Jaya-tīrtha as being inseparable concomitance (*avinābhāva*). Vyāsa-tīrtha urges in the *Tarka-tāṇḍava* that this inseparable concomitance ought really to mean contradiction of experience leading to inadmissible assumption or implication (*anupapatti*). When anything experienced in a particular space-time relation must be invalid except on the assumption of some other thing, in some other space-time relation, it must be admitted that such a particular relation subsisting between the two is a relation of concomitance (*vyāpti*), leading to the inference of the latter through the former¹.

Vyāsa-tīrtha urges that this view of inference has also been supported by Madhva in his *Pramāṇa-lakṣaṇa*, where he says that the residual method (*pariśeṣa*) is the essential method in all cases of valid inference². Reduction to absurdity in regard to any valid experience is what necessitates the supposition in an act of inference.³ Jaya-tīrtha in his *Pramāṇa-paddhati* has indeed defined concomitance (*vyāpti*) as inseparability (*avinābhāva*); this inseparable concomitance cannot be described as being in all cases agreement in absence, i.e., the absence of the reason, *hetu*, in all cases of the absence of the *probandum* (*sādhya*), or the inferred entity; for there are cases where, in spite of the absence of such negative instances, inference is possible, e.g., sound is expressible on account of its being an object of knowledge; now here no such negative instance is available where there would be no expression; hence in such cases of impossible-negative (*kevalānvayi*) inferences the above definition of concomitance, which

¹ *yad-deśa-kāla-sambaddhasya yasya yad-deśa-kāla-sambaddhena yena vinā-mupapattis tasyiva tena saha vyāptiḥ. Tarka-tāṇḍava* (MS., p. 1).

² *pariśeṣo'rthāpattir anumānam ity aviśeṣaḥ. Pramāṇa-lakṣaṇa and Pramāṇa-lakṣaṇa-tīkā*, p. 27.

³ *anumānam apī āvaśyakānmupapattyaiiva gamakam. Tarka-tāṇḍava* (MS., p. 2).

requires the existence of negative instances for the ascertainment of concomitance, would not apply. Also no kind of spatial association of the reason and consequence (*sādhya*) can be urged as being an indispensable condition of concomitance: for there can be the inference of rain in the upper part of a country from perceiving a rise of water in the river in the lower part, and there is no spatial contiguity between the reason and consequence. So the main point in concomitance determining inference is the reduction of an incontrovertible experience into an impossibility, which necessitates the assumption of the inferred entity. It is this which has also been described as the law of unconditional and invariable association (*sāhacarya-niyama*). In the well-known example of fire and smoke what is described as the unconditional and invariable coexistence of the absence of smoke in all cases of the absence of fire is also a case of *reductio ad absurdum* (*anupapatti*). It would apply with equal force in the cases of impossible-negatives (*kevalānvayi*); for there also the impossible absence of the consequence would render the reason absurd; and hence the assumption of the consequence is necessary.

Vyāsa-tīrtha refutes at great length the definition of inference given by Gaṅgeśa in his *Tattva-cintāmaṇi*, where he explains concomitance as the coexistence of consequence and reason as qualified by the fact of the absence of the latter in each case of the absence of the former. Had it not been for the fact that in inferences of the type of impossible-negatives (*kevalānvayi*) no negative instances are available where we might have been acquainted with cases of absence of the consequence being also cases of absence of the reason (*sādhyaḥbhāvavad-avṛttitvam*), Gaṅgeśa would have been glad to define concomitance (*vyāpti*) as unconditional and invariable non-existence of the reason in all cases of the non-existence of the consequence (*sādhyaḥbhāvavad-avṛttitvam*). But owing to the above difficulty Gaṅgeśa was forced to define concomitance as coexistence (*sāmānādhikaraṇya*) of the consequence and reason where the reason is also qualified as the repository of the negation of all possible conditions which could invalidate its unconditional and invariable relation to the consequence (*sādhya*)¹. The insight of Gaṅgeśa in formulating such a definition consists in this, that he

¹ *pratiyogy-asamānādhikaraṇa-yat-samānādhikaraṇāntyantābhāva-pratiyogitā-vacchedakāvachinnam yan na bhavati tena samam tasya sāmānādhikaraṇyam vyāptiḥ. Tattva-cintāmaṇi, Part II, p. 100 (ed. 1888, Bibliotheca Indica).*

thinks that universal existence of the reason in case of the consequence is alone sufficient for an inference of the latter from the former, provided that the reason is pure and unmixed by the presence of any other entity. It is the presence of other entities mixed with the reason that may invalidate its universal coexistence with the consequence; so, if that could be eliminated, then mere universal existence of the reason in cases of the consequence would be sufficient to establish a relation of concomitance between the former and the latter.

Vyāsa-tīrtha, however, points out that the existence of the reason in cases of the consequence is not universally valid in all cases of inference. Thus in the inference of rain in the upper regions from perceiving a rise of water in the river in the lower regions there is no spatial coexistence of the reason in the consequence; so also in the inference that the constellation *Rohiṇī* will shortly rise in the east because the constellation *Kṛttikā* has already risen. In all such cases and in all cases of inference the view of *reductio ad absurdum* (*anupapatti*) can always define concomitance in the best possible way and therefore can also serve as the best ground for all kinds of inference, including the class known as impossible-negatives (*kevalānvayi*). For in the example given of that class, "this is expressible because it is an object of knowledge", we can argue that the denial of non-expressibility is a necessary postulate for the validity of the incontrovertible experience of its being an object of knowledge¹. An objection may be raised that, non-expressibility being as fictitious an entity as a round square, there would be no meaning in further denying it. To this Vyāsa-tīrtha's reply is that negation may apply even to the fictitious and the non-existent (*aprāmāṇika*)².

It is evident that this view of concomitance is a later development of theory by Vyāsa-tīrtha. For Jaya-tīrtha, in his *Pramāṇa-paddhati*, describes concomitance as being inseparable existence (*avinābhāva*), which he explains as invariable coexistence (*sāha-carya-niyama*) and also as invariable relation (*avyabhicaritaḥ sambandhaḥ*)³. Janārdana, however, in his commentary on the

¹ *idaṃ vācyam jñeyatvāt kevalānvayi anumānam.*

² *tatra sādhyābhāvasya asattvād eva sādhyābhāve sati sādhanasya yopapattis tad-abhāva-rūpānupapatteḥ sattvāt; mammate'prāmāṇikasyāpi niṣedha-pratigeyitvāt. Tarka-tāṇḍava* (MS., p. 6).

³ *Pramāṇa-paddhati*, p. 30.

Pramāṇa-paddhati, holds that this *sāhacarya-niyama* of Jaya-tīrtha must be interpreted to mean the *reductio ad absurdum* of Vyāsa-tīrtha; otherwise it would be evident to all that his view of concomitance has been intended by the above definition of Jaya-tīrtha; and he supports his view by pointing out that both in the *Pramāṇa-lakṣaṇa* and in his commentary on the *Pramāṇa-lakṣaṇa* Jaya-tīrtha has included inference by residues (*pariśeṣa*) and implication (*arthāpatti*) within inference, as he thought that the methods of these are practically methods of inference itself¹. But this only proves that *pariśeṣa* and *arthāpatti* are also kinds of inference and not that the method of *anupapatti* involved in them should be regarded as being the only possible form of inference. Had he thought this to be so, he would certainly have mentioned it and would not have limited his definition of concomitance to invariable coexistence (*sāhacarya-niyama*). Chāḷari-śeṣācārya, who faithfully follows the footprints of Jaya-tīrtha, often repeating his language also, explains this invariable coexistence of Jaya-tīrtha as “where there is smoke, there is fire”; but he remarks that this invariable coexistence means only the existence of an invariable relation of the reason to the consequence (*atra sāhacaryam hetoḥ sādhyena sambandha-mātram vivakṣitam*), and not merely existence in the same place (*sāmānādhikaraṇya*). Coexistence therefore is said to mean here unfailing relation to the consequence (*avyabhicarita-sādhya-sambandho vyāptiḥ*), and this is *vyāpti*². He also refers to Gaṅgeśa’s definition of *vyāpti*, noted above, and points out that this definition of *vyāpti* would be inapplicable in those instances of inference where there is no spatial coexistence (e.g., the inference of rain in the upper regions from the rise of water in the river in the lower regions)³. He points out on the strength of such instances that concomitance cannot be defined as coexistence (*sāmānādhikaraṇya*), but is an unfailing relation which may hold between a cause and an effect existing in different places. On the strength of these instances Chāḷari-śeṣācārya argues in favour of concomitance without co-

¹ *anupapatter vyāptitvam ca pramāṇa-lakṣaṇe pariśeṣārthāpattiḥ anumā-viśeṣa ity atrārthāpattir iva anumānam api āvaśyakānupapattyaiva gamakam ity uktatvāt. Tarka-tāṇḍava* (MS., pp. 1-2). Also *Pramāṇa-lakṣaṇa-ṭīkā*, pp. 5-7.

² Cf. Gaṅgeśa’s alternative definition of *vyāpti* in the section on *Vīśeṣa-vyāpti*: *yat-sambandhitāvacchedaka-rūpavattvam yasya tasya sā vyāptiḥ. Tattva-cintāmaṇi*, Part II, p. 156.

³ *na tu samānādhikaraṇyam eva. Pramāṇa-candrikā*, p. 8a.

existence (*vyadhikaraṇa-vyāpti*) as being possible, and therefore advocates the dropping of the coexistence as a necessary condition of concomitance. Vyāsa-tirtha seems to have profited by these remarks and, instead of remaining content with “unfailing relation” of Chāṭari-śeṣācārya, explained this “unfailing relation” as being the definite relation of *reductio ad absurdum* (*anupapatti*)¹.

Tarka (Ratiocination).

The determining oscillation constituent in a mental process leading to inference is called *tarka* or *ūha*². Gautama, in his *Nyāya-sūtra*, describes it as being ratiocination with a view to knowledge of truth, involving attempt at determination of any fact as possessing a particular character, based on a proper enquiry regarding the cause of such a determination. Thus there is a desire to know the truth about the nature of selves as knowers. Are they produced or are they uncreated? If they were created, they would suffer destruction, like all created things, and would not suffer or enjoy the fruits of their own deeds. If they are uncreated, they may very well continue to exist for ever to suffer or enjoy the fruits of their deeds and undergo rebirth. So the self which undergoes rebirth and enjoys or suffers the fruits of all its deeds must necessarily be uncreated³. Vātsyāyana says that *tarka* is neither included within the accepted *pramāṇas* nor is it a separate *pramāṇa*, but is a

¹ *Pramāṇa-candrikā*, pp. 8a, 9

² *ūhatvaṃ ca mānasatva-vyāpyo jāti-viśeṣaḥ “tarkayāmi” ity anubhava-siddhaḥ. Viśvanātha-vṛtti*, I, p. 40.

Tarka is used in the sense of *ūha* by Jayanta also in the *Nyāya-mañjarī*, p. 586. Jayanta says that its function as *ūha* consists in weakening the chances of the weak alternative, thereby strengthening the probability of the stronger alternative and so helping the generation of a valid knowledge of the certainty of the latter alternative. The meaning of *tarka* here must be distinguished from the meaning “inference” (*anumāna*), which it has in *Brahma-sūtra*, II. 1. 12 (*tarkā-pratiṣṭhānāt...*), and also from its use as the science of logic (*ānūṅikī*), one of the fourteen subjects of learning (*vidyā-sthāna*). *Yājñavalkya-smṛti*, I. 3; also *Nyāya-mañjarī*, pp. 3-4. *Ūha* is with Sāṃkhya a quality of *buddhi* and with the Mīmāṃsakas it is a process of application of recognized linguistic maxims for the determination of the sense of words or of sentences (*yuktyā prayoga-nirūpaṇam ūhaḥ*), *ibid.* p. 588. Here *ūha* is used practically in the sense of “inference” and is such a *pramāṇa*. But here in the *Nyāya ūha* or *tarka* stands between right knowledge and doubt. Thus Jayanta says: *tad eṣa mīmāṃsaka-kalpyamāno nohaḥ pramāṇa-vyatirekam eti pramāṇa-sandehadaśāntarālavartī tu tarkaḥ kathito'tra śāstre* (p. 590).

³ *Nyāya-sūtra*, I. 1. 40 and Vātsyāyana's *Vṛtti* on it.

process which helps the *pramāṇas* to the determination of true knowledge¹. Keśava Miśra, in his *Tarka-bhāṣya*, is inclined to include it under doubt². But Annam Bhaṭṭa, in his *Tarka-dīpikā*, says that, though *tarka* should properly be counted under false knowledge (*viparyaya*), yet, since it helps the *pramāṇas*, it should be separately counted³. The usefulness of *tarka* in inference consists in assuring the mind of the absence of any cases of failure of existence of the reason in the consequence and thereby helping the formation of the notation of the concomitance of the reason and the consequence⁴. Viśvanātha says that *tarka* clears away the doubts regarding the possible cases of failure (*vyabhicāra*) of the reason (e.g., if smoke existed in any instance where there was no fire, then fire would not be the cause of smoke), and thereby renders the knowledge of concomitance infallible and so helps the work of inference not in a direct, but in an indirect way (*pāramparayā*)⁵. Viśvanātha further adds that such a *tarka* is of five kinds, namely consideration of the fallacy of self-dependence (*ātmāśraya*, e.g., if the knowledge of this jug is produced by the knowledge of this jug, then it should be different from it), mutual dependence (*anyonyāśraya*, e.g., if this jug is the object of the knowledge as produced by the knowledge, then it should be different from this jug), circle (*cakraka*, if this jug is produced by something else produced by this jug, then it should be different from anything produced by something else produced by this jug), vicious infinite (*anavasthā*, e.g., if the class concept "jug" refers to all jugs, it cannot refer to things produced by the jug), contradictory experience (*pramāṇa-bādhitārthaka-prasaṅga*, e.g., if smoke exists where there is no fire, then it could not be produced by fire, or if there was no fire in the hill, there would be no smoke in it)⁶.

¹ *tarko na pramāṇa-saṃgrhīto na pramāṇāntaram;

evānya upayogaḥ.* *Viśvanātha-vṛtti*, I. 1. 40.

⁶ Each of the first three has three varieties, according as it refers to knowledge (*jñāpti*), production (*utpatti*) and existence (*sthiti*). Thus the threefold example of *ātmāśraya* would be (i) *etat-ghaṭa-jñānam yady etat-ghaṭa-janyaṃ syāt etad-ghaṭa-bhīmanṃ syāt*, (ii) *ghaṭo'yaṃ yady etad-ghaṭa-janakah syāt, etad-ghaṭa-*

Mathurānātha, in explaining the function of *tarka* in the formation of the notion of concomitance (*vyāpti*), says that, even when through noticing the existence of smoke in all known cases of fire and the absence of smoke in all those places where there is no fire, one decides that smoke is produced by fire or not, it is there that *tarka* helps to remove all legitimate doubts. As Gaṅgeśa shows, such a *tarka* would proceed thus: Either smoke is produced by fire or it is not produced there. So, if smoke is produced neither by fire nor by not-fire, it is not produced at all. If, however, there are the doubts whether smoke is from not-fire, or whether it can sometimes be where there is no fire, or whether it is produced without any cause (*ahetuka*), then none of us can have the notion of inseparable existence of fire in all cases of smoke so as to lead us to action (*sarvatva sva-kriyā-vyāghātaḥ*)¹. A course of thought such as is called *tarka* is helpful to the formation of the notion of concomitance only when a large number of positive and negative cases has been actually perceived and a provisional certainty has been reached. Even when the provisional certainty is reached, so long as the mind is not cleared by the above *tarka* the series of doubts (*saṁśaya-dhārā*) might continue to rise². It cannot be urged, says Gaṅgeśa, that, even when by the above method the notion of concomitance has been formed, there might still arise doubts whether fire might not be the cause of smoke or whether smoke might be without any cause; for, had it been so, you would not always (*niyata*) make fire when you wanted smoke, or eat when you wanted to satisfy your hunger, or use words to carry your ideas to

bhinnah syāt, (iii) ayam ghaṭo yady etad-ghaṭa-vṛttiḥ syāt, tathātvena upalabhyeta. Example of anyonyāśraya in jñapti: ayam ghaṭo yady etad-ghaṭa-jñāna-janya-jñāna-viśayaḥ syāt etad-ghaṭa-bhinnah syāt. Example of cakraka in utpatti: ghaṭo'yaṁ yady etad-ghaṭa-janya-janya-janyaḥ syāt tadā etad-ghaṭa-janya-janya-bhinnam syāt. Mādhava, in his Sarva-darśana-saṁgraha, speaking of older Nyāya tradition, adds seven others, vyāghāta (contradiction), pratibandhi-kalpanā (irrelevant thesis), lāghava (minimum postulation), gaurava (too much postulation), utsarga (general rule), apavāda (exception), vaijātya (class-difference). But Viśvanātha, whose list of these varies somewhat from the above, as he drops vyāghāta and has prathamopasthitatva, and vimigamana-viraha for pratibandhi-kalpanā, apavāda and vaijātya, holds that these are not properly tarka, but are so called only because they help as accessories to pramāṇas (pramāṇa-sahakāritva-rūpa-sādharmyāt tathā vyavahārah). Viśvanātha-vṛtti, I. 1. 40.

¹ Gaṅgeśa on *tarka* and Mathurānātha's commentary thereon. *Tattva-cintāmaṇi*, Part II, pp. 219-28.

² *Ibid.* p. 220; see also Kāmākhyānātha's note, also p. 228.

others. Such regular attempts themselves show that in such cases there are no doubts (*śaṅkā*); for, had there been doubts, these attempts would not be so invariable. It is not possible that you would be in doubt whether fire is the cause of smoke and yet always kindle fire when you try to get smoke. The existence of doubt in such cases would contradict your invariable attempt to kindle fire whenever you wanted smoke; doubts can be admitted only so long as one's actions do not contradict (*sva-kriyā-vyāghātā*) them¹.

Śrīharṣa, however, arguing from the Vedānta point of view, denies the power of *tarka* to dispel doubt. He urges that, if it is said that *tarka* necessarily dispels doubts in all cases and helps the formation of any particular notion of concomitance, then this statement must itself depend on some other notion of concomitance, and so on, leading us to a vicious infinite (*anavasthā*). Moreover, the fact that we know the universal coexistence of fire and smoke, and do not perceive any other element universally abiding in the fire which is equally universally coexistent with fire, does not prove that there is no such element in it which is really the cause of smoke (though apparently fire may appear as its cause). Our perception can certify only the existence or non-existence of all that is visible under the normal conditions of visual perception; it cannot say anything regarding the presence or absence of entities not controlled by these conditions, or we could only say that in the absence of fire there is absence of a specific kind of smoke; we could not say that there would be absence of all kinds of smoke; for it is just possible that there is some other kind of cause producing some special kind of smoke which we have not yet perceived; mere non-perception would not prove that such a special kind of smoke does not exist at all, since perception applies only to entities that are perceptible and is guided by its own conditions, and cannot therefore apply to entities which cannot be brought under those conditions². The *tarka* which is supposed to dispel doubt by the supposition of contradiction of experience and which would thus support conco-

¹ *tad eva hy āśaṅkyate yasmīn āśaṅkyamāne sva-kriyā-vyāghāto na bhavātīti; na hi sambhavati svayaṁ vahnī-ādikaṁ dhumādi-kāryyārthaṁ niyamata upādatte tat-kāraṇaṁ tan netyāśaṅkyate ca.* Ibid. p. 232.

² *tad-adarśanasya āpātato hetu-antara-prayojyāvāntara-jāty-adarśanena ayo-gyatayā avikalpyatvād apy upapatteḥ; yadā tu hetu-antara-prayojyo dhūmasya viśeṣo drakṣyate tadāsau vikalpiṣyate iti sambhāvanāyā durnivāratvāt.*

Śrīharṣa's *Khaṇḍana-khaṇḍa-khāḍya*, p. 680.

mitance, not being itself grounded on concomitance, would naturally fail to do its part; for, if such groundless *tarka* could be supposed to establish concomitance, that would itself be contradiction (*vyāghāta*). Udayana had said that, if even when no doubt is present you suppose that doubt might arise in the future, that can only be due to inference, so inference is valid. No doubts need be entertained regarding the concomitance underlying *tarka*, as that would lead to the contradiction of our own actions; for we cannot say that we believe fire to be the cause of smoke and still doubt it. Śrīharṣa had replied to this by saying that, where there is experience of failure of coexistence, that itself makes the supposition of concomitance doubtful; when there is no experience of failure of coexistence, there is no end of indefinite doubts lurking about; for these unknown doubts are only put an end to when a specific failure of coexistence is noticed; so under no circumstances can doubts be dispelled by *tarka*¹. The main point of the dispute consists in this, that, while Śrīharṣa is afraid to trust *tarka* because of the supposed doubts, Udayana thinks that, if we are so pessimistic, then we should have to stop all our actions. None of them, however, discusses the middle course of probability, which may lead us to action and may yet not be considered as proved valid inference. Vardhamāna, however, in commenting on the above verse of Udayana, refers to Gaṅgeśa as holding that *tarka* does not lead to the formation of the notion of concomitance².

Vyāsa-tīrtha, however, in his *Tarka-tāṇḍava*, urges that *tarka* is not an indispensable condition of the notion of concomitance; by faith in trusty persons, or from inherited tendencies, as a result of experiences in past life, or through acquiescence in universally

¹ Udayana's verse ran as follows:

*śaṅkā ced amumāsty eva na cec chaṅkā tatastarām
vyāghātāvadhir āśaṅkā tarkaḥ śaṅkāvadhir mataḥ.*

Kusumāñjali, III. 7.

Śrīharṣa gave his reply to this by slightly changing Udayana's words as follows:

*vyāghāto yadi śaṅkāsti na cec chaṅkā tatastarām
vyāghātāvadhir āśaṅkā tarkaḥ śaṅkāvadhiḥ kutaḥ.*

Khaṇḍana-khaṇḍa-khāḍya, p. 693.

Gaṅgeśa suggests that the word *vyāghāta* in Śrīharṣa means failure of coexistence (*sahānavasthāna-niyama*), while in Udayana it means contradiction of one's own actions (*sva-kriyā-vyāghātaḥ*). But, as Vyāsa-tīrtha shows, the word may be taken in the latter sense even in Śrīharṣa. *Tarka-tāṇḍava* (MS., p. 25).

² *atrāsmatpitṛcaranāḥ, tarko na vyāpti-grāhakaḥ kintu
vyabhicāra-jñānābhāva-sahakṛtām saha-cāra-darśanam.*

Prakāśa, III, p. 26.

accepted views, we may have a notion of concomitance without going through the process of *tarka*. He seems, however, to be largely in agreement with the view of *tarka* as held by Gaṅgeśa according to the above statement of Vardhamāna, in holding that *tarka* does not lead directly to the establishment of concomitance. For he says that *tarka* does not directly lead us to the establishment of concomitance, since concomitance is directly grasped by a wide experience (*bhūyo-darśana*) of coexistence, qualified by a knowledge of absence of failure of coexistence¹. Vācaspati also holds more or less the same view when he says that it is the sense-organ, aided by the memory of wide experience, that grasps this natural relation of concomitance². Vyāsa-tīrtha says that the determination of absence of vitiating conditions (*upādhi*), which is a function of *tarka*, becomes necessary only in some kinds of inference; it is not always awaited. If it were always necessary, then *tarka* being required for all notions of concomitance and concomitance being the basis of *tarka*, there would be a vicious infinite³. If failures of coexistence are not known, then from cases of coexistence the self may immediately form the notion of concomitance⁴. What is necessary therefore is to dispel the doubts as to failure of coexistence (*vyabhicāra-śaṅkā-nivṛtti-dvāra*). But such doubts come only occasionally (*kvacitkaiva*) and not always; and such occasional doubts require to be dispelled by only an occasional recourse to *tarka*. It cannot be argued that the possibility of doubts may remain in all cases and hence in all cases there is necessity for the exercise of the *tarka*; for it may well be asked, do such doubts arise of themselves in our minds or are they raised by others? On the first supposition one may have doubts even as to the perception of one's hands and feet, or one might even have doubts in regard to one's doubts, which would render even the doubts invalid. If it is held that doubts arise only when other possible alternatives are suggested, then it has to be agreed that there will be many cases where no such

¹ *api ca tarko na sākṣād vyāpti-grāhakah bhūyo-darśana-vyabhicārādarśana-sahakṛta-pratyakṣeṇaiva tad-grahaṇāt. Tarka-tāṇḍava* (MS., p. 20).

² *bhūyo-darśana-janīta-saṃskāra-sahitam indriyam eva svābhāvika-saṃbandha-grāhi. Tātparya-ṭīkā.*

³ This has already been pointed out above in dealing with Śrīharṣa's objections.

⁴ *adrṣte vyabhicāre tu sādhanam tad ati sphuṭam jñāyate sākṣīnavāddhā mānavadho na tad bhavet.*

Tarka-tāṇḍava (MS., p. 21).

alternatives would be suggested or the probability of one of them might be so strongly suggested that there will be no occasion for doubts. So it must be admitted that in many cases we have a natural belief in certain orders of coexistence, where no doubts arise of themselves (*sva-rasika-viśvāsasyāvāśyakatvān na sarvata śaṅkā*)¹; no one is seen going through a never-ending series of doubts all his life (*na cāvīrala-lagna-śaṅkā-dhārā amubhūyate*). On the second supposition also, no one can suggest that doubts may always arise: in the relation of smoke and fire one cannot suggest that there may still be some other entity, different from fire, which causes smoke; for, if this were a sensible entity, it would have been perceived, and, if it were non-sensible, there would be no proof at all that a non-sensible entity existed or could exist. For, if Śrīharṣa should be so doubtful of all things, it might be suggested that in all the proofs in favour of monism (*advaita*) there may be a thousand faults and in the arguments of the dualists there may be a thousand good points, and so in consequence of these doubts you could not come to any conclusion establishing your doctrine of monism². If a belief in a concomitance arises, the mere indefinite possibility of doubt does not shake one off his natural conviction of the concomitance as valid³. If you yourself would eat whenever you had hunger to appease, you cannot say that you have still doubts that eating may not after all be the cause of appeasing of hunger. Moreover, what is gained by urging that possibility of doubts always remains? Is it meant to destroy the validity of all inference or of all notions of concomitance? No one who wishes to admit the usefulness of inference would think of destroying the means—the notion of concomitance—by which it is established. If concomitance is not established, the Vedāntist will find that it is impossible to understand the meanings of those Vedic monistic words by which he wishes to establish monism. Again, if inference is to be valid, that can only be established by inference and not by perception. Without inference the Vedāntist could neither establish anything nor refute any assertions made by his opponents, contradicting his own doctrines. It seems therefore that Śrīharṣa would

¹ *Tarka-tāṇḍava*, pp. 22–3.

² *Ibid.* p. 24.

³ *na hi grāhya-saṁśaya-mātraṁ niścaya-pratibandhakam; na ca utpannasya vyāpti-niścayasya balavad bādhakam asti yena autsargikaṁ prāmāṇyam apodyeta. Ibid.* p. 24.

carry out an inference as if there were no fear of the supposed doubts and yet, merely for the sake of saying it, say that there is a possibility of the existence of doubts in all inferences¹.

The main points that arise from the above discussion are that, while Śrīharṣa would argue that *tarka* cannot remove the doubts threatening the validity of any notion of concomitance and while the Naiyāyikas would hold that *tarka*, on account of its function of removing doubts from notions of concomitance, is a necessary factor of all inferential process, Vyāsa-tīrtha argues that, though the power of *tarka* in removing doubts is admitted, yet, since in many of our inferences no doubts requiring the help of *tarka* would arise, it is not true that *tarka* is a necessary factor in all inferences². From what has been said above it will appear that there is some subtle difference of opinion in the Nyāya school regarding the real function of *tarka*. But the general tendency seems to be to restrict the function of *tarka* to removing doubts and thereby paving the way for the formation of the notion of concomitance; but it does not directly produce the notion of concomitance (*na tu vyāpti-grāhaka*) nor does it verify particular inductions by the application of general principles of uniformity of nature³.

¹ *Ibid.* pp. 25-31.

² It cannot, however, be said that the Nyāya would urge the necessity of *tarka* in all instances of inference. The older Nyāya writers do not say anything explicitly on the subject; but Viśvanātha, in his *Muktāvalī*, states that *tarka* is necessary only in those cases where there are doubts regarding the forming of the notion of concomitance. Where no doubts naturally arise, there is no necessity of *tarka* (*yatra svata eva śaṅkā nāvatarati tatra na tarkāpekṣāpti*). *Muktāvalī*, 137.

Dinakara, however, in his commentary on the *Muktāvalī* 137, thinks that there are two kinds of *tarka*, clearance of doubts and the formation of concomitance (*tarkaś ca divividho saṁśaya-pariśodhako vyāpti-grāhakaś ca*). This however is directly opposed to the view of Vardhamāna cited above.

³ The wording of Dr Seal's brief references to the subject of *tarka* in *A History of Hindu Chemistry* by Dr P. C. Ray (p. 264) is inexact. He says there: "*Tarka* or *Ūha*, then, is the verification and vindication of particular inductions by the application of the general principles of Uniformity of Nature and of Causality, principles which are themselves based on repeated observation (*bhūyo-darśana*) and the ascertainment of innumerable particular inductions of Uniformity or Causality (*bhūyo-darśana-janita-saṁskāra-sahitam indriyam eva svābhāvika-saṁbandha-grāhi* Vācaspati)." Thus *tarka* also helps in dispelling doubt (*saṁdeha*).

On its function in clearing the way to the formation of the notion of concomitance: *mārga-sādhana-dvāreṇa tarkasya tattva-jñānārthatvam iha vivakṣitam*. *Nyāya-mañjarī*, p. 586. Mathurānātha also points out that the function of *tarka* is to supply such grounds that doubts may not arise, but it is not *vyāpti-grāhaka* (*tarkaḥ śaṅkānutpattau prayojakaḥ...*). Mathurānātha on *Tattva-cintāmaṇi*, Part II, p. 240.

So far Vyāsa-tīrtha has been using the word *tarka* in the accepted Nyāya sense and, using it in that sense, he has been showing that the removal of doubts is not indispensable for the formation of the notion of concomitance. *Tarka* consists according to him, however, in the necessary awakening of the knowledge of absence of the reason owing to absence of the consequence; taken from this point of view, it becomes identical with inference (*anumāna*). Jaya-tīrtha also says in his *Pramāṇa-paddhati* that *tarka* means the necessary assumption of something else (consequence), when a particular character or entity (reason) is perceived or taken for granted (*kasyacid dharmasyāṅgikare'rthāntarasyāpādanam tarkaḥ*)¹. Granted that there is no fire in the hill, it must necessarily be admitted that there is no smoke in it; this is *tarka* and this is also inference². *Tarka* is thus the process by which the assumption of one hypothesis naturally forces the conclusion as true. This is therefore a *pramāṇa*, or valid source of knowledge, and should not be considered as either doubt or false knowledge, as some Nyāya writers did, or, as other Nyāya writers considered it to be, different from both doubt and decision (*nirṇaya*). Thus according to Vyāsa-tīrtha *tarka* has a twofold function, one as the dispeller of doubts and a help to other *pramāṇas*, and the other as inference. The main point that Vyāsa-tīrtha urges against Udayana (who holds the function of *tarka* to be merely the removal of undesirable assumptions) and against Vardhamāna (who holds that the function of *tarka* is merely the removal of doubt of the absence of the consequence) is that, if *tarka* does not take account of the material discrepancy or impossibility of facts involved in the assumption of the absence of the consequence (fire) when the smoke is present, then even the doubts or undesirable assumptions will not be removed; and, if it does take account thereof, then it yields new knowledge, is identical with inference, and is a *pramāṇa* itself³. *Tarka* may be treated as a negative inference, e.g., "had it been

¹ *Pramāṇa-paddhati*, p. 36a. *manmate tu āṅgikṛtena sādhyābhāvena saha anāṅgikṛtasya sādhanābhāvasya vyāpakatva-pramā vā sādhyābhāvāṅgikāra-nimittaka-sādhanābhāvasyāṅgikartavyatva-pramā vā tarkyate'nena iti vyutpattyā tarkaḥ. Tarka-tāṇḍava* (MS., p. 78).

² *parvato nirdhūmatvenāṅgikartavyaḥ niragnikatvena āṅgikṛtatvād hradavat ity anumānam eva tarkaḥ. Ibid.* p. 84.

³ *kiṁ ca para-mate tarkasya kiṁ viśaya-pariśodhane upayogaḥ kiṁ Udayana-riti vā anīṣṭa-prasaṅjanatvamātreṇa upayogaḥ, kiṁ vā Varddhamānādi-riti vā sādhyābhāva-sandeha-nivarttanena. Ibid.* p. 92.

without fire, it would have been without smoke; but it is not so". Being such a negative inference, it stands as an independent inference, and, as it may also be used to strengthen a positive inference, it may also be considered in that case an additional support to it (*pramāṇānām anugrāhaka*), just as what is known by perception may again be strengthened by inference¹. Its function in removing doubts in other cases remains just as it has been shown before; but everywhere the root principle involved in it is necessary supposition rendering other alternatives impossible (*anyathānupapatti*), which is the principle also in inference².

Concomitance (Vyāpti).

The word *vyāpti* in Sanskrit is a noun formed from the root *vyāp*, "to pervade". The consequence (e.g., fire) pervades all cases of smoke, i.e., the circle of the consequence is not smaller than the circle of smoke and encloses it; consequence is therefore called the pervader (*vyāpaka*) and the reason (e.g. smoke) as the object of this action of pervading is called the pervaded (*vyāpya*). Thus in the case of smoke and fire there is an unfailing relation (*avyabhicāritā-sambandha*) between them and the former is called *vyāpya* and the latter *vyāpaka*. This unfailing relation may however be of four kinds. First, the two circles might coincide (*samavṛtti*), in which case the reason may be treated as consequence and inferred from the consequence treated as reason and *vice versa*. Thus one may argue both ways: it is sinful because it is prohibited in the Vedas and it is prohibited in the Vedas because it is sinful; here the two circles coincide. Secondly, when one circle is smaller than the other, as in the case of smoke and fire (*nyūnādhika-vṛtti*); the circle of fire is larger than the circle of smoke and so one could infer smoke from fire, but not fire from smoke—*vyāpya* is smaller than the *vyāpaka*. Thirdly, where the two circles are mutually exclusive (*paraspara-parihāreṇaiva vartate*), e.g., the class-concept cow (*gotva*) and the class-concept horse (*aśvatva*); where there is one, there is not the other. There is a relation of exclusion here, but not the relation of a *vyāpya* and *vyāpaka*. Fourthly, where the two are

¹ *sādhana-numānaṃ vinaiva yadi niragnikaḥ syāt tarhi nirdhūmaḥ syāt tathā cāyaṃ nirdhūma itī tarka-rūpānumānenaiva agnisiddheḥ. Ibid. p. 90.*

² *sākṣād anyathānupapatti-pramāpaka-tarka-viṣaya-kṛta-virodhasya sattvāt. Ibid. p. 89.*

sometimes mutually exclusive, yet sometimes found to be coincident; thus cooking is done by women, yet there are men who cook; cook and males are mutually exclusive, though there may be some males who cook (*kvacit samāviṣṭa api kvacit paraṣpara-parihāreṇaiva vartate*). The circle of cooking is divided between males and females. Here also there is a relation between cooking and males, but it is not unfailing (*avyabhicāritā*); unfailing relation means that, where there is one, there must be the other also.

When a man observes the coexistence of fire and smoke, he naturally revolves in his mind "is it in this place that fire and smoke are seen together, while in other places and at other times the presence of one excludes the presence of the other, or are they always found together"; then by observing in several instances, he finds that, where there is smoke, there is fire, and that, where there is no fire, there is no smoke, and that in some cases at least there is fire, but no smoke. These observations are followed by a consideration such as this: "since, though in many cases fire coexists with smoke, in some cases at least fire is found where there is no smoke, does smoke, although in all the cases known to me it exists with fire, ever remain without it, or does it always coexist with fire?" Then again the consideration arises that the relation of smoke to fire is determined by the presence of wet wood (*ādrendhana*), which may be called a vitiating condition (*upādhi*), i.e., had this condition not been there, there would have been unqualified coexistence of fire with smoke, and *vice versa*. This vitiating condition (*upādhi*) exists in all cases of smoke, but not in all cases of fire¹. Where the coexistence is not determined by any such vitiating condition, the coexistence is universally mutual. There are some qualities which are common to both fire and smoke (e.g., both of them are objects of knowledge: *yathā prameyatvam*), and these cannot determine the connection. There are other qualities which do not belong either to smoke or fire, and these also cannot determine the connection. It is only the vitiating condition of the presence of wet wood which by its absence can dissociate fire from smoke, but cannot dissociate smoke from fire. If there were any such condition which was present in all cases of fire, but not in all cases of smoke, then the inference of fire from smoke would have been faulty as the

¹ This vitiating condition will therefore falsify an inference such as "There is smoke in the hill because there is fire."

inference of smoke from fire is faulty. Now, so far as we have observed, there is no such condition which is present in all cases of fire, but not in all cases of smoke; the fear that there may be some vitiating conditions which are too subtle for our senses is illegitimate; for, if it is neither perceived nor known by any other sources of knowledge (*pramāṇāntara-vedya*), the doubt that it may still somehow exist cannot arise. So, when we are satisfied that there are no vitiating conditions, there arises the notion of invariable concomitance (*avinābhāva-pramitiḥ*)¹. So the invariable concomitance is grasped by perception aided by wide experience, associated with absence of any knowledge of exception to co-existence and ascertainment of absence of vitiating conditions, operating as accessories. When once the mutual invariable relation between smoke and fire is grasped, then, wherever smoke is perceived, fire is inferred². This description of the formation of the notion of concomitance seems to be more or less the same as the Nyāya view; there also the perceiving of coexistence, associated with the knowledge of absence of exception, is said to lead to the formation of the notion of concomitance³.

¹ Vyāsa-tīrtha remarks here that the ascertainment of the absence of vitiating conditions is necessary in most cases where there are doubts as to their possible existence, but should not be insisted upon as indispensable in all cases; for then, this ascertainment of absence of vitiating conditions being dependent on determination of concomitance and that on previous ascertainment of absence of vitiating conditions, there would be infinite regress (*anavasthā*): *yā tu Paddhataḥ upādhi-niścayasya sahakāritvoktiḥ sā tu upādhi-śaṅkāsthābhiḥprāyā na tu sārva-trikābhiḥprāyā anyathā upādhy-abhāva-niścayasya vyāpti-sāpekṣa-tarkādāhātvenānavasthāpātāt. Tarka-tāṇḍava* (MS., p. 22).

² *Pramāṇa-paddhati*, pp. 31-5.

³ *vyabhicāra-jñāna-viraha-sahakṛtaṃ saha-cāra-darśanaṃ vyāpti-grāhakam. Tattva-cintāmaṇi*, p. 210. Legitimate doubts regarding invariable concomitance may be removed by *tarka*, as has already been described above.

Vyāsa-tīrtha, following the *Nyāya-sūdhā*, defines vitiating conditions (*upādhi*) as *sādhyā-vyāpakatve sati sādhanāvyāpaka upādhir iti*; and he objects to Udayana's definition of it as *sādhyā-sama-vyāptatve sati sādhanāvyāpaka upādhiḥ* and also to Gaṅgeśa's definition of it as *parāvāsita-sādhyā-vyāpakatve sati sādhanāvyāpaka upādhiḥ*. But the purport aimed at by these various definitions is the same, as has been explained above. The distinctions are more verbal and scholastic than logical or philosophical; it will therefore be an unnecessary digression to enter into these. See the whole discussion on *upādhi* in Vyāsa-tīrtha's *Tarka-tāṇḍava* (MS., pp. 44-61).

Epistemological Process in Inference.

The Nyāya holds that, when a person acquainted with the relation of concomitance existing between smoke and fire sees smoke on a hill, he remembers the relation of concomitance (*vyāpti-smaraṇa*), that this smoke is invariably and unconditionally connected with fire¹; then the two ideas are connected, namely, that the smoke which has unconditional invariable relations with fire is in the hill. It is this third synthesis of knowledge that leads us to the inference of fire in the hill. Vyāsa-tīrtha, following the *Nyāya-sudhā*, argues that this view may be true in all those cases where a concomitance (*vyāpti*) is remembered on seeing the reason (*hetu*), but, where the concomitance is remembered without seeing the reason, the threefold synthesis cannot be admitted. Prabhākara, however, holds that all inference proceeds from two distinct propositions, and no synthesis is required. The two propositions are "smoke is pervaded by fire" and "the hill is smoky." Prabhākara holds that, since knowledge as formulated in the above two propositions must invariably and unconditionally precede all inference, there is no necessity for believing their synthesis to be the cause of inference, since no such synthesis really happens. Vyāsa-tīrtha, however, argues that such a synthesis is a real psychological state in inference and other mental operations, such as recognition, etc. Moreover, if the identity of the smoke (with which fire was found invariably present) with the smoke now perceived in the hill were not established by the synthesis of the two propositions, it would be a syllogism of four terms and hence invalid². Moreover, the movement of thought involved in inference requires such a synthesis, without which the two propositions would be unrelated and statical (*nirvyāpaka*) and no inference would follow.

Various Considerations regarding Inference.

Inference is of three kinds: (i) of cause from effect (*kāryānumāna*), as the inference of fire from smoke, (ii) of effect from cause (*kāraṇānumāna*), as the inference of rain from gathering

¹ *ayam dhūmo vahni-vyāpya* or *vahni-vyāpya-dhūmavān ayam iti*. Nyāya view.

² *evam ca kiñcit prameyaṃ vahni-vyāpyaṃ paravataś ca prameyavān iti jñāna-dvayam iva kaścid dharmo vahni-vyāpyaḥ parvataś ca dhūmavān iti viśa-bhūtaṃ paraspara-vartanābhijñān jñāna-dvayam api nānumiti-hetuḥ.*

Tarka-tāṇḍava (MS., p. 68).

clouds, (iii) inference of a different order from cause-effect types (*akārya-kāraṇānumāna*), as the inference of colour from taste (*rāse rūpasya*). From another point of view inference is of two kinds: (i) *dṛṣṭa*, where the inferred object is perceivable (*pratyakṣa-yogyā*), as of fire from smoke, and (ii) *sāmānyato-dṛṣṭa*, where it is not perceivable (*pratyakṣāyogyā*), as of the existence of the sense of vision from the perception of colours. This division of inference into *dṛṣṭa* and *adṛṣṭa* may be made from another point of view. Thus, when an inference is made on the basis of the concomitance directly observed between two entities (e.g., fire and smoke), it is called *dṛṣṭa*; but, when an inference is made on the basis of similarity or analogy, it is called *sāmānyato-dṛṣṭa*, as the inference that, just as ploughing, etc., lead to the production of crops, so sacrifices also produce heavenly enjoyments, since they have this similarity that both are results of effort. Inference may again be considered as being of two kinds: (i) inference of one right knowledge from another right knowledge (*sādhānānumāna*), e.g., of fire from smoke, (ii) the inference of false knowledge (*dūṣaṇānumāna*), e.g., “this cannot prove its conclusion, since it is contradicted by experience.” Again, some hold that inference is of three kinds: (i) by absolute agreement in presence (where no case of absence is possible), (ii) by absolute absence (where no outside positive instance is possible), and (iii) by combination of agreement in presence and absence; in accordance with this it is *kevalānvayi* (impossible-negation), *kevala-vyatireki* (impossible-position) and *anvaya-vyatireki* (joint positive-negative). Thus the proposition “all objects of knowledge are expressible” is an example of the first type of inference, since no negative instance is possible of which we could say that this is not an object of knowledge and is not also expressible; the proposition “all living bodies are endowed with souls, since they have lives” is an example of inference of the second type. This can only be proved by an appeal to negative instances such as “all those who are not endowed with souls are not living”; for, since the proposition comprehends all positive instances, no positive instances apart from the proposition under consideration are available. The third type is the ordinary one of inference where concomitance is experienced through both positive and negative instances.

Inference is said again to be of two kinds: first *svārtha*, where the knowledge of the reason with its concomitance rises in one’s

own mind of itself, and secondly *parārtha*, where such a knowledge is for the instruction of others. As regards the constituent propositions (*avayava*) of inference, Vyāsa-tirtha discusses the ten-proposition view of older Nyāya writers (*jaraṇ-naiyāyika*), also the five-proposition view of the later Nyāya writers¹, the three-proposition view of the Mīmāṃsā, and also the two-proposition view of example and the application of reason (*udāharaṇopanayaṣ*) of the Buddhists. Vyāsa-tirtha urges that, since the value of these constituent propositions consists in reminding persons of a particular concomitance or in rousing an enquiry in those who did not know it before, there is necessity only for as many propositions as are necessary for the purpose, in accordance with the circumstances under which the inference is being made or the state of mind of the person who makes it—so that there may be cases where only the enunciating proposition, reason and example are necessary, there may be cases where only the enunciating proposition combined with the reason is necessary (*agni-vyāpta-dhūmavān parvato'gnimān iti hetu-garbha-pratijñā*), or, when in certain cases the discussion presupposes the enunciating proposition, only the reason may be necessary, and so on². So there is no fixed rule as to the number of constituent propositions necessary for inference; it all depends upon the nature of the case whether two, three or more propositions are necessary.

Both Jaya-tirtha and Vyāsa-tirtha devote a long discussion to the division of fallacies (*upapatti-doṣa*) and criticize the Nyāya division of the same; but, as these have but little philosophical bearing, I feel inclined to omit them³.

Testimony.

Madhva and his followers admitted only three kinds of means of knowledge, namely, perception, inference, and the testimony of the Vedas. All other kinds of means of knowledge (*pramāṇa*) admitted in other systems, such as *arthāpatti*, *sambhava*, etc., are shown to be but modes of inference⁴. The Vedas are regarded as having by

¹ *jijñāsā-saṃśaya-śakya-prāptiḥ prayojana-saṃśayanirāsāḥ pratijñā-hetūdāharaṇopanaya-nigamanāni iti daśāvayavā iti jaraṇ-naiyāyikā āhuh. Tarka-tāṇḍava.*

² *vivādenaiva pratijñā-siddhau kutaḥ parvato'gnimān iti praśne agni-vyāpta-dhūmavattvād iti hetu-mātreṇa vā. Tarka-tāṇḍava (MS., p. 10).*

⁴ *Pramāṇa-paddhati*, pp. 86–90.

themselves independent force of knowledge. They are uncreated (*apauruṣeya*) and eternal (*nitya*). They are valid means of knowledge, and yet, since their validity is not derived from the speech of any person, they must be regarded as uncreated¹. No attempt, however, was made to prove that the Vedas were valid means of knowledge; but, as their validity was not questioned by any of the Hindu schools, that was taken as accepted, and then it was argued that, since they were not uttered by anyone, they were uncreated and eternal. It was sought to establish this uncreatedness of the Vedas as against the Nyāya view that they were created by God (*Īśvara*). Vyāsa-tīrtha argues that it is better to accept the direct validity of the Vedas on the ground of their being uncreated, than to do it in an indirect way through the admission of an omniscient being as their author; for there is no certainty that even such authors would not try to deceive mankind by false statements. Buddha himself is an incarnation of God, and yet he deceived the people by false teachings. Tradition also does not ascribe any author to the Vedas. If they had been created, they would be of the same kind as the holy scriptures of the Buddhists or Jains. If the importance of scriptures were to be judged by the number of people who followed them, then the Mahomedan scriptures would have a superior place. God may be regarded as the great teacher of the Vedas, being the first person who uttered and taught them². He did not create them and He remembers them always; so that there is no chance of the Vedic order of words being destroyed. Ordinarily the claim of facts to validity is prior to that of the words which express them, and the latter depends on the former; but in the case of the Vedas the words and passages have a validity which is prior to facts and independent of them. The Madhva view thus combines the Nyāya and the Mimāṃsā views of the Vedas without agreeing with either.

CHAPTER XXIX

CONTROVERSY BETWEEN THE DUALISTS AND THE MONISTS

Vyāsa-tīrtha, Madhusūdana and Rāmācārya on the Falsity of the World.

THE Vedāntists urge that the world-appearance is false. But before entering into any discussion about the nature of falsehood it is required that the Vedāntists should give a definition of falsehood. Five principal definitions have been adduced by the old Vedāntists; of these the first is that falsehood is that which is the absence of being as well as the absence of non-being (*sattvātyantā-bhāvattve sati asattvātyantatā-bhāvavattva-rūpaṃ viśiṣṭam*¹). But Vyāsa-tīrtha urges that, since one of these is the negation of the other, joint assertion of them both will be against the Law of excluded middle and therefore will be self-contradictory; the fact that both being and non-being may be admitted independently is no reason for their joint admission (e.g., the hare and horn both exist separately, but the hare's horn exists nowhere). To this the reply of Madhusūdana is that the Law of excluded middle does not apply to every case of the relation between being and non-being. Thus the false-appearances have being so far as they appear and non-being so far as they are non-existent; exclusion of being does not necessarily lead us to non-being, and *vice versa*. To this the retort given by the author of *Taraṅgiṇī* is that the Śāṅkarites themselves say that, if a thing has no being, it cannot appear, which shows that they themselves admit the Law of excluded middle, the force of which can never be denied, as Logic amply demonstrates in the examination of any and every specific relation of being and non-being.

The second definition of falsehood by the Śāṅkarites is that falsehood is that which can be denied at all times even where it appears to exist (*prati-pannopādhu traikālika-niṣedha-prati-yogitvam*). To this Vyāsa-tīrtha says that, if the denial is true, then this true thing would exist side by side with Brahman and thus the

¹ *Nyāyāmṛta*, p. 22.

theory of extreme monism would break down (*niṣedhasya tatttrikātve advaita-hāniḥ*); if the denial is false or true only in a limited manner (*vyāvahārika*), then the world-appearance would become true. Again, what does the denial actually mean? These supposed appearances are said to be produced from a material cause, and they are perceived as existing at the time of perception; and, if it is held that even then they have no existence at all as such, then they must be absolutely without being, like the chimerical hare's horn. If it is held that the difference of the world-appearance from chimerical entities like the hare's horn, etc., is that they are absolutely indescribable, then the reply is that the very term "indescribable" describes their nature. Again, that which is absolutely non-existing cannot in any way appear in knowledge (*asataḥ a-pratītav*), and therefore it is not possible to make reference to it or to relate it in any way to anything else. The Śāṅkarites themselves hold that what is non-existing cannot appear in knowledge (*asac cet na pratīyeta*), and thus they themselves deny the possibility of any being-in-knowledge of that which is non-existing. Again, reality is not the same as mere appearance in knowledge, and consequently, if Brahman remained always uncontradicted in knowledge, its reality could not on that ground be affirmed. Again, it is not true that words denoting absolutely non-existing and chimerical things, such as the hare's horn, produce no knowledge; for they also produce some notion; the difference between ordinary illusions and the chimerical entities is this that, while the ground of the ordinary illusions is right and valid, chimerical entities have no ground at all. Therefore, since chimerical entities can also be made objects of awareness they appear in knowledge as non-existing. The Vedic text "non-being alone existed in the beginning" (*asad eva idam agre āsīt*) also testifies to the fact that "non-being" may appear as existent. Also non-being cannot be defined as that which is different from mere "being" (*sat*) and "the indescribable" (*a-nirvācya*); for the latter can only be understood through the concept of non-being and *vice versa*. Thus non-being may be defined as that which is different from that being which cannot at all times be denied at all places (*sārvatrika-traikālika-niṣedha-prati-yogitva-rūpa-sadanyasyaiva tattvāc ca*). If the indescribable (*a-nirvācya*) is defined as that which can be denied at all times, it is the same as non-being itself. Also non-being cannot be defined

as that which is incapable of fulfilling any practical purpose; for even the conch-shell-silver, which is admitted to be false, can serve to rouse an effort to grasp it in the deluded person and thus be considered to have some kind of practical efficiency, and the pure Brahman, which is regarded as ultimately real, is itself unable to serve any practical purpose of any kind. Again, falsehood or non-being cannot be defined as that which has no nature of its own; for, if that were so, then the denial of falsehood could not be said to be directed to its own nature as such; nor could the nature of falsehood be regarded as itself false, since such an interpretation would rest on a mere technical assumption of the meaning of falsehood, and it would not in the least clear the points at issue; for, if the nature of the so-called entity persisted in its own time and place, it would be meaningless to call such a nature false in itself. Such an assumption would also mean that no distinction is made between that which can serve practical efficiency and that which cannot; if that which persists in time and place and can serve a practical purpose could be called false, then there would be no difference between being and non-being, and the absence of the real could be said to be as much a cause of cloth as the thread itself. Thus absolute non-being may be defined as that which can always be denied in all places (*sarvatra traikālika-niṣedha-pratīyogitvam*). Also it cannot be held that "non-being" (*asat*) cannot be the object of an absolute denial simply because it is non-being, as is said in the *Nyāya-makaranda* of Ānandabodha; for, if an absolute denial cannot have any object, then the reason "because it is non-being" as adduced above would have no object itself and would therefore be inapplicable. Moreover, just as positive entities can be denied, so the specific negations referring to positive entities may also be denied and so lead on to their corresponding positive affirmations. Again, it is also agreed that specific positive entities come into being through the negation of their corresponding negations immediately prior to their coming into being (*prāg-abhāva*). This also proves that denial or negation does not necessarily require positive characters or entities for the operation and their function of negation. The whole upshot of this discussion is that, if falsehood means absolute denial of anything where it appears in knowledge, then the implication is that no reality can be affirmed; for what could be affirmed either as false or as true would only apply to

entities as they are known, and in that case even the reality of Brahman would be conditional, namely, so far as it is known. Again, absolute negation (*sarvatra traikālika-niṣedha-pratīyogitvaṃ*) cannot be distinguished from what is known as chimerical entities. And, if the world-appearance could be an object of absolute negation, its status would be no better than that of chimerical entities (e.g., the hare's horn).

In reply to the objections of Vyāsa-tīrtha against the definition of falsehood, that, if falsehood be real, then that implies dualism, and that, if falsehood is false, that implies re-affirmation of the world as real, Madhusūdana says that, since the denial is itself identical (so far as its ultimate ground is concerned) with Brahman, the reality of falsehood does not imply dualism; for the reality of the denial does not imply the reality of the phenomenon, denial of which has been denied by the denial of all phenomena. It has only so much reality as is implied in the ground of all phenomena, which is the Brahman. Again, the falsehood of the falsehood does not imply the affirmation of the reality of the world-appearance; for in the case of the conch-shell-silver, though it is known that not only was it false, but, since it is never existent, it never exists, and never will exist, and the attribution of falsity to it is also false, the conch-shell-silver is not for the matter of that re-affirmed as real. It is wrong to suppose that the falsity of the falsity or the denial of the denial is re-affirmation in all cases; it is only when the reality and the denial have the same status and identically the same scope that the denial of the denial means an affirmation; but, when the scope of their meaning varies, the denial of the denial does not imply an affirmation. It may further be pointed out that, when the denial of the denial is intended to re-affirm the positive entity, the denial of the denial leads to affirmation. But, when a denial denies both the positive entity and the denial (which is itself taken as an independent entity), the second denial does not lead to affirmation¹. The denial of the world-appearance is the denial of the reality of the very world-appearance as such (*svarūpeṇa*), like the denial of the conch-shell-silver. The fact that the world-appearance is

¹ *Tatra hi niṣedhasya niṣedhe pratīyogi-sattvaṃ āyāti, yatra niṣedhasya niṣedha-buddhyā pratīyogisattvaṃ vyavasthāpyate, na niṣedha-mātraṃ niṣedhyate, yathā rajate na idam rajatam iti jñānāntaram idam na arajatam iti jñānena rajatam vyavasthāpyate. yatra tu prati-yogi-niṣedhayor ubhayor api niṣedhas tatra na prati-yogi-sattvaṃ. Advaita-siddhi, pp. 105-6.*

believed to be a product of *ajñāna* does not in the least imply that its very nature cannot be false; for what is by its very nature false would be so, whether produced or not. The denial of the conch-shell-silver ("this is not silver") means that the conch-shell-silver is other than the real market-silver, i.e., the negation here is that of otherness (*anyo-anya-abhāva*). But, when it is said that "here is no silver," the negation is one of non-existence, and the falsity of the appearance is thereby definitely declared (*sā ca purovartti-rajatasyaiva vyāvahārikam atyanta-abhāvam viṣayīkaroti iti kantho-ktam eva mithyātvam*), whereas in the former case falsehood is only implied (*idaṃ śabda-nirdiṣṭe purovarti-prātītika-rajate rajata-śabda-nirdiṣṭa-vyāvahārika-rajata-anyonya-abhāva-pratiter ārthi-kaṃ mithyātvam*)¹. Now, if the world-appearance be denied ("there is no world-appearance here"), then, since there is no world-appearance anywhere else, the denial implies the absolute non-existence of the world-appearance, i.e., world-appearance is as non-existent as any chimerical entity, e.g., the hare's horn. The reply to such an objection, that there is a difference between the absolute negation of the world-experience as indescribable (*anirvācya*) and the absolute negation as chimerical (*tucca*), is that the latter has not even a seeming appearance anywhere, whereas the former appears as really existent until it is contradicted (*kvachid apy upādhanu sattvena pratīty-anarhatvam atyanta-asattvam yāvad bādham pratītyogyatvam prātītika-sattvam*). It must further be noted in this connection that the denial which leads to falsehood must have the same relation and the same extent and scope as the content which is being denied (*yena rūpeṇa yad-adhikaraṇatayā yat pratīpannam tena rūpeṇa tan-niṣṭha-atyanta-abhāva-pratīyogitvasya pratīpanna-padena sūcitatvāt; tac ca rūpaṃ āmbandha-viśeṣo'vacchedakaviśeṣaś ca*)². The Śāṅkarites, moreover, do not admit negation as a separate category, but consider the negation to be identical with the unqualified nature of the locus where the negation appears. Brahman has no qualities, and this does not therefore mean that it has a negative quality; for, there being more separate negations, the negation of all qualities simply means the pure nature of Brahman. The attribution of so-called positive qualities also as infinitude, etc., means the negation of the opposite qualities of falsehood and limitation, which ultimately

¹ *Advaita-siddhi*, pp. 130-1.² *Ibid.* p. 151.

implies a reversion to the pure nature of Brahman, etc. (*adhikaraṇa-atirikta-abhāva-abhyupagameṇa ukta-mithyātva-abhāva-rūpa-satyatvasya Brahma-svarūpa-virodhāt*)¹.

Ramācārya, in his *Taraṅgiṇī*, refuting the view of Madhusūdana, says that, excepting the case of the negation of the negation-prior-to-becoming (*prāg-abhāva*), the negation of negation means positing and therefore, since no third alternative is possible, the denial of the denial of an entity necessarily posits. Again, the assertion of Madhusūdana, that the illusion consists in the appearance of the illusory silver as the real silver of the market, is groundless; for the material cause that produced the illusory silver is different from the material cause of the silver of the market. The illusory silver ceases to exist only when there is true knowledge removing the ignorance which was the material cause of the illusory silver (*prātibhāsikasya svopādāna-jñāna-nivartaka jñāna-viśayeṇaiva vā tādātmya-pratīteṣā*): where the same material cause produces two different appearances (e.g., the cloth and the whiteness) they may be experienced as identical. But, when the material causes are entirely different, their products can never be experienced as identical². Again, it has been urged by Madhusūdana that the denial that constitutes falsehood must be qualified by the same conditions and relations whereby the positive entities were qualified; but this is unmeaning, for no amount of such conditioning can gainsay the truth that the negation of negations means position, until some definite proof of the existence of a third alternative escaping the sphere of the Law of Excluded Middle can be adduced³.

Vyāsa-tīrtha says that falsehood moreover cannot be defined as absolute denial of reality; for, unless the meaning of denial is understood, the meaning of reality cannot be comprehended and *vice versa*. The point at issue here is whether conch-silver is denied in its very nature as such or whether its reality is denied. The former alternative is denied on the ground that, if it were accepted, then it would be difficult to account for the awareness of the conch-silver as existing in front of the perceiver; for, if it was absolutely non-existent, it could not be directly perceived. But it may be pointed out with the same force that the second alternative is also unacceptable, because, when the conch-silver was perceived, it was

¹ *Ibid.* p. 156.

² *Nyāyāmrta-taraṅgiṇī*, p. 16(a).

³ *Taraṅgiṇī*, p. 20.

also perceived to be real, and, if that is so, how can that reality be denied? If in reply to this it is suggested that the reality of the conch-shell-silver is only a relative reality and not an absolute reality, then it may be pointed out that, if once a degree of reality be admitted, then infinite regress will follow; for one may as well ask whether the absolute reality is absolutely absolute or relatively absolute and so on. Again, falsehood is defined as that which is liable to be destroyed by knowledge in its function as knowledge. But Vyāsa-tīrtha does not tolerate such a position and says that knowledge of past events and things, even though false, ceases by itself without waiting to be destroyed by the so-called right knowledge; also it is not felt that the silver is destroyed by the knowledge of the conch-shell. It is further urged that right knowledge of the conch-shell also removes the error which, so far as it was an error, was true, and this shows that knowledge removes not only falsehood, but also true things, and on that account the definition in question cannot be a true definition of falsehood. Moreover, when an illusion is removed, the removal is not due to the function of cognition as such, but is by virtue of its perceptual immediacy (*āparokṣa-adhyāsam prati jñānasya-āparokṣatayā nivartakatvena jñānatvena anivartakatvāc ca*)¹. Again, if a falsehood is defined as that which is destroyed by knowledge which destroys the very material cause of the falsehood (*svopādāna ajñāna-nivartaka jñāna-nivartyatvam*), the objection will be that it does not apply to the beginningless illusion². It may similarly be held that the definition of falsehood as appearance in the place where it does not exist (*svātyanta-abhāva-adhikaraṇe eva pratīyamānatvam*) may also be refuted; for many objections occur, as has already been pointed out, according as we consider the negation to be relatively real or illusory. Again, if falsehood be defined as that which is different both from being and non-being, then, since it has already been pointed out that non-being means absolute denial, the appearances or illusions would be inexplicable. If it be defined as that which is destroyed by knowledge, then that can prove its momentary character, but not its false nature (*dhī-nāśyatve anityatā eva syāt na mṛṣātmatā*)³.

In reply to the objection of Vyāsa-tīrtha concerning the definition of falsehood as that which is liable to be destroyed by know-

¹ *Nyāyāmṛta*, p. 39(b).

² *Ibid.* p. 40.

³ *Ibid.* p. 41.

ledge, Madhusūdana says that the real meaning of the definition is that the entity which is destroyed, both in its causal aspect and the aspect as effect, on account of the rise of knowledge is false. The jug though destroyed as effect by the stroke of the club is not destroyed in its causal aspect as the earthy pot. The hare's horn does not exist at all: so its non-existence is not due to knowledge. Again, since the conch-shell-silver appears in consciousness and is destroyed immediately after the rise of true knowledge, its dissolution must be due to knowledge. Also it is not wrong to say that falsehood is negated by knowledge in its function as knowledge; for the later knowledge does not negate the prior knowledge by its function as knowledge, but merely on account of its posteriority; and therefore the definition of falsehood as that which can be negated by knowledge only in its function as knowledge clearly keeps aloof the case of the negation of the prior knowledge by the later, to which it was supposed that the above definition of falsehood could wrongly be extended. It is well, however, to point out that falsehood is negated by knowledge not in an indirect manner, but directly and immediately (*vastutas tu sākṣātkāratvena jñāna-nivartyatvaṃ vivakṣitam*)¹.

To this Rāmācārya replies that it is Madhusūdana who says that the definition of falsehood as that which can be negated by knowledge means the general absence of an entity through the rise of knowledge (*jñāna-prayukta-avasthiti-sāmānya-viraha-pratīyogitvaṃ jñāna-nivartyatvaṃ* (see *Advaita-siddhi*, p. 168, and *Taraṅgiṇī*, p. 22)². It may be asked whether the word "generally" (*sāmānya*) or the negation is qualified by the existence (*avasthityā sāmānyaṃ vā viśiṣyate viraho vā*). The first alternative would mean the negation of the cause of an entity through the rise of knowledge; for the word *avasthiti-sāmānya* means cause. But in that case there would be an illicit extension of the definition of falsehood to the negation of the prior knowledge by the posterior knowledge; for the posterior knowledge destroys the cause of the persistence of the prior knowledge, and it would not apply to the beginningless *avidyā*. In the second alternative, i.e., if the word *sāmānya* is

¹ *jñānatva-vyāpya-dharmeṇa jñānanivartyatvaṃ ityapi sādhu, uttarajñānasya pūrva-jñāna-nivartakatvaṃ na jñānatvavyāpyadharmeṇa kintu icchādi-sādhāraṇenodīcātmaviśeṣaḥ* *uḍīcyatvena uḍīcyatvena veti na siddha-sādhanaḍi*.

Advaita-siddhi, pp. 171-2.

² *Ibid.* p. 178.

qualified by the negation, then it may be pointed out that the Śāṅkarite never admits a general negation as distinguished from the negation of any special entity. Moreover, since the conch-shell-silver is denied in its very nature as false, it cannot be said that its general absence (that is, both as cause and effect) was due to the rise of knowledge; for it is not admitted to be existent at any time¹. Again, as it has been shown by Vyāsa-tīrtha that there ought not to be any difference between the non-existence of the conch-shell-silver and that of the hare's horn, the non-existence of the hare's horn might equally be said to be due to knowledge, if the non-existence of the conch-shell-silver be said to be due to the rise of knowledge.

In supporting the fourth definition of falsehood as "appearance in the locus of its own absence" (*svātyanta-abhāva-adhikaraṇe eva pratiyamānatvaṃ*) or as the "absence in the locus of its own existence" (*svāśraya miṣṭha-atyanta-abhāva-pratīyogitvaṃ*), Madhusūdana says that, since an entity may be both present and absent in one identical time, so it may be both present and absent in one identical space. To this Rāmācārya replies that, if this is admitted, then there is no difference between existence and non-existence, and ordinary experience is inexplicable (*tathā sati bhāvābhāvayor ucchinmakathā syāt iti vyāvahārikyapi vyavasthā na syāt*); consequently dualism and its negation, monism, would be the same, and the monistic knowledge would be unable to dispel the dualistic consciousness.

In support of the fifth definition of falsehood as difference from the real (*sad-viviktatvaṃ mithyātvaṃ*) Madhusūdana defines existence of reality as that which is established by knowledge and not invalidated by defects. The definition of existence is further modified by him as that which appears as existent through proofs not invalidated by defects. By this qualification he excludes chimerical entities and Brahman; for chimerical entities do not appear as existent, and Brahman, though it exists in itself, is never an object to any mind to which it appears as existent (*satvā-prakāra-pratīti-viśayatābhāvāt*).

The existent is defined as that which is established by proof (*pramāṇa-siddha*), and this is again as that which is uncontradicted.

¹ *śukti-rajatāder-avasthity-aṅgikāre svarūpeṇa niṣedhokty-ayogaś-ca.*

Taraṅgiṃ, p. 22.

To this it is objected by Rāmācārya that Brahman is not the object of any proofs, whereas the world, which is established by all proofs, is ultimately contradicted¹.

The question is raised by Vyāsa-tīrtha whether falsehood itself is contradicted or uncontradicted. If it is uncontradicted, then falsehood becomes real, and the doctrine of monism fails. If it is urged in reply that falsehood is identical with the ground of illusion, the Brahman, then the meaning of the phrase "world-appearance is false" (*prapañco mithyā*) is that the world-appearance is identical with Brahman (*mithyā* being identical with Brahman), and this is not disputed by us; for Brahman, being all-pervasive, is in a sense identical with the world-appearance. Moreover, if falsehood be identical with Brahman, the general argument that those things alone are false which are cognizable would be faulty, because falsity, being identical with Brahman, would itself be uncognizable. If falsehood be contradicted, then it is self-false (*bādhya*), and the world would become real. Even if it is again urged that falsehood is not identical with Brahman, but is one with the reality of Brahman as underlying the second denial or the falsehood of the falsehood, to this the reply would be that our very inquiry centres round the question whether the second denial is itself contradicted or uncontradicted, and it is well known that, since the underlying reality is everywhere pure consciousness, the underlying reality of the second falsehood has no separate or independent existence regarding which any affirmation could be made. It is clear that, if in the first case the assertion of falsehood being identical with Brahman be meaningless, the attempt at an extension by making it identical with the pure consciousness underlying the second denial does not in reality lead to any new meaning. If it is again urged that, since the conch-shell-silver is false, the falsehood which is a quality of this conch-shell-silver is necessarily false; if the substance is false, its quality is necessarily false, and therefore the falsehood of this falsehood does not reaffirm the reality of the conch-shell-silver. Since both the falsehoods are based on the falsehood of the substance to which they are attributively associated the negation of negation does not mean a position. The negation of a negation can mean a position only if the substance be real. But this is clearly a confusion; for the absence of qualities follows on the

¹ *Taraṅgiṇī*, p. 23.

absence of the substance only when such qualities are dependent on the nature of the substance; but falsehood is not so, since it is naturally opposed to that to which it refers¹. Moreover, if the falsehood of the conch-shell-silver becomes false merely because it is associated with the illusory silver, though it is affirmed by an experience of contradiction, then it might equally well be real because of its ultimate association with Brahman, the ground reality of all things; or on the other hand the conch-shell might equally well be false because of its association with the illusory silver, and the non-existent would also be existent because of its association with existence, and *vice versa*². Moreover, the conch-shell-silver is not regarded by the Śāṅkarites as absolutely non-existent, like the chimerical hare's horn, and therefore falsehood cannot be considered to be so on account of its association therewith. Again, the argument that falsehood has not the same status of existence as the world-appearance to which it refers and therefore the assertion of falsehood does not hurt extreme monism, is wrong: for, if falsehood has only a relative existence (*vyāvahārikṭve*), the world of our daily experience, which is opposed to it and which is attested by perception, ought to be regarded as ultimately real. Thus our former objection remains valid, that, if falsehood be uncontradicted, the doctrine of monism fails and, if contradicted, the world would be real³.

Madhusūdana has the former reply to the above objection that, when the position and negation have a different order of being, the negation of the negation does not imply affirmation. If the negation refers to a relative existence, then such negation does not take away the assertion of a fanciful existence⁴. Thus an entity may be in different senses both true and false. Madhusūdana further says that, when the denial is due to a specific quality, then the negation of negation cannot be an affirmation. Here both the conch-shell and its quality are denied on account of their common

¹ *dharmy-asattve dharmāsattvaṃ tu dharmi-sattvāsāpekṣa-dharma-viśayam; mithyātvaṃ tu tat-pratikūlam. Nyāyāmṛta*, p. 44.

Advaita-siddhi, p. 217.

attribute of plausibility. Thus it may be said with impunity that both the horse and the cow may be denied in an elephant¹.

To this Rāmācārya's reply is that existence and non-existence naturally exclude each other, and their denial is therefore not due to any other specific property. That existence and non-existence are mutually exclusive is acknowledged even by the Śāṅkarites when they speak of *māyā* as being different both from existence and non-existence².

An important argument establishing the falsity of the world rests upon the fact that the world is cognizable; all that is cognizable is false, like dream experiences. At this point Vyāsa-tīrtha seeks to analyse what may be meant by the word cognizable. Several alternative meanings are offered, of which the first is termed *ṛtti-vyāpyatva*, i.e., that which is a content of a mental state. The Śāṅkarites are thus supposed to say that all that can be a content of a mental state is false. To this Vyāsa-tīrtha's reply is that Brahman and the self must also be the content of at least some kind of mental state, and therefore, if the thesis of the Śāṅkarites be accepted, Brahman also would be false. If it is said that Brahman in its purity can never be the object of any mental state, and it can be so only when it is associated with *ajñāna*, to this the reply is that, if Brahman in its purity cannot manifest itself in awareness, it can never establish itself, and such a theory directly militates against the self-revealing nature of Brahman. Again, it is urged that, though Brahman is self-revealing, yet it cannot be the content of any mental state; for the very expression "Brahman is pure and self-revealing" would make it the content of that verbal cognition; if the expression carries no sense, then there is no meaning in it. Moreover, if Brahman as associated with *ajñāna* be admitted to be the content of a mental state, it would through such an association be a constituent of that mental content and therefore a content in itself. It cannot, moreover, be said that the objection cannot apply to Brahman because Brahman can be a content only in association and not in its nature; for, since the same conditions apply to eternal and transcendental entities of an indeterminate character which

¹ *Advaita-siddhi*, p. 213.

² *na tāvat paraṣpara-vīraharūpayor ekaṁśedhyatā-avacchedakāvachimmatvaṁ sambhavati tvayāpi satyatvamithyātvaayoḥ paraṣpara-samuccaye virodhāt bibhyatā sad-asad-vailakṣaṇyasārūpye'ṅgikārācca. Taraṅgiṇī*, p. 26.

cannot be contents of consciousness in themselves, but only in later associated forms, Brahman would not be false on that account. Again, it is wrong to suppose that, when an object is known, the content of that mental state has the same form as the object of awareness; for we may know a hare's horn through a verbal cognition without assuming that the mental state has the same form as a hare's horn. The assumption therefore that the content of awareness must have the same form as its object is wholly invalid. It is clearly found to be so in the case of Brahma-knowledge; for no awareness can have an infinitude as its content. So to say that an awareness has content as an object simply means that it refers thereto (*tad-viṣayatvam eva tad-ākāratvam*)¹. Since this is so, the condition of perception that pure consciousness must be reflected in the mental state in superimposition upon the physical object is wholly unnecessary. Thus the objection, that all that is cognizable is on that account false, is invalid.

To this Madhusūdana's reply is that the pure consciousness, which is always self-revealing, is never the content of any awareness. It only appears to be so in association with the *ajñāna* modifications which alone can become the content of knowledge. Thus in all circumstances the pure consciousness is self-revealing and it can never be the content of itself. Madhusūdana would admit all the suggested interpretations of cognizability offered by Vyāsa-tīrtha, excepting the second (*phala-vyāpyatva*)²; he, however, admits that a stricter criticism would require the definition to be slightly modified by excluding cognizability through verbal cognition (*vastutas tu śābdājanya-vṛtti-viṣayatvam eva dṛśyatvam*); in this way, though one may be aware of chimerical entities through verbal propositions, they would not on that account be called false; for they are absolutely non-existent entities, which cannot be called either false or true³. Madhusūdana further interprets cognizability as that which has a definite formal content (*sva-prakāra-ka-vṛtti-viṣayatvam eva dṛśyatvam*). By the term "formal" (*sva-prakāra-ka*)

¹ *Nyāyāmṛta*, p. 57.

² The suggested interpretations of cognizability (*dṛśyatva*) as given by Vyāsa-tīrtha are of seven kinds: *kim idaṁ dṛśyatvam; vṛtti-vyāpyatvam vā; phala-vyāpyatvam vā; sādharmaṇam vā; kadācid-kathamcid-viṣayatvam vā; svavyavahāre svātirikta-saṁvid-antarāpekṣā-mīyatir vā; a-sva-prakāśatvam vā*. *Ibid.* p. 49.

³ *Advaita-siddhi*, p. 268.

he means any describable characteristic (*sopākhyaḥ kaścid dharmah*) and thereby excludes Brahman, which means purity having no describable characteristic: on the other hand, even the cognition of negations may be described as having the character of negativity. The effect of this interpretation is that cognizability is limited to all that comes within the purview of relative and pragmatic experience. In attempting to clear the meaning of cognizability Madhusūdana defines it as that which is somehow in relation with pure consciousness (*cid-viśayatva*). This, being identical with self, is devoid of any such two-term relation. In the attempt to classify the meaning further, cognizability of things is defined as dependence for revelation on an alien consciousness (*sva-vyavahāre svātirikta-samvid-apekṣā-niyati-rūpaṃ dṛśyatvaṃ*) or as the character of being other than the self-revealing (*a-sva-prakāśatva-rūpatvaṃ dṛśyatvaṃ*). It is clear therefore that anything other than pure consciousness depends on pure consciousness for revelation.

Rāmācārya, in attempting to refute Madhusūdana, says that merely from the knowledge of the concomitance of impurity (*aśuddhatva*) and dependent revelation (*a-sva-prakāśatva*) one cannot say that pure consciousness is self-revealed; but such a conclusion can be arrived at only when it is known that pure consciousness has no impurity in it. Again, the concomitance of dependent revelation and impurity can be known only when their opposites, "purity" and "self-revealingness," are known to coexist with pure consciousness; thus the knowledge of concomitance of pure consciousness with self-revealingness and that of impure consciousness with dependent revelation are mutually independent. There is therefore no way in which it can be asserted that only pure consciousness is self-revealing¹. The other reason adduced for falsehood is that the world-appearance is false because it is material. Now what is this materiality? Its character is given as "non-knower" (*ajñātṛtva*), "ignorance" (*ajñānatva*), as "non-self-revealing" (*a-sva-prakāśatva*), or "non-self." If the first meaning of materiality be accepted, then it may be pointed out that according

¹ na tāvad a-sva-prakāśatvāśuddhatvayor vyāpya-vyāpaka-bhāva-grahamā-trena śuddhe sva-prakāśatā paryavasyati kintu śuddhe asva-prakāśatva-vyāpakasya aśuddhatvasya vyāvṛttāu jñātāyām eva. tathā ca vyāpaka-vyatireka-grahārtham avaiyam śuddha-jñānam. kimcāsva-prakāśatvāśuddhatvayor vyāpya-vyāpaka-bhāva-graho'pi tadubhayavyatirekayoḥ śuddhatva-svaprakāśatvayor śuddhe saha-cāra-grahe saty eveti ghaṭṭa-kūṭi-prabhāta-ṛttāntaḥ. Taraṅgiṇī, p. 31.

to the Śāṅkarites the ego is false, and yet it is the knower; the pure consciousness, which according to the Śāṅkarites is the only reality, is not itself the knower. If it is suggested that pure consciousness may be regarded as the knower through false assumption, then it may well be said that false assumption would validate any false reasoning, and that would be of no avail. Even the body appears as the knower when one says, "I, the white man, know," yet on that account the body cannot be regarded as the knower. The second interpretation, which defines materiality as ignorance (*ajñāna*), cannot be held; for phenomenal knowledge is partly true and partly false. Again, it may in this connection be asked whether the knowledge of the self (*ātman*) has any content or not. If it has, then that content must necessarily be the object of a cognizing activity, and it is impossible that the cognizing activity of the self should direct its activity towards the self. If it is urged in reply that the self has no activity to be directed to itself, but the fact that it is distinguished as self is its cognition of itself, the obvious reply to this is that the cognition of all things is nothing more than the fact that they are distinguished in their specific characters. If again the knowledge of the self has no content, then it is no knowledge at all. If any knowledge be admitted which does not illuminate any object, then even a jug can be called knowledge. Therefore, if materiality be defined as *ajñāna* or ignorance, then even the self would for the above reasons be *ajñāna*. In this connection it may well be remembered that knowledge requires both the object and the knower: there cannot be any experience without the experiencer and the thing experienced. Again, if the self be regarded as mere knowledge, it may well be asked whether that knowledge is right knowledge or illusion. If the former, then, since the modifications of the *avidyā* are known by the self, these would be true. It cannot be the latter, because there is no defect associated with the self. Neither can the self be regarded as bliss: for the phenomenal enjoyment of worldly objects is not admitted as bliss, and there is no way in which the degrees of pleasure or bliss which may lead ultimately to the highest bliss can be admitted; for, once a degree of pleasure is admitted, an extraneous element naturally creeps in. Thus falsity of the world on the ground that it is material is unacceptable in any sense of the term¹.

¹ This argument that the world is false on account of its materiality is adduced in the *Tattva-sūddhi*.

To this Madhusūdana's reply is that the second and third interpretations of materiality, i.e., that which is ignorance is material or that which is non-self is material, would be quite suitable. In finding fault with Vyāsa-tīrtha's exposition of knowledge Madhusūdana says that, if knowledge be defined as that which illuminates an object, then even during emancipation objects would be illuminated, which is impossible; the relation of knowledge to objects is extraneous and therefore illusory. If it is objected that, if no objects are revealed during release, then even bliss is not revealed, and in that case no one would care to attain release, the reply is that the emancipated state is itself bliss and there is no separate manifestation of bliss as obtainable therein. The association of an object is perceivable only in sense-knowledge; in the knowledge of the self there is no association with the senses, and it is unreasonable to demand that even then objects should be manifested in knowledge. When it is said that self is of the nature of immediate knowledge, the suggestion that then it must be either valid or erroneous is unacceptable. For the exclusive classification of knowledge as valid or invalid applies to ordinary experienced knowledge. But the self as knowledge is like the indeterminate knowledge that is neither valid nor invalid.

Rāmācārya, however, says that, if the association of knowledge with objects be extraneous, then at the time of the dawn of ultimate knowledge the self should not be regarded as its object. If it is said that this is only so in the case of perceptual knowledge, where pure consciousness is reflected through the *vr̥tti* of the form of the object, then the connection of the knowledge with the object would be false; for in that case the necessity of *vr̥tti* and the reflection of consciousness through it would have to be admitted at the dawn of the knowledge of the self in the ultimate stage. The relation of the object to knowledge therefore cannot be extraneous and therefore false. In reply to Madhusūdana's statement that, just as according to the Naiyāyikas, though universals and individuals are mutually correlated, yet in the state of ultimate dissolution the universals remain even though there are no individuals, so there may be a state where there is knowledge, but no object; for the sphere of knowledge is wider than that of knowledge with objects. Rāmācārya says that even in the state of *pralaya*, where there is no individual, the knowledge of the universals has the individuals within it as its constituents. Again, the association of objects with

knowledge does not mean that the objects produce knowledge, but that knowledge is associated with the objects. Again, if the association with the object be regarded as meaning "necessarily produced by objects," or if it necessarily means "in whichever place or at whichever time this object exists there is knowledge," then the Śāṅkarites would not be able to affirm the unity of the soul. For, since the unity exists in Brahman, it could not be generated by the individual soul. And again, if it is affirmed that, whenever there is unity with Brahman, there is unity with the soul, then, since the Brahman is always one, all individual souls will be emancipated; it will also be impossible to determine the unity of individual souls and the unity of Brahman. So the objects do not generate the determinate knowledge, but are associated with it.

It is argued that whatever is limited and finite is false; now this limitation may be by time or space or by other entities (*paricchinatvam aṇi deśataḥ kālato vastuto vā*). Now as to this Vyāsa-tīrtha says that time and space cannot be limited by time and space and this is so much the case that even the supreme reality, the Brahman, is often spoken of as existing always and everywhere; time and space are thus universal characteristics and cannot be denied of others or of themselves. Thus the observation of Vācaspati, that whatever does not exist in some places and in some time is on that account absent everywhere and always, and that what is existent must always and everywhere be so (*yat sat tat sadā sarvatra sad eva...tathā ca yat kadācit kutracid asat tat sadā sarvatra asadeva*), is wholly invalid; for, if by non-existence at some particular time existence at any other time can be invalidated, then by existence at that time non-existence at other times may also be invalidated. It is as good logic to say that, because it will not exist then, therefore it does not exist now, as to say that, because it exists now, it must exist then¹. Again, what is meant by spatial limitation? If it means non-association with all bodies (*sarva-mūrttāsamyoḡitvam*) or the non-possession of the supreme measure (*parama-mahat-parimāṇānadhikaraṇatvam*), then even Brahman is so; for He is untouchable (*asaṅga*) and He has no measure as His quality; if it means possession of limited measure (*parimāṇa*), then *parimāṇa* or "measure," being a quality, cannot belong to a quality; so qualities would not be limited (*guṇa-karmāḍau guṇānaṅgikārāt*). Again,

¹ *Nyāyāmṛta*, p. 79.

temporal limitation cannot be associated with negation as "otherness"; for, if the limitation as otherness be denied at any time, then all things in the world would be one. Now limitation by other entities (which is the third definition of limitation) means "difference" (*bhinnatva*); but such a limitation (according to the Śāṅkarites) is absent in the world of everyday experience; for they deny the reality of difference. Again, difference from falsehood exists also in the self: therefore the argument of Ānandabodha, that whatever things exist divided (*vibhaktatvāt*) are on that account false, is invalid. It is, again, wrong to suppose that the unlimited nature of being consists in the fact that it alone remains universal, whereas everything else changes and must therefore be considered to be imposed upon it, since, when we say "a jug exists," "a jug moves," the jug seems to remain unchanged, while its verb changes, as "exists" and "moves." As "many" is associated with "one," so "one" also is associated with "many"; so nothing can be made of the argument that what remains constant is unlimited and valid and what is changeful is false.

To this Madhusūdana's reply is that, since the Śāṅkarites do not admit universals, it is wrong to suppose that in all cases of the existence of a cow there is something like the cow-universal which persists, and, if that is not so, then the only other explanation is that it is the individuals that come and go and are imposed upon the persistent experience of being, which alone is therefore real. Now, again, it may be argued, the Brahman, as being, is always covered by *ajñāna*; it has no distinguishable form, and so it is wrong to think that Brahman is manifested as being in our experience of the world-objects. To this the reply is that Brahman is itself not covered by *ajñāna* (*sad-ātmanā na brahmaṇo mūlājñānenā-vṛtatvaṃ*): it is only by the limitations of the specific forms of world-objects that its nature is hidden; when the obstacles of these specific forms are broken by the function of the *vṛtti* modification of the mind, the Brahman underlying these objects manifests itself as pure being. It cannot be objected that Brahman, as such a pure being, has no visual characteristics and therefore cannot be perceived by the eye; for Brahman is not perceivable by any of the senses or by any specific sense¹.

¹ *na ca rūpādi-hīnatayā cākṣuṣatvādy-anupapattiḥ bādhikā iti vācyaṃ, pratīyatendriya-grāhyeṣv eva rūpādy-apekṣā-niyamāt sarvendriya-grāhyam tu sad-rūpam brahma nāto rūpādi-hīnatve'pi cākṣuṣatvādy anupapattiḥ sattvāyāḥ parair api sarvendriya-grāhyatva-ābhīyupagamāt ca. Advaita-siddhi, p. 318.*

Rāmācārya in reply says that the universal (as "cow") has to be accepted; for otherwise how can the so-called universal as being be sometimes manifested as cow and at other times as other objects? Again, it is wrong to say that Brahman is not in itself covered by the *avidyā*; for it is said that, even when the being-aspect is revealed, the aspect as bliss may still remain covered; then, since being and bliss must be one (for otherwise the monism would fail), the veil must also be over the being-aspect as well. Again, as Brahman has no form and no characteristic, it cannot be said to be grasped by all the senses (*atyantam avyakta-svabhāvasya brahmanaś caṅśur-ādi-sarvendriyagrāhyatve mānābhāvāt*)¹.

The argument that falsehood consists in the non-existence of the whole in the parts is attacked by Vyāsa-tīrtha. He says that, so far as concerns the view that, because part and whole are identical, therefore the whole cannot be dependent on the part, he has no objection. If the whole is not dependent upon anything else and not on its parts either, then it may not be dependent on anything at all; but it cannot on that account be called false. But it may be pointed out that perception shows that the whole *is* dependent on the parts and rests in them, and therefore on the evidence of perception its non-existence in the parts cannot be admitted. The question arises whether "non-existence" or "negation" is valid or invalid: if it is valid, then monism breaks down, and, if it is invalid, then non-existence is denied, which will be in favour of Vyāsa-tīrtha. Now it cannot be urged that the existence of negation cannot be fatal to monism: for negation includes position as a constituent. Again, Brahman is denoted by the term *advitiya* ("devoid of any second"); this involves a negation, and, if negation is invalid, then its demolition of Brahman will also be invalid. Further, the denial of a second to Brahman may mean a denial not only of positive entities, but of negative entities also; positivity itself means the negative of the negative. Also, if negation is admitted, then, since one of its forms is "otherness," its admission means the admission of otherness and hence of duality. Moreover, it would be difficult for the Śāṅkarites to describe the nature of negation; for, if no positive entities can be described, it goes without saying that it will be still more difficult to describe negative entities. Moreover, not only is the non-existence of the whole in

¹ *Taraṅgiṇī*, p. 52.

the parts contradicted by perceptual experience, but it is opposed to reason also; for, since the whole cannot be subsistent anywhere else, if it is not admitted to be subsistent in the parts, its very nature is inexplicable (*anyāsamavetasyāṃśītvam etat-tantu-samavetatvam vinā na yuktam*)¹.

Again, the view that, since without knowledge nothing is revealed, the so-called things are nothing but knowledge, is wrong; for the things are experienced not as being themselves knowledge, but as those things of which we have knowledge (*ghaṭasya jñānam iti hi dhīḥ na tu ghaṭo jñānam iti*).

In reply to the above Madhusūdana says that, since the experience of cause and effect cannot be explained without assuming some difference between them, such a difference must be admitted for practical purposes, in spite of the fact that they are identical. Discussion regarding the validity or invalidity of negation is brushed aside by Madhusūdana as being out of place. Again, the opposition of perception is no objection; for perception is often illusory. Also, the objection that, if the whole, which is not elsewhere, is also not in the parts, its existence is inexplicable, is invalid; for, though the whole may not exist in the parts as an independent entity, it may still be there as identical with the material cause, the parts; for being materially identical (*etat-samavetatva*) with anything does not necessarily follow from a denial of its negation therein; for, if it were so, then all such qualities as are devoid of negative instances (being on that account present in it) would be materially identical with the thing². But what really determines a thing's material identity with another thing is that the former's negation-prior-to-existence (*prāg-abhāva*) must be in it (*kintu etan-niṣṭha-prāg-abhāva-pratīyogitvād aikyam*). The objection of Vyāsa-tīrtha, that a cloth can have its negation in threads only when such threads are not its constituent parts, is invalid, for the very reason that what determines material identity is the existence of the prior-to-existence negation (*prāg-abhāva-pratīyogitva*) of the whole in the part or of the effect in the cause, and therefore it is not proper to say that a cloth can non-exist only in such threads as are not

¹ *tathā ca aṃśītvā-rūpa-hetor etat-tantu-niṣṭhātyantābhāva-pratīyogitva-rūpa-sādhyena virodhaḥ. Nyāyāmṛta-prakāśa, p. 86.*

² *etan-niṣṭhātyantābhāva-pratīyogitvam hi etatsamavetatve prayojakam na bhavati, paramate kevalānvayi-dharma-mātrasya etatsamavetatvāpatteḥ.*

constituents of it: for the condition of the non-existence of the cloth in the threads is not the fact of the threads not being a constituent of the cloth, but the absence of the prior-to-existence negation of the cloth in the threads.

An objection is urged by Vyāsa-tīrtha that for the self-same reasons on account of which the world is called false Brahman as well may be regarded as false; for Brahman is the substratum of all our experience and therefore may be regarded as false. As to this Madhusūdana says that, so far as Brahman is associated with *ajñāna*, it is false, but, so far as it is beyond our practical experience, it is real. Moreover, if no ground-reality be admitted, then, the whole world-appearance being an illusion, we shall be landed in pure nihilism. Again, the objection that Brahman, being different from non-existent entity, is like the conch-shell-silver, which also, though not real, is different from non-existent entity, cannot be maintained. For difference from non-existent entity is difference from that which cannot appear anywhere as existent, and that alone is different from it which appears somewhere as an existent entity; but this cannot apply to Brahman, since pure Brahman does not appear anywhere as an existent entity.

Vyāsa-tīrtha, after adopting a number of tentative definitions of being, finds fault with them all, and says that, in whatever way being may be defined by the Śāṅkarites, that would be applicable in the same manner to the being of the world. Briefly speaking, the definition of being comes to be "that which at all times and in all places cannot be denied" (*sarva-deśa-kāla-sambandhi-niṣedha-pratīyogitvam sattvam*). It may also be defined as that which, being different from non-being, is not a false imposition, or as that which at some time or other is directly and rightly felt as existing (*astitva-prakāra-pramāṇam prati kadācid sākṣād-viśayatvam*).

In reply to the above attempt at a definition of being by Vyāsa-tīrtha, Madhusūdana says that our perceptual experience is absolutely illegitimate in discerning truth as distinguished from falsehood or as opposed to it¹. Truth and falsehood being mutually related, all attempts at defining them by mutual opposition become circular, and therefore illegitimate; definitions of being which refer in some way or other to the experience of being as such are also

¹ *caṅkṣurādy-adhyakṣa-yogya-mithyātva-virodhi-satvānirukteḥ.*

Advaita-siddhi, pp. 333-4.

false, as they involve the very concept of being which is to be defined. It is also wrong to say that the world has as much reality of the same order as that of Brahman; for falsehood and reality cannot have the same order of being. The being of Brahman is of the nature of one pure luminous consciousness, and it is clear that the material world cannot have that order of being. Now falsehood is defined as non-existence at all times and places (*sarva-deśiya-traikālika-niṣedha-pratīyogitvam*); reality is its opposite. Sense-perception can never bring to us such a negation, and therefore it also cannot bring to us the opposite of negation, i.e., reality. The fact that some things are perceived to exist somewhere at some time is irrelevant; for even a false appearance may have such a temporary perceptual existence. There is a Nyāya view to the effect that there is a special mode of presentation of universals (*sāmānya-pratyāsatti*), by which all the individuals that come under such universals are presented in consciousness, and that it is by this means alone that inductive generalization leading to deductive inference is possible. On this view the contention is that, though all negations of an entity at all times and places may not be visually perceived, they may be presented to consciousness by the above means of presentation, and, if they are thus presented to consciousness, their negation, viz., the reality, may also be perceived.

Madhusūdana's reply to this is, that there is no such special mode of presentation of universals by which all the individuals associated with them are also present in consciousness, i.e., there is no such *sāmānya-pratyāsatti* as is admitted by the Nyāyāyikas. He then indulges in a polemic against such a *sāmānya-pratyāsatti* and tries to show that deductive inferences are possible through the association of the special characteristics of the universals as determining the concomitance¹; thus, if there is no *sāmānya-pratyāsatti* and if all the negations at all times and places cannot be presented to consciousness, their opposite, reality, cannot be perceived either.

The reply of Rāmācārya is that, though such negations at all times and all places may not be perceived by the senses, yet there

¹ *vyāpti-smṛti-prakāreṇa vā pakṣadharmatā-jñānasya hetutā; mahānastyā eva dhūmo dhūmatvena vyāpti-smṛti-viśayo bhavati, dhūmatvena parvatīya-dhūma-jñānaṃ cāpi jātam, tac ca sāmānya-lakṣaṇaṃ vinaiva; tāvataiva anumiti-siddheḥ; ...pratīyogitāvaccchedaka-prakāraka-jñānād eva tat-sambhavana tad-arthaṃ sakala-pratīyogi-jñāna-janikāyāḥ sāmānya-pratyāsattya anupayogāt.*

is no reason why their opposite, reality, cannot be perceived; when one sees a jug, one feels that it is there and nowhere else. One perceives the objects negated and not the negation itself¹. He further says that, though *sāmānya-pratyāsatti* may not be admitted, yet the unperceived negations may be known by inference, and thus the objection of Madhusūdana that, unless *sāmānya-pratyāsatti* is admitted, such negations cannot be known and their opposite, reality, cannot be perceived either, is doubly invalid².

Madhusūdana further says that the testimony of the testifying consciousness (*sākṣī*) in experience reveals only present entities, and in that way the world-objects are relatively real. But the testifying consciousness cannot in any way show whether they will be contradicted in future or not; the testifying consciousness is thus incapable of defying a future denial of world-experience, when the Brahma-knowledge is attained.

Vyāsa-tīrtha had objected to the Vedānta thesis that there is one Being, self-identical with pure consciousness, on which all the so-called forms of object and content of knowledge are imposed, pointing out that the mere fact that one experiences that a jug exists does not prove that the jug is imposed upon the pure being; for pure existence can never be perceived and all the characteristics, including false appearances, may also be considered to have the same existential character as existence itself.

Madhusūdana's simple reply is that instead of admitting a number of individual entities it is much better to admit one constant being on which the various forms of objects are imposed. The assertion of Vyāsa-tīrtha that perceptual evidence is by its very nature stronger than inference, which is slow in establishing itself on account of the various conditions that it has to depend on, is objected to by Madhusūdana, who says that, when perceptual evidence is contradicted by inference and scriptural testimony (e.g., as in the perception of the small dimensions of planetary bodies), it is the former that is negated. So perception has also to depend for its validity on its non-contradiction and other means of proof, and the other means of proof have no more to depend on perception than perception on them. So all these means of proof, being relatively dependent, are of inferior validity to the Vedic testimony, which, not being a man-made document, has naturally an inalien-

¹ *Taraṅgiṇī*, p. 61.

² *Ibid.* p. 63.

able claim to validity. It is well known that perception through one sense, say the visual, has often to be woven together with perception through other senses, e.g., the tactile, for arriving at valid experience of facts, as in the perception "fire is hot." Thus perceptual evidence has no right of superior validity by reason of being perceptible, though it may be admitted that in certain spheres perception may dispel an ignorance which is not removed by inference¹. The objection that an inferential evidence, because it establishes itself slowly (on account of its dependence on many facts), is of inferior validity to perception because this comes quicker is invalid; for validity depends upon proper examination and discovery of faultlessness and not on mere quickness. Moreover, since there are many scriptural texts declaring the oneness of all, which cannot be justified except on the assumption of the falsity of the world, and since such an admission would not take away from perception its natural claim to validity in the relative sphere, a compromise may well be effected by allowing perceptual validity to remain uncontrolled in the relative sphere and admitting the scriptural validity of oneness in the absolute sphere.

Again, Vyāsa-tīrtha urges that, since inference and scriptural testimony both depend on visual and auditory perception, it will be wrong to think that the former could invalidate the latter. If perception is not valid in itself, then all inference and scriptural testimony would be invalid, since their data are supplied by perception.

To this Madhusūdana's reply is that the scriptural testimony does not challenge the data supplied by perception, but challenges their ultimate validity, which can never be supplied by perceptual experience². The bare fact that one knowledge springs up because it was preceded by another is no reason why it is to be less valid; the judgement "this is not silver, but conch-shell" is not less valid because it could not have come into being unless there had been a previous error with the perception of conch-shell as silver. It is said that the validity of sense-evidence is determined by a critical examination depending on correspondence. To this Madhusūdana's

¹ *nāpi anumānādy-anivartita-dimohanādi-nivartakatvena prābalyam; etāvata hi vaidharmya-mātram siddham. Advaita-siddhi, p.355.*

² *yat-svarūpam upayujyate tanna bādhyate, bādhyate ca tātvikatvākāraḥ, sa ca nopajīryate kāraṇatve tasyāpraveśāt. Ibid. p. 363.*

reply is that, so far as concerns the validity of an awareness according to correspondence, the Śāṅkarites have nothing to say against it. What he challenges is that the ultimate validity or ultimate non-contradiction cannot be revealed by any critical examination. It is again argued that, if perception is invalid, the knowledge of concomitance arrived at through it is invalid, and therefore all inference is invalid. This is, however, wrong; for even by a false reasoning a right inference may be possible; from an illusory reflection it is possible to infer the existence of the thing reflected. Moreover, falsity of the evidence (inferential or perceptual) does not imply the falsity of the thing known; so the objection that, if perception is not regarded as valid, then all knowledge becomes invalid, is illegitimate.

Vyāsa-tīrtha urges that, if perceptual testimony can be contradicted in any place by inference, then any and every inference can contradict perception, and fire can be regarded as cold and a hare as having a horn, which is impossible.

To this Madhusūdana's reply is that not any and every inference can be regarded as superior to perception, since it is well known that an illegitimate inference leads to no valid conclusion. The instances which have been adduced by Vyāsa-tīrtha are instances of illegitimate inferences, the fallacy of which is apparent. It is never admitted by anyone that an illegitimate inference is stronger than perception; but it also cannot be denied that there are many instances of illegitimate perception which are rightly denounced by right inferences.

Vyāsa-tīrtha further says that the science of *mīmāṃsā* itself admits in various places the superior validity of perception, and recommends a twisting interpretation of such scriptural passages as are not in harmony with perception. The scriptural text, "That art thou," is directly contradicted in perceptual experience, and therefore should be so interpreted as not to come into conflict therewith.

To this Madhusūdana's reply is that it is indeed true that certain scriptural passages which deal with ordinary mundane affairs are thus brought into harmony with experience and are sometimes interpreted in accordance with perception; but that is no reason why those texts which refer to ultimate experience and which do not refer to the accessory details of sacrifices should also be subordinate to perception.

Vyāsa-tīrtha says that it is wrong to suppose that perception is invalidated by inference or scriptural testimony; what happens in the case of perceptual illusions is that in both cases perception is vitiated by various types of defects, the presence of which is also known by perception.

To this Madhusūdana's simple reply is that the presence of defects cannot be known by perception itself, and that most cases of illusory perception are invalidated by stronger inference. When it is said that the moon is no bigger than a foot the illusory perception is no doubt due to the defect of the long distance, but that this is so can be known only by an inference based upon the observation of the diminution of sizes in trees on distant hill-tops. Thus, though there are cases in which one perception invalidates another, there are also cases in which an inference invalidates a perception.

A question arises whether the present perception of the world-appearance may ultimately be contradicted; but to this Vyāsa-tīrtha says that such a fear of future contradiction may invalidate even that knowledge which contradicts this perception. Ordinarily the waking experience contradicts dream-experience, and, if waking experience be also contradicted, then there would be nothing to contradict dream-experience. In this way it will be difficult to find an instance of false experience. The knowledge that contradicts the illusory perception comprehends within it things which are not known at the time of illusory perception (e.g., the knowledge of the conch-shell which was not present at the time of perception of illusory shell-silver). But it cannot be urged that the knowledge that would contradict world-experience would have the specific nature of not being comprehended within the knowledge of world-appearance. Again, a knowledge that contradicts another knowledge must have a content; contentless knowledge has no opposition to false cognitions, yet Brahma-knowledge is regarded as contentless. Moreover, contradiction is possible only there, where a defect is, and that defect lies with the Śāṅkarites, who give a monistic interpretation of scriptural texts. Again, if the monistic experience is certified by monistic texts, the dualistic experience is also certified by dualistic texts, and a knowledge that would contradict and negate the world-experience would involve a duality by the very fact of such negation. Moreover, the last experience which would contradict the world-experience, being itself an experience, would

be equally liable to contradiction; and, if uncontradicted experience be also doubted as being liable to contradiction, then there would be no end to such doubts.

Madhusūdana, in reply to the above objection of Vyāsa-tīrtha, emphasizes the point that it is no essential character of a knowledge that contradicts another that it should have a content; what is essential here is that a right knowledge should be grounded in the realization of the reality and thereby negate the false knowledge. It is also wrong to think that, when Brahma-knowledge negates world-appearance, an affirmation of duality is involved; for the Brahma-knowledge is of the very nature of reality, before which the falsehood, which has only appearance and no existence, naturally dissolves away. He further says that doubts regarding validity can only arise when it is known that there are defects; but, since there can be no defects in Brahma-knowledge, no doubts can arise. The assertion of Vyāsa-tīrtha that, if the world-appearance is false, then it is wrong to speak of the self as being of the nature of pure bliss on the ground that the experience of dreamless sleep reveals such a blissful state, is unwarranted, because the nature of self as blissful is known directly from scriptural testimony, and the experience of dreamless sleep is consistent with it.

Nature of Knowledge.

Vyāsa-tīrtha argues that, if the reasons, cognizability, etc., are supposed to indicate the falsity of the world-appearance and if they are applied to the inferential apparatus, then they also are false; and, if they are not false, then all the world-appearance is false, and the argument for the falsity of the world is fallacious. Vyāsa-tīrtha says further that, if the Śāṅkarite be asked to explain the nature of true reality, he will naturally be liable to confusion. It cannot be regarded as an object of awareness, because chimerical entities are also objects of awareness; it cannot be described as direct awareness, because then it would not belong to any eternal and transcendental entities which are unperceiving, and the world-appearance also, which is directly perceived, would not be false, and the inference, e.g., of fire based upon an illusory perception of the reason (e.g., the water-vapour in a lake), would also be true. Knowledge does not contribute to the existence of things all their properties;

even if fire is not known as fire, it can burn all the same. Thus existence does not depend upon any kind of awareness. It is also wrong to define reality as practical behaviour; for, unless the nature of world-appearance is known, the nature of practical behaviour is not known. The world as such must be either existent or non-existent, and there is no other third way of subsistence; the non-existence of the world cannot be proved by any existent proof, because existence and non-existence are opposed to each other; nor can it be proved by non-existent proofs, simply because they *are* non-existent. There cannot be any being such that it exists in common with non-being and ultimate being¹.

Madusūdana says that the false may be distinguished from the true by exactly the same kind of considerations which lead the opponent to distinguish between the perception of the blueness of the sky and the ordinary objects of experience such as a jug, a rope, etc. The nature of reality that has been conceded to the world-appearance is that it is not contradicted by anything other than Brahma-knowledge.

Vyāsa-tīrtha points out that the contention of the Śāṅkarites that there cannot be any relation between knowledge and its contents is borrowed from the Buddhists, who consider awareness and its objects to be the same. The Śāṅkarites hold that, if the objects are considered to be real, then it is difficult to show how there can be any relation between knowledge and the objects revealed by it; for the two accepted relations of contact and inseparable inherence (*samavāya*) cannot hold between them. The relation of objectivity is also too obscure to be defined; and therefore it must be admitted that the relation between knowledge and the objects is wholly illusory.

To this Vyāsa-tīrtha replies that, though all objects are regarded by the Śāṅkarites as illusorily imposed upon the one supreme perceiver, the Brahman, yet for explanation of specific cognitions of specific individuals, sense-contact, leading to the rise of different perceptions of different individuals, is admitted by them. The Śāṅkarites are not idealists to the same extent as the Buddhists are. Even if it be admitted that pure consciousness may appear different under various conditions, yet there is no reason why the world-

¹ *nāpi sat-trayānugataṃ sat-dvayānugataṃ vā satva-sāmānyam tantram. Nyāyāmṛta*, p. 174.

objects should be considered as impositions upon pure consciousness. Even the admission of the world-objects as illusory impositions does not help us very much; for there cannot be any knowledge of these world-objects without the cognitive function (*vr̥tti*) of the mind. Again, if all world-objects are illusory impositions, then it is meaningless to put into the *modus operandi* of the perceptual process a reflection of the pure consciousness through its specific functions, or into the specific cognitive senses the consciousness underlying the objects¹. The mere fact that neither contact nor inseparable relation can be of any avail does not necessarily imply that perceptual forms are all illusory; for, if there is an actual experience, then relations have naturally to be imagined to explain the situation². Again, if it be admitted for argument's sake that there is no way of proving the validity of the assumption of a relation between knowledge and its object, yet that would not prove the falsity of the objects themselves; what it would do at the utmost would be to deny the validity of relations subsisting between knowledge and its objects. Again, if the Śāṅkarite finds no difficulty in admitting the relation of the pure consciousness to the *vr̥tti*, why does he find any difficulty in admitting such a relation to the objects³? Even if the world-objects be regarded as indescribable, yet their existence may be regarded as being indescribable in the same way as that of Brahman. The Śāṅkarite has also to admit the existence of the objective world and to offer explanations for the way in which it is perceived. The only difference of this view from that of the realists is that, while the Śāṅkarite considers the objects to be ultimately false, the realist considers them to be real; and the same reason that leads the Śāṅkarites to consider them as having a higher order of reality than the merely illusory leads the realists to consider them as ultimately real⁴. The Brahman itself is in a sense as indescribable as the world-objects⁵. Things, so far as they

are known and so far as they have certain common characteristics, can well be described, though in their unique nature each of them has such peculiarities that they cannot be properly defined and expressed. Each human face may be well known by the uncontradicted testimony of our senses; but still it cannot be described with its own specific and peculiar characteristics¹. So it is difficult to describe the specific nature of Brahman as the identity of pure being, bliss and consciousness; yet its reality is not denied. The same is the case with the world-objects, and, though they are indescribable in their specific natures, yet their reality cannot be denied².

Madusūdana generally passes over many of the points of objection raised by Vyāsa-tīrtha; one of these points is that relations are grasped directly and that there is no incongruity in thinking that, if relations cannot be mediated, they can yet be grasped directly by the senses. Madhusūdana's contention is that, if relations be described as self-subsistent, then they cannot be explained and must therefore be regarded as false. Vyāsa-tīrtha now refers to the Śāṅkarite account of perception, and says that in their view the objects are supposed to be there and the veil over them is removed by the mind (*antaḥkaraṇa*) transforming itself into the form of the object; he says also, that, if this is so, then the objects of perception cannot be regarded as mental. If the objects were merely mental, the application of the sense-organs would be unnecessary for their perception; in dreams mental objects are "perceived," but the visual organs are not exercised. The difference between the ordinary practical experience of the world and that of dreams is only that the former is longer in duration, and so, if in dream-experience the mental objects can be perceived without the exercise of the visual organ, there is no reason why the world-objects also cannot be perceived in the same way. Moreover, in the case of non-perceptual cognition (*parokṣa jñāna*) the Śāṅkarites themselves admit that the objects are illuminated without any direct operation of *antaḥkaraṇa*, in association with the senses, involving an actual

¹ *tasmāt pramitasya ittham iti nirvaktum

ca prāmāṇikatvād eva sattva-siddheḥ. Ibid. p. 206.*

contact with the objects. There is no reason why the same thing cannot take place in ordinary perception. The difference of the *antaḥkaraṇa* transformation in the two cases might equally well explain the difference between the perceptual (*a-parokṣa*) and non-perceptual (*parokṣa*) cognitions, and for this it is not necessary to assume that in one case the *antaḥkaraṇa* goes out and in another case remains inside. It cannot be held that an immediate intuitive character belongs to the *antaḥkaraṇa*; for the *antaḥkaraṇa* itself being non-intuitive and non-self-illuminating by nature, its modifications also cannot be intuitive or self-illuminating. The mere fact that *antaḥkaraṇa* has fire elements in it does not make it self-illuminating; for then many objects which are supposed to be made up of fire elements would be self-illuminating. Again, it is wrong to suppose that the manifestation of consciousness must be non-transitive by nature; for, though one may speak of the illumination of an object in non-transitive terms, one speaks of knowing in transitive terms. If it is not admitted that the transitive or intransitive character of an action is often of a verbal nature, it would be difficult for a Śāṅkarite to speak of a modification of *antaḥkaraṇa* (which is non-transitive) as equivalent to knowing an object. Moreover, if it is held that it is only the pure consciousness outside the *vytti* that is illuminated, then the past, wherein there is no pure consciousness manifesting it, could not reveal itself to us; so it is wholly unwarrantable to conceive of an intermediary means in order to explain the relation between knowledge and its objects. Even if it be admitted that the *antaḥkaraṇa* goes outside the body, yet it is difficult to conceive of the nature of pure consciousness, which is supposed to illumine the object, either as consciousness reflected in the *vytti* of *antaḥkaraṇa* (as stated by Bhārati-tīrtha), or as the pure consciousness which is the ground of the appearance of objects manifested by the consciousness reflected in the *antaḥkaraṇa-vytti* (*vytti-pratibimbīta-caitanyābhivyaktaṃ viśayādhiṣṭhānaṃ caitanyam*), as supposed by Sureśvara. The question is whether consciousness as manifested in the *antaḥkaraṇa* illumines the object or whether the ground-consciousness underlying the objects manifests the objects. Neither of these views is tenable. The first view is not possible because, the consciousness reflected in the *antaḥkaraṇa-vytti* being false, it is not possible that the world-objects should be imposed on such an illusory entity; the second view is also im-

possible; for, if the consciousness reflected in the *antaḥkaraṇa-vṛtti* be supposed to remove the veil of the object, it may as well be held to manifest it, and it is, therefore, unnecessary to suppose that the ground-consciousness illumines the object.

Further, it cannot be admitted that the *vṛtti* assumes the form of the gross physical objects; for then it would be as gross and material as the objects are. Moreover, the existence of an object assumes therewith the existence of the negation of other entities; and, if the *antaḥkaraṇa* is supposed to take the form of an object, it must also assume the negative forms; it is, however, difficult to conceive how the *antaḥkaraṇa* can be supposed to assume the positive and the negative forms at one and the same time. Again, following the same supposition in the case of the final intuition, it has to be assumed that the *antaḥkaraṇa-vṛtti* assumes the form of Brahman; this, however, has no form, so that the *antaḥkaraṇa-vṛtti* must be supposed to be here both formless and endowed with form—which is absurd.

Moreover, it is not legitimate to suppose that it is the consciousness underlying the finite self (*jīva-caitanya*) that reveals the object; for, on the supposition that the objects are illusory superpositions on pure consciousness or on the consciousness underlying the objects, the Śāṅkarite theory fails; for in this case the perceiving consciousness, being consciousness underlying the *jīva*, would be different either from pure consciousness or from the consciousness underlying the objects, which is supposed to be the basis of the illusory creations. The *jīva* itself, moreover, cannot be regarded as the basis of the creation; for it is itself an illusory creation. For the same reasons also it cannot be asserted that it is the Brahman-consciousness that illumines the object. Thus the Brahman, being itself as underlying the objects, an illusory creation, cannot be regarded as also illuminating the objects. The pure consciousness underlying the objects, being itself veiled by *ajñāna*, should not also be able to manifest itself; and thus all knowledge of objects would be impossible. If it is argued that, though the pure consciousness is veiled, yet the consciousness limited by the object-form may be manifested by the *vṛtti* of the *antaḥkaraṇa*, that is not correct: for it cannot be admitted that the consciousness limited by the object-forms is itself the basis of those object-forms, since that would amount to an admission that the object-forms are their own

basis, which would be a fallacy of self-dependence (*ātmāśraya*), and the original contention of the Śāṅkarites that the objects are illusorily imposed upon pure consciousness fails. Moreover, if the process of knowledge is admitted to be such that the *antaḥkaraṇa-vṛtti* manifests the pure consciousness as limited by objective forms, then the case of final intuition (Brahman-knowledge), where objective characteristics are absent, would be inexplicable. Again, the Śāṅkarites hold that in deep dreamless sleep the *antaḥkaraṇa* is dissolved; and, if that were so, the *jīva*, which is the consciousness limited by a particular *antaḥkaraṇa*, would be renewed after each dreamless sleep, and thus the fruits of the *karma* of one *jīva* ought not to be reaped by the new *jīva*. The view that the pure consciousness is reflected through a *vṛtti* is also inadmissible; for reflections can happen only between two visible objects. The view that consciousness is transformed into a particular state is also inadmissible, since by hypothesis consciousness is unchangeable. Consciousness being entirely unsupported by anything else (*anāśritatvāt*), the analogy of the relation of universal and particular as explaining the conditioning of consciousness is also inadmissible. Moreover, if the consciousness underlying the *jīva* be regarded as manifesting the objects, then, since such a consciousness always exists in an unveiled form, there is no meaning in saying that in effecting its spontaneous manifestation the operation of the *vṛtti* is necessary. Also the pure consciousness cannot be regarded as being limited by the *vṛtti* just as limitless space is supposed to be limited by a jug; for the pure consciousness is all-pervading and, as such, it must also pervade the *vṛtti* and cannot therefore be regarded as being inside it. Neither can the pure consciousness be compared with the ray of light manifesting colour; for the ray of light does so only with the help of accessories, whereas pure consciousness manifests things by itself. Again, if things are manifested spontaneously by the unveiled consciousness (*anāvṛta-cit yadi viśaya-prakāśikā*), then, since such a consciousness is in touch with objects not only so far as their forms and colours are concerned, but also with their other characteristics such as weight, these also ought to be illuminated along with qualities such as colour, etc. Moreover, the relation of consciousness to the object cannot be of the nature of eternal contact, but must be of the nature of illusory imposition upon it (consciousness); this being so, the

relation of consciousness to the object is already there, since all things in the world are imposed upon consciousness. The supposition therefore of a *vytti* as an intermediary is quite uncalled for¹. Again, if the Brahma-consciousness stands in need of the help of a *vytti* in order to manifest things, it has no claim to be called by itself omniscient. If it is suggested that Brahman, being the material cause of all, is competent without the help of any conditions to illuminate the world, which is identical with it, then the reply will be that, if Brahman be regarded as transforming itself under the limitation of objective forms, then such a transformation of the limited Brahman does not justify the accepted thesis of the Śāṅkarites that all objects are illusorily imposed on the pure consciousness². It is also not possible to say that it is the pure consciousness, unconditioned by any object-form, that forms the ground cause; for, if that were so, it could not be called omniscient, since omniscience can be affirmed only in relation to object-forms³.

The supposition that the conception of *vytti* is necessary for the removal of the veil is also wrong; for such a veil must attach either to the pure consciousness or to limited consciousness. The former is impossible, since the pure consciousness which forms the basis of all appearances is the intuitive perceiver of all *ajñāna* and its forms, and as such, being self-luminous, cannot have any veil attached to it. The second also is impossible; for without the help of the pure consciousness *ajñāna* itself would be without any *locus standi*, and without the *ajñāna* there would be no limited consciousness and no veil of *ajñāna*. Again, admitting for argument's sake that there is a veil of *ajñāna* over the objects, the conception of its removal by a *vytti* is impossible; for, if the *ajñāna* belongs to the individual perceiver, then, if it is destroyed for one individual, it remains the same for another; if it belongs to the object, as is supposed, then, when it is removed by the *vytti* of one individual, the

object should be manifest to other individuals, so that, when a person sees an object, that object should be visible also to other persons at other places. Again, is the *ajñāna* to be accepted as one, according to the author of the *Vivaraṇa*, or as many, according to the author of the *Iṣṭa-siddhi*? In the former case, when by one right knowledge *ajñāna* is removed, there ought to be immediate emancipation. If the *ajñāna* is not removed, then the silver-appearance of conch-shell should not have been contradicted, and the form of conch-shell could not have been manifested. It cannot be said that in the case of the perception of conch-shell through negation of the silver-appearance the *ajñāna* is merely dissolved (just as a jug is reduced to dust by the stroke of a club, but not destroyed), which can only be done through Brahma-knowledge; for *ajñāna* is directly opposed to knowledge, and without destroying ignorance knowledge cannot show itself. If the *ajñāna* were not removed by the knowledge of the conch-shell, then the manifested consciousness would have no relation to the conch-shell, and it could not have been manifested, and in spite of the contradiction the illusion would have remained. Nor can it be suggested that, though *ajñāna* may be removed in some parts, it might continue in others; for *ajñāna* and consciousness are both partless. Nor can it be suggested that, just as by the influence of certain precious stones the burning capacity of fire can be stopped, so by the knowledge of the conch-shell the veiling power of *avidyā* is suspended; for the *antaḥkaraṇa-vṛtti* in the form of the conch-shell, being produced through the agency of the visual organ and other accessories, cannot be in touch with the pure self, which is devoid of all characteristics, and therefore it cannot remove the veiling power. If it is suggested that the *vṛtti* of the form of the conch-shell is in association with the pure consciousness, under the limited form of the conch-shell, and can therefore remove the veil, then the underlying pure consciousness ought to be directly intuited. *Avidyā* cannot have the material objects as its support; for they are themselves the product of *avidyā*. So the veiling power of *avidyā* also can have no reference to the material objects, since a veil can hide only what is luminous; the material objects, not being luminous, cannot be veiled. So there is no meaning in saying that the veil of the objects is removed in perception. If, again, it is said that the veil has reference to the pure self, as modified by the

material characteristic, and not to the material characteristic, then with the knowledge of the conch-shell the veil of the conch-shell underlying it might be removed, and this ought to bring immediate emancipation. If it is suggested that the *ajñāna* which forms the substratum of the illusory silver is but a special modified state of a root *ajñāna* which forms the material of the conch-shell, then that virtually amounts to an assumption of many *ajñānas* independent of one another; and, that being so, it would not necessarily follow that the knowledge of the conch-shell could dispel the illusory appearance of silver.

On the view of the author of the *Iṣṭa-siddhi*, if the existence of many *ajñānas* is admitted, then the question is whether by the operation of one *ṛtti* only one *ajñāna* is removed or all the *ajñānas*. In the former view the conch-shell could never remain unmanifested even in the case of illusion, since *ṛtti* manifesting the illusory silver would also manifest silver; and on the second view, there being infinite *ajñānas*, which cannot all be removed, conch-shell would never be manifested. This criticism would apply equally well to the former view that there is only one root *ajñāna* of which there are many states. Again, it is difficult to understand how the conch-shell, which has a beginning in time, can be associated with beginningless *avidyā*. Further, if it is urged in reply that the beginningless *avidyā* limits the beginningless pure consciousness and that later, when other objects are produced, the *ajñāna* appears as the veil of pure consciousness limited by those object-forms, the reply is that, if the veil associated with pure consciousness is the same as the veil associated with consciousness in limited object-forms, then, with the knowledge of any of those objects, the veil of pure consciousness would be removed, and immediate emancipation would result.

Rāmādvaya, the author of the *Vedānta-kaumudī*, suggests that, just as there is an infinite number of negations-precedent-to-production (*prāg-abhāva*), and yet, when anything is produced, only one of them is destroyed, or just as, when there is a thunder-bolt falling upon a crowd, only one of them may be killed, while others may only disperse, so with the rise of knowledge only one *ajñāna* may be removed, while others may persist. Vyāsa-tīrtha replies that the analogy is false, since (according to him) negation-precedent-to-knowledge is not a veil but merely the absence of the

causes of knowledge. Knowledge, moreover, is not the cause of the cessation of such negation, but behaves as an independent entity, so that one knowledge may produce its effects, while the negation-precedent-to-production of other cognitions of its class may remain. The presence of a cause produces the effect, but it does not involve the condition that for the production of the effect the negations-precedent-to-production of all causes of the same class should be removed. In the case of the Vedāntists, since the *ṛtti* removes the veil of one *ajñāna*, there may still be other *ajñāna*-veils to suspend the operation of cognition. On the view that darkness is absence of light, darkness is not a veil of objects, but merely absence of the conditions of light; nor is light supposed in its operation to destroy darkness, but directly to produce illumination. Darkness, also, should not be regarded as negation of individual light, but as absence of light in general; so that, even if there is one light, there is no darkness. The *ajñānas* also possess no constituent material forms; so the analogy of scattering crowds of men cannot apply to them.

Madhusūdana, in replying to the above criticism of Vyāsa-tīrtha, says that the contention of the latter that whatever is imaginary or mental (*kalpita*) necessarily has no other being than the *percipi* (*pratīti-mātra-śarīratva*), is wrong; for in the instance under discussion, when logic shows that the relation between the perceiver and the perceived is so absurd that the perceived entities cannot be anything more than illusory, perception shows that the perceived entities do persist even when they are not perceived. The persistence of the perceived entities is well attested by experience and cannot be regarded as imaginary, like the illusory perception of silver.

But yet it may be objected that, just as in mediate knowledge (*parokṣa*) no necessity is felt for admitting a *ṛtti*, so in immediate perception also there may be an illumination of the object without it. The reply to this is that in mediate knowledge also a mediate (*parokṣa*) *ṛtti* is admitted; for there also the illumination takes place by the manifestation of consciousness through a mediate *ṛtti*¹. It is wrong to contend that, since the pure consciousness is the principle of manifestation in both cases, mediate cognition

¹ *parokṣasthale'pi parokṣa-ṛtity-uparakta-caitanyasya iva prakāśakatvāt. Advaita-siddhi*, p. 480.

should, on our theory, be expected to behave as immediate; for in the case of immediate perception there is a direct identity of consciousness and the object through the *vr̥tti*, and therefore the object behaves as the object of cognition in that specific direct relation. The mediacy or immediacy of cognition depends on the specific nature of the object, and not on the specific modifications of the *vr̥tti* in the two cases, nor can the two be regarded as two different classes of cognition; for on such a supposition such cognition or recognition as "this is the man I knew," where there seems to be a mixture of mediate and immediate cognition, will involve a joint operation of two distinct classes of cognition in the same knowledge; which is obviously absurd.

It must be borne in mind that the *vr̥tti* by itself is merely an operation which cannot constitute conscious illumination; the *vr̥tti* can lead to an illumination only through its association with pure consciousness, and not by itself alone. It is wrong to suppose that there is no difference between a transitive (as when one says "I know a jug") and an intransitive (as when one says "the jug has come into consciousness") operation; for the distinction is well attested in experience as involving a direct and an indirect method. The same *vr̥tti* (operation), however, cannot be regarded as both transitive and intransitive at the same time, though with different and indifferent circumstances an operation may be both transitive and intransitive. Such instances of experience as "the past is revealed" are to be explained on the supposition that the pure consciousness is revealed through a particular modification of the *vr̥tti* as past.

Again, it is contended by the opponents that, though it may be admitted that pure consciousness manifests the object, yet there is no necessity why the *antaḥkāraṇa* should be supposed to go out of the body and be in contact with the object of perception. The difference between mediate and immediate knowledge may well be accounted for on the supposition of different kinds of mediate or immediate operation through which the consciousness is revealed in each case¹: for, just as in mediate knowledge there is no actual contact of the *antaḥkāraṇa-vr̥tti* with the object, but yet the cognition is possible through the presence of adequate causes which

¹ *parokṣa-vailakṣaṇyāya viśayasyābhivṛtyaktāparokṣa-cid-uparāga eva vaktavyaḥ. Ibid. p. 482.*

generate such cognition, the same explanation may be adduced in explaining immediate cognition of objects. To this the reply is that the Śāṅkarites do not consider that the *antaḥkaraṇa-vṛtti* must assume the form of the object, but they certainly do consider it to be indispensable. There should be in immediate cognition an actual contact between the object and the *vṛtti*. If the *vṛtti* so acts in any particular case, that does not constitute its essential function in conditioning the awareness. Thus the function of the ray of light in illumination is that it dispels darkness; that it also spreads over the object is only an accidental fact¹. The mere fact that a *vṛtti* may be in contact with an object does not necessarily mean that it assumes its form; thus, though the *antaḥkaraṇa-vṛtti* may travel up to the pole star or be in contact with objects having an atomic structure, that does not imply that all objects in the space intermediate between the eye and the star or the atoms should be perceived; such perceptions are baffled through the absence of such accessory causes as might have caused the *vṛtti* to assume their form. In the case of tactile perception the *antaḥkaraṇa-vṛtti* comes into contact with the object through the tactile organ; there is no restriction such that the *antaḥkaraṇa* should come out only through the eye and not through other organs². The contention that in the case of other mental operations, such as desire or aversion, there is no assumption of the migration of *antaḥkaraṇa* outside is pointless; for in these cases there is not a removal of a veil as in the case of cognition.

Madhusūdana urges that the basis or the ground-consciousness (*adhiṣṭhāna-caitanya*) which illumines everything is directly connected with the objects through illusory imposition. This self-illuminating entity can, indeed, manifest all that is associated with it; but, as it is, it is in an unmanifested state, like a veiled lamp, and the operation of the *vṛtti* is regarded as necessary for its manifestation. In the case of mediate knowledge this unmanifested consciousness manifests itself in the form of the *vṛtti*; and in the case of immediate perception through the contact of the *vṛtti* the veil of *ajñāna* is removed, since the *vṛtti* extends so as to reach the objects.

¹ *viśayeṣu abhivyakta-cid-uparāge na tad-ākāratva-mātram tantram.*

Advaita-siddhi, p. 482.

² *na ca spārsana-pratyakṣe cakṣurādīvat niyata-golakadvārā-bhāvena antaḥkaraṇa-nirgatya-ayogād āvaraṇābhībhavānupapattir iti vācyam. sarvatra tat-tad-indriyādhiṣṭhānasyaiva dvāratva-sambhavāt. Ibid.* p. 482.

So in the case of mediate cognition the knowledge is of a mental state, and not of an object, whereas in immediate perception the illumination is of the object through the association of the *ṛtti*. In the case of mediate cognition there is no way by which the *antaḥkaraṇa* could go out.

To the objection of Vyāsa-tīrtha that it is absurd to think of the *antaḥkaraṇa* as taking the shape of gross physical objects, Madhusūdana's reply is that "taking the shape of an object" only means the capacity of the *ṛtti* to remove the veil of *ajñāna* which had stood in the way of the affirmation of the existence of the object¹; thus the functioning of the *ṛtti* consists only in the removal of the veil of *ajñāna*.

To the objection that, if the pure consciousness is veiled by *ajñāna*, no cognition is possible, Madhusūdana's reply is that, though *ajñāna* in its extensive entirety may remain intact, yet a part of it may be removed by coming into association with the *ṛtti*, and thus the object may be revealed.

To the objection of Vyāsa-tīrtha that in the last emancipatory intuition one would expect that the *antaḥkaraṇa* should have the form of Brahman as object (which is absurd, Brahman being formless), the reply of Madhusūdana is that the Brahman which forms the object of the last immediate intuition, being absolutely unconditioned, does not shine as associated with any particular form. The manifestation of objects in worldly experience is always with specific condition, whereas, the object of this last manifestation being without any condition, the absence of any form is no objection to it; its cognition results in the absolute cessation of all *ajñāna* and thus produces emancipation. Again, the objection that, if during dreamless sleep the *antaḥkaraṇa* is dissolved, then on re-awakening there will be new *antaḥkaraṇa*, and thus the deeds associated with the former *antaḥkaraṇa* will have no continuity with the new *antaḥkaraṇa*, is invalid; for even in deep sleep the causal *antaḥkaraṇa* remains, what is dissolved being the manifested state of the *antaḥkaraṇa*.

Again, the objection that there cannot be any reflection in the *antaḥkaraṇa* because it has neither manifest colour (*udbhūtā-rūpatvāt*) nor visibility, is invalid; for what may be regarded as the

¹ *astitvādi tad-viśayaka-vyavahāra-pratibandhaka-jñāna-nivartana-yogyatvasya tad-ākāratva-rūpatvāt. Ibid. p. 483.*

necessary qualification for reflection is not visibility or the possession of colour, but transparency, and such transparency is admitted to belong to *antaḥkaraṇa* or its *vr̥tti*. The *ajñāna*, which is regarded as constituted of the three *guṇas*, is also considered to be capable of reflection by virtue of the fact that it contains *sattva* as one of its elements.

The objection that, as a ray of light illuminates not only colours, but also other entities, so the pure consciousness also should illuminate not only the colour of the object, but also its other properties, such as weight, is invalid; for the pure consciousness is not in touch with any quality or characteristic, and therefore can illuminate only those characters which are presented to it through the transparent *vr̥tti*; this is why, in the case of the illusion "this is silver," the *vr̥tti* implied in the cognition "this" does not manifest the illusory silver, for the manifestation of which a separate *vr̥tti* of *avidyā* has to be admitted. The *antaḥkaraṇa-vr̥tti*, however, can directly receive the reflection of the pure consciousness and therefore does not require for such a reflection a further *vr̥tti*, and there is accordingly no vicious infinite. The function of the *vr̥tti* is to manifest the identity of the *jīva*-consciousness and the consciousness underlying the object, without which the relation between the knower and the known as "this is known by me" could not be manifested¹.

Though Brahman is absolutely untouched by anything, yet, since all things are illusorily imposed upon it, it can manifest them all without the aid of *māyā*; this justifies the omniscience of Brahman, and the criticism that the pure Brahman cannot be omniscient is invalid.

Regarding the destruction of the veil of *ajñāna* it may be pointed out that the veiling power of the *ajñāna* pertaining to one individual is destroyed by the functioning of his *vr̥tti*, so that he alone can perceive, and not any other individual in whose case the veiling power has not been destroyed. The difference between the veiling power and darkness is this: the veiling power has relation both to the object and to the perceiver, whereas darkness relates only to the object; so that, when darkness is destroyed, all can see, but not so in the case of the veiling power. This refutes the criticism that, if

¹ *jivacaitanyasyādhiṣṭhāna-caitanyasya vābhedābhivyaktārthatvād vr̥tteh. anyathā mayedam viditam iti sambandhāvabhāso na syāt. Advaita-siddhi*, p. 485.

there is one *ajñāna*, the perception of one object ought to lead to immediate emancipation.

The criticism that, since knowledge must necessarily dispel ignorance, the illusion of silver cannot be destroyed, is invalid; for knowledge destroys ignorance only in the last instance, i.e., only before emancipation. The knowledge of the conch-shell cannot destroy the supreme veiling power of the root *ajñāna* covering the unlimited consciousness, but can only remove the relative *ajñāna* covering the limited consciousness, thereby opening up the consciousness underlying the limited object-forms, and so producing the contradiction of the illusory silver and the intuition of the conch-shell.

The objection that *ajñāna* cannot veil the material objects, because they are not luminous, is quite beside the point; for the Śāṅkarite theory does not assume that the *ajñāna* veils the material objects. Their view is that the veiling relates to the pure consciousness on which all material objects are illusorily imposed. The *ajñāna* veiling the underlying consciousness veils also the material objects the existence of which depends on it, being an imposition upon it. When by the *vṛtti* the ground-consciousness of an object is manifested, the result is not the manifestation of the pure consciousness as such, but of the limited consciousness only so far as concerns its limited form with which the *vṛtti* is in contact. Thus the objection that either the removal of the veil is unnecessary or that in any particular cognition it necessarily implies emancipation is invalid.

Again, the states of the ignorance must be regarded as being identical with it, and the knowledge that is opposed to ignorance is also opposed to them; so the states of *ajñāna* can very well be directly removed by knowledge. The objection that there are many *ajñānas*, and that even if one *ajñāna* is removed there would be others obstructing the manifestation of cognition, is invalid; for, when one *ajñāna* is removed, its very removal is an obstruction to the spread of other *ajñānas* to veil the manifestation, so that, so long as the first *ajñāna* remains removed, the manifestation of the object continues.

An objection is put forward that, the consciousness being itself partless, there cannot be any manifestation of it in part, with reference to certain object-forms only. If it is held that such conditioned manifestation is possible with reference to the conditioning

fact of object-forms, then even previous to the existence of definite object-forms there cannot be any *ajñāna*, or, in other words, *ajñāna* cannot exist as a pre-condition, it being only coterminous with definite object-forms. To this Madhusūdana's reply is that the object-forms, being imposition upon pure consciousness and the latter being their ground, the manifestation of consciousness with reference to any object-form depends upon the removal of *ajñāna* with reference to the illusory creation of that object-form imposed upon the ground-consciousness. The *ajñāna* itself does not constitute the object-form; therefore the removal of *ajñāna* has reference not to object-forms as separate and independent entities, but only to the creation of such object-forms imposed upon the ground-consciousness. Thus there is no objection; the existence of *ajñāna* as a pre-condition is such that, when along with itself object-forms are created, the veil on these is removed by the *vr̥tti* contact leading to their cognition. The position is that, though the ground-consciousness reveals the object-forms imposed upon it, yet such a revelation takes place only with reference to that perceiver whose *vr̥tti* comes into contact with the object, and not with reference to others. The condition of the revelation is that the consciousness underlying the perceiver, the *vr̥tti* and the object-form becomes identical, as it were, through the imposition of the *vr̥tti* upon the object. This tripartite union being a condition of the manifestation of an object to a particular perceiver, the object, revealed by the ground-consciousness underlying it, is not manifested to other perceivers.

The World as Illusion.

Vyāsa-tīrtha tried to refute the Śāṅkarite theory that the world is an illusory imposition. He contends that, if the world is an illusory creation, it must have a basis (*adhiṣṭhāna*) which in a general manner must be known, and must yet be unknown so far as its special features are concerned. Brahman, however, has no general characteristic, and, since it is devoid of any specific peculiarities, any affirmation that it stands as the entity of which the specific peculiarities are not known would be inadmissible¹. To this

¹ *adhiṣṭhānatva-sāmānyatve jñāte saty ajñāta-viśeṣavattvasya prayojakatvāt. brahmaṇaḥ sāmānya-dharmopetatvādinā tāvat jñātatvaṃ na sambhavati. nissāmānyatvāt. ajñāta-viśeṣavattvaṃ ca na sambhavati nirviśeṣatvāṅgikārāt.* Śrīnivāsa's *Nyāyāmṛta-prakāśa*, on the *Nyāyāmṛta*, p. 234.

Madhusūdana's reply is that a knowledge of the general characteristic of the locus of illusion is by no means indispensable; what is necessary is that the true nature of the object should be known without any of its specific details. In the case of Brahman the nature is self-luminous bliss, but the specific characters of such bliss, as greater or less, and any variation in its quality, are not known; so there is no impropriety in considering Brahman as the locus of illusion. But the defence may be made in another way; for Madhusūdana says that an imaginary general characteristic and special features may well be conceived of Brahman without involving the fallacy of the circle (*anyonyāśraya*), if we assume the beginningless character of all such imaginary qualities. The characters of Brahman as being and bliss may be regarded as generic, and the fullness of the bliss may be regarded as specific. So the quality of existence or being that is found in all things may be regarded as a generic quality of Brahman, on the basis of which the illusions take place in the absence of the specific quality of Brahman as fullness of bliss. The inadequacy of the reply is obvious; for the objection was made on the ground that all illusions are psychological in their nature and are possible only through confusion of individual things, which have both universal and specific qualities, whereas the Brahman, being the absolute, is devoid of all characters on the basis of which any illusion is possible.

Vyāsa-tīrtha in this connection further points out that, if it is suggested that an illusion can remain when there is no cognition antagonistic to illusory perception and that the *ajñāna* in itself is opposed not to the illusion of world-appearance, but to its form as *ṛtti*, the reply is that, since the definition of *ajñāna* is "that which is opposed to consciousness," the above view, which considers that the *ajñāna* is not opposed to consciousness, would hardly justify us in speaking of *ajñāna* as *ajñāna*; for, if it is not opposed to knowledge, it has no right to be so called. Moreover, the self and the not-self, the perceiver and the perceived, are so different from each other, that there is no scope for illusion between them. Thus Vedāntists themselves assert that, among entities that are spatially separated or whose essences are entirely different, the speaker and the person spoken to, there cannot be any possibility of doubt about their identity. Moreover, unless the nature of the locus of

illusion is hidden from view, there cannot be an illusion, and the pure consciousness, being always self-manifested, is such that its nature can never be hidden; and so it is difficult to conceive how there can be an illusion. Again, the "self," which is the nature of Brahman, is never associated with the objects of world-appearance, which are always apparent to us as non-self, and, this being so, how can these objects be regarded as an imposition upon the self, as in the case of the illusion of silver, which is always associated with "this" as its locus? The position cannot be justified by saying that all objects of world-appearance are associated with "being," which is the nature of Brahman; for this does not imply that these objects are not imposed upon being as its locus, since in these instances existence appears as a quality of the objects, like colour, but the objects do not appear as illusory qualities imposed upon existence, which should have been the case, if the former are to be regarded as an illusory imposition upon the latter. Nor can it be asserted that the "being" is a self-luminous entity underlying the world-objects; for, if it were so, then these world-objects should have manifested themselves directly through their association with that pure consciousness, and the acceptance of a *vr̥tti* would be wholly unnecessary. It is also wrong to say that the manifestation of an object implies that the object is an imposition upon the fact of manifestation; for the latter appears as being only qualitative in relation to the object¹. It is sometimes suggested that the knowledge of the true basis is not essential for explanation, because even an illusory notion of such a basis is sufficient to explain illusion, and therefore, even if the true basis (Brahman) is not apparent in perception, it is no valid objection to the possibility of illusion. But the reply to such a view is that the infinite occurrences of previous illusion would then be competent to explain present illusion, and there would be no point in admitting the existence of the true Brahman as being the foundation-truth of all illusory appearance; which would land us in Buddhist nihilism².

If the world-appearance, which is supposed to be false, is able to exert causal efficiency and behave as real, a thing well attested by scriptural texts affirming the production of sky from the self,

¹ *ghaṭaḥ sphurati tasya ca sphuraṇānubhavatvena ghaṭānubhavatvāyogāt. Nyāyāmṛta*, p. 236.

² *Ibid.* p. 237a.

then it is clearly different from ordinary illusions, which have no such causal efficiency (*artha-kriyā-kāritva*). Moreover, following the analogy of the conch-shell-silver, which is regarded as false in relation to the silver of the silversmith, one may likewise expect that the world-appearance should be false only in relation to some other real world-appearance; but no such real entities are known.

Again, it is suggested in the *Vivaraṇa* that, though there is no real similarity between Brahman and illusion, yet there is no difficulty in admitting that even without any real similarity there is the world-illusion based upon Brahman through some imaginary similarity. But in reply to these it may be pointed out that such an imaginary similarity can only be supposed to be due to *avidyā*; but *avidyā* itself, being imaginary, will itself depend on some other illusion, and such an illusion would demand another similarity, and thus there would be a vicious circle. It is suggested that illusions are possible even without similarity, as in the case of red crystal; but in reply it may be said, first, that red crystal is a case of a reflection of the red in the crystal and may hence not stand in need of any similarity as the cause of the illusion, whereas in all other cases which are not of this nature an illusion would naturally require some kind of similarity as pre-condition; secondly, here also it may be admitted that the red substance and the crystal substance have this similarity between them, that they are both made up of the same substance, and such a similarity is not admissible between Brahman and the world. Again, it is well known that without the agency of extraneous defect there can be no false knowledge, since otherwise all knowledges may be invalid by themselves. So also there cannot be any illusion without a perceiver able to have both the false knowledge and the right knowledge to contradict it; and for this the presence of the body and the senses are indispensable. In the state of dissolution, though there may be *ajñāna*, yet, there being no body, there cannot be either illusion or right knowledge.

It cannot be suggested that, just as in ordinary illusions of conch-shell-silver, ordinary defects of observation having relative existence are to be admitted, so the world-illusion also is to be explained on the supposition of the existence of such relative defects. The reply to such a suggestion is, that, unless the status of world-illusion is determined, no meaning can be attached to the

status of the defects producing the world-appearance, which has a relative existence. The tables cannot be turned on the dualists by supposing that on their side also the reality of the defects, body and senses, can be affirmed only when the non-illusory nature of the world is known, and that the knowledge of the latter is dependent upon that of the former; for knowledge of the reality of the world is to be obtained directly from experience, and not through such a logical quibble. It may also be pointed out that, if the analogy of the conch-shell-silver be pursued, then, since the defects there have the same status as the locus of the illusion, viz., the "this" of the conch-shell, so in the world-illusion also the defects should have the same status as the locus.

Again, if the defects are not regarded as ultimately real, but only as illusory, then it must be admitted that there are in the world no real defects, which would imply that our world-knowledge is valid. The assumption that defect, the body, the senses, etc., are all illusory demands that this be due to the presence of other defects; these in turn must depend on some other defects, and thus we may have a vicious infinite. If the defects are spontaneously imagined in the mind, then the self-validity of knowledge must be sacrificed. If it is urged that the *avidyā* is either beginningless or self-sustained and immediate (like the concept of difference), there is no vicious infinite, the reply is that, if *avidyā* is self-sustained and beginningless, it ought not to depend upon any locus or ground of world-illusion, Brahman, as its *adhiṣṭhāna*. Again, if the experience of *avidyā* be not regarded as due to some defects, it could not be regarded as invalid. But it would be difficult to imagine how *avidyā* could be due to some defect; for then it would have to exist before itself in order to produce itself. Again, the conception that the world is an illusion because it is contradicted is false, because the contradiction itself is again contradicted; this may lead to a vicious infinite, since it cannot be admitted that the knowledge that contradicts is itself contradicted.

Just as in the silver illusion the locus of the illusion has the same kind of existence as the defect, so in the world-illusion also the locus of the illusion might have the same kind of relative existence as the defects; which would mean that Brahman also is relative. Moreover, it is wrong to say that the knowledge of the locus (*adhiṣṭhāna*) of the world-illusion is ultimately real, while the defects have only a

relative existence; for such a different treatment would be unjustifiable, unless the defects should be found to be contradicted, whereas it has been shown above that the very concept of contradiction is illegitimate. It cannot be said that the falsehood of the defects constitutes their contradiction; for the concept of defect is unintelligible without the comprehension of falsehood; moreover, in all illusions the knowledge of the locus seems to have no antagonism to the defects which cause the illusion. Therefore there is no reason why, even if the world-appearance be regarded as illusion, the knowledge of the Brahman as the locus of the illusion should be able to dispel the defect which has produced it. Therefore, just as the Brahman is real, so the defects are also real. If bondage were absolutely false, no one would have tried to be liberated from it; for that which is non-existent cannot come into being. Again, if the bondage itself were an illusory imposition upon Brahman, it could not be expected that the intuitional knowledge of Brahman should be able to dispel it. Moreover, the supposition that the world-appearance is illusion is directly contradicted in most of the *sūtras* of the *Brahma-sūtra*, e.g., the definition of Brahman as "that which causes the birth, sustenance and dissolution of the world." So, from whichever way we can look at it, the supposition that the world-process is illusory is found to be wholly illogical.

Madhusūdana's contention that the position that an illusion is possible only when the locus is hidden only so far as its special features are concerned holds good in the case of world-illusion also; for, though Brahman is manifest so far as its nature as pure being is concerned, it is hidden in regard to its nature as fullness of bliss. The condition that illusion is only possible when there is no knowledge contradicting the illusion holds good in the case of world-illusion; for the knowledge that contradicts the *ajñāna* constituting the world illusion must be of the nature of a *vytti* cognition. Thus, so long as there is no *vytti* cognition of the pure nature of Brahman, there is no cognition contradicting the world-cognition; for the pure consciousness in its own nature is not opposed to *ajñāna*. The objection that the distinction between the perceiver and the perceived, the self and the non-self, is so obvious that one cannot be mistaken for the other, is met by Madhusūdana with the supposition that in the case of the silver-illusion also the difference between the presented "this" and the unrepresented "that" (silver) is known and

yet there is an illusion. Moreover, the difference conceived in a particular manner cannot thwart the imposition of identification of any two entities in other forms; thus, though the opposition between the perceiver and the perceived, self and the not-self, is quite obvious in this particular form, yet the distinction between "being" and "jug" is not at all apparent; for the notion of the jug is permeated through and through by the notion of being, so that there is no difficulty in conceiving the possibility of false identification between the being and the jug¹. Moreover, nature as being is an object of all cognition, so that, though formless like time, it can well be conceived to be an object of visual perception, like time².

The world-illusions occur in a successive series, the later ones being similar to the previous ones. This is all the condition that is needed; it is not at all necessary that the illusory forms that are imposed should also be real. It is sufficient that there should be a cognition of certain forms giving place to certain other forms. What is necessary for a silver-illusion is that there should be a knowledge of silver; that the silver should also be real is quite unimportant and accidental. So the reality of the world-appearance as an entity is never the condition of such an illusion. The objection that, following the same analogy, it may also be contended that the reality of the locus of illusion is quite uncalled-for and that an awareness of such a locus is all that is needed in explaining an illusion, is invalid; for the locus of illusion is not the cause of illusion through awareness of it, but through ignorance of it. Moreover, if the reality of the locus of reality is not demanded as a pre-condition of illusion, contradiction of illusion will be meaningless; for the latter dispels only the illusory notion regarding a real entity.

The objection that, if the world-illusion is capable of practical efficiency and behaviour, it cannot be regarded as invalid, is untenable; for dreams also have some kind of practical efficiency. The story in the scriptural texts of the creation of the sky from the self need not lead us to think of the reality of such scriptural texts; for the scriptures speak of the dream-creations also. The objection

¹ *na hi rūpāntareṇa bheda-grāho rūpāntareṇādhyāsa-virodhī. san-ghaṭa ity-ādi-pratyaye ca sad-rūpasyātmāno ghaṭādy-anuvidhāyatayā bhānūn na tasya ghaṭādy-adhyāsādhiṣṭhānā-nūpapattiḥ. Advaita-siddhi, p. 495.*

² *sad-rūpeṇa ca sarva-jñāna-viśayatopapatter na rūpādi-hīnasyāpy ātmanah kalāsyeva cākṣusatvādy anūpapattiḥ. Ibid. p. 495.*

that, if the root-impression of illusion at the beginning of creation be due to those of other cycles, then the root-impressions of previous birth ought to manifest themselves in each and every experience of this life, is invalid; for not all root-impressions of previous birth are manifested in this life, and the agency of such root-impressions in influencing the experiences of this life, as in the case of the instinctive desire of the baby to suck its mother's breasts, is to be accepted in those cases where they do in fact occur. So also the objection that illusion cannot be due to the root-impressions of one's own wrong imagination, because before the erroneous perception takes place there cannot be root-impressions of illusory perceptions, and therefore the existence of the illusory world existent as a prior fact and a pre-condition of one's illusory perceptions, cannot be regarded as valid; for it is just the nature of things that is responsible for two kinds of illusions such that, though bangles can be made out of the illusory silver in the silversmith's shop, nothing can be done with the illusory silver in the conch-shell. So the root-impressions of one's own illusion may act as constituent stuff of the illusion of the world-appearance, and even before the occurrence of such illusory experience of the world-appearance the stuff of the world-appearance, derived from the root-impression of one's own illusion, may already be objectively there as a pre-condition of the illusory perception. The objection that, since illusory perceptions must have as their pre-condition a similarity between the entities falsely identified, and since also no such similarity can be traced between Brahman and the world-appearance, there cannot be any false identification between them, is invalid; first, because *avidyā*, being beginningless, does not stand in need of any similarity. Secondly, the supposition that similarity is an essential pre-condition of illusion is likewise false; for even in those cases where similarity seems to induce illusion it does so by generating a mental state congenial to production of illusion, and, if such a mental state is produced in other ways, say as a fruit of one's own *karma* and *adṛṣṭa*, the necessity that the similarity should behave as a pre-condition vanishes, and so the indispensable character of similarity as a pre-condition to illusion cannot be admitted. Invalid also is the objection that, if there may be an illusion without defect, then that means that all cognitions are by themselves invalid and that, if illusions be regarded as due to

defects, then defects also are results of illusory impositions, and thus there will be a vicious infinite; for illusion through beginningless *avidyā* does not belong to defects, and, though illusions which have a temporal beginning are due to the beginningless *avidyā*-defect, this does not render all cognitions invalid, since only illusions which have a temporal beginning are due to the defect of *avidyā*, and, since *avidyā* itself is beginningless, it cannot stand in need of any defects, and so there cannot be any vicious infinite. It must be borne in mind that, though illusion in time is due to defects, or *doṣa*, the beginningless defect of *avidyā*, it is not necessarily due to any such defect, and therefore stands directly and spontaneously as an illusory creative agent; and is called illusion, not because it is produced by defects, but because it is contradicted by Brahma-knowledge. Thus the objection that *avidyā* is due to defect, and defect is due to *avidyā*, is invalid; that which is a product of defects is bound to be contradicted; but the converse of this is not necessarily true.

It cannot be urged that, if *avidyā* is independent of *doṣa*, the world-illusion may be regarded as independent of the locus or basis of illusion, viz., the Brahman; for, though the basis of illusion may not be regarded as producing illusion, it has to be regarded as the support and ground thereof and also as its illuminator¹.

Again, the objection that illusion must depend on sense-functioning, on the existence of the body, is invalid; for these are necessary only for intuitive perception. But in the cases of illusion, of the imposition of the *avidyā* upon the pure consciousness, the latter is the spontaneous reflector of the *avidyā* creations, and so for the purpose there is no necessity of the sense-functioning.

Again, it is urged that, since the defects are imaginary impositions, the negation of defects becomes real, and therefore the defects, being unreal, cannot render the knowledge of world-appearance unreal; and, if this is so, the world-appearance being real, this would be our admission of reality (as an illustration of this, it is urged that the criticism of the Buddhists against the Vedas, being invalid and illusory, cannot stultify the validity of the Vedas). To this the reply is that the criticism of the defects pointed out against the Vedas by the Buddhists is illusory, because the defects are only imagined by them; the Vedas are not affected

¹ *Advaita-siddhi*, p. 498

by this, because their truth is affirmed by our practical experience. The defects imagined are not therefore coterminous with the reality of the Vedas; the defect of *avidyā* and the manifold world-appearance have the same kind of existence—one is the effect of the other; and thus, if the defects are illusory, their product (the world) also becomes illusory, and so the illusory nature of defects does not prove the reality of the world. The world-appearance is called relatively true only because it is not contradicted by anything else except the Brahma-knowledge. Its relative character therefore does not depend upon the determination of the nature of falsehood, which in its turn might be conceived to be determinable by the nature of the world as relative, thus involving a vicious nature of dependence¹. It is urged that the reality of the defects is directly grasped by the senses, and that therefore they can behave as the cause of error only if they are ultimately real; to this the reply is that the existence of the defects can be grasped only by the senses, but that they will never be contradicted at any time (*traikālikā-bādhyatva*) can never be ascertained on any intuitive basis, and so the reality of the defects can never be affirmed. It must always be borne in mind that the defects have never the same status as pure consciousness, upon which illusory conch-shell is imposed. Nor can it be said that the knowledge which contradicts the world-appearance is real on the ground that, if it were not real, it would require some other knowledge to contradict it and this would land us in a vicious infinite; for this final contradiction of world-appearance may well be regarded as contradicting itself also, for the very simple reason that the content of this contradiction applies to the whole range of the knowable, and this final contradiction, being itself within the field of the knowable, is included within the contradiction. It is urged that, if bondage is false in the sense that it is at all times non-existent, there is no reason why anyone should be anxious to remove that which is already non-existent; to this the reply is that the true (Brahman) can never cease to exist—the falsity of the bondage means that it is an entity which is liable to cease immediately on the direct intuition of the basic truth. It is like the case of a man who has forgotten that he has his necklace round his neck and is anxiously searching for it, and who the instant he is reminded of it gives up his search. It is wrong to suppose that,

¹ *Ibid.* p. 499.

because no effort could be directed towards the chimerical, which is non-existent at all times, therefore no effort could be made for the removal of the illusory; for, though the illusory and the chimerical may be in agreement so far as their non-existence at all times is concerned, there is no reason why these two should agree in other respects also. The concept of the cessation of the bondage may not have any other content than the intuition of the real, or it may be regarded as indefinable or of an entirely unique nature. The illusory bondage and the world-appearance can cease only when the basic truth, the Brahman, is intuited, just as the silver illusion ceases with the knowledge of the conch-shell on which it is imposed. The objection that some of the *sūtras* of Bādarāyaṇa imply the existence of a realistic world is invalid, if it is remembered that the import of those *sūtras* merely points to the existence of a relative order of things which ceases entirely as soon as the basic truth on which they are imposed is known.

The *dr̥ṣṭi-sr̥ṣṭi* view is the supposition that the existence of all things consists in their being perceived. Vyāsātirtha says that, if things existed only so long as they are perceived, then they would be only momentary; and so all the objections against Buddhist momentariness, to the effect that they do not admit the permanence of things as attested by recognition, might equally well be levelled against the Śāṅkarites themselves. To this Madhusūdana's reply is that, though the existence of objects as realities is not admitted, yet their existence in the causal state, as *ajñāna*, is on this view not denied; this would be its difference from the Buddhist position, which does not admit any such causal existence of things.

If the world-objects have no existence outside their perception, then they are plainly independent of definite causes, and, if that is so, then the definite cause-and-effect relation between sacrifices and their fruits, and the import of all the Vedāntic texts regarding definite cause and effect, are meaningless. To this Madhusūdana's reply is that the specification of cause-and-effect relation in the scriptures and the experience of them in mundane life is like cause and effect in dreams; these dream-causes and their effects also have a certain order among themselves, known by contradiction in experiences.

It is objected that on the *dr̥ṣṭi-sr̥ṣṭi* view (that the objects do not exist prior to perception) world-experience is inexplicable. It would

be difficult also to explain how, if the "this" which forms a basis of illusion is not already there outside us, there can be any sense-relation to it and to the foundation of the illusory image. To this Madhusūdana's reply is that the ordinary explanation of illusion depending upon sense-relation and other conditions is only an explanation for people of the lower order. For people of the higher order the definition of illusion would be "the manifestation of a true entity in association with a false one," and such a definition would hold good even on the *dr̥ṣṭi-sṛṣṭi* view. The consciousness underlying the "this" is a substance, and the false silver is manifested in association with it.

It is further objected that at the time of the illusory perception ("this is silver"), if there is no conch-shell as an objective fact, then the illusion cannot be explained, as is generally done, as effect of ignorance about the conch-shell. The reply is that, even if the conch-shell is absent, the *ajñāna* that forms its stuff is there. To the objection that the two perceptions "this is silver" and "this is not silver" are directed to two different perceptions and do not refer to one common objective fact, and that therefore neither of them can be regarded as the contradiction of the other, since such a contradiction is only possible when two affirmations refer to one and the same objective fact—the reply is that on the analogy of dream-experiences the contradiction is possible here also. Vyāsa-tīrtha further says that, since the contradiction of an illusion is not an objective fact, but a mere perception, it has no better status than the illusory perception and therefore cannot be regarded as necessarily truer than the illusion which it is supposed to contradict. He further says that in dreamless sleep and in dissolution, since there is no differential perception as between Brahman and the *jīva*, such a difference between Brahman and the *jīva* ceases in each dreamless sleep and in each cyclic dissolution. Thus in the absence of difference between Brahman and the *jīva* there cannot be at the end of each dreamless sleep and dissolution any return to world-experience. In the case of a person who is sleeping and whose root-impressions on that account are not perceivable (and are therefore non-existent), there is no explanation how the world-experience may again be started. Emancipation also, being only a perception, cannot have a better status of existence than the world-experience; moreover, if the pure consciousness appeared as all the world-

objects, then there could not have been any time when such objects could remain unmanifested.

To this Madhusūdana's reply is that the relation of *jīva* and Brahman, being beginningless, does not depend upon perception; in dreamless sleep, though the root-impressions vanish as effect, they still remain in their causal character; emancipation also, being of the nature of Brahman, has the pure intuitive character of perception.

An objection is urged that, if pure consciousness is the intuition of objects, then they should always be manifested. To this the reply is that perception here means the manifestation of consciousness through a *vyrtti* which does not stand in need of further *vyrtti* for its relation to consciousness; the possibility of illusion without bodies can well be explained by analogy with dreams. Again, the objection that, since the perception is as much an illusory intuition as the object of which it is conceived to be the essence, the object in itself ceases to have its essence as mere intuition, is invalid; because, though the perception has no other existence than the intuition itself, that is no bar to the conception of the object as having no essence but perception. An objection may again be raised that recognition shows permanent existence of objects; but reply to it may easily be found in the illustration of dream-experiences, and also in the possibility of accidental agreement between the misperception of different perceivers. The objection that the notion of identity of Brahman and *jīva*, being itself mental, cannot contradict duality is invalid; for the notion of such identity is identical with the self and therefore cannot be called mental. Again, the intuition of the ultimate truth cannot itself be called invalid because it is mental; for its validity depends upon the fact that it is never contradicted.

CHAPTER XXX

CONTROVERSY BETWEEN THE DUALISTS AND THE MONISTS (CONTINUED)

A Refutation of the definition of Avidyā (nescience).

AVIDYĀ is defined as that beginningless positive entity which is removable by knowledge. The objection to this, as given by Vyāsa-tīrtha, is, first, that, the objects of the world being in time, the ignorance that limits the consciousness underlying it cannot be beginningless. Moreover, since according to the Vedāntist negation has no constituent material stuff as its material cause, *ajñāna* cannot be regarded as its cause. Even on the assumption of illusory negation *ajñāna*, which is regarded as being in its nature positive, cannot be regarded as its cause; for, if negation has for its cause a positive entity, then the unreal may have the real as its cause. Again, if *ajñāna* is not the cause of the negation, then knowledge ought not to be able to dispel it, and the negation of a jug should not be liable to cease on its negation. Again, on the Śāṅkarite view the *ajñāna* is supposed to veil the object; we cannot have any cognition of Brahman, because it is hidden by *ajñāna*. They also hold that the *vytti* knowledge cannot intuit Brahman. If that is so, then in the last emancipatory knowledge through *vytti* there is no intuition of Brahman; without this the *ajñāna* concealing Brahman cannot be removed, and hence emancipation is impossible. Again, if it is supposed that the *ajñāna* is removed, then in the *jīvan-mukti* state the saint ought to have no experience of worldly things.

Again, it must be admitted that knowledge removes *ajñāna* directly and spontaneously, without waiting for the assistance of any accessory cause; for otherwise, when a thing is known, its ignorance would not have vanished spontaneously with it. But, if that were so, then in cases where an *ajñāna* is associated with certain conditions, the removal of the *ajñāna* would not stand in need of the removal of the conditions also together with it. What is to be expected is that the *ajñāna* should be removed irrespective of the removal of the conditions, and this is not admitted. Again, if it is held that the removal of the conditions is awaited, then pure

consciousness cannot be regarded as capable of removing *avidyā* directly. Again, if knowledge can directly and spontaneously remove *ajñāna*, then it is useless to restrict the scope by saying that it removes only the beginningless *ajñāna*. The restriction is imposed in order to distinguish the cosmic *avidyā* from the phenomenal *avidyā* of silver-illusion, and if the spontaneous removal of *ajñāna* serves in both places, there is no utility in restricting the scope. It cannot be said that the epithet "beginningless" is given to *ajñāna* because it is the product of beginningless illusory imposition through defects; for it has already been pointed out that such a view would lead to a vicious infinite, because there can be no defect without *avidyā*. Again, *ajñāna* cannot be beginningless, because whatever is different from knowledge and also from negation cannot be beginningless like the illusory silver. Again, it is wrong to define *ajñāna* as positive; for on the Śāṅkarite view *ajñāna* is different from both positive and negative, and therefore cannot be negative. If an entity is not positive, it must be negative; for, being different from positive, it cannot also be different from negative. Again, if there is an entity which is not a negation and has no beginning, it is not capable of being negated, but has an un-negated existence like the self. The self also cannot be designated by any predicate explaining its positiveness, except that it is not negated. It has been pointed out in the *Vivaraṇa* that it is immaterial whether an entity is beginningless or has a beginning; for in either case it may be destructible, provided that there is sufficient cause for its destruction. The general inference that a beginningless positive entity cannot cease has its exception in the special case of *ajñāna*, which would cease to exist with the dawn of *jñāna*. If it is urged that, since *ajñāna* is both beginningless and different from negation, it ought to persist eternally, like the self, it may also be urged on the opposite side that, since *ajñāna* is different also from "positive," it ought to be liable to destruction, like negation-precedent-to-production. To this the reply is that the inference is that no beginningless positive entity is confronted with anything which can oppose or destroy it. Any refutation of this argument must take the form of citing an instance where the concomitance fails, and not of any mere opposite assertion. No instance can be adduced to illustrate the assertion that the beginningless *ajñāna* can be removed by *jñāna*; for the removal of ignorance by knowledge is always with

reference to such ignorance as has a beginning in time, as in the case of silver-illusion. So all that could be said would be that whatever opposes ignorance destroys it, and such a general statement has no special application to the case of the supposed beginningless *ajñāna*. Again, if *ajñāna* is regarded as different from positive entity, then it is like negation, and its cessation would mean position once more. Again, *ajñāna* (or ignorance) cannot have any existence apart from its perception, and, since *ajñāna* has always as its basis the pure consciousness, its perception can never be negative, so that it can never cease to exist¹. Moreover, if *ajñāna* is false in the sense that it is non-existent in the locus in which it appears, it cannot be destroyed by knowledge. No one thinks that the illusory silver is destroyed by the perception of the conch-shell.

The second alternative definition of *ajñāna* is that it is the material cause of illusion. But according to the Śāṅkarite theory that there are different *ajñānas* corresponding to the different *jñānas*, the knowledge of the conch-shell would remove ignorance of it, and the knowledge of a negation would remove ignorance of it; but in neither of these cases can ignorance be defined as a constituent of illusion. Negation, in itself, has no constituent material cause, and thus it cannot have *ajñāna* as a constituent.

There is a Śāṅkarite view that *māyā* is the material cause of the world and Brahman is its locus. On such a view, *māyā* or *ajñāna* being the material cause of the world, and illusion (*bhrama*) being a part of the world, *ajñāna* becomes a constituent cause of *bhrama*, and not *vice versa*. On the other view, that both Brahman and *māyā* are causes of the world-appearance, *māyā* cannot by itself become the cause of illusion. Moreover, an illusion, being itself different from a positive entity, is more like negation and cannot have any constituent material of its own, and so it cannot itself be the constituent material of *ajñāna*. Moreover, on the Śāṅkarite view, the illusory object, "having no being" (*sad-vilakṣaṇatvena*), has no constituent, and so the illusory cannot be a constituent of *ajñāna*. If anything is to be a constituent of anything, it must be positively existing, and not merely different from non-existents. Again, whenever anything is a material stuff of other things, the former appears as a constant factor of the latter; but neither the illusory

¹ *pratiti-mātra-śarīrasya ajñānasya yāvat sva-viśaya-dhī-rūpa-sākṣi-sattvam anuvṛtti-niyamena nivṛtti-ayogāc ca. Nyāyāmṛta, p. 304.*

silver nor its knowledge appears as *ajñāna*. Thus the two definitions of *ajñāna* fail.

In reply to this Madhusūdana says that the *ajñāna* which forms the stuff of the illusory silver is the beginningless *ajñāna*. The *ajñāna* is called positive in the sense that it is different from the negative. It is for this reason that the *ajñāna* which is regarded as the material stuff of the illusory negation can be regarded as different from negation, and therefore it can be regarded as constituent of the illusory negation. It is by no means true that the effect must be of exactly the same stuff as the cause. Things which are absolutely similar in nature or absolutely dissimilar cannot be related to each other as cause and effect; it is for this reason that truth cannot be the material stuff of untruth. For in that case, since truth never ceases to manifest itself, and never suffers change, untruth also would never cease to manifest itself. The truth, however, can behave as the cause of untruth in the sense that it remains as the basis of the illusory changes of the untruth. It is wrong also to suppose that, since the *ajñāna* of Brahman cannot be removed through a *vṛtti*, which itself is a manifestation of *ajñāna*, Brahman-knowledge itself becomes impossible; for, so far as Brahman is a content, this *ajñāna* (as content) can be removed by a *vṛtti*. In the case of *jīvan-mukti*, though the ultimate cessation may be delayed through absence of the obstructive factors of the right *karmas* of the past and other conditions, these may well be regarded as liable to cessation through knowledge. Certain causes may produce certain effects; but that such production may be delayed for some reason does not invalidate the causal character of the cause. It is well admitted by the Śāṅkarites that knowledge directly removes *ajñāna*, the removal being itself a part of *ajñāna*.

It is wrong to suppose that whatever is imaginary must necessarily be an idea due to defects or must have a temporal beginning; but it must be a product which is simultaneous with the imagination that produces it¹.

It is also wrong to suppose that, if any entity is not positive, it must be negative or that, if it is not negative, it must be positive; for there is always scope for a third alternative, viz., that which is neither positive nor negative. According to the Śāṅkarites the

¹ *kalpitatva-mātram hi na doṣa-janya-dhī-mātra-śarīratve sādītve vā tantram. kimtu prātibhāsa-kalpaka-samānakālīna-kalpakatvaṃ. Advaita-siddhi*, p. 544.

principle of the excluded middle is a false premiss of logic, and thus they admit the possibility of an extra-logical category, that which is neither positive nor negative. The supposed inference that beginningless positive entity must necessarily be permanent, like the self, is false; for it is only in the case of self that beginningless positive entity is found eternally to persist.

It is also wrong to suppose that, since *ajñāna* is always manifested through pure consciousness, it can never cease to exist; for there is no law that whatever is manifested by the *sākṣi*-consciousness must remain during the whole period while the *sākṣi* persists; so there is no incongruity in supposing that the *ajñāna* ceases, while the *sākṣi*-consciousness persists. Moreover, the *avidyā* that becomes manifested is so only through the *sākṣi*-consciousness as modified or limited by it; such a limited consciousness may cease to exist with the cessation of the *avidyā*. It is also wrong to suppose that through the operation of the *vytti* the *avidyā* ceases to exist; for even in such cases it persists in its subtle causal form.

When *avidyā* is defined as being constituted of the stuff of illusion (*bhramopādāna*), what is meant is that it is changing and material. It is not necessary to suppose also that a cause and effect must necessarily be positive; for the self, which is a positive entity, is neither a cause nor an effect. What constitutes the defining characteristic of a material cause is that it is continuous with all its effects (*anvayi-kāraṇatvam upādānatve tantram*); and what is an effect must necessarily have a beginning in time. A negation-precedent-to-production of knowledge cannot be regarded as the material cause of illusion; for such negation can only produce the correlative positive entity with which it is connected. It cannot therefore be the cause of production of illusion; so there is no incongruity in supposing that *ajñāna* or illusion, neither of which is real, are related to each other as cause and effect. It is also not correct to contend that a material cause should always be found to persist as a perceivable continuous constituent of all its effects; the colour of the material cause of a jug is not found in the jug. The fact that, when the *ajñāna* is removed with the knowledge of the conch-shell, no illusion is experienced, is no proof that *ajñāna* is not a constituent of illusion. Not all things that are related as cause and effect are always experienced as such. Thus the definitions of *ajñāna* as *anādi-bhāva-rūpatve sati jñāna-nivartyatvam* or as *bhramopādānatvam* are valid.

Perception of *ajñāna* (ignorance).

The Śāṅkarites urge that *ajñāna* can be directly intuited by perception and that therefore its existence is attested by perception. In regard to this Vyāsa-tīrtha says that what is regarded as perception of ignorance as a positive entity is nothing more than negation of knowledge. Thus the substratum of the ego (*aham-artha*) is not admitted to be a support of the positive entity of ignorance. The apperception "I am ignorant" is to be explained therefore as being the experience of absence of knowledge and not of a positive ignorance (*ajñāna*). Again, since neither pleasure, pain, nor the illusory entities cognized in illusion are directly manifested by the *sākṣi*-consciousness, absence of such knowledge (e.g., "I do not know pleasure," "I do not know pain," "I do not know conch-shell-silver") is to be explained as negation of knowledge and not as due to an experience of positive ignorance. So also, when one says "I do not know what you say," there is only an experience of negation of knowledge and not of positive ignorance. In mediate knowledge also, since the illumination does not proceed by direct removal of the veil of *ajñāna* from the face of the object, the theory that all knowledge which does not involve the removal of *ajñāna* involves an intuition of positive ignorance would land us into the position that, when something is known in mediate knowledge, one should feel as if he did not know it, since no *ajñāna* is directly removed here.

On the Śāṅkarite view it is not admitted that there is any veil covering material objects; consequently the explanation of the experience of ignorance in such cases as "I do not know what you say" is to be found in the supposition, not of a positive ignorance, but of absence of knowledge. It may be contended that, though there may not be any *ajñāna* veiling the objects, yet these very material creations represent the creative (*vikṣepa*) part of *ajñāna* and so the experience of the unknown objects represents an experience of positive *ajñāna*, since *ajñāna* creations do not always arrest knowledge. Thus, for instance, when a jug is known as a jug, if someone says that it is a cloth and not a jug, that does not produce a confusion in the perceiver of the jug, though the delusive words of the speaker must be supposed to produce a false im-

pression—a *vikṣepa* of *ajñāna*. It will be shown later that the experience “I do not know” with reference to a material object does not refer to pure consciousness as limited by material qualities¹. On the view which admits the *vr̥tti* in order to explain the reflection of pure consciousness no *ajñāna* can be admitted as veiling the consciousness under material limitations. Moreover, if the experience “I am ignorant” (*aham ajñāḥ*) is explained as being a direct intuition of *ajñāna* and, as such, different from the experience “there is no knowledge in me” (*māyī jñānaṃ nāsti*), then the two propositions “the ground without the jug” and “there is no jug in the ground” are different in meaning, which is absurd; for certainly the two propositions do not differ in meaning, any more than any other two propositions, e.g., “I have a desire” and “I have no antipathy.” There is no difference between the two concepts of absence of knowledge and ignorance. Again, when one is engaged in Vedāntic discipline for the attainment of Brahma-knowledge, there is at that time the negation-precedent-to-the-production of Brahma-knowledge; for, if it were not so, then there would be the Brahma-knowledge and there would be no necessity for Vedāntic discipline. Now a negation-precedent-to-production cannot be known without the knowledge of the entity to which it refers. If this is admitted, then without the knowledge of Brahman there cannot be any knowledge of its negation-precedent-to-production; and, if there is knowledge, then Brahman becomes known, and, if it is considered that such a negation of Brahma-knowledge is known as a positive entity by direct intuition (as it would be on the theory of the direct intuition of *ajñāna*), then Brahman also would be known directly at the stage of the negation precedent to it, which is self-contradictory.

Moreover, the concept of *ajñāna* is clearly that of negation of knowledge, as in the sentence “I do not know.” Even in cases when one says “I am ignorant” the sense of negation is apparent, though there is no negative particle. The *Vivaraṇa* also admits the opposition of *ajñāna* to knowledge; and, if this were admitted, then with the knowledge of such opposition there would not be knowledge of ignorance as a positive entity, and without such knowledge of opposition there will be no knowledge of *ajñāna*, that being the

¹ *jaḍe na jñānamīty anubhavasya jaḍāvachchinnaṃ caitanyaṃ viśaya iti cen na, nirasiṣyamāṇatvāt. Nyāyāmṛta*, p. 309(c).

essential concept of *ajñāna*. Even a negation of knowledge which has a reference to the object of which there is the negation may also have no such reference when it is taken up as being itself an object of the enquiry of knowledge. Thus there is no way in which *ajñāna* can be regarded as anything but a negation of knowledge; and the supposition that *ajñāna*, though in its analytical concept it involves two constituents—knowledge and its negation—yet is only a name for a positive concept which does not involve these constituents, is wrong¹. If *ajñāna* can be removed by *ṛtti* knowledge, it is unnecessary to suppose that it has any other meaning different from that involved in its constituent negative particle qualifying knowledge. Experience also shows that *ajñāna* has no other meaning than the negation of knowledge; so, unless the entity which is the defining reference of *ajñāna* is known, there cannot be any knowledge of *ajñāna*. But such a defining reference being Brahma-knowledge which has no *ajñāna* associated with it, the inclusion of the defining reference would make the concept impossible: hence there cannot be any knowledge of *ajñāna*².

The reply made by the Śāṅkarites is that the defining reference of *ajñāna* is Brahma-knowledge and this Brahma-knowledge as *sākṣi*-consciousness, being the manifest of *ajñāna*, is not opposed to it; for it is only the *ṛtti* shade mind that is opposed to *ajñāna*. So, there being no opposition between the Brahma-knowledge as *sākṣi*-consciousness and the *ajñāna*, it is quite possible to have a knowledge of *ajñāna* in spite of the fact that Brahma-knowledge becomes in a sense its constituent as a defining reference. But it may be pointed out in reply that the awareness of Brahma-knowledge is the *sākṣi*-consciousness; the experience "I do not know" is a negation of *ṛtti* knowledge and, as such, it may be referred to the *sākṣi*-consciousness even when there is no *ṛtti* knowledge. Thus the solution in the theory that *ajñāna* is nothing but negation of knowledge would be just the same as in the theory of *ajñāna* as positive entity. If it is contended that, though denial of knowledge may be related to the defining reference in a general manner, yet it may, in its specific form, appear as a mere positive ignorance

¹ *jñānābhāvo'pi hi prameyatvādinājñāne pratiyogy-ādi-jñānānapekṣa etena nipuṇe kuśalādi-śabdavat bhāva-rūpa-jñāne ajñānaśabdo rūḍha iti nirastam. Nyāyāmṛta, p. 312.*

² *api ca bhāva-rūpājñānāvachchedaka-viśayasyājñāne ajñāna-jñānāyogāt jñāne ca ajñānaśābhabhāvāt katham bhāva-rūpājñānajñānam. Ibid. p. 313.*

without involving such an explicit relation to the defining reference—to this the reply is that, even if this contention is admitted, it does not lend any support to the admission of a positive ignorance; for even in the case of a negation of knowledge one may well admit that, though it may be generally related to a defining reference, yet in any specific case it may not always involve such a reference. It is further urged by some that an entity may be known directly and that such knowledge may not involve always the specific defining relations of that entity; it is only the latter type of knowledge which makes doubt impossible. But the fact that there may be doubt regarding an object that is known shows clearly that an object may be known without its specific and negative relations being manifested at the same time.

Moreover, if *ajñāna* cannot be grasped by the *vyrtti* knowledge, then there also cannot be any possibility of inference regarding *ajñāna*. When one says “you do not know the secret,” the hearer to whom the secret is presented through a mediate cognitional state would not be able to have the awareness of the *ajñāna*, if the *ajñāna* could not be presented through a *vyrtti* cognition. It cannot be said that the mediate cognitional state is not opposed to *ajñāna*; for, if that were so, then even when an entity was known through a mediate cognition he might have had the experience that he did not know it. It is admitted by the Śāṅkarites that the *vyrtti* of direct intuition through perception is opposed to *ajñāna*; and, if *vyrtti* of mediate cognition also is opposed to *ajñāna*, then there is no mental state through which *ajñāna* can be known.

The experience in deep dreamless sleep, “I did not know anything so long,” also refers to absence of knowledge, and not to any positive ignorance. It cannot be said that, since at that time all other knowledge has ceased (there being no awareness of the perceiver or of any other content), there cannot be any awareness regarding the absence of knowledge; for the objection would be the same with regard to the experience of positive ignorance. If it is urged that in that state *ajñāna* is experienced directly as a positive entity, but its relationing with regard to its special defining reference becomes apparent in the waking state, the same explanation may equally well be given if the experience in the dreamless sleep be regarded as being that of absence of knowledge; for negation of knowledge may also be experienced as a knowable

entity without any relation to its defining reference; or the so-called experience of ignorance may be explained as an inference of the absence of knowledge, in the dreamless state, made from physical and physiological conditions in the waking state. In the Śāṅkarite view also, since the ego cannot be experienced in that state, the experience “I did not know anything” must be regarded as being in some sense illusory. If it is urged that in the dreamless state *ajñāna*, being reflected through a state of *avidyā* (*avidyā-vṛtti*), is intuited by the *sākṣi*-consciousness, then it might equally well be intuited in the same manner in the waking state also. If it is regarded as being intuited directly by the *sākṣi*-consciousness, then, being an eternal cognition, it would have no root-impression (*saṃskāra*) and could not be remembered. Moreover, if it is not agreed that the absence of knowledge in the dreamless state is a matter of inference from conditions in the waking state, then the absence of knowledge in the dreamless state cannot in any other way be proved; for it cannot be inferred from a positive *ajñāna*, since the negation of knowledge, being material (*jaḍa*), has no *ajñāna* associated with it as a veiling factor. Moreover, if from *ajñāna*, a positive entity, the negation of knowledge can always be inferred, then from the negation of attachment in the dreamless state positive antipathy will have to be inferred. Thus the *ajñāna* can never be regarded as being susceptible of direct intuition.

Madhusūdana's reply is that, though the ego perceived cannot be a support of the *ajñāna*, yet, since the *antaḥkaraṇa* in its causal form is falsely identified with the pure consciousness which is the support of the *ajñāna*, the *ajñāna* appears to be associated with the ego perceived. This explains the experience in the dreamless sleep, “I did not know anything.” In the case of the experience “I do not know the jug” also, though there cannot be any veil on the jug, yet, since *ajñāna* has for its support consciousness limited by the jug-form, there is the appearance that the jug-form itself is the object of the veil of *ajñāna*. The objection that in the mediated cognition, there being the veil of *ajñāna* on the object, there ought to be the negation of awareness is also invalid; for, when the *ajñāna* is removed from the knower, the enlightenment of knowledge cannot be obstructed by the presence of the *ajñāna* in the object.

The objection of Vyāsa-tīrtha that *ajñāna* is only a negation of knowledge and that therefore, instead of admitting *ajñāna* as

existing as a positive entity in the perceiver, it is better to admit the negation of knowledge only, is invalid; for the experience of negation of knowledge is invalid in this form, because negation implies the defining reference as a constituent. In order to know that "there is no knowledge in me" there must be a knowledge of knowledge in me, which is self-contradictory. The experience of negation of knowledge in the perceiver without involving any relation to a defining reference can only be valid in the case of positive *ajñāna*. A specific negation can never appear as a universal negation; for, if this were admitted, then even when there is a particular book on the table there may be an experience of there being no book on the table; since according to the proposed theory of the opponent a specific negation of this or that book is to appear as universal negation. Madhusūdana urges that what constitutes the difference between negations is not a difference between negations *per se*, but is due to the difference among the defining references which are a constituent in them. It is thus impossible that the experience of one's ignorance could be explained on the supposition that such an experience referred to experience of negation; for it has already been shown that such negation can be neither specific nor universal. So the experience of ignorance is to be regarded as the experience of a positive entity.

It may however be contended that the concept of *ajñāna* also involves a reference by way of opposition to knowledge and thus implies knowledge as its constituent, so that all the objections raised against the concept of negation apply equally well to the concept of *ajñāna*. The reply is that on the Śāṅkarite view the pure *sākṣi*-consciousness grasps at the same time both *ajñāna* and the object as veiled by it without consequent destruction or contraction of either of them. Thus there is no chance of any self-contradiction; for the awareness of *ajñāna* does not involve any process which negates it¹. If it is contended by the opponent that in the case of the awareness of negation also a similar reply is possible (on the assumption that the object of negation is directly known by the *sākṣi*-consciousness), Madhusūdana's reply is that, since *ajñāna* can be known by *sākṣi*-consciousness, its defining reference is also

¹ *pramāṇa-vṛtti-nivartyasyāpi bhāva-rūpājñānasya sākṣi-vedyasya virodhinirūpaka-jñāna-tad-vyāvartaka-viśaya-grāhakeṇa sākṣiṇā tat-sādhakena tad-anāśād vyāhaty-anupapatteḥ. Advaita-siddhi*, p. 550.

intuited thereby—in the same manner; but, since negations are not intuited directly by the *sākṣi*-consciousness, but only through the *pramāṇa* of non-perception, the defining reference of *ajñāna* also cannot be intuited by the *sākṣi*. It cannot be contended that negation no less than knowledge may be manifested by the *sākṣi*-consciousness; for knowledge implies the non-existence of negation, and so the two cannot be manifested by *sākṣi*-consciousness at the same time; but unproduced knowledge may appear in a qualitative relation to *ajñāna*, since, the relation being qualitative, there is no contradiction between the two, and this explains the possibility of the knowledge of *ajñāna*. The Śāṅkarites do not admit that the knowledge of a qualified entity presupposes the knowledge of the quality; and so the objection that, the entity which forms the defining relation of *ajñāna* not being previously known, *ajñāna* cannot have such defining reference as its adjectival constituent is invalid¹.

An objection may be raised to the effect that, since Brahma-knowledge is to be attained by a definite course of discipline, so long as that is not passed through there is a negation-precedent-to-Brahma-knowledge; and admission of such a negation exposes the Śāṅkarites to all the criticisms which they wished to avoid. The reply is to be found in the view that instead of admitting a negation-precedent here the Śāṅkarites assume that there may either be knowledge of Brahman or *ajñāna* relating to it, i.e., instead of admitting a negation-precedent-to-Brahma-knowledge, they admit a positive ignorance regarding Brahma-knowledge; and thus there is no contradiction.

Vyāsa-tīrtha's contention is that negation of an entity does not necessarily imply the knowledge of any particular entity in its specific relations as a constituent of the knowledge of it, and such knowledge may arise without any specific reference to the particularities of the defining reference. In such experience as "I do not know" no specific defining reference is present to the mind and there is only a reference to entities in general. On such a view, since the knowledge of the defining reference is not a constituent of the knowledge of negation, there is no contradiction on the ground

¹ *na ca avacchedakasya viśayādeḥ prāgajñāne katham tad-viśiṣṭajñāna-jñānam. viśeṣaṇa-jñānādhīnatvād viśiṣṭa-jñānasyeti vācyam viśeṣaṇa-jñānasya viśiṣṭa-jñāna-jñānatve mānābhāvāt. Advaita-siddhi*, p. 550.

that, since negation is affirmed with regard to the defining reference, its presence as a constituent is impossible. To this Madhusūdana's reply is that no negation of any particular entity can appear merely in a general reference without regard to the specific relations of that particular entity. If it is urged that no negation-precedent can appear in association with the specific particularities of the defining reference as a constituent and that all negations-precedent can appear only in a general reference, the criticism is answered by Madhusūdana to the effect that such negations-precedent as are associated only with the general reference to their defining character are impossible¹. The opponent of Madhusūdana is supposed to argue that the nature of the defining reference in a negation involves only that particular content which is a character inherent in the thing or things negated. Such characters, forming the content of the knowledge of negation, may indeed constitute the defining limit as such of a thing or things negated; but such an objective reference is wholly irrelevant for the knowledge of any negation. What is essential in the knowledge of the negation is the content, which, indeed, involves the character associated with the things negated, and so the defining reference involved in the knowledge of negation has reference only to such characters as are psychologically patent in experience and do not imply that they are objectively the defining characters of the things negated. Thus, since on such a view the knowledge of negation does not involve as a constituent the things negated, there is no such contradiction as is urged by the Śāṅkarites. As to this Madhusūdana says that such a reply does not provide any escape from the strictures already made by him; for the opponents seem to think that it is sufficient if the defining reference involved in a negation is regarded as a defining character of the knowledge of negation and does not involve the supposition that at the same time it is also the defining character of the objects negated, and they hold that in a knowledge of negation the particular entity that is negated does not appear in its specific character, but only generically, and, if this were so, then, even when an object is present in a spot as a particular, there may be an experience of negation of it in a general manner, since according to the opponents' supposition particular negations always appear

¹ *pratiyogitāvacchedaka-prakāra-ññānābhāvena prāg-abhāva-pratitir asid-dhāva. Ibid. p. 552.*

only generically. Thus, when one says "I have no knowledge," if knowledge here has only a generic reference, the proposition is absurd, since the knowledge of not having knowledge is itself a knowledge, and in the proposition the negation of knowledge, having a general reference, contradicts the very supposition of not having knowledge.

It may be urged that, if the above criticisms against the knowledge of negation be valid, then the same would apply to negation-precedent also. To this Madhusūdana's reply is that there is no necessity to admit "negation-precedent"; for the real meaning of the so-called negation-precedent is future production, which, again, means nothing more than that time-entity which is not qualified by any object or its destruction—such object being that which is supposed to be the defining reference of the so-called negation-precedent. This is also the meaning of futurity¹. It must be noted in this connection that production must be defined as a specific relation which stands by itself; for it cannot be defined in terms of negation-precedent, since the negation-precedent can be defined only in terms of production, and thus, if negation-precedent is made a constituent of the definition of production, this entails a vicious circle. So, even if negation-precedent be admitted, it would be difficult to show how it could be intuited; and, on the other hand, one loses nothing by not admitting negation-precedent as a separate category. The negation involved in a negation-precedent is equivalent, so far as merely the negation is concerned, to the absence of the negated object at a particular point of time, which, again, has for its content a specific negation limited by a particular time, where the specific object appears only in a generic relation. An analysis of this shows that in negation-precedent (*prāg-abhāva*) there is negation of a specific object as limited by the present, yet that specific object does not appear in its character as specific and particular, but only in a generic manner². The dilemma here is that negation of a specific object (*viśeṣābhāva*) cannot have for the content of its defining reference merely the generic character of the thing negated, without involving any of its particularities; and, if

¹ *bhaviṣyatvaṃ ca pratiyogi-tad-dhvaṃsānādhāra-kāla-sambandhitvaṃ. Advaita-siddhi*, p. 552.

² *ihe dānim ghaṭo nāstīti pratītiḥ tu sāmānya-dharmāvacchinna-pratiyogitāka-tat-kālāvacchinna-yāvad-viśeṣābhāva-viśayā. Ibid.* p. 553.

this is so, then there cannot be any negation-precedent involving this condition. Again, if the possibility of such a contingency be admitted, then general negation (*sāmānyābhāva*) is impossible; for no negation limited by any kind of particularity either of time or of object would be entitled to be called a general negation. Thus both the negation-precedent and the general negation appear to be interdependent in their conception, and so thwart each other that neither of them can be admitted. The main contention of Madhusūdana in all these cases is that no specific object can as defining reference in any negation appear only in a generic nature devoid of relation to particularity. Thus, when one says "I do not know," the experience involved in such a proposition is not that of the negation of a particular object appearing only in a generic aspect. If this contention is admitted, then the experience involved in "I do not know" cannot be interpreted as being one of general negation.

Again, it is a matter of common experience that the mere locus of the negation can itself furnish the awareness of negation; thus the bare spot is also the negation of the jug on it. Looked at from this point of view, even positive entities may yield a comprehension of negation. It is wrong to suggest that the nature of the defining reference defines the nature of the negation; for, if this were so, then it would have been impossible that the different negations, such as negation-precedent, destruction, etc., should be classed as different, since they all have the same defining reference. According to the view of Madhusūdana the differences of negation are due to illusory impositions no less than are differences in positive entities.

Even if it is held that there is only one negation, which under different conditions appears as diverse, the Śāṅkarites will have nothing to object to; for according to them both negation and position are but illusory impositions. But Madhusūdana points out that, since the experience "I am ignorant" does not (even under the trenchant analysis undergone above) disclose as its origin any negation, it must be admitted that it is due to the experience of the positive entity of *ajñāna*.

So Madhusūdana further urges that the apperception in the waking state of the experience of the dreamless sleep, viz., "I did not know anything so long," refers to a positive *ajñāna*. Now, if this apperception be an inference, the opponent points out that it

may be an inference of negation of knowledge and not of positive ignorance. For one may well infer that, since he existed and during the interval between the two waking stages had a state of mind, that state must have been a state of absence of knowledge. The apperception cannot be said to be mere memory; for memory can only be through root-impressions. The intuition of the *sākṣi*-consciousness being eternal, no root-impression can be produced by such knowledge; for the mechanism of root-impressions is only a psychological device for producing memory by such cognitions as are transitory. To this Madhusūdana's reply is that the apperception under discussion cannot be called an inference; for the inference is based on the ground that the sleeper had a mental state during the dreamless condition. But, if he had no knowledge at the time, it is impossible for him to say that he was at that time endowed with any specific mental state. It also cannot be said that negation of knowledge during dreamless sleep can be inferred from the fact that at that time there was no cause for the production of knowledge; for the absence of such cause can be known only from the absence of knowledge (and *vice versa*), and this involves a vicious circle. Nor can it be said that absence of cause of knowledge can be inferred from the blissful condition of the senses, which could happen only as a consequence of the cessation of their operation; for there is no evidence that the cessation of the operation of the senses would produce the blissful condition. It must be noted in this connection that intuition of *ajñāna* is always associated with absence of knowledge; so that in every case where there is an intuition of *ajñāna* the inference of absence of knowledge would be valid. The so-called non-perception is really an inference from positive *ajñāna*; thus, when one has perceived in the morning an empty yard, he can infer from the absence of the knowledge of an elephant in it the fact of his positive ignorance of an elephant there. Thus the apperception of absence of knowledge can be explained as inference. It can also be explained as a case of memory. The objection that the intuition of *ajñāna* cannot have any root-impression is also invalid; for the *ajñāna* which is the object of the *sākṣi*-consciousness during dreamless sleep is itself a reflection through a *vṛtti* of *ajñāna*, since it is only under such conditions that *ajñāna* can be an object of *sākṣi*-consciousness. Since a *vṛtti* is admitted in the intuition of *ajñāna*, with the cessation of the *vṛtti*

there must be a root-impression and through that there can be memory of the *ṛtti*, as in the case of the memory of any other cognition¹. It cannot be contended that, if *ajñāna* requires for its cognition a *ṛtti* state, then, if there is no such *ṛtti*, there may be doubt regarding *ajñāna*; for there cannot be any *ajñāna* regarding *ajñāna*, and doubt itself, being a modification of *ajñāna*, has the same scope as *ajñāna*. It cannot be urged that, like *ajñāna*, negation may also be perceived by the *sākṣi*-consciousness; for, since negation is always associated with its defining reference, it cannot be intuitively perceived by the indeterminate intuitive *sākṣi*-consciousness. Though *ajñāna* involves an opposition to knowledge, yet the opposition is not as such intuited in the dreamless state. Madhusūdana says that it is contended that, since there is a continuous succession of *ajñāna* states, from the dreamless condition to the waking stage (for in the waking state also all cognitions take place by reflection through *ajñāna* states), there is no occasion for a memory of the dreamless intuition of *ajñāna*; for through *saṃskāras* memory is possible on the destruction of a *ṛtti* state of cognition. To this the reply is that the *ajñāna* state of dreamless condition is of a specific nature of darkness (*tamasī*) which ceases with sleep, and hence there is no continuity of succession between this and the ordinary cognitive states in the waking condition. From one point of view, however, the contention is right; for it may well be maintained that in the dreamless state *ajñāna* exists in its causal aspect, and thus, since the *ajñāna* is the material for experience of both dreamless sleep and waking state, there is in reality continuity of succession of *ajñāna*, and thus there cannot be any memory of dreamless experience of *ajñāna*. It is for this reason that Sureśvara has discarded this view. The view taken by the author of the *Vivaraṇa* follows the conception of sleep in the *Yoga-sūtras*, where a separate *ṛtti* in the dreamless state is admitted. Thus the experience of the dreamless state may well be described as relating to experience of positive *ajñāna*.

¹ *ajñānasyājñāna-ṛtti-prativimbita-sākṣi-bhāsyatvena ṛtti-nāśād eva saṃskāropapattih. Advaita-siddhi*, p. 557.

Inference of *ajñāna*.

It is held by Prakāśānanda in his *Vivaraṇa* that *ajñāna* can be inferred; the form of the inference that he suggests is: "A valid cognition is associated with a positive veil upon its object, which veil is removable by the cognition itself, and such a veil is different from the negation-precedent of its self."¹ Vyāsa-tīrtha, in refuting this inference, starts by criticizing the concept of the minor term (*pakṣa*, i.e., *pramāṇa-jñāna*). He says that according to the above form of inference consciousness of pleasure, which is a valid cognition, should also appear after removing the veil on itself, but the pleasure-consciousness, being of the nature of *sākṣi*-consciousness, is unable (according to the theory of the Śāṅkarites themselves) to remove *ajñāna*. If the concept of the minor term is narrowed to *ṛtti-jñāna*, or cognitive states in general, then also it is not possible; for, if a mediate cognitive state be supposed to remove the veil upon its object, that would mean that there is a direct revelation of intuitive consciousness through the object, which would be the same as saying that mediate cognition is perception. If the concept of the minor be narrowed down to immediate perception, then the above definition would not apply to mediate cognition, which is a valid cognition. Even in the case of the immediate cognition of error there is an element of the intuition of "being" to which also the above definition would apply; for certainly that does not manifest itself after removing a veil of non-being, since the intuition of being is universal. Moreover, if that could remove the *ajñāna*, then *ajñāna* would have no being and so could not be the material cause of illusion. The *ajñāna* which has "being" for its support is regarded as the material cause of illusion, but is never the object of illusion itself. If the concept of the minor is further narrowed, so as to mean merely the cognitive states, excluding the underlying "being," then in the case of successive awareness of the same entity the awareness at the second and third moments cannot be supposed to remove the veil itself, since that was removed by the first awareness. If the concept of the

¹ *vivāda-gocarāpannam pramāṇa-jñānam sva-prāg-abhāva-vyatirikta-sva-viśayāvaraṇa-sva-nivartya-sva-deśa-gata-vastu-antara-pūrvakam bhavitum arhati aprakāśitārtha-prakāśakatvād andhakāre prathamotpanna-pradīpa-prabhāvad iti. Pañca-pādikā-vivaraṇa*, p. 13.

minor term is further narrowed, so as to mean merely the direct cognition of the material object, then also, since the Śāṅkarites do not admit that there are veils on the object, the object-cognition cannot be regarded as having removed such a veil. If in answer to this it is held that the mental state, e.g., the cognition of jug, involves a limitation of the pure consciousness by the jug-form and, since the *ajñāna* has the same scope as the above limitation, the removal of the veil on the jug-form limitation means also the removal of the veil of *ajñāna* to that extent, the reply is, first, that on the view that there is only one *ajñāna* the above explanation does not hold; secondly, since the pure consciousness, limited in any form, is not self-luminous, it cannot, according to the Śāṅkarites, be associated with a veil, which can only be associated with the pure self-luminous consciousness. Moreover, if the removal of the veil is spoken of as having reference only to material objects, then, since the verbal proposition "this is a jug" has the same content as the jug itself, the removal of the veil with reference to the material object—the jug—which has the same content as the mediate verbal proposition, ought not to take place.

Again, since on the Śāṅkarite view the *vyrtti*-knowledge is itself false, there cannot be any possibility that illusory objects should be imposed upon it. On the other hand, if the pure consciousness, as manifested by the *vyrtti*, be synonymous with knowledge, then, since such a consciousness is the support of *ajñāna*, it cannot be regarded as removing *ajñāna*. Thus the requirement of the inference that knowledge establishes itself by removing *ajñāna* fails; further, the requirement of the definition that the veil that is removed has the same location as the knowledge fails, since the *ajñāna* is located in pure consciousness, whereas the cognition is always of the conditioned consciousness.

The inference supposes that there is a removal of the veil because there is a manifestation of the unmanifested; but this cannot hold good, since the Brahma-knowledge cannot be manifested by any thing other than pure consciousness, and the self-luminous, which is the basis of all illusions, is ever self-manifested, and thus there is no possibility here of the unmanifested being manifested. Moreover, if the *ajñāna* be a positive entity existing from beginningless time, then it would be impossible that it should be removed. It is also impossible that that which is a veil should be beginning-

less. So it is possible to have such counter-arguments as that beginninglessness can never be associated with veils, since it exists only as beginningless, like the negation-precedent; or that a valid knowledge can never remove anything else than negation, because it is knowledge. The manifestation of the unmanifested does not imply any positive fact of unmanifestation, but may signify only an absence of manifestation. Moreover, the light manifests the jug, etc., by removing darkness, because light is opposed to darkness, but the manifestation of knowledge cannot be opposed to *ajñāna*; for pure consciousness underlying the objects is not opposed to *ajñāna*. The opposition of *ṛtti* to *ajñāna* is irrelevant; for *ṛtti* is not knowledge. What may be said concerning the rise of a new cognition is that it removes the beginningless negation of the knowledge of an object of any particular person.

Madhusūdana in reply says that the term "valid knowledge," which is the minor term, has to be so far restricted in meaning that it applies only to the *ṛtti*-knowledge and not to the *sākṣi*-consciousness which reveals pleasure or bliss; the *ṛtti*-knowledge also has to be further narrowed down in its meaning so as to exclude the substantive part (*dharmy-amśa*) of all cognitions, the "this" or the "being" which is qualified by all cognitive characters. *Pramāṇajñāna*, or valid knowledge, which is inferred as removing a veil, means therefore only the cognitive characters revealed in the *ṛtti*. Even in the case of *parokṣa* (mediate knowledge) there is the removal of its veil, consisting in the fact of its non-existence to the knower; which veil being removed, the object of the mediate cognition is revealed to the knower. Thus the valid cognition includes the cognitive characters as appearing both in mediate and in immediate *ṛttis*. The reason for the exclusion of the substantive part, or the "this," from the concept of valid knowledge under discussion is apparent from the fact that there is no error or illusion regarding the "this"; all errors or doubts can happen only with regard to the cognitive characters. The "this" is as self-existent as the experience of pleasure. There cannot, therefore, be any such objection as that in their case also there is a revelation of the unknown and therefore a removal of the veil. If, however, it is urged that, though there may not be any error or doubt regarding the "this," yet, since there remains the fact that it was first unknown, and then known, and therefore it involves the removal of a

veil, there would be objection on the part of the Śāṅkarites to admitting such a removal, which may well be effected by the cognitive state or the *pramāṇa-vṛtti*. In such a case, however, the removal of the veil is not of the ordinary nature; for this *ajñāna*, which consists only in the fact that the entity is unknown, is different from the *ajñāna* the extent and limit of which can be regarded as a positive ignorance having the same defining reference as the object of cognition. In this view, therefore, the *ajñāna* is to be defined as that which has the capacity of producing errors, since there cannot be any error with regard to the substantive part, the "this." The fact that it remains unknown until cognized involves no *ajñāna* according to our definition. Thus it may well be supposed that in the case of the cognition of the "this" there is, according to the definition contemplated in the scheme of the inference of *ajñāna* under discussion, no removal of *ajñāna*.

In the case of continuous perception, though the object may remain the same, yet a new time-element would be involved in each of the succeeding moments, and the removal of the veil may be regarded as having a reference to this new factor. It is well known that according to the Śāṅkarites time can be perceived by all the *pramāṇas*. Again, the objection that, since material objects can have no veil and since the *ajñāna* cannot be said to hide pure consciousness which is its support, it is difficult to say which of these is veiled by *ajñāna*, is not valid; for, though the pure consciousness exists in its self-shining character, yet for its limited appearance, as "it exists," "it shines," *ajñāna* may be admitted to enforce a limitation or veiling and to that extent it may be regarded as a veil upon that pure consciousness. Madhusūdana further adds arguments in favour of the view that *ajñāna* can be inferred; these are of a formal nature and are, therefore, omitted here.

The theory of Avidyā refuted.

Vyāsa-tīrtha says that it cannot be assumed that an entity such as the *avidyā* must exist as a substratum of illusion, since otherwise illusions would be impossible; for it has been shown before that the definition of *avidyā* as the material cause of illusion is untenable. Moreover, if it is held that illusions such as the conch-shell-silver are made out of a stuff, then there must also be a producer who

works on the stuff to manufacture the illusions. Neither God nor the individual can be regarded as being such a producer; nor can the changeless Brahman be considered to be so. Again, *avidyā*, being beginningless, ought to be as changeless as Brahman. Moreover, if Brahman be regarded as the material cause of the world, there is no necessity for admitting the existence of *avidyā*; for under the Śāṅkarite supposition Brahman, though not changing, may nevertheless well be the basis of the illusions imposed upon it. If that were not so, then *avidyā*, which needs a support, would require for the purpose some entity other than Brahman. It may be suggested that the supposition of *avidyā* is necessary for the purpose of explaining the changing substratum of illusion; for Brahman, being absolutely true, cannot be regarded as the material cause of the false illusion, since an effect must have for its cause an entity similar to it. But, if that is so, then Brahman cannot be regarded as the cause of the sky or other physical elements which are unreal in comparison with Brahman. It cannot be urged that, since the individual and the Brahman are identical in essence, without the assumption of *avidyā* the limited manifestation of bliss in the individual would be inexplicable; for the very supposition that Brahman and the individual are identical is illegitimate, and so there is no difficulty in explaining the unlimited and limited manifestation of bliss, in Brahman and the individual, because they are different.

Madhusūdana in reply to the above says that *antaḥkāraṇa* (or mind) cannot be regarded as the material cause of illusion; first, because the *antaḥkāraṇa* is an entity in time, whereas illusions continue in a series and have no beginning in time; secondly, the *antaḥkāraṇa* is in its processes always associated with real objects of the world, and would, as such, be inoperative in regard to fictitious conch-shell-silver—and, if this is so, then without the supposition of *avidyā* there would be no substratum as the material cause of *avidyā*. Brahman also, being unchangeable, cannot be the cause of such illusion. It cannot be suggested that Brahman is the cause of illusion in its status as basis or locus of illusion; for, unless the cause which transforms itself into the effect be admitted, the unchanging cause to which such effects are attributed itself cannot be established¹, since it is only when certain transformations have

¹ *na ca vivartādhisthānatvena śukty-āder ivopādānatvam avidyām antareṇā-tāttvikaṇyathā-bhāva-lakṣaṇasya vivartasambhavaḥ. Advaita-siddhi, p. 573.*

been effected that they are referred to a certain ground or basis as belonging to it.

Again, if *ajñāna* be itself invalid, as the Śāṅkarites say, it is impossible that it should be amenable to the different valid means of proof. If it is contended that *ajñāna* has only an empirical existence (*vyāvahārika*), then it could not be the stuff of the ordinary illusory experience; for the stuff of the empirical cannot be the cause of the illusory, and there is no evidence that the *avidyā* is illusory. If it is contended that the valid means of proof serve only for negating the non-existence of *avidyā*, then the reply is that, since the *ajñāna* is grasped by the faultless *sākṣi*-consciousness, it must be admitted to be valid. It is wrong also to suppose that the means of proof negate only the non-existence of *ajñāna*; for, unless the nature of *ajñāna* could be known by inference, the negation of its non-existence could also not be known. It must also be noted that, when the valid means of proof reveal the *ajñāna*, they do so as if it were not an illusory conch-shell-silver known by the *sākṣi*-consciousness, but a valid object of knowledge, and they also do not reveal the non-existence of *ajñāna* in the locus of its appearance. Thus the valid means of proof by which *ajñāna* is supposed to be made known indicate its existence as a valid object of knowledge. The *avidyā*, therefore, may be regarded as non-eternal (being removable by knowledge), but not false or invalid. The statement of the Śāṅkarites, therefore, that *avidyā* is invalid by itself and yet is known by valid means of proof, is invalid.

If *avidyā* is apprehended by the pure faultless consciousness, it should be ultimately true, and it ought to persist after emancipation. It cannot be said that it may not persist after emancipation, since, its *esse* being its *percipi*, so long as its perception exists (as it must, being apprehended by the eternal pure consciousness) it also must exist. If it is held that *avidyā* is known through a *vr̥tti*, then the obvious difficulty is that the two conditions which can generate a *vr̥tti* are that of valid cognitive state (*pramāṇa*) or defects (*doṣa*), and in the case of the apprehension of *avidyā* neither of these can be said to induce the suitable *vr̥tti*. There being thus no possibility of a *vr̥tti*, there would be no apprehension of *avidyā* through the reflection of consciousness through it. Again, the *vr̥tti*, being itself an *avidyā* state, would itself require for its comprehension the help of pure consciousness reflected through another *vr̥tti*, and that

another, and so on; and, if it is urged that the comprehension of the *vr̥tti* does not stand in need of reflection through another *vr̥tti*, but is directly revealed by *sākṣi*-consciousness, then such a *vr̥tti* would be experienced even after emancipation. Moreover, it is difficult to conceive how an entity like *avidyā*, whose *esse* is *percipi*, can be regarded as capable of conditioning a *vr̥tti* by the reflection of the consciousness through which it can be known. For there is no *esse* of the thing before it is perceived, and according to the supposition it cannot be perceived unless it has a previous *esse*.

The reply of Madhusūdana is that the above objections are invalid, since the *ajñāna*, being perceived by the *sākṣi*-consciousness, which is always associated with the perceiver, has no such ontological appearance or revelation. In reply to some of the other criticisms Madhusūdana points out that, *avidyā* being a defect and being itself a condition of its own *vr̥tti*, the objections on these grounds lose much of their force.

Vyāsa-tīrtha says that the Śāṅkarites think that, since everything else but the pure consciousness is an imaginary creation of *avidyā*, the *avidyā* can have for its support only Brahman and nothing else. He points out that it is impossible that ignorance, which is entirely opposed to knowledge, should have the latter as its support. It may well be remembered that ignorance is defined as that which is removable by knowledge. It cannot be said that the opposition is between the *vr̥tti*-knowledge and *ajñāna*; for, if that were so, then *ajñāna* should be defined as that which is opposed to knowledge in a restricted sense, since *vr̥tti*-knowledge is knowledge only in a restricted sense (the real knowledge being the light of pure consciousness). If consciousness were not opposed to ignorance, there could not be any illumination of objects. The opposition of ignorance to knowledge is felt, even according to the Śāṅkarites, in the experience "I do not know." It is also well known that there is no ignorance with regard to pleasure or pain, which are directly perceived by the *sākṣi*. This is certainly due to the fact that pure consciousness annuls *ajñāna*, so that whatever is directly revealed by it has no *ajñāna* in it. It is contended that there are instances where one of the things that are entirely opposed to each other may have the other as its basis. Persons suffering from photophobia may ascribe darkness to sunshine, in which case darkness is seen to be based on sunshine; similarly, though knowledge and ignorance are

so much opposed, yet the latter may be supposed to be based on the former. To this the reply is that, following the analogy where a false darkness is ascribed to sunlight, one may be justified in thinking that a false *ajñāna* different from the *ajñāna* under discussion may be based on the pure consciousness. Moreover, the experience "I am ignorant" shows that the ignorance (*avidyā*) is associated with the ego and not with pure consciousness. It cannot be suggested that, both the ego and the ignorance being at the same time illusorily imposed on the pure consciousness, they appear as associated with each other, which explains the experience "I am ignorant"; for without first proving that the *ajñāna* exists in the pure consciousness the illusory experience cannot be explained, and without having the illusory experience first the association of *ajñāna* with pure consciousness cannot be established, and thus there would be a vicious circle. It is also wrong to suppose that the experience "I am ignorant" is illusory. Moreover, the very experience "I am ignorant" contradicts the theory that *ajñāna* is associated with pure consciousness, and there is no means by which this contradiction can be further contradicted and the theory that *ajñāna* rests on pure consciousness be supported. The notions of an agent, knower, or enjoyer are always associated with cognitive states and therefore belong to pure consciousness. If these notions were imposed upon the pure consciousness, the *ajñāna* would belong to it (which, being a false knower, is the same as the individual self or *jīva*), and, so would belong to *jīva*; this would be to surrender the old thesis that *ajñāna* belongs to pure consciousness. It is also not right to say that the *ajñāna* of the conch-shell belongs to the consciousness limited by it; it is always experienced that knowledge and ignorance both belong to the knower. If it is contended that what exists in the substratum may also show itself when that substratum is qualified in any particular manner, and that therefore the *ajñāna* in the pure consciousness may also show itself in the self or *jīva*, which is a qualified appearance of pure consciousness, to this the reply is that, if this contention is admitted, then even the pure consciousness may be supposed to undergo through its association with *ajñāna* the world-cycles of misery and rebirth.

The supposition that the *jīva* is a reflection and the impurities are associated with it as a reflected image and not with the Brahman, the reflector, is wrong; for, if the *ajñāna* is associated

with pure consciousness, it is improper to think that its effects should affect the reflected image and not Brahman. Moreover, the analogy of reflection can hold good only with reference to rays of light, and not with reference to consciousness. Again, if the *jīvas* be regarded as a product of reflection, this will necessarily have a beginning in time. Moreover, the reflection can occur only when that through which anything is reflected has the same kind of existence as the former. A ray of light can be reflected in the surface of water and not in mirage, because water has the same status of existence as the ray of light; but, if Brahman and *ajñāna* have not the same kind of existence, the former cannot be reflected in the latter. Moreover, *ajñāna*, which has no transparency, cannot be supposed to reflect Brahman. Again, there is no reason to suppose that the *ajñāna* should be predisposed to reflect the Brahman, and, if the *ajñāna* is transformed into the form of *ākāśa*, etc., it cannot also at the same time behave as a reflector. Moreover, just as apart from the face and its image through reflection there is no other separate face, so there is also no separate pure consciousness, apart from Brahman and the *jīva*, which could be regarded as the basis of *ajñāna*. Also it cannot be suggested that pure consciousness as limited by the *jīva*-form is the basis of the *ajñāna*; for without the reflection through *ajñāna* there cannot be any *jīva*, and without the *jīva* there cannot be any *ajñāna*, since on the present supposition the *ajñāna* has for its support the consciousness limited by *jīva*, and this involves a vicious circle. Again, on this view, since Brahman is not the basis of *ajñāna*, though it is of the nature of pure consciousness, it may well be contended that pure consciousness as such is not the basis of *ajñāna*, and that, just as the *jīva*, through association with *ajñāna*, undergoes the cycles of birth, so Brahman also may, with equal reason, be associated with *ajñāna*, and undergo the painful necessities of such an association.

The analogy of the mirror and the image is also inappropriate on many grounds. The impurities of the mirror are supposed to vitiate the image; but in the present case no impurities are directly known or perceived to exist in the *ajñāna*, which stands for the mirror; even though they may be there, being of the nature of root-impressions, they are beyond the scope of the senses. Thus, the view that the conditions which are perceived in the mirror are also reflected in the image is invalid.

It cannot be held that, just as in the Nyāya view the soul is associated with pain only through the intermediacy of body, so the pure consciousness may be regarded as associated with *ajñāna* in association with its limited form as *jīva*; for, since pure consciousness is itself associated with the mischievous element, the *ajñāna*, the attainment of Brahmanhood cannot be regarded as a desirable state.

Madhusūdana in reply says that pure consciousness, in itself not opposed to *ajñāna*, can destroy *ajñāna* only when reflected through modification of *ajñāna* as *vṛtti*, just as the rays of the sun, which illuminate little bits of paper or cotton, may burn them when reflected through a lens. It is wrong also to suppose that the ignorance has its basis in the ego; for the ego-notion, being itself a product of *ajñāna*, cannot be its support. It must, therefore, have as its basis the underlying pure consciousness. The experience "I am ignorant" is, therefore, to be explained on the supposition that the notion of ego and ignorance both have their support in the pure consciousness and are illusorily made into a complex. The ego, being itself an object of knowledge and removable by ultimate true knowledge, must be admitted to be illusory. If *ajñāna* were not ultimately based on pure consciousness, then it could not be removable by the ultimate and final knowledge which has the pure consciousness as its content. It is also wrong to suppose that the *ajñāna* qualifies the phenomenal knower; for the real knower is the pure consciousness, and to it as such the *ajñāna* belongs, and it is through it that all kinds of knowledge, illusory or relatively real, belong to it. The criticism that, there being *ajñāna*, there is the phenomenal knower, and, there being the phenomenal knower, there is *ajñāna*, is also wrong; for *ajñāna* does not depend for its existence upon the phenomenal knower. Their mutual association is due not to the fact that *avidyā* has the knower as its support, but that ignorance and the ego-notion are expressed together in one structure of awareness, and this explains their awareness. The unity of the phenomenal knower and the pure consciousness subsists only in so far as the consciousness underlying the phenomenal knower is one with pure consciousness. It is well known that, though a face may stand before a mirror, the impurities of the mirror affect the reflected mirror and not the face. The reflected image, again, is nothing different from the face itself; so,

though the pure consciousness may be reflected through impure *ajñāna*, impurities affect not the pure consciousness, but the *jīva*, which, again, is identical in its essence with the consciousness. It must be noted in this connection that there are two *ajñānas*, one veiling the knower and the other the object, and it is quite possible that in some cases (e.g., in mediate knowledge) the veil of the object may remain undisturbed as also the veil of the subject.

It is wrong to suppose that reflection can only be of visible objects; for invisible objects also may have reflection, as in the case of *ākāśa*, which, though invisible, has its blueness reflected in it from other sources. Moreover, that Brahman is reflected through *ajñāna* is to be accepted on the testimony of scripture. It is also wrong to contend that that which is reflected and that in which the reflection takes place have the same kind of existence; for a red image from a red flower, though itself illusory and having therefore a different status of existence from the reflecting surface of the mirror, may nevertheless be further reflected in other things. Moreover, it is wrong to suppose that *ajñāna* cannot be predisposed to reflect pure consciousness; for *ajñāna*, on the view that it is infinite, may be supposed to be able to reflect pure consciousness in its entirety; on the view that it is more finite than pure consciousness there is no objection that a thing of smaller dimensions could not reflect an entity of larger dimensions; the sun may be reflected in water on a plate. Moreover, it is not a valid objection that, if *ajñāna* has transformation into particular forms, it is exhausted, and therefore cannot reflect pure consciousness; for that fraction of *ajñāna* which takes part in transformation does not take part in reflection, which is due to a different part of *ajñāna*. Again, the criticism that, in contradistinction to the case of reflection of a neutral face appearing as many images, there is no neutral consciousness, apart from the *jīva* and Brahman, is ineffective; for the neutral face is so called only because the differences are not taken into account, so that the pure consciousness also may be said to be neutral when looked at apart from the peculiarities of its special manifestation through reflection.

It must be noted that the function of reflection consists in largely attributing the conditions (such as impurities, etc.) of the reflector to the images. This is what is meant by the phrase

upādheḥ pratibimba-pakṣapātītvaṃ (i.e., the conditions show themselves in the images). It is for this reason that the impurities of *ajñāna* may show themselves in the reflected *jīvas* without affecting the nature of pure consciousness.

Also it cannot be said that *māyā* is associated with Brahman; for, if this *māyā* be *ajñāna*, then the possibility of its association with Brahman has already been refuted. *Māyā*, being *ajñāna*, also cannot be regarded as a magical power whereby it is possible to show things which are non-existent (*aindrajalīkasyeva avidyā-māna-pradarśana-saktiḥ*); for, since *ajñāna* in general has been refuted, a specific appearance of it, as magic, cannot be admitted; also it is never seen that a magician demonstrates his magical feats through *ajñāna*. If *māyā* be regarded as a special power of Brahman by which He creates the diverse real objects of the world, then we have no objection to such a view and are quite prepared to accept it. If it is held that *māyā* is a power of deluding other beings, then, since before its application there are no beings, the existence of *māyā* is unjustifiable. Again, if such a power should be regarded as having a real existence, then it would break monism. If it be regarded as due to the false imagination of the *jīvas*, then it cannot be regarded as deluding these. If it be regarded as due to the false imagination of Brahman, then it must be admitted that Brahman has *ajñāna*, since without *ajñāna* there cannot be any false imagination.

The view of Vācaspati that *avidyā* resides in the *jīva* is also wrong—for, if *jīva* means pure consciousness, then the old objection holds good; if *jīva* means pure consciousness as limited by reflection from *ajñāna* or the *ajñāna*-product, the *buddhi*, then this involves a vicious circle; for without first explaining *avidyā* it is not possible to talk about its limitation. If it is said that *avidyā*, standing by itself without any basis, produces the *jīvas* through its reference to pure consciousness, and then, when the *jīva* is produced, resides in it, then it will be wrong to suppose that *avidyā* resides in the *jīva*; even the production of the *jīva* will be inexplicable, and the old objection of the vicious circle will still be the same. Nor can it be held that, the *jīva* and the *avidyā* being related to each other in a beginningless relation, the criticism of the vicious circle through mutual dependence is unavailing is not correct; for, if they do not depend on each other, they also cannot

determine each other. If the *ajñāna* and the *jīva* are not found to be related to each other in any of their operations, they also cannot depend upon each other; that which is entirely unrelated to any entity cannot be said to depend on it. It is held that the difference between *jīva* and Brahman consists in the fact of the former being a product of *avidyā*, and it is also held that the *avidyā* has the *jīva* as its basis, so that without the knowledge of *jīva* there cannot be *avidyā*, and without the knowledge of *avidyā* there cannot be any *jīva*.

To this Madhusūdana's reply is that the so-called vicious circle of mutual dependence is quite inapplicable to the case under discussion, since such mutual dependence does not vitiate the production, because such production is in a beginningless series. There is not also a mutual agency of making each other comprehensible; for, though the *ajñāna* is made comprehensible by pure consciousness, yet the latter is not manifested by the former. There is, further, no mutual dependence in existence; for, though the *ajñāna* depends upon pure consciousness for its existence, yet the latter does not depend upon the former. Madhusūdana further points out that according to Vācaspati it is the *ajñāna* of the *jīva* that creates both the *īśvara* and the *jīva*.

The *ajñāna* is supposed to veil the pure consciousness; but the pure consciousness is again supposed to be always self-luminous, and, if this is so, how can it be veiled? The veil cannot be of the *jīva*, since the *jīva* is a product of *ajñāna*; it cannot be of the material objects, since they are themselves non-luminous, so that no veil is necessary to hide them. The veiling of the pure consciousness cannot be regarded as annihilation of the luminosity of the self-luminous (*siddha-prakāśa-lopaḥ*); nor can it be regarded as obstruction to the production of what after it had come into existence would have proved itself to be self-luminous; for that whose essence is self-luminous can never cease at any time to be so. Moreover, since the self-luminosity is ever-existent, there cannot be any question regarding production of it which the *ajñāna* may be supposed to veil. Again, since it is the nature of knowledge to express itself as related to objects, it cannot stand in need of anything else in order to establish its relationing to the objects, and there cannot be any time when the knowledge will exist without relationing itself to the objects. Moreover, on the Śāṅkarite view

the pure consciousness, being homogeneous in its self-luminosity, does not stand in need of any relationing to objects which could be obstructed by the veil. Nor can it be said that the veil acts as an obstruction to the character of objects as known (*prākāṣya-pratibandha*); even according to the Śāṅkarites the *prākāṣya*, or the character of objects as known, is nothing but pure consciousness. It cannot be said that such awareness as "this exists," "it does not shine" cannot be said to appertain to pure consciousness; for even in denying the existence of consciousness we have the manifestation of consciousness. Even erroneous conceptions of the above forms cannot be said to be the veil of *ajñāna*; for error arises only as a result of the veiling of the locus (e.g., it is only when the nature of the conch-shell is hidden that there can appear an illusory notion of silver) and cannot therefore be identified with the veil itself. Citsukha defines self-luminosity as that which, not being an object of awareness, has a fitness for being regarded as immediate (*avedyatve sati aparokṣa-vyavahāra-yogyatvam*). The view that the self-luminosity is the fitness for not being immediate or self-shining as an explanation of the veil of *ajñāna* that exists in it, is wrong, for that is self-contradictory, since by definition it has fitness for being regarded as immediate.

Again, a veil is that which obstructs the manifestation of that which is covered by it; but, if a self-luminous principle can manifest itself through *ajñāna*, it is improper to call this a veil.

Again, if a veil covers any light, that veil does not obstruct the illumination itself, but prevents the light from reaching objects beyond the veil. Thus a light inside a jug illuminates the inside of the jug, and the cover of the jug only prevents the light from illuminating objects outside the jug. In the case of the supposed obstruction of the illumination of the pure consciousness the same question may arise, and it may well be asked "To whom does the veil obstruct the illumination of the pure consciousness?" It cannot be with reference to diverse *jīvas*; for the diversity of *jīvas* is supposed to be a product of the action of the veil, and they are not already existent, so that it may be said that the pure consciousness becomes obstructed from the *jīvas* by the action of the veil. It is also wrong to suppose that the illumination of the Brahman so far differs from that of ordinary light that it does not manifest itself to itself; for, if that were so, it might equally remain unmanifested

even during emancipation and there would be no meaning in introducing *ajñāna* as the fact of veiling. It is held that even while the *sākṣi*-consciousness is manifesting itself the *ajñāna* may still be there, since the *sākṣi*-consciousness manifests the *ajñāna* itself. It is further held that in such experiences as "I do not know what you said" the *ajñāna*, though it may not veil anything, may yet be manifested in pure consciousness, as may be directly intuited by experience. To this the reply is that the conception of the *ajñāna* aims at explaining the non-manifestation of the unlimited bliss of Brahman, and, if that is so, how can it be admitted that *ajñāna* may appear without any veiling operation in the manifested consciousness? Though in the case of such an experience as "I do not know what you said" the *ajñāna* may be an object of knowledge, in the case of manifestation of pleasure and pain there cannot be any experience of the absence of manifestation of these, and so no *ajñāna* can appear in consciousness with reference to these. Moreover, even when one says "I do not know what you say" there is no appearance of *ajñāna* in consciousness; the statement merely indicates that the content of the speaker's words is known only in a general way, excluding its specific details. So far, therefore, there is thus a manifestation of the general outline of the content of the speaker's words, which might lead, in future, to an understanding of the specific details. Anyway, the above experience does not mean the direct experience of *ajñāna*. Just as God, though not subject like ourselves to illusions, is yet aware that we commit errors, or just as we, though we do not know all things that are known by God, yet know of the omniscience of God, so without knowing the specific particularities of *ajñāna* we may know *ajñāna* in a general manner. If the above view is not accepted, and if it is held that there is a specific cognitive form of *ajñāna*, then this cognitive form would not be opposed to *ajñāna*, and this would virtually amount to saying that even the cessation of *ajñāna* is not opposed to *jñāna*, which is absurd. Moreover, if *ajñāna* were an object of knowledge, then the awareness of it would be possible only by the removal of another *ajñāna* veil covering it.

Again, if it is said that *ajñāna* exists wheresoever there is a negation of the *ṛtti-jñāna*, which alone is contradictory to it, then it should exist also in emancipation. But, again, when one says "I do not know," the opposition felt is not with reference to *ṛtti*-

knowledge specifically, but with reference to knowledge in general. Moreover, if *caitanya* (pure consciousness) and *ajñāna* were not opposed to each other, it would be wrong to designate the one as the negation of the other, i.e., as knowledge (*jñāna*) and ignorance (*ajñāna*). Moreover, if cognitions are only possible and ignorances can only be removed through the manifestation of the self-shining pure consciousness, it stands to reason that it is the pure consciousness that should be opposed to *ajñāna*. It is also unreasonable to suppose that the self could have *ajñāna* associated with it and yet be self-luminous. There ought to be no specific point of difference between the *vr̥tti* and the *sākṣi*-consciousness in their relation to *ajñāna*; for they may both be regarded as opposed to *ajñāna*. If the *sākṣi*-consciousness were not opposed to *ajñāna*, then it could not remove ignorance regarding pleasure, pain, etc. There is no reason to suppose that no *ajñāna* can be associated with whatever is manifested by *sākṣi*-consciousness. It is indeed true that there is no *ajñāna* in the knower, and the knower does not stand in need of the removal of any ignorance regarding itself. The self is like a lamp ever self-luminous; no darkness can be associated with it. It is for this reason that, though ordinary objects stand in need of light for their illumination, the self, the knower, does not stand in need of any illumination. It is also wrong to suppose that the pure consciousness is opposed to *ajñāna* only when it is reflected through a *vr̥tti* state, and that in the case of the experience of pleasure the *sākṣi*-consciousness is reflected through a *vr̥tti* of the pleasure-form; for, if this is admitted, then it must also be admitted that the pleasure had a material existence before it was felt, and thus, as in the case of other objects, there may be doubts about pleasure and pain also; and so the accepted view that the perception of pleasure is also its existence must be sacrificed. Thus it has to be admitted that pure consciousness is opposed to ignorance regarding pleasure, pain, etc. There is, therefore, as regards opposition to knowledge no difference between pure consciousness and pure consciousness manifested through a *vr̥tti*. Nor can it be said that pleasure, pain, etc., are perceived by the pure consciousness as reflected through the *vr̥tti* of the *antaḥkaraṇa*; for the *vr̥tti* of the *antaḥkaraṇa* can arise only through sense-functioning, and in the intuition of internal pleasure there cannot be any such sense-function. Nor can it be a reflection through the *vr̥tti* of *avidyā*; for that is possible

only in the presence of a defect or defects. If, like things immersed in darkness, like absence of knowledge, *ajñāna* be utter unmanifestation, then it cannot be manifested by the *sākṣi*-consciousness. Again, if it is held that *ṛtti* is opposed to *ajñāna*, then, since there exists the ego-*ṛtti* forming the *jīva* and the object-formed *ṛtti* representing the knowledge of the material objects, it might well be expected that these *ṛttis* would oppose the existence of *ajñāna* and that there would be immediate emancipation.

To this Madhusūdana's reply is that the *ajñāna* is called a veil in the sense that it has a fitness (*yogyatā*) by virtue of which it is capable of making things appear as non-existent or unmanifested, though it may not always exert its capacity, with the result that in dreamless sleep the operation of the veil exists, while in emancipation it is suspended. Generally speaking, the veil continues until the attainment of Brahma-knowledge. It may be objected that the concept of a veil, being different from that of pure consciousness, is itself a product of false imagination (*kalpita*), and therefore involves a vicious circle; to this the reply would be that *avidyā* is beginningless, and hence, even if a false imagination at any particular stage be the result of a preceding stage and that of a still further preceding stage, there cannot be any difficulty. Moreover, the manifestation of the *āvaraṇa* does not depend on the completion of the infinite series, but is directly produced by pure consciousness. It must be remembered that, though the pure consciousness in its fulness is without any veil (as during emancipation), yet on other occasions it may through the operation of the veil have a limited manifestation. Against the objection of Vyāsa-tīrtha that pure consciousness, being homogeneous, is incapable of having any association with a veil, Madhusūdana ends by reiterating the assertion that veiling is possible—for which, however, no new reason is given. To the objection that the veil, like the jug, cannot avert the illumination of the lamp inside, and can obstruct only with reference to the things outside the jug, but that in the case of the obstruction of pure consciousness no such external entity is perceivable, Madhusūdana's reply is that the obstruction of the pure consciousness is with reference to the *jīva*. The veiling and the *jīva* being both related to each other in a beginningless series, the question regarding their priority is illegitimate. Madhusūdana points out that, just as in the experience "I do not know what you say" the

ignorance is associated with knowledge, so also, in the manifestation of pleasure, pleasure is manifested in a limited aspect with reference to a particular object, and such limitation may be considered to be due to the association with *ajñāna* which restricted its manifestation. Madhusūdana contends that in such experiences as "I do not know what you say" the explanation that there is a general knowledge of the intention of the speaker, but that the specific knowledge of the details has not yet developed, is wrong; for the experience of *ajñāna* may here be regarded from one point of view as having reference to particular details. If the specific details are not known, there cannot be any ignorance with reference to them. But, just as, even when there is the knowledge of a thing in a general manner, there may be doubt regarding its specific nature, so there may be knowledge in a general manner and ignorance regarding the details. It may also be said that ignorance is directly known in a general manner without reference to its specific details. Vyāsa-tīrtha had contended that the knowledge of ignorance could only be when the particulars could not be known; thus God has no illusion, but has a knowledge of illusion in general. Against this Madhusūdana contends that in all the examples that could be cited by the opponents ignorance in a general manner can subsist along with a knowledge of the constituent particulars. Again, it is argued that, since *ajñāna* is an object of knowledge, it would be necessary that the veil of *ajñāna* should be removed; this is self-contradictory. To this Madhusūdana's reply is that, just as in the case of the knowledge of specific space-relations the presence of an object is necessary, but yet but for the knowledge of its negation presence of the object would be impossible, so also in the case of the knowledge of *ajñāna* the removal of a further veil is unnecessary, as this would be self-contradictory.

It may be urged that *ajñāna* is known only when the object with reference to which the ignorance exists is not known; later on, when such an object is known, the knower remembers that he had ignorance regarding the object; and the difference between such an *ajñāna* and negation of *jñāna* (*jñānābhāva*) lies in the fact that negation cannot be known without involving a relationing to its defining reference, whereas *ajñāna* does not stand in need of any such defining reference. To this supposed explanation of *ajñāna* by Vyāsa-tīrtha Madhusūdana's reply is that the Śāṅkarites virtually

admit the difference between *ajñāna* and *abhāva*, against which they have been contending so long. Moreover, when one says "I do not know what you say," the *ajñāna* with reference to the speech of the speaker is directly known at the present time, and this would be inexplicable if the cognition of *ajñāna* did not involve a cognition of the defining reference. So, since *ajñāna* is cognized along with its object, there is no discrepancy in the object being manifested in its aspect as under the grasp of *ajñāna* as intuited by the *sākṣi*-consciousness. Madhusūdana urges that the pure consciousness can remove *ajñāna* only by being reflected through the *pramāṇa-vṛtti* and not through its character as self-luminous or through the fact of its being of a class naturally opposed to *ajñāna*¹. The difference between the *vṛtti* and the *sākṣi*-consciousness in relation to *ajñāna* consists in the fact that the former is opposed to *ajñāna*, while the latter has no touch of *ajñāna*. The latter, i.e., the *sākṣi*-consciousness, directly manifests pleasures, pains, etc., not by removing any *ajñāna* that was veiling them, but spontaneously, because the veil of *ajñāna* was not operating on the objects that were being directly manifested by it².

Ajñāna and Ego-hood (ahaṃkāra).

The Śāṅkarites hold that, though during dreamless sleep the self-luminous self is present, yet, there being at the time no non-luminous ego, the memory in the waking stage does not refer the experience of the dreamless state to the ego as the self; and the scriptural texts also often speak against the identification of the self with the ego. In the dreamless stage the ego is not manifested; for, had it been manifested, it would have been so remembered.

To this Vyāsa-tīrtha's reply is that it cannot be asserted that in dreamless sleep the self is manifested, whereas the ego is not; for the opponents have not been able to prove that the ego is something different from the self-luminous self. It is also wrong to say that the later memory of sleeping does not refer to the ego; for all memory refers to the self as the ego, and nothing else. Even when

¹ *pramāṇa-vṛtty-upārūḍha-prakāśatvena nīvartakatvaṃ brūmah, na tu jāti-rīṣeṣeṇa, prakāśatra-mātreṇa vā. Advaita-siddhi*, p. 590.

² *sākṣiṇi yad ajñāna-virodhitvaṃ anubhūyate tan nājñāna-nīvartakatva-nibandhanam, kintu sva-viśayecchādaṃ yāvatsattvaṃ prakāśād ajñānāprasakti-nibandhanam. Ibid.* p. 590.

one says "I slept," he uses the "I," the ego with which his self is associated. The *Vivaraṇa* also says that recognition is attributed to the self as associated with the *antaḥkaraṇa*. If the ego were not experienced as the experiencer of the dreamless state, then one might equally well have entertained doubts regarding it. It is wrong also to suppose that the entity found in all perceivers is the self, and not the ego; for, howsoever it may be conceived, it is the ego that is the object of all such reference, and even the *Vivaraṇa* says that the self, being one in all its experiences in separate individuals, is distinct only through its association with the ego. It cannot be said that reference to the ego is not to the ego-part, but to the self-luminous entity underlying it; for, if this be admitted, then even ignorance would have to be associated with that entity. The *ajñāna* also appears in experiences as associated with the ego, and the ego appears not as the sleeper, but as the experiencer of the waking state, and it recognizes itself as the sleeper. Nor can it be denied that in the waking state one remembers that the ego during the sleep has experienced pleasure; so it must be admitted that in dreamless sleep it is the ego that experiences the sleep. The fact that one remembers his dream-experience as belonging to the same person who did some action before and who is now remembering shows that the action before the dream-experience and the present act of remembering belong to the same identical ego, the experiencer; even if the underlying experiencer be regarded as pure consciousness, yet so far as concerns the phenomenal experiencer and the person that remembers it is the ego to which all experience may be said to belong. Moreover, if the ego is supposed to be dissolved in the dreamless sleep, then even the bio-motor functions of the body, which are supposed to belong to the ego, would be impossible. Moreover, since our self-love and our emotion for self-preservation are always directed towards the self as the ego, it must be admitted that the experiences of the permanent self refer to the ego-substratum. It cannot be urged that this is possible by an illusory imposition of the ego on the pure self; for this would involve a vicious circle, since, unless the pure self is known as the supreme object of love, there cannot be any imposition upon it and, unless there is an imposition of the ego upon it, the self cannot be known as the supreme object of love. Moreover, there is no experience of a self-love which could be supposed to be directed to

pure consciousness and not to the phenomenal self. Similar criticisms may also be made in the case of the explanation of such experience as "I shall attain the ultimate bliss," as based on the imposition of the ego upon the pure self¹. Moreover, if the notion of the ego has as a constituent the mind, then such experience as "my mind," where the mind and the ego appear as different, would be impossible, and the experience of mind and ego would be the same. Moreover, all illusions have two constituents—the basis and the appearance; but in the ego no such two parts are experienced. It is also wrong to suppose that in such experiences as "I appear to myself" (*aham sphurāmi*) the appearance in consciousness is the basis and "appear to myself" is the illusory appearance². For, the appearance (*sphurana*) of the ego being different from the ego-substance (*aham-artha*), there is no appearance of identity between them such that the former may be regarded as the basis of the latter. The ego is, thus, directly perceived by intuitive experience as the self, and inference also points to the same; for, if the ego is enjoined to go through the ethical and other purificatory duties, and if it is the same that is spoken of as being liberated, it stands to reason that it is the ego substance that is the self. Vyāsa-tirtha further adduces a number of scriptural texts in confirmation of this view.

To this Madhusūdana's reply is that, if the ego-substance had been present in sleep, then its qualities, such as desire, wish, etc., would have been perceived. A substance which has qualities can be known only through such qualities: otherwise a jug with qualities would not require to be known through the latter. It is true, no doubt, that we affirm the existence of the jug in the interval between the destruction of its qualities of one order and the production of qualities of another order. But this does not go against the main thesis; for though a qualified thing requires to be known through its qualities, it does not follow that a qualityless thing should not be knowable. So it must be admitted that, since no qualities are apprehended during deep sleep, it is the qualityless self that is known in deep sleep; if it had not been perceived, there would have been no memory of it in the waking state. Moreover,

¹ Vyāyāmṛta, p. 283(a).

² *iha tu sphuraṇamātram adhiṣṭhānamiti sphurāmīty eva dhīr iti cen na. Ibid. p. 38(a).*

during dreamless sleep the self is perceived as supporting ignorance (as is testified by the experience “I did not know anything in deep sleep”), and hence it is different from the ego. The memory refers to pure consciousness as supporting *ajñāna*, and not to the ego. It is true that the *Vivaraṇa* holds that recognition (*pratyabhijñā*) can be possible only of pure consciousness as associated with the *antaḥkaraṇa*; but, though this is so, it does not follow that the apprehension (*abhijñā*) of the pure consciousness should also be associated with the *antaḥkaraṇa*. In the dreamless state, therefore, we have no recognition of pure consciousness, but an intuition of it. In the waking stage we have recognition not of the pure consciousness, but of the consciousness as associated with *ajñāna*. The emphasis of the statement of the *Vivaraṇa* is not on the fact that for recognition it is indispensable that the pure consciousness should be associated with the *antaḥkaraṇa*, but on the fact that it should not be absolutely devoid of the association of any conditioning factor; and such a factor is found in its association with *ajñāna*, whereby recognition is possible. The memory of the ego as the experiencer during dreams takes place through the intuition of the self during dreamless sleep and the imposition of the identity of the ego therewith. It is the memory of such an illusory imposition that is responsible for the apparent experience of the ego during dreamless sleep. It is wrong to suggest that there is a vicious circle; for it is only when the ego-substratum is known to be different from the self that there can be illusory identity and it is only when there is illusory identity that, as the ego does not appear during dreamless state, the belief that it is different is enforced. For it is only when the self is known to be different from the ego that there can be a negation of the possibility of the memory of the self as the ego. Vyāsa-tīrtha says that, the ego-substratum (*aḥam-artha*) and the ego-sense (*aḥaṃ-kāra*) being two different entities, the manifestation of the former does not involve as a necessary consequence the manifestation of the latter, and this explains how in the dreamless state, though the ego-substratum is manifested, yet the ego-sense is absent. To this Madhusūdana's reply is that the ego-substratum and the ego-sense are co-existent and thus, wherever the ego-substratum is present, there ought also to be the ego-sense, and, if during the dreamless state the ego-substratum was manifested, then the ego-sense should also have

been manifested with it. He adds that the same objection cannot be made in regard to the manifestation of the self during the dreamless state; for the self is not associated with the ego-sense. Vyāsa-tīrtha has said that, just as the Śāṅkarites explain the manifestation of *ajñāna* in the dreamless state as having reference to objective entities only, and not to the pure *sākṣi*-consciousness (as it could not without contradiction be manifested and be at the same time the object of *ajñāna*), so the manifestation of the ego-substratum is not contradicted by the association with *ajñāna*, but may be regarded as having reference to extraneous objective entities. To this Madhusūdana's reply is that there is no contradiction in the appearance of *ajñāna* in the *sākṣi*-consciousness, as it may be in the case of its association with the ego-substratum, and so the explanation of Vyāsa-tīrtha is quite uncalled-for.

Madhusūdana says that the ego-substratum may be inferred to be something different from the self, because, like the body, it is contemplated by our ego-perception or our perception as "I." If it is held that even the self is contemplated by the ego-perception, the reply is that the self, in the sense in which it is contemplated by the ego-perception, is really a non-self. In its essential nature the self underlying the ego-perception cannot be contemplated by the ego-perception. Again, the view of Vyāsa-tīrtha, that the fact of our feeling ourselves to be the supreme end of happiness shows that supreme happiness belongs to the ego-substratum, is criticized by the Śāṅkarites to the effect that the supreme happiness, really belonging to the self, is illusorily through a mistaken identity imposed upon the ego-substratum. This criticism, again, is criticized by the Madhvas on the ground that such an explanation involves a vicious circle, because only when the supremely happy nature of the ego-substratum is known does the illusory notion of identity present itself; and that only when the illusory notion of identity is present is there awareness of that supremely happy nature. To this, again, the reply of Madhusūdana is that the experiencing of the dreamless stage manifests the self as pure consciousness, while the ego-substratum is unmanifest; thus through the testimony of deep sleep the ego-substratum is known to be different from the self. The ego-substratum is by itself unmanifested, and its manifestation is always through the illusory imposition of identity with the pure self. What Madhusūdana wishes to

assert is that the supremely happy experience during deep sleep is a manifestation of the pure self and not of the ego-substratum; the ego is felt to be happy only through identification with the pure self, to which alone belongs the happiness in deep sleep.

The objection of Vyāsa-tīrtha is that in emancipation the self is not felt as the supreme end of happiness, because there is no duality there, but, if such an experience be the nature of the self, then with its destruction there will be destruction of the self in emancipation. To this Madhusūdana's reply is that the experience of the self as the end of supreme happiness is only a conditional manifestation, and therefore the removal of this condition in emancipation cannot threaten the self with destruction.

It is urged by the Śāṅkarites that the agency (*kartṛtva*) belonging to the mind is illusorily imposed upon the self, whereby it illusorily appears as agent, though its real changeless nature is perceived in deep sleep. Vyāsa-tīrtha replies that there are two specific illustrations of illusion, viz., (i) where the red-colour of the *japā*-flower is reflected on a crystal, whereby the white crystal appears as red, and (ii) where a rope appears as a dreadful snake. Now, following the analogy of the first case, one would expect that the mind would separately be known as an agent, just as the *japā*-flower is known to be red, and the pure consciousness also should appear as agent, just as the crystal appears as red. If the reply is that the illusion is not of the first type, since it is not the quality of the mind that is reflected, but the mind with its qualities is itself imposed, there it would be of the second type. But even then the snake itself appears as dreadful, following which analogy one would expect that the mind should appear independently as agent and the pure consciousness also should appear so.

Madhusūdana in reply says that he accepts the second type of illusion, and admits that agency parallel to the agency of the mind appears in the pure consciousness and then these two numerically different entities are falsely identified through the identification of the mind with the pure consciousness. As a matter of fact, however, the illusion of the agency of the mind in the pure consciousness may be regarded as being of both the above two types. The latter type, as *nirupādhika*, in which that which is imposed (*adhyasyamāna*, e.g., the dreadful snake), being of the *Vyāvahārika* type of existence, has a greater reality than the illusory knowledge

(the rope-snake which has only a *prātibhāsika* existence), as has been shown above. It may also be interpreted as being a *sopādhika* illusion of the first type, since both that which is imposed (the agency of the mind) and that which is the illusory appearance (the agency of the pure consciousness) have the same order of existence, viz., *Vyāvahārika*, which we know to be the condition of a *sopādhika* illusion as between *japā*-flower and crystal.

Madhusūdana points out that ego-hood (*aham-kāra*) is made up of two constituents, (i) the underlying pure consciousness, and (ii) the material part as the agent. The second part really belongs to the mind, and it is only through a false identification of it with the pure consciousness that the experience "I am the doer, the agent" is possible: so the experience of agency takes place only through such an illusion. So the objection that, if the agency interest in the mind is transferred to the ego-substratum, then the self cannot be regarded as being subject to bondage and liberation, is invalid; for the so-called ego-substratum is itself the result of the false identification of the mind and its associated agency with the pure consciousness. Vyāsa-tīrtha had pointed out that in arguing with Sāṃkhyists the Śāṅkarites had repudiated (*Brahma-sūtra*, II. 3. 33) the agency of the *buddhi*. To this Madhusūdana's reply is that what the Śāṅkarites asserted was that the consciousness was both the agent and the enjoyer of experiences, and not the latter alone, as the Sāṃkhyists had declared; they had neither repudiated the agency of *buddhi* nor asserted the agency of pure consciousness.

Vyāsa-tīrtha says that in such experience as "I am a Brahmin" the identification is of the Brahmin body with the "I" and this "I" according to the Śāṅkarites is different from the self; if that were so, it would be wrong to suppose that the above experience is due to a false identification of the body with the "self"; for the "I" is not admitted by the Śāṅkarites to be the self. Again, if the identity of the body and the self be directly perceived, and if there is no valid inference to contradict it, it is difficult to assert that they are different. Moreover, the body and the senses are known to be different from one another and cannot both be regarded as identical with the self. Again, if all difference is illusion, the notion of identity, which is the opposite of "difference," will necessarily be true. Moreover, as a matter of fact, no such illusory identification of the body and the self ever takes place; for, not to speak of men,

even animals know that they are different from their bodies and that, though their bodies change from birth to birth, they themselves remain the same all through.

Madhusūdana says in reply that the false identification of the body and the ego is possible because ego has for a constituent the pure consciousness, and thus the false identification with it means identification with consciousness. Moreover, it is wrong to say that, if perception reveals the identity between the body and self, then it is not possible through inference to establish their difference. For it is well known (e.g., in the case of the apparent size of the moon in perception) that the results of perception are often revised by well-established inference and authority. Again, the objection that, all difference being illusory, the opposite of difference, viz., false identification, must be true, is wrong; for in the discussion on the nature of falsehood it has been shown that both the positive and the negative may at the same time be illusory. Moreover, the false identification of the body with the self can be dispelled in our ordinary life by inference and the testimony of scriptural texts, whereas the illusion of all difference can be dispelled only by the last cognitive state preceding emancipation. Madhusūdana holds that all explanation in regard to the connection of the body with the self is unavailing, and the only explanation that seems to be cogent is that the body is an illusory imposition upon the self.

Indefinability of World-appearance.

It is urged by Vyāsa-tīrtha that it is difficult for the Śāṅkarites to prove that the world-appearance is indefinable (*anirvācya*), whatever may be the meaning of such a term. Thus, since it is called indefinable, that is in itself a sufficient description of its nature; nor can it be said that there is an absence of the knowledge or the object which might have led to a definition or description; for in their absence no reference to description would be at all possible. Nor can it be said that indefinability means that it is different from both being and non-being; for, being different from them, it could be the combination of them. To this Madhusūdana's reply is that the indefinability consists in the fact that the world-appearance is neither being nor non-being nor being-and-non-being. Indefinability may also be said to consist in the fact that the world-

appearance is liable to contradiction in the context wherein it appears. It cannot be said that the above position does not carry us to a new point, since one existent entity may be known to be different from any other existent entity; for the negation here is not of any particular existence, but of existence as such. If it is possible to assert that there may be an entity which is neither existence nor non-existence, then that certainly would be a new proposition. Madhusūdana further points out that “existence” and “non-existence” are used in their accepted senses and, both of them being unreal, the negation of either of them does not involve the affirmation of the other, and therefore the law of excluded middle is not applicable. When it is said that the indefinability consists in the fact that a thing is neither being nor non-being, that means simply that, all that can be affirmed or denied being unreal, neither of them can be affirmed; for what is in itself indescribable cannot be affirmed in any concrete or particularized form¹.

Vyāsa-tīrtha contends that the inscrutable nature of existence and non-existence should not be a ground for calling them indefinable; for, if that were so, then even the cessation of *avidyā*, which is regarded as being neither existent nor non-existent nor existent-non-existent nor indefinable, should also have been called indefinable. The reply of Madhusūdana to this is that the cessation of *avidyā* is called unique, because it does not exist during emancipation; he further urges that there is no incongruity in supposing that an entity as well as its negation (provided they are both unreal) may be absent in any other entity—this is impossible only when the positive and the negative are both real. Madhusūdana further says that being and non-being are not mutual negations, but exist in mutually negated areas. Being in this sense may be defined as the character of non-being contradicted, and non-being as incapability of appearing as being. It may be argued that in this sense the world-appearance cannot be regarded as different from both being and non-being. To this the reply is that by holding the view that being and non-being are not in their nature exclusive, in such a way that absence of being is called non-being and *vice versa*, but that the absence of one is marked by the presence of another, a possibility

¹ *na ca tarhi sad-ādi-vailakṣanyoktiḥ katham tat-tat-pratīyogī-durnirūpatā-mātre prakāṣanāya, na hi svarūpato durnirūpasya kimcid api rūpaṃ vāstavaṃ sambhavati. Advaita-siddhi*, p. 621.

is kept open whereby both may be absent at one and the same time. Thus, if eternity and non-eternity be defined as being-associated-with-destruction and being-unassociated-with-destruction, then they may be both absent in generality, which has no being; and, again, if eternity be defined as absence of a limit in the future, and non-eternity be defined as liability to cessation on the part of entities other than being, then negation-precedent-to-production (*prāg-abhāva*) may be defined as an entity in which there is neither entity nor non-entity; for a negation-precedent-to-destruction has a future and at the same time cannot be made to cease by any other thing than a positive entity, and so it has neither eternity nor non-eternity in the above senses. So the false silver, being unreal, cannot be liable to contradiction or be regarded as uncontradicted. The opponent, however, contends that the illustration is quite out of place, since generality (*sāmānya*) has no destruction and is, therefore, non-eternal, and negation-precedent-to-production is non-eternal, because it is destroyed. To this Madhusūdana's reply is that the Śāṅkarites do not attempt to prove their case simply by this illustration, but adduce the illustration simply as a supplement to other proofs in support of their thesis. The reason why the qualities of being and non-being may be found in the world-appearance without contradiction is that, being qualities of imaginary entities (being and non-being), they do not contradict each other¹. If an entity is not regarded as non-eternal in a real sense, there is no contradiction in supposing it to be non-eternal only so long as that entity persists. Madhusūdana puts forward the above arguments to the effect that there is no contradiction in affirming the negation of any real qualities on the ground that those qualities are imaginary², against the criticism of Vyāsa-tīrtha that, if the world-appearance is pronounced by any person for whatever reasons to be indefinable, then that itself is an affirmation, and hence there is a contradiction. To be indefinable both as being and as non-being means that both these are found to be contradicted in the entity under consideration. When it is said that the imaginary world-appearance ought not to be liable to being visible, invisible,

¹ *dharmiṇa eva kalpitatvena viruddhayaḥ api dharmayoḥ abhāvāt. Ibid. p. 622.*

² *atāttvika-hetu-sad-bhāvena tāttvika-dharmābhāvasya sādhanena vyāghātā-bhāvāt. Ibid. p. 623.*

contradicted or uncontradicted, there is a misunderstanding; for it is certainly outside such affirmations in any real sense, but there is no incongruity in the affirmation of these qualities as imaginary appearances, since they are presented in those forms to all experience. The whole point is that, when qualities that are contradictory are in themselves imaginary, there is no incongruity in their mutual negation with reference to a particular entity; if the mutual negation is unreal, their mutual affirmation is equally unreal. Vyāsa-tīrtha argues that indefinability of the world-appearance (*anirvācya*) cannot mean that it is not the locus of either being or non-being; for both non-being and Brahman, being qualityless, would satisfy the same conditions, and be entitled to be called indefinable. It cannot be said that Brahman may be regarded as the locus of imaginary being, for the reply is that the same may be the case with world-appearance. Again, since Brahman is qualityless, if being is denied of it, absence of being also cannot be denied; so, if both being and absence of being be denied of Brahman, Brahman itself becomes indefinable. The reply of Madhusūdana is that the denial of both being and non-being in the world-appearance is indefinable or unspeakable only in the sense that such a denial applies to the world appearance only so long as it is there, whereas in the Brahman it is absolute. Whereas the main emphasis of the argument of Vyāsa-tīrtha is on the fact that both being and non-being cannot be denied at the same time, Madhusūdana contends that, since the denial of being and the affirmation of it are not of the same order (the latter being of the *Vyāvahārika* type), there is no contradiction in their being affirmed at the same time. In the same way Madhusūdana contends that the denial of quality in Brahman (*nirviśeṣatva*) should not be regarded as a quality in itself; for the quality that is denied is of imaginary type and hence its denial does not itself constitute a quality. Vyāsa-tīrtha further urges that, following the trend of the argument of the Śāṅkarites, one might as well say that there cannot be any contradiction of the illusory conch-shell-silver by the experiential conch-shell, the two being of two different orders of existence: to this Madhusūdana's reply is that both the illusory and the experiential entities are grasped by the *sākṣi*-consciousness, and this constitutes their sameness and the contradiction of one by the other; there is no direct contradiction of the illusory by the experiential, and therefore the criticism of Vyāsa-tīrtha fails.

Nature of Brahman.

Vyāsa-tīrtha, in describing the nature of illusion, says that, when the subconscious impression of silver is roused, the senses, being associated with specific defects, take the "thisness" of conch-shell as associated with silver. There is, therefore, no production of any imaginary silver such as the Śaṅkarites allege; the silver not being there, later perception directly shows that it was only a false silver that appeared. Inference also is very pertinent here; for whatever is false knowledge refers to non-existent entities simply because they are not existent. Vyāsa-tīrtha further points out that his view of illusion (*anyathā-khyāti*) is different from the Buddhist view of illusion (*a-sat-khyāti*) in this, that in the Buddhist view the appearance "this is silver" is wholly false, whereas in Vyāsa-tīrtha's view the "this" is true, though its association with silver is false.

Vyāsa-tīrtha further points out that, if the illusory silver be regarded as a product of *ajñāna*, then it will be wrong to suppose that it is liable to negation in the past, present and future; for, if it was a product of *ajñāna*, it was existing then and was not liable to negation. It is also wrong to say that the negation of the illusory appearance is in respect of its reality; for, in order that the appearance may be false, the negation ought to deny it as illusory appearance and not as reality, since the denial of its reality would be of a different order and would not render the entity false.

Vyāsa-tīrtha had contended that, since Brahman is the subject of discussion and since there are doubts regarding His nature, a resolution of such doubts necessarily implies the affirmation of some positive character. Moreover, propositions are composed of words, and, even if any of the constituent words is supposed to indicate Brahman in a secondary sense, such secondary meaning is to be associated with a primary meaning; for as a rule secondary meanings can be obtained only through association with a primary meaning, when the primary meaning as such is baffled by the context. In reply to the second objection Madhusūdana says that a word can give secondary meaning directly, and does not necessarily involve a baffling of the primary meaning. As regards the first objection the reply of Madhusūdana is that the undifferentiated

character of Brahman can be known not necessarily through any affirmative character, but through the negation of all opposite concepts. If it is objected that the negation of such opposing concepts would necessarily imply that those concepts are constituents of Brahma-knowledge, the reply of Madhusūdana is that, such negation of opposing concepts being of the very nature of Brahman, it is manifested and intuited directly, without waiting for the manifestation of any particular entity. The function of ordinary propositions involving association of particular meanings is to be interpreted as leading to the manifestation of an undivided and unparticularized whole, beyond the constituents of the proposition which deal with the association of particular meanings.

Vyāsa-tīrtha contends that, if Brahman is regarded as differenceless, then He cannot be regarded as identical with knowledge or with pure bliss, or as the one and eternal, or as the *sākṣi*-consciousness. Brahman cannot be pure consciousness; for consciousness cannot mean the manifestation of objects, since in emancipation there are no objects to be manifested. To this Madhusūdana's reply is that, though in emancipation there are no objects, yet that does not detract from its nature as illuminating. To Vyāsa-tīrtha's suggestion that Brahman cannot be regarded as pure bliss interpreted as agreeable consciousness (*anukūla-vedanatva*) or mere agreeableness (*anukūlatva*), since this would involve the criticism that such agreeableness is due to some extraneous condition, Madhusūdana's reply is that Brahman is regarded as pure bliss conceived as unconditional desirability (*nirupādhikeṣṭarūpatvāt*). Madhusūdana urges that this cannot mean negation of pain; for negation of pain is an entity different from bliss and in order that the definition may have any application it is necessary that the negation of pain should lead to the establishment of bliss. Vyāsa-tīrtha further argues that, if this unconditional desirability cannot itself be conditional, then the blissful nature of Brahman must be due to certain conditions. Moreover, if Brahman's nature as pure bliss be different from its nature as pure knowledge, then both the views are partial; and, if they are identical, it is useless to designate Brahman as both pure knowledge and pure bliss. To this Madhusūdana's reply is that, though knowledge and bliss are identical, yet through imaginary verbal usage they are spoken of as different. He further urges that objectless

pure knowledge is defined as pure bliss¹; pure bliss is nothing but pure perceiver (*dr̥g-anatirekāt*). On this view again there is no difference between bliss and its consciousness. Vyāsa-tīrtha contends that, if Brahman is regarded as non-dual, then that involves the negation of duality. If such a negation is false, then Brahman becomes dual; and, if such a negation is affirmed, then also Brahman becomes dual, for it involves the affirmation of negation. To this Madhusūdana's reply is that the reality of negation is nothing more than the locus in which the negation is affirmed; the negation would then mean nothing else than Brahman, and hence the criticism that the admission of negation would involve duality is invalid.

Regarding the *sākṣi*-consciousness Vyāsa-tīrtha contends that the definition of *sākṣi* as pure being is unacceptable in the technical sense of the word as defined by Pāṇini. To this Madhusūdana's reply is that *sākṣi* may be defined as the pure consciousness reflected either in *avidyā* or a modification of it; and thus even the pure being may, through its reflection, be regarded as the *draṣṭā*. The objection of circular reasoning, on the ground that there is interdependence between the conditions of reflection and the seeing capacity of the seer, is unavailing; for such interdependence is beginningless. The *sākṣi*-consciousness, according to Madhusūdana, is neither pure Brahman nor Brahman as conditioned by *buddhi*, but is the consciousness reflected in *avidyā* or a modification of it; the *sākṣi*-consciousness, though one in all perceivers, yet behaves as identified with each particular perceiver, and thus the experiences of one particular perceiver are perceived by the *sākṣi*-consciousness as identified with that particular perceiver, and so there is no chance of any confusion of the experience of different individuals on the ground that the *sākṣi*-consciousness is itself universal².

Refutation of Brahman as material and instrumental cause.

Vyāsa-tīrtha says that a material cause always undergoes transformation in the production of the effect; but Brahman is supposed to be changeless, and, as such, cannot be the material cause. There are, however, three views: viz., that Brahman and *māyā* are jointly the cause of the world, just as two threads make a string, or that Brahman with *māyā* as its power is the cause, or that Brahman as the support of *māyā* is the cause. The reconciliation is that the Brahman is called changeless so far as it is unassociated with *māyā* either as joint cause or as power or as instrument. To this Vyāsatīrtha says that, if the permanently real Brahman is the material cause of the world, the world also would be expected to be so. If it is said that the characteristics of the material cause do not inhere in the effect, but only a knowledge of it is somehow associated with it, then the world-appearance also cannot be characterized as indefinable (or *anirvācya*) by reason of the fact that it is constituted of *māyā*. Since only Brahman as unassociated with *māyā* can be called changeless, the Brahman associated with *māyā* cannot be regarded as the material cause of the world, if by such material cause the changeless aspect is to be understood. If it is urged that the changes are of the character (*māyā*), then, since such a character is included within or inseparably associated with the characterized, changes of character involve a change in the characterized, and hence the *vivarta* view fails. If the underlying substratum, the Brahman, be regarded as devoid of any real change, then it is unreasonable to suppose that such a substratum, in association with its power or character, will be liable to real change; if it is urged that the material cause may be defined as that which is the locus of an illusion, then it may be pointed out that earth is never regarded as the locus of an illusion, nor can the conch-shell be regarded as the material cause of the shell-silver.

The reply of Madhusūdana is that Brahman remains as the ground which makes the transformations of *māyā* possible. The Brahman has a wider existence than *māyā* and so cannot participate in the changes of *māyā*. Further, the objection that, if the Brahman is real, then the world which is its effect should also be real is not

valid; for only the qualities of the transforming cause (as earth or of gold) are found to pass over to the effect, whereas, Brahman being the ground-cause, we have no analogy which should lead us to expect that it should pass on to the effect.

Vyāsa-tīrtha further says that, just as one speaks of the being of jugs, so one may speak of the non-being of chimerical entities, but that does not presuppose the assertion that chimerical entities have non-being as their material cause. Again, if the world had Brahman for its material cause, then, since Brahman was pure bliss, the world should also be expected to be of the nature of bliss, which it is not. Again, on the *vivarta* view of causation there is no meaning in talking of a material cause. Moreover, if Brahman be the material cause, then the *antaḥkaraṇa* cannot be spoken of as being the material and transforming cause of suffering and other worldly experiences.

Vyāsa-tīrtha, in examining the contention of the Śāṅkarites that Brahman is self-luminous, says that the meaning of the term "self-luminous" (*svaprakāśa*) must first be cleared. If it is meant that Brahman cannot be the object of any mental state, then there cannot be any dissension between the teacher and the taught regarding the nature of Brahman; for discussions can take place only if Brahman be the object of a mental state. If it is urged that Brahman is self-luminous in the sense that, though not an object of cognition, it is always immediately intuited, then it may be pointed out that the definition fails, since in dreamless sleep and in dissolution there is no such immediate intuition of Brahman. It cannot be said that, though in dreamless sleep the Brahman cannot be immediately intuited, yet it has the status or capacity (*yogyatā*) of being so intuited; for in emancipation, there being no characters or qualities, it is impossible that such capacities should thus exist.

Even if such capacity be negatively defined, the negation, being a category of world-appearance, cannot be supposed to exist in Brahman. Moreover; if Brahman can in no way be regarded as the result of cognitive action, then the fact that it shines forth at the culmination of the final knowledge leading to Brahmahood would be inexplicable. Nor can it be argued that pure consciousness is self-luminous, i.e., non-cognizable, because of the very fact that it is pure consciousness, since whatever is not pure consciousness is not self-luminous; for non-cognizability, being a quality, must

exist somewhere, and, if it is absent everywhere else, it must by reduction be present at least in pure consciousness. But it may be urged that, even if pure consciousness be self-luminous, that does not prove the self-luminosity of the self. The obvious reply is that the self is identical with pure consciousness. To this Vyāsa-tirtha's objection is that, since there cannot be any kind of quality in the self, it cannot be argued that self-luminosity exists in it, whether as a positive quality, or as a negation of its negation, or as capacity. For all capacity as such, being outside Brahman, is false, and that which is false cannot be associated with Brahman. If non-cognizability is defined as that which is not a product of the activity of a mental state (*phala-vyāpyatvaṃ*), and if such non-cognizability be regarded as a sufficient description of Brahman, then, since even the perception of a jug or of the illusory silver or of pleasure and pain satisfies the above condition, the description is too wide, and, since the shining of Brahman itself is the product of the activity of the destruction of the last mental state, the definition is too narrow¹. It cannot be said that *phala-vyāpyatva* means the accruing of a speciality produced by the consciousness reflected through a mental state, and that such speciality is the relationing without consciousness on the occasion of the breaking of a veil, and that such a *phala-vyāpyatva* exists in the jug and not in the self. Nor can it be said that *phala-vyāpyatva* means the being of the object of consciousness of the ground manifested through consciousness reflected through a mental state. For the Śāṅkarites do not think that a jug is an object of pure consciousness as reflected through a *vyrtti* or mental state, but hold that it is directly the object of a mental state. It is therefore wrong to suggest that the definition of *phala-vyāpyatva* is such that it applies to jug, etc., and not to Brahman. By Citsukha pure self-shiningness of consciousness is regarded as an objectivity of consciousness, and, if that is so, Brahman must always be an object of consciousness, and the description of it as non-objectivity to consciousness, or non-cognizability, would be impossible. Citsukha, however, says that Brahman is an object of consciousness (*cid-viśaya*), but not an object

¹ *nāpi phalavyāpyatvaṃ drīyatva-bhaṅge ukta-ṛtīyā prātibhāsike rūpyādaḥ vyāvahārike avidyāntaḥkaraṇa-tad-dharma-sukhādaḥ ghaṭādaḥ ca lakṣaṇasyā-tīryāpteh. tatroktarītyaiva brahmaṇo'pi carama-vṛtti-pratibimbīta-cid-rūpa-phala-vyāpyatvenāsambhavāc ca. Nyāyāmṛta, p. 507(b).*

of cognizing activity (*cid-akarmatva*). If, following Citsukha, *avedyatva* (or non-cognizability) be regarded as the status of that which is not the object of a cognitive operation, and if by cognitive operation one expresses that consciousness is manifested through a particular objective form, as in the case of a jug, then, since Brahman also in the final stage is manifested through a corresponding mental state, Brahman also must be admitted to be an object of cognitive operation; otherwise even a jug cannot be regarded as an object of cognitive operation, there being no difference in the case of the apprehension of a jug and that of Brahman. If it is urged that object of cognizability means the accruing of some special changes due to the operation of cognizing, then also Brahman would be as much an object as the jug; for, just as in the case of the cognition of a jug the cognizing activity results in the removal of the veil which was obstructing the manifestation of the jug, so final Brahma-knowledge, which is an intellectual operation, results in the removal of the obstruction to the manifestation of Brahman. The objectivity involved in cognizing cannot be regarded as the accruing of certain results in the object of cognition through the activity involved in cognizing operation; for, the pure consciousness not being an activity, no such accruing of any result due to the activity of the cognizing operation is possible even in objects (as jug, etc.) which are universally admitted to be objects of cognition. If reflection through a mental state be regarded as the cognizing activity, then that applies to Brahman also; for Brahman also is the object of such a reflection through a mental state or idea representing Brahman in the final state.

Citsukha defines self-luminosity as *aparokṣa-vyavahāra-yogyatva*, i.e., capability of being regarded as immediate. A dispute may now arise regarding the meaning of this. If it signifies "that which is produced by immediate knowledge," then virtue and vice, which can be immediately intuited by supernatural knowledge of Yogins and Gods, has also to be regarded as immediate; and, when one infers that he has virtue or vice and finally has an immediate apprehension of that inferential knowledge, or when one has an immediate knowledge of virtue or vice as terms in inductive proposition (e.g., whatever is knowable is definable, such a proposition including virtue and vice as involved under the term "knowable"), one would be justified in saying that virtue and vice are also

immediate, and thus immediacy of apprehension would be too wide for a sufficient description of Brahman. Thus, though virtue and vice are not cognizable in their nature, it is yet possible in the case of Yogins and of God to have immediate apprehension of them, and so also in our case, so far as concerns the direct apprehension of inference of them.

If immediacy signifies "that which may be the object of immediate knowledge," and if the self be regarded as immediate in this sense, then it is to be admitted that the self is an object of immediate cognition, like the jug¹. Nor can it be urged that the immediacy of an object depends upon the immediacy of the knowledge of it; for the immediacy of knowledge also must depend upon the immediacy of the object. Again, Vyāsa-tīrtha contends that immediacy cannot signify that the content is of the form of immediacy (*āparokṣa-ity-ākāra*); for it is admitted to be pure and formless and produced by the non-relational intuition of the Vedāntic instructions.

Vyāsa-tīrtha, in his *Nyāyāmṛta*, tries to prove that Brahman is possessed of qualities, and not devoid of them, as the Śāṅkarites argue; he contends that most of the scriptural texts speak of Brahman as being endowed with qualities. God (Īśvara) is endowed with all good qualities, for He desires to have them and is capable of having them; and He is devoid of all bad qualities, because He does not want them and is capable of divesting Himself of them. It is useless to contend that the mention of Brahman as endowed with qualities refers only to an inferior Brahman; for, Vyāsa-tīrtha urges, the scriptural texts do not speak of any other kind of Brahman than the qualified one. If the Brahman were actually devoid of all qualities, it would be mere vacuity or *sūnya*, a negation; for all substances that exist must have some qualities. Vyāsa-tīrtha further contends that, since Brahman is the creator and protector of the world and the authorizer of the Vedas, He must have a body and organs of action, though that body is not an ordinary material body (*prākṛtāvayavādi-niṣedha-paratvāt*); and it is because His body is spiritual and not material that in spite of the possession of a body He is both infinite and eternal and His abode is also spiritual and eternal².

¹ *vastuna āparokṣyam āparokṣa-jñāna-viśayatvaṃ ced ātmāpi ghaṭādivad vedyah syāt. Nyāyāmṛta*, p. 511 (a).

² *Ibid.* pp. 496-8.

Again, it is also wrong to say that Brahman is both the material cause and the instrumental cause of the world, as the substance-stuff of the world and as the creator or modeller of the world; for the material cause undergoes modifications and changes, whereas the Brahman is unchangeable. Brahman, again, is always the master, and the individual selves or souls are always His servants: so God alone is always free (*nitya-mukta*), whereas individual souls are always related and bound to Him¹. The *guṇas* belong to *prakṛti* or *māyā* and not to the individual souls; and therefore, since the *guṇas* of *prakṛti* are not in the individual souls, there cannot be any question of the bondage of individual souls by them or of liberation from them. Whatever bondage, therefore, there is by which the *guṇas* tie the individual souls is due to ignorance (*avidyā*). The *guṇas*, again, cannot affect God; for they are dependent (*adhīna*) on Him. It is only out of a part of God that all individual souls have come into being, and that part is so far different from God that, though through ignorance the individual souls, which have sprung forth from this part, may be suffering bondage, God Himself remains ever free from all such ignorance and bondage². The *māyā* or *prakṛti* which forms the material cause of the world is a fine dusty stuff or like fine cotton fibres (*sūkṣma-reṇumayī sā ca tantu-vāyasya tantuvat*), and God fashions the world out of this stuff³. This

¹ *muktāṁ api svāmi-bhṛtya-bhāva-sadbhāvena bhakty-ādi-bandha-sadbhāvāt nitya-baddhatvaṁ jīvasya kṛṣṇasya tu nitya-muktatvaṁ eva. Bhāva-vilāsinī* (p. 179) on *Yukti-mallikā*.

² *ekasyaiva mamāṁśasya jīvasyaivaṁ mahāmata bandhasyāvidyayānādi vidyayā ca tathetarah
sva-bhinnāṁśasya jīvākyā ajasyaikasya kevalam
bandhaś ca bandhān mokṣaś ca na svasyety āha sa prabhuḥ.*

Yukti-mallikā, p. 179.

The *Bhāva-vilāsinī* (p. 185) also points out that, though God has His wives and body and His heavenly abode in *Vaikuṇṭha*, yet He has nothing to tie Himself with these; for these are not of *prakṛti*-stuff, and, as He has no trace of the *guṇas* of *prakṛti*, He is absolutely free; only a tie of *prakṛti*-stuff can be a tie or bondage. But *prakṛti* cannot affect Him; for He is her master—*mama guṇā vastūni ca śruti-smṛtiṣu aprakṛtatayā prasiddhāḥ*. It may be noted in this connection that the Madhva system applies the term *māyā* in three distinct senses: (i) as God's will (*harer icchā*); (ii) as the material *prakṛti* (*māyākyā prakṛtir jaḍā*); and (iii) *māyā* or *mahā-māyā* or *avidyā*, as the cause of illusions and mistakes (*bhrama-hetuś ca māyāikā māyeyaṁ trividhā matā*). *Yukti-mallikā*, p. 188. There is another view which supposes *māyā* to be of five kinds; it adds God's power (*śakti*) and influence (*tejas*).

³ This stuff is said to be infinitely more powdery than the atoms of the Naiyāyikas (*tārikābhīmatā-paramānuto'py ananta-guṇita-sūkṣma-reṇumayī*). *Bhāva-vilāsinī*, p. 189. The *Srīmad-bhāgavata*, which is considered by Madhva

prakṛti is eightfold, inasmuch as it has five modifications as the five elements, and three as *manas*, *buddhi* and *ahaṁkāra*. The *māyā*, by the help of which God creates the world, is like the mother of the world and is called, in the theological terminology of the Madhva school, *Lakṣmī*. The creative *māyā*, or the will of God, is also called the *svarūpa-māyā*, because she always abides with the Lord. The *māyā* as *prakṛti*, or as her guiding power (*mayāśrayin*), is outside of God, but completely under His control¹.

God is referred to in the *Gītā* and other sacred texts as possessing a universal all-pervading body, but this body is, as we have already said, a spiritual body, a body of consciousness and bliss (*jñānānandātmako hy asau*). This His universal body transcends the bounds of all the *guṇas*, the *māyā* and their effects. All throughout this universal all-transcending spiritual body of the Lord is full of bliss, consciousness and playful activity². There is no room for pantheism in true philosophy, and therefore Vedic passages which seem to imply the identity of the world and God are to be explained as attributing to God the absolute controlling power³. Again, when it is said that the individual souls are parts of God, it does not mean that they are parts in any spatial sense, or in the sense of any actual division such as may be made of material objects. It simply means that the individual souls are similar to God in certain respects and are at the same time much inferior to Him⁴.

and his followers to be authoritative, speaks of the four wives of Vāsudeva, Saṅkarṣaṇa, Pradyumna and Aniruddha, as *Māyā*, *Jayā*, *Kṛti* and *Śānti*, which are but the four forms of the goddess Śrī, corresponding to the four forms of Hari as *Vāmadeva*, *Saṅkarṣaṇa*, *Pradyumna* and *Aniruddha*. *Yukti-mallikā*, p. 191.

¹ It is curious to note that the *māyā* which produces illusion and which affects only the individual souls, counted in one place referred to above as the third *māyā*, is counted again as the fourth *māyā*, and *prakṛti* (or *jaḍa-māyā* and *māyā-śrī*) as the second and the third *māyās*. *Yukti-mallikā*, p. 192 a, b.

² The *Bhāva-vilāsinī* (p. 198), giving the meaning of the word *śarīra* (which ordinarily means "body," from a root which means "to decay") with reference to God, assigns a fanciful etymological meaning; it says that the first syllable *śa* means bliss, *ra* means "play," and *tra* means "consciousness." In another place Varadarāja speaks of the Lord as being of the nature of the pure bliss of realization and the superintendent of all intelligence: *vidito'si bhavān sāṅśāt puruṣaḥ prakṛteḥ paraḥ kevalānubhāvānandasvarūpas sarva-buddhi-dṛk*. *Yukti-mallikā*, p. 201.

³

ataḥ puruṣa eveti prathamā pañcamī yadā
sadā sarva-nimittatva-mahimā pumsī varnyate.
yadā tu saptaṁ sarvādhāratvaṁ varṇayet tadā
sūktasyaikārthatā caivaṁ satyeva syān na cānyathā. *Ibid.* p. 211.

⁴ *tat-sadṛśatve sati tato nyūnatvaṁ jīvasya aṁśatvaṁ na tu ekadeśatvaṁ*. *Nyāyāmṛta*, p. 606.

It may be pointed out in this connection that as God is all-pervasive, so the individual souls are by nature atomic, though by their possession of the quality of consciousness, which is all-pervasive, they can always feel the touch of any part of their body just as a lamp, which, remaining at one place, may have its rays illuminating all places around it¹.

At the end of *pralaya* God wishes to create, and by His wish disturbs the equilibrium of *prakṛti* and separates its three *guṇas*, and then creates the different categories of *mahat*, *buddhi*, *manas* and the five elements and also their presiding deities; and then He permeates the whole world, including the living and the non-living². In all the different states of existence (e.g., the waking, dream, deep sleep, swoon and liberation) it is God who by His various forms of manifestation controls all individual souls, and by bringing about these states maintains the existence of the world³. The destruction or *pralaya* also of the world is effected by His will⁴. Moreover, all knowledge that arises in all individual souls either for mundane experience or for liberation, and whatever may be the instruments employed for the production of such knowledge, have God as their one common ultimate cause⁵.

Liberation (*mokṣa*).

Bondage is due to attachment to worldly objects, and liberation is produced through the direct realization of God (*aparokṣa-jñānam Viṣṇoḥ*). This is produced in various ways, viz.: Experience of the sorrows of worldly existence, association with good men, renunciation of all desires of enjoyment of pleasures, whether in this world

¹ *Nyāyāmṛta*, p. 612. The view that the atomic soul touches different parts of the body at different successive moments for different touch-experiences is definitely objected to.

² *Padārtha-saṃgraha-vyākhyāna*, pp. 106-8.

³ The five manifestations of God, controlling the five states above mentioned (waking, dream, etc.), are called *Prājña*, *Viśva*, *Taijasa*, *Bhagavān* and *Turiya Bhagavān* respectively.

⁴ There are two kinds of destruction or *pralaya* in this system: (a) the *mahā-pralaya*, in which everything but *prakṛti* is destroyed, only absolute darkness remains, and *prakṛti* stops all her creative work, except the production of time as successive moments; (b) the secondary destruction, called *avāntara pralaya*, which is of two kinds, one in which along with our world the two imaginary worlds are also destroyed, and one in which only the living beings of this world are destroyed. *Ibid.* pp. 117-19.

⁵ *Ibid.* p. 119.

or in some heavenly world, self-control and self-discipline, study, association with a good teacher, and study of the scriptures according to his instructions, realization of the truth of those scriptures, discussions on the proper meaning for strengthening one's convictions, proper respectful attachment to the teacher, respectful attachment to God (*paramātmā-bhakti*), kindness to one's inferiors, love for one's equals, respectful attachment to superiors, cessation from works that are likely to bring pleasure or pain, cessation from doing prohibited actions, complete resignation to God, realization of the five differences (between God and soul, soul and soul, soul and the world, God and the world and between one object of the world and another), realization of the difference between *prakṛti* and *puruṣa*, appreciation of the difference of stages of advancement among the various kinds of men and other higher and lower living beings, and proper worship (*upāsana*). As regards the teachers here referred to, from whom instructions should be taken, two distinct types of them are mentioned: there are some who are permanent teachers (*niyata guru*) and others who are only occasional teachers (*aniyata guru*). The former are those who can understand the nature and needs of their pupils and give such suitable instructions to them as may enable them to realize that particular manifestation of Viṣṇu which they are fit to realize; the occasional teachers are those who merely instruct us concerning God. In another sense all those who are superior to us in knowledge and religious discipline are our teachers. As regards worship, it is said that worship (*upāsana*) is of two kinds: worship as religious and philosophical study, and worship as meditation (*dhyāna*)¹; for there are some who cannot by proper study of the scriptures attain a true and direct realization of the Lord, and there are others who attain it by meditation. Meditation or *dhyāna* means continual thinking of God, leaving all other things aside², and such a meditation on God as the spirit, as the existent, and as the possessor of pure consciousness and bliss is only possible when a thorough conviction has been generated by scriptural studies and rational thinking and discussions, so that all false ideas have been removed and all doubts have been dispelled.

¹ *upāsana ca dvividhā, satataṃ śāstrābhyāsa-rūpā dhyāna-rūpā ca. Madhva-siddhānta-sara*, p. 500.

² *dhyānaṃ ca itara-tiraskāra-pūrvaka-bhagavad-viṣayakākhaṇḍa-smṛtiḥ. Ibid.* p. 502. This *dhyāna* is the same as *nididhyāsana*.

God alone is the cause of all bondage, as well as of all liberation¹. When one directly realizes the nature of God, there arises in him devotion (*bhakti*) to the Lord; for without personal, direct and immediate knowledge of Him there cannot be any devotion. Devotion (*bhakti*) consists of a continual flow of love for the Lord, which cannot be impaired or affected by thousands of obstacles, which is many times greater than love for one's own self or love for what is generally regarded as one's own, and which is preceded by a knowledge of the Lord as the possessor of an infinite number of good and benign qualities². And when such a *bhakti* arises, the Lord is highly pleased (*atyartha-prasāda*), and it is when God is so pleased with us that we can attain salvation.

Though individual souls are self-luminous in themselves, yet through God's will their self-luminous intelligence becomes veiled by ignorance (*avidyā*). When, as a modification of the mind or inner organ (*antaḥkaraṇa*), direct knowledge of God arises, such a modification serves to dispel the ignorance or *avidyā*; for, though *avidyā* is not directly associated with the mind, yet such a mental advancement can affect it, since they are both severally connected with the individual self. Ordinarily the rise of knowledge destroys only the deeds of unappointed fruition, whereas the deeds of appointed fruition (*prārabdha-karma*) remain and cause pleasure and pain, cognition and want of cognition. So ordinarily the realization of God serves to destroy the association of *prakṛti* and the *guṇas* with an individual, as also his *karmas* and subtle body (*liṅga-deha*),

¹ God maintains or keeps in existence all other entities, which are all wholly dependent on Him. He creates and destroys only the non-eternal and eternal-non-eternal entities. Again, with reference to all beings except Lakṣmī, it is He who holds up the veil of positive ignorance (*bhāva-rūpā avidyā*) of *prakṛti*, either as the first *avidyā*, the *guṇas* of *sattva*, *rajas* and *taṃas*, or as the second *avidyā* of desire (*kāma*), or as the third *avidyā* of actions of appointed fruition (*prārabdha-karma*), or as the subtle body, or finally as His own will. It is the last, the power of Hari, which forms the real stuff of all ignorance; the *avidyā* is only an indirect agent (*parameśvara-śaktir eva svarūpāvaraṇā mukhyā, avidyā tu nimitta-mātram*); for, even if *avidyā* is destroyed, there will not arise supreme bliss, unless God so desires it. It is again He who gives knowledge to the conscious entities, happiness to all except those demons who are by nature unfit for attaining it, and sorrow also to all except Lakṣmī, who is by nature without any touch of sorrow. *Tattva-saṃkhyāna-vivaraṇa* and *Tattva-saṃkhyāna-ṭīppaṇa*, pp. 43-7.

² *parameśvara-bhaktir nāma niravadhikānantānavadya-kalyāṇa-guṇatvā-jñānapūrvakah svātmātmiya-samasta-vastubhyaḥ aneka-guṇādhikah antarāya-sahasreṇāpi apratibaddhaḥ nirantara-prema-pravāhaḥ. Nyāya-sudhā* on *Anuvyākhyāna*.

consisting of the senses, five *prāṇas* and *manas*, until the deeds of appointed fruition are exhausted by suffering or enjoyment¹. During *pralaya* the liberated souls enter the womb of God and cannot have any enjoyment; but again after creation they begin to enjoy. The enjoyment of liberated souls is of four kinds: *sālokya*, *sāmīpya*, *sārūpya* and *sāyujya* (*sārṣṭi* being counted as a species of *sāyujya* and not a fifth kind of liberation). *Sāyujya* means the entrance of individual souls into the body of God and their identification of themselves with the enjoyment of God in His own body; *sārṣṭi-mokṣa*, which is a species of *sāyujya-mokṣa*, means the enjoyment of the same powers that God possesses, which can only be done by entering into the body of God and by identifying oneself with the particular powers of God. Only deities or Gods deserve to have this kind of liberation; they can, of course, at their will come out of God as well and remain separate from Him; *sālokya-mokṣa* means residence in heaven and being there with God to experience satisfaction and enjoyment by the continual sight of Him. *Sāmīpya-mokṣa* means continuous residence near God, such as is enjoyed by the sages. *Sārūpya-mokṣa* is enjoyed by God's attendants, who have outward forms similar to that which God possesses². The acceptance of difference amongst the liberated souls in the states of enjoyment and other privileges forms one of the cardinal doctrines of Madhva's system; for, if it is not acknowledged, then the cardinal dualistic doctrine that all individual souls are always different from one another would fail³. It has already been said that liberation can be attained only by *bhakti*, involving continuous pure love (*sneha*)⁴. Only gods and superior men deserve it, whereas ordinary men deserve only to undergo rebirth, and the lowest men and the demons always suffer in hell. The Gods cannot go to hell, nor can the demons ever attain liberation, and ordinary persons neither obtain liberation nor go to hell⁵.

¹ *Bhāgavata-tātparya*, I. 13, where a reference is made also to *Brahma-tarka*.

² Jaya and Vijaya, the two porters of God, are said to enjoy *Sārūpya-mokṣa*.

³ *muktānām ca na hīyante tāratamyam ca sarvadā. Mahābhārata-tātparya-nirṇaya*, p. 4. See also *Nyāyāmṛta*.

⁴ *acchidra-sevā* (faultless attendance) and *niṣkāmatva* (desirelessness) are also mentioned as defining the characteristic *bhakti*. Gifts, pilgrimage, *tapas*, etc., also are regarded as secondary accessories of attendance on, or *sevā* of, God. *Ibid.* p. 5.

⁵ *Ibid.* p. 5.

As the imperative duties of all men upwards of eight years and up to eighty years of age, Madhva most strongly urges the fasting on the *Ekādaśī* (eleventh day of the moon), marking the forehead with the black vertical line characteristic of his followers even to the present day. One should constantly worship Lord Kṛṣṇa with great devotion (*bhakti*) and pray to Him to be saved from the sorrows of the world. One should think of the miseries of hell and try to keep oneself away from sins, and should always sing the name of Hari, the Lord, and make over to Him all the deeds that one performs, having no desire of fruits for them¹.

¹ *Kṛṣṇāmṛta-mahārṇava*.

CHAPTER XXXI

THE PHILOSOPHY OF VALLABHA

Vallabha's Interpretation of the *Brahma-sūtra*.

MOST systems of Vedānta are based upon an inquiry regarding the ultimate purport of the instruction of the text of the Upaniṣads which form the final part of the Vedas. The science of *mīmāṃsā* is devoted to the enquiry into the nature of Vedic texts, on the presumption that all Vedic texts have to be interpreted as enjoining people to perform certain courses of action or to refrain from doing others; it also presumes that obedience to these injunctions produces *dharma* and disobedience *adharma*. Even the study of the Vedas has to be done in obedience to the injunction that Vedas must be studied, or that the teacher should instruct in the Vedas or that one should accept a teacher for initiating him to the holy thread who will teach him the Vedas in detail. All interpreters of *Mīmāṃsā* and Vedānta agree on the point that the study of the Vedas implies the understanding of the meaning by the student, though there are divergences of opinion as to the exact nature of injunction and the exact manner in which such an implication follows. If the *Brahmacārin* has to study the Vedas and understand their meaning from the instruction of the teacher at his house, it may generally be argued that there is no scope for a further discussion regarding the texts of the Upaniṣads; and if this is admitted, the whole of the *Brahma-sūtra*, whose purpose is to enter into such a discussion, becomes meaningless. It may be argued that the Upaniṣad texts are pregnant with mystic lore which cannot be unravelled by a comprehension of the textual meaning of words. But, if this mystic lore cannot be unravelled by the textual meaning of the word, it is not reasonable to suppose that one can comprehend the deep and mystic truths which they profess to instruct by mere intellectual discussions. The Upaniṣads themselves say that one can comprehend the true meaning of the Upaniṣads through *tapas* and the grace of God¹.

¹ *a-laukiko hi vedārtho na yuktyā pratipadyate tapasā
veda-yuktyā tu prasādāt paramātmanah.*

Vallabha's *Bhāṣya* on *Brahma-sūtra*
(Chowkhamba edition, p. 13).

To this Vallabha's reply is that, since there are diverse kinds of *śāstras* offering diverse kinds of instructions, and since Vedic texts are themselves so complicated that it is not easy to understand their proper emphasis, an ordinary person may have legitimate doubt as to their proper meaning, unless there is a *śāstra* which itself discusses these difficulties and attempts to solve them by textual comparisons and contrasts; it cannot be denied that there is a real necessity for such a discussion as was undertaken by Vyāsa himself in the *Brahma-sūtra*¹.

According to Rāmānuja the *Brahma-sūtra* is a continuation of the *Mīmāṃsā-sūtra*; though the two works deal with different subjects, they have the same continuity of purpose. The study of the *Brahma-sūtra* must therefore be preceded by the study of the *Mīmāṃsā-sūtra*. According to Bhāskara the application of the *Mīmāṃsā-sūtra* is universal; all double-born people must study the *Mīmāṃsā* and the nature of *dharma* for their daily duties. The knowledge of Brahman is only for some; a discussion regarding the nature of Brahman can therefore be only for those who seek emancipation in the fourth stage of their lives. Even those who seek emancipation must perform the daily works of *dharma*; the nature of such *dharma* can only be known by a study of the *Mīmāṃsā*. The enquiry regarding Brahman must therefore be preceded by a study of the *Mīmāṃsā*. It is also said by some that it is by a long course of meditation in the manner prescribed by the Upaniṣads that the Brahman can be known. A knowledge of such meditation can only be attained by a knowledge of the due nature of sacrifices. It is said also in the *smṛtis* that it is by sacrifices that the holy body of Brahman can be built (*mahā-yajñaiś ca yajñaiś ca brāhmīyaṃ kriyate tanuḥ*)²; so it is when the forty-eight *saṃskāras* are performed that one becomes fit for the study or meditation on the nature of the Brahman. It is also said in the *smṛtis* that it is only after discharging the three debts—study, marriage, and performance of sacrifices—that one has the right to fix his mind on Brahman for emancipation. According to most

¹ *sandeha-vāraṇam śāstram buddhi-doṣāt tad-udbhavaḥ
viruddha-śāstra-sambhedād aṅgaiś cāśakya-niścayaḥ
tasmāt sūtrānusāreṇa kartavyaḥ sarva-nirṇayaḥ
anyathā bhraśyate svārthān madhyamaś ca tathāvidhaḥ.*

Ibid. p. 20.

² Manu, II. 28.

people the sacrificial duties are useful for the knowledge of Brahman; so it may be held that enquiry about the nature of Brahman must follow an enquiry about the nature of *dharma*¹.

But, even if the theory of the joint-performance of sacrifice and meditation on Brahman be admitted, it does not follow that an enquiry into the nature of Brahman must follow an enquiry about the nature of *dharma*. It can only mean that the nature of the knowledge of Brahman may be held to be associated with the nature of *dharma*, as it is properly known from the *Mīmāṃsā-śāstra*. On such a supposition the knowledge of the nature of the self is to be known from the study of the *Brahma-sūtra*; but since the knowledge of the self is essential even for the performance of sacrificial actions, it may well be argued that the enquiry into the nature of *dharma* must be preceded by an enquiry about the nature of the self from the *Brahma-sūtra*². Nor can it be said that from such texts as require a person to be self-controlled (*śānto dānto*, etc.) it may be argued that enquiry into the nature of *dharma* must precede that about Brahman: the requirement of self-control does not necessarily mean that enquiry about the nature of *dharma* should be given precedence, for a man may be self-controlled even without studying the *Mīmāṃsā*.

Nor can it be said, as Śaṅkara does, that enquiry into the nature of Brahman must be preceded by a disinclination from earthly and heavenly joys, by mind-control, self-control, etc. On this point Bhāskara argues against the Vallabha views, and his reason for their rejection is that such attainments are extremely rare; even great sages like Durvāsa and others failed to attain them. Even without self-knowledge one may feel disinclined to things through sorrows, and one may exercise mind-control and self-control even for earthly ends. There is moreover no logical relation between the attainment of such qualities and enquiry about the nature of Brahman. Nor can it be argued that, if enquiry into the nature of Brahman is preceded by an enquiry into the *Mīmāṃsā*, we can attain all these qualities. Moreover, an enquiry about the nature of Brahman can only come through a conviction of the importance of

¹ Puruṣottama's commentary on Vallabhācārya's *Anubhāṣya*, pp. 25-6.

² *pūrvam vedānta-ricāreṇa tad avagantavyam nānā-balaḥ ātma-svarūpe vipratipanna-vaidikānāṃ veda-vākyaḥ eva tan nirāsaśyāvaśyakatvāt jñāte tayoh sva-rūpe kurmaṇi sukhena pravṛtti-darśanam. Ibid. p. 27.*

the knowledge alone, and for the comprehension of such importance the enquiry about Brahman is necessary: there is thus an argument in a circle. If it is held that, when knowledge of the Vedāntic texts is properly acquired by listening to instruction on the Vedas, one may then turn to an enquiry into the nature of Brahman, that also is objectionable; for, if the meaning of the Vedāntic texts has been properly comprehended, there is no further need for an enquiry about the nature of Brahman. If it is held that the knowledge of Brahman can come only through the scriptural testimony of such texts as "that art thou" or "thou art the truth," that too is objectionable: for no realization of the nature of Brahman can come by scriptural testimony to an ignorant person who may interpret it as referring to an identity of the self and the body. If by the scriptural texts it is possible to have a direct realization of Brahman, it is unnecessary to enjoin the duty of reflection and mediation. It is therefore wrong to suppose that an enquiry into the nature of Brahman must be preceded either by *dharmavicāra* or by the attainment of such extremely rare qualities as have been referred to by Śaṅkara. Again, it is said in the scriptures that those who have realized the true meaning of the Vedānta should renounce the world; so renunciation must take place after the Vedāntic texts have been well comprehended and not before. Again, without an enquiry into the nature of Brahman one cannot know that Brahman is the highest object of attainment; without a knowledge of the latter one would not have the desired and other attainments of the mind and so be led to a discussion about Brahman. Again, if a person with the desired attainments listens to the Vedāntic texts, he would immediately attain emancipation and there would be no one to instruct him.

The enquiry about the nature of Brahman does not require any preceding condition; anyone of the double-born caste is entitled to do it. The Mīmāṃsakas say that all the Vedāntic texts insisting upon the knowledge of Brahman should be interpreted as injunctions by whose performance *dharma* is produced. But this interpretation is wrong; though any kind of prescribed meditation (*upāsana*) may produce *dharma*, Brahman itself is not of the nature of *dharma*. All *dharma*s are of the nature of actions (*dharmāśya ca kriyā-rūpatvāt*); but Brahman cannot be produced, and is therefore not of the nature of action. The seeming injunction for meditation

on Brahman is intended to show the greatness of Brahma-knowledge; such meditations are merely mental operations akin to knowledge and are not any kind of action. This Brahma-knowledge is also helpful for the proper discharge of one's duties; for this reason people like Janaka had it and so were able to discharge their duties in the proper manner. It is wrong to suppose that those who do not have the illusory notion of the self as the body are incapable of performing *karma*; for the *Gītā* says that the true philosopher knows that he does not work and yet is always associated with work; he abnegates all his *karmas* in Brahman and acts without any attachment, just as a lotus leaf never gets wet by water. The conclusion is therefore that only he who knows Brahman can by his work produce the desired results; so those who are engaged in discussing the nature of *dharma* should also discuss the nature of Brahman. The man who knows Brahman and works has no desire for the fruits of his *karma*, for he has resigned all his works to Brahman. It is therefore wrong to say that only those who are desirous of the fruits of *karma* are eligible for their performance; the highest and the most desired end of *karma* is the abnegation of its fruits¹. It is the intention of Vallabha that both the *Pūrva-mīmāṃsā* and the *Uttara-mīmāṃsā* (or the *Brahma-sūtra*) are but two different ways of propounding the nature of Brahman; the two together form one science. This in a way is the view of all the Vedāntic interpreters except Śaṅkara, though they differ in certain details of mode of approach². Thus according to Rāmānuja the two *Mīmāṃsās* form one science and the performance of sacrifices can be done conjointly with continual remembering of Brahman, which (with him) is devotion, meditation and realization of Brahman. According to Bhāskara, though the subject of the *Pūrva-mīmāṃsā* is different from that of the *Uttara-mīmāṃsā*, yet they have one end in view and form one science, and the ultimate purport of them both is the realization of the nature of Brahman. According to Bhikṣu the purpose of the *Brahma-sūtra* is to reconcile the apparently contradictory portions of the Vedāntic texts which have

¹ *phala-kāmādy-anupayogāt anenaiva tat-samarpaṇāt nityatvād apy arthajñānasya na phala-preṣur adhikārī*. Puruṣottama's commentary on Vallabhācārya's *Anubhāṣya*, p. 43.

² *prakāra-bhedenāpi kāṇḍa-dvayaśāpi brahma-pratipādatayaikavākyatva-samarthanam mīmāṃsā-dvayaśaika-śāstrasya sūcanena vṛttikāra-virodhato'pi bodhitāḥ*. *Ibid.* p. 46.

not been taken by *Pūrva-mīmāṃsā*. The purpose of the *Brahma-sūtra* is the same as that of the *Pūrva-mīmāṃsā*, because enquiry into the nature of the Brahman is also due to the injunction that Brahman should be known, and the highest *dharma* is produced thereby. The *Uttara-mīmāṃsā* is a supplement of the *Pūrva-mīmāṃsā*. According to Madhva it is those who have devotion who are eligible for enquiry into the nature of Brahman.

Vallabha combines the second and the third *sūtra* of *Adhyāya* 1, *Pāda* 1, of the *Brahma-sūtra* and reads them as *janmādyasya yataḥ, śāstrayonitvāt*. The commentator says that this is the proper order, because all topics (*adhikaraṇas*) show the objections, conclusions and the reasons; the reasons would be missing if the third *sūtra* (*śāstrayonitvāt*) were not included in the second, forming one *adhikaraṇa*. Brahman is the cause of the appearance and disappearance of the world, and this can be known only on the evidence of the scriptures. Brahman is thus the final and the ultimate agent; but, though production and maintenance, derangement and destruction are all possible through the agency of Brahman, yet they are not associated with Him as His qualities. The *sūtra* may also be supposed to mean that that is Brahman from which the first (i.e., *ākāśa*) has been produced¹.

The view of Śāṅkara that Brahman is the producer of the Vedas and that by virtue of this He must be regarded as omniscient is rejected to-day by Puruṣottama. To say the Vedas had been produced by God by His deliberate desire would be to accept the views of the Nyāya and Vaiśeṣikas; the eternity of the Vedas must then be given up. If the Vedas had come out of Brahman like the breath of a man, then, since all breathing is involuntary, the production of the Vedas would not show the omniscience of God (*niḥśvā-sātmaka-vedopādānatvena abuddhi-pūrvaka-niḥśvāsoṣopādāna-puru-ṣaḍrṣṭānta-sanāthena pratisādhanaena apāstam*)². Moreover, if Brahman had produced the Vedas in the same order in which they existed in the previous *kalpa*, He must in doing so have submitted Himself to some necessity or law, and therefore was not independent³. Again, the view of Śāṅkara that the Brahman associated

³ *tādṛśānupūrvā-racanayā asvātantrye rājājñānuvādaka-rāja-dūtavadānu-pūrvā-racanā-mātreṇeśvara-sārvajñāsiddhyā vyākhyeya-grantha-virodhāc ca. Ibid.* p. 64.

with *ajñāna* is to be regarded as the omniscient *Īśvara* can be accepted on his authority alone.

It is no doubt true that the nature of Brahman is shown principally in the Upaniṣads, and from that point of view the word *śāstra-yoni*, "he who is known by the Upaniṣads," may well be applied to Brahman; yet there may be a legitimate objection that other parts of the Vedas have no relevant connection with Brahman. The reply is that it is by actions in accordance with other parts of the Vedas that the mind may be purified, and thus God may be induced to exercise His grace for a revelation of His nature. So in a remote manner other parts of the Vedas may be connected with the Vedas. So the knowledge of the Vedānta helps the due performance of the scriptural injunctions of other parts of the Vedas. The *karma-kāṇḍa* and the *jñāna-kāṇḍa* are virtually complementary to each other and both have a utility for self-knowledge, though the importance of the Upaniṣads must be superior.

We know already that Rāmānuja repudiated the idea of inferring the existence of God as omniscient and omnipotent from the production of the world, and established the thesis that God cannot be known through any means of proof, such as perception, inference, and the like, but only through the testimony of the scriptural texts.

The tendency of the Nyāya system has been to prove the existence of God by inference; thus Udayana gives nine arguments in favour of the existence of God. The first of these is that the word, being of the nature of effect, must have some cause which has produced it (*kāryānumāna*). The second is that there must be some one who in the beginning of the creation set the atoms in motion for the formation of molecules (*āyojanānumāna*). The third is that the earth could not have remained hanging in space if it were not held by God (*dṛṭyanumāna*). The fourth is that the destruction of the world also requires an agent and that must be God (*vināśānumāna*). The fifth is that meanings ascribed to words must have been due to the will of God (*padānumāna*). The sixth is that merit and demerit, as can be known from the prescription of the Vedas, must presume an original acquaintance of the person who composed the Vedas (*pratyanumāna*). The seventh is that the scriptures testify to the existence of God. The eighth (*vākya-numāna*) is the same as the seventh. The ninth is as follows: the accretion of the

mass of atoms depends upon their number, as they are partless; the numerical conception is dependent upon relative mental comparison on the part of the perceiver; at the time of creation there must have been some one by whose numerical conception the accretion of mass is possible. This is the ninth *anumāna* (*samkhyā-numāna*). Though God is regarded as the cause of the world, yet He need not have a body; for cause as producer does not necessarily involve the possession of a body; there are others, however, who think that God produces special bodies, the *avatāra* of Rāma, Kṛṣṇa, etc., by which He acts in special ways.

Vijñāna-bhikṣu, however, thinks that the Sāṃkhya categories of *buddhi*, etc., being products, presume the existence of their previous causes, about which there must be some intuitive knowledge, and whose purpose is served by it; such a person is Īśvara. The procedure consists in inferring first an original cause (the *prakṛti*) of the categories, and God is He who has direct knowledge of the *prakṛti* by virtue of which He modifies it to produce the categories, and thus employs it for His own purpose.

There are some who hold that even in the Upaniṣadic texts there are instances of inferring the nature of Brahman, and though Bādarāyaṇa does not indulge in any inferences himself, he deals with such texts as form their basis. The point of view of the syllogists has been that the inferences are valid inasmuch as they are in consonance with the Upaniṣad texts. But Vallabha agrees with Rāmānuja and Bhāskara that no inference is possible about the existence of God, and that His nature can only be known through the testimony of the Upaniṣadic texts¹.

The nature of Brahman.

Brahman is both the material and instrumental cause of the world. There is no diversity of opinion regarding the Brahman as the instrumental (*nimitta*) cause of the world, but there is difference of opinion whether Brahman is its creator or whether He is its material cause, since the Vedānta does not admit the relation of *samavāya*, the view that Brahman is the inherent (*samavāyi*) cause of the world. The objection against Brahman being the *samavāyi*

¹ The commentator Puruṣottama offers a criticism of the theistic arguments after the manner of Rāmānuja. Commentary on *Anubhāṣya*, pp. 74-8.

kāraṇa is further enhanced by the supposition that, if He were so He must be liable to change (*samavāyitve vikṛtatvasyāpatteh*). Vallabha holds that the *sūtra* “*tat tu samanvayāt*” establishes the view that Brahman is the inherent cause (*samavāyikāraṇa*), because it exists everywhere in His tripartite nature, as being, thought and bliss. The world as such (the *prapañca*) consists of names, forms and actions, and Brahman is the cause of them all, as He exists everywhere in His tripartite forms. The Sāṃkhyaists hold that it is the *sattva*, *rajas* and *tamas* which pervade all things, and all things manifest these qualities; a cause must be of the nature of the effects, since all effects are of the nature of *sattva*, *rajas* and *tamas*. So the reply is that there is a more serious objection, because the *prakṛti* (consisting of *sattva*, *rajas* and *tamas*) is itself a part of Brahman (*prakṛter api svamate tadaṃśatvāt*)². But yet the Sāṃkhya method of approach cannot be accepted. The pleasure of *prakṛti* is of the nature of ignorance, and is limited by time and space; things are pleasant to some and unpleasant to others; they are pleasant at one time and not pleasant at another; they are pleasant in some places and unpleasant in other places. But the bliss of Brahman is unlimited by conditions; the relation of bliss and the self as associated with knowledge is thus different from the pleasure of *prakṛti* (*ātmānandajñānena prakṛtikapriyatvātau bādhadarśanāt*)³. The Brahman therefore pervades the world in His own true nature as knowledge and bliss. It is by His will that He manifests Himself as many and also manifests His three characters—thought, being and bliss—in different proportions in the material world of *antaryāmins*. This pervasion of Brahman as many and all is to be distinguished from the Śāṅkarite exposition of it. According to Śāṅkara and his followers the phenomenal world of objects has the Brahman as its basis of reality; the concrete appearances are only impositions on this unchanging reality. According to this view the concrete appearances cannot be regarded as the effects of Brahman, or, in other words, Brahman cannot be regarded as the *upādāna* or the material cause of the stuff of the concrete objects. We know that among the Śāṅkarites also there are diverse opinions regarding the material cause of the world. Thus the author of the *Padārtha-nirṇaya* thinks that Brahman and *māyā* are jointly the

¹ Vallabha's *Anubhāṣya*, p. 85.

² Puruṣottama's commentary, p. 86.

cause of the world, Brahman being the unchanging cause and *māyā* being the transforming cause. Sarvajñātmamuni, the author of the *Samkṣepa-śāriraka*, thinks that Brahman is the material cause through the instrumentality of *māyā*. Vācaspati Miśra thinks that the *māyā* resting in *jīva* as associated with Brahman jointly produces the world; *māyā* here is regarded as the accessory cause (*sahakāri*). The author of the *Siddhānta-muktāvalī* thinks that the *māyā-śakti* is the real material cause and not the Brahman; Brahman is beyond cause and effect¹.

Vallabha, however, disagrees with this view for the reason that according to this the causality of Brahman is only indirect, and as regards the appearances which are illusory impositions according to Śaṅkara no cause is really ascribed; he therefore holds that Brahman by His own will has manifested Himself with preponderance of the elements of being, consciousness, and bliss in His three forms as matter, soul and the Brahman. Brahman is therefore regarded as the *samavāyikāraṇa* of the world².

Bhāskara also holds that Brahman is at once one with the world and different from it, just as the sea is in one sense one with the waves and in another sense different from them. The suggestion that a thing cannot be its opposite is meaningless, because it is so experienced. All things as objects may be regarded as one, but this does not preclude their specific characters and existence; in reality there is no opposition or contradiction, like heat and cold or as between fire and sparks, between Brahman and the world, for the world has sprung out of Him, is maintained in Him and is merged in Him. In the case of ordinary contradiction this is not the case; when the jug is produced out of the earth, though the earth and the jug may seem to be different, yet the jug has no existence without the earth—the former is being maintained by the latter. So, as effect, the world is many; as cause, it is one with Brahman³.

Vallabha's point of view is very close to that of Bhāskara, though not identical; he holds that it is the same Brahman who is present in all His fullness in all objects of the world and in the selves. He only manifested some qualities in their preponderating

¹ See *Siddhāntaleśa* (ed. Lazaras, 1890), pp. 12-13.

² *anāropitānāgantuka-rūpeṇa anuvṛttir eva samavāya iti idam eva ca tādātmīyam*. Puruṣottama's commentary on *Amubhāṣya*, p. 90.

³ *kāryarūpeṇa nānātvam, abhedaḥ kāraṇātmanā hemātmanā yathā'bhedah kuṇḍalādyātmanā bhedaḥ*. Bhāskara-bhāṣya, p. 18.

manner in the different forms; multiplicity therefore does not involve any change. It is for this reason that he prefers the term *samavāyikāraṇa* to *upādānakāraṇa*; according to him the concept of *samavāyikāraṇa* consists in universal and unconditional pervasion. The concept of *upādāna* involves a concept of change, though the effects caused by the change are maintained by the *upādāna* (or the material cause) and though it ultimately merges into it¹. So far as the Brahman may be regarded as being one with all the multiplicity, Vallabha is in agreement with Bhāskara.

Vallabha again denies the relation of *samavāya*, like other Vedāntic thinkers, though he regards Brahman as the *samavāyikāraṇa* of the world. His refutation of *samavāya* follows the same line as that of the other Vedāntic interpreters, Śaṅkara and Rāmānuja, and need not be repeated here. *Samavāya*, according to Vallabha, is not a relation of inherence such as is admitted by the Nyāya writers; with him it means identity (*tādātmya*). According to the Nyāyīyikas *samavāya* is the relation of inherence which exists between cause and effect, between qualities and substance, between universals and substance; but Vallabha says that there is no separate relation of inherence here to combine these pairs; it is the substance itself that appears in action, qualities and as cause and effect. It is thus merely a manifestation of identity in varying forms that gives us the notion of diversity in contraries; in reality there is no difference between the varying forms which are supposed to be associated together by a relation of inherence².

Puruṣottama, in his *Prasthāna-ratnākara*, says that *māyā* is a power of Brahman, and is thus identical with Him (*māyāyā api bhagavac-chaktitvena śaktimad-abhinnatvāt*)³; *māyā* and *avidyā* are the same. It is by this *māyā* that God manifests Himself as many. This manifestation is neither an error nor a confusion; it is a real manifestation of God in diverse forms without implying the notion of change or transformation. The world is thus real, being a real manifestation of God. Brahman Himself, being of the nature of

³ *Prasthāna-ratnākara*, p. 159.

sat, *cit* and *ānanda*, can manifest Himself in His partial aspects in the world without the help of any instrument. It is possible to conceive Brahman in His aspects or characters as knowledge, bliss, activity, time, will, *māya*, and *prakṛti*. The *kāla* represents the *kriyā-śakti* or power of action. The determination of the creation or dissolution through time (*kāla*) means the limitation of His power of action; determined by this power of action His other parts act consonantly with it. By His will He conceives His selves as different from Him and through different forms thus conceived He manifests Himself; in this way the diverse characters of Brahman manifesting Himself in diverse forms manifest Himself also as differing in diverse ways. Thus, though He is identical with knowledge and bliss, He appears as the possessor of these. The power of God consists in manifesting His nature as pure being, as action and as producing confusion in His nature as pure intelligence. This confusion, manifesting itself as experiential ignorance (which shows itself as egotism), is a part of the *māyā* which creates the world, and which is instrument of God as pure bliss in His manifestation as the world. This *māyā* thus appears as a secondary cause beyond the original cause, and may sometimes modify it and thereby act as a cause of God's will. It must, however, be understood that *māyā* thus conceived cannot be regarded as the original cause; it serves in the first instance to give full play to the original desire of God to become many; in the second place it serves to create the diversity of the grades of existence as superior and inferior. It is in relation to such manifestation of God's knowledge and action that God may be regarded as the possessor of knowledge and action. The aspect of *māyā* as creating confusion is regarded as *avidyā*. This confused apperception is also of the nature of understanding such as we possess it; through this confused understanding there comes a desire for association with the nature of bliss conceived as having a separate existence and through it come the various efforts constituting the life in the living. It is by virtue of this living that the individual is called *jīva*. The nature as being when posited or a product of the action appears as inanimate objects, and is later on associated again with action and goes to manifest itself as the bodies of the living. So from His twofold will there spring forth from His nature as pure being the material *prāṇas*, which serve as elements of bondage for the *jīvas* and are but manifestations of His nature as

being: there also spring forth from His nature as pure intelligence the *jīvas* which are the subject of bondage; and there spring forth like sparks from His nature as pure bliss the *antaryāmins* which control the *jīvas*¹. So among the *jīvas* who are bound there may be some with whom God may be pleased and to whom He may grant the complete power of knowledge; the confusing *māyā* leaves its hold upon such persons; they thus remain in a free state in their nature as pure intelligence, but they have not the power to control the affairs of the Universe.

Brahman may be described in another way from the essential point of view (*svarūpa*) and the causal point of view (*kāraṇa*). From the essential point of view God may be viewed in three aspects, as action, knowledge, and knowledge and action. The causes prescribed in the sacrificial sphere of the Vedas represent His nature in the second aspect. The third aspect is represented in the course of *bhakti* in which God is represented as the possessor of knowledge, action and bliss. In the aspect as cause we have the concept of the *antaryāmins*, which, though they are in reality of the essential nature of Brahman, are regarded as helping the *jīvas* in their works by presiding over them²; the *antaryāmins* are thus as infinite in number as the *jīvas*. But apart from these *antaryāmins*, God is also regarded as one *antaryāmin* and has been so described in the *Antaryāmi-brahman*.

The Categories.

Time is also regarded as a form of God. Activity and nature (*karma-svabhāvam*) are involved in the concept of time or *kāla*. Time in its inner essence consists of being, intelligence, and bliss, though in its phenomenal appearance it is manifest only with a slight tinge of being³. It is supra-sensible and can be inferred only from the nature of effects (*kāryānumeya*). It may also be defined

¹ *evaṃ ca ubhābhyām icchābhyām sac-cid-ānandarūpebhyo yathā-yatham prānādyā jaḍās cid-amśa-jīva-bandhana-parikara-bhūtāḥ sadamśāḥ jīvās cidamśā bandhanīyā ānandamśās tan-niyāmakā antar-yāmināḥ ca viṣṭhulinga-nyāyena vyuccaranti.* Commentary on *Amubhāṣya*, pp. 161-2.

² *antaryāmināṃ sva-rūpa-bhūtatve'pi jīvena saha kārye praveśāt tad-bhedānām ānantye'pi kārāṇi-bhūta-vakṣyamāṇa-tattva-śarīre praviśya tat-sahāyā-karaṇāt kāraṇa-koṭāu eva niveśo na tu sva-rūpa-koṭāu.* Ibid. pp. 164-5.

³ *etasyaiva rūpāntaram kāla-karma-svabhāvāḥ kālasyaṃśa-bhūtau karma-svabhāvau tatra antaḥ-sac-ci-dānando vyavahāre īśat-sattvāmśena prakāṣaḥ kāla iti kālasya svarūpa-lakṣaṇaṃ.* Ibid. p. 165.

as eternally pervasive and the cause and support of all things. Time is the first cause that disturbs the equilibrium of the *guṇas*. The sun, the moon, etc., are its *ādhibhautika* forms, the atoms are its *ādhyatmika* form, and God is its *ādhidāivika* form. The time that the sun takes in passing an atom is the time-atom; being thus too small it cannot be any further divided. It is only by the conglomeration of the smallest time-units that long spans of time are produced; for time is not one whole of an all-pervasive character of which the smaller units of time are parts.

Karma or action of all descriptions is regarded as universal; it only manifests itself in diverse forms and specific conditions as specific actions of this or that individual. Since it is this universal *karma* that manifests itself as different actions of diverse men, it is unnecessary to admit *adṛṣṭa* as a separate category belonging to self, which remains after the destruction of a *karma* and gives its fruit after a remote time; it is also unnecessary to admit *dharma* and *adharma* as important categories; for they are all included in the concept of this universal *karma*, which manifests itself in diverse forms under diverse conditions. The application of the terms *dharma* and *adharma* is thus only the method of logical interest; it thus explains how the specific can produce *svarga* without the intermediary of *adṛṣṭa*, or how the *karma* of one person (*putreṣṭi*, "sacrifice") can produce fruit in another, i.e., the son. How a *karma* should manifest itself in its fruits or with reference to the performer and other persons is determined by the conditions and as explained in the scriptures; the production of a fruit in specific forms in specific centres does not mean its destruction but its disappearance¹.

Svabhāva ("nature") is admitted as a separate category. It also is identified with God; its function consists in the inducement of God's will. It is therefore defined as that which produces change (*parināma-hetutvaṃ tal-lakṣaṇam*); it is universal and reveals itself by itself before all other things. There may, however, be subtle changes which are not at first noticeable; but, when they become manifest, they presume the function of *svabhāva*, without which they could not have come about. It is from this that the twenty-

¹ *tal-lakṣaṇam ca vidhi-niṣedha-prakāreṇa laukika-kriyābhīḥ pradeśato'-bhīvyāñjana-yogyā vyāpikā kriyati... etenaiv-ādṛṣṭasyāpyātma-guṇatvaṃ nirākṛtaṃ veditavyam. evaṃcāpūrv-ādṛṣṭadharmaḍharmāḍipadairapidamevocyate. ataḥ sādharāṇye'pi phala-vyavasthōpatīter na karma-nānātvamity api. dāna-hiṃsādaṁ tu dharmāḍharmāḍi-prayogo' bhīvyāñjakatvopādhiṇā bhāktāḥ. Ibid. pp. 168-9.*

eight categories have evolved: they are called *tattva*, because they are of the nature of "that," i.e., God; all *tattvas* are thus the unfolding of God. The causality involved in the manifestation of *svabhāva* is a specific causality following a definite cause, and is giving rise to the evolutionary series of the *tattvas*; in this sense it is different from the causality of God's will, and is only a cause in the general manner. Of these categories *sattva* may be counted first. *Sattva* is that which, being of the nature of pleasure and luminosity of knowledge and non-obstructive to the manifestation of pleasure, behaves as the cause of attachment to pleasure and knowledge in individuals¹. *Rajas* is that which, being of the nature of attachment, produces clinging or desire for actions in individuals. *Tamas* is that which produces in individuals a tendency to errors, laziness, sleep, etc. There is a difference between the Sāṃkhya conception of these *guṇas* and Vallabha's characterization of them (which is supposed to follow the *Pañcarātra*, *Gītā* and *Bhāgavata*). Thus, according to the Sāṃkhya, the *guṇas* operate by themselves; but this is untenable, as it would lead to the theory of natural necessity and atheism. Nor can *rajas* be defined as being of the nature of sorrow; for the authoritative scriptures speak of its being of the nature of attachment. When these qualities are conceived as being produced from God, they are regarded as being of the nature of *māyā* as the power of intelligence and bliss of God². These (*sattva*, *rajas* and *tamas*) should be regarded as identical with *māyā* and products of *māyā*. Nor are these *guṇas* for the sake of others (*parārtha*), as is conceived by the Sāṃkhya; nor are they inextricably mixed up with another, but their co-operation is only for building the *puruṣa*. God thus manifests Himself as the form of the *māyā*, just as cotton spreads itself as threads. God, as unqualified, produces all His qualities by Himself; in His nature as pure being He produces *sattva*, in His nature as bliss He produces *tamas*, in His nature as intelligence He produces *rajas*³.

Puruṣa or *ātman* may be defined from three points of view: it may be defined as beginningless, qualityless, the controller of

¹ *sukhānāvarakatve prakāśakatve sukhātmakatve ca sati sukhāsktyā jñānā-saktyā ca dehino dehādy-āśakti-janakam sattvam.* Commentary on *Anubhāṣya*, p. 170.

² *ete ca guṇā yadā bhagavataḥ sakāśād eva utpadyante tadā māyā cic-chakti-rūpā ānanda-rūpā vijñeyā.* Ibid. p. 171.

³ *sad-aṃśāt sattvam, ānandāṃśāt tamah, cidāṃśāt rajas.* Ibid. p. 172.

prakṛti, and apperceptible as the object of the notion of “I”; it may also be defined as purely self-luminous; and, again, as that which, though not in reality affected by the qualities or defects of the universe, is yet associated with them. In the self-being of a self-luminous and blissful nature there is some kind of consciousness and bliss in the absence of all kinds of objects, as in deep dreamless sleep. It is thus consciousness which represents the true nature of the self, which, in our ordinary experience, becomes associated with diverse kinds of ignorance and limits itself by the objects of knowledge. The *puruṣa* is one, though it appears as many through the confusing power of *māyā* due to the will of God. The notion of the doer and the enjoyer of experiences is thus due to misconception. It is for this reason that emancipation is possible; for, had not the self been naturally free and emancipated, it would not be possible to liberate it by any means. It is because the self is naturally free that, when once it is liberated, it cannot have any further bondage. If the bondage were of the nature of association of external impurities, then even in emancipation there would be a further chance of association with impurities at any time; it is because all bondage and impurities are due to a misconception that, when once this is broken, there is no further chance of any bondage¹. *Prakṛti*, however, is of two kinds: (a) as associated with ignorance, causing the evolutionary series, and (b) as abiding in God and holding all things in God—the Brahman. *Jīva*, the phenomenal individual, is regarded as a part of the *puruṣa*. It may be remembered that the concept of *puruṣa* is identical with the concept of Brahman; for this reason the *jīva* may on the one hand be regarded as a part of the *puruṣa* and on the other as part of the Brahman, the unchangeable. The various kinds of experiences of the *jīva*, though apparently due to *karma*, are in reality due to God’s will; for whomsoever God wishes to raise, He causes to do good works, and, whomsoever He wishes to throw down, He causes to perform bad works. *Prakṛti* is in its primary sense identical with Brahman; it is a nature of Brahman by which He creates the world. As Brahman is on the one hand identical with the qualities of being, intelligence and bliss, and on

¹ *evam tasya kevalatve siddhe yas tasmin kartṛtvādinā saguṇatvapratyayaḥ sa sṛṣṭy-anukūla-bhagavad-icchayā prakṛty-ādy-aviveka-kṛtaḥ...ata eva ca mukti-yogyatvam. anyathā bandhasya svābhāvikatvāpattau mokṣa-sāstra-vaiarthyā-patteḥ svābhāvikasya nāśyogāt pravṛtti-vidhau tu anuṣṭhāna-lakṣaṇāprāmāṇyā-patteḥ ca...so’yaṁ na nānā, kintu-eka eva sarvatra.* Ibid. pp. 175-6.

the other hand regarded as associated with them, so also the *prakṛti* may be regarded as the identity of the *guṇas* and also as their possessor. This is the distinction of Vallabha's conception of *prakṛti* from the Sāṃkhya view of it. The other categories of *mahat*, etc., are also supposed to evolve from the *prakṛti* more or less in the Sāṃkhya fashion: *manas*, however, is not regarded as an *indriya*.

The Pramāṇas.

Puruṣottama says that knowledge (*jñāna*) is of many kinds. Of these, eternal knowledge (*nitya-jñāna*) is of four kinds: the essential nature of God, in which He is one with all beings and the very essence of emancipation (*mokṣa*); the manifestation of His great and noble qualities; His manifestation as the Vedas in the beginning of the creation; His manifestation as verbal knowledge in all knowable forms of the deity. His form as verbal knowledge manifests itself in the individuals; it is for this reason that there can be no knowledge without the association of words—even in the case of the dumb, who have no speech, there are gestures which take the place of language. This is the fifth kind of knowledge. Then there are one kind of sense-knowledge and four kinds of mental knowledge. Of mental knowledge, that which is produced by *manas* is called doubt (*saṃśaya*); the function of *manas* is synthesis (*saṃkalpa*) and analysis (*vikalpa*). The function of *buddhi* is to produce knowledge as decision, superseding doubt, which is of an oscillatory nature. The knowledge of dreams is from *ahaṃkāra* (egoism) as associated with knowledge. *Citta* perceives the self in the state of deep dreamless sleep. There is thus the fourfold knowledge of the *antaḥ-karaṇa*; this and sense-knowledge and the previous five kinds of knowledge form the ten kinds of knowledge. From another point of view will (*kāma*), conceiving (*saṃkalpa*), doubt (*vicikitsā*), faith (*śraddhā*), absence of faith (*āśraddhā*), patience (*dhṛti*), absence of patience (*adṛti*), shame (*hrī*), understanding (*dhi*), fear (*bhī*), are all *manas*. Pleasure and pain also belong to it, because they are not associated with the senses. Knowledge does not stay only for three moments, but stays on until it is superseded by other objects of knowledge, and even then it remains as impression or *saṃskāra*. This is proved by the fact that *manas* can discover it in memory when it directs its attention towards it; it is because the *manas* is

busy with other objects and it ceases to be discovered. Memory can be strengthened by proper exercise, and things can be forgotten or wrongly remembered through diverse kinds of defects; in these cases also knowledge is not destroyed, but only remains hidden through the effect of *māyā*.

The knowledge that is associated with the *pramāṇas* is the *sāttvika* knowledge; the *sattva* is associated with *pramā* (or right knowledge), and when it disappears there is error. *Pramā* is defined as uncontradicted knowledge or knowledge that is not liable to contradiction¹. The increase of the *sattva* by which knowledge is produced may be due to various causes, e.g., scriptures, objects, people, country, time, birth, *karma*, meditation, *mantras*, purifications, *saṃskāras*. The knowledge which is primarily predominant in *sattva* is the notion that one universal essence is present everywhere; this knowledge alone is absolutely valid. The knowledge which is associated with *rajas* is not absolutely valid; it is that which we find in all our ordinary or perceptual scientific knowledge, which is liable to errors and correction. This *rajas* knowledge at the time of its first manifestation is indeterminate in its nature, conveying to us only the being of things. At this stage, however, we have the first application of the senses to the objects which rouse the *sattva* quality, and there is no association with *rajas*; as such this indeterminable knowledge, though it forms the beginning of *rajas* knowledge, may be regarded as *sāttvika*. Later on, when the *manas* functions with the senses, we have the *saṃkalpa* knowledge, and regard it as *rajas*. The pure sensory knowledge or sensation is not regarded as inherent in the senses. The sense-operation in the first instance rouses the *sattva*, and therefore the knowledge produced by the application of the senses in the first instance does not convey with it any of the special qualities of the senses, visual, auditory and the like, but merely the being, which is not the specific quality of any sense, but only a revelation of the nature of *sattva*; such knowledge, though roused by the senses, does not belong to them. It is by the function of the *vikalpa* of the *manas* that this knowledge as pure being assumes distinct forms in association with sense-characteristics. The application of this function is too rapid to be easily apprehended by us, and for this

¹ *a-bādhita-jñānatvaṃ bādha-yogya-vyatiriktatvaṃ vā tal-lakṣaṇam.*

Prasthānaratnākara, p. 6.

reason we often fail to detect the prior existence of the *nirvikalpa* knowledge.

In the case of determinate knowledge, whether it be simple as of a jug, or complex as of a jug on the ground, we have the same procedure of having first through the senses the indeterminate perception of the being, which by a later influence of *rajas* becomes associated with names and forms; it is the being given by the senses, which appears in names and forms through the influence of the *antaḥkaraṇa* as moved by the *rajas* in association with the senses. The principle followed in perception is analogous to the cosmic appearance of Brahman as manifold, in which the pure Brahman by His will and thought shows Himself as the many, though He remains one in Himself all the time; in the case of perception the senses by their first application cause an influx of *sattva*, resulting in the apperception of pure being, which later on becomes associated with diverse names and forms through the *rajas* element of the *antaḥkaraṇa* operating with the senses. The determinate knowledge is of two kinds: *viśiṣṭa-buddhi* and *samūhālambana-buddhi*; the former means associated knowledge ("a man with a stick"), and the latter means knowledge as conglomeration of entities ("a stick and a book"). The knowledge of simple objects (such as a jug) is regarded as an associated knowledge. All these varied types of determinate cognitions are in reality of one type, because they all consist of the simple process of a revelation of being by the senses and an attribution of names and forms by the *antaḥkaraṇa*.

From another point of view the determinate knowledge can be of five kinds: (i) *saṁśaya* (doubt), (ii) *viparyāsa* (error), (iii) *nīścaya* (right knowledge), (iv) *smṛti* (memory), (v) *svapṇa* (dream).

Doubt is defined as the apprehension of two or more opposite attributes or characters in the same object (*ekasmin dharmiṇi viruddha-nānā-koṭy-avagāhi jñānaṃ saṁśayam*). Error is defined as the apprehension of external objects other than those with which the senses are in contact. *Nīścaya* means right apprehension of objects; such an apprehension must be distinguished from memory, because apprehension (*anubhava*) always means the intuition of an object, while memory is purely internal though produced by a previous apprehension. Such a right knowledge can be perception, inference, verbal knowledge, and analogy (*upamiti*, which arises

through the senses associated with a knowledge of similarity: *sādrśyādi-sahakṛtendriyārtha-saṃsargajanya*).

This right knowledge can be of two kinds: perception (*pratyakṣa*) and that which is not perception (*parokṣa*). Perception arises from a real contact of the sense and its objects (*indriyārtha-sat-samprayoga-janyaṃ jñānam*)¹. Memory (*smṛti*) is defined as knowledge which is produced neither by sleep nor by external objects, but by past impressions, which consist of the subtle existence of previous apprehensions. Dream-experiences are special creations, and should therefore be distinguished from the world of things of ordinary experience; they are out of and through *māyā* by God. This is indeed different from the view of Madhva; for according to him the dream-appearances are without any stuff and should not be regarded as creations; they are mere illusions produced by thought. The dream-appearances being creations according to Vallabha, their knowledge is also to be regarded as real. Dreamless sleep is a special class of dream-experience in which the self manifests itself (*tatra ātma-sphuranamtu svata eva*). Reflection (as synthesis or analysis, or by the methods of agreement and difference, or as mental doubt, or meditation) is included within memory. Shame, fear (*hrī*, *bhī*), etc., are the functions of egoism and not cognitive states. Recognition is regarded as right knowledge (*niscaya*). In the case of firm knowledge growing out of habit the impressions of past knowledge act as a determinant (*sahakāri*), and in the case of recognition memory acts as a determinant². Recognition is thus regarded as due to memory rather than past impressions. The reason for this preference is that, even though there may be an operation of past impressions, the function of memory is a direct aid to it. Recognition is distinguished from memory in this, that, while the latter is produced directly from past impressions, the former is produced in association with the present perception, directly through the operation of memory, and indirectly through the operation of past impressions.

¹ *Prasthānaratnākara*, p. 20.

² *abhyāsa-janye dydha-pratīti-rūpe jñāne yathā pūrvānubhava-saṃskārah sahakāri tathā pratyabhijñāyām smṛtiḥ sahakāriṇī, viśeṣaṇatāvacchedaka-prakārakamīscayārtham tasyā avāśyam apekṣaṇāt. ato yathā'nugrāhakāntara-praveśe'pi yathārthānubhavatvānapāyād abhyāsajñānam niscaya-rūpaṃ tathā smṛtyā viśayeṇa ca pūrva-sthita-jñānasyoddīpanāt pratyabhijñā'pi iti jñeyam. Ibid.* p. 25.

The distinction between right knowledge and error consists in the fact that the latter contains somewhat more than the former; thus, in the case of conch-shell-silver, right knowledge consists in the perception of conch-shell, but false knowledge consists in the further attribution of silver to it; this additional element constitutes error¹. There may be cases which are partly correct and partly false and in these knowledge may be called right or false according as there is or is not a preponderance of right knowledge. Upon this criterion of Puruṣottama painting, art creations and impersonations in dramatic perceptions have a preponderance of right knowledge, as they produce through imitation such pleasures as would have been produced by the actual objects which they have imitated.

Puruṣottama makes a distinction between *kaṛaṇa* (the instrumental) and *kāraṇa* (the cause). *Kaṛaṇa* is a unique agent, associated with a dynamic agent with reference to the effects that are to be produced (*vyāpāraḥ asādhāraṇam*); *kāraṇa* is that seat of power which may produce appearance and disappearance of forms (*āvirbhāva-śaktyādhāratvaṃ kāraṇatvaṃ*). That which produces particular forms, or works for the disappearance of certain forms, is regarded as corresponding causes; hence the power which can make the effects of a material cause manifest for our operation is regarded as the *āvirbhāva-kāraṇa* of that effect. *Āvirbhāva*, "manifestation of appearances," is that aspect of things by which or in terms of which they may be experienced or may be operated upon, and its negation is "disappearance" (*tirobhāva*)². These powers of manifestation and disappearance belong primarily to God, and secondarily to objects with which He has associated them in specific ways. The Naiyāyika definition of cause as invariable unconditional antecedent of the effect is regarded as invalid, inasmuch as it involves a mutual dependence. Invariable antecedence to an effect involves the notion of causality and the notion of causality involves invariable antecedence; so unconditionality involves the notion of causality and causality involves unconditionality.

Cause is of two kinds: identity (*tādātmya*, also called *samavāyī*), and instrument. This identity however involves the notion of

¹ *bhrama-pramā-samūhālambanaṃ tu, eka-deśa-vikṛtaṃ ananyavad bhavatīti nyāyena bhramādhikye viparyāsa eva. pramādhikye ca niscayaḥ. Prasthānarat-nākara*, pp. 25-6.

² *upādānasya kāryaṃ yā vyavahāra-gocaraṃ karoti sā śaktir āvirbhāvīkā. āvirbhāvaśca vyavahāra-yogyatvaṃ. tirobhāvaśca tadayogyatvaṃ. Ibid.* p. 26.

identity-in-difference, in which difference appears as a mode of the identity which is to be regarded as the essence of causality. Puruṣottama discards the notion of substance and quality, which is explained on the basis of the relation of *samavāya*, and in which substance is regarded as the cause of quality; a quality is only an appearance simultaneous with the substance, and the latter cannot be regarded as the cause of the former. The concept of material cause (*upādāna-kāraṇa*) is of two kinds: unchanging (e.g., the earth unchanging, in jugs, etc.), and changing (e.g., knowledge appearing as a function of the mind, the instrumental cause). The contact of parts or movement involved in the material cause is *not* regarded as a separate cause, as it is by the Naiyāyika, but is regarded as a part of the material cause.

The nature of concomitance that determines the nature of a *hetu* is of two kinds: *anvaya* and *vyatireka*. *Anvaya* means agreement in presence of an element such that to its sole presence (in the midst of many irrelevant elements or conditions present with it) the effect is due¹. *Vyatireka* means the negation of that element which involves the negation of the effect, i.e., that element which does not exist if the effect is absent (*kāryātirekeṇānavasthānam*). The causal movement (*vyāpāra*) is that which exists as a link between the cause and the effect; thus sense-object contact has for its dynamic cause the movement of the senses. In the case of God's will no dynamic movement is regarded necessary for the production of the world.

The *pratyakṣa pramāṇa*, the means of perceptual experience, is defined as the sense-faculties corresponding to the different kinds of perception. There are thus six *pramāṇas*, viz., visual, tactual, gustatory, auditory, olfactory and mental; as opposed to the monistic Vedāntic view of Śaṅkara, *manas* is regarded here as a sense-faculty. All faculties are regarded as being atomic in their nature. The visual organ can perceive colours only when there is a "manifested colour" (*udbhūta-rūpavattva*); the atoms of ghosts are not visible because they have no manifested colour. So for perception of all sense-qualities by the corresponding senses we have to admit that the sense-qualities, of touch, of smell, etc., must be manifested in order to be perceived.

¹ *Tatra sva-sva-vyāpyetara-yāvat-kāraṇa-sattve yat-sattve avaśyaṃ yat-sattvam anvayaḥ. Ibid. p. 32.*

In agreement with the monistic Vedānta of Śaṅkara *tamas* (darkness) is regarded here as a separate category and not as the mere negation of light. Negation itself is regarded as the positive existence of the locus in which the negation appears with specific reference to the appearance or disappearance of the negated object. Thus in the case of negation-precedent-to-production (*prāg-abhāva*) of a jug, the simple material cause which will be helpful to the production or the appearance of the jug is regarded as the negative-precedent-to-production of the jug. In the case of negation of destruction (*dhvaṃsābhāva*) the cause is helpful to the disappearance of the jug, and is thus associated with the special quality that is regarded as the negation of destruction. The concept of negation is thus included in the conception of the cause; negation is thus a specific mode of *samavāyi kāraṇa* and therefore identical with it.

Regarding the manner in which visual cognitions of things are possible, the Sāṃkhya and Vedānta uphold the subsistence of a *vyrtti* (*vyrtti* means mental state). When after looking at a thing we shut our eyes, there is an after-image of the object. This after-image cannot belong to the object itself, because our eyes are shut; it must itself belong to the *ahamkāra* or the *buddhi*. It is supposed by the Sāṃkhya and the Vedānta that this *vyrtti* goes to external objects near and far and thereby produces a relation between the *buddhi* and the object. It may naturally be objected that this *vyrtti* is not a substance and therefore cannot travel far and wide. The Sāṃkhya and the Vedānta reply again that, since such travelling is proved by the facts of perception, we have to admit it; there is no rule that only existing substances should be able to travel and that in the absence of substance there should be no travelling. The Naiyāyikas, however, think that certain rays emanate from the eye and go to the object, sense-contact is thereby produced in association with the *manas* and *ātman*, and the result is sense-cognition; they therefore do not admit the existence of a separate *vyrtti*. Puruṣottama, however, admits the *vyrtti*, but not in the same way as the Vedāntists and the Sāṃkhya; according to him this *vyrtti* is a state of the *buddhi* which has been roused through the category of time and has manifested a preponderance of *sattva* quality. Time is hereby admitted as a category existing in the *buddhi* and not in the senses as it is in the Vedānta of Śaṅkara (explained by Dharmarājā-dhvarindra in

the *Vedānta-paribhāṣā*). According to him time does not possess any colour, but can yet be perceived by the visual organs. But according to Puruṣottama time is a determinant of the *buddhi* and is the agent responsible, along with other accessories, for mental illumination; he says further that rays from the object penetrate the eye-ball and produce there certain impressions which remain even when the rays are cut off by the shutting of the eye. These retinal impressions are accessory to the production of illumination in the *buddhi* as the manifestation of *sattva-guṇa*¹. *Vṛtti* is thus a condition of *buddhi*.

In the illusory perception of conch-shell-silver it is supposed that by the power of *rajas* the impressions of silver experienced before are projected on to the object of perception, and by *tamas* the nature of conch-shell as such is obscured; in this manner a conch-shell is perceived as silver.

The indeterminate knowledge arises at that stage in which the *buddhi* functions at the first moment of sense-operation; and it becomes determinate when in association with the sense-faculty there is modification in the *buddhi* as *vṛtti*. Though with the rise of one *vṛtti* a previous one disappears, it still persists in the form of impression (*saṃskāra*); when these *saṃskāras* are later roused by specific causes or conditions, we have memory.

The intuition of God is not, however, produced by the ordinary method of perception only by God's grace, which is the seed of *bhakti* in all, can His nature be intuited; in the individual this grace manifests itself as devotion².

Inference (*anumāna*) as a *pramāṇa* is defined as instrument by which influential knowledge is attained; in other words, inference is the knowledge which is derived through the mediation of other knowledge, a process which is, of course, affected by the knowledge of concomitance (*vyāpti-jñāna*). *Vyāpti* means the unconditioned existence of *hetu* in the *sādhya*, i.e., where there is a *hetu*, there is a *sādhya*, and wherever there is absence of *sādhya*, there is absence of *hetu*; *hetu* is that by which one proceeds to carry on an inference, and *sādhya* is affirmation or denial. Following the *Sāṃkhya-pravacana-sūtra* Puruṣottama says that, when there is an unconditional existence of one quality or character in another, there may be either a mutual or a one-sided concomitance between them; when the circle of the *hetu* coincides with the circle of the *sādhya*, we have *samavyāpti*, and when the circle of the *hetu* falls within the circle of the *sādhya*, there is *viśama-vyāpti*¹.

Puruṣottama does not admit the *kevalānvayi* form of inference; for in the Brahman there is the absence of the *sādhya*. The objection that such a definition will not hold good in the case of inference (where no negative existences are available), namely, that it is knowledge because it is definable, is invalid; for the Brahman is neither knowable nor definable. Even when an object is knowable in one form, it may be not knowable in another form. So even in the aforesaid inference negative instances are available; therefore the *kevalānvayi* form of inference, where it is supposed that concomitance is to be determined only by agreement, cannot be accepted².

When the co-existence of the *hetu* with the *sādhya* is seen in one instance or in many, it rouses the part-impressions and though in the memory of them necessary co-existence, and, following that, the *hetu* determines the *sādhya*. When we see in the kitchen the co-existence of fire and smoke, the necessary co-existence of the smoke with the fire is known; then later on, when smoke is seen in the hill and the co-existence of the smoke with the fire is remembered, the smoke determines the existence of the fire: this right knowledge is called *anumiti*. It is the *līṅga* that is the cause of the *anumiti*. Two

² *sarvatrāpi kenacid rūpeṇa jñeyatvādi-sattve'pi rūpāntareṇa tad-abhāvasya sarvajānatvāc ca kevalānvayi-sādhya-kānumānasyaivābhāvāt. Ibid. p. 141.*

kinds of *anumāna* are admitted by Puruṣottama, viz., *kevala-vyatireki*, where positive instances are not available and the concomitance is only through negation, and *anvaya-vyatireki*, where the concomitance is known through the joint method of agreement and difference.

Five propositions are generally admitted for convincing others by inference; these are *pratijñā*, *hetu*, *udāharaṇa*, *upanaya*, and *nigamana*. Thus "the hill is fiery" is the *pratijñā*, "because it is smoky" is the *hetu*, "as in the case in the kitchen" is the *udāharaṇa*, "whatever is smoky is fiery and whatever is not so is not so" is the *upanaya*, "therefore the smoke now visible is also associated with fire" is *nigamana*. But these need not be regarded as separate propositions; they are parts of one synthetic proposition¹. But Puruṣottama in reality prefers these three, viz., *pratijñā*, *hetu* and *dṛṣṭānta*.

Puruṣottama does not admit either *upamāna* or *anupalabdhi* as separate *pramāṇas*. *Upamāna* is the *pramāṇa* by which a previous knowledge of similarity between two objects of which one is known enables one to know the other when one sees it; thus a man who does not know a buffalo, but is told that it is similar in appearance to the cow, sees the buffalo in the forest and knows it to be a buffalo. The sight of it makes him remember that a buffalo is an animal which is similar in appearance to the cow, and thus he knows it is a buffalo. Here perception as helped by memory of similarity is the cause of the new apprehension of the animal as a buffalo; what is called *upamāna* thus falls within perception.

Puruṣottama also admits *arthāpatti*, or implication, as separate *pramāṇa*, in the manner of Pārthasārathimiśra. This *arthāpatti* is to be distinguished from inference. A specific case of it may be illustrated by the example in which one assumes the existence of someone outside the house when he is not found inside; the knowledge of the absence of a living person from the house is not connected with the knowledge of the same man's presence outside the house as cause and effect, and yet they are simultaneous. It is by the assumption of the living individual outside the house that his non-existence in the house can be understood; the complex notion of life and non-existence in the house induces the notion of his existence outside the house. It is the inherent contradiction that

¹ *Ibid.* p. 143.

leads us from the known fact to the unknown, and as such it is regarded as a separate *pramāṇa*.

Puruṣottama thinks that in some cases where knowledge is due to the accessory influence of memory its validity is not spontaneous, but is to be derived only through corroborative sources, whereas there may be other cases where knowledge may be self-valid.

Concept of bhakti.

Madhva, Vallabha and Jīva Gosvāmī were all indebted to the *Bhāgavata-purāṇa*, and held it in high reverence; Madhva wrote *Bhāgavata-tātparyā*, Jīva Gosvāmī *Ṣaṭ-sandarbhā*, and Vallabha wrote not only a commentary on the *Bhāgavata* (the *Subodhinī*) but also a commentary (*Prakāśa*) on his own *kārikās*, the *Tattvadīpa*, based on the teachings of the *Bhāgavata*. The *Tattvadīpa* consists of four books: the *Śāstrārthanirūpaṇa*, the *Sarvanirnaya* of four chapters, *Pramāṇa*, *Prameya-phala*, and the *Sādhana*, of which the first contains 83 verses, the second 100 verses, the third 110 and the fourth 35. The third book, of 1837 verses, contains observations on the twelve *skandhas* of the *Bhāgavata-purāṇa*. The fourth book, which dealt with *bhakti*, is found only in a fragmentary condition. This last has two commentaries on it, the *Nibandha-tippaṇa*, by Kalyāṇarāja, and one by Gotthulal (otherwise called Bālakṛṣṇa). The *Prakāśa* commentary on the *kārikās* was commented upon by Puruṣottama in the *Āvaraṇa-bhaṅga*, but the entire work has not been available to the present writer. According to the *Tattvadīpa* the only *śāstra* is the *Gītā*, which is sung by the Lord Himself, the only God is Kṛṣṇa the son of Devakī, the *mantras* are only His name and the only work is the service of God, the Vedas, the words of Kṛṣṇa (forming the *smṛtis*), the *sūtras* of Vyāsa and their explanations by Vyāsa (forming the *Bhāgavata*) are their four *pramāṇas*. If there are any doubts regarding the Vedas, they are solved by the words of Kṛṣṇa; any doubts regarding the latter are explained by reference to the *sūtras*, and difficulties about the *Vyāsa-sūtras* are to be explained by the *Bhāgavata*. So far as the other *smṛtis* are concerned, such as that of Manu and others, only so much of them is valid as is in consonance with these; but, if they are found contradictory in any part, they are to be treated as invalid. The true object of the *śāstras* is

devotion to Hari, and the wise man who takes to devotion is best of all; yet there have been many systems of thought which produce delusion by preaching creeds other than that of *bhakti*. There is no greater delusion than devoting oneself to *śāstras* and not to God; such devotees are always under bondage and suffer birth and rebirth. The culmination of one's knowledge is omniscience, the culmination of *dharma* is the contentment of one's mind, the culmination of *bhakti* is when God is pleased. With *mukti* there is destruction of birth and rebirth; but the world, being a manifestation of Brahman, is never destroyed except when Kṛṣṇa wishes to take it back within Himself. Wisdom and ignorance are both constituents of *māyā*.

Bhakti consists in firm and overwhelming affection for God with a full sense of His greatness; through this alone can there be emancipation¹. Though *bhakti* is the *sāadhanā* and *mokṣa* is the goal, yet it is the *sāadhanā* stage that is the best. Those who enter into the bliss of Brahman have the experience of that bliss in their selves; but those devotees who do not enter into this state nor into the state of *jīvan-mukti*, but enjoy God with all their senses and the *antaḥkaraṇa*, are better than the *jīvan-muktas*, though they may be ordinary householders².

The *jīva* is atomic in nature, but yet, since the bliss of God is manifested in it, it may be regarded as all-pervasive. Its nature as pure intelligence cannot be perceived by the ordinary senses, but only by *yoga*, or knowledge through that special vision by which one sees God. The views of the monistic Vedānta that the *jīvas* are due to *avidyā* is repudiated on the ground that, if *avidyā* was destroyed by right knowledge, the bodily structure of the individual formed through the illusion of *avidyā* would immediately be destroyed and as *jīvan-mukti* would be possible.

Brahman is described here as *saccidānanda*—all-pervasive, independent, omniscient. He is devoid of any reduplication, either of this class or of a different class or as existing in Him—i.e., *jīvas*,

¹ *māhātmya-jñāna-pūrvas tu sudṛḍhaḥ sarvato'dhikah,

Tattvārthadīpa, p. 65.

² *sva-tantra-bhaktānām tu gopikādi-tulyānām sarvendriyaiḥ tathā'ntaḥkaraṇaiḥ sva-rūpeṇa cā'nandānubhavaḥ. ato bhaktānām jīvan-muktyapekṣayā bhagavat-kṛpā-sahita-grhāśrama eva viśiṣyate.* Vallabha's commentary on *Tattvādīpana*, p. 77.

the material world and the *antaryāmi*: these are the three forms of God, they are not different from Him¹. He is also associated with a thousand other noble qualities, purity, nobility, kindness, etc.; He is the upholder of the universe, controller of *māyā*. God is on the one hand the *samavāya* and the *nimittakāraṇa* of the world, delights in His creation, and sometimes takes delight in withdrawing it within Himself; He is the repository of all contradictory qualities and causes delusion in various forms and appearances and disappearances of worldly manifestation. He is the changeable as well as the unchangeable². Since the creation is a manifestation of Himself, the diversity of existence and the diversity in the distribution of pleasure and pain cannot make Him liable to the charge of cruelty or partiality. The attempt to explain diversity as due to *karma* leads to the further difficulty that God is dependent on *karma* and is not independent; it also leaves unexplained why different persons should perform different *karmas*. If God as *antaryāmin* Himself makes us perform good or bad actions, He cannot also make us responsible for the same and distribute happiness to some and displeasure to others; but on the view that the whole creation is self-creative and that self-manifestation and the *jīvas* are nothing but God all these difficulties are removed³. God is the creator of the world, yet He is not *saguṇa*, possessed of qualities; for the simple reason that the elements that constitute His qualities cannot stand against Him and deprive Him of His independence. Since He is the controller of the qualities, their existence and non-existence depend on Him. The conception of the freedom of God thus necessarily leads to the concept of His being both *saguṇa* and *nirguṇa*. The view of Śāṅkara that Brahman appears as the world through the bondage of *avidyā* is a delusive teaching (*pratāraṇā-śāstra*), because it lowers the dignity of God, and it should be rejected by all devotees.

Ibid. pp. 129-30.

He who thinks of God as all and of himself as emanating from Him, and who serves Him with love, is a devotee. In the absence of either knowledge or love we have only a lower kind of devotee; but in the absence of both one cannot be a devotee, though by listening to the scriptures one may remove one's sins. The highest devotee leaves everything; his mind is filled with Kṛṣṇa alone; for him there is no wife, no home, no sons, no friends, no riches, but he is wholly absorbed in the love of God. No one, however, can take the path of *bhakti* except through the grace of God. *Karma* itself, being of the nature of God's will, manifests itself as His mercy or anger to the devotee; He approaches with His mercy and relieves him even if he be in a low state, and those who do not obey His commands or proceed in the wrong path He approaches with anger and causes to suffer. It is said that the law of *karma* is mysterious; the reason is that we do not know the manner in which God's will manifests itself; sometimes by His grace He may even save a sinner, who may not have to take the punishment due to him.

In the *Śāṇḍilya-sūtra* *bhakti* is defined as the highest attachment (*parānurakti*) to God. *Anurakti* is the same as *rāga*; so the *sūtra* "*parānuraktir īśvare*" means highest attachment to the object of worship (*ārādhya-viśayaka-rāgatvam*)¹. This attachment is associated with pleasure (*sukha-niyato rāga*). We remember that in the *Viṣṇu-purāṇa* Prahlaḍa expresses the wish that he may have that attachment to God that is experienced with regard to sense-objects². One must find supreme pleasure in God; it is this natural and spontaneous attachment to God that is called *bhakti*³. Even if there is no notion of worship, but merely love, there also we can apply the term *bhakti*, as in the case of *gopīs* towards Kṛṣṇa. But ordinarily it arises from the notion of the greatness of God. This devotion, being of the nature of attachment, is associated with will and not with action; just as in the case of knowledge no action is necessary, but the only result is enlightenment, so the will that tends

Viṣṇu-purāṇa, 1. 20. 19.

³ Compare *Gītā*, x. 9:

*mac-cittā mad-gata-prāṇā bodhayantaḥ paras-param
kathayantaś ca mām nityam tuṣyantica ran-anti ca...*

to God is satisfied with devotion or attachment¹. *Bhakti* cannot also be regarded as knowledge: *jñāna* and *bhajana* are two different concepts. Knowledge may be only indirectly necessary for attachment, but attachment does not lead to knowledge. A young woman may love a young man; this love does not lead to any new knowledge, but finds its fulfilment in the love itself. In the *Viṣṇu-purāṇa* we hear of the *gopīs*' attachment of emancipation through excess of love; so attachment may lead to emancipation without any knowledge². *Yoga*, however, is accessory both to knowledge and to *bhakti*. *Bhakti* is different also from *śraddhā* (or faith), which may be an accessory even to *karma*. According to Kasya *bhakti* with the notion of the majesty of God leads to emancipation. According to Bādarāyaṇa this emancipation consists in the nature of self as pure intelligence. According to Śāṇḍilya emancipation is associated with the notion of transcendence, immanence in the self. Through an excess of devotion understanding of the *buddhi* is dissolved in the bliss of God; it is this *buddhi* which is the *upādhi* or condition through which God manifests Himself as the *jīva*.

Gopeśvaraji Mahārāja, in his *Bhakti-mārtaṇḍa*, follows the interpretation of *bhakti* in the *Śāṇḍilya-sūtra* and enters into a long discussion regarding its exact connotation. He denies that *bhakti* is a kind of knowledge or a kind of *śraddhā* (or faith); nor is *bhakti* a kind of action or worship. Rāmānuja defines *bhakti* as *dhruvām smṛti*, and regards it as only a kind of knowledge. Various forms of worship or prescribed ritual connected therewith lead to *bhakti*, but they cannot themselves be regarded as *bhakti*. In the *Bhakti-cintāmaṇi*, *bhakti* has been defined as *yoge viyogavṛttiprema*, i.e., it is that form of love in which even when the two are together they are afraid of being dissociated and when they are not together they have a painful desire for union³. Śāṇḍilya, Haridāsa and Guptācārya also follow the same view. Govinda Chakravarti, however, defines

¹ *na kriyākṛty-apekṣanā jñānavat. Śāṇḍilya-sūtra, 1. 1. 7. sā bhaktir na kriyātmikā bhavitum arhati prayatnānuvedhābhāvāt.* Commentary on Svapneśvara.

³ *A-dṛṣṭe darśanotkanthā dṛṣṭe viśleśa-bhīrutā nādrṣṭena na dṛṣṭena bhavatā labhyate sukhaṃ.*

Bhakti-mārtaṇḍa, p. 75.

this love as the yearning which never ceases even in spite of many difficulties and dangers¹, and Paramārtha Ṭhakkuna, in his *Premalakṣaṇa-candrikā*², as an unspeakable yearning referring to an object. Viśvanātha, in his *Premarasāyina*, defines it as a loving yearning or desire. Guṇakara supplements the view of the *Bhakti-cintāmaṇi* and defines it as that which culminates in intense enjoyment³.

Gopeśvarajī Mahārāja differs from all these definitions of *bhakti* that regard yearning and desire as its principal element. No desire can be an object of desire (*puruṣārtha*); in the love of a son or any other dear relation we do not find any kind of desire playing a part; moreover desire refers to an unattained object, while *bhakti*, attachment, is not so.

Some say that *bhakti* is the cause of the melting of the mind; that is not acceptable either, for it has no reference to the object. There are others who define it as the object or condition with reference to which the amorous sentiment called love flows⁴. This definition is too wide, because all *bhakti* must have a reference to God, and according to it *bhakti* becomes a part of sex-sentiment. Gopeśvarajī, however, refers to the *Tattvadīpa-prakāśa* of Vallabha and accepts the view there adopted, according to which *bhakti* is composed of the root *bhaj* and suffix *kti*; the suffix means "love" and the root "service." It is the general rule that root and suffix together form a complete meaning in which the meaning of the suffix is dominant; *bhakti* thus means the action of *bhaj*, i.e., service (*sevā*). *Sevā* (service) is a bodily affair (e.g., *strīsevā*, *auśadhasevā*). Service, in order that it may be complete, implies love, and without love the service would be troublesome, but not desirable; love also for its completion requires service. This view has been objected to by Puruṣottama in his *Bhakti-haṃsa-vivṛti*.

Referring to the *Tattva-dīpa-prakāśa* Gopeśvarajī Mahārāja thinks that according to Vallabha *bhakti* means *sneha* or affection, but, if we take the word analytically, it means *sevā* or service; he thinks that both *prema* and *sevā* form the connotative meaning of

¹ *gāḍha-vyāsana-sāhasra-sampāte'pi nir-antaraṃ na hīyate yadīheti svādu tat prema-lakṣaṇam. Ibid.*

⁴ *yam upādhiṃ samāsṛitya rasa ādyaḥ nigadyate tam upādhiṃ budhottamaṣaḥ premeti paricakṣata. Ibid. p. 76.*

*bhakti*¹. He, however, develops further the concept of *bhakti*, and says that the idea of *sevā* forming the connotation of *bhakti* means the state of mind which slowly lowers down and merges itself into God².

One of the results of *bhakti* or rather one of its characteristics has been described as the oneness of all with the self (*sarvātma-bhāva*). Through the deep notion of love one sees everywhere one's beloved, and even in separation one always perceives one's beloved round one; but, God being all, it is natural that through intense attachment to Him one should perceive Him in all things; for these are all manifestations of God³. This identity of the self with all cannot be regarded as an illustration of Vedāntic monism, as is explained by the followers of *maryādā-marga*; it is associated with intense love. This view of the *puṣṭi-mārga* (Vallabha school) is also shared by Haricaraṇa, who is quoted by Gopeśvara in support of his own view⁴.

Bhakti is regarded as parallel to the other *rasas* described in the *alambkāra-śāstra*; as such, it affects the *manas* and the body with intense delight, coalescing with God, as it were⁵; affection is thus the dominant phase (*sthāyī-bhāva*) of the *bhakti-rasa*. Some have defined it as a reflection of God in the melted heart; this has been objected to both by Puruṣottama in his *Pratibimba-vāda* and by Gopeśvara on the ground that formless God cannot have His reflection, and also on the ground that this would

¹ *prema-ṇ, ūrvakaṃ kāyika-vyāpāratvaṃ bhaktitvaṃ...athavā śrī-kṛṣṇa-viśayaka-prema-pūrvaka-kāyika-vyāpāratvaṃ. Bhakti-mārtanda, p. 79.*

He further quotes a passage from Vallabha's *Bhakti-vardhinī* in support of his statement:

*tataḥ prema tathā śaktir vyasanañca yadā bhaved iti,
yadā syād vyasanaṃ kṛṣṇe kṛtārthaḥ syāt tadaivahi. Ibid. p. 82.*

⁵ *yatra manaḥsarvendriyāṇāṃ ānanda-mātra-kara-pāda-mukhodarādi-bhagavad-rūpatā tatra bhakti-rasa eva. Ibid. p. 102.*

make *bhakti* identical with God, and it is difficult to identify affection with the melting of the heart¹. If *ātmānubhava* be understood merely as the comprehension of identity with the self, in the fashion of Śāṅkara monism, then there would be no pleasure in the attachment of God².

The assertion of the philosophic identity of the self and the Brahman is only for the purpose of strengthening the nature of *bhakti*; it merely shows that the oneness that is felt through attachment can also be philosophically supported. In the intensity of love there is revealed a feeling of oneness with Kṛṣṇa which is to be regarded as one of the transitory phases (*vyābhicāri bhāva*) of the emotion of *bhakti*, of which affection is the dominant phase (*sthāyi bhāva*); the feeling of oneness is thus not the culminating result, but only a transitory phase. Thus *bhakti* does not result finally in knowledge; knowledge is an *aṅga* of *bhakti*³. As God is spiritual, so also is *bhakti* spiritual; as by the measures of fire objects become more or less heated, so relative proximity to God gives an experience of greater or less intensity of *bhakti*⁴.

Bhakti may be classified as *phala-rūpa* ("fruit"), as *sādhana-rūpa* ("means"), and as *saguṇa*. The *saguṇa-bhakti* is of three kinds, as forming part of different kinds of meditation, as part of knowledge, and as part of *karma*. These again may be of eighty-one kinds, as associated with different kinds of quality. *Bhakti* as a *phala* is of one kind, and as *sāadhanā* ("means") is of two kinds, viz., as part of knowledge (*jñānāṅgabhūta*), and as directly leading to emancipation (*bhaktiḥ svāntantryena muktidātrī*). The *jñānāṅgabhūta-bhakti* is itself of two kinds, as *saguṇa* and *nirguṇa*, of which the former is of three kinds, *jñāna-miśra*, *vairāgya-miśra* and *karma-*

¹ It is interesting to refer here to the definition of *bhakti* as given by jīva in the *Ṣaṭ-sandarbha* (p. 274), where *bhakti* is described as a dual existence in God, and, the *bhakta* being itself of the nature of blissful experience, *sva-rūpaśakteḥ sārabhūtā hlādinī nāma yā vṛttis tasyā eva sārabhūta-vṛttiviśeṣo bhaktiḥ sā ca ratyaparaparyāyā. bhaktir bhavati bhakteṣu ca nikṣipta-nijābhayaakoṭiḥ sarvadā tiṣṭhati. ata evoktaṃ bhagavān bhakto bhaktimān.*

² *kena kaṃ paśyet iti śruteḥ bheda-vilopakatvena bhajanānandāntarāya-bhūtaṃ yadi svātmatvena jñānaṃ sampādayed bhajanāṇḍaṃ nādadyāt.*

Bhakti-mārtanḍa, p. 136.

³ *ati-gāḍha-bhāvo' bhedasphūrtir api ek ovyābhicāribhāvaḥ. na tu sāravadika-stadā svātmānaṃ tattvena viśiṃsanti. Ibid.* p. 139.

⁴ *yathā bhagavān mānasīyas tadvad bhagavatsambandha-naikatyaṭ mana-syāvīrbhavanti bhaktir api mano-dharmatvena vyavahriyate. yathā vahni-naikatya-tāratamyena bhaktyanubhava-tāratamyam. Ibid.* p. 142.

miśra. The *jñāna-miśra* ("mixed with knowledge") may be of three kinds, high, middling and lower. The *vairāgya-miśra* ("mixed with detachment") is only of one kind. The *karma-miśra* ("mixed with action") is of three kinds.

The principal means by which *bhakti* is attained through the grace of God is purity of heart. There are sixteen means prescribed for attaining purity of heart, of which some are external and some internal. The three externals are ablutions, sacrifices and image-worship. The practice of meditation of God in all things is the fourth. The development of the *sattva* character of the mind is the fifth. Abnegation of all *karmas* and cessation of attachment is the sixth; showing reverence to the revered is the seventh. Kindness to the poor is the eighth. To regard all beings as one's equals and friends is the ninth. *Yamas* and *niyamas* are the tenth and eleventh respectively. Listening to the scriptures from teachers is the twelfth, and listening to and chanting of God's name is the thirteenth. Universal sincerity is the fourteenth. Good association is the fifteenth. Absence of egoism is the sixteenth.

There is however a difference of view between two important schools of the *bhakti*-path. Those who follow the *maryādā-bhakti* think that *bhakti* is attainable by one's own efforts in following specific courses of duties and practices; the followers of the *puṣṭi-bhakti* think that even without any effort *bhakti* can be attained by the grace of God alone¹.

The Vallabhas belong to the *puṣṭi-bhakti* school and therefore do not admit the absolute necessity of personal effort. The followers of the *maryādā* school also agree that the *sādhana*s are to be followed only so long as affection does not show itself; when once that has manifested itself, the *sādhana*s can no longer be regarded as determining it, for it manifests itself spontaneously. For the followers of the *puṣṭi* school the *sādhana*s can at no stage determine the *bhakti*; for it is generated through the grace of God (*puṣṭimārge varaṇam eva sādhanam*). According to the *maryādā* school sins are destroyed by the practice of the *sādhana*s and emancipation attained through the rise of affection. To the followers of the *puṣṭi* school the grace of God is sufficient to destroy obstructions of sins, and there is no definite order about the practices following affection or

¹ *kṛti-sādhya-sādhana-sādhya-bhaktir maryādā-bhaktiḥ tadrahitānām bhagavad-anugrahaika-prāpya-puṣṭi-bhaktiḥ. Bhakti-mārtanda, p. 151.*

affection following the practices¹. In the *Pañcarātra bhakti* is defined as affection associated with the majesty of God; but the association of the majesty of God is not a necessary part of *bhakti*. Puruṣottama defines *bhakti* as attachment to God with detachment from all fruits. Purity of mind can be attained both by knowledge and *bhakti* as produced by *puṣṭi* or the grace of God; so the only condition that can be attached to the rise of affection is the grace of God.

It is impossible to say for what reason God is pleased to extend His grace; it cannot be for the relief of suffering, since there are many sufferers to whom God does not do so. It is a special character of God, by which He adapts certain people for manifesting His grace through them.

As regards the fruit of *bhakti*, there are diverse opinions. Vallabha has said in his *Sevāphala-vivṛti* that as a result of it one may attain a great power of experiencing the nature of God (*a-laukika-sāmarthyā*), or may also have the experience of continual contact with God (*sājujya*), and also may have a body befitting the service of God (*sevopayogi deha*). This is his description of the *puṣṭi-mārga*. He has also described two other *mārgas*, the *pravāha* and the *maryādā*, in his *Puṣṭi-pravāha-maryādā*. The *pravāha-mārga* consists of the Vedic duties which carry on the processes of birth and rebirth. Those however who do not transgress the Vedic laws are said to belong to the *maryādā-mārga*. The *puṣṭi-mārga* differs from the other two *mārgas* in this, that it depends upon the grace of God and not on Vedic deeds²; its fruits are therefore superior to those of other *mārgas*³.

Vallabha, in his *Bhakti-vardhinī*, says that the seed of *bhakti* exists as *prema* or affection due to the grace of God, and, when it is firm, it increases by renunciation, by listening to the *bhakti-śāstra*, and by chanting God's name. The seed becomes strong when in

¹ *maryādāyām hi śravaṇādibhiḥ pāpakṣaye premopattis tato muktih. puṣṭi-mārgāṅgikṛtes tu atyanugraha-sādhyatvena tatra pāpāder aprati-bandhakatvāc chraṇādīritipā premarūpā ca yugapat paurevāparyeṇa vā vaiparityeṇa vā bhavati. Ibid. p. 152.*

the householder's state one worships Kṛṣṇa, following one's caste-duties with a complete absorption of mind. Even when engaged in duties one should always fix one's mind on God; in this way there grows the love which develops into attachment or passion. The firm seed of *bhakti* can never be destroyed; it is through affection for God that other attachments are destroyed, and by the development of this affection that one renounces the home. It is only when this affection for God grows into a passion (*vyasana*) that one attains one's end easily. The *bhakti* rises sometimes spontaneously, sometimes in association with other devotees, and sometimes through following favourable practices¹. Gradual development of *bhakti* is described through seven stages in an ascending order; these are *bhāva*, *prema*, *pranaya*, *sneha*, *rāga*, *anurāga*, and *vyasana*. The passion or *vyasana* for God, which is the deepest manifestation of affection, is the inability to remain without God (*tadvināna sthātum aśaktiḥ*); it is not possible for a man with such an attachment to stay at home and to carry on his ordinary duties. In the previous stages, though one may try to remain at home like a guest in the house, yet he always feels various obstructions in the proper manifestation of his emotion; worldly attachments are always obstacles to the divine attachment of worldly ties which helps the development of *bhakti*².

Vallabha, however, is opposed to renunciation after the manner of monistic *saṁnyāsa*, for this can only bring repentance, as being inefficacious³. The path of knowledge can bring its fruit in hundreds of births and it depends upon various other practices; the path of *bhakti* therefore should be taken up instead of the path of knowledge⁴. Renunciation in the *bhakti-mārga* proceeds only out of the necessity of the *bhakti* and for its proper maintenance, and not as a matter of duty.

The fruits of *bhakti* have already been described as *a-laukika-sūmarthya*, *sāyujya* and *sevopayogī-deha*, and are further discussed

¹ See note 3, p. 355.

² *snehāśakti-vyasanānām vināśanam. tathā sati kṛtam-api sarvaṁ vyartham syāt. tena tat-tyāgam kṛtvā yateta.* Bālakṛṣṇa's commentary on *Bhakti-vardhini*, śloka 6.

³ *ataḥ kalau sa san-nyāsaḥ pascāt tūpāya nānyathā. pāṣaṇḍitaṁ bhavet cāpi tasmāt jñāne na saṁ-nyaset.*

Vallabha's *San-nyāsa-nirṇaya*, śloka 16.

⁴ *jñānārtham uttaraṅgam ca siddhir janmaśataiḥ, jñānam ca sādhanāpekṣam yajñādi-śravaṇān matam param.* *San-nyāsa-nirṇaya* of Vallabha, with Gokulānātha's *Vivaraṇa*, śloka 15.

in Vallabha's *Sevāphala*, upon which various commentators have written with their several differences. Thus Devakīnandana and Puruṣottama think that *a-laukika-sāmarthyā* means that God has a special *āveśa* or that He favours the devotee with a special inspiration, enabling him to experience the nature of the full bliss of God. Harirāja, however, thinks that it means the capacity for experiencing the separation of God; Kalyāṇarāja thinks that it means participation in divine music in heaven with God. Gopīśa thinks that it means special fitness (*svarūpa-yogyatā*) for experiencing the supernatural joy of worshipping God¹. The second fruit of *bhakti* (*sāyujya*) is considered by Puruṣottama, Bācā Gopīśa, and Devakīnandana to be the merging of the devotee in the nature of God; Harirāja, however, regards it as a capacity for continual association with God.

The obstacles to *bhakti* are regarded as *udvega*, *pratibandha*, and *bhoga*. *Udvega* means fear caused by evil persons or unsteadiness of mind through sins; *pratibandha* means obstacles of a general nature, and *bhoga* means ordinary experiences of pleasures and pains of body and mind. These obstacles can be removed by comprehending the false nature of causes that give rise to them; but if on account of the transgressions of the devotee God is angry and does not extend His mercy, then the obstacles cannot be removed². The true knowledge, by which the false comprehension giving rise to the obstacles can be removed, consists in the conviction that everything is given by God, everything is Brahman, that there is no *sādhana*, no *phala* and no enjoyer³. He who tries to enjoy the blessed nature of God easily removes the obstacles. The experiencing of God's nature as a devotee is better than the bliss of Brahman itself and the pleasure of sense-objects (*viśayānandabrahmānandāpekṣayā bhajanānandasya māhāt̥tvāt*). Mental unsteadiness as a result of

¹ *tatra alaukika-sāmarthyam nāma para-prāpti-vivarāṇa-śrutyukta-bhagavat-sva-rūpāmubhave pradiṭṭapavādāveśa iti sūtrokta-rītika-bhagavadāveśajā yogyatā yayā rasātmakasya bhagavataḥ pūrṇa-sva-rūpānandāmubhavaḥ. śrī-devakīnandanādāvapyevam āhuḥ. śrī-hari-rāyās tu bhagavad-virahānubhava-sāmarthyam ity āhuḥ. śrī-kalyāṇa-rāyās tu bhagavatā saha gānādī-sāmarthyam mukhyānām evetyāhuḥ. tathā gopīnāntvalaukika-bhajanānandāmubhave sva-rūpa-yogyatā ityāhuḥ.* Puruṣottama's commentary on *Sevāphala*, śloka 1.

attachment to worldly things stands in the way of extension of God's grace; it can be removed by abnegating the fruits of *karma*. The emancipation that has been spoken of before as a result of *bhakti* is to be interpreted as the three-fold *Sevāphala*, superior, middling and inferior, viz., *a-laukika-sāmarthyā* (*uttama-sevā-phala*), *sāyujya* (*madhyama-sevāphala*) and *bhajanopayogi deha* (*adhama-sevā-phala*)¹.

Topics of Vallabha Vedānta as explained by Vallabha's followers.

A number of papers, which deserve some notice, were written by the followers of Vallabha on the various topics of the Vedānta. According to the *Bhāgavata-purāṇa* (III. 7, 10-11), as interpreted by Vallabha in his *Subodhinī*, error is regarded as wrong attribution of a quality or character to an entity to which it does not belong². Taking his cue from Vallabha, Bālakṛṣṇa Bhaṭṭa (otherwise called Dallū Bhaṭṭa) tries to evolve a philosophic theory of illusion according to the Vallabha school. He says that in the first instance there is a contact of the eye (as associated with the *manas*) with the conch-shell, and thereby there arises an indeterminate knowledge (*sāmānyajñāna*), which is prior to doubt and other specific cognitions; this indeterminate cognition rouses the *sattvaguna* of the *buddhi* and thereby produces right knowledge. It is therefore said in the *Sarvanirṇaya* that *buddhi* as associated with *sattva* is to be regarded as *pramāṇa*. In the *Bhāgavata* (III. 26. 30) doubt, error, definite knowledge, memory and dream are regarded as states of *buddhi*; so the defining character of cognition is to be regarded as a function of *buddhi*. Thus it is the *manas* and the senses that produce indeterminate knowledge, which later on becomes differentiated through the function of *buddhi*. When through the *tamas* quality of *māyā* the *buddhi* is obscured, the conch-shell with which the senses are in contact is not perceived; the *buddhi*, thus obscured, produces the notion of silver by its past impression of silver, roused by the shining characteristic of the conch-shell, which is similar to

¹ *bhakti-mārgē sevāyā uttama-madhyama-sādhāraṇādihikārakrameṇa etat phala-trayam eva, no mokṣādih*. Harirāja's commentary on *Sevāphala*, śloka 6.

² *yathā jale candramasaḥ pratibimbitasya tena jalena kṛto guṇaḥ kāmṇādi-dharmāḥ āsanno vidyamāno mithyaiva dṛśyate na vastutaścandrasya evam anātmano dehader dharmo janma-bandha-duḥkhādirūpo dṛaṣṭur ātmano jīvasya na īśvarasya*. *Subodhinī*, III. 7. 11.

silver. In the Śāṅkara school of interpretation the false silver is created on the conch-shell, which is obscured by *avidyā*. The silver of the conch-shell-silver is thus an objective creation, and as such a relatively real object with which the visual sense comes in contact. According to Vallabha the conch-shell-silver is a mental creation of the *buddhi*¹. The indefinite knowledge first produced by the contact of the senses of the *manas* is thus of the conch-shell, conch-shell-silver being a product of the *buddhi*; in right knowledge the *buddhi* takes in that which is grasped by the senses. This view of illusion is called *anyakhyāti*, i.e., the apprehension of something other than that with which the sense was in contact. The Śāṅkara interpretation of illusion is false; for, if there was a conch-shell-silver created by the *māyā*, it is impossible to explain the notion of conch-shell; for there is nothing to destroy the conch-shell-silver which would have been created. The conch-shell-silver having obscured the conch-shell and the notion of conch-shell-silver not being destructible except without the notion of the conch-shell, nothing can explain how the conch-shell-silver may be destroyed. If it is suggested that the conch-shell-silver is produced by *māyā* and destroyed by *māyā*, then the notion of world-appearances produced by *māyā* may be regarded as destructible by *māyā*, and no effort can be made for the attainment of right knowledge. According to Vallabha the world is never false; it is our *buddhi* which creates false notions, which may be regarded as intermediate creation (*antarālīkī*). In the case of transcendental illusion—when the Brahman is perceived as the manifold world—there is an apprehension of Him as being, which is of an indefinite nature. It is this being which is associated with characters and appearances, e.g., the jug and the pot, which are false notions created by *buddhi*. These false notions are removed when the defects are removed, and not by the intuition of the locus of the illusion; the intellectual creation of a jug and a pot may thus be false, though this does not involve the denial of a jug or a pot in the actual world². So the notion of world-creation and world-destruction are false notions created by us. The *jīva*, being a part of God, is true; it is false only

¹ *iad idaṃ bauddham eva rajataṃ buddhyā viṣayi-kriyate. na tu sāmānya-jñāne cakṣur-viṣayi-bhūtaṃ iti vivekaḥ. Vādāvali, p. 3.*

² *atrāpi bauddha eva ghaṭo mithyā, na tu prapañcāntar-vartti niṣkarṣaḥ. Ibid. p. 6.*

in so far as it is regarded as the subject of the cycle of birth and rebirth. The falsity of the reality of the world thus depends on the manner in which it is perceived¹; so, when one perceives the world and knows it as Brahman, his intellectual notion of the real diversity of the world vanishes, though the actually perceived world may remain as it is². The creation of *māyā* is thus not external, but internal. The visible world, therefore, as such is not false; only the notion of it as an independent reality, apart from God, is false. The word *māyā* is used in two senses, as the power of God to become all, and as the power of delusion; and the latter is a part of the former.

Puruṣottama, however, gives a different interpretation in his *Khyātivāda*. He says that the illusion of conch-shell-silver is produced by the objective and the external projection of knowledge as a mental state through the instrumentality of *māyā*; the mental state thus projected is intuited as an object³. This external projection is associated with the rising of older impressions. It is wrong to suppose that it is the self which is the basis of illusion; for the self is the basis of self-consciousness and in the perception of the conch-shell-silver no one has the notion "I am silver."

Speaking against the doctrine of the falsity of the world, Giridhara Gosvāmī says in his *Prapañcavāda* that the illusoriness of the world cannot be maintained. If the falsity of the perceived world is regarded as its negation in past, present and future, then it could not have been perceived at all; if this negation be of the nature of *atyantābhāva*, then, since that concept is dependent on the existence of the thing to be negated and since that thing also does not exist, the negation as *atyantābhāva* does not exist either. If the negation of the world means that it is a fabrication of illusion, then again there are serious objections; an illusion is an illusion only in comparison with a previous right knowledge; when no comparison with a previous right knowledge is possible, the world cannot be an illusion.

³ *ataḥ śukti-rajatādi-sthale māyayā bahiḥ-kṣipta-buddhi-vṛtti-rūpaṃ jñānam eva arthākāreṇa khyāyata iti mantavyam. Ibid.* p. 121.

If the nature of the world be regarded as due to *avidyā*, one may naturally think, to whom does the *avidyā* belong? Brahman (according to the Śāṅkarites) being qualityless, *avidyā* cannot be a quality of Brahman. Brahman Himself cannot be *avidyā*, because *avidyā* is the cause of it. If *avidyā* is regarded as obscuring the right knowledge of anything, then the object of which the right knowledge is obscured must be demonstrated. Again, the Śāṅkarites hold that the *jīva* is a reflection of Brahman on *avidyā*. If that is so, then the qualities of the *jīva* are due to *avidyā* as the impurities of a reflection are due to the impurity of the mirror. If that is so, the *jīva* being a product of the *avidyā*, the latter cannot belong to the former. In the Vallabha view the illusion of the individual is due to the will of God.

Again, the *avidyā* of the Śāṅkarites is defined as different from being and non-being; but no such category is known to anybody, because it involves self-contradiction. Now the Śāṅkarites say that the falsity of the world consists in its indefinableness; in reality this is not falsity—if it were so, Brahman Himself would have been false. The *śruti* texts say that He cannot be described by speech, thought or mind. It cannot be said that Brahman can be defined as being; for it is said in the text that He is neither being nor non-being (*na sat tan nāsad ity ucyate*). Again, the world cannot be regarded as transformation (*vikāra*); for, if it is a *vikāra*, one must point out that of which it is a *vikāra*; it cannot be of Brahman, because Brahman is changeless; it cannot be of anything else, since everything except Brahman is changeable.

In the Vallabha view the world is not false, and God is regarded as the *samavāyi* and *nimitta-kāraṇa* of it, as has been described above. *Samavāyi-kāraṇa* is conceived as pervading all kinds of existence, just as earth pervades the jug; but, unlike the jug, there is no transformation or change (*vikāra*) of God, because, unlike the earth, God has will. The apparent contradiction, that the world possessed of quality and characters cannot be identified with Brahman, is invalid, because the nature of Brahman can only be determined from the scriptural texts, and they unquestionably declare that Brahman has the power of becoming everything.

In the *Bhedābheda-svarūpa-nirṇaya* Puruṣottama says that according to the *satkāryavāda* view of the Vedānta all things are existent in the Brahman from the beginning. The *jīvas* also, being

the parts of God, exist in Him. The difference between the causal and the effect state is that in the latter certain qualities or characters become manifest. The duality that we perceive in the world does not contradict monism; for the apparent forms and characters which are mutually different cannot contradict their metaphysical character of identity with God¹. So Brahman from one point of view may be regarded as partless, and from another point of view as having parts.

There is a difference, however, between the *prapañca* and the manifold world and *saṃsāra*, the cycle of births and rebirths. By the concept of *saṃsāra* we understand that God has rendered Himself into effects and the *jīvas* and the notion of their specific individuality as performers of actions and enjoyers of experience. Such a notion is false; there is in reality no cause and effect, no bondage and salvation, everything being of the nature of God. This idea has been explained in Vallabha Gosvāmī's *Prapañca-saṃsāra-bheda*. Just as the sun and its rays are one and the same, so the qualities of God are dependent upon Him and identical with Him; the apparent contradiction is removed by the testimony of the scriptural texts².

Regarding the process of creation Puruṣottama, after refuting the various views of creation, says that Brahman as the identity of *sat*, *cit*, and *ānanda* manifests Himself as these qualities and thereby differentiates Himself as the power of being, intelligence and action, and He is the delusive *māyā*. These differentiated qualities show themselves as different; they produce also the notion of difference in the entities with which they are associated and express themselves in definite forms. Though they thus appear as different, they are united by God's will. The part, as being associated with the power of action, manifests itself as matter. When the power of intelligence appears as confused it is the *jīva*³. From the point of view of the world the Brahman is the *vivartakāraṇa*; from the point of view of the self-creation of God, it is *pariṇāma*⁴.

Viṭṭhala's Interpretation of Vallabha's Ideas.

Viṭṭhala, the son of Vallabha, wrote an important treatise called *Vidvanmaṇḍana* upon which there is a commentary, the *Suvarṇa-sūtra*, by Puruṣottama. The central ideas of this work may now be detailed.

There are many Upaniṣadic texts which declare that Brahman is without any determinate qualities (*nirviśeṣa*) and there are others which say that He is associated with determinate qualities, i.e., He is *saviśeṣa*. The upholders of the former view say that the *guṇas* or *dharma*s which are attributed by the other party must be admitted by them as having a basis of existence somewhere. This basis must be devoid of qualities, and this qualityless being cannot be repudiated by texts which declare the Brahman to be endowed with qualities; for the latter can only be possible on the assumption of the former, or in other words the former is the *upajīvyā* of the latter. It may, however, be argued that the *śruti* texts which declare that the Brahman is qualityless do so by denying the qualities; the qualities then may be regarded as primary, as the ascertainment of the qualityless is only possible through the denial of the qualities. The reply is that, since the *śruti* texts emphasize the qualityless, the attempt to apprehend the qualityless through qualities implies contradiction; such a contradiction would imply the negation of both quality and qualityless and lead us to nihilism (*śūnya-vāda*). If, again, it is argued that the denial of qualities refers only to ordinary mundane qualities and not to those qualities which are approved by the Vedas, then there is also a pertinent objection; for the *śruti* texts definitely declare that the Brahman is absolutely unspeakable, indefinable. But it may further be argued that, if Brahman be regarded as the seat of certain qualities which are denied of it, then also such denial would be temporarily qualified and not maintained absolutely. A jug is black before being burnt and, when it is burnt, it is no longer black, but brown. The reply proposed is that the qualities are affirmed of Brahman as conditioned and denied of Brahman as unconditioned. When one's heart becomes pure by the worship of the Brahman as conditioned he understands the nature of Brahman as unconditioned. It is for the purpose of declaring the nature of such a Brahman that the texts declare Him to be qualityless: they declare Him to be endowed

with qualities when He is conditioned by *avidyā*. To this Viṭṭhala says that, if Brahman is regarded as the Lord of the world, He cannot be affirmed as qualityless. It cannot be argued that these qualities are affirmed of Brahman as conditioned by *avidyā*; for, since both Brahman and *avidyā* are beginningless, there would be a continuity of creation; the creation, being once started by *avidyā*, would have nothing else to stop it. In the Vedāntic text it is the Brahman associated with will that is regarded as the cause of the world; other qualities of Brahman may be regarded as proceeding from His will. In the Śāṅkarite view, according to which the will proceeds from the conditioned Brahman, it is not possible to state any reason for the different kinds of the will. If it is said that the appearance of the different kinds of will and qualities is the very nature of the qualities of the conditioned, then there is no need to admit a separate Brahman. It is therefore wrong to suppose that Brahman exists separately from the *guṇas* of which He is the seat through the conditions. In the *Brahma-sūtra* also, immediately after launching into an enquiry about Brahman, Bādarāyaṇa defines His nature as that from which the creation and destruction of the world has proceeded; the *Brahma-sūtra*, however, states that such creative functions refer only to a conditioned Brahman. It is wrong to say that, because it is difficult to explain the nature of pure Brahman, the *Brahma-sūtra* first speaks of the creation of the world and then denies it; for the world as such is perceived by all, and there is no meaning in speaking of its creation and then denying it—it is as if one said “My mother is barren”. If the world did not exist, it would not have appeared as such. It cannot be due to *vāsanā*; for, if the world never existed, there would be no experience of it and no *vāsanā*. *Vāsanā* also requires other instruments to rouse it, and there is no such instrument here.

It cannot be said that the *avidyā* belongs to the *jīvas*, because the *jīvas* are said to be identical with Brahman and the observed difference to be due to false knowledge. If knowledge destroys *avidyā*, then the *avidyā* of the *jīva* ought to be destroyed by the *avidyā* underlying it. Again, if the world is non-existent, then its cause, the *avidyā*, ought also to be non-existent. What is *jīva*? It cannot be regarded as a reflection of Brahman; for only that which has colour can have reflection; it is not the formless sky that is reflected in the sky, but the rays of the sun hovering above.

Moreover, *avidyā* is all-pervasive as Brahman: how can there be reflection? Again such a theory of reflection would render all our moral efforts false, and emancipation, which is their result, must also be false; for the means by which it is attained is very false. Moreover, if the Vedas themselves are false, as mere effects of *avidyā*, it is wrong to suppose that the nature of Brahman as described by them is true. Again, in the case of reflections there are true perceivers who perceive the reflection; the reflected images cannot perceive themselves. But in the case under discussion there are no such perceivers. If the Paramātman be not associated with *avidyā*, He cannot perceive the *jīvas*, and if He is associated with *avidyā*, He has the same status as the *jīvas*. Again, there is no one who thinks that *jīva* is a reflection of the Brahman or the *antaḥkaraṇa*; upon such a view, since the *jīvanmukta* has an *antaḥkaraṇa*, he cannot be a *jīvanmukta*. If the *jīva* is a reflection on *avidyā*, then the *jīvanmukta* whose *avidyā* has been destroyed can no longer have a body. Since everything is destroyed by knowledge, why should there be a distinction in the case of the *prārabdha karma*? Even if by the *prārabdha karma* the body may continue to exist, there ought not to be any experience. When one sees a snake his body shakes even when the snake is removed; this shaking is due to previous impressions, but *prārabdha karma* has no such past impressions, and so it ought to be destroyed by knowledge; the analogy is false. It is therefore proved that the theory of the *jīva* as reflection is false.

There is another interpretation of the Śāṅkara Vedānta, in which it is held that the appearance of the *jīva* as existing separate from Brahman is a false notion; impelled by this false notion people are engaged in various efforts for self-improvement¹. On this explanation too it is difficult to explain how the erroneous apprehension arises and to whom it belongs. The *jīva* himself, being a part of the illusion, cannot be a perceiver of it, nor can the nature of the relation of the *avidyā* and the Brahman be explained; it cannot be contact, because both *avidyā* and Brahman are self-pervasive; it cannot be illusory, since there is no illusion prior to illusion; it cannot

¹ *asmin pakṣe jīvasya vastuto brahmatve bheda-bhānasya jīva-pada-vācya-tāyās ca duṣṭatvaṃ na tu svarūpātirekatvaṃ na vā mokṣasya apuruṣārthatvaṃ na vā pāralaukika-prayātna-pratirodhaḥ*. Puruṣottama's *Suvarṇa-sūtra* on *Vidvan-maṇḍana*, p. 37.

be unique, since in that case even an emancipated person may have an error. Again, if *avidyā* and its relation are both beginningless and *jīva* be also beginningless, then it is difficult to determine whether *avidyā* created *jīva* or *jīva* created *avidyā*.

It must therefore be assumed that the bondage of the *jīvas* or their existence as such is not beginningless. Their bondage is produced by *avidyā*, which is a power of God, and which operates only with reference to those *jīvas* whom God wishes to bind. For this reason we have to admit a number of beings, like snakes and others, who were never brought under the binding power of *avidyā*¹. All things appear and disappear by the grace of God as manifesting (*āvirbhāva*) and hiding (*tirobhāva*). The power of manifesting is the power by which things are brought within the sphere of experience (*anubhava-viśayatva-yogyatāvirbhāvaḥ*), and the power of hiding is the power by which things are so obscured that they cannot be experienced (*tad-aviśaya-yogya tātirobhāvaḥ*). Things therefore exist even when they are not perceived; in the ordinary sense existence is defined as the capacity of being perceived, but in a transcendental sense things exist in God even when they are not perceived. According to this view all things that happened in the past and all that may happen in the future—all these exist in God and are perceived or not perceived according to His will².

The *jīva* is regarded as a part of God; this nature of *jīva* can be realized only on the testimony of the scriptures. Being a part of God, it has not the fullness of God and therefore cannot be as omniscient as He. The various defects of the *jīva* are due to God's will: thus, in order that the *jīva* may have a diversity of experience, God has obscured His almighty power in him and for securing his moral efforts He has associated him with bondage and rendered him independent. It is by obscuring His nature as pure bliss that the part of God appears as the *jīva*. We know that the followers of Madhva also regard the *jīvas* as parts of God; but according to them they are distinct from Him, and the identity of the Brahman and the *jīva* is only in a remote sense. According to the Nimbārka

¹ *yad-bandhane tad-icchā tam eva sa badhnāti.* Puruṣottama's *Suvarṇa-sūtra*, p. 35.

² *asmin kāle asmin deśe idam kāryam idam bhavatu iti icchā-viśayatvam āvir-bhāvaḥ tadā tatra tat mā bhavatu iti icchā-viśayatvam tirobhāvaḥ.* *Ibid.* p. 56.

jīvas are different from God, and are yet similar to Him: they too regard *jīvas* as God's parts, but emphasize the distinctness of the *jīvas* as well as their similarity to Him. According to Rāmānuja God holds the *jīvas* within Himself and by His will dominates all their functions, by expanding or contracting the nature of the *jīva's* knowledge. According to Bhāskara *jīva* is naturally identical with God, and it is only through the limiting conditions that he appears as different from Him. According to Vijñāna-bhikṣu, though the *jīvas* are eternally different from God, because they share His nature they are indistinguishable from Him¹.

But the Vallabhas hold that the *jīvas*, being parts of God, are one with Him; they appear as *jīvas* through His function as *āvirbhāva* and *tirobhāva*, by which certain powers and qualities that exist in God are obscured in the *jīva* and certain other powers are manifested. The manifestation of matter also is by the same process; in it the nature of God as intelligence is obscured and only His nature as being is manifested. God's will is thus the fundamental determinant of both *jīva* and matter. This also explains the diversity of power and character in different individuals, which is all due to the will of God. But in such a view there is a serious objection; for good and bad *karmas* would thus be futile. The reply is that God, having endowed the individual with diverse capacities and powers for his own self-enjoyment, holds within His mind such a scheme of actions and their fruits that whoever will do such actions will be given such fruits. He does so only for His own self-enjoyment in diverse ways. The law of *karma* is thus dependent on God and is dominated by Him². Vallabha, however, says that God has explained the goodness and badness of actions in the scriptures. Having done so, He makes whoever is bent upon following a particular course of conduct do those actions. *Jīva's* will is the cause of the *karma* that he does; the will of the person is determined by his past actions; but in and through them all God's will is the ultimate dispenser. It is here that one distinguishes the differences between the *maryādā-mārga* and the *puṣṭi-mārga*: the *maryādā-*

¹ *jīvānāṃ nitya-bhinnatvam aṅgīkṛtya avibhāga-lakṣaṇam aṅgīkṛtya sajātiyātve sati avibhāga-pratīyogitvam aṁśatvam tad-anuyogitvam ca aṁśitvam. Suvārṇa-sūtra, p. 85.*

² *kṛdāiva muktyā anyat sarvaṃ upasarjaṃbhūtaṃ tathā ca tadapekṣyā bhagavān vicitra-rasānubhavārtham evaṃ yāḥ kariṣyati tam evaṃ kariṣyāmīti svayam eva kāryādau cakāra. Vidvan-maṇḍana, p. 91.*

mārga is satisfied that in the original dispensation certain *karmas* should be associated with certain fruits, and leaves the individual to act as he pleases; but the *puṣṭi-mārga* makes the playful activity of God the cause of the individual's efforts and also of the law of *karma*¹.

The Upaniṣad says that, just as sparks emanate from fire, so the *jīvas* have emanated from Brahman. This illustration shows that the *jīvas* are parts of God, atomic in nature, that they have emanated from Him and may again merge in Him. This merging in God (*Brahma-bhāva*) means that, when God is pleased, He manifests His blissful nature as well as His powers in the *jīva*². At the time of emancipation the devotees merge in God, become one with Him, and do not retain any separate existence from Him. At the time of the incarnation of God at His own sweet will He may incarnate those parts of Him which existed as emancipated beings merged in Him. It is from this point of view that the emancipated beings may again have birth³.

It is objected that the *jīvas* cannot be regarded as atomic in nature, because the Upaniṣads describe them as all-pervasive. Moreover, if the *jīvas* are atomic in nature, they would not be conscious in all parts of the body. The analogy of the sandal-paste, which remaining in one place makes the surrounding air fragrant, does not hold good; for the surrounding fragrance is due to the presence of minute particles. This cannot be so with the souls; consciousness, being a quality of the soul, cannot operate unless the soul-substance is present there. The analogy of the lamp and its rays is also useless; the lamp has no pervasive character; for the

¹ *ācāryas tu yathā putram yatamāna-valaṃ vā padārtha-guṇa-doṣau varṇayan api yat-prayatnābhiniवेशं paśyati tathaiiva kārayati. phala-dānārthaṃ śrutau karmāpekṣā-kathanāt phaladāne karmāpekṣaḥ karma-karane jīva-kṛta-prayatnāpekṣaḥ, prayatne tat-karmāpekṣaḥ, svargādi-kāme ca lokapravāhūpekṣaḥ kārayatīti na brahmaṇo doṣagandho'pi, na caivam anīśvaratvam. mār्याdāmārgasya tathaiiva nirmāṇāt. yatra tvanyathā tatra puṣṭi-mārgāṅgikāra ityāhuḥ. ayamapi pakṣaḥ svakṛtamār्याdayā eva hetutvena kathanān mār्याdhākarane nīrūpaṇād rte hetvantarasya sambhavād asmaduktānnātīricyate. ² *brahma-bhāvasca bhagavad-ukta-sāadhanakaraṇena santuṣṭāt bhagavata ānanda-prākṛtyāt svaguṇa-svarūpaśvār्याdi-prākṛtyāc ceti jñeyam.... Ibid. p. 96.*

³ *mokṣe jīva-brahmaṇor abhinnavād abhinnavabhāvenaiiva nīrūpaṇād ityarthah. tenādi-madhyāvasāneṣu śuddha-brahmaṇa evopādānatvāt....svāvatārasamayē kṛdārthaṃ sākṣād yogyās ta eva bhavanti tīnāpyavatārayatīti punar nīrgama-yogyatvam, idameva, muktānupasṛpya vyapadeśādītisūtreṇoktam....muktā api līlā-vigrahaṃ kṛtvā bhajanti iti. Ibid. p. 97.*

illumination is due to the presence of minute light-particles. To this Viṭṭhala replies that Bādarāyaṇa himself describes the nature of the *jīvas* as atomic. The objection that qualities cannot operate in the absence of the substance is not valid either. Even the Naiyāyikas admit that the relation of *samavāya* may exist without the relata. The objection that the fragrance of a substance is due to the presence of minute particles of it is not valid; for a piece of musk enclosed in a box throws its fragrance around it, and in such cases there is no possibility for the minute particles of the musk to come out of the box; even when one touches garlic, the smell is not removed even by the washing of the hand. It must therefore be admitted that the smell of a substance may occupy a space larger than the substance itself. There are others who think that the soul is like fire, which is associated with heat and light, the heat and light being comparable to consciousness; they argue that, being of the nature of consciousness, the soul cannot be atomic. This is also invalid; for the Upaniṣad texts declare that knowledge is a quality of the soul, and it is not identical with it. Even heat and light are not identical with fire; through the power of certain gems and *mantras* the heat of the fire may not be felt; warm water possesses heat, though it has no illumination. Moreover, the Upaniṣad texts definitely declare the passage of the soul into the body, and this can only be possible if the soul is atomic. The objection that these texts declare the identity of souls with Brahman cannot be regarded as repudiating the atomic nature of the *jīvas*; because this identification is based on the fact that the qualities of knowledge or intuition that belong to the *jīvas* are really the qualities of God. The *jīvas* come out of Brahman in their atomic nature and Brahman manifests His qualities in them, so that they may serve Him. The service of God is thus the religion of man; being pleased with it God sometimes takes man within Himself, or at other times, when He extends His highest grace, He keeps him near Himself to enjoy the sweet emotion of his service¹.

The Śāṅkarites think that Brahman is indeterminate (*nirviśeṣa*) and that all determination is due to *avidyā*. This view is erroneous;

¹ *ata eva sahaja-hari-dāsya-tadaṃśatvena brahma-svarūpaśya ca nijaṇisarga-prabhu-śrīgokula-nātha-caraṇa-kamala-dāsyam eva sva-dharmāḥ. tena cātisaṃtuṣṭaḥ svayaṃ prakāṣībhuṃ nija-guṇāṃś tasmai dattā svasmin praveśayati svarūpānandānubhavārtham. athavā'tyanugrahe nīkate sthāpayati tato'dhikarasa-dāsya-karaṇārtham iti. Ibid. p. 110*

for the supposed *avidyā* cannot belong to the *jīvas*; if it did, it could not affect the nature of Brahman. Nor can it belong to Brahman, because Brahman, being pure knowledge, is destructive of all *avidyā*; again, if the *avidyā* belonged to the Brahman from beginningless time, there would be no *nirviṣeṣa* Brahman. It must therefore be admitted that Brahman possesses the power of knowledge and action and that these powers are natural to and identical with Him. Thus God, in association with His powers, is to be regarded as both determinate and indeterminate; the determinate forms of Brahman are, however, not to be regarded as different from Brahman or as characters of Him; they are identical with Brahman Himself¹.

If *māyā* is regarded as the power of Brahman, then Vallabha is prepared to admit it; but, if *māyā* is regarded as something unreal, then he repudiates the existence of such a category. All knowledge and all delusion come from Brahman, and He is identical with so-called contradictory qualities. If a separate *māyā* is admitted, one may naturally enquire about its status. Being unintelligent (*jaḍā*), it cannot of itself be regarded as the agent (*kartr*); if it is dependent on God, it can be conceived only as an instrument—but, if God is naturally possessed of infinite powers, He cannot require any such inanimate instrument. Moreover, the Upaniṣads declare that Brahman is pure being. If we follow the same texts, Brahman cannot be regarded as associated with qualities in so far as these *guṇas* can be considered as modifications of the qualities of *sattva*, *rajas* and *taṃas*. It is therefore to be supposed that the *māyā* determines or modifies the nature of Brahman into His determinate qualities. To say that the manifestation of *māyā* is effected by the will of God is objectionable too; for, if God's will is powerful in itself, it need not require any *upādhi* or condition for effecting its purpose. In reality it is not possible to speak of any difference or distinction between God and His qualities.

¹ *brahmanyapi mūrtāmūrtarūpe sarvataḥ veditavye evaṃ tvānena prakāreṇa veditavye brahmaṇa eṭe rūpe iti; kintu brahmaiva iti veditavye. Vidvan-maṇḍana*, p. 138.

Life of Vallabha (1481-1533).

Vallabha was born in the lineage of Yajñanārāyaṇa Bhaṭṭa; his great-grandfather was Gaṅgādhara Bhaṭṭa, his grandfather Gaṇapati Bhaṭṭa, and his father Lakṣmaṇa Bhaṭṭa. It is said that among themselves they performed one hundred *somayāgas* (soma sacrifices). The family was one of Telugu Brahmins of South India, and the village to which they belonged was known as Kamkar Khamlh; his mother's name was Jllamagaru. Glasenapp, following N. G. Ghosh's sketch of Vallabhācārya, gives the date of his birth as A.D. 1479; but all the traditional accounts agree in holding that he was born in Pampāraṇya, near Benares, in *Samvat* 1535 (A.D. 1481), in the month of *Vaiśākha*, on the eleventh lunar day of the dark fortnight. About the time of his birth there is some discrepancy of opinion; but it seems very probable that it was the early part of the night, when the Scorpion was on the eastern horizon. He was delivered from the womb in the seventh month underneath a tree, when Lakṣmaṇa Bhaṭṭa was fleeing from Benares on hearing of the invasion of that city by the Moslems; he received initiation from his father in his eighth year, and was handed over to Viṣṇucitta, with whom he began his early studies. His studies of the Vedas were carried on under several teachers, among were them Tirammalaya, Andhanārāyaṇadīkṣita and Mādhavayatīndra. All these teachers belonged to the Madhva sect. After his father's death he went out on pilgrimage and began to have many disciples, Dāmodara, Śambhū, Svabhū, Svayambhū and others. Hearing of a disputation in the court of the king of Vidyānagara in the south, he started for the place with his disciples, carrying the *Bhāgavata-purāṇa* and the symbolic stone (*śālagrāma śilā*) of God with him. The discussion was on the problem of the determinate nature of Brahman; Vallabha, being of the Viṣṇusvāmī school, argued on behalf of the determinate nature of Brahman, and won after a protracted discussion which lasted for many days. He met here Vyāsa-tīrtha, the great Madhva teacher. From Vidyānagara he moved towards Pampā and from there to the Ṛṣyamukha hill, from there to Kāmākāṣṇī, from there to Kāncī, from there to Cidambaram and from there to Rāmeśvaram. Thence he turned northwards and, after passing through many places, came to Mahiṣapuri and was well received by the king of that place; from there he came

to Molulakota (otherwise called Yādavādri). From there he went to Udipi, and thence to Gokarṇa, from where he again came near Vidyānagara (Vijayanagara) and was well received by the king. Then he proceeded to Pāṇḍuraṅga, from there to Nāsik, then by the banks of the Revā to Mahiṣmatī, from there to Viśāla, to a city on the river Vetravati to Dhalalāgiri, and from there to Mathurā. Thence he went to Vṛndāvana, to Siddhapura, to the Arhatpattana of the Jains, to Vṛddhanagara, from there to Viśvanagara. From Viśvanagara he went to Guzerāt and thence to the mouth of the river Sindh through Bhāruch. From there he proceeded to Bhamkṣetra, Kapilakṣetra, then to Prabhāsa and Raivata, and then to Dvārakā. From there he proceeded to the Punjab by the banks of the river Sindh. Here he came to Kurukṣetra, from there to Hardwar and to Hṛṣīkeśa, to Gaṅgottri and Yamunottri. After returning to Hardwar he went to Kedāra and Badarikāśrama. He then came down to Kanauj, then to the banks of the Ganges, to Ayodhyā and Allāhābad, thence to Benares. From there he came to Gayā and Vaidyanātha, thence to the confluence of the Ganges and the sea. He then came to Purī. From there he went to Godāvarī, proceeded southwards and came again to Vidyānagara. Then he proceeded again to Dvārakā through the Kathiāwād country; from there he came to Puṣkara, thence again to Bṛndāvana and again to Badarikāśrama. He then came again to Benares; after coming again to the confluence of the Ganges he returned to Benares, where he married Mahā-lakṣmī, the daughter of Devaṇṇa Bhaṭṭa. After marriage he started again for Vaidyanātha and from there he again proceeded to Dvārakā, thence again to Badarikāśrama; from there he came to Bṛndāvana. He again returned to Benares. He then came to Bṛndāvana. From there he came to Benares, where he performed a great *somayāga*. His son Viṭṭhalanātha was born in 1518 when he was in his thirty-seventh year. For his later life he renounced the world and became a *sannyāsin*. He died in 1533. He is said to have written eighty-four works and had eighty-four principal disciples.

Works of Vallabha and his Disciples.

Of the eighty-four books (including small tracts) that Vallabha is said to have written we know only the following; *Antaḥkaraṇa-prabodha* and commentary, *Ācārya-kārikā*, *Anandādhikaraṇa*, *Āryā*, *Ekānta-rahasya*, *Kṛṣṇāśraya*, *Catuḥśloki bhāgavata-ṭikā*, *Ḥalabheda*, *Ḥaiminisūtra-bhāṣya-mīmāṃsā*, *Tattvadīpa* (or more accurately *Tattvārthadīpa* and commentary), *Trividhalilānāmāvalī*, *Navaratna* and commentary, *Nibandha*, *Nirodha-lakṣaṇa* and *Vivṛti*, *Patrāvalambana*, *Padya*, *Parityāga*, *Parivṛddhāṣṭaka*, *Puruṣottamasahasranāma*, *Puṣṭi-pravāha-maryādābheda* and commentary, *Pūrvamīmāṃsā-kārikā*, *Premāmṛta* and commentary, *Praudhacaritanāma*, *Bālacaritanāman*, *Bālabodha*, *Brahma-sūtrāṇubhāṣya*, *Bhakti-vardhinī* and commentary, *Bhakti-siddhānta*, *Bhagavad-gītā-bhāṣya*, *Bhāgavata-tattvadīpa* and commentary, *Bhāgavata-purāṇa-ṭikā* *Subodhinī*, *Bhāgavata-purāṇa-daśamaskandhānukramaṇikā*, *Bhāgavata-purāṇa-pañcamaskandha-ṭikā*, *Bhāgavata-purāṇa-ikādaśaskandhārthanirūpaṇa-kārikā*, *Bhāgavatasāra-samuccaya*, *Maṅgalavāda*, *Mathurā-māhātmya*, *Madhurāṣṭaka*, *Yamunāṣṭaka*, *Rājāvilānāma*, *Vivekadhairyaśraya*, *Vedastutikārikā*, *Śraddhāprakaraṇa*, *Śrutisāra*, *Sannyāsanirṇaya* and commentary, *Sarvottamastotra-ṭippaṇa* and commentary, *Sākṣātpuruṣottamavākya*, *Siddhānta-muktāvalī*, *Siddhānta-rahasya*, *Sevāphala-stotra* and commentary, *Svāmīnyaṣṭaka*¹.

The most important of Vallabha's works are his commentary on the *Bhāgavata-purāṇa* (the *Subodhinī*), his commentary on the *Brahma-sūtra*, and his commentary *Prakāśa* on his own *Tattvadīpa*. The *Subodhinī* had another commentary on it called the *Subodhinī-lekha* and the *Subodhinī-yojana-nibandha-yojana*; the commentary on the *Rasapañcādhyāya* was commented upon by Pitāmbara in the *Rasapañcādhyāyī-prakāśa*. Vallabha's commentary on the *Brahma-sūtra*, the *Āṇubhāṣya*, had a commentary on it by Puruṣottama (the *Bhāṣya-prakāśa*), another by Giridhara (*Vivaraṇa*), another by Icchārama (the *Brahma-sūtrāṇubhāṣya-pradīpa*), and another, the *Balāprabodhinī*, by Śrīdhara Śarma. There was also another commentary on it, the *Āṇubhāṣya-nigūḍhārtha-dīpikā* by Lalu Bhaṭṭa, of the seventeenth century; another by Muralidhara, the pupil of Viṭṭhala (the *Āṇubhāṣya-vyākhyā*), and the *Vedānta-candrikā* by an

¹ See Aufrecht's *Catalogus Catalogorum*.

anonymous writer. Vallabha's own commentary *Prakāśa* on the *kārikās* he had written had a commentary on the first part of it, the *Āvaraṇa-bhaṅga* by Pitāmbaraji Mahārāja. The *Tattvārthadīpa* is divided into three sections, of which the first, the *Śāstrārtha-prakarāṇa*, contains 105 *kārikās* of a philosophical nature; the second section, the *Sarvanirṇaya-prakarāṇa*, deals with eschatology and matters relating to duties; the third, the *Bhāgavatārtha-prakarāṇa*, containing a summary of the twelve chapters of the *Bhāgavata-purāṇa*, had a commentary on it, also called the *Āvaraṇa-bhaṅga*, by Puruṣottamaji Mahārāja. There was also another commentary on it by Kalyāṇarāja, which was published in Bombay as early as 1888.

Coming to the small tracts of Vallabha, we may speak first of his *Sannyāsa-nirṇaya*, which consists of twenty-two verses in which he discusses the three kinds of renunciation: the *sannyāsa* of *karma-mārga*, the *sannyāsa* of *jñāna-mārga* and the *sannyāsa* of *bhakti-mārga*. There are at least seven commentaries on it, by Gokulanātha, Raghunātha, Gokulotsava, the two Gopeśvaras, Puruṣottama and a later Vallabha. Of these Gokulanātha (1554–1643) was the fourth son of Viṭṭhalanātha; he also wrote commentaries on *Śrī Sarvottama-stotra*, *Vallabhāṣṭaka*, *Siddhānta-muktāvalī*, *Puṣṭi-pravāha-maryādā*, *Siddhānta-rahasya*, *Catuḥśloki*, *Dhairyyāśraya*, *Bhakti-vārdhinī* and *Sevāphala*. He was a great traveller and preacher of Vallabha's views in Guzerat, and did a great deal to make the *Subodhinī* commentary of Vallabha popular. Raghunātha, the fifth son of Viṭṭhalanātha, was born in 1557; he wrote commentaries on Vallabha's *Ṣoḍaśa-grantha* and also on *Vallabhāṣṭaka*, *Madhurāṣṭaka*, *Bhakti-hamsa* and *Bhakti-hetu*; also a commentary on *Puruṣottama-nāma-sahasra*, the *Nāma-candrikā*. Gokulotsava, the younger brother of Kalyāṇarāja and uncle of Harirāja, was born in 1580; he also wrote a commentary on the *Ṣoḍaśa-grantha*. Gopeśvara, the son of Ghanaśyāma, was born in 1598; the other Gopeśvara was the son of Kalyāṇarāja and the younger brother of Harirāja. Puruṣottama, also a commentator, was born in 1660. Vallabha, son of Viṭṭhalarāja, the other commentator, great-great-grandson of Raghunātha (the fifth son of Vallabhācārya) was born in 1575, and wrote a commentary on the *Aṇubhāṣya* of Vallabhācārya. He should be distinguished from the earlier Vallabha, the son of Viṭṭhaleśvara.

The *Sevāphala* of Vallabha is a small tract of eight verses which discusses the obstacles to the worship of God and its fruits; it was commented upon by Kalyāṇarāja. He was the son of Govindarāja, the second son of Viṭṭhalanātha, and was born in 1571; he was the father of Harirāja, and wrote commentaries on the *Śoḍaśa-grantha* and also on the rituals of worship. This work was also commented on by Devakīnandana, who was undoubtedly prior to Puruṣottama. One Devakīnandana, the son of Raghunātha (the fifth son of Viṭṭhalanātha), was born in 1570; a grandson of the same name was born in 1631. There was also a commentary on it by Haridhana, otherwise called Harirāja, who was born in 1593; he wrote many small tracts. There was another commentary on it by Vallabha, the son of Viṭṭhala. There were two other Vallabhas—one the grandson of Devakīnandana, born in 1619, and the other the son of Viṭṭhalarāja, born in 1675; it is probable that the author of the commentary of the *Sevāphala* is the same Vallabha who wrote the *Subodhinī-lekha*. There are other commentaries by Puruṣottama, Gopeśa, and Lālu Bhaṭṭa, a Telugu Brāhmin; his other name was Bālakṛṣṇa Dīkṣita. He probably lived in the middle of the seventeenth century; he wrote *Aṇubhāṣya-nigūḍhārtha-prakāśikā* on the *Aṇubhāṣya* of Vallabha and a commentary on the *Subodhinī* (the *Subodhinī-yojana-nibandha-yojana Sevākaumudī*), *Nirṇayārṇava*, *Prmeṃya-ratnārṇava*, and a commentary on the *Śoḍaśa-grantha*. There is another commentary by Jayagopāla Bhaṭṭa, the son of Cintāmaṇi Dīkṣita, the disciple of Kalyāṇarāja. He wrote a commentary on the *Taittirīya Upaniṣad*, on the *Kṛṣṇa-karṇāmṛta* of Bilvamaṅgala, and on the *Bhakti-vardhinī*. There is also a commentary by Lakṣmaṇa Bhaṭṭa, grandson of Śrinātha Bhaṭṭa and son of Gopinātha Bhaṭṭa, and also two other anonymous commentaries.

Vallabha's *Bhakti-vardhinī* is a small tract of eleven verses, commented upon by Dvārakeśa, Giridhara, Bālakṛṣṇa Bhaṭṭa (son of the later Vallabha), by Lālu Bhaṭṭa, Jayagopāla Bhaṭṭa, Vallabha, Kalyāṇarāja, Puruṣottama, Gopeśvara, Kalyāṇarāja and Bālakṛṣṇa Bhaṭṭa; there is also another anonymous commentary.

The *Sannyāsa-nirṇaya*, the *Sevāphala* and the *Bhakti-vardhinī* are included in the *Sixteen Tracts* of Vallabha (the *Śoḍaśa-grantha*); the others are *Yamunāṣṭaka*, *Bālabodha*, *Siddhānta-muktāvalī*,

Puṣṭi-pravāha-maryādā, *Siddhānta-rahasya*, *Navaratna*, *Antaḥkaraṇaprabodha*, *Vivekadhairyāśraya*, *Kṛṣṇāśraya*, *Catuḥśloki*, *Bhakti-vardhinī*, *Īalabheda* and *Pañcapādyā*. The *Yamunāṣṭaka* is a tract of nine verses in praise of the holy river Yamunā. *Bālabodha* is a small tract of nineteen verses, in which Vallabha says that pleasure (*kāma*) and extinction of sorrow (*mokṣa*) are the two primarily desirable things in the world; two others, *dharma* and *artha*, are desirables in a subsidiary manner, because through *artha* or wealth one may attain *dharma*, and through *dharma* one may attain happiness. *Mokṣa* can be attained by the grace of *Viṣṇu*. *Siddhānta-muktāvalī* is a small tract of twenty-one verses dealing with *bhakti*, which emphasize the necessity of abnegating all things to God. *Puṣṭi-pravāha-maryādā* is a small tract of twenty-five verses, in which Vallabha says that there are five kinds of natural defects, due to egotism, to birth in particular countries or times, to bad actions and bad associations. These can be removed by offering all that one has to God; one has a right to enjoy things after dedicating them to God. *Navaratna* is a tract of nine verses in which the necessity of abnegating and dedicating all things to God is emphasized. *Antaḥkaraṇa-prabodha* is a tract of ten verses which emphasize the necessity of self-inspection and prayer to God for forgiveness, and to convince one's mind that everything belongs to God. The *Vivekadhairyāśraya* is a small tract of seventeen verses. It urges us to have full confidence in God and to feel that, if our wishes are not fulfilled by Him, there must be some reason known to Him; He knows everything and always looks to our welfare. It is therefore wrong to desire anything strongly; it is best to leave all things to God to manage as He thinks best. The *Kṛṣṇāśraya* is a tract of eleven verses explaining the necessity of depending in all matters on Kṛṣṇa, the Lord. *Catuḥśloki* is a tract of four verses of the same purport. The *Bhakti-vardhinī* is a tract of eleven verses, in which Vallabha says that the seed of the love of God exists in us all, only it is obstructed by various causes; when it manifests itself, one begins to love all beings in the world; when it grows in intensity it becomes impossible for one to be attached to worldly things. When love of God grows to this high intensity, it cannot be destroyed. The *Īalabheda* contains twenty verses, dealing with the different classes of devotees and ways of devotion. The *Pañcapādyā* is a tract of five verses.

Viṭṭhaladikṣita or Viṭṭhaleśa (1518-88), the son of Vallabha, is said to have written the following works: *Avatāra-tāratamya-stotra*, *Āryā*, *Kṛṣṇa-premāmṛta*, *Gīta-govinda-prathamāṣṭapadī-vivṛti*, *Gokulāṣṭaka*, *Janmāṣṭamī-nirṇaya*, *Ḥalabheda-ṭikā*, *Dhruvāpada-ṭikā*, *Nāma-candrikā*, *Nyāsādeśavivarāṇa-prabodha*, *Premāmṛta-bhāṣya*, *Bhakti-ḥaṁsa*, *Bhakti-hetu-nirṇaya*, *Bhagavata-svatantratā*, *Bhagavadgītā-tātparya*, *Bhagavad-gītā-hetu-nirṇaya*, *Bhāgavata-tattva-dīpikā*, *Bhāgavata-daśama-skandha-vivṛti*, *Bhujāṅga-prayātāṣṭaka*, *Yāmunaṣṭaka-vivṛti*, *Rasasarvasva*, *Rāma-navamī-nirṇaya*, *Vallabhāṣṭaka*, *Vidvan-maṇḍana*, *Viveka-dhairyyāśraya-ṭikā*, *Śikṣā-patra*, *Śṛṅgārārasa-maṇḍana*, *Ṣaṭpadī*, *Samyāsa-nirṇaya-vivarāṇa*, *Samaya-pradīpa*, *Sarvottama-stotra* with commentary, commentary on *Siddhānta-muktāvalī*, *Sevākaumudī*, *Svatantrālekhana* and *Svāmistotra*¹. Of these *Vidyā-maṇḍana* is the most important; it was commented on by Puruṣottama and has already been noticed above in detail. A refutation of the *Vidyā-maṇḍana* and the *Śuddhādvaita-mārtaṇḍa* of Giridhara was attempted in 1868 in a work called *Sahasrākṣa* by Sadānanda, a Śāṅkarite thinker. This was again refuted in the *Prabhañjana* by Viṭṭhalanātha (of the nineteenth century) and there is a commentary on this by Govardhanaśarmā of the present century. From the *Sahasrākṣa* we know that Viṭṭhala had studied Nyāya in Navadvīpa and the Vedas, the *Mīmāṃsā* and the *Brahma-sūtra*, that he had gone to different countries carrying on his disputations and conquering his opponents, and that he was received with great honour by Svarūpasimha of Udaypur. Viṭṭhala's *Yāmunaṣṭakavivṛti* was commented on by Harirāja; his commentary on Vallabha's *Siddhānta-muktāvalī* was commented on by Brajanātha, son of Raghunātha. The *Madhurāṣṭaka* of Vallabha was commented on by Viṭṭhala, and his work was further commented on by Ghanaśyāma. The *Madhurāṣṭaka* had other commentaries on it, by Harirāja, Bālakṛṣṇa, Raghunātha and Vallabha. Viṭṭhala also wrote commentaries on the *Nyāsadesa* and the *Puṣṭipravāha-maryādā* of Vallabha. His *Bhakti-hetu* was commented on by Raghunātha; in this work Viṭṭhala discusses the possible course of the rise of *bhakti*. He says that there are two principal ways; those who follow the *maryādā-mārga* follow their duties and attain God in course of time, but those who follow the *puṣṭi-mārga* depend entirely on the grace of God. God's grace is not conditioned by

¹ See Aufrechts' *Catalogus Catalogorum*.

good deeds, such as gifts, sacrifices, etc., or by the performance of the prescribed duties. The *jīvas* as such are the natural objects to whom God's grace is extended when He is pleased by good deeds. But it is more appropriate to hold that God's grace is free and independent of any conditions; God's will, being eternal, cannot be dependent on conditions originated through causes and effects. The opponents' view—that by good deeds and by prescribed duties performed for God, *bhakti* is attained, and through *bhakti* there is the grace of God and, through that, emancipation—is wrong; for though different persons may attain purity by the performance of good deeds, yet some may be endowed with knowledge and others with *bhakti*; and this difference cannot be explained except on the supposition that God's grace is free and unconditioned. The supposition that with grace as an accessory cause the purity of the mind produces *bhakti* is also wrong; it is much better to suppose that the grace of God flows freely and does not require the co-operation of other conditions; for the scriptures speak of the free exercise of God's grace. Those whom God takes in the path of *maryādā* attain their salvation in due course through the performance of duties, purity of mind, devotion, etc.; but those to whom He extends His special grace are accepted in the path of *puṣṭi-bhakti*; they attain *bhakti* even without the performance of any prescribed duties. The prescription of duties is only for those who are in the path of *maryādā*; the inclination to follow either the *maryādā* or the *puṣṭi* path depends on the free and spontaneous will of God¹, so that even in the *maryādā-mārga bhakti* is due to the grace of God and not to the performance of duties². Viṭṭhala's view of the relation of God's will to all actions, whether performed by us or happening in the course of natural and material causes, reminds us of the doctrine of occasionalism, which is more or less of the same period as Viṭṭhala's enunciation of it; he says that whatever actions happened, are happening or will happen are due to the immediately preceding will of God to that effect; all causality is thus due to God's spontaneous will at the preceding

¹ *yeṣu jīveṣu yathā bhagavadicchā tathāiva teṣāṃ pravṛtter āvaśyakatvāt. Bhakti-hetu-nirṇaya*, p. 7.

² In the *Bhakti-haṃsa* (p. 56) of Viṭṭhala it is said that *bhakti* means affection (*sneha*): *bhaktipadasya śaktiḥ sneha eva*. Worship itself is not *bhakti*, but may lead to it; since *bhakti* is of the nature of affection, there cannot be any *vidhī* or injunction with reference to it.

moment¹. The causality of so-called causes and conditions, or of precedent-negations (*prāg-abhāva*), or of the absence of negative causes and conditions, is thus discarded; for all these elements are effects, and therefore depend upon God's will for their happening; for without that nothing could happen. God's will is the ultimate cause of all effects or happenings. As God's will is thus the only cause of all occurrences or destructions, so it is the sole cause of the rise of *bhakti* in any individual. It is by His will that people are associated with different kinds of inclinations, but they work differently and that they have or have not *bhakti*. Viṭṭhala is said to have been a friend of Akbar. His other works were commentaries on *Puṣṭi-pravāha-maryādā* and *Siddhānta-muktāvalī*, *Aṇubhāṣya-pūrtti* (a commentary on the *Aṇubhāṣya*), *Nibandha-prakāśa*, *Subodhini-ṭippanī* (a commentary on the *Subodhini*), otherwise called *Sannyāsāvachheda*. Vallabhācārya's first son was Gopināthaji Mahārāja, who wrote *Sādhana-dīpaka* and other minor works, and Viṭṭhala was his second son. Viṭṭhala had seven sons and four daughters.

Pitāmbara, the great-grandson of Viṭṭhala, the pupil of Viṭṭhala and the father of Puruṣottama, wrote *Avatāravādāvalī*, *Bhakti-rasatvavāda*, *Dravya-śuddhi* and its commentary, and a commentary on the *Puṣṭi-pravāha-maryādā*. Puruṣottama was born in 1670; he wrote the following books; *Subodhini-prakāśa* (a commentary on the *Subodhini* commentary of Vallabha on the *Bhāga-vata-purāṇa*), *Upaniṣad-dīpikā*, *Āvaraṇa-bhaṅga* on the *Prakāśa* commentary of Vallabha on his *Tattvāttha-dīpikā*, *Prārthanā-ratnākara*, *Bhakti-haṃsa-viveka*, *Utsava-pratāna*, *Suvarṇa-sūtra* (a commentary on the *Vidvanamaṇḍana*) and *Ṣoḍaśa-grantha-vivṛti*. He is said to have written twenty-four philosophical and theological tracts, of which seventeen have been available to the present writer, viz., *Bhedābheda-svarūpa-nirṇaya*, *Bhagavat-pratikṛti-pūjanavāda*, *Sṛṣṭi-bheda-vāda*, *Khyāti-vāda*, *Andhakāra-vāda*, *Brāhmaṇatvādi-devatādi-vāda*, *Jīva-pratibimbatva-khaṇḍana-vāda*, *Āvirbhāva-tirobhāva-vāda*, *Pratibimba-vāda*, *Bhaktiyutkarṣa-vāda*, *Ūrdhva-puṇḍra-dhāraṇa-vāda*, *Mālādhāraṇa-vāda*, *Upadeśa-viśaya-śaṅkā-nirāsa-vāda*, *Mūrti-pūjana-vāda*, *Śaṅkha-cakra-dhāraṇa-vāda*. He

¹ *yadā yadā yat yat kāryaṃ bhavati bhāvi abhūd vā tat-tatkāloṣādhau kramikenaiva tena tena hetunā tat tat kāryaṃ kariṣye iti tataḥ pūrvaṃ bhagavad-icchā asty āsīd vā iti mantāryam. Ibid. p. 9.*

also wrote commentaries on *Sevāphala*, *Sannyāsa-nirṇaya* and *Bhakti-vardhinī*, the *Bhāṣya-prakāśa* and the *Utsava-pratāna*. He wrote these commentaries also; *Nirodha-lakṣaṇa*, *ḥalabheda*, *Pañcapādyā*, and the *Tīrtha* commentary on the *Bhakti-haṃsa* of Viṭṭhala on the *Siddhānta-muktāvalī* and the *Bāla-bodha*. He also wrote a sub-commentary on Viṭṭhala's *Bhāṣya* on the *Gāyatrī*, a commentary on *Vallabhāṣṭaka*, the *Vedānta-karaṇamāla* and the *Śāstrārtha-prakaraṇa-nibandha*, and a commentary on the *Gītā*. He is said to have written about nine hundred thousand verses, and is undoubtedly one of the most prominent members of the Vallabha school.

Muralīdhara, the pupil of Viṭṭhala, wrote a commentary on Vallabha's *Bhāṣya* called the *Bhāṣya-tīkā*; also the *Paratattvāñjana*, *Bhakti-cintāmaṇi*, *Bhagavannāma-darpaṇa*, *Bhagavannāma-vaibhava*. Viṭṭhala's great-grandson Vallabha, born in 1648, wrote the *Subodhinī-lekha*, a commentary on the *Sevāphala*, a commentary on the *Śoḍaśa-grantha*, the *Gītā-tattva-dīpanī*, and other works. Gopeśvaraji Mahārāja, the son of Kalyāṇarāja and the great-grandson of Viṭṭhala, was born in 1595, and wrote the *Raśmī* commentary on the *Prakāśa* of Vallabha, the *Subodhinī-bubhutra-bodhinī*, and a Hindi commentary on the *Śikṣāpatra* of Harirāja. The other Gopeśvara, known also as Yogi Gopeśvara, the author of *Bhakti-mārtanda*, was born much later, in 1781. Giridharji, born in 1845, wrote the *Bhāṣya-vivaraṇa* and other works.

Muralīdhara, the pupil of Viṭṭhala, wrote a commentary on Vallabha's *Aṇubhāṣya*, a commentary on the *Śāṇḍilya-sūtra*, the *Paratattvāñjana*, the *Bhakti-cintāmaṇi*, the *Bhagavannāma-darpaṇa* and the *Bhagavannāma-vaibhava*. Raghunātha, born in 1557, wrote the commentary *Nāma-candrikā* on Vallabha's *Bhakti-haṃsa*, also commentaries on his *Bhakti-hetu-nirṇaya* and *Vallabhāṣṭaka* (the *Bhakti-taraṅginī* and the *Bhakti-hetu-nirṇaya-vivṛti*). He also wrote a commentary on the *Puruṣottama-stotra* and the *Vallabhāṣṭaka*. Vallabha, otherwise known as Gokulanātha, son of Viṭṭhala, born in 1550, wrote the *Prapañca-sāra-bheda* and commentaries on the *Siddhānta-muktāvalī*, *Nirodha-lakṣaṇa*, *Madhurāṣṭaka*, *Sarvottamastotra*, *Vallabhāṣṭaka* and the *Gāyatrī-bhāṣya* of Vallabhācārya. Kalyāṇarāja, son of Govindarāja, son of Viṭṭhala, was born in 1571, and wrote commentaries on the *ḥalabheda* and the *Siddhānta-muktāvalī*. His brother Gokulastava, born in 1580,

wrote a commentary called *Trividhānāmāvalī-vivṛti*. Devakinandana (1570), son of Raghunātha and grandson of Viṭṭhala, wrote the *Prakāśa* commentary on the *Bāla-bodha* of Vallabhācārya. Ghanaśyāma (1574), grandson of Viṭṭhala, wrote a sub-commentary on the *Madhurāṣṭaka-vivṛti* of Viṭṭhala. Kṛṣṇacandra Gosvāmi, son of Brajanātha and pupil of Vallabhācārya, wrote a short commentary on the *Brahma-sūtra*, the *Bhāva-prakāśikā*, in the fashion of his father Brajanātha's *Marīcikā* commentary on the *Brahma-sūtra*. This Brajanātha also wrote a commentary on *Siddhānta-muktāvalī*. Harirāja (1593), son of Kalyāṇarāja, wrote the *Śikṣā-patra* and commentaries on the *Siddhānta-muktāvalī*, the *Nirodha-lakṣaṇa*, *Pañcapādyā*, *Madhurāṣṭaka*, and a *Parīṣiṣṭa* in defence of Kalyāṇarāja's commentary on the *Ķalabheda*. Gopeśa (1598), son of Ghanaśyāma, wrote commentaries on the *Nirodha-lakṣaṇa*, *Sevāphala* and *Sannyāsanirṇaya*. Gopeśvaraji Mahārāja (1598), brother of Harirāja, wrote a Hindi commentary on Harirāja's *Śikṣāpatra*. Dvārakeśa, a pupil of Viṭṭhala, wrote a commentary on *Siddhānta-muktāvalī*. Jayagopāla Bhaṭṭa, disciple of Kalyāṇarāja, wrote commentaries on the *Sevāphala* and the *Taittirīya Upaniṣad*. Vallabha (1648), great-grandson of Viṭṭhala, wrote commentaries on the *Siddhānta-muktāvalī*, *Nirodha-lakṣaṇa*, *Sevāphala*, *Sannyāsa-nirṇaya*, *Bhakti-varḍhinī*, *Ķalabheda* and the *Madhurāṣṭaka*. Brajarāja, son of Śyāmala, wrote a commentary on the *Nirodha-lakṣaṇa*. Indiveśa and Govardhana Bhaṭṭa wrote respectively *Gāyatriyārtha-vivaraṇa* and *Gāyatriyārtha*. Śrīdharasvāmi wrote the *Bāla-bodhinī* commentary on the *Aṇubhāṣya* of Vallabha. Giridhara, the great-grandson of Viṭṭhala, wrote the *Siddhādvaita-mārtaṇḍa* and the *Prapañca-vāda*, following *Vidvāna-maṇḍana*. His pupil Rāmakṛṣṇa wrote the *Prakāśa* commentary on the *Siddhādvaita-mārtaṇḍa*, and another work, the *Śuddhādvaita-parikṣkāra*. Yogi Gopeśvara (1787) wrote the *Vādakathā*, *Ātmavāda*, *Bhakti-mārtaṇḍa*, *Caturthādhikaraṇamālā*, the *Rasmi* commentary on the *Bhāṣya-prakāśa* of Puruṣottama, and a commentary on Puruṣottama's *Vedāntādhikaraṇamālā*. Gokulotsava wrote a commentary on the *Trividhānāmāvalī* of Vallabha. Brajeśvara Bhaṭṭa wrote the *Brahmavidyā-bhāvana*, Haridāsa the *Haridāsa-siddhānta*, Icchārāma the *Pradīpa* on Vallabha's *Aṇubhāṣya* and Nirbhaya-rāma, the pupil of the *Adhikaraṇa-saṃgraha*.

Viṣṇusvāmin.

Viṣṇusvāmin is regarded by tradition as being the earliest founder of the *viśuddhādvaita* school which was regenerated by Vallabha. Śrīdhara, in his commentary on the *Bhāgavata-purāṇa*, also refers to Viṣṇusvāmin, and it is possible that he wrote a commentary on the *Bhāgavata-purāṇa*; but no such work is available. A brief account of Viṣṇusvāmin's views is available in the *Sakalacaryā-mata-saṃgraha* (by an anonymous writer), which merely summarizes Vallabha's views; there is nothing new in it which could be taken up here for discussion. This work, however, does not contain any account of Vallabha's philosophy, from which it may be assumed that it was probably written before the advent of Vallabha, and that the view of Viṣṇusvāmin contained therein was drawn either from the traditional account of Viṣṇusvāmin or from some of his works not available at the present time. It is unlikely, therefore, that the account of Viṣṇusvāmin in the *Sakalacaryā-mata-saṃgraha* is in reality a summary statement of Vallabha's views imposed on the older writer Viṣṇusvāmin. Vallabha himself, however, never refers to Viṣṇusvāmin as the originator of his system; there is a difference of opinion among the followers of Vallabha as to whether Vallabha followed in the footsteps of Viṣṇusvāmin. It is urged that while Vallabha emphasized the pure monistic texts of the Upaniṣads and regarded Brahman as undifferentiated, as one with himself, and as one with his qualities, Viṣṇusvāmin emphasized the duality implied in the Vedāntic texts¹. Vallabha also, in his *Subodhinī* commentary on the *Bhāgavata-purāṇa* (III. 32. 37) describes the view of Viṣṇusvāmin as propounding a difference between the Brahman and the world through the quality of *taṃas*, and distinguishes his own view as propounding Brahman as absolutely qualityless². The meagre account of Viṣṇusvāmin given in *Sakalacaryā-mata-saṃgraha* does not lend us any assistance in discovering whether his view differed from that of Vallabha, and, if it did, in what points. It is

¹ Thus Nirbhayarāma, in *Adhikaraṇa-saṃgraha* (p. 1), says: *tasyāpi durbo-dhatvena vyākhyāna-sāpekṣatayā tasya vyākhyātāro Viṣṇusvāmi-madhva-pra-bhṛtayo brahmādvaita-vādasya sevya-sevaka-bhāvasya ca virodham manvānā abheda-bodhaka-śrutiṣu lakṣaṇayā bheda-paratvam śuddham bhedaṃ aṅgicakruḥ.*

² *te ca sāmpratam Viṣṇusvāmyanusāriṇaḥ tattva-vādino Rāmānujaś ca tamora-jah-sattvair bhīmā asmat-pratipādītā ca nairguṇvādasya. Ibid. p. 1.*

also not impossible that the author of *Sakalacaryā-mata-saṃgraha* had not himself seen any work of Viṣṇusvāmin and had transferred the views of Vallabha to Viṣṇusvāmin, who, according to some traditions, was the originator of the Śuddhādvaita system¹.

According to the *Vallabha-dig-vijaya* there was a king called Vijaya of the Pāṇḍya kingdom in the south. He had a priest Devasvāmin, whose son was Viṣṇusvāmin. Śukasvāmin, a great religious reformer of North India, was his fellow-student in the Vedānta; it is difficult to identify him in any way. Viṣṇusvāmin went to Dvārakā, to Bṛndāvana, then to Purī, and then returned home. At an advanced age he left his household deities to his son, and having renounced the world in the Vaiṣṇava fashion, came to Kāñcī. He had many pupils there, e.g., Śrīdevadarśaṇa, Śrīkaṇṭha, Sahasrārcci, Śatadhṛti, Kumārapada, Parabhūti, and others. Before his death he left the charge of teaching his views to Śrīdevadarśaṇa. He had seven hundred principal followers teaching his views; one of them, Rājaviṣṇusvāmin, became a teacher in the Andhra country. Viṣṇusvāmin's temples and books were said to have been burnt at this time by the Buddhists. Vilva-maṅgala, a Tamil saint, succeeded to the pontifical chair at Śrīraṅgam, Vilva-maṅgala left the pontifical chair at Kāñcī to Deva-maṅgala and went to Bṛndāvana. Prabhāviṣṇusvāmin succeeded to the pontifical chair; he had many disciples, e.g., Śrīkaṇṭhagarbha, Satyavatī Paṇḍita, Somagiri, Narahari, Śrāntanidhi and others. He installed Śrāntanidhi in his pontifical chair before his death. Among the Viṣṇusvāmin teachers was one Govindācārya, whose disciple Vallabhācārya is said to have been. It is difficult to guess the date of Viṣṇusvāmin; it is not unlikely, however, that he lived in the twelfth or the thirteenth century.

¹ This tradition is found definitely maintained in the *Vallabha-dig-vijaya*, written by Jadunāthajī Mahārāja.

CHAPTER XXXII

CAITANYA AND HIS FOLLOWERS

Caitanya's Biographers.

CAITANYA was the last of the Vaiṣṇava reformers who had succeeded Nimbārka and Vallabha. As a matter of fact, he was a junior contemporary of Vallabha. So far as he is known to us, he did not leave behind any work treating of his own philosophy, and all that we can know of it is from the writings of his contemporary and later admirers and biographers. Even from these we know more of his character and of the particular nature of his devotion to God than about his philosophy. It is therefore extremely difficult to point out anything as being the philosophy of Caitanya. Many biographies of him were written in Sanskrit, Bengali, Assamese and Oriya and a critical study of the materials of Caitanya's biography in Bengali was published some time ago by Dr Biman Behari Mazumdar. Of the many biographies of Caitanya those by Murārigupta and Vṛndāvanadāsa deal with the first part of Caitanya's life, and the latter's work is regarded as the most authoritative and excellent treatment of his early life. Again, Kṛṣṇadāsa Kavirāja's *Life*, which emphasizes the second and third parts of Caitanya's life, is regarded as the most philosophical and instructive treatment of his most interesting period. Indeed, Vṛndāvanadāsa's *Caitanya-bhāgavata* and Kṛṣṇadāsa Kavirāja's *Caitanya-caritāmṛta* stand out as the most important biographical works on Caitanya. We have already mentioned Murārigupta, who wrote a small work in Sanskrit, full of exaggerations, though he was a contemporary. There are also biographies by Jayānanda and Locanadāsa, entitled *Caitanya-maṅgala*. Some Govinda and Svarūpa Dāmodara, supposed to have been personal attendants of Caitanya, were said to have kept notes, but these are apparently now lost. Kavi Karṇapūra wrote the *Caitanya-candrodaya-nāṭaka*, which may be regarded as the principal source of Kṛṣṇadāsa Kavirāja's work. Vṛndāvanadāsa was born in śaka 1429 (A.D. 1507); he had seen Caitanya during the first fifteen years of his life. Caitanya died in śaka 1455 (A.D. 1533) and the *Caitanya-bhāgavata*

was written shortly after. Kṛṣṇadāsa Kavirāja's work, *Caitanya-caritāmṛta*, was written long afterwards. Though there is some dispute regarding the actual date of its completion, it is well-nigh certain that it was in śaka 1537 (A.D. 1616). The other date, found in *Prema-vilāsa*, is śaka 1503 (A.D. 1581), and this had been very well-combated by Professor Rādhā Govinda Nath in his learned edition of the work. The *Caitanya-candrodaya-nāṭaka* was written by Kavi Kārṇapūra in śaka 1494 (A.D. 1572). It would thus appear that for the most authentic account of Caitanya's life one should refer to this work and to Vṛndāvanadāsa's *Caitanya-bhāgavata*. Kavirāja Kṛṣṇadāsa's *Caitanya-caritāmṛta* is, however, the most learned of the biographies. There was also a *Caitanya-sahasra-nāma* by Sārvabhauma Bhaṭṭācārya, the *Govinda-vijaya* of Paramā-nandapurī, songs of Caitanya by Gauridāsa Paṇḍita, the *Gauḍarāja-vijaya* of Paramānanda Gupta, and songs of Caitanya by Gopāla Basu.

The Life of Caitanya.

I shall attempt here to give only a brief account of Caitanya's life, following principally the *Caitanya-bhāgavata*, *Caitanya-candrodaya-nāṭaka* and *Caitanya-caritāmṛta*.

There lived in Navadvīpa Jagannātha Miśra and his wife Śacī. On a full-moon day in Spring (the month of *Phālguna*), when there was an eclipse of the moon, in śaka 1407 (A.D. 1485), Caitanya was born to them. Navadvīpa at this time was inhabited by many Vaiṣṇavas who had migrated from Sylhet and other parts of India. Thus there were Śrīvāsa Paṇḍita, Śrīrāma Paṇḍita, Candraśekhara; Murārigupta, Puṇḍarīka Vidyānidhi, Caitanya-vallabha Datta. Thus the whole atmosphere was prepared for a big spark of fire which it was the business of Caitanya to throw into the combustible material. In Śāntipura, Advaita, a great Vaiṣṇava very much senior to Caitanya, was always regretting the general hollowness of the people and wishing for someone to create new fire. Caitanya's elder brother Viśvarūpa had gone out as an ascetic, and Caitanya, then the only son left to his parents, was particularly cherished by his widowed mother Śacī Devī, the daughter of Nilāmbara Chakravartī.

Navadvīpa was at this time under Moslem rulers who had grown tyrannical. Sārvabhauma Bhaṭṭācārya, son of Viśārada

Paṇḍita and a great scholar, had gone over to Orissa to take refuge under the Hindu king there, Pratāparudra.

Caitanya studied in the Sanskrit school (*tol*) of Sudarśana Paṇḍita. His study in the school was probably limited to the Kalāpa grammar and some *kāvya*s. Some later biographers say that he had also read Nyāya (logic); there is, however, no proper evidence in support of this. He had, however, studied at home some *Purāṇas*, notably the great devotional work, *Śrīmad-bhāgavata*. As a student he was indeed very gifted; but he was also very vain, and always took special delight in defeating his fellow-students in debate. From his early days he had shown a strong liking for devotional songs. He took a special delight in identifying himself with Kṛṣṇa. Among his associates the names of the following may be mentioned: Śrīnivāsa Paṇḍita and his three brothers, Vāsudeva Datta, Mukunda Datta and Jagai, the writer, Śrīgarbha Paṇḍita, Murārigupta, Govinda, Śrīdhara, Gaṅgādāsa, Dāmodara, Candrasekhara, Mukunda, Sañjaya, Puruṣottama, Vijaya, Vakreśvara, Sanātana, Hṛdaya, Madana and Rāmānanda. Caitanya had received some instruction in the Vedas also from his father. He had also received instruction from Viṣṇu Paṇḍita and Gaṅgādāsa Paṇḍita. At this period of his life he became intimately acquainted with Haridāsa and Gadādhara.

Caitanya's first wife, Lakṣmī Devī, daughter of Vallabha Miśra, died of snake-bite; he then married Viṣṇupriyā. After his father's death he went to Gayā to perform the post-funeral rites; there he is said to have met saintly persons like Paramānanda Purī, Īśvara Purī, Raghunātha Purī, Brahmānanda Purī, Amara Purī, Gopāla Purī, and Ananta Purī. He was initiated by Īśvara Purī and decided to renounce the world. He came back, however, to Navadvīpa and began to teach the *Bhāgavata-purāṇa* for some time.

Nityānanda, an ascetic (*avadhūta*), joined him in Navadvīpa. His friendship further kindled the fire of Caitanya's passion for divine love, and both of them, together with other associates, began to spend days and nights in dancing and singing. It was at this time that through his influence and that of Nityānanda, two drunkards, Jagai and Madhai, were converted to his Vaiṣṇava cult of love. Shortly after this, with his mother's permission, he took the ascetic life and proceeded to Katwa, and from there to Śantipur to meet Advaita there. From this place he started for Purī with his followers.

Such is the brief outline of Caitanya's early life, bereft of all interesting episodes, and upon it there is a fair amount of unanimity among his various biographers.

Kṛṣṇadāsa Kavirāja's Bengali work, *Caitanya-caritāmṛta*, is probably one of the latest of his biographies, but on account of its recondite character has easily surpassed in popularity all other biographies of Caitanya. He divides Caitanya's life into three parts: *Ādilīlā* (the first part), *Madhya-līlā* (the second part) and *Antyalīlā* (the last part). The first part consists of an account of the first twenty-four years, at the end of which Caitanya renounced the world. He lived for another twenty-four years, and these are divided into two sections, the second and the last part of his life. Of these twenty-four years, six years were spent on pilgrimage; this marks the middle period. The remaining eighteen years were spent by him in Purī and form the final period, of which six years were spent in preaching the cult of holy love and the remaining twelve years in deep ecstasies and suffering pangs of separation from his beloved Kṛṣṇa, the Lord.

After his renunciation in the twenty-fourth year of his life, in the month of *Māgha* (January), he started for Bṛndāvana and travelled for three days in the Rāḍha country (Bengal). He did not know the way to Bṛndāvana and was led to Śāntipura by Nityānanda. Caitanya's mother, along with many other people, Śrīvāsa, Rāmai, Vidyānidhi, Gadādhara, Vakreśvara, Murāri, Śuklāmbara, Śrīdhara, Vyaya, Vāsudeva, Mukunda, Buddhimanta Khan, Nandana and Sañjaya, came to see him at Śāntipur. From Śāntipur Caitanya started for Purī with Nityānanda, Paṇḍita Jagadānanda, Dāmodara Paṇḍita and Mukunda Dutta by the side of the Ganges, by way of Bāleśvar (in Orissa). He then passed by Yājpur and Sākṣigopāla and came to Purī. Having arrived there, he went straight to the temple of Jagannātha, looked at the image and fell into a trance. Sārvabhauma Bhaṭṭācārya, who was then residing at Purī, brought him to his house; Nityānanda, Jagadānanda, Dāmodara all came and joined him there. Here Caitanya stayed for some time at the house of Sārvabhauma and held discussions with him, in the course of which he refuted the monistic doctrines of Śāṅkara¹.

¹ There is considerable divergence about this episode with Sārvabhauma; the Sanskrit *Caitanya-caritāmṛta* and the *Caitanya-candrodaya-nāṭaka* do not agree with the description in the *Caitanya-caritāmṛta* in Bengali of Kṛṣṇadāsa Kavirāja as given here.

After some time Caitanya started for the South and first came to Kūrmasthāna, probably a place in the Ganjam district (South Orissa); he then passed on by the banks of the Godāvarī and met Rāmānanda Ray. In a long conversation with him on the subtle aspect of the emotion of *bhakti* Caitanya was very much impressed by him; he passed some time with him in devotional songs and ecstasies. He then resumed his travel again and is said to have passed through Mallikārjuna-tīrtha, Ahobala-Nṛsiṃha, Skanda-tīrtha and other places, and later on came to Śrīraṅgam on the banks of the Kāverī. Here he lived in the house of Veṅkaṭa Bhaṭṭa for four months, after which he went to the Rṣabha mountain, where he met Paramānanda Purī. It is difficult to say how far he travelled in the South, but he must have gone probably as far as Travancore. It is also possible that he visited some of the places where Madhvācārya had great influence, and it is said that he had discussions with the teachers of the Madhva school. He discovered the *Brahma-saṃhitā* and the *Kṛṣṇa-karnāmṛta*, two important manuscripts of Vaiṣṇavism, and brought them with him. He is said to have gone a little farther in the East up to Nāsika; but it is difficult to say to what extent the story of these tours is correct. On his return journey he met Rāmānanda Ray again, who followed him to Purī.

After his return to Purī, Pratāparudra, then King of Purī, solicited his acquaintance and became his disciple. In Purī Caitanya began to live in the house of Kāśī Miśra. Among others, he had as his followers Janārdana, Kṛṣṇadāsa, Śikhī Māhiti, Pradyumna Miśra, Jagannātha Dāsa, Murārī Māhiti, Candaneśvara and Siṃheśvara. Caitanya spent most of his time in devotional songs, dances and ecstasies. In A.D. 1514 he started for Bṛndāvana with a number of followers; but so many people thronged him by the time he came to Pāṇihāṭī and Kāmārahāṭī that he cancelled his programme and returned to Purī. In the autumn of the next year he again started for Bṛndāvana with Bālabhadra Bhaṭṭācārya and came to Benares; there he defeated in a discussion a well-known teacher, Prakāśānanda, who held monistic doctrines. In Bṛndāvana he met Śrī-rūpa Gosvāmī, Uddhavadāsa Mādhava, and others. Then he left Bṛndāvana and Mathurā and went to Allahabad by the side of the Ganges. There he met Vallabha Bhaṭṭa and Raghupati Upādhyāya, and gave elaborate religious instruction to

Śrī-rūpa. Later on Caitanya met Sanātana and imparted further religious instruction to him. He returned to Benares, where he taught Prakāśānanda; then he came back to Puri and spent some time there. Various stories are narrated in the *Caitanya-caritāmṛta*, describing the ecstatic joy of Caitanya in his moods of inspiration; on one occasion he had jumped into the sea in a state of ecstasy and was picked up by a fisherman. It is unfortunate, however, that we know nothing of the exact manner in which he died.

Emotionalism of Caitanya.

The religious life of Caitanya unfolds unique pathological symptoms of devotion which are perhaps unparalleled in the history of any other saints that we know of. The nearest approach will probably be in the life of St Francis of Assisi; but the emotional flow in Caitanya seems to be more self-centred and deeper. In the beginning of his career he not only remained immersed as it were in a peculiar type of self-intoxicating song-dance called the *kīrtana*, but he often imitated the various episodes of Kṛṣṇa's life as told in the *Purāṇas*. But with the maturity of his life of renunciation his intoxication and his love for Kṛṣṇa gradually so increased that he developed symptoms almost of madness and epilepsy. Blood came out of the pores of his hair, his teeth chattered, his body shrank in a moment and at the next appeared to swell up. He used to rub his mouth against the floor and weep, and had no sleep at night. Once he jumped into the sea; sometimes the joints of his bones apparently became dislocated, and sometimes the body seemed to contract. The only burden of his songs was that his heart was aching and breaking for Kṛṣṇa, the Lord. He was fond of reading the dramas of Rāmānanda Ray, the poems of Caṇḍidāsa and Vidyāpati, the *Kṛṣṇa-karṇāmṛta* of Vilva-maṅgala and the *Gīta-govinda* of Jayadeva; most of these were mystic songs of love for Kṛṣṇa in erotic phraseology. Nowhere do we find any account of such an ecstatic *bhakti* in the *Purāṇas*, in the *Gītā* or in any other religious literature of India—the *Bhāgavata-purāṇa* has, no doubt, one or two verses which in a way anticipate the sort of *bhakti* that we find in the life of Caitanya—but without the life of Caitanya our storehouse of pathological religious experience would have been wanting in one of the most fruitful harvests of pure emotionalism

in religion. Caitanya wrote practically nothing, his instructions were few and we have no authentic record of the sort of discussions that he is said to have held. He gave but little instruction, his preaching practically consisted in the demonstration of his own mystic faith and love for Kṛṣṇa; yet the influence that he exerted on his contemporaries and also during some centuries after his death was enormous. Sanskrit and Bengali literature during this time received a new impetus, and Bengal became in a sense saturated with devotional lyrics. It is difficult for us to give any account of his own philosophy save what we can gather from the accounts given of him by his biographers. Jīva Gosvāmī and Baladeva Vidyābhūṣaṇa are probably the only persons of importance among the members of his faith who tried to deal with some kind of philosophy, as we shall see later on.

Gleanings from the Caitanya-Caritāmṛta on the subject of Caitanya's Philosophical Views.

Kṛṣṇadāsa Kavirāja, otherwise known as Kavirāja Gosvāmī, was not a contemporary of Caitanya; but he came into contact with many of his important followers and it may well be assumed that he was in possession of the traditional account of the episodes of Caitanya's life as current among them. He gives us an account of Vāsudeva Sārvabhauma's discussion with Caitanya at Purī, in which the latter tried to refute the monistic view. The supposed conversation shows that, according to Caitanya, Brahman cannot be indeterminate (*nirviśeṣa*); any attempt to prove the indeterminateness of Brahman would only go the other way, prove His determinate nature and establish the fact that He possesses all possible powers. These powers are threefold in their nature: the *Viṣṇu-śakti*, the *kṣetrajña-śakti*, and the *avidyā-śakti*. The first power, as *Viṣṇu-śakti*, may further be considered from three points of view, the *hlādinī*, *saudhinī* and *saṃvit*. These three powers, bliss, being, and consciousness, are held together in the transcendent power (*parā-śakti* or *Viṣṇu-śakti*) of God. The *kṣetrajña-śakti* or *jīva-śakti* (the power of God as souls of individuals) and the *avidyā-śakti* (by which the world-appearances are created) do not exist in the transcendent sphere of God. The Brahman is indeed devoid of all *prākṛta* or phenomenal qualities, but He is indeed full of non-

phenomenal qualities. It is from this point of view that the Upaniṣads have described Brahman as *nirguṇa* (devoid of qualities) and also as devoid of all powers (*niḥśaktika*). The individual souls are within the control of *māyā-śakti*; but God is the controller of the *māyā-śakti* and through it of the individual souls. God creates the world by His unthinkable powers and yet remains unchanged within Himself. The world thus is not false; but, being a creation, it is destructible. The Śāṅkarite interpretation of the *Brahma-sūtra* is wrong and is not in consonance with the purport of the Upaniṣads.

In chapter viii of the *Madhya-līlā* of the *Caitanya-caritāmṛta* we have the famous dialogue between Caitanya and Rāmānanda regarding the gradual superiority of the ideal of love. Rāmānanda says that devotion to God comes as the result of the performance of caste-duties. We may note here that according to the *Bhakti-rasāmṛta-sindhu bhakti* consists in attaching oneself to Kṛṣṇa for His satisfaction alone, without being in any way influenced by the desire for philosophic knowledge, *karma* or disinclination from worldly things (*vairāgya*), and without being associated with any desire for one's own interests¹.

The *Viṣṇu-purāṇa*, as quoted in the *Caitanya-caritāmṛta*, holds the view that it is by the performance of caste-duties and *āśrama*-duties that God can be worshipped. But the point is whether such performance of caste-duties and *āśrama*-duties can lead one to the attainment of *bhakti* or not. If *bhakti* means the service of God for His sake alone (*ānukūlyena Kṛṣṇānusevanam*), then the performance of caste-duties cannot be regarded as a necessary step towards its attainment; the only contribution that it may make can be the purification of mind, whereby the mind may be made fit to receive the grace of God. Caitanya, not satisfied with the reply of Rāmānanda, urges him to give a better account of *bhakti*. Rāmānanda in reply says that a still better state is that in which the devotee renounces all his interests in favour of God in all his performance of duties; but there is a still higher state in which one renounces all his duties through love of God. Unless one can renounce all thoughts about one's own advantage, one cannot proceed in the path of love. The next higher stage is that in which devotion is

¹ *anyābhilāṣitāśūnyaṃ jñāna-karmādy-anāvṛtam.
ānukūlyena Kṛṣṇānusevanam bhaktiruttamā.*

Bhakti-rasāmṛta-sindhu, 1. 1. 9.

impregnated with knowledge. Pure devotion should not have, however, any of the obstructive influences of knowledge; philosophical knowledge and mere disinclination obstruct the course of *bhakti*. Knowledge of God's nature and wisdom regarding the nature of the intimate relation of man with God may be regarded as unobstructive to *bhakti*. The natural and inalienable attachment of our mind to God is called *prema-bhakti*; it is fivefold: *śānta* (peaceful love), *dāśya* (servant of God), *sakhya* (friendship with God), *vātsalya* (filial attitude towards God), and *mādhurya* (sweet love, or love of God as one's lover). The different types of love may thus be arranged as above in a hierarchy of superiority; love of God as one's bridegroom or lover is indeed the highest. The love of the *gopīs* for Kṛṣṇa in the love-stories of Kṛṣṇa in Bṛndāvana typifies this highest form of love and particularly the love of Rādhā for Kṛṣṇa. Rāmānanda closes his discourse with the assertion that in the highest altitude of love, the lover and the beloved melt together into one, and through them both one unique manifestation of love realizes itself. Love attains its highest pitch when both the lover and the beloved lose their individuality in the sweet milky flow of love.

Later on, in *Madhya-līlā*, chapter XXIX, Caitanya, in describing the nature of *śuddhā bhakti* (pure devotion), says that pure devotion is that in which the devotee renounces all desires, all formal worship, all knowledge and work, and is attached to Kṛṣṇa with all his sense-faculties. A true devotee does not want anything from God, but is satisfied only in loving Him. It shows the same symptoms as ordinary human love, rising to the highest pitch of excellence.

In chapter XXII of *Madhya-līlā* it is said that the difference in intensity of devotion depends upon the difference of the depth of emotion. One who is devoted to Kṛṣṇa must possess preliminary moral qualities; he must be kind, truthful, equable to all, non-injurious, magnanimous, tender, pure, selfless, at peace with himself and with others; he must do good to others, must cling to Kṛṣṇa as his only support, must indulge in no other desires, must make no other effort than that of worshipping Kṛṣṇa, must be steady, must be in full control of all his passions; he should not be unmindful, should be always prepared to honour others, be full of humility and prepared to bear with fortitude all sorrows; he should indulge in association with true devotees—it is by such a course

that love of Kṛṣṇa will gradually dawn in him. A true Vaiṣṇava should give up the company of women and of all those who are not attached to Kṛṣṇa. He should also give up caste-duties and *āśrama*-duties and cling to Kṛṣṇa in a helpless manner. To cling to Kṛṣṇa and to give oneself up to Him is the supreme duty of a Vaiṣṇava. Love of Kṛṣṇa is innate in a man's heart, and it is manifested under encouraging conditions. Love for God is a manifestation of the *hlādinī* power of God, and by virtue of the fact that it forms a constituent of the individual soul, God's attraction of individual souls towards Him is a fundamental fact of human life; it may remain dormant for a while, but it is bound to wake under suitable conditions.

The individual souls share both the *hlādinī* and the *samvit śakti* of God, and the *māyā-śakti* typified in matter. Standing between these two groups of power, the individual souls are called the *taṭastha-śakti*. A soul is impelled on one side by material forces and attractions, and urged upwards by the *hlādinī-śakti* of God. A man must therefore adopt such a course that the force of material attractions and desires may gradually wane, so that he may be pulled forward by the *hlādinī-śakti* of God.

Some Companions of Caitanya.

A great favourite of Caitanya was Nityānanda. The exact date of his birth and death is difficult to ascertain, but he seems to have been some years older than Caitanya. He was a Brahmin by caste, but became an *avadhūta* and had no caste-distinctions. He was a messenger of Caitanya, preaching the Vaiṣṇava religion in Bengal during Caitanya's absence at Purī; he is said to have converted to Vaiṣṇavism many Buddhists and low-caste Hindus of Bengal. At a rather advanced stage of life, Nityānanda broke the vow of asceticism and married the two daughters of Sūrjadās Sarkhel, brother of Gaurdāsa Sarkhel of Kalna; the two wives were Vasudhā and Jāhnavi. Nityānanda's son Vīrachand, also known as Virabhadra, became a prominent figure in the subsequent period of Vaiṣṇava history.

Pratāparudra was the son of Puruṣottamadeva, who had ascended his throne in 1478, and himself ascended the throne in 1503. He was very learned and took pleasure in literary disputes.

Mr Stirling, in his *History of Orissa* (published in 1891), says of him that he had marched with his army to Rameśwaram and took the famous city of Vijayanagara; he had also fought the Mahomedans and prevented them from attacking Purī. Caitanya's activities in Purī date principally between 1516 and 1533. Rāmānanda Ray was a minister of Pratāparudra, and at his intercession Caitanya came into contact with Pratāparudra, who became one of his followers. The influence of Caitanya together with the conversion of Pratāparudra produced a great impression upon the people of Orissa, and this led to the spread of Vaiṣṇavism and the collapse of Buddhism there in a very marked manner.

During the time of Caitanya, Hussain Shaha was the Nawab of Gaur. Two Brahmins, converted into Islam and having the Mahomedan names Sakar Malik and Dabir Khas, were his two high officers; they had seen Caitanya at Ramkeli and had been greatly influenced by him. Later in their lives they were known as Sanātana and Rūpa; they distributed their riches to the poor and became ascetics. Rūpa is said to have met Caitanya at Benares, where he received instruction from him; he wrote many Sanskrit works of great value, e.g., *Lalita-mādhava*, *Vidagdhamādhava*, *Ujjvalanīlamanī*, *Utkalikā-vallarī* (written in 1550), *Uddhava-dūta*, *Upadeśāmṛta*, *Kārpaṇya-puñjikā*, *Gaṅgāśṭaka*, *Govindavirudāvali*, *Gaurāṅgakalpataru*, *Caitanyāśṭaka*, *Dāna-keli-kaumudī*, *Nāṭaka-candrikā*, *Padyāvali*, *Paramārtha-sandarbhā*, *Pṛīti-sandarbhā*, *Pre-mendu-sāgara*, *Mathurā-mahimā*, *Mukundamuktā-ratnāvalī-stotra-tīkā*, *Yāmunāśṭaka*, *Rasāmṛta*, *Vilāpa-kusumāñjali*, *Brajavilāsa-stava*, *Śikṣādaśaka*, *Samkṣepa Bhāgavatāmṛta*, *Sādhana-paddhati*, *Stavamālā*, *Haṃsa-dūta-kāvya*, *Harināmāmṛta-vyākaraṇa*, *Hare-kṛṣṇa-mahāmantrārtha-nirūpaṇa*, *Chando'sṭādaśaka*.

Sanātana wrote the following works: *Ujjvala-rasa-kaṇa*, *Ujjvalanīlamanī-tīkā*, *Bhakti-bindu*, *Bhakti-sandarbhā*, *Bhāgavata-krama-sandarbhā*, *Bhāgavatāmṛta*, *Yoga-śataka-vyākhyāna*, *Viṣṇu-toṣiṇī*, *Haribhakti-vilāsa*, *Bhakti-rasāmṛta-sindhu*. Sanātana had been put in prison by Hussain Shah when he heard that he was thinking of leaving him, but Sanātana bribed the gaoler, who set him at liberty. He at once crossed the Ganges and took the ascetic life; he went to Mathurā to meet his brother Rūpa, and returned to Purī to meet Caitanya. After staying some months in Purī, he went to Br̥ndāvana. In the meanwhile Rūpa had also gone to Purī and he also

returned to Bṛndāvana. Both of them were great devotees and spent their lives in the worship of Kṛṣṇa.

Advaitācārya's real name was Kamalākara Bhaṭṭācārya. He was born in 1434 and was thus fifty-two years older than Caitanya; he was a great Sanskrit scholar and resided at Śāntipur. He went to Nabadvīpa to finish his studies. People at this time had become very materialistic; Advaita was very much grieved at it and used to pray in his mind for the rise of some great prophet to change their minds. Caitanya, after he had taken to ascetic life, had visited Advaita at Śāntipur, where both of them enjoyed ecstatic dances; Advaita was then aged about seventy-five. It is said that he had paid a visit to Caitanya at Purī. He is said to have died in 1539 according to some, and in 1584 according to others (which is incredible).

Apart from Advaita and Nityānanda there were many other intimate companions of Caitanya, of whom Śrīvāsa or Śrīnivāsa was one. He was a brahmin of Sylhet who settled at Navadvīpa; he was quite a rich man. It is not possible to give his exact birth-date, but he had died long before 1540 (when Jayānanda wrote his *Caitanya-maṅgala*); he was probably about forty when Caitanya was born. As a boy Caitanya was a frequent visitor to Śrīvāsa's house. He was devoted to the study of the *Bhāgavata*, though in his early life he was more or less without a faith. He was also a constant companion of Advaita while he was at Navadvīpa. When Caitanya's mind was turned to God after his return from Gayā, Śrīvāsa's house was the scene of ecstatic dances. Śrīvāsa then became a great disciple of Caitanya. Nārāyaṇī, the mother of Bṛndāvanadāsa, the biographer of Caitanya, was a niece of Śrīvāsa.

Rāmānanda Ray, the minister of Pratāparudra and author of the *Ṣaṅgannātha-vallabha*, was very much admired by Caitanya. He was a native of Vidyānagara, in Central India. The famous dialogue narrated in the *Caitanya-caritāmṛta* shows how Caitanya himself took lessons from Rāmānanda on the subject of high devotion. Rāmānanda Ray on his part was very fond of Caitanya and often spent his time with him.

CHAPTER XXXIII

THE PHILOSOPHY OF JĪVA GOSVĀMĪ AND BALADEVA VIDYĀBHŪṢAṆA, FOLLOWERS OF CAITANYA

Ontology.

JĪVA GOSVĀMĪ flourished shortly after Caitanya. He wrote a running commentary on the *Bhāgavata-purāṇa* which forms the second chapter (*Bhāgavata-sandarbhā*) of his principal work, the *Ṣaṭ-sandarbhā*. In this chapter he says that, when the great sages identify themselves with the ultimate reality, their minds are unable to realize the diverse powers of the Lord. The nature of the Lord thus appears in a general manner (*sāmānyena lakṣitam tathaiṣa sphurat*, p. 50), and at this stage the powers of Brahman are not perceived as different from Him. The ultimate reality, by virtue of its essential power (*svarūpasthhitayā eva śaktyā*), becomes the root support of all its other powers (*parāsām api śaktīnām mūlā-śrayarūpam*), and through the sentiment of devotion appears to the devotees as the possessor of diverse powers; He is then called Bhagavān. Pure bliss (*ānanda*) is the substance, and all the other powers are its qualities; in association with all the other powers it is called *Bhagavān* or God¹. The concept of Brahman is thus the partial appearance of the total personality denoted by the word Bhagavān; the same Bhagavān appears as Paramātmān in His aspect as controlling all beings and their movements. The three names Brahman, Bhagavān and Paramātmān are used in accordance with the emphasis that is put on the different aspects of the total composite meaning; thus, as any one of the special aspects of God appears to the mind of the devotee, he associates it with the name of Brahman, Bhagavān or Paramātmān².

The aspect as Brahman is realized only when the specific qualities and powers do not appear before the mind of the devotee.

¹ *ānanda-mātraṃ viśeṣyaṃ samastāḥ śaktayaḥ viśeṣaṇāni viśiṣṭo Bhagavān. Ṣaṭ-sandarbhā*, p. 50.

² *tatraikasyaiva viśeṣaṇa-bhedena tad avīṣiṣṭatvena ca pratipādanāt tathaiṣa tat-tad-upāsakapuruṣānubhava-bhedāc ca āvirbhāva-nāmnor bhedaḥ. Ibid.* p. 53.

In realizing the pure consciousness as the nature of the devotee's own self the nature of the Brahman as pure consciousness is also realized; the realization of the identity of one's own nature with that of Brahman is effected through the special practice of devotion¹. In the monistic school of Vedānta, as interpreted by Śāṅkara, we find that the identity of the self with the Brahman is effected through the instruction in the Vedāntic maxim: "that art thou" (*tat tvam asi*). Here, however, the identity is revealed through the practice of devotion, or rather through the grace of God, which is awakened through such devotion.

The abode of Bhagavān is said to be *Vaikuṇṭha*. There are two interpretations of this word; in one sense it is said to be identical with the very nature of Brahman as unobscured by *māyā*²; in another interpretation it is said to be that which is neither the manifestation of *rajas* and *tamas* nor of the material *sattva* as associated with *rajas* and *tamas*. It is regarded as having a different kind of substance, being the manifestation of the essential power of Bhagavān or as pure *sattva*. This pure *sattva* is different from the material *sattva* of the Sāṃkhyists, which is associated with *rajas* and *tamas*, and for this reason it is regarded as *aprākṛta*, i.e., transcending the *prākṛta*. For this reason also it is regarded as eternal and unchanging³. The ordinary *guṇas*, such as *sattva*, *rajas* and *tamas*, are produced from the movement of the energy of *kāla* (time); but the *sattva-Vaikuṇṭha* is not within the control of *kāla*⁴. The *Vaikuṇṭha*, thus being devoid of any qualities, may in one sense be regarded as *nirviśeṣa* (differenceless); but in another sense differences may be said to exist in it also, although they

¹ *Ibid.* p. 54. *namu sūkṣma-cid-rūpatvaṃ padārthānubhave katham pūrṇa-cid-ākāra-rūpa-madīya-brahma-svarūpaṃ sphuratu tatrāha, ananyabodhyā-tmatayā cid-ākārata-sāmyena śuddha-tvaṃ padārthaikyabodhya-svarūpatayā. yady api tādrg-ātmānubhāvānantaram tad-ananya-bodhyatā-kṛtau sādha-śaktir nāsti tathāpi pūrvam tadartham eva kṛtayā sarvatrā'pi upajīvyayā sādhanabhaktyā āradhitasya śrī-bhagavataḥ prabhāvād eva tad api tatrodayate. ³ *yatra vaikuṇṭhe rajas tamaś ca na pravartate. tayoṛ miśram saha-caram jaḍam yat sattvaṃ na tad api. kintu anyad eva tac ca yā suśṭhu sthāpayiṣyamāṇā māyātāḥ parā bhagavat-svarūpa-śaktiḥ tasyāḥ vṛttitvena cid-rūpaṃ śuddha-sattvākhyam sattvam. Ibid.* p. 58.

⁴ *Ibid.* p. 59. This view, that the *guṇas* are evolved by the movement of *kāla*, is not accepted in the ordinary classical view of Sāṃkhya, but is a theory of the Pāñcarātra school. Cf. *Ahīrbudhnya-saṃhitā*, chs. 6 and 7.

can only be of the nature of the pure *sattva* or the essential power of God¹.

The essential power (*svarūpa-śakti*) and the energy (*māyā-śakti*) are mutually antagonistic, but they are both supported in God². The power of God is at once natural (*svābhāvika*) and unthinkable (*acintya*). It is further urged that even in the ordinary world the powers of things are unthinkable, i.e., neither can they be deduced from the nature of the things nor can they be directly perceived, but they have to be assumed because without such an assumption the effect would not be explainable. The word "unthinkable" (*acintya*) also means that it is difficult to assert whether the power is identical with the substance or different from it; on the one hand, power cannot be regarded as something extraneous to the substance, and, on the other, if it were identical with it, there could be no change, no movement, no effect. The substance is perceived, but the power is not; but, since an effect or a change is produced, the implication is that the substance must have exerted itself through its power or powers. Thus, the existence of powers as residing in the substance is not logically proved, but accepted as an implication³. The same is the case in regard to Brahman; His powers are identical with His nature and therefore co-eternal with Him. The concept of "unthinkableness" (*acintyatva*) is used to reconcile apparently contradictory notions (*durghaṭa-ghaṭakatvaṃ hy acintyatvam*). The internal and essential power (*antaraṅga-svarūpa-śakti*) exists in the very nature of the Brahman (*svarūpeṇa*) and also as its various manifestations designated by such terms as *Vaikuṇṭha*, etc. (*vaikuṇṭhādi-svarūpa-vaibhava-rūpeṇa*)⁴. The second power (*taṭasthaśakti*) is represented by the pure selves. The third power (*bahiraṅga-māyā-śakti*) is represented by the evolution of all cosmical categories and their root, the *pradhāna*. The analogy offered is that of the sun, its rays and the various

¹ *nanu guṇādy-abhāvān nirvīṣeṣa evāsau loka ity āsamkya tatra viśeṣas tasyāḥ śuddha-sattvātmikāyāḥ svarūpānatirikta-śakter eva vilāsa-rūpa iti. Śaṭ-sandarbhā, p. 59.*

⁴ *Ibid. p. 65.*

colours which are manifested as the result of refraction. The external power of *māyā* (*bahiraṅga-śakti*) can affect the *jīvas* but not Brahman.

The *māyā* is defined in the *Bhāṅgavata* (as interpreted by Śrīdhara) as that which is manifested without any object and is not yet perceivable in its own nature, like an illusory image of darkness¹. This is interpreted in a somewhat different form in the *Bhāṅgavata-sandarbhā*, where it is said that *māyā* is that which appears outside the ultimate reality or Brahman, and ceases to appear with the realization of Brahman. It has no appearance in its own essential nature, i.e., without the support of the Brahman it cannot manifest itself; it is thus associated with Brahman in two forms as *jīva-māyā* and *guṇa-māyā*. The analogy of *ābhāsa*, which was explained by Śrīdhara as "illusory image," is here interpreted as the reflection of the solar light from outside the solar orb. The solar light cannot exist unless it is supported by the solar orb. But though this is so, yet the solar light can have an independent rôle and play outside the orb when it is reflected or refracted; thus it may dazzle the eyes of man and blind them to its real nature, and manifest itself in various colours. So also the analogy of darkness shows that, though darkness cannot exist where there is light, yet it cannot itself be perceived without the light of the eyes. The *prakṛti* and its developments are but manifestations or appearances, which are brought into being outside the Brahman by the power of the *māyā*; but the movement of the *māyā*, the functioning of the vital *prāṇas*, *manas* and the senses, the body, are all made possible by the fact that they are permeated by the original essential power of God (*antaraṅga-śakti*)². Just as a piece of iron which derives its heat from the fire in which it is put cannot in its turn burn the fire or affect it in any manner, so the *māyā* and its appearances, which derive their essence from the essential power of God, cannot in any way affect God or His essential power.

The selves can know the body; but they cannot know the ultimate reality and the ultimate perceiver of all things. It is through *māyā* that different things have an apparently independent existence and

¹ *ṛte'rtham yat pratīyeta na pratīyeta cātmani
tad vidyād ātmano māyām yathā bhāsam yathā tamah.*

² *svarūpa-bhūtākhyām antaraṅgām śaktim sarvasyāpi pravṛtty-anyathā-
mupapattiyā. Ibid. p. 69.*

are known by themselves; but the true and essential nature of Brahman is always one with all things, and, since in that state there is no duality, there is nothing knowable and no form separate from it. The ultimate reality, which reveals all things, reveals itself also—the heat rays of fire, which derive their existence from the fire, cannot burn the fire itself¹. The *guṇas*—*sattva*, *rajas* and *tamas*—belong to the *ġīva* and not to Brahman; for that reason, so long as the selves (*ġīva*) are blinded by the power of *māyā*, there is an appearance of duality, which produces also the appearance of knower and knowable. The *māyā* is again described as twofold, the *guṇa-māyā*, which represents the material forces (*jaḍātmikā*), and the *ātma-māyā*, which is the will of God. There is also the concept of *ġīva-māyā*, which is, again, threefold—creative (*Bhū*), protective (*Śrī*), and destructive (*Durgā*). The *ātma-māyā* is the essential power of God². In another sense *māyā* is regarded as being composed of the three *guṇas*. The word *yoga-māyā* has also two meanings—it means the miraculous power achieved through the practice of the *yoga* when it is used as a power of the Yogins or sages; when applied to God (*paramēśvara*), it means the manifestation of His spiritual power as pure consciousness (*cic-chakti-vilāsa*). When *māyā* is used in the sense of *ātma-māyā* or God's own *māyā*, it has thus three meanings, viz., His essential power (*svarūpa-śakti*), His will involving knowledge and movement (*ġñāna-kriye*), and also the inner dalliance of His power as consciousness (*cic-chakti-vilāsa*)³. Thus, there is no *māyā* in *Vaikuṇṭha*, because it itself is of the nature of *māyā* or *svarūpa-śakti*; the *Vaikuṇṭha* is, thus, identical with *mokṣa* (emancipation).

Once it is admitted that the unthinkable power of God can explain all contradictory phenomena and also that by *yoga-māyā* God can directly manifest any form, appearance or phenomena, it was easy for the Vaiṣṇavas of the Gaudīya school to exploit the idea theologically. Leaving aside the metaphysical idea of the non-Vaiṣṇava nature of the relation of God with His powers, they tried

¹ *svarūpa-vaibhava tasya ġīvasya raśmi-sthānīyasya maṇḍalasthūniyo ya ātmā paramātmā sa eva svarūpa-śaktiā sarvaṃ abhūt, anādita eva bhavaṃ āste, na tu tat-praveśena, tat tatra itarāḥ sa ġīvaḥ kenetareṇa karaṇa-bhūtena kaṃ padārthaṃ paśyet, na kenāpi kaṃ api paśyet ity-arthaḥ; na hi raśmayāḥ svaśaktiā sūrya-maṇḍalāntargata-vaibhavaṃ prakāśayeyuh, na cārciṣo vahnīm nirduheyuh. Śaṭ-sandarbhā, p. 71.*

² *mīyate anayā iti māyā-śabdena śakti-mātram api bhanyate. Ibid. p. 73.*

³ *Ibid. pp. 73-4.*

by an extension of the metaphysical formula to defend their religious belief in the theological nature of the episodes of Kṛṣṇa in Vṛndāvana, as related in the *Bhāgavata*. Thus they held that Kṛṣṇa, including His body and all His dress and ornaments and the like, the *Gopīs*, with whom He had dalliance, and even the cows and trees of Vṛndāvana, were physically existent in limited forms and at the same time unlimited and spiritual as a manifestation of the essential nature of God. The Vaiṣṇavas were not afraid of any contradiction, because in accordance with the ingeniously-devised metaphysical formula the supra-logical nature of God's power was such that through it He could manifest Himself in all kinds of limited forms, and yet remain identical with His own supreme nature as pure bliss and consciousness. The contradiction was only apparent; because the very assumption that God's power is supra-logical resolves the difficulty of identifying the limited with the unlimited, the finite with the infinite¹. The author of *Ṣaṭ-sandarbhā* takes great pains to prove that the apparent physical form of Kṛṣṇa, as described in the *Bhāgavata-purāṇa*, is one with Brahman. It is not a case in which the identity is to be explained as having absolute affinity with Brahman (*atyanta-tādātmya*) or as being dependent on Brahman: if the Brahman reveals itself in pure mind, it must appear as one, without any qualitative difference of any kind; if, in associating Brahman with the form of Kṛṣṇa, this form appears to be an additional imposition, it is not the revelation of Brahman. It cannot be urged that the body of Kṛṣṇa is a product of pure *sattva*; for this has no *rajas* in it, and therefore there is no creative development in it. If there is any *rajas* in it, the body of Kṛṣṇa cannot be regarded as made up of pure *sattva*; and, if there is any mixture of *rajas*, then it would be an impure state and there can be no revelation of Brahman in it. Moreover, the text of the *Bhāgavata-purāṇa* is definitely against the view that the body of Kṛṣṇa is dependent only on pure *sattva*, because it asserts that the body of Kṛṣṇa is itself one and the same as pure *sattva* or pure

¹ *Ibid.* pp. 70-92. *satya-jñānānantānandaika-rasa-mūrtitvād yugapad eva sarvaṃ api tat-tad-rūpaṃ vartata eva, kintu yūyaṃ sarvadā sarvaṃ na paśyatheti* (p. 87). *tataśca yadā tava yatrāmśe tat-tad-upāśanā-phalasya yasya rūpasya prakāśaneccā tadaiva tatra tad-rūpaṃ prakāśate iti. iyaṃ kadety asya yuktiḥ. tasmāt tat tat sarvaṃ api tasmīn śrī-kṛṣṇa-rūpe'ntarbhūtaṃ ity evam atrāpi tātparyam upasaṃharati* (p. 90). *tad ittham madhyamākāra eva sarvādhāratvāt bibhṛtaṃ sādhitam. sarva-gatatvād api sādhyate. citraṃ vataitad ekena vapuṣā yugapad prthuk grheṣu deyaṣṭa-sāhasraṃ striya eka udāvahat.*

consciousness¹. Again, since the body of Kṛṣṇa appears in diverse forms, and since all these forms are but the various manifestations of pure consciousness and bliss, they are more enjoyable by the devotee than the Brahman².

In the *Paramātma-sandarbha* the *jīva* or individual is described as an entity which in its own nature is pure and beyond *māyā*, but which perceives all the mental states produced by *māyā* and is affected by them. It is called *Kṣetrajña*, because it perceives itself to be associated with its internal and external body (*kṣetra*)³. In a more direct sense God is also called *Kṣetrajña*, because He not only behaves as the inner controller of *māyā* but also of all those that are affected by it and yet remains one with Himself through His essential power⁴. The *Kṣetrajña* should not be interpreted in a monistic manner, to mean only a pure unqualified consciousness (*nirviśeṣam cid-vastu*), but as God, the supreme inner controller. The view that unqualified pure consciousness is the supreme reality is erroneous. Consequently a distinction is drawn between the *vyāṣṭi-kṣetrajña* (the individual person) and the *samaṣṭi-kṣetrajña* (the universal person)—God, the latter being the object of worship by the former. This form of God as the inner controller is called Paramātmān.

God is further supposed to manifest Himself in three forms: first, as the presiding lord of the totality of selves and the *prakṛti*, which have come out of Him like sparks from fire—Saṅkarṣaṇa or Mahāviṣṇu; secondly, as the inner controller of all selves in their totality (*samaṣṭi-jīvāntaryāmī*)—*Pradyumna*. The distinction between the first and the second stage is that in the first the *jīva* and the *prakṛti* are in an undifferentiated stage, whereas in the second the totality of the *jīvas* has been separated outside of *prakṛti* and stands independently by itself. The third aspect of God is that in which He resides in every man as his inner controller.

The *jīvas* are described as atomic in size; they are infinite in number and are but the parts of God. *Māyā* is the power of God,

² *Ibid.* p. 149.

³ *Ibid.* p. 209.

⁴ *māyāyāṃ māyike'pi antar-yāmitayā praviṣṭo'pi svarūpa-śaktyā svarūpa-stha eva na tu tat-samsakta ity arthaḥ, vāsudevatvena sarva-kṣetra-jñātytvāt so'paraḥ kṣetrajña ātmā paramātmā. tad evaṃ api mukhyaṃ kṣetrajñatvaṃ paramātmāny eva. Ibid.* p. 210.

and the word is used in various senses in various contexts; it may mean the essential power, the external power, and it has also the sense of *pradhāna*¹.

The author of the *Ṣaṭ-sandarbhā* denies the ordinary Vedāntic view that the Brahman is pure consciousness and the support (*āśraya*) of the objects (*viśaya* or *māyā* or *ajñāna*). He regards the relation between *māyā* and Brahman as transcendental and supra-rational. Just as various conflicting and contradictory powers may reside in any particular medicine, so also various powers capable of producing manifold appearances may reside in Brahman, though the manner of association may be quite inexplicable and unthinkable. The appearance of duality is not due to the presence of *ajñāna* (or ignorance) in the Brahman, but through His unthinkable powers. The duality of the world can be reconciled with ultimate monism only on the supposition of the existence of the transcendent and supra-rational powers of God. This fact also explains how the power of God can transform itself into the material image without in any way affecting the unity and purity of God². Thus both the subtle *jīvas* and the subtle material powers of the universe emanate from Paramātman, from whom both the conscious and the unconscious parts of the universe are produced. Paramātman, considered in Himself, may be taken as the agent of production (*nimitta-kāraṇa*), whereas in association with His powers He may be regarded as the material cause of the universe (*upādāna-kāraṇa*)³. Since the power of God is identical with the nature of God, the position of monism is well upheld.

On the subject of the relation between the parts and the whole the author of the *Ṣaṭ-sandarbhā* says that the whole is not a conglomeration of the parts, neither is the whole the transformation of the parts or a change induced in the parts. Nor can the whole be regarded as different from the parts or one with it, or as associ-

² *Ibid.* p. 249.

³ *Ibid.* p. 250.

ated with it. If the whole were entirely different from the parts, the parts would have nothing to do with the whole; if the parts were inherent in the whole, then any part would be found anywhere in the whole. Therefore the relation between the parts and the whole is of a supra-logical nature. From this position the author of the *Ṣaṭ-sandarbha* jumps to the conclusion that, wherever there is an appearance of any whole, such an appearance is due to the manifestation of Paramātmān, which is the ultimate cause and the ultimate reality (*tasmād aikya-buddhyā lambana-rūpaṃ yat pratīyate tat sarvatra paramātmā-lakṣaṇaṃ sarvakāraṇaṃ asty eva*, p. 252). All manifestations of separate wholes are, therefore, false appearances due to similarity; for wherever there is a whole there is the manifestation of God. In this way the whole universe may be regarded as one, and thus all duality is false¹.

Just as fire is different from wood, the spark and the smoke (though the latter two are often falsely regarded as being identical with the fire), so the self, as the separate perceiver called Bhagavān or Brahman, is also different from the five elements (the senses, the *antaḥkaraṇa* and the *pradhāna*) which together pass by the name of *jīva*².

Those who have their minds fixed on the Supreme Soul (Paramātmān) and look upon the world as its manifestation thereby perceive only the element of ultimate reality in it; whereas those who are not accustomed to look upon the world as the manifestation of the supreme soul perceive it only as the effect of ignorance; thus to them the Paramātmān, who pervades the world as the abiding Reality, does not show Himself to be such. Those who traffic in pure gold attach no importance to the various forms in which the gold may appear (bangles, necklaces and the like), because their chief interest lies in pure gold; whereas there are others whose chief interest is not pure gold, but only its varied unreal forms. This world is brought into being by God through His inherent power working upon Himself as the material cause; as the world is brought

into being, He enters into it, controls it in every detail, and in the last stage (at the time of *pralaya*) He divests Himself of various forms of manifestation and returns to Himself as pure being, endowed with His own inherent power. Thus it is said in the *Viṣṇu-purāṇa* that the ignorant, instead of perceiving the world as pure knowledge, are deluded by perceiving it as the visible and tangible world of objects; but those who are pure in heart and wise perceive the whole world as the nature of God, as pure consciousness.

Status of the World.

Thus in the Vaiṣṇava system the world is not false (like the rope-snake), but destructible (like a jug). The world has no reality; for, though it is not false, it has no uninterrupted existence in past, present and future; only that can be regarded as real which is neither false nor has only an interrupted existence in time. Such reality can only be affirmed of Paramātman or His power¹. The Upaniṣads say that in the beginning there existed ultimate Reality, *sat*; this term means the mutual identity of the subtle potential power of Brahman and the Brahman. The theory of *satkāryavāda* may be supposed to hold good with reference to the fact that it is the subtle power of God that manifests itself in diverse forms (*sūkṣmāvasthā-lakṣaṇa-tac-chaktiḥ*). Now the question arises, whether, if the world has the ultimate *sat* as its material cause, it must be as indestructible as that; if the world is indestructible, then why should it not be false (like the conch-shell-silver) and, consequently, why should not the *vivarta* theory be regarded as valid? The reply to such a question is that to argue that, because anything is produced from the real (*sat*), therefore it must also be real (*sat*) is false, since this is not everywhere the case; it cannot be asserted that the qualities of the effect should be wholly identical with the qualities of the cause; the rays of light emanating from fire have not the power of burning². Śrīdhara, in his commentary on the *Viṣṇu-purāṇa*, asserting that Brahman has an unchangeable and a changeable form, explains the apparent incongruity in the possibility of the changeable coming out of the unchangeable on the

¹ *tato vivarta-vādinām iva rajju-sarpa-van na mithyātvam kintu ghaṭa-van naśvaratvam eva tasya. tato mithyātvābhāve api tri-kālavyabhicārā-bhāvāj jagato na sattvam vivarta-pariṇāmāsiddhatvena tad-doṣa-dvayābhāvavaty eva hi vastuni sattvam vidhīyate yathā paramātmāni tacchaktau vā. Ibid. p. 255.*

² *Ibid. p. 256.*

basis of the above analogy of fire and the rays emanating from it. Again, in other cases an appearance like that of silver manifesting itself from the conch-shell is wholly false, as it has only appearance, but no utility; so there are many other things which, though they are believed to have a particular nature, are in reality quite different and have entirely different effects. Thus some wood poison may be believed to be dry ginger, and used as such; but it will still retain its poisonous effects. Here, in spite of the illusory knowledge of one thing as another, the things retain their natural qualities, which are not affected by the illusory notion.

The power a thing has of effecting any change or utility cannot be present at all times and places, or with the change of object, and so the power of effecting any change or utility, not being an eternal and all-abiding quality, cannot be regarded as the defining character of reality; so a false appearance like the conch-shell-silver, which has merely a perceivable form, but no other utility or power of effecting changes, cannot be regarded as real. Only that is real which is present in all cases of illusory objects or those which have any kind of utility; reality is that which lies as the ground and basis of all kinds of experience, illusory or relatively objective. The so-called real world about us, though no doubt endowed with the power of effecting changes or utility, is yet destructible. The word “destructible,” however, is used only in the sense that the world returns to the original cause—the power of God—from which it came into being. The mere fact that we deal with the world and that it serves some purpose or utility is no proof that it is real; for our conduct and our dealings may proceed on the basis of blind convention, without assuming any reality in them. The currency of a series of conventions based on mutual beliefs cannot prove either their reality or their nature as knowledge (*vijñāna*) without any underlying substratum. Thus the currency of conventions cannot prove their validity. The world thus is neither false nor eternal; it is real, and yet does not remain in its apparent form, but loses itself in its own unmanifested state within the power of Brahman; and in this sense both the *satkārya* and the *pariṇāma* theories are valid¹.

It is wrong to suppose that originally the world did not exist at all and that in the end also it will absolutely cease to exist; for, since

¹ *Ṣaṭ-sandarbhā*, p. 259.

absolute reality is altogether devoid of any other kind of experience, and is of the nature of homogeneous blissful experience, it is impossible to explain the world as an illusory imposition like the conch-shell-silver. It is for this reason that the world-creation is to be explained on the analogy of *pariṇāma* (or evolution) and not on the analogy of illusory appearances like the conch-shell-silver or the rope-snake. Through His own unthinkable, indeterminable and inscrutable power the Brahman remains one with Himself and yet produces the world¹; thus it is wrong to think of Brahman as being the ground cause. If the world is eternally existent as it is, then the causal operation is meaningless; if the world is absolutely non-existent, then the notion of causal operation to produce the absolutely non-existent is also impossible. Therefore, the world is neither wholly existent nor wholly non-existent, but only existent in an unmanifested form. The jug exists in the lump of clay, in an unmanifested form; and causal operation is directed only to actualize the potential; the world also exists in the ultimate cause, in an unmanifested form, and is actualized in a manifest form by His natural power operating in a definite manner. It is thus wrong to suppose that the *māyā* of the *jīva*, from which comes all ignorance, is to be regarded as the cause of the majesty of God's powers; God is independent, all-powerful and all-creator, responsible for all that exists in the world. It is thus wrong to suppose that the *jīva* creates the world either by his own powers or by his own *ajñāna*; God is essentially true, and so He cannot create anything that is false².

The Vaiṣṇava theory thus accepts the doctrine of ultimate dissolution in *prakṛti* (*prakṛti-laya*). In the time of emancipation the world is not destroyed; for being of the nature of the power of God it cannot be destroyed; it is well known that in the case of *jīvan-mukti* the body remains. What happens in the stage of emancipation is that all illusory notions about the world vanish, but the world, as such, remains, since it is not false; emancipation is thus a state of subjective reformation, not an objective disappearance of the world. As the objective world is described as identical with

¹ *ato acintya-saṅkhyā-svarūpād acyutaśyaiva tava pariṇāma-svikāreṇa draviṇa-jātinām dravya-mātrānām mṛl-lohādīnām vikalpā vedā ghaṭa-kunḍalādayas teṣāṃ panthāno mārgāḥ prakārās tair eva asmābhir upamīyate na tu kutrāpi bhṛama-rajatādibhiḥ. Ibid. p. 260.*

² *satya-svābhāvīkacintya-śaktiḥ parameśvaras tuccha-māyikam api na kuryāt. Ibid. p. 262.*

God's powers, so also are the senses and the *buddhi*. When the Upaniṣad says that the *manas* is created by God, this merely means that God is identical with the cosmic *manas*, the *manas* of all beings, in His form as *Aniruddha*¹. The ultimate cause is identical with the effect; wherever the effect is new (*apūrva*), and has a beginning and an end, it is illusory; for here the concept of cause and effect are mutually interdependent and not separately determinable. Until the effect is produced, nothing can be regarded as cause, and, unless the cause is determined, the effect cannot be determined²; so to validate the concept of causality the power as effect must be regarded as already existent in the cause. It is this potential existence of effect that proves its actual existence; thus the world exists as the natural energy of God, and as such it is eternally real. Even the slightest change and manifestation cannot be explained without reference to God or independently of Him; if such explanation were possible, the world also would be self-luminous pure consciousness.

It has been said that the *jīvas* are indeed the energy of God, but that still they may suffer from the defect of an obscuration of their self-luminosity. The *jīvas*, being of the nature of *taṭastha śakti*, are inferior to the essential power of God, by which their self-luminosity could be obscured³. This obscuration could be removed by God's will only through the spirit of enquiry regarding God's nature on the part of the *jīvas*. According to the *Ṣaṭ-sandarbhā* the world is a real creation; but it refers with some approval to another view, that the world is a magical creation which deludes the *jīvas* into believing in a real objective existence of the world. This view, however, must be distinguished from the monistic view of Śaṅkara (which is that the real creator by His real power manifests the world-experience to a real perceiver)⁴, and it also differs from the *Ṣaṭ-sandarbhā* in that the latter regards the world as a real creation.

¹ *atas tan-mano'sṛjata manaḥ prajāpatim ity ādau manaḥ-śabdena samaṣṭi-mano'dhiṣṭhātā śrīmān aniruddha eva. Ṣaṭ-sandarbhā*, p. 262.

⁴ *satyeṇaiva kartā satyam eva draṣṭāram prati satyaiva tayā śaktyā vastunaḥ sphuraṇāt loka upi tathaiva drśyata iti. Ibid.* p. 268.

It must, however, be maintained that the main interest of the Vaiṣṇavas is not in these hair-splitting dialectical discussions; theirs is professedly a system of practical religious emotionalism, and this being so it matters very little to a Vaiṣṇava whether the world is real or unreal. His chief interest lies in the delight of his devotion to God¹. It is further held that the ordinary experience of the world can well be explained by a reference to world-analogies; but the transcendental relation existing between God, the individual, the souls and the world can hardly be so explained. The Upaniṣad texts declare the identity of the *jīva* and *parameśvara*; but they only mean that *parameśvara* and the *jīva* alike are pure consciousness.

God and His Powers.

Returning to the *Ṣaṭ-sandarbha*, one stumbles over the problem how the Brahman, who is pure consciousness and unchangeable, can be associated with the ordinary *guṇas* of *prakṛti*. The ordinary analogy of play cannot apply to God; children find pleasure in play or are persuaded to play by their playmates; but God is self-realized in Himself and His powers, He cannot be persuaded to act by anybody, He is always dissociated from everything, and is not swayed by passions of any kind. As He is above the *guṇas*, they and their actions cannot be associated with Him. We may also ask how the *jīva*, who is identical with God, can be associated with the beginningless *avidyā*. He being of the nature of pure consciousness, there ought not to be any obscuration of His consciousness, either through time or through space or through conditions or through any internal or external cause. Moreover, since God exists in the form of the *jīvas* in all bodies, the *jīvas* ought not to be under the bondage of afflictions or *karma*. The solution of such difficulties is to be found in the supra-rational nature of the *māyā-śakti* of God, which, being supra-logical, cannot be dealt with by the apparatus of ordinary logic. The fact that the power of God can be conceived as internal (*antaraṅga*) and external (*bahiraṅga*) explains why what happens in the region of God's external power cannot affect His own internal nature; thus, though God in the form of *jīvas* may be under the influence of *māyā* and the world-experience arising therefrom, He remains all the time unaffected in His own internal

¹ *satyaṃ na satyaṃ naḥ kṛṣṇa-pādābjāmodaṃ antaraṃ jagat satyaṃ asatyaṃ vā ko'yaṃ tasmin durāgrahaḥ. Ibid. p. 269.*

nature. The supra-logical and supra-rational distinction existing between the threefold powers (*svarūpa* or *antaraṅga*, *bahiraṅga*, and *taṭastha*) of God and their relation to Him explains difficulties which ordinarily may appear insurmountable. It is this supra-logical conception that explains how God can be within the sway of *māyā* and yet be its controller¹. The *jīva* in reality is not under the sway of afflictions, but still he appears to be so through the influence of God's *māyā*; just as in dreams a man may have all kinds of untrue and distorted experiences, so also the world-experiences are imposed on the self through the influence of God's *māyā*. The appearance of impurity in the pure *jīva* is due to the influence of *māyā* acting as its *upādhi* (or condition)—just as the motionless moon appears to be moving on the ripples of a flowing river. Through the influence of *māyā* the individual *jīva* identifies himself with the *prakṛti* and falsely regards the qualities of the *prakṛti* as his own².

God's Relation to His Devotees.

The incarnations of God are also to be explained on the same analogy. It is not necessary for God to pass through incarnations or to exert any kind of effort for the maintenance of the world; for He is omnipotent; all the incarnations of God recounted in the *Purāṇas* are for the purpose of giving satisfaction to the devotees (*bhaktas*). They are effected by the manifestation of the essential powers of God (*svarūpa-śaktyāviśkaraṇa*), out of sympathy for His devotees. This may naturally be taken to imply that God is affected by the sorrows and sufferings of His devotees and that He is pleased by their happiness. The essential function of the essential power of God is called *hlādinī*, and the essence of this *hlādinī* is *bhakti*, which is of the nature of pure bliss. *Bhakti* exists in both God and the devotee, in a dual relation³. God is self-realized, for

¹ *Ṣaṭ-sandarbhā*, p. 270.

² *yathā jale pratibimbītasya eva candramaso jalopādhiḥ kṛtāḥ kampādī-guṇo dharmo dṛśyate na tvākāśa-sthitasya tadvad anātmanah prakṛti-rūpopādher dharmah ātmanah śuddhasyāsanm api aham eva so'yam ity āveśān māyayā upādhi-tādātmyāpannāhamkārahābhāsasya pratibimba-sthāntyasya tasya draṣṭur ādhyātmikāvasthasya eva yady api syāt tathāpi śuddhaḥ asau tad-abhedābhimānena tam paśyati. Ibid. p. 272.*

³ *parama-sāra-bhūtāyā api svarūpa-śakteḥ sāra-bhūtā hlādinī nāma yā vṛttis tasya eva sāra-bhūto vṛtti-viśeṣo bhaktiḥ sā ca raty-apara-paryāyā. bhaktir bhagavati bhakteṣu ca nikṣipta-nijabhaya-koṭiḥ sarvadā tiṣṭhati. Ibid. p. 274.*

the *bhakti* exists in the *bhakta*, and being a power of God it is in essence neither different from nor identical with Him. *Bhakti* is only a special manifestation of His power in the devotee, involving a duality and rousing in God a special manifestation of delight which may be interpreted as pleasure arising from the *bhakti* of the devotee. When God says that He is dependent on the *bhakta*, the idea is explicable only on the supposition that *bhakti* is the essence of the essential power of God; the devotee through his *bhakti* holds the essential nature of God within him. Now the question arises whether God really feels sorrow when the devotees feel it, and whether He is moved to sympathy by such an experience of sorrow. Some say that God, being all-blissful by nature, cannot have any experience of sorrow; but others say that He has a knowledge of suffering, not as existing in Himself, but as existing in the devotee. The writer of *Ṣaṭ-sandarbhā*, however, objects that this does not solve the difficulty; if God has experience of sorrow, it does not matter whether He feels the pain as belonging to Himself or to others. It must therefore be admitted that, though God may somehow have a knowledge of suffering, yet He cannot have experience of it; and so, in spite of God's omnipotence, yet, since He has no experience of the suffering of men, He cannot be accused of cruelty in not releasing everyone from his suffering. The happiness of devotees consists in the experience of their devotion, and their sorrow is over obstruction in the way of their realization of God. God's supposed pity for His devotee originates from an experience of his devotion, expressing itself in forms of extreme humility (*dainyātmaka-bhakti*), and not from experience of an ordinary sorrow. When God tries to satisfy the desires of His devotee, He is not actuated by an experience of suffering, but by an experience of the devotion existing in the devotee. If God had experience of the sorrows of others and if in spite of His omnipotence He had not released them from them, He would have to be regarded as cruel; so also, if He had helped only some to get out of suffering and had left others to suffer, He would have to be regarded as being only a partial God. But God has no experience of the sorrows of others; He only experiences devotion in others. The efficacy of prayer does not prove that God is partial; for there is no one dear to Him or enemy to Him; but, when through devotion the devotee prays for anything to Him, He being present in his heart in one through the

devotion, grants him the object of his desire; so it is not necessary for God to pass through stages of incarnation for the protection or maintenance of the world; but still He does so in order to satisfy prayers to God. All the incarnations of God are for the fulfilment of the devotee's desires. The inscrutability of God's behaviour in the fulfilment of His devotee's desires is to be found in the inscrutability of the supra-rational nature of the essential power of God. Though all the works of God are absolutely independent and self-determined, yet they are somehow in accord with the good and bad deeds of man. Even when God is pleased to punish the misdeeds of those who are inimical to his devotees, such punishment is not effected by the rousing of anger in Him, but is the natural result of His own blissful nature operating as a function of His *hlādinī*¹. But the writer of the *Ṣaṭ-sandarbhā* is unable to explain the fact why the impartial and passionless God should destroy the demons for the sake of His devotees, and he plainly admits that the indescribable nature of God's greatness is seen when, in spite of His absolute impartiality to all, He appears to be partial to some. Though He in Himself is beyond the influence of *māyā*, yet in showing mercy to His devotees He seems to express Himself in terms of *māyā* and to be under its sway. The transition from the transcendent *sattva* quality of God to His adoption of the ordinary qualities of *prakṛti* is supra-rational and cannot be explained. But the writer of the *Ṣaṭ-sandarbhā* always tries to emphasize the facts that God is on the one hand actuated by His purpose of serving the interest of His devotees and that on the other hand all His movements are absolutely self-determined—though in the ordinary sense self-determination would be incompatible with being actuated by the interest of others. He further adds that, though it may ordinarily appear that God is moved to action in certain critical happenings in the course of world-events or in the life of His devotee, yet, since these events of the world are also due to the manifestation of His own power as *māyā*, the parallelism that may be noticed between world-events and His own efforts cannot be said to invalidate the view that the latter are self-determined. Thus

¹ *atha yadi kecit bhaktānām eva dviṣanti tadā tadā bhakta-pakṣa-pātāntaḥ-pātitvād bhagavatā svayaṁ tadvreṣe api na doṣaḥ pratyuta bhakta-viṣayaka-tad-rateḥ poṣakatvena hlādinī-vṛtti-bhūtānandollāsa-viśeṣa evāsau. Ṣaṭ-sandarbhā. p. 278.*

His own efforts are naturally roused by Himself through the impulsion of *bhakti*, in which there is a dual manifestation of the essential power of God, as existing in Himself and in the heart of the devotee. It has already been said that *bhakti* is the essence of the essential power of God which has for its constituents the devotee and God. The prompting or rousing of God's powers through world-events is thus only a mere appearance (*pravṛtyā bhāsa*), happening in consonance with the self-determining activity of God. It is further said that God's activity in creating the world is also motivated by His interest in giving satisfaction to His devotees. Time is the defining character of His movement, and, when God determines Himself to move forward for creation through time-movement, He wishes to create His own devotees, merged in the *prakṛti*, out of His mercy for them. But in order to create them He must disturb the equilibrium of the *prakṛti*, and for this purpose His spontaneous movement as thought separates the power (as *jīva-māyā*) from His essential power (*svarūpa-śakti*); thus the equilibrium of the former is disturbed, and *rajas* comes into prominence. The disturbance may be supposed to be created in an apparent manner (*taccheṣatātmakaprabhāvenaivoddīpta*) or by the dynamic of *kāla*¹. When God wishes to enjoy Himself in His manifold creation, He produces *sattva*, and, when He wishes to lie in sleep with His entire creation, He creates *tamas*. Thus all the creative actions of God are undertaken for the sake of His devotees. The lying in sleep of God is a state of ultimate dissolution. Again, though God exists in all as the internal controller, yet He is not perceived to be so; it is only in the mind of the devotee that He really appears in His true nature as the inner controller.

The author of the *Ṣaṭ-sandarbhā* is in favour of the doctrine of three *vyūhas* as against the theory of four *vyūhas* of the Pañcārātras. He therefore refers to the *Mahābhārata* for different traditions of one, two, three and four *vyūhas*, and says that this discrepancy is to be explained by the inclusion of one or more *vyūhas* within the others. The *Bhāgavata-purāṇa* is so called from the fact that it accepts Bhagavān as the principal *vyūha*². The enquiry (*jijñāsā*) concerning this Brahman has been explained by Rāmānuja as *dhyāna*, but according to the *Ṣaṭ-sandarbhā* this *dhyāna* is nothing

¹ *Ibid.* p. 283.

² *Ibid.*

but the worship of God in a definite form; for it is not easy to indulge in any *dhyāna* (or worship of God) without associating it with a form on which one may fix his mind. Brahman is described as unchanging ultimate truth, and, as sorrow only is changeable, He is also to be regarded as wholly blissful. Brahman is also regarded as *satyam*, because He is the self-determiner, and His existence does not depend on the existence or the will of anything else. He, by his power as self-luminosity, dominates His other power as *māyā*, and is in Himself untouched by it. This shows that, though *māyā* is one of His powers, yet in His own nature He is beyond *māyā*. The real creation coming out of *māyā* consists of the three elements of fire, water and earth partaking of each other's parts. The Śāṅkarites say that the world is not a real creation, but an illusory imposition like the silver in the conch-shell; but such an illusion can only be due to similarity, and, if through it the conch-shell can be conceived as silver, it is also possible that the silver may also be misconceived as conch-shell. It is by no means true that the ground (*adhiṣṭhāna*) of illusion should be one and the illusion manifold; for it is possible to have the illusion of one object in the conglomeration of many; the collocation of many trees and hills and fog may produce the combined effect of a piece of cloud. The world of objects is always perceived, while the Brahman is perceived as pure self-luminosity; and, if it is possible to regard Brahman also as illusory, that will practically mean that Brahman cannot any longer be regarded as the ground of the world. The world therefore is to be regarded as real. The monistic view, that the Brahman is absolutely devoid of any quality, is false; for the very name Brahman signifies that He is supremely great. The world also has not only come out of Him, but stays in Him and will ultimately be dissolved in Him. Moreover, the effect should have some resemblance to the cause, and the visible and tangible world, of which God is the cause, naturally signifies that the cause itself cannot be absolutely devoid of quality¹. Even on the supposition that Brahman is to be defined as that from which the world-illusion has come into being, the point remains, that this in itself is a distinguishing quality; and, even if Brahman be regarded as self-luminous, the self-luminosity itself is a quality which distinguishes

¹ *sādhyā-dharmāvyabhicāri-sādhana-dharmānvita-vastu-viṣayatvān na tattvāpramāṇam. Śaṭ-sandarbhā. p. 27.*

Brahman from other objects. If self-luminosity is a distinguishing quality, and if Brahman is supposed to possess it, He cannot be regarded as qualityless¹.

Nature of bhakti.

The author of the *Ṣaṭ-sandarbha* discusses in the *Kṛṣṇa-sandarbha* the then favourite theme of the Vaiṣṇavas that Lord Kṛṣṇa is the manifestation of the entire Godhood. The details of such a discussion cannot pertinently be described in a work like the present one, and must therefore be omitted.

In the *Bhakti-sandarbha* the author of the *Ṣaṭ-sandarbha* deals with the nature of *bhakti*. He says that, though the *jīvas* are parts of God's power, yet through beginningless absence of true knowledge of the ultimate reality their mind is turned away from it, and through this weakness their self-knowledge is obscured by *māyā*; they are habituated to looking upon the *pradhāna* (the product of *sattva*, *rajas* and *tamas*) as being identical with themselves, and thereby suffer the sorrows associated with the cycles of birth and re-birth. Those *jīvas*, however, who by their religious practices have inherited from their last birth an inclination towards God, or those who through a special mercy of God have their spiritual eyes opened, naturally feel inclined towards God and have a realization of His nature whenever they listen to religious instruction. It is through the worship of God that there arise the knowledge of God and the realization of God, by which all sorrows are destroyed. In the Upaniṣads it is said that one should listen to the Upaniṣadic texts propounding the unity of Brahma and meditate upon them. Such a course brings one nearer God, because through it the realization of Brahma is said to be possible. The processes of *aṣṭāṅga-yoga* may also be regarded as leading one near to God's realization. Even the performance of *karma* helps one to attain the proximity of God; by performing one's duties one obeys the commands of God, and in the case of obligatory duties the performer derives no benefit, as the fruits of those actions are naturally dedicated to God. Knowledge associated with *bhakti* is also

¹ *jagaj-janmādi-bhramo yatas tad brahmeti svotprekṣā-pakṣe ca na nir-viśeṣa-vastu-siddhiḥ bhrama-mūlam ajñānam ajñāna-sākṣi brahmeti upagamāt. sākṣitvaṁ hi prakāśaikarasatayā ucyate. prakāśatvaṁ tu jaḍād vyāvartakam svasya parasya ca vyavahāra-yogyatāpādana-svabhāvena bhavati. tathā sati saviśeṣatvaṁ tad-abhāve prakāśataiva na syāt tucchataiva syāt. Ibid. p. 291.*

negatively helpful by detaching one's mind from objects other than God; yet *bhakti* alone, exhibited in chanting God's name and in being intoxicated with emotion for God, is considered to be of supreme importance. The two forms of *bhakti* have but one objective, namely, to afford pleasure to God; they are therefore regarded as *ahetukī*. The true devotee finds a natural pleasure in chanting the name of God and absorbing himself in meditation upon God's merciful actions for the sake of humanity. Though the paths of duty and of knowledge are prescribed for certain classes of persons, yet the path of *bhakti* is regarded as superior; those who are in it need not follow the path of knowledge and the path of disinclination from worldly things¹. All the various duties prescribed in the *śāstras* are fruitful only if they are performed through the inspiration of *bhakti*, and, even if they are not performed, one may attain his highest only through the process of *bhakti*.

Bhakti is also described as being itself the emancipation (*mukti*)². True philosophic knowledge (*tattva-jñāna*) is the secondary effect of *bhakti*. True *tattva-jñāna* consists in the realization of God in His three-fold form, as Brahman, Paramātmā and Bhagavān in relation to His threefold powers, with which He is both identical and different. This reality of God can only be properly realized and apperceived through *bhakti*³. Knowledge is more remote than realization. *Bhakti* brings not only knowledge, but also realization (*jñāna-mātrasya kā vārttā sākṣād api kurvanti*); it is therefore held that *bhakti* is much higher than philosophic knowledge, which is regarded as the secondary effect of it. The true devotee can realize the nature of God either in association with His Powers or as divested of them, in His threefold form or in any one of His forms, according as it pleases him. The effect of one's good deeds is not the attainment of Heaven, but success in the satisfaction of God through the production of *bhakti*. The *nīdīdhya-sana* of the Upaniṣads means the worship of God (*upāsana*) by reciting the name and glory of God; when one does so with full attachment to God, all the bonds of his *karma* are torn asunder. The real difficulty however lies in the generation in one's mind of

¹ *bhajatām jñāna-vairagyābhyāseṇa prayojanaṃ nāsti. Śaṭ-sandarbha*, p. 481.

² *nīśalā tvayi bhaktir yā saiva muktir janārdana* (quotation from *Skanda-purāṇa*, Revākhanda). *Ibid.* p. 451.

³ *Ibid.* p. 454.

a natural inclination for turning to God and finding supreme satisfaction in reciting His name and glories. By association with true devotees one's mind gradually becomes inclined to God, and this is further intensified by the study of religious literature like the *Bhāgavata-purāṇa*. As an immediate result of this, the mind becomes dissociated from *rajas* and *tamas* (desires and afflictions), and by a further extension of the attachment to God there dawns the wisdom of the nature of God and His realization; as a result, egoism is destroyed, all doubts are dissolved, and all bondage of *karma* is also destroyed. Through reciting God's name and listening to religious texts describing His nature one removes objective ignorance regarding the nature of God, by deep thought and meditation one dispels one's own subjective ignorance through the destruction of one's illusory views regarding God, and by the realization and direct apprehension of God the personal imperfection which was an obstacle to the comprehension of the nature of God is destroyed. The following of the path of *bhakti* is different from the following of the path of duties in this, that, unlike the latter, the former yields happiness both at the time of following and also when the ultimate fulfilment is attained¹. Thus one should give up all efforts towards the path of obligatory or other kinds of duties (*karma*), or towards the path of knowledge or of disinclination (*vairāgya*)². These are fruitless without *bhakti*; for, unless the works are dedicated to God, they are bound to afflict one with the bondage of *karma*, and mere knowledge without *bhakti* is only external and can produce neither realization nor bliss; thus neither the obligatory (*nitya*) nor the occasional (*naimittika*) duties should be performed, but the path of *bhakti* should alone be followed. If the ultimate success of *bhakti* is achieved, there is nothing to be said about it; but, even if the path of *bhakti* cannot be successfully followed in the present life, there is no punishment in store for the devotee; for the follower of the path of *bhakti* has no right to follow the path of knowledge or of duties (*bhakti-rasikasya karmā-nādhikārat*)³. God manifests Himself directly in the conscious processes of all men, and He is the world-soul⁴; and He alone is

¹ *karmānuṣṭhānavan na sādhana-kāle sādhyā-kāle vā bhaktyanuṣṭhānaṃ duḥkha-rūpaṃ pratyuta sukha-rūpaṃ eva. Ibid. p. 457.*

² *Ibid. p. 457.*

³ *Ibid. p. 460.*

⁴ *sarveṣāṃ dhī-vṛttibhiḥ anubhūtaṃ sarvaṃ yena sa eka eva sarvāntarātmā. Ibid. p. 460.*

to be worshipped. Since *bhakti* is in itself identical with emancipation, our ultimate object of attainment is *bhakti* (*bhaktir evābhidheyam vastu*). A man who is on the path of *bhakti* has no need to undergo troublous efforts for self-concentration; for the very devotion would by itself produce self-concentration in a natural and easy manner through the force of the devotional emotion. The place of *bhakti* is so high that even those who have attained saintliness or the stage of *ġivan-mukti* and whose sins have been burnt away may have their fall, and their sins may re-grow through the will of God, if they are disrespectful to God¹. Even when through *bhakti* the bondage of *karma* has been destroyed, there is scope for a still higher extension of *bhakti*, through which one attains a still purer form of his nature. Thus *bhakti* is a state of eternal realizations which may subsist even when the impurities of bondage are entirely removed. God is the supreme dispenser of all things; through His will even the lowest of men may be transformed into a god, and the gods also may be transformed into the lowest of men. The existence of *bhakti* is regarded as the universal dispeller of all evils; thus *bhakti* not only removes all kinds of defects, but even the impending evils of *karmas* which are on the point of fructification (*prārabdha-karma*) are destroyed through its power². A true devotee therefore wants neither ordinary emancipation nor anything else, but is anxious only to pursue the path of *bhakti*.

To a devotee there is nothing so desired as God. This devotion to God may be absolutely qualityless (*nirguṇa*). The true knowledge of God must be the knowledge of the qualityless (*nirguṇa*), and therefore true devotion to Him must also be qualityless (*nirguṇa*); for, in whatever way *bhakti* may manifest itself, its sole object is the qualityless God. The meaning of the word “qualityless” (or *nirguṇa*) is that in itself it is beyond the *guṇas*. It has been explained before that *bhakti* is nothing but a manifestation of God’s essential power, and as such it has God only as its constituent, and it must therefore be regarded as beyond the *guṇas*; but in its expression *bhakti* may appear both as within or without the *guṇas*. Knowledge of Brahman may also be regarded as occurring in a twofold form;

¹ *ġivan-muktā api punar bandhanam yānti karmabhiḥ
yady acintya-mahā-śaktau bhagavatya aparādhinah.*

Ṣaṭ-sandarbha, p. 505.

as identity between the self and God, as in the case of the so-called Brahma-vādins; and with a certain kind of duality, as in the case of devotees. For this reason, though *bhakti* consists of knowledge and action, it is to be regarded as *nirguṇa*, because it refers to God alone, who is beyond all *guṇas*. *Bhakti* is thus obviously a transcendental process. It is no doubt true that sometimes it is described as being associated with *guṇas* (*sagūṇa*); but in all such cases such a characterization of *bhakti* can only be on account of its association with intellectual, volitional or emotional qualities of the mind¹. *Bhakti* really means "to live with God"; since God Himself is beyond the *guṇas*, residence with or in God must necessarily mean a state beyond the *guṇas*. There are others, however, who distinguish *bhakti* as worshipful action and as God-realizing knowledge, and according to them it is only the latter that is regarded as being beyond the *guṇas* (*nirguṇa*). But, though the actual worshipping action is manifested in and through the *guṇas*, the spiritual action determining it must be regarded as outside the material influences².

A question may here naturally arise, that if God is always of the nature of pure bliss, how is it possible for the devotee to please Him by his *bhakti*? This has already been explained, and it may further be added that *bhakti* is a mode of the self-realization of God's own blissful nature; its mode of operation is such that here the *hlāḍinī* power of God works itself by taking in the devotee as its constituent and its nature is such that it is blissful not only to God, but also to the devotee³. The appearance of *bhakti* in a devotee is due to God's will manifesting His self-realizing power in him, and such a manifestation of His will is to be interpreted as His mercy. So God is the real cause of the appearance of *bhakti* in any individual. It is to be remembered that not only the rise of *bhakti* but even the functioning of the sense-powers is due to the influence of God; thus God realizes Himself through men in all their conduct, though in *bhakti* alone His highest and most blissful nature expresses itself for the highest satisfaction of the devotee, and this must therefore be regarded as an act of His special grace. It is said in the scriptures that even a short recitation of God's name is

¹ *yat tu śrī-kapila-devena bhakter api nirguṇa-sagūṇāvasthāḥ kathitās tat punaḥ puruṣāntaḥkaraṇa-guṇā eva tasyām upacaryante iti sthitam. Ibid. p. 520.*

² *Ibid. p. 522.*

³ *Ibid. p. 523.*

sufficient to satisfy God, and those who consider these texts as exaggeration (*arthavāda*) are punished by God. But the true devotee does not cease from reciting the name of God because a single recital has been sufficient to please Him; for the very recital of God's name fills him with thrills of great joy. But still there are cases in which a single recital is not sufficient to produce the realization of God; in such cases it is to be presumed that the devotee is a great sinner. To those who are great sinners God is not easily inclined to extend His mercy; such persons should continually recite the name of God until their sins are thereby washed away and the desired end is attained. The recital of God's name is by itself sufficient to destroy even the worst of sins; but insincerity of mind (*kaūṭilya*), irreligiosity (*aśraddhā*), and attachment to those things which impede our attachment to God are the worst vices; for through their presence the revelation of the process of *bhakti* in the mind is obstructed, and such persons cannot attach themselves to God¹. Thus much learning and consequent crookedness of heart may prove to be a much stronger impediment to the rise of *bhakti* than even the commission of the deadliest of sins or submersion in deep ignorance; for God is merciful to the latter but not to the former; such attitudes of mind can only be due to the existence of very grave long-standing sins. A single recital is sufficient for success only when there are no previous sins and when no serious offences are committed after the recital of the name²; but, if at the time of death one recites the name of God, then a single recital is sufficient to dispel all sins and bring about intimate association with God³.

Without religious faith (*śraddhā*) it is not possible for a man to follow the path either of knowledge or of duties; but still religious faith is an indispensable condition for those who wish to follow the path of *bhakti*. Once the religious *bhakti* is roused one should give up the path of knowledge and of duties. *Bhakti* does not require for its fulfilment the following of any ritual process. Just as fire naturally by itself burns the straw, so the recital of God's name and His glories would by itself, without the delay of any intermediary process, destroy all sins. Religious faith is not in itself a part of *bhakti*, but it is a pre-condition which makes the

¹ *Śaṭ-sandarbhā*, pp. 532-4.

² *Ibid.* p. 536.

³ *Ibid.* p. 536.

rise of *bhakti*¹ possible. In following the path of *bhakti* one should not try to follow also the path of knowledge or of duties; such a course will be a strong impediment to the acceleration of *bhakti*.

If *bhakti* produces proximity to God, then, since God has three powers—Brahman, Paramātman, and Bhagavān—it is possible to have three kinds of proximity; of these the third is better than the second, and the second is better than the first. The realization of God as endowed with forms is superior to His realization without any forms. The true devotee prefers his position as the servant of God to any other so-called higher position of power and glory²; he therefore wishes for pure *bhakti*, unassociated with any other so-called beneficial results. It is these devotees, who want God and God alone, that are called the *ekāntins*, who are superior to all other types of devotees; this kind of *bhakti* is called *ākiñcana-bhakti*. It may be argued, that since all individuals are parts of God, and since they are naturally attached to Him as parts to wholes, the *ākiñcana-bhakti* should be natural to them all; but to this the reply is that man is not a part of God so far as He is in His own essential nature, but he is a part of Him so far as He is endowed with His diverse powers, including His neutral powers (*taṭastha-śakti*). Man is a part of God in the sense that both externally and internally he is in direct connection with God; but still he has his own instincts, tendencies, habits and the like, and it is these that separate him from God. For this reason, though man shares in the life of God and has the same life as He, yet, being hidden in his own sheath of ideas and tendencies, he cannot indulge in his natural truth-right of devotion to God except through the grace of God³. When a man is not under the sway of great obstructive sins such as crookedness and the like, association with other devotees gives an occasion to God for extending His grace in rousing devotion in his mind. It cannot be said that all beings must necessarily attain salvation; the number of souls is infinite, and only those will attain salvation who may happen to awaken His grace. Man from beginningless time is

¹ *bhakti* is said to have nine characteristics, as follows:

*śravaṇam kīrtanam viśṇoḥ smaraṇam pāda-sevanam
arccanam vandanam dāsyam saukhyam ātma-nivedanam.*

Ibid. p. 541.

But it is not necessary that *bhakti* should be pursued in all these ninefold forms.

² *ko mūḍho dāsātām prāpya prābhavam padam icchati.* *Ibid.* p. 551.

³ *Ibid.* p. 553.

ignorant of God and is disinclined from Him; and this natural impediment can only be removed by association with true devotees (*sat-saṅga*); God descends into men through the grace of good devotees who have at some time or other suffered like other ordinary people and are therefore naturally sympathetic to them¹. God Himself cannot have sympathy with men, for sympathy presupposes suffering; God is of the nature of pure bliss and could not have experienced the suffering of ordinary beings.

The best devotee is he who perceives God in all beings, and also perceives all beings as parts of himself and of God as He reveals Himself in him². The second type of devotee is he who has love for God, friendship for His devotees, mercy for the ignorant and indifference with reference to his enemies³. The lower type of devotee is he who worships the image of God with faith and devotion, but has no special feeling for the devotees of God or other persons⁴. There are other descriptions also of the nature of the best devotee: thus it is said in the *Gītā* that he whose heart is pure and unafflicted by the tendencies of desire and deeds, and whose mind is always attached to God, is to be regarded as the best devotee⁵; it is further said that the best devotee is he who makes no distinction between himself and others, or between his own things and those of others, and is the friend of all persons and at absolute peace with himself⁶; and, further, that the best devotee is he whose heart is held directly by God and holds within it in bonds of love the lotus-feet of God⁷.

From another point of view *bhakti* is defined as service (*sevā*) or as that by which everything can be attained; the former is called *svārūpa-lakṣaṇa* and the latter *taṭastha-lakṣaṇa*. *Bhakti* is again regarded as being of a threefold nature: as merely external (*āropa-*

⁷ *Ibid.* p. 565.

siddha), as due to association with other devotees (*saṅga-siddha*), and as due to a sincere spirit of natural affection for God (*svarūpa-siddha*). In the first two cases the *bhakti* is called fictitious (*kitava*), and in the last it is called real (*akitava*)¹. The most direct action to be performed in the path of *bhakti* is to listen to and recite the names and glories of God, but indirectly associated with it there is also the dedication of all actions to God. In doing this one includes even his bad deeds; a devotee not only dedicates the fruits of his religious duties, ordinary duties of life, but also those which are done through the prompting of passions. He confesses to God all the imperfections of his nature and all the bad deeds that he has performed, and prays to Him for His grace by which all his sins are washed away. The devotee prays to God that he may be intoxicated by love for Him in the same manner that a young woman is smitten with love for a young man or *vice versa*². When a man performs an action through motives of self-interest, he may suffer through failures or through deficient results; but, when one dedicates his actions to God, he no longer suffers any pains through such failures. All actions and their fruits really belong to God; it is only through ignorance or false notions that we appropriate them to ourselves and are bound by their ties. But, if those very actions are performed in the true perspective, we cannot in any way be bound down by their effects; thus those actions which are responsible for our births and rebirths can destroy that cycle and free us from their bondage, when it is realized they belong not to us, but to God³. If it is argued that the performance of mandatory actions produces a new and unknown potency (*apūrva*) in the performer, then also it may be argued that the real performer in the man is his inner controller (*antar-yāmin*), which impels him to do the action, and so the action belongs to this inner controller—God; and it is wrong to suppose that the performer of the action is the real agent⁴. Thus all the Vedic duties can be performed only by God as the supreme agent, and so the fruits of all actions can belong only to Him.

The dedication of our actions to God may again be of a twofold nature: one may perform an action with the express object of

¹ *Ṣaṭ-sandarbhā*, pp. 581-2.

² *yuvatīnām yathā yūni yūnāṅca yuvatau yathā
mano'bhiramate tadvaṅ mano me ramatām tvayi.*

Viṣṇu-purāṇam, *ibid.* p. 58

³ *Ibid.* p. 584.

⁴ *Ibid.* p. 585.

pleasing God thereby, or he may perform the action without any desire to reap their fruits, and may dedicate them to God—one is *karma-sannyāsa* and the other *phala-sannyāsa*. Actions may be motivated either through desires or for the sake of God, i.e., leaving the effects to God or for pleasing God, and this last is said to be due to pure *bhakti*. These three types of actions are classified as *kāmanā-nimitta*, *naiṣkarmya-nimitta* and *bhakti-nimitta*. True devotees perform all their actions for the sake of pleasing God and for nothing else¹. *Bhakti* again may be regarded as associated with *karma*, and as such it may be regarded as *sakāma*, *kaivalya-kāma* and *bhakti-mātra-kāma*. When one becomes devoted to God for the fulfilment of ordinary desires, this is regarded as *sakāma-bhakti*. *Kaivalya-kāma-bhakti* may be regarded as associated with *karma* or with *karma* and knowledge (*jñāna*); this is to be found in the case of one who concentrates upon God and enters into the path of *yoga*; practises detachment, and tries to conceive of his unity with God, and through such processes frees himself from the bondage of *prakṛti*; through knowledge and action he tries to unify the *jīvātman* with the *paramātman*. The third type may be associated either with *karma* or with *karma* and *jñāna*. Of these the first class expresses their devotion by reciting God's name and glories, by continually worshipping Him, and by dedicating all their actions to God. The second class of devotees add to their duties of worship to God the continual pursuit of an enlightened view of all things; they think of all people as manifestations of God; they are patient under all exciting circumstances and detach themselves from all passions; they are respectful to the great and merciful to the humble and the poor, and friendly to their equals; they practise the virtues included within *yama* and *niyama*, destroy all their egotism, and continue to think of the glory of God and to recite His name. He who, however, has the highest type of *bhakti*—the *akiñcana-bhakti*—in him it is such that simply on hearing the name of God his mind flows to Him just as the waters of the Ganges flow into the ocean. Such a one does not accept anything that may be given to him; his only pleasure exists in being continuously immersed in God.

From another point of view *bhakti* can be divided into two classes, *vaidhī* and *rāgānuga*. The *vaidhī-bhakti* is of two kinds, leading him to devote himself to God, and to worship without any

¹ *Ṣaṭ-sandarbhā*, p. 586.

ulterior motive. It is *vaidhī* because here the prompting to the course of *bhakti* comes from scriptural sources (otherwise called *vidhī*, or scriptural injunctions). The *vaidhī-bhakti* is of various kinds, such as seeking of protection (*śaraṇāpatti*), association with good teachers and devotees, to listen to God's name and to recite His name and glories¹. Of these *śaraṇāgati* is the most important; it means seeking protection of God upon being driven to despair by all the dangers and sufferings of life. Thus in *śaraṇāgati* there must be a driving cause which impels one to seek the protection of God as the sole preserver. Those who turn to God merely out of deep attachment for Him are also impelled by their abhorrence of their previous state, when their minds were turned away from God. It also implies a belief either that there is no other protector, or a renunciation of any other person or being to whom one had clung for support. One should leave all hope in the Vedic or *smṛti* injunctions, and turn to God as the only support. *Śaraṇāpatti* may be defined as consisting of the following elements: (i) to work and think always in a manner agreeable to God, (ii) to desist from anything that may in any way displease God, (iii) strong faith that He will protect, (iv) clinging to Him for protection, (v) to throw oneself entirely into God's hands and to consider oneself entirely dependent on Him, and (vi) to consider oneself a very humble being waiting for the grace of God to descend on him². Of all these the main importance is to be attached to the adoption of God alone as sole protector, with whom the other elements are only intimately associated. But next to the solicitation of the protection of God is the solicitation of help from one's religious teacher (*guru*) and devotion to his service, as well as to the service of great men, by whose association one may attain much that would be otherwise unattainable³. One of the chief forms in which the *vaidhī-bhakti* manifests itself is in regarding oneself as the servant of God, or in considering God as our best friend. The sentiments of service and friendship should be so deep and intense as to lead one to renounce

¹ *atha vaidhī-bhedāḥ śaraṇāpatti-śrī-gurv-ādi-sat-sevā-śravaṇa-kīrtanā-dayaḥ. Śaṭ-sandarbhā*, p. 593.

² *śaraṇāpatter lakṣaṇaṃ vaiṣṇava-tantre, āmukūlyasya saṃkalpaḥ prātikūlya-vivarjanam rakṣiṣyati viśvāso goptṛtve varaṇaṃ tathā ātma-nikṣepa-kārpaṇye śaḍvidhā śaraṇāgatiḥ. Ibid.* p. 593.

³ *Ibid.* pp. 595-604.

one's personality entirely to God; this complete renunciation of oneself to God is technically called *ātma-nivedana*. The *rāgānuga*, or purely emotional type of *bhakti*, must be distinguished from *vaidhī-bhakti*; since the *rāgānuga-bhakti* follows only the bent of one's own emotions, it is difficult to define its various stages. In this form of *bhakti* the devotee may look upon God as if He were a human being, and may turn to Him with all the ardour and intensity of human emotions and passions; thus one of the chief forms in which this type of *bhakti* manifests itself is to be found in those cases where God is the object of a type of deep love which in human relation would be called sex-love. Sex-love is one of the most intense passions of which our human nature is capable, and, accordingly, God may be loved with the passionate intensity of sex-love. In following this course of love the devotee may for the time being forget the divinity of God, may look upon Him as a fellow-being, and may invest Him with all the possibilities of human relations and turn to Him as if He were his intimate friend or a most beloved husband. He may in such circumstances dispense entirely with the ritualistic formalities of worship, meditation, recital of His names or glories, and simply follow his own emotional bent and treat God just as may befit the tendency of his emotion at the time. There may however be stages where the *rāgānuga* is mixed up with *vaidhī*, where the devotee follows some of the courses of the *vaidhī-bhakti* and is yet passionately attached to God. But those who are simply dragged forward by passion for God are clearly above the range of the duties of *vaidhī-bhakti*; not only through such passionate attachment to God, but even when one's mind is filled with a strong emotion of anger and hatred towards God, so as to make one completely forget oneself and to render oneself entirely pervaded by God's presence—even as an object of hatred—one may, by such an absorption of one's nature in God, attain one's highest. The process by which one attains one's highest through *rāgānuga-bhakti* is the absorption of the nature of the devotee by God through an all-pervading intense emotion. For this reason, whenever the mind of a man is completely under the sway of a strong emotion of any description with reference to God, he is absorbed, as it were, in God's being and thus attains his highest through a complete disruption of his limited personality.

In the sixth section, the *Prīti-sandarbha*, the author of the *Ṣaṭ-sandarbha* deals with the nature of bliss (*prīti*) as the ultimate reality and object of the best of our human efforts. The ultimate object or end of man is the attainment of happiness and the destruction of sorrow; only when God is pleased can one secure the ultimate extinction of sorrow and the attainment of eternal happiness. God, the ultimate reality, is the ultimate and infinite bliss, though He may show Himself in diverse forms. The individual or the *jīva*, not having any true knowledge of God and being obscured by *māyā*, fails to know His true nature, becomes associated with many subjective conditions, and undergoes the sorrow of beginningless cycles of births and rebirths. The realization of the highest bliss consists in the realization of the ultimate reality; this can happen only through the cessation of one's ignorance and the consequent ultimate cessation of one's sorrows. Of these the former, though expressed in a negative form, is in reality positive, being of the nature of the self-luminosity of the ultimate reality and the self-manifestation of the same. The latter, being of the nature of a negation through destruction, is eternal and unchangeable—such that, when sorrows are once ultimately uprooted, there cannot be any further accretion of sorrow. The realization of God is thus the only way of attaining the highest happiness or bliss¹. Emancipation (*mukti*) is the realization of God, accompanied as a consequence by that cessation of the bondage of egoism which is the same thing as existence in one's true nature. This existence in one's own nature is the same thing as the realization of one's own nature as the supreme soul (*Paramātman*). But in this connection it must be noted that the *jīva* is not identical with the supreme soul; for it is only a part of it; its nature as bliss is thus to be affirmed only because of the fact that its essence is derived from the essence of the supreme soul. The realization of God, the absolute whole, is only through the realization of His part as the supreme soul (*aṁśena aṁśi-prāpti*). This can be attained in two ways, first, as the attainment of Brahmahood by the revelation of His knowledge as constituting only His essential powers along with the destruction of individual ignorance (which is a state or function of *māyā* only);

1

*nīrastātīśayāhlāda-sukha-bhāvaika-lakṣaṇā
bheṣajam bhagavat-prāptir ekāntātyantikā matā.*

Vīṇu-purāṇa, Ṣaṭ-sandarbha, p. 674.

secondly, as the realization of God in His personal nature, as associated with His supra-rational powers in a personal manner. Emancipation (*mukti*) may be achieved both in life and after death; when one realizes the true nature of God, one's false apprehension of His nature vanishes and this is one's state of *mukti*; at death also there may be a revelation of God's true nature, and a direct and immediate realization of His nature as God.

Ultimate Realization.

The realization of the nature of ultimate reality may again be of a twofold nature: abstract, i.e., as Brahman, and concrete, i.e., as personal God or the supreme soul (Paramātman). In the latter case the richness of the concrete realization is further increased when one learns to realize God in all His diverse forms¹. In this stage, though the devotee realizes the diverse manifold and infinite powers of God, he learns to identify his own nature with the nature of God as pure bliss. Such an identification of God's nature manifests itself in the form of the emotion of *bhakti* or joy (*prīti*); the devotee experiences his own nature as joy, and realizes his oneness with God through the nature of God as bliss or joy. It is through the experience of such joy that the ultimate cessation of sorrow becomes possible, and without it the devotee cannot realize God in association with all His diverse and infinite powers. By the intimate experience of the joyous nature of God His other attributes, characters and powers can also be revealed to him. Man naturally seeks to realize himself through joy; but ordinarily he does not know what is the true object of joy, and thus he wastes his energies by seeking joy in diverse worldly objects. He attains his true end when he realizes that God is the source of all joy, that He alone should be sought in all our endeavours, and that in this way alone can one attain absolute joy and ultimate liberation in joy. The true devotee wishes to attain *kaivalya*; but *kaivalya* means "purity," and, as the true nature of God is the only ultimate purity, *kaivalya* would mean the realization of God's nature. The joy of the realization of God and God alone should therefore be regarded as the true *kaivalya*, the ultimate nature of God.

In the state of *jīvan-mukti* the individual, through a true knowledge of himself and his relation to God, comes to realize that the

¹ *Ṣaṭ-sandarbhā*, p. 675.

world is both being and non-being, and has therefore no real existence in its own true nature, but is only regarded as part of himself through his own ignorance (*avidyā*). The mere negation of the world is not enough; for there is here also the positive knowledge of the true nature of the individual as dependent on God. In this stage the individual realizes the falsity of associating world-experiences with his own nature, and learns to identify the latter as a part of God. In this state he has to experience all the fruits of his deeds which are on the point of yielding fruits, but he feels no interest in such experiences, and is no longer bound by them¹. As a further culmination of this stage, the functioning of *māyā* in its individual form as ignorance (*avidyā*) ceases with the direct and immediate revelation of the true nature of God and with participation in His true nature as joy; the complete cessation of *māyā* should therefore be regarded as the final state of *mukti*².

It should be borne in mind that the *jīva* is a part of the ultimate reality in association with the energy of God as represented in the totality of the *jīvas*. The ultimate reality is like the sun and the *jīvas* are like the rays which emanate from it. From their root in God they have sprung out of Him, and, though seemingly independent of Him, are yet in complete dependence on Him. Their existence outside of Him also is not properly to be asserted; for in reality such an appearance of existence outside Him is only the effect of the veil of *māyā*. The comparison of the *jīvas* with the rays merely means that they have no separate existence from that body whose rays they are, and in this sense they are entirely dependent on God. When the *jīvas* are regarded as the power or energy of God, the idea is that they are the means through which God expresses Himself. As God is endowed with infinite powers, it is not difficult to admit that the *jīvas*, the manifestations of God's power, are in themselves real agents and enjoyers, and the suggestion of the extreme monist, that to assert agency or enjoyability of them is illusory, is invalid; for agency in an individual is a manifestation of God's power. It is through that that the *jīvas* pass through the cycle of *saṃsāra*, and it is through the operation of the essential power of God that they learn to perceive the identity of their own nature with God and immerse themselves in emotion towards Him. The view that there is

¹ *asya prārabdha-karma-mātrāṇām anabhiniveśeṇaiva bhogaḥ. Ibid. p. 678.*

² *Ibid. p. 678.*

no experience of joy in the state of emancipation is invalid; for in that case the state of emancipation would not be desirable. Moreover, the view that in the state of emancipation one becomes absolutely identical with Brahman, which is of the nature of pure joy, is also wrong; for no one wishes to become identical with joy, but to experience it. The extreme form of monism cannot therefore explain why the state of emancipation should be desirable; if emancipation cannot be proved to be an intensely desirable state, there will be no reason why anyone should make any effort to attain it. It may further be added that, if the ultimate reality be of the nature of pure bliss and knowledge, there is no way of explaining why it should be subject to the obscuring influence of *māyā*. The conception of whole and part explains the fact that, though the *jīvas* are not different from God, yet they are not absolutely identical, being indeed entirely dependent on Him. The proper way of regarding God is to recognize Him as presiding over all beings as they are associated with their specific conditions and limitations—as varied personalities and yet as one; this is the way to unify the concept of Paramātmān with that of Bhagavan¹.

The Joy of bhakti.

Joy in God may be of a twofold nature. By an extension of meaning joy may be that attachment to God which produces the realization of the true conception of God (*bhagavad-viṣayānukūlyātmakas tad-anugata-sprhā dimayo jñāna-viśeṣas tat-prītiḥ*). But there is a more direct experience of joy in God which is directly of an intensely emotional nature; this type of *bhakti* is also called *rati*. This is also described as *bhakti* as love (*preman*). Just as one is attracted to physical objects by their beauty, apart from any notion of utility, so one may also be attracted by divine beauty and the diverse qualities of God, and fall into intense love with Him. It has already been said above that the joy of God manifests itself in the hearts of His devotees and produces their joyful experience of God.

¹ Apart from the higher kind of *mukti* reserved for the most superior type of *bhaktas* there are other kinds of inferior liberation described as *sālokya* (co-existence with God), *sārṣṭi* (the advantage of displaying the same miraculous powers as God), *sārūpya* (having the same form as that of God), *sāmīpya* (having the privilege of always being near God), *sāyujya* (the privilege of entering into the divine person of God). A true *bhakta*, however, always rejects these privileges, and remains content with his devotion to God. *Ṣaṭ-sandarbhā*, p. 691.

This may be regarded as an active phase of God's joy as distinguished from His nature as pure joy. God's joy is said to be of two kinds: His nature as pure joy (*svarūpānanda*), and His nature in the active phases of the joy of His own powers (*svarūpa-śaktyānanda*). This last is again of two kinds, viz., *mānasānanda* and *aiśvaryānanda*, i.e., joy as the active operation of *bhakti*, and joy in His own majesty¹. When a devotee is attached to God by a sense of His greatness or majesty, such a state of mind is not regarded as an instance of joy or *prīti*; but, when the *bhakti* takes a purely emotional form as the service of God, or as immediately dependent on Him, or as attached to Him through bonds of intense love (like those of a bride for her lover, of a friend for his friend, of a son for his father or of the father for his child), we have *bhakti* as *prīti*. *Prīti* or "joy" manifests itself in its most intense and elevated form when the attraction has all the outward appearance of physical love, and all the well-known exciting factors and modes of enjoyment of that emotion; but, as this emotion is directed towards God and has none of the biological or physiological accompaniments of physical love, it should be sharply distinguished from that love; but it has all the external expressions of erotic love. For this reason it can be properly described only in terms of the inward experience and the outward expressions of erotic love. Joy (*prīti*) is defined as an emotional experience constituting an inclination and attraction towards its object². In ordinary emotions the objects to which they have reference are worldly objects of sense or ideas associated with them, but in godward emotions God is their only object. Such a joy in God flows easily (*svābhāviki*) through God's grace, and is not the result of great efforts; it is superior to emancipation³. This joy may grow so much in intensity that the devotee may forget himself

¹ *Ibid.* p. 722

² *tatra ullāsātmaṇo jñāna-viśeṣaḥ sukham; tathā viśayānukūlyātmakas tad - ānukūlyānugata - tat - sprhā-tad-anubhava-hetukollāsa-maya - jñāna-viśeṣa-priyatā. Ibid.* p. 718.

³ The yearning implied in *bhakti* is almost a distressing impulse and is not only erotic in type. Thus it is said:

*ajāta-pakṣā iva mātaram khagāḥ
stanyaṃ yathā vatsatarāḥ kṣudhārtāḥ
priyaṃ priyeṇa vyūṣitaṃ viṣaṇṇo
mano'raṇḍāḥśa didṛkṣate tvām. Ibid.* p. 726.

Two stages are sometimes distinguished according to the intensity of the development of joy, viz., *udaya*, *iśad-udgama*; the latter has again two stages. The culminating stage is called *prakaṭodayāvasthā*.

completely and feel himself as one with God; this is technically called *mahābhāva*¹. In a general sense *bhakti* may be said to produce a sense of unique possession (*mamatā*), and consequently great attachment of heart; this emotion may express itself in various forms. But there is also the other quieter form (*śānta*) of devotion, in which the devotee feels himself to be of God, but not that God is his, like Sanaka and other devotees of his type². Here also there is a remote sense of God's possession, i.e., as master—as looking forward for His grace as a master (*bhṛtyatva*), protector (*pālyatva*), or as a fond parent (*lālyatva*). One may also enjoy God in himself, assuming the rôle of a parent and looking upon God as a dear child; this kind of emotion is called *vātsalya*. But, as has been said above, the most intense joy in God takes the conjugal form; the difference between eroticism (*kāma*) and this type of love (*rati*) is that the former seeks self-satisfaction, while the latter seeks the satisfaction of the beloved God; yearning is the common element in both. These devotees, through their dominant emotion of love, restrict their relation to God solely to His aspect of sweetness (*mādhurya*), as a great lover. The affection of Rādhā for Kṛṣṇa is said to illustrate the highest and intensest form of this love. The Vaiṣṇava writers frequently explain this love in accordance with the analysis of ordinary mundane love current in books of rhetoric (*alaṃkāra-śāstra*).

In treating of the subject of *bhakti* it is impossible not to make a short reference to the well known work of Rūpa Gosvāmī, *Bhakti-rasāmṛta-sindhu*. This work is divided into four books, *pūrva*, *dakṣiṇa*, *paścima*, and *uttara*, and each of these is divided into chapters called *laharīs*. In writing out the chapters of the *Bhakti-sandarbha* and the *Prīti-sandarbha* Jīva Gosvāmī, the nephew of Rūpa, was much indebted to the above work of the latter, on which he had also written a commentary, *Durgama-saṅgamana*, after the

¹ *Ṣaṭ-sandarbha*, p. 732. There occurs here a quotation from *Ujjvala-nīlamanī* to illustrate the situation:

*rādhāyā bhavataśca citta-jatunī svedair vilāpya kramād
yuniṇam adri-nikunja-kuṇjara-puter nirdhūta-bheda-bhramam
citraya svayam anvaranajayad iha brahmāṇḍa-harmyodare
bhūyobhir nava-rāga-hiṅgula-phalair śṛṅgāra-cāruḥ kṛtiḥ.*

² *saty api bhedāpagame nātha tavāham na māmakīnas tvam samudro hi tarāṅgaḥ kvacana samudro na tāraṅgaḥ. Ibid. p. 735. harer guṇā dvividhāḥ bhakta-citta-saṃskāra-hetavas tadabhimāna-viśeṣya-hetavas'cānye... (p. 733). jñāna-bhaktir bhaktir vātsalyam maitrī kānta-bhāvaśca (p. 738).* Though all these different varieties of *bhakti* are mentioned, it is admitted that various other forms may arise from these simply by their mutual mixture in various degrees.

completion of the *Bhāgavata-sandarbhā*. Superior (*uttama*) *bhakti* is here defined as the mental state and the associated physical actions for yielding satisfaction to Kṛṣṇa (*ānukūlyena kṛṣṇā-nuśīlanam*) without any further desire, motive or object of any description; such a *bhakti* must not be associated with any monistic philosophical wisdom, such as that of extreme monists like Śāṅkara, or the philosophical wisdom of Sāṃkhya, Yoga and other systems, nor with the performance of any obligatory or occasional duties as enjoined in the *smṛti* literature¹. Such a *bhakti* has six characteristics. First, it destroys sins, their roots and ignorance. Sins are of two kinds, those which are not in a state of fruition (*aprārabdha*), and those which are (*prārabdha*); and *bhakti* removes them both. The roots of sins are evil tendencies of the mind, otherwise called the *karmāśayas*, and these too are destroyed by *bhakti*, which, as it is concrete wisdom, also destroys ignorance (*avidyā*). Secondly, it is described as holy or good (*śubhada*). Through *bhakti* one renders happiness to the world and is attached by bonds of friendship and love to all people; as a devotee is a friend of all, all beings are also his friends. Thirdly, a devotee is so much satisfied with his joy in *bhakti* that emancipation has no attractions for him. Fourthly, the attainment of *bhakti* is extremely difficult; for even with the utmost effort one may not attain it without the grace of God. Fifthly, the joy of *bhakti* is infinitely superior to the joy of emancipation through Brahma-knowledge. Sixthly, *bhakti* overcomes God to such an extent that He is completely drawn to the service of His devotee. Even a little *bhakti* is superior to much philosophical learning; philosophical and logical discussions lead to no certainty, and the thesis established by an able reasoner may easily be disproved by another who is abler; such logical discussions are only barren and ineffectual for true realization.

Rūpa distinguishes three kinds of *bhakti*: *sādhana*, *bhāva* and *preman*². The *sādhana-bhakti* stands for the different means whose

¹ *anyābhilāsītā-śūnyaṃ jñāna-karmādy-anāvṛtam
ānukūlyena kṛṣṇānuśīlanam bhaktir uttamā.*

² *Ibid.* 1. 2. 1: *Bhakti-rasāmṛta-sindhu*, 1. 1. 9.

sā bhaktiḥ sādhanam bhāvaḥ premā ceti tridhohitā.

In commenting upon this passage Jīva Gosvāmī says that *bhakti* is of two kinds, *sādhana* and *sādhya*; of these the second is of pure emotionalism and consists of five varieties: *bhāva*, *prema*, *prāṇaya*, *sneha* and *rāga*. The author of *Ujjvala-nīla-maṇi* adds three more, *māna*, *anurāga* and *mahā-bhāva*. Rūpa has not mentioned these last because they are but variant forms of *prema*.

adoption enables the mental emotion to emerge in a natural way as *bhāva-bhakti* (also called *sādhya-bhakti*). But Rūpa further adds that the natural devotional emotion cannot be produced by any course of conduct or any effort; for *bhakti* is the highest good and as such is eternal. Nothing that is eternal can be produced; the true devotional emotion therefore cannot be created—it already exists in the heart, and the function of the *sādhana-bhakti* is merely to manifest it in the heart in the enjoyable form¹. This *sādhana-bhakti* is of two kinds, *vaidhī* and *rāgānuga*²: these have already been described above. One is within the sphere of *vaidhī-bhakti* only so long as natural attachment to God does not reveal itself within one's heart. It is said that one who has a logical mind and is well read in the *śāstras*, and is also a man of firm conviction with a great faith in the Vaiṣṇava religion, is best fitted for *vaidhī-bhakti*³. Desire for worldly happiness or for emancipation is the greatest obstacle to the rise of *bhakti*. One following the path of *bhakti* incurs no demerit if he does not perform the obligatory and other duties as enjoined in the Vedas; but he is at fault if he does not perform the true duties of a Vaiṣṇava; but even in such cases a Vaiṣṇava need not perform any expiatory duties; for the mere recital of God's name is sufficient to remove all his sins. No injunctions of the *śāstras* have any reference to a devotee. The complete code of moral virtues and many ritualistic duties are counted as preliminary conditions for a person following the path of *bhakti*⁴. In many undeserving pupils too much learning or indulgence is regarded as a great obstruction of the path of *bhakti*⁵. A devotee of the *vaidhī* type should meditate upon the beauty of God and all His qualities and glories, and learn to regard himself as His servant; one of the conditions of meditation upon God as master is to train oneself in dedicating all one's actions to God. He should also try

Ibid. 1. 2. 52.

to generate in himself the firm conviction that God is the greatest friend of His devotees; one should try to look upon God as one's best friend. The Śāstric duties should be performed only so long as there is no real inclination of the mind towards God, to recite His name, to listen to His glories, and to say them with joy. As soon as this stage comes, one is on the path of *vaidhī-bhakti* and must follow its specific duties, so that it may continually grow into a truly natural and irresistible emotion. Here begins the stage of *sādhya-bhakti* with *bhāva*. Even before we come to this there is another stage of *sādhana-bhakti*, the *rāgānuga*. It is only when one transcends this stage that one can come to a still higher stage of the *sādhya-bhakti* with its successive developments. *Rāgānuga-bhakti* is said to be an imitation of the *rāgātmikā*¹. The *rāgātmikā-bhakti* is the *bhakti* as natural attachment; *rāga* means "attachment". This *rāgātmikā-bhakti* may be of the type of erotic emotion (*kāma*) or the assumption of other relationships², such as friendship, parenthood, etc. The *rāgānuga-bhakti* is that where there is no natural attachment, but where there is an effort to imitate the forms of natural emotional attachment, and it may be associated with the diverse steps taken for the furtherance of *vaidhī-bhakti*. The distinction of *prema* (spiritual love) and *kāma* has already been explained above. Though *kāma* is often used in connection with the intoxicating love of God, yet it is used in the sense of *prema*³. The *rāgānuga-bhakti* thus following the two kinds of subdivision of *rāgātmikā-bhakti* is itself also of two kinds, *kāmānuga* and *sambandhānuga*.

From the second stage of *sādhana-bhakti* as *rāgānuga* we come to the stage of *bhāva-bhakti*, which also evolves itself into ever more

¹ *virājantīm abhivyaktāṃ vraja-vāsi-janādiṣu
rāgātmikāṃ anusṛtā yā sā rāgānugocyate. Ibid. 1. 2. 131.*

² It is said that in the case of natural attachment, even when it takes the form of an inimical relationship to God, it is superior to any type of *vaidhī-bhakti* where there is no such natural attachment. Thus it is said in Jiva's *Durgama-saṅgama*, 1. 2. 135: *yathā vairānubandhena martyas tanmayatām iṣṭā na tathā bhakti-yogena iti me nīcitā matiḥ tad api rāgamaya-kāmādy-apekṣayā vidhimaya-yaśya cittāveśa-hetuve'tyanta-nyūnatvam iti vyañjanārtham eva. yeṣu bhāva-mayeṣu mindito'pi vairānubandho vidhimaya-bhakti-yogāc chreṣṭhāḥ*. The natural feeling of enmity towards God can be regarded as *bhāvātmikā* (or emotional) but not as *rāgātmikā*. It cannot also be regarded as *bhakti*, for there is no desire here to please God; it therefore stands on a separate basis; it is inferior to *rāgātmikā-bhakti* but superior to *vaidhī-bhakti*.

³ *premaiva gopa-rāmāṇām kāma ityagamāt prathām. Ibid. 1. 2. 142, 143.*

intense forms until it reaches the stage of *mahā-bhāva* already described. It is regarded as the manifestation of the pure transcendent *sattva* (the blissful nature of God). *Bhakti* has already been defined as behaviour that is intended to please God and which has no further object or end in view; as such it would involve some kind of effort (*ceṣṭā-rūpa*) on the part of the devotee. But here the meaning is modified to denote only the emotional condition of mind, including physiological and physical changes produced in the body by it, and as roused by emotive conditions such as the object of love, excitants of love, the feeding emotions, external manifestation determining and increasing the original dominant emotion¹. The first stage of natural attachment to God as love is called *bhāva* and is associated with slight physiological effects like shedding tears or the rising of the hair on the body and the like². This emotion is of a transcendental nature and of the nature of the power of God, involving consciousness and bliss; therefore it is on the one hand self-revealing (*svaprakāśa*) and self-enjoying, and on the other hand it reveals the nature of God, whose power it is, and to whom it refers. Being a power of God it appears in the mental states of the devotee, becomes identified with them, and manifests itself in identity with them. *Bhakti*, as it appears in the devotee, is thus an identity of the transcendent and the phenomenal, and reveals the dual function of enjoying the sweetness of the nature of God and the self-revealing sweet enjoyable nature of its own. It is thus cognitive with reference to its object, and involves a dual enjoyment of God's sweet nature as well as the sweet nature of *bhakti* itself. It is the root of all *rati* (or enjoyment) and is therefore also called *rati*³. An inferior amount of it is generally common to all,

¹ *śarīrendriya-vargasya vikārāṇām vidhāyikāḥ

but the superior appearance which continues to grow is rare and comes only through the grace of God or His devotees. So even in the *vaidhī* and the *rāgānuga* also there is, no doubt, some amount of *bhāva* of the inferior type. The natural attachment to God of the superior type which arises without going through the ordinary prescribed path of *bhakti* (the *sādhana-bhakti*), is generally due to the grace of God.

In the first stage of the *bhāva-bhakti* the devotee manifests in himself a nature which remains absolutely unperturbed, even though there may be causes of perturbation; he always spends his time in reciting God's name with strong emotion; he is unattached to sense-objects, and, though great, he is always extremely humble, and has always the strong conviction of attaining the ultimate realization of God. He is also always extremely anxious to attain his end and always finds pleasure in the name of God¹. The internal characteristic of *bhāva*, as *rati*, is extreme smoothness and liquidity of heart, but, wherever such a state is associated with other desires, even be it of emancipation, it should not be regarded as signifying the true state, and is called *ratyābhāsa*; for this is a state of absolute self-contentment, and it cannot be associated with any other desire of any kind.

When *bhāva* deepens, it is called *prema*; it is associated with a sense of possession in God and absolute detachment from all other things. This may rise from a direct development of *bhāva*, or through the immediate grace of God; it may be associated with a notion of the greatness of God or may manifest itself merely as an enjoyment of the sweetness of God. The development of *bhakti* depends on a special temperament derived in this life as a result of previous good deeds, and also on the efforts of this life. There is an elaborate description of the various characteristics of different kinds of joyous emotion with reference to God, and the various kinds of relationships on the assumption of which these may grow, but these can hardly be treated here.

Rūpa Gosvāmī wrote another work, *Samkṣepa-Bhāgavatāmṛta* which is a well recognized book in the Vaiṣṇava circle. It has at least two commentaries, one by Jīva Gosvāmī, and another, a later one, by Brindāvana Candra Tarkālaṅkāra; the latter was the pupil of Rādhācaraṇa Kavindra. In this book Rūpa describes the various

¹ *Bhakti-rasāmṛta-sindhu*, 1. 3. 11-16.

types of God's incarnation in accordance with the testimony of the *Purāṇas*: Kṛṣṇa is, of course, regarded as the highest God. His elder brother Sanātana also wrote a work, *Bṛhad-bhāgavatā-mṛta*, with a commentary on it, the *Dig-darśana*, in which he narrates the episodes of certain devotees in quest of God and their experiences.

The Philosophy of Baladeva Vidyābhūṣaṇa.

Baladeva was Vaiśya by caste and born in a village near Remuna in the Balesvar subdivision of Orissa; he was a pupil of *vairāgī* Pītāmvara Dāsa, and was generally known as Govinda Dāsa. He was the disciple of a Kanouj Brahmin, Rādhā Dāmodara Dāsa, the author of *Vedānta-Syamantaka*. Rādhā Dāmodara was a disciple of Nayanānanda, the son of Rādhānanda, and a pupil of his grandfather, Rasikānanda Murāri, who was a disciple of Śyāmānanda, a junior contemporary of Jīva Gosvāmī. Śyāmānanda was a disciple of Hṛdaya Caitanya, who in his turn was a disciple of Gauridāsa Paṇḍita, a disciple of Nityānanda. Baladeva himself had two well known disciples, Nanda Miśra and Uddhava Dāsa; he wrote his commentary on Rūpa Gosvāmī's *Stava-mālā* in the Śaka era 1686 (or A.D. 1764). He is known to have written at least the following fourteen works: *Sāhitya-kaumudī* and its commentary, *Kṛṣṇānandī*; *Govinda-bhāṣya*; *Siddhānta-ratna*; *Kāvya-Kaustubha*; *Gītā-bhūṣaṇa*, a commentary on the *Gītā*; a commentary on Rādhā Dāmodara's *Chandaḥ-Kaustubha*; *Prameya-ratnāvalī* and its commentary, *Kānti-mālā*; a commentary on Rūpa's *Stava-mālā*; a commentary on Rūpa's *Laghu-bhāgavatā-mṛta*; *Nāmārtha-śuddhikā*, a commentary on *Sahasra-nāma*; a commentary on Jaya Deva's *Candrāloka*; *Siddhānta-darpaṇa*; a commentary on *Tattva-sandarbhā*; a commentary on Rūpa's *Nātaka-candrikā*. He also wrote commentaries on some of the important Upaniṣads¹.

Baladeva's most important work is his commentary on the *Brahma-sūtra*, otherwise known as *Govinda-bhāṣya*. This has a sub-commentary on it called *Sūkṣma*; the name of the author of this commentary is not known, though it has been held by some to be a work of Baladeva himself. Baladeva has also summarized the

¹ M. M. Gopinath Kavirāja's introduction to *Siddhānta-ratna*, Part II. A. K. Sastri, in his introduction to *Prameya-ratnāvalī*, strongly criticizes the view that Baladeva was a *Vaiśya*. No satisfactory proofs are available on either side.

contents of his *Govinda-bhāṣya* in the *Siddhānta-ratna*, to which also there is a commentary. M. M. Gopinath Kavirāja says that the *Siddhānta-ratna* was written by Baladeva himself. There is nothing to urge in support of this assertion; the natural objection against it is that a Vaiṣṇava like Baladeva should not speak in glowing terms of praise of his own work¹. *Siddhānta-ratna* is regarded by Baladeva not as a summary of *Govinda-bhāṣya*, but as partly a supplementary work and partly a commentary². It is probable that the writer of the *Sūkṣma* commentary on the *Govinda-bhāṣya* is also the writer of the commentary on *Siddhānta-ratna*; for there is one introductory verse which is common to them both³. The *Siddhānta-ratna* contains much that is not contained in the *Govinda-bhāṣya*.

The eternal possession of bliss and the eternal cessation of sorrow is the ultimate end of man. This end can be achieved through the true knowledge of God in His essence (*svarūpataḥ*) and as associated with His qualities by one who knows also the nature of his own self (*sva-jñāna-pūrvakam*). The nature of God is pure consciousness and bliss. These two may also be regarded as the body of God (*na tu svarūpād vighrahasya atirekaḥ*). His spirit consists in knowledge, majesty and power⁴. Though one in Himself, He appears in many places and in the forms of His diverse devotees. These are therefore but modes of His manifestation in self-dalliance, and this is possible on account of His supra-logical powers, which are identical with His own nature⁵. This, however, should not lead us to suppose the correctness of the *bhedābheda* doctrine, of the simultaneous truth of the one and the many, or that of difference

and unity¹; just as one actor, remaining one in himself, shows himself in diverse forms, so God also manifests Himself in diverse forms, in accordance with diverse effects and also in accordance with the mental plane and the ways in which diverse devotees conceive of Him². On account of His supra-logical powers the laws of contradiction do not apply to Him; even contradictory qualities and conceptions may be safely associated in our notion of Him. So also His body is not different in nature from Him: He is thus identical with His body. The conception of a body distinct from Him is only in the minds of the devotees as an aid to the process of meditation; but, though this is imagination on their part, such a form is not false, but as a matter of fact is God Himself (*deha eva dehī or vighraha evātmā ātmaiva vighrahaḥ*). On account of the transcendent nature of God, in spite of His real nature as pure consciousness and bliss He may have His real nature in bodily form, as Kṛṣṇa. This form really arises in association with the mind of the devotee just as musical forms show themselves in association with the trained ears of a musician³. In this connection it may be observed that according to Baladeva even dream-creations are not false, but real, produced by the will of God and disappearing in the waking stage through the will of God⁴. These forms appearing in the minds of the devotees are therefore real forms, manifested by God through His will working in association with the minds of the devotees. In this connection it may also be pointed out that the *jīvas* are different from God. Even the imagined reflection of Brahman in *avidyā*, introduced by the extreme monists to explain *jīva* as being only a reflection of Brahman and as having no real existence outside it, is wrong; for the notion of similarity or reflection involves difference. The *jīvas* are atomic in nature, associated with the qualities of *prakṛti*, and absolutely dependent on God. Though Brahman is all-pervasive, yet He can be grasped by knowledge and devotion. A true realization of His nature and even a sensuous perception of Him is possible only through *sādhya-bhakti*,

¹ The *Sūktma* commentary on III. 2. 12 says that God's *māyā-śakti* has three functions: *hlādinī*, *sandhinī*, and *saṁvit*; it is through His *māyā-śakti*, i.e., the power as *māyā*, that He can manifest Himself in diverse ways.

² *dhyātr-bhedāt kārya-bhedāt ca anekatayā pratīto'pi hariḥ svarūpaikyam svasmin na muñcati. Govinda-bhāṣya*, III. 2. 13.

³ *tan-mūrtatvaṁ khalu bhakti-vibhāvitena hṛdā grāhyaṁ gāndharvānūsilitena śrotreṇa rāga-mūrtatvaṁ iva. Ibid.* III. 2. 17.

⁴ *Ibid.* III. 2. 1-5.

not through *sādhana-bhakti*. The consciousness and bliss of God may be regarded either as the substance of God or as His attributes. This twofold way of reference to God is due to the admission of the category of *viśeṣa*, by which, even in the absence of difference between the substance and the quality, it is possible to predicate the latter of the former as if such a difference existed. *Viśeṣa* is spoken of as the representative of difference (*bheda-pratinidhi*); that is, where no difference exists, the concept of *viśeṣa* enables us to predicate a difference; yet this *viśeṣa* is no mere *vikalpa* or mere false verbal affirmation. The ocean can be spoken of as water and waves by means of this concept of *viśeṣa*. The concept of *viśeṣa* means that, though there is no difference between God and His qualities, or between His nature and His body, yet there is some specific peculiarity which makes it possible to affirm the latter of the former; and by virtue of this peculiarity the differential predication may be regarded as true, though there may actually be no difference between the two. It is by virtue of this concept that such propositions as "Being exists," "Time always is," "Space is everywhere," may be regarded as true; they are neither false nor mere verbal assumption; if they were false, there would be no justification for such mental states. There is obviously a difference between the two propositions "Being exists" and "Being does not exist"; the former is regarded as legitimate, the latter as false. This proves that though there is no difference between "being" and "existence" there is such a peculiarity in it that, while the predication of existence to being is legitimate, its denial is false. If it were merely a case of verbal assumption, then the latter denial would also have been equally possible and justifiable. This peculiarity is identical with the object and does not exist in it in any particular relation. For this reason a further chain of relations is not required, and the charge of a vicious infinite also becomes inadmissible. If the concept of *viśeṣa* is not admitted, then the notion of "qualified" and "quality" is inexplicable¹. The concept of *viśeṣa* in this sense was first introduced by Madhva; Baladeva borrowed the idea from him in interpreting the relation of God to His powers and qualities. This interpretation is entirely different from the view of Jīva and others who preceded Baladeva; we have already seen how Jīva interpreted the situation merely by the doctrine of the supra-logical

¹ *Ibid.* III. 2. 31.

nature of God's powers and the supra-logical nature of the difference and identity of power and the possessor of power, or of the quality and the substance. Baladeva, by introducing the concept of *viśeṣa*, tried to explain more clearly the exact nature of supra-logicality (*acintyatva*) in this case; this has been definitely pointed out in the *Sūkṣma* commentary¹.

The bliss of God is different from the bliss of the *jīvas*, both in nature and in quantity, and the nature of their knowledge is different. Brahman is thus different in nature both from the world and from the *jīvas*. All the unity texts of the Upaniṣads are to be explained merely as affirming that the world and the *jīvas* belong to God (*sarvatra tadīyatva-jñānārthaḥ*). Such a way of looking at the world will rouse the spirit of *bhakti*. The revelation of God's nature in those who follow the path of *vaidhī-bhakti* is different from that in those who follow the *ruci-bhakti*; in the former case He appears in all His majesty, in the latter He appears with all His sweetness. When God is worshipped in a limited form as Kṛṣṇa, He reveals Himself in His limited form to the devotee, and such is the supra-logical nature of God that even in this form He remains as the All-pervasive. It is evident that the acceptance of *viśeṣa* does not help Baladeva here and he has to accept the supra-logical nature of God to explain other parts of his religious dogmas.

God is regarded as being both the material cause of the world and as the supreme agent. He has three fundamental powers: the supreme power, *viṣṇu-śakti*, the power as *kṣetrajñā*, the power as *avidyā*. In His first power Brahman remains in Himself as the unchangeable; His other two powers are transformed into the *jīvas* and the world. The Sāṃkhyist argues that, as the world is of a different nature from Brahman, Brahman cannot be regarded as its material cause. Even if it is urged that there are two subtle powers which may be regarded as the material cause of the world and the *jīvas*, their objection still holds good; for the development of the gross, which is different from the subtle, is not explained. To this the reply is that the effect need not necessarily be the same as or similar to the material cause. Brahman transforms Himself into the world, which is entirely different from Him. If there were absolute oneness between the material cause and the effect, then

¹ *tenaiva tasya vastvabhinnatvaṃ sva-nirvāhakatvaṃ ca svasya tādṛśe tad-bhāvōjjyirnbhakam acintyatvaṃ sidhyati. Sūkṣma on Govinda-bhāṣya, III. 2. 31.*

one could not be called the cause and the other the effect; the lumpy character of the mud is not seen in the jug, which is its effect; in all cases that may be reviewed the effect must necessarily be different from the material cause. Such a modification does not in any way change the nature of Brahman. The changes are effected in His powers, while He remains unchanged by the modification of His powers. To turn to an ordinary example as an illustration, it may be pointed out that "a man with the stick" refers to none other than the man himself, though there is a difference between the man and the stick; so though the power of the Brahman is identical with Brahman in association with His powers, yet the existence of a difference between Brahman and His powers is not denied¹. Moreover, there is always a difference between the material cause and the effect. The jug is different from the lump of clay, and the ornaments from the gold out of which they are made; also they serve different purposes and exist in different times. If the effect existed before the causal operation began, the application of the causal operation would be unnecessary; also the effect would be eternal. If it is held that the effect is a manifestation of that which was already existent, then a further question arises, whether this manifestation, itself an effect, requires a further manifestation, and so on; thus a chain of manifestations would be necessary, and the result would be a vicious infinite. Still, Baladeva does not deny the *pariṇāma* or the *abhivyakti* theory; he denies the Sāṃkhya view that even before the causal operation the effect exists, or that a manifestation (*abhivyakti*) would require a chain of manifestations. He defines effect as an independent manifestation (*svatantrābhivyaktimattvaṃ kila kāryatvaṃ*), and such an effect cannot exist before the action of the causal operatives. The manifestation of the world is through the manifestation of God, on whom it is dependent. Such a manifestation can only happen through the causal operation inherent in God and initiated by His will. Thus the world is manifested out of the energy of God, and in a limited sense the world is identical with God; but once it is separated out of Him as effect, it is different from Him. The world did not exist at any time before it was manifested in its present form; therefore it is wrong to suppose that the world was at any stage identical with God, though God may always be regarded as the material cause of the

¹ *Ibid.* II. 1. 13.

world¹. Thus after all these discussions it becomes evident that there is really no difference of any importance between Baladeva's views and the Sāṃkhya view. Baladeva also admits that the world exists in a subtle form in God as endowed with His energies. He only takes exception to the verbal expression of the *kārikā* that the effect exists in the cause before the action of the causal operatives; for the effect does not exist in the cause *as effect* but in a subtle state. This subtle state is enlarged and endowed with spatio-temporal qualities by the action of the causal operatives before it can manifest itself as effect. The Sāṃkhya, however, differs in overstressing the existence of the effect in the cause, and in asserting that the function of the causal operatives is only to manifest openly what already existed in a covered manner. Here, however, the causal operatives are regarded as making a real change and addition. This addition of new qualities and functions is due to the operation of the causal will of God; it is of a supra-logical nature in the sense that they were not present in the subtle causal state, and yet have come into being through the operation of God's will. But, so far as the subtle cause exists in God as associated with Him, the world is not distinct and independent of God even in its present form². The *jīvas* too have no independence in themselves; they are created by God, by His mere will, and having created the world and the *jīvas* He entered into them and remained as their inner controller. So the *jīvas* are as much under natural necessity as the objects of the physical world, and they have thus no freedom of action or of will³. The natural necessity of the world is but a manifestation of God's will through it. The spontaneous desire and will that is found in man is also an expression of God's will operating through man; thus man is as much subject to necessity as the world, and there is no freedom in man. Thus, though the cow which gives milk may seem to us as if it were giving the milk by its own will, yet the vital powers of the cow produce the milk, not the cow; so, when a person is perceived as doing a particular action or behaving in a particular manner or willing something, it is not he who is the

¹ *Govinda-bhāṣya*, II. 1. 14.

² *tasmād ekam eva jīva-prakṛti-śaktimad brahma jagad-upādānam tadātmakam ca iti siddham evam kāryāvasthatve'py avicintyatva-dharma-yogād apracyuta-pūrvāvastham cāvatiṣṭhate. Ibid.* II. 1. 20.

³ *cetanasyāpi jīvasyāśma-kāṣṭha-loṣṭravad asvātantryāt svataḥ kartṛtvārūpānāptiḥ. Ibid.* II. 1. 23.

agent, but the supreme God, who is working through him¹. But the question may arise, if God is the sole cause of all human willing and human action, then why should God, who is impartial, make us will so differently? The answer will be that God determines our action and will in accordance with the nature of our past deeds, which are beginningless. A further objection may be made, that if God determines our will in accordance with our past deeds, then God is dependent in His own determining action on the nature of our *karmas*; which will be a serious challenge to His unobstructed freedom. Moreover, since different kinds of action lead to different kinds of pleasurable and painful effects God may be regarded as partial. The reply to these objections is that God determines the *jīvas* in accordance with their own individual nature; the individual *jīvas* are originally of a different nature, and in accordance with their original difference God determines their will and actions differently. Though God is capable of changing their nature, He does not do so; but it is in the nature of God's own will that He reserves a preferential treatment for His devotee, to whom He extends His special grace². God's own actions are not determined by any objective end or motive, but flow spontaneously through His enjoyment of His own blissful nature. His special grace towards His devotees flows from His own essential nature; it is this special treatment offered to His devotees that endears Him to them and that rouses others to turn towards Him³.

Bhakti is also regarded as a species of knowledge (*bhaktir api jñāna-viśeṣo bhavati*)⁴. By *bhakti* one turns to God without any kind of objective end. *Bhakti* is also regarded as a power which can bind God to us⁵; this power is regarded as the essence of the *hlādinī* power of God as associated with consciousness. The consciousness here spoken of is identical with the *hlāda*, and its essence consists in a favourable outflow of natural inclination⁶. This is thus identical with God's essential nature as consciousness and bliss; yet it is not regarded as identical with Him, but as a power of

¹ *Ibid.* II. 1. 24.

² *na ca karma-sāpekṣatvena iṣyarsya asvātantryam;...anādi-jīva-svabhāvā-nusāreṇa hi karma kārayati śva-bhāvam anyathā-kartuṃ samartho'pi kasyāpi na karoti.* *Ibid.* II. 1. 35.

⁶ *hlāda-bhinnā samvid, yas tadānukūlyamaṣaḥ sa tasyāḥ sārāḥ.* *Ibid.* p. 37.

Him¹. Though *bhakti* exists in God as His power, yet it qualifies the devotee also, it is pleasurable to them both, and they are both constituents of it². It will be remembered that, of the three powers, *samvit* is superior to *sandhinī* and *hlādinī* is superior to *samvit*. God not only is, but He extends His being to everything else; *sandhinī* is the power by which God extends being to all. He is Himself of the nature of consciousness; *samvit* is the power by which His cognitive action is accomplished and by which He makes it possible for other people to know. Though He is of the nature of bliss, He experiences joy and makes it possible for others to have joyous experiences; the power by which He does this is called *hlādinī*.³ True *bhakti* cannot have any object outside itself, simply for the reason that it is itself an experience of God as supreme bliss. That there is a kind of bliss other than sensuous pleasure is proved by our experience of our own nature as bliss during deep sleep. But, since we are but atoms of God's energy, it is necessarily proved that God's nature is supreme and infinite bliss; once that bliss is experienced, people will naturally turn away from worldly sensuous pleasure to God, once for all.

True knowledge destroys all merit and demerit, and so in the *ġivan-mukti* man holds his body only through the will of God. The effect of obligatory duties is not destroyed, except in so far as it produces meritorious results—admission to Heaven and the like—and it helps the rise of true knowledge; when the true knowledge dawns, it does not further show itself. It is also stated in the Kauṣītakī Upaniṣad that the merits of a wise man go to his friends and his demerits to his foes; so in the case of those devotees who are anxious to enter communion with God the meritorious effects of their deeds are distributed to those who are dear to Him, and the effects of their sinful actions are distributed to His enemies⁴. So, as the effects of the fructifying *karma* are distributed to other persons, the principle that all fructifying *karmas* must produce

¹ *svārūpānātrekīnyāpi tad-viśeṣatayā ca bhāṣate'nyathā tasya śaktir iti vyapedeṣa-siddheḥ. Siddhānta-ratna, p. 38.*

⁴ *Govinda-bhāṣya, IV. 1. 17.*

their effects is satisfied, and the devotee of God is released from them. The best way for true advancement can only be through the association of saintly devotees. Our bondage is real, and the destruction of the bondage is real and eternal. Even in the state of ultimate emancipation the *jīvas* retain their separate individuality from God.

In the sixth and seventh chapters of the *Siddhānta-ratna* Baladeva tries to refute Śaṅkara's doctrine of extreme monism; but as these arguments contain hardly anything new but merely repeat the arguments of the thinkers of the Rāmānuja and the Madhva Schools, they may well be omitted here. In his *Prameya-ratnāvalī* Baladeva gives a general summary of the main points of the Vaiṣṇava system of the Gauḍīya School. If one compares the account they give of Vaiṣṇava philosophy in the *Bhāgavata-sandarbhā* with that given in Baladeva's *Govinda-bhāṣya* and *Siddhānta-ratna*, one finds that, though the fundamental principles are the same, yet many new elements were introduced by Baladeva into the Gauḍīya school of thought under the influence of Madhva, and on account of his personal predilections. The stress that is laid on the aspect of difference between Īśvara and the *jīva* and the world and the concept of *viśeṣa*, are definite traces of Madhva influence. Again, though Baladeva admires the *ruci-bhakti* as the best form of *bhakti*, he does not lay the same emphasis on it as is found in the works of Rūpa, Sanātana or Jīva. His concept of *bhakti* is also slightly different from that of Jīva; he does not use the older terminologies (*antaraṅga* and *bahiraṅga śakti*), and does not seek the explanation of his system on that concept. His *Prameya-ratna-mālā* has an old commentary, the *Kānti-mālā*, by one Kṛṣṇadeva Vedānta Vāgīśa. In the *Prameya-ratna-mālā* he pays his salutation to Ānanda-tīrtha or Madhva, whom he describes as his boat for crossing the ocean of *saṃsāra*. He gives also a list of the succession of teachers from whom he derived his ideas, and he thinks that by a meditation upon the succession of *gurus* one would succeed in producing the satisfaction of Hari. He further says that four *sampradāyas* or schools of Vaiṣṇavas, the *Śrī*, *Brahma*, *Rudra*, and *Sanaka*, will spring forth in Orissa (Utkala) in the Kali yuga, which may be identified with Rāmānuja, Madhva, Viṣṇusvāmin, and Nimbāditya. He enumerates the succession of his teachers, in the following order: Śrīkṛṣṇa, Brahmā, Devarṣi-

Bādarāyaṇa, Madhva, Padmanābha, Nṛhari, Mādhava, Akṣobhya, Jaya-tīrtha, Jñāna-sindhu, Vidyānidhi, Rājendra, Jayadharmā, Puruṣottama, Brāhmaṇya, Vyāsa-tīrtha, Lakṣmīpati, Mādhavendra, Śvara, Advaita, Nityānanda and also Śrī Caitanya¹. The system of thought represented by Baladeva may well be styled the Madhva-Gauḍīya system; we have had recently in Bengal a school of Vaiṣṇavas which calls itself Madhva-Gauḍīya.

¹ See an earlier list by Kavi-Karṇapūra, in his fanciful or legendary treatise *Gaura-gaṇodeśa-dīpikā*.

SURENDRANATH DASGUPTA

A MEMOIR

THE late Surendranath Dasgupta was born in Kusthia, a subdivision of Bengal, in October 1885 (10th of Āśvina). He came from a well-known family in Goila, District Barishal, East Bengal. This family was particularly known for its great tradition of Sanskrit learning and culture. His great-grandfather was a distinguished scholar and also a Vaidya (physician of the Ayurvedic school of medicine). He was known by his title “Kavindra”, and was running a Sanskrit institution known as “Kavindra College”, which continued in existence up to the time of the partition of India in 1947. This institution maintained about 150 students with free board and lodging, and taught Kāvya, Grammar, Nyāya, Vedānta and Āyurveda in traditional Indian style. Professor Dasgupta’s father, Kaliprasanna Dasgupta, was the only member of the family who learnt English and took up the job of a surveyor.

In his early years, between five and eight, while he did not know any Sanskrit, he showed certain remarkable gifts of answering philosophical and religious questions in a very easy and spontaneous manner. He could demonstrate the various Yogic postures (*āsanas*); and used to pass easily into trance states, while looking at the river Ganges or listening to some Kirtan song. He was visited by hundreds of learned men and pious saints at his father’s residence at Kalighat and was styled “Khoka Bhagawan” (Child God). Mention may particularly be made of Srimat Bijay Krishna Goswami, Prabhu Jagat Bandhu and Sivanarayan Paramhansa. He was sometimes taken to the Theosophical Society, Calcutta, where a big audience used to assemble, and the boy was put on the table and questioned on religious and theological matters. The answers that he gave were published in the Bengali and English newspapers along with the questions. Some of these are still preserved.

He was educated at Diamond Harbour for a time, and then for seven years in the Krishnagar Collegiate School and College. He was interested in Sanskrit and science alike, and surprised the professor of chemistry by his proficiency in the subject so much that he never taught in the class unless his favourite pupil was

present. He took his M.A. degree from Sanskrit College, Calcutta, in 1908. His fellow-students noticed with interest his habits and peculiarities. He took no care of his clothes and hair; he studied on a mat with a pillow for his table; and his place was littered with books and papers. Though he did not talk very much, he already had a reputation for scholarship when he was an M.A. student at the Sanskrit College. His scholarship in Pāṇini was so great that when even his teachers had differences of opinion about a grammatical matter, he was called out of his class to solve it. His first research work on Nyāya, which was written while he was in the Sanskrit College, was read out before the Pandits, and was very highly appreciated by them and the then Principal, the late Mahamahopadhyaya H. P. Sastri. Incidentally it may be noted that Nyāya was not one of the subjects of his M.A. curriculum. After his childhood, both as a student and as a young man, he had many striking religious and spiritual experiences, which were known to a group of his intimate friends and admirers.

One of the peculiar traits of Dasgupta was that he seldom wished to learn anything from others. He had an inner pride that led him to learn everything by his own efforts. He never wanted any stimulus from outside. Whenever he took up any work, he threw his whole soul and being into it. He passed his M.A. in Philosophy in 1910, as a private candidate, summarising all the prescribed books in his own way. He was twice offered a state scholarship to study Sanskrit in a scientific manner in Europe, but as he was the only child of his parents, he refused out of consideration for their feelings. He began his service at Rajshahi College as an officiating lecturer in Sanskrit. He was soon provided with a permanent professorship at Chittagong College, where he worked from 1911 to 1920 and from 1922 to 1924.

Chittagong was to him like a place of banishment, being far away from the great libraries of Calcutta. The College was newly started and had none of the facilities that it possesses now. But Dasgupta had taken the resolution that he would dedicate himself to the study of the Indian “Śāstras” in their entirety. For him to take a resolution was to accomplish it, and while many of his colleagues enjoyed club life in an easy-going manner, he continued his studies for fourteen hours or more a day, in spite of the teasing of his friends. At this time Maharaja Manindra Chandra Nandi of

Cassimbazar made an offer of 300 rupees a month for Dasgupta to start his library; this is now one of the best of its kind, containing many unpublished manuscripts and over 15,000 printed books. It was given by him as a gift to the Benares Hindu University on his retirement from the Calcutta University. Love of knowledge seems to have been the guiding passion of the professor's life. He never sought position or honour, though they were showered upon him in quick succession in his later days. He had a unique sincerity of purpose and expression, and the light that came from his soul impressed kindred souls.

When Lord Ronaldshay, the Governor of Bengal, came to visit Chittagong College, he had a long talk with Professor Dasgupta in his classroom, and was so much impressed by it that he expressed the desire that the first volume of the *History of Indian Philosophy* might be dedicated to him. Originally Dasgupta's plan was to write out the history of Indian systems of thought in one volume. Therefore he tried to condense the materials available within the compass of one book. But as he went on collecting materials from all parts of India, a huge mass of published and unpublished texts came to light, and the plan of the work enlarged more and more as he tried to utilise them. As a matter of fact, his was the first and only attempt to write out in a systematic manner a history of Indian thought directly from the original sources in Sanskrit, Pali and Prakrit. In a work of the fourteenth century A.D., the *Sarva-darśana-saṃgraha* of Mādhavācārya, we find a minor attempt to give a survey of the different philosophical schools of India. But the account given there is very brief, and the work does not give an exhaustive survey of all the different systems of philosophy. In the present series the author traced, in a historical and critical manner, the development of Indian thought in its different branches from various sources, a considerable portion of which lies in unpublished manuscripts. He spared no pains and underwent a tremendous amount of drudgery in order to unearth the sacred, buried treasures of Indian thought. He revised his original plan of writing only one volume and thought of completing the task in five consecutive volumes constituting a series. He shouldered this gigantic task all alone, with the sincerest devotion and unparalleled enthusiasm and zeal.

Dasgupta had taken the Griffith Prize in 1916 and his doctorate

in Indian Philosophy in 1920. Maharaja Sir Manindra Chandra Nandi now urged him to go to Europe to study European philosophy at its sources, and generously bore all the expenses of his research tour (1920-22). Dasgupta went to England and distinguished himself at Cambridge as a research student in philosophy under Dr McTaggart. During this time the Cambridge University Press published the first volume of the *History of Indian Philosophy* (1921). He was also appointed lecturer at Cambridge, and nominated to represent Cambridge University at the International Congress of Philosophy in Paris. His participation in the debates of the Aristotelian Society, London, the leading philosophical society of England, and of the Moral Science Club, Cambridge, earned for him the reputation of being an almost invincible controversialist. Great teachers of philosophy like Ward and McTaggart, under whom he studied, looked upon him not as their pupil but as their colleague. He received his Cambridge doctorate for an elaborate thesis on contemporary European philosophy. The impressions that he had made by his speeches and in the debates at the Paris Congress secured for him an invitation to the International Congress at Naples in 1924, where he was sent as a representative of the Bengal Education Department and of the University of Calcutta; later on, he was sent on deputation by the Government of Bengal to the International Congress at Harvard in 1926. In that connection he delivered the Harris Foundation lectures at Chicago, besides a series of lectures at about a dozen other Universities of the United States and at Vienna, where he was presented with an illuminated address and a bronze bust of himself. He was invited in 1925 to the second centenary of the Academy of Science, Leningrad, but he could not attend for lack of Government sanction. In 1935, 1936 and 1939 he was invited as visiting professor to Rome, Milan, Breslau, Königsberg, Berlin, Bonn, Cologne, Zürich, Paris, Warsaw and England.

While in Rome he delivered at the International Congress of Science in 1936 an address on the Science of Ancient India with such success that shouts of "Grand' uomo" cheered him through the session of the day. This led eventually to the conferment of the Honorary D.Litt. upon him by the University of Rome in 1939. He was on that occasion a state guest in Rome and military honours were accorded to him. At this time he read out before many

cultured societies English translations of his own Bengali verses called *Vanishing Lines*. The appreciation that these verses received secured for him a special reception and banquet at the Poets' Club. Before this, only two other Indian poets had been accorded this reception: Tagore and Mrs Naidu. Laurence Binyon spoke of his poems in the following terms: "I am impressed by the richness of imagination which pervades the poems and the glow of mystic faith and fervent emotion—reminding me of one of William Blake's sayings: 'Exuberance is beauty'. It would be a great pity if the poems are not published in English."

The University of Warsaw made him an honorary Fellow of the Academy of Sciences. He was elected Fellow of the Royal Society of Literature. The Société des Amis du Monde of Paris offered him a special reception, and M. Renou, Professor of Sanskrit in the University of Paris, wrote to him afterwards: "While you were amongst us, we felt as if a Śāṅkara or a Patañjali was born again and moved amongst us." Kind and simple and gentle as he was, Dasgupta was always undaunted in challenging scholars and philosophers. In the second International Congress of Philosophy in Naples, the thesis of his paper was that Croce's philosophy had been largely anticipated by some forms of Buddhism, and that where Croce differed he was himself in error. On account of internal differences Croce had no mind to join the Congress, but the fact that Dasgupta was going to challenge his philosophy and prove it to be second-hand in open congress, induced him to do so. In the same way he challenged Vallée Poussein, the great Buddhist scholar, before a little assembly presided over by McTaggart. In the meetings of the Aristotelian Society he was a terror to his opponents, his method of approach being always to point out their errors. He inflicted this treatment on many other scholars, particularly Steherbatsky and Levy.

Disinterested love of learning and scientific accuracy were his watchwords. He had to make a most painstaking tour of South India to collect materials for his great *History*. Though he was well known as a scholar of Sanskrit and philosophy, his studies in other subjects, such as physics, biology, anthropology, history, economics, political philosophy, etc. are very considerable. Above all, he developed a new system of thought which was entirely his own. A brief account of this appeared in *Contemporary Indian Philosophy*

edited by Radhakrishnan and Muirhead and published by Allen and Unwin.

In 1924, as a mark of recognition of his scholarship, he was admitted to I.E.S. service in Calcutta Presidency College and was posted as Head of the Department of Philosophy. In 1931 he became Principal of the Government Sanskrit College, Calcutta, and *ex-officio* Secretary of the Bengal Sanskrit Association. In the latter capacity he had to arrange about 218 papers in Sanskrit for Sanskrit Title Examinations for about ten thousand candidates coming from all parts of India. During the eleven years of his principalship in Sanskrit College he had worked in various ways for the advancement of Sanskrit learning and culture in India.

In 1942 he retired from Sanskrit College and was appointed King George V Professor of Mental and Moral Science in the University of Calcutta. He worked there for three years and delivered the Stephanos Nirmalendu lectures on the history of religions. He had been suffering from heart trouble since 1940, but was still carrying on his various activities and research work. In 1945 he retired from the Calcutta University and was offered the Professorship of Sanskrit at Edinburgh which had fallen vacant after the death of Professor Keith. The doctors also advised a trip to England. On his arrival in England he fell ill again. In November 1945 he delivered his last public lecture on Hinduism in Trinity College, Cambridge. Since then he was confined to bed with acute heart trouble. He stayed in England for five years (1945-50). Even then he published the fourth volume of his *History of Indian Philosophy* at the Cambridge University Press, the *History of Sanskrit Literature* at Calcutta University, *Rabindranath the Poet and Philosopher* with his Calcutta publishers, and a book on aesthetics in Bengali. In 1950 he returned to Lucknow.

In 1951, through friendly help given by Pandit Jawaharlal Nehru, he started writing the fifth and final volume of the *History of Indian Philosophy*. He had also planned to write out his own system of philosophy in two volumes. His friends and students requested him several times to complete the writing of his own thought first. But he looked upon his work on Indian philosophy as the sacred mission of his life, and thought himself to be committed to that purpose. His love of his mother country and all that is best in it always had precedence over his personal aspirations.

With strong determination and unwavering devotion he brought his life's mission very near its completion. Till the last day of his life he was working for this, and completed one full section just a few hours before his passing away, on 18 December 1952. Even on this last day of his life, he worked in the morning and afternoon on the last chapter of the section of Southern Śaivism. He passed away peacefully at eight in the evening while discussing problems of modern psychology. All his life he never took rest voluntarily and till his end he was burning like a fire, full of zeal and a rare brightness of spirit for the quest of knowledge.

His plan of the fifth volume was as follows:

- (1) Southern Schools of Śaivism.
- (2) Northern Schools of Śaivism.
- (3) Philosophy of Grammar.
- (4) Philosophy of some of the Selected Tantras.

Of these the first was to be the largest section and covers more than a third of the proposed work according to his own estimate. He collected manuscripts from various sources from Southern India and completed his survey of the different schools of Southern Śaivism. This is now being published by the Cambridge University Press.

Another aspect of his life, which showed itself in trances and in deep unswerving devotion and faith in his Lord, never left him. These were manifest in him even as a child, and continued all through his life. In trials and troubles and sorrows he was fearless and undaunted. In difficulties he had his indomitable will to conquer; he bore all his sufferings with patience and fortitude. His faith in God sustained him with an unusual brightness and cheerfulness of spirit. He never prayed, as he thought there was no need of it since his dearest Lord was shining in his heart with sweetness, love and assurance. That is why in different critical stages of his illness he never gave up hope, and tried to cheer up his worried wife and attending doctors. It was through sheer determination and unshaken faith that he carried out his life's mission nearly to completion when God took him away—maybe for some purpose known to him alone.

It now remains to thank the Syndics of the Cambridge University Press for the very kind interest that they have shown in the

publication of this fifth volume of the *History of Indian Philosophy* by my husband. The Indian Government have permitted me to complete the remaining portion of the work as planned by the author. It is a great task and a very sacred obligation that I owe to my husband, both as his disciple and wife, and I do not know how far I shall be able to fulfil it. It all depends on God's will. But the work as it stands now is self-complete and will serve the need of enquiring minds about the different important schools of Śaivism from the beginning of the Christian era. The references to texts and manuscripts have been duly checked. I beg the forgiveness of readers for any mistake that might remain.

CHAPTER XXXIV

LITERATURE OF SOUTHERN ŚAIVISM

The Literature and History of Southern Śaivism.

THE earliest Sanskrit philosophical literature in which we find a reference to Śaivism is a *bhāṣya* of Śaṅkara (eighth century) on *Brahma-sūtra* II. 2. 37. In the commentary on this *sūtra*, Śaṅkara refers to the doctrines of the Siddhāntas as having been written by Lord Maheśvara. The peculiarity of the teachings of the Siddhāntas was that they regarded God as being only the instrumental cause of the world. Here and elsewhere Śaṅkara has called the upholders of this view Īśvara-kāraṇins. If Śiva or God was regarded as both the instrumental and the material cause of the world, according to the different Siddhānta schools of thought, then there would be no point in introducing the *sūtra* under reference, for according to Śaṅkara also, God is both the instrumental and the material cause of the world. Śaṅkara seems to refer here to the Pāśupata system which deals with the five categories, such as the cause (*kāraṇa*), effect (*kārya*), communion (*yoga*), rules of conduct (*vidhi*) and dissolution of sorrow (*duḥkḥānta*)¹. According to him it also holds that Pāśupati (God) is the instrumental cause of the world. In this view the Naiyāyikas and the Vaiśeṣikas also attribute the same kind of causality to God, and offer the same kind of arguments, i.e. the inference of the cause from the effect.

Vācaspati Miśra (A.D. 840), in commenting on the *bhāṣya* of Śaṅkara, says that the Maheśvaras consist of the Śaivas, Pāśupatas, the Kāruṇika-siddhāntins and the Kāpālikas. Mādhava of the fourteenth century mentions the Śaivas as being Nakuliśa-pāśupatas who have been elsewhere mentioned as Lākuliśa-pāśupatas or Lakuliśa-pāśupatas, and they have been discussed in another section of the present work. Mādhava also mentions the *Śaiva-darśana* in which he formulates the philosophical doctrines found in the *Śaivāgamas* and their cognate literature. In addition to this he devotes a section to *pratyabhijñā-darśana*, commonly

¹ The skeleton of this system has already been dealt with in another section as *Pāśupata-śāstras*.

called Kāśmīr Śaivism. This system will also be dealt with in the present volume. Vācaspati mentions the Kāruṇika-siddhāntins and the Kāpālikas. Rāmānuja in his *bhāṣya* on *Brahma-sūtra* II. 2. 37 mentions the name of Kāpālikas and Kālamukhas as being Śaiva sects of an anti-Vedic character. But in spite of my best efforts, I have been unable to discover any texts, published or unpublished, which deal with the special features of their systems of thought. We find some references to the Kāpālikas in literature like the *Mālatī-mādhava* of Bhavabhūti (A.D. 700–800) and also in some of the Purāṇas. Ānandagiri, a contemporary of Śaṅkara and a biographer, speaks of various sects of Śaivas with various marks and signs on their bodies and with different kinds of robes to distinguish themselves from one another. He also speaks of two schools of Kāpālikas, one Brahmanic and the other non-Brahmanic. In the Atharva-veda we hear of the Vrātyas who were devotees of Rudra. The Vrātyas evidently did not observe the caste-rules and customs. But the Vrātyas of the Atharva-veda were otherwise held in high esteem. But the Kāpālikas, whether they were Brahmanic or non-Brahmanic, indulged in horrid practices of drinking and indulging in sex-appetite and living in an unclean manner. It is doubtful whether there is any kind of proper philosophy, excepting the fact that they were worshippers of Bhairava the destroyer, who also created the world and maintained it. They did not believe in *karma*. They thought that there are minor divinities who perform various functions in world creation and maintenance according to the will of Bhairava. The Śūdra Kāpālikas did not believe also in the caste-system and all these Kāpālikas ate meat and drank wine in skulls as part of their rituals. Sir R. G. Bhandarkar thinks on the authority of *Śiva-mahāpurāṇa* that the Kālamukhas were the same as the Mahāvratadharas. But the present author has not been able to trace any such passage in the *Śiva-mahāpurāṇa*, and Bhandarkar does not give any exact reference to the *Śiva-mahāpurāṇa* containing this identification. The *Mahāvrata*, meaning the great vow, consists in eating food placed in a human skull and smearing the body with the ashes of human carcasses and others, which are attributed to the Kālamukhas by Rāmānuja. Bhandarkar also refers to the commentary of Jagaddhara on the *Mālatī-mādhava*, where the *Kāpālika-vrata* is called *Mahāvrata*. Bhandarkar further points out that the ascetics dwelling in the temple of

Kāpāleśvara near Nasik are called the Mahāvratins¹. Be that as it may, we have no proof that the Kāpālikas and Kālamukhas had any distinct philosophical views which could be treated separately. Members of their sects bruised themselves in performing particular kinds of rituals, and could be distinguished from other Śaivas by their indulgence in wines, women, and meat and even human meat. Somehow these rituals passed into Tāntric forms of worship, and some parts of these kinds of worship are found among the adherents of the Tāntric form of worship even to this day. Tāntric initiation is thus different from the Vedic initiation.

Frazer in his article on Śaivism in the *Encyclopaedia of Religion and Ethics* says that, in some well-known temples in South India, the ancient blood-rites and drunken orgies are permitted to be revived yearly as a compromise with the aboriginal worshippers, whose primitive shrines were annexed by Brahmin priests acting under the protection of local chieftains. These chieftains, in return for their patronage and countenance, obtained a rank as Kṣatriyas with spurious pedigrees. Frazer further gives some instances in the same article in which non-Brahmins and outcastes performed the worship of Śiva and also offered human sacrifices, and one of the places he mentions is Śrīśaila, the Kāpālika centre referred to by Bhavabhūti. These outcaste worshippers were ousted from the temple by some of the Buddhists, and thereafter the Buddhists were thrown out by the Brahmins. By the time of Śaṅkara, the Kāpālikas developed a strong centre in Ujjain. We, of course, do not know whether the South Indian cult of blood-rites as performed by Brahmins and non-Brahmins could be identified with the Kāpālikas and Kālamukhas; but it is quite possible that they were the same people, for Śrīśaila, mentioned by Bhavabhūti, which is described as an important Kāpālika centre, is also known to us as a centre of bloody rites from the *Sthala-māhātmya* records of that place as mentioned by Frazer. The Kāpālikas and Kālamukhas were anti-Vedic according to the statement of Rāmānuja in *Brahma-sūtra* II. 2. 37. Śaṅkara also, according to Ānandagiri, did not hold any discussion with the Kāpālikas, as their views were professedly anti-Vedic. He simply had them chastised and whipped. The Kāpālikas, however, continued in their primitive

¹ *Vaiṣṇavism, Saivism and Minor Religious Systems*, by Sir R. G. Bhandarkar (1913), p. 128.

form and some of them were living even in Bengal, as is known to the present writer. The habit of smearing the body with ashes is probably very old in Śaivism, since we find the practice described in the *Pāśupata-sūtra* and in the *bhāṣya* of Kaunḍinya.

The Kāruṇika-siddhāntins mentioned by Vācaspati have not been referred to by Mādhava (fourteenth century) in his *Sarva-darśana-saṃgraha*, and we do not find a reference to these in any of the *Śaivāgamas*. But from the statement of Śaiva philosophy in the *Vāyaviya-saṃhitā* of the *Śiva-mahāpurāṇa*, as discussed in another section (pp. 106–29), it is not difficult for us to reconstruct the reasons which might have led to the formation of a special school of Śaivism. We find that the doctrine of grace or *karuṇā* is not always found in the same sense in all the Āgamas, or in the *Vāyaviya-saṃhitā*, which was in all probability based on the Āgamas. Ordinarily the idea of grace or *karuṇā* would simply imply the extension of kindness or favour to one in distress. But in the *Śaivāgamas* there is a distinct line of thought where *karuṇā* or grace is interpreted as a divine creative movement for supplying all souls with fields of experience in which they may enjoy pleasures and suffer from painful experiences. The *karuṇā* of God reveals the world to us in just the same manner as we ought to experience it. Grace, therefore, is not a work of favour in a general sense, but it is a movement in favour of our getting the right desires in accordance with our *karma*. Creative action of the world takes place in consonance with our good and bad deeds, in accordance with which the various types of experience unfold themselves to us. In this sense, grace may be compared with the view of Yoga philosophy, which admits of a permanent will of God operating in the orderliness of the evolutionary creation (*pariṇāmakramanīyama*) for the protection of the world, and supplying it as the basis of human experience in accordance with their individual *karmas*. It is again different from the doctrine of *karuṇā* of the Rāmānuja Vaiṣṇavas, who introduce the concept of Mahālakṣmī, one who intercedes on behalf of the sinners and persuades Nārāyaṇa to extend His grace for the good of the devotees.

The word ‘*śiva*’ is supposed to have been derived irregularly from the root ‘*vaś kāntan*’. This would mean that Śiva always fulfils the desires of His devotees. This aspect of Śiva as a merciful Lord who is always prepared to grant any boons for which prayers

are offered to Him is very well depicted in the *Mahābhārata* and many other Purāṇas. This aspect of Śiva is to be distinguished from the aspect of Śiva as *rudra* or *śarva* or the god of destruction.

We have seen that we know practically nothing of any importance about the Kāpālikas and the Kālamukhas. The other doctrines of Śaivism of the South are those of the Pāśupatas, the Śaiva doctrines derived from the Āgamas and the Vaiṣṇavas. The other schools of Śaivism that developed in Kāśmīr in the ninth and tenth centuries will be separately discussed. The *Pāśupata-sūtra* with the *Pañcārtha bhāṣya* of Kauṇḍinya was first published from Trivandrum in 1940, edited by Anantakriṣṇa Śāstri. This *bhāṣya* of Kauṇḍinya is probably the same as the *Rāśīkara-bhāṣya* referred to by Mādhava in his treatment of *Nakuliśa-pāśupata-darśana* in *Sarva-darśana-saṃgraha*. Some of the lines found in Kauṇḍinya's *bhāṣya* have been identified by the present writer with the lines attributed to Rāśīkara by Mādhava in his treatment of the *Nakuliśa-pāśupata* system. Nakuliśa was the founder of the Pāśupata system. Aufrecht in the *Catalogus Catalogorum* mentions the *Pāśupata-sūtra*¹. The *Vāyaviya-saṃhitā* II. 24. 169, also mentions the *Pāśupata-śāstra* as the *Pañcārtha-vidyā*². Bhandarkar notes that in an inscription in the temple of Harṣanātha which exists in the Śīkar principality of the Jaipur State, a person of the name of Viśvarūpa is mentioned as the teacher of the *Pañcārthā-lākulāmnāya*. The inscription is dated v.E. 1013 = A.D. 957. From this Bhandarkar infers that the Pāśupata system was attributed to a human author named Lakulin and that the work composed by him was called *Pañcārtha*. This inference is not justifiable. We can only infer that in the middle of the tenth century Lakuliśa's doctrines were being taught by a teacher called Viśvarūpa, who was well reputed in Jaipur, and that Lakuliśa's teachings had attained such an authoritative position as to be called *āmnāya*, a term used to mean the Vedas.

In the *Pāśupata-sūtra* published in the Trivandrum series, the first *sūtra* as quoted by Kauṇḍinya is *athātaḥ paśupateḥ paśupataṃ*

¹ Bhandarkar notes it in his section on the Pāśupatas, *op. cit.* p. 121 n.

² The present writer could not find any such verse in the edition of *Śiva-mahāpurāṇa* printed by the Venkatesvara Press, as II. 24 contains only seventy-two stanzas.

yogavidhiṃ vyākhyāsyāmaḥ. Here the *yoga-vidhi* is attributed to Paśupati or Śiva. In the *Sūtasamhitā* iv. 43. 17, we hear of a place called Nakula and the Śiva there is called Nakuliśa. The editor of the *Pāśupata-sūtra* mentions the names of eighteen teachers beginning with Nakuliśa¹. These names are (1) Nakuliśa, (2) Kauśika, (3) Gārgya, (4) Maitreya, (5) Kauruṣa, (6) Īśāna, (7) Paragārgya, (8) Kapilāṇḍa, (9) Maṇuṣyaka, (10) Kuśika, (11) Atri, (12) Piṅgalākṣa, (13) Puṣpaka, (14) Bṛhadārya, (15) Agasti, (16) Santāna, (17) Kauṇḍinya or Rāśikara, (18) Vidyāguru. The present writer is in agreement with the view of the editor of the *Pāśupata-sūtra*, that Kauṇḍinya the *bhāṣyakāra* lived somewhere from the fourth to the sixth century A.D. The style of the *bhāṣya* is quite archaic, and no references to the later system of thought can be found in Kauṇḍinya's *bhāṣya*. We have already seen that according to the *Śiva-mahāpurāṇa* there were twenty-eight yogācāryas and that each of them had four disciples so that there were 112 yogācāryas. Out of these twenty-eight yogācāryas the most prominent were Lokākṣī, Jaigīṣavya, Ṛṣabha, Bhṛgu, Atri and Gautama. The last and the twenty-eighth ācārya was Lakuliśa, born at Kāyā-vatarana-tīrtha. Among the 112 yogācāryas, Sanaka, Sanandana, Sanātana, Kapila, Āsuri, Pañcaśikha, Parāśara, Garga, Bhārgava, Aṅgira, Śuka, Vaśiṣṭha, Bṛhaspati, Kuṇi, Vāmadeva, Śvetaketu, Devala, Śālihotra, Agniveśa, Akṣapāda, Kaṇāda, Kumāra and Ruru are the most prominent².

¹ These names are taken from Rājasekhara's *Ṣaḍdarśana-samuccaya* composed during the middle of the fourteenth century. Almost the same names with slight variations are found in Guṇaratna's commentary on *Ṣaḍdarśana-samuccaya*.

² See *Śiva-mahāpurāṇa*, *Vāyavīya Samhitā* II. 9, and also *Kūrma-purāṇa* I. 53. The *Vāyu-purāṇa* describes in the twenty-third chapter the names of the four disciples of each of the twenty-eight ācāryas. Viśuddha Muni mentions the name of Lakuliśa in his work called *Ātma-samarpaṇa*. See also Introduction to the *Pāśupata-sūtra*, p. 3 n.

The list of twenty-eight teachers given in the *Śiva-mahāpurāṇa* does not always tally with the list collected by other scholars, or with that which is found in the *Ātma samarpaṇa* by Viśuddha Muni. It seems therefore that some of these names are quite mythical, and as their works are not available, their names are not much used. Viśuddha Muni summarises the main items of self-control, *yama*, from the *Pāśupata-śāstra*, which are more or less of the same nature as the *yamas* or measures of self-control as found in the *Yogaśāstra* introduced by Patañjali. It is not out of place here to mention that the concept of God in *Yogaśāstra* is of the same pattern as that of the Paśupati in the *Pāśupata-sūtra* and *bhāṣya*.

Mr Dalal in his introduction to *Gaṇakārikā* says that the *Lākuliśa-pāśupata-darśana* is so called from Lakuliśa, who originated the system. *Lakuliśa* means "a lord of those bearing a staff". Lakuliśa is often regarded as an incarnation of God Śiva with a citron in the right hand and a staff in the left. The place of the incarnation is Kāyārohaṇa in Bhṛgu-kṣetra which is the same as Kāraṇa, a town in the Dabhoi Taluka of the Baroda State. In the *Kāraṇa-māhātmya* it is said that a son of a Brahmin in the village Ulkāpurī appeared as Lakuliśa and explained the methods and merits of worshipping and tying a silken cloth to the image of the God Lakuliśa. This work is divided into four chapters; the first is from the *Vāyu-purāṇa*, the remaining three are from the *Śiva-mahāpurāṇa*. At the commencement of the work, there is obeisance to Maheśvara, who incarnated himself as Lakūṭa-pānīśa. There is a dialogue there between Śiva and Pārvatī, in which the latter asks Śiva of the merits of tying a silken cloth. Śiva then relates the story of his incarnation between the Kali and Dvāpara yugas as a Brahmin named Viśvarāja in the family of the sage Atri. His mother was Sudarśana. Some miraculous myths relating to this child, who was an incarnation of Śiva, are narrated in the *Kāraṇa Māhātmya*, but they may well be ignored here.

We have already mentioned the name of Atri as being one of the important teachers of the Pāśupata school. But according to the account of these teachers as given above, Nakuliśa should be regarded as the first founder of the system. We have seen also that by the middle of the tenth century there was a teacher of the *Pañcārtha-lākulāmnāya*, which must be the same as the doctrine propounded in the *Pāśupata-sūtra*. It is difficult to say how early the concept of Paśupati might have evolved. From the Mohenjodaro excavations we have a statuette in which Śiva is carved as sitting on a bull, with snakes and other animals surrounding Him. This is the representation in art of the concept of the lord of *paśus* or *paśupati*, which is found in pre-Vedic times. The concept of Śiva may be traced through the Vedas and also through the Upaniṣads and particularly so in the Śvetāśvatara Upaniṣad. The same idea can be traced in the *Mahābhārata* and many other Purāṇas. The religious cult of Śiva, which defines the concept of Śiva in its various mythological bearings, has to be given up here, as the interest of the present work is definitely restricted to

philosophical ideas and the ethical and social attitude of the followers of Śiva¹.

It must, however, be said that the Śaiva philosophy and the worship of Śiva had spread itself far and wide throughout the whole of the peninsula long before the eighth century A.D. We have the most sacred temples of Śiva in the north in Badrikāśrama, in Nepal (Paśupati-nātha), in Kāśmīr, in Prabhāsa, in Kathiawar (the temple of Somanātha), in Benaras (the temple of Viśvanātha), the Nakuliśvara temple in Calcutta, and the temple of Rāmeśvaram in extreme South India. This is only to mention some of the most important places of Śiva-worship. As a matter of fact, the worship of Śiva is found prevalent almost in every part of India, and in most of the cities we find the temples of Śiva either in ruins or as actual places of worship. Śiva is worshipped generally in the form of the phallic symbol and generally men of every caste and women also may touch the symbol and offer worship. The Śaiva forms of initiation and the Tāntric forms of initiation are to be distinguished from the Vedic forms of initiation, which latter is reserved only for the three higher castes. But as the present work is intended to deal with the philosophy of Śaivism and Tāntricism, all relevant allusions to rituals and forms of worship will be dropped as far as possible.

The Jaina writer Rājaśekhara of the middle of the fourteenth century mentions the name of Śaiva philosophy in his *Ṣaḍ-darśana-samuccaya* and calls it a *yoga-mata*². He describes the Śaiva ascetics as holding staves in their hands and wearing long loin cloths (*praudha-kaupīna-paridhāyinah*). They had also blankets for covering their bodies, matted locks of hair, and their bodies were smeared with ashes. They ate dry fruits, bore a vessel of gourd (*tumbaka*), and generally lived in forests. Some of them had wives, while others lived a lonely life. Rājaśekhara further says that the Śaivas admitted eighteen incarnations of Śiva, the Overlord, who creates and destroys the world. We have already mentioned the names of the teachers that are found in *Ṣaḍdarśana-samuccaya*. These teachers were particularly adored and among

¹ Those who are interested in the study of the evolution of the different aspects of God Śiva, may consult Bhandarkar's *Vaiṣṇavism and Śaivism*, and also the article on Śaivism by Frazer in the *Encyclopaedia of Religion and Ethics*.

² *atha yoga-mataṃ brumāḥ, śaivism-ity-aparā-bhidham*. Rājaśekhara's *Ṣaḍ-darśana-samuccaya*, p. 8 (2nd edition, Benares).

them it was Akṣapāda who enunciated a system of logic in which he discussed the *pramāṇas*, perception, inference, analogy and testimony and also described the sixteen categories that are found in the *Nyāya-sūtra* of Gautama or Akṣapāda. Rājāśekhara mentions the names of Jayanta, Udayana, and Bhāsarvajña. Thus according to Rājāśekhara the Naiyāyikas were regarded as Śaivas. It does not seem that Rājāśekhara had made any definite study of the Nyāya system, but based his remarks on the tradition of the time¹. He also regards the Vaiśeṣikas as Pāśupatas. The Vaiśeṣika saints wore the same kind of dress and the marks as the Naiyāyikas and admitted the same teachers, but they held that the perception and inference were the only two *pramāṇas* and that the other *pramāṇas* were included within them. He also mentions the six categories that we find in the *Vaiśeṣika-sūtra*. Rājāśekhara calls the Naiyāyikas Yaugas. The Vaiśeṣika and the Nyāya are more or less of the same nature and both of them regard the dissolution of sorrow as ultimate liberation. Guṇaratna, the commentator of Haribhadra Suri's *Ṣaḍdarśana-samuccaya* was a Jaina writer like Rājāśekhara and he was in all probability a later contemporary of him. Many of his descriptions of the Naiyāyikas or Yaugas seem to have been taken from Rājāśekhara's work, or it may also have been that Rājāśekhara borrowed it from Guṇaratna, the descriptions being the same in many places. Guṇaratna says that there were found kinds of Śaivas such as the Śaivas, Pāśupatas, Mahāvratadharas and the Kālamukhas². In addition to these both Guṇaratna and Rājāśekhara speak of those who take the vow (*vrātas*) of service to Śiva and they are called Bharatas and Bhaktas. Men of any caste

¹ *śrūtānusārataḥ proktaṁ naiyāyika-mataṁ mayā. Ibid. p. 10.*

² *śaivaḥ pāśupataścaiva mahāvratā-dharas tathā,
turyāḥ kālamukhā mukhyā bheda ete tapasvinām.*

Guṇaratna's commentary on Haribhadra's *Ṣaḍdarśana-samuccaya*, p. 51 (Suali's edition, Calcutta, 1905).

According to Guṇaratna, therefore, the Mahāvratadharas and the Kālamukhas are entirely different. The Kāpālikas are not mentioned by Guṇaratna. These four classes of Śaivas were originally Brahmins and they had the sacred thread. Their difference was largely due to their different kinds of rituals and behaviour (*ācāra*):

*ādihāra-bhasma-kaupīna-jaṭā-yajñopavītināḥ,
sva-svācārādi-bhedena caturdhā syus tapasvināḥ.*

Rāmānuja mentions the names of Kāpālikas and Kālamukhas as being outside the pale of the Vedas (*veda-bāhya*). In *Saṅkara-vijaya* of Ānandagiri also the Kāpālikas are represented as being outside the pale of the Vedas. But the Kālamukhas are not mentioned there.

could be included in the class of Bharatas (servants) and Bhaktas (devotees) of Śiva. The Naiyāyikas were always regarded as devotees of Śiva and they were called Śaivas. The Vaiśeṣika philosophy was called Pāśupata¹. Haribhadra also says that the Vaiśeṣikas admitted the same divinity as the Naiyāyikas².

Excluding the Kāpālikas and the Kālamukhas, about whom we know very little except the traditional imputations against their rituals and non-Vedic conduct, we have the text of the Pāśupata system and the Śaiva philosophy as described in the Śaiva Āgamas. We have also the *Pāśupata-śāstra* as described in the *Vāyaviya saṃhitā*, the Śaiva philosophy of Śrīkaṇṭha as elaborated by Appaya Dikṣita, and the Śaiva philosophy as expounded by King Bhoja of Dhāra in his *Tattva-prakāśa* as explained by Śrīkumāra and Aghora-śivācārya. We have also the Vīra-śaivism which evolved at a later date and was explained in a commentary on *Brahma-sūtra* by Śrīpati Paṇḍita who is generally placed in the fourteenth century³. Śrīpati Paṇḍita was posterior to the Pāśupatas and Rāmānuja, and also to Ekorāma and the five ācāryas of the Vīra-śaiva religion. Śrīpati was also posterior to Mādhavācārya. But it is curious that Madhava seems to know nothing either of Vīraśaivism or of Śrīpati Paṇḍita. He was of course posterior to Basava of the twelfth century, who is generally regarded as being the founder of Vīra-śaivism. As Hayavadana Rao points out, Śrīpati was posterior to Śrīkaṇṭha, who wrote a *bhāṣya* on the *Brahma-sūtra*⁴. We have treated in a separate section the philosophy of Śrīkaṇṭha. Śrīkaṇṭha lived somewhere in the eleventh century and may have been a junior contemporary of Rāmānuja. Śrīkaṇṭha in his treatment of *Brahma-sūtra* III. 3. 27-30, criticises the views of Rāmānuja and Nimbārka. Hayavadana Rao thinks on inscriptional grounds that Śrīkaṇṭha was living in A.D. 1122⁵.

Meykaṇḍadeva, the most famous author of the Tamil translation of the Sanskrit work *Śiva-jñāna-bodha* belonged to Tiru-

¹ See Guṇaratna's commentary, p. 51.

⁴ *Ibid.* p. 36.

⁵ *Ibid.* p. 41.

venneyllur near the South Arcot district. There is an inscription in the sixteenth year of the Chola King Rājārāja III (A.D. 1216-48) which records a gift of land to an image set up by Meykaṇḍa. This fixes the date of Meykaṇḍadeva, the disciple of Parañjoti muni to about the middle of the thirteenth century. Hayvadana Rao after a long discussion comes to the view that Meykaṇḍa actually lived about A.D. 1235, if not a little earlier¹. From inscriptional sources it has been ascertained that Śrīkaṇṭha, the commentator of *Brahma-sūtra* lived about A.D. 1270. It is quite possible that Meykaṇḍa and Śrīkaṇṭha were contemporaries. The philosophical difference between Meykaṇḍa and Śrīkaṇṭha is quite remarkable, and the two persons cannot therefore be identified as one². Śrīkaṇṭha thinks that the world is a transformation of the *cicchakti* of the Lord. It does not provide for the creation of the material world, does not speak of the *āṇava-mala*, and is apparently not in favour of *jīvan-mukti*. Further Śrīkaṇṭha appears to establish his system on the basis of the *śruti*. Meykaṇḍa, however, tries to establish his system on the basis of inference, and there are many other points of difference as will be easily seen from our treatment of Meykaṇḍadeva. It does not seem that Śrīkaṇṭha had any relation with Meykaṇḍadeva.

Śrīpati quotes from Haradatta in very reverential terms. Hayvadana Rao refers to an account of the life of Haradatta as given in the *Bhaviṣyottara-purāṇa*, and to the writings of his commentator Śiva-liṅga-bhūpati, which would assign Haradatta to the Kali age 3979, corresponding roughly to A.D. 879. In the *Śiva-rahasya-dīpikā*, however, Kali age 3000 is given as a rough approximation of the date of Haradatta. Professor Shesagiri Śāstrī accepts the former date as a more correct one and identifies the Haradatta quoted in *Sarva-darśana-saṃgraha* as being the same as the author of *Harihara-tāratamya* and the *Caturveda-tātparyasaṃgraha*. As we have mentioned elsewhere, Haradatta was the author of the *Gaṇakārikā*. Mr Dalal in all probability had confused the two in his introduction to the *Gaṇakārikā*, in which he says that Bhāsarvajna was the author of *Gaṇakārikā*. In reality Haradatta wrote only the *Kārikā*, and the Nyāya author Bhāsar-

¹ *Ibid.* p. 48.

² *Ibid.* p. 49. The systems of Śrīkaṇṭha and of Meykaṇḍa have been dealt with in separate sections of the present work.

vajña wrote a commentary on it called the *Ratnaṭīkā*¹. Śrīpati also quotes from *Siddhānta śikhāmaṇi*, a Viraśaiva work written by Revanārya.

It is curious to note that though Vira-śaivism was founded at least as early as the time of Basava (A.D. 1157-67), Mādhava in the fourteenth century does not know anything of Vira-śaivism. It is, however, doubtful if Basava was really the founder of Vira-śaivism in India. We have got some sayings in Canarese known as the *vacanas* of Basava, but we find that his name is seldom mentioned as a teacher of any articles of the Vira-śaiva faith. There is a semi-mythical account of Basava in a work called *Basava-purāṇa*. It is said there that Śiva asked Nandin to incarnate himself in the world for the propagation of the Vira-śaiva faith. Basava was this incarnation. He was a native of Bāgevāḍi from where he went to Kalyāṇa where Vijjala or Vijjana was reigning (A.D. 1157-67). His maternal uncle, Baladeva, was the minister, and he himself was raised to that position after his death. Basava's sister was given away to the king. He was in charge of the treasury and spent large sums in supporting and entertaining the Liṅgayat priests or mendicants called Jaṅgamas. When the king came to know of this, he became angry and sent troops to punish him. Basava collected a small army and defeated these troops. The king brought him back to Kalyāṇa and there was apparently some reconciliation between them. But Basava later on caused the king to be assassinated. This depicts Basava more as a scheming politician than as a propounder of new faith.

Returning to our treatment of the literature of the Pāśupatas, we see that between the Vaiṣṇavas and the monists like the Śaṅkarites we have a system of thought representing the monotheistic point of view. This view appears in diverse forms in which God is sometimes regarded as being established as upholding the universe, but beyond it; sometimes it is held that God is beyond the world and has created it by the material of His own energy; at other times it

¹ The colophon of the *Gaṇakārikā* runs as follows:
ācārya-bhāsarvajña-viracitāyāṃ gaṇakārikāyāṃ
ratnaṭīkā parisamāptā.

This led to the confusion that the *Gaṇakārikā* was the composition of Bhāsarvajña, who only wrote the commentary. This Haradatta must be distinguished from the Haradatta of the *Padamañjarī* on the *Kāśikā-vṛtti*, and also from the commentator of the *Āpastamba-sūtra*.

has been held that God and energy are one and the same. Sometimes it has been held that God has created the world by His mercy or grace and that His grace is the inner dynamic force which follows the course of creation and maintenance. It is in this way that a compromise has been made between the theory of grace and the theory of *karma*. There are others, however, who think that we do not as of necessity have a right to reap the fruits of our actions, but we have to be satisfied with what is given to us by God. The Pāsupatas hold this view, and it is important to notice that the Nyāya which admits the doctrine of *karma* also thinks that we are only entitled to such enjoyments and experiences as are allotted to us by God. The fact that both the Nyāya and the Pāsupatas think that God can be established by inference, and that the grace of God is ultimately responsible for all our experiences, naturally leads us to link together the Nyāya-vaiśeṣika view with the Pāsupata view. The tradition is preserved in the two *Ṣaḍdarśana-samuccayas* of Rājaśekhara and Haribhadra with Guṇaratna, which, as well as the benedictory verses in most Nyāya works until the tenth and eleventh centuries, justify the assumption that the Nyāya-vaiśeṣika was a school of Pāsupatas which paid more emphasis to evolving a system of logic and metaphysics. The Pāsupata system generally accepted the caste-division, and only those belonging to higher castes could claim to attain spiritual liberation. Yet as time rolled on we find that men of all castes could become devotees or servants of God and be regarded as Śaivas. We find the same kind of gradual extension and withdrawal of caste system among the Vaiṣṇavas also. Both in Śaivism and Vaiṣṇavism, *bhakti* or devotion to God came to be regarded as the criterion of the faith.

We have already referred to the statement in the *Kāraṇa-māhātmya* about how the Lord incarnated Himself as a descendant of Atri. He is said to have walked to Ujjain and taught a Brahmin there called Kuśika who came from Brahmāvarta. These teachings were in the form of the present *sūtras* called the *Pañcārtha*, the main substance of which has already been described. It is generally believed that the original *sūtras*, divided into five chapters (*pañcārtha*), were composed somewhere in the first or the second century A.D. The *bhāṣya* of Kauṇḍinya is probably the same as the *Rāṣikara bhāṣya*. Kauṇḍinya does not mention the name of any writer contemporary to him. He refers to the *Sāṃkhya-yoga* but

not to Vedānta or the Upaniṣads. It is interesting to note therefore that this system does not pretend to claim the authority of the Upaniṣads or its support. The authority of the *sūtras* is based on the assumption that they were composed by Paśupati himself. There are many quotations in the work of Kauṇḍinya, but it is not possible to identify their sources. The style of Kauṇḍinya's *bhāṣya* reminds one of the writings of Patañjali the grammarian, who probably lived about 150 B.C. Kauṇḍinya is generally believed to have lived between A.D. 400-600, though I do not know why he could not be placed even a century or two earlier. The date of *Gaṇakārikā* is rather uncertain. But Bhāsarvajña wrote a commentary on it called *Ratnaṭīkā*. He seems to have lived in the middle of the tenth century A.D. It is interesting to note that the temple of Somanātha is also mentioned in the *Kāraṇa-māhātmya* as one of the most important Pāśupata centres.

In the *Sarva-darśana-saṃgraha* of Mādhava of the fourteenth century, we find a treatment of Nakuliśa-pāśupata system, the Śaiva system and the Pratyabhijñā system of Kāśmīr. The Nakuliśa-pāśupata system is based upon the *Pāśupata-sūtra* and the *bhāṣya* of Kauṇḍinya called also the *Rāśīkara-bhāṣya*. The Śaiva system is based on the various *Śaivāgamas* and also on the *Tattva-prakāśa* of Bhoja. Thus Mādhava mentions about ten Śaiva works which, with many others, have been available to the present writer either in whole manuscripts or in fragments¹. Śaṅkara, in his *bhāṣya* on the *Brahma-sūtra* II. 2. 37, speaks of the Māheśvaras along with others who regarded God as the instrumental cause, but not the material cause. He does not seem to distinguish the subdivisions of the Maheśvaras. But Vācaspati speaks of four subdivisions of the Maheśvaras. Mādhava, however, treats the two types of the Śaiva school as Nakuliśa-pāśupata and Śaiva in two different sections. From Śaṅkara's *bhāṣya* it appears that he was familiar only with the *Pañcārtha* of the *Pāśupata-sūtra*. But Ānandagiri in his *Śaṅkara-vijaya* refers to six different kinds of Śaiva sects such as Śaiva, Raudra, Ugra, Bhaṭṭa, Jaṅgama and Pāśupata. These different sects bore different kinds of marks on

¹ The works mentioned by Mādhava in his *Sarva-darśana-saṃgraha* are as follows: *Mygendrāgama*, *Paṣkarāgama*, *Tattva-prakāśa* of Bhoja, Soma-sambhu's *bhāṣya*, Aghora-śivācārya's commentary on *Tattva-prakāśa*, *Kālotta-rāgama*, Rāmakaṇḍa's commentary on *Kālottarā*, *Kiraṇāgama*, *Saurabheyāgama* and *Jñāna-ratnāvalī*.

their bodies and distinguished themselves from one another by various rituals. But most of their specific religious literature now in all probability has long disappeared. The Pāśupatas have a literature, and the sect is still living. But the external signs of the Pāśupatas as found in *Śaṅkara-vijaya* are entirely different from those which are found in Guṇaratna's commentary. Guṇaratna (fourteenth century) regards the Kāṇādas as Pāśupatas. He also regards the Naiyāyikas, called also the Yaugas, as being Śaivites of the same order as the Kāṇādas, and behaving in the same manner, and bearing the same kind of marks as the Kāṇādas. From the description of the Śaiva sects by Ānandagiri very little can be made out of the doctrines of those Śaiva sects. One can only say that some of those Śaivas believed that God was the instrumental cause (*nimitta kāraṇa*), besides the material cause (*upādāna kāraṇa*). Śaṅkara refuted this type of Śaivism in his commentary on *Brahma-sūtra* II. 2. 37. Both Pāśupatas and the followers of the *Śaivāgama* held the instrumentality of God, while Śaṅkara regarded God as being both the instrumental and material cause. In the *Śaṅkara-vijaya* we also find reference to some schools of Śaivism, the members of which wore the stone phallic symbols on their bodies. They held a doctrine similar to the *ṣaṭ-sthala* doctrine of the Vīra-śaivas, though we find the proper formulation of the Vīra-śaiva system at least five hundred years after Ānandagiri. We have seen that Vācaspati Miśra in his *Bhāmati* speaks of four types of Śaivas. Mādhava of the fourteenth century describes only two sects of Śaivas as Nakulīśa-pāśupata and the Śaivas of the Āgamas, excluding the separate treatment of the *Pratyabhijñā* system generally known as the Kāśmīr school of Śaivism.

The *Śaivāgamas* or Siddhāntas are supposed to have been originally written by Maheśvara, probably in Sanskrit. But it is said in *Śiva-dharmottara* that these were written in Sanskrit, Prākṛt and the local dialects¹. This explains the fact that the Āgamas are available both in Sanskrit and some Dravidian languages such as Tamil, Telegu, and Kanarese. It also explains the controversy as to whether the Āgamas or Siddhāntas were originally written in

¹ *saṃskṛtaiḥ prākṛtaiḥ vākyaair yaśca śiṣyānurūptāḥ
deśa-bhāṣā-dyupāyaś ca bodhayet sa guruḥ smṛtaḥ.*

Śiva-dharmottara quoted in *Śiva-jñāna-siddhi*. (MS. no. 3726, Oriental Research Institute, Mysore.)

Sanskrit or in the Dravidian tongue. The present writer had the good fortune to collect a large number of the Āgamas either as complete wholes or in fragmentary portions. Many of the manuscripts are in a decaying state and some of them have been completely lost. The Sanskrit manuscripts on which our present attempt is founded are available in the big manuscript libraries at Triplicane, Adyar and Mysore. It is curious to note that Benares, the principal seat of Śaivism, has but few manuscripts of importance. The important Siddhāntas and Āgamas are quite numerous and most of them are in manuscripts mainly in South India¹. The same works may be found also in many cases in the whole Dravidian language; but the inspiration and the thought are almost always taken from Sanskrit. The essence of Dravidian culture is therefore almost wholly taken from Sanskrit, at least so far as philosophy is concerned.

The study of old Tamil is fairly difficult, and those who had made a lifelong study of Tamil, like Pope or Schomercus, had but little time to dig into Sanskrit to any appreciable extent. The present writer, being unacquainted with the Dravidian languages, had to depend almost wholly on the Sanskrit literature, but has taken good care to ascertain that the works in Dravidian, pertinent to the subject, are well represented in the Sanskrit manuscripts.

It is difficult to ascertain the respective dates of the Āgamas. We only feel that most of the Āgamas mentioned above were completed by the ninth century A.D. Some of them were current in the time of Śaṅkarācārya, who lived some time in the eighth or

¹ Some of the Āgamas are as follows: *Kāmika*, *Yogaja*, *Cintya*, *Kāraṇa*, *Ajita*, *Dīpta*, *Sūkṣma*, *Aṃsumāna*, *Suprabhedha*, *Vijaya*, *Niḥśvāsa*, *Svāyambhuva*, *Vīra*, *Raurava*, *Makuta*, *Vimala*, *Candra-jñāna*, *Bimba*, *Lalita*, *Santāna*, *Sarvokta*, *Pārameśvara*, *Kiraṇa*, *Vātula*, *Śiva-jñāna-bodha*, *Anala*, *Prodgīta*.

In the *Śiva-jñāna-siddhi* we find extensive quotations from other Āgamas and Tantras as illustrating the philosophical and religious position of Siddhāntas. The works from which the quotations have been taken are as follows: *Hima-saṃhitā*, *Cintya-viśva*, *Śiva-dharmottara* (*purāṇa*), *Paṇḍara*, *Siddha-tantra*, *Sarva-matopanyāsa*, *Parā*, *Ratna-traya*, *Nivāsa*, *Mr̥gendra*, *Jñāna-kārikā*, *Nāda-kārikā*, *Kālottara*, *Viśva-sārottara*, *Vāyavya*, *Mātāṅga*, *Suddha*, *Sarva-jñānottara*, *Siddhānta-rahasya*, *Jñāna-ratnāvali*, *Meru-tantra*, *Svacchanda* and *Devī-kālottara*.

Most of the above Āgamas are written in Sanskrit characters in about half a dozen Dravidian languages, such as Tamil, Telegu, Kanarese, Grantha and Nandi-nāgri. Several Tantras based on these Āgamas are also found as Sanskrit compositions in Dravidian scripts. So far as the knowledge of the present writer goes, there is hardly anything of philosophical value or systematic thought which is available in Dravidian, and not available in Sanskrit.

ninth century A.D. Some of the Purāṇas also mention the names of some of the Āgamas referred to above. The *bhāṣya* of Kaunḍinya on the *Pāśupata-sūtras* has many untraceable quotations, but there is no mention of the names of the Āgamas referred to above, though one might have expected reference to the names of some of these Āgamas, as they carry on the same faith in different fashions. On the other hand, the Āgamas do not mention the name of the *Pāśupata-sūtras* or the *bhāṣya* of Kaunḍinya. It seems, therefore, that though later writers sometimes mixed up the Pāśupata and the Āgamic systems, as for example the *Vāyaviya-saṃhitā*, or in later times Appayadiḥṣita, Śaṅkara himself speaks only of the Siddhāntas written by Maheśvara. Vācaspati refers to four schools of Śaivism, and Mādhava refers to two schools of southern Śaivism, Nakuliśa-pāśupata and the Śaivas. In still later times, in the Jaina tradition as kept by Rājaśekhara and Guṇaratna, we find the names of a long list of teachers of the Pāśupata school. We find also the names of twenty-eight yogācāryas, each having four disciples, in the *Vāyaviya-saṃhitā*.

We have already discussed in a separate section the essence of the Āgamic system as preserved in the *Tattva-prakāśa* of Bhoja with the commentary of Śrīkumāra and Aghora-śivācārya. Mādhava in his *Sarva-darśana-saṃgraha* also mentions the names of some of the Āgamas and Āgamic writers referred to above.

Schomerus in his *Der Śaiva Siddhānta*, in which he describes the particular form of Śaiva monism, speaks of the names of various other schools of Śaivism as he picks them up on a commentary on *Śiva-jñāna-bodha*¹. The Śaiva-siddhānta view dealt with by Schomerus is one of the many trends of Śaiva thought that was prevalent in the country. Schomerus thinks that they are more or less the same except the Pāśupata, the Virāśaiva and the Pratyabhijñā. Schomerus does not seem to utilise the texts of the Āgamas and to show in what way they proceeded with the subject. We have, however, in our treatment of Āgamic Śaivism, tried to utilise the materials of the Āgamas that are still available as complete wholes or in fragments. But a large part of the Āgamas deals

¹ He puts them in two groups: (i) Pāśupata, Māvratā-vāda (possibly Mahāvratā), Kāpālika, Vāma, Bhairava, Aikya-vāda; (ii) Ūrdha-śaiva, Anādi-śaiva, Ādi-śaiva, Mahā-śaiva, Bheda-śaiva, Abheda-śaiva, Antara-śaiva, Guṇa-śaiva, Nirguṇa-śaiva, Adhvan-śaiva, Yoga-śaiva, Jñāna-śaiva, Aṇu-śaiva, Kriyā-śaiva, Nālu-pāda-śaiva, Suddha-śaiva.

with rituals, forms of worship, construction of the places of worship and *mantras*, and the like. These have no philosophical value and could not, therefore, be taken account of and had simply to be ignored.

The Āgamic Śaivism belongs principally to the Tamil country, the Pāśupata to Gujarat and Pratyabhijñā to Kāśmīr and the northern parts of India. The Vīra-śaiva is found mostly among the Kanarese-speaking countries. Schomerus points out that it is sometimes claimed that the Āgamas were written in the Dravidian languages in prehistoric times, and that they owe their origin to revelation by Śiva, to Nandiperuman in the form of Śrīkaṇṭha-rudra in the Mahendra Parbata in Tinivelly District. Owing to a great flood much of these twenty-eight Āgamas were lost. The rest is now available in the Sanskrit translations and even the Dravidian texts abound with Sanskrit words. But this claim cannot be substantiated in any way. The reference to the Āgamas is found in the *Vāyavīya-saṃhitā* of the *Śiva-mahāpurāṇa* and the *Sūta-saṃhitā*¹. The references show that the *Kāmika* and other Āgamas were written in Sanskrit, as they formed a cognate literature with the Vedas. Portions of the *Kāmika* in Sanskrit quotations have been available to the present writer; similarly *Mṛgendra*, which formed a part of the *Kāmika*, is wholly available in Sanskrit. In the section on the Āgamic Śaivism the present writer has drawn his materials from these Āgamas. It has already been noted that there is a definite text in the *Svāyaṃbhuvāgama* that these Sanskrit works were translated into Prākṛt and other local dialects. We are, therefore, forced to think that the assertion that these Āgamas were originally written in Dravidian and then translated into Sanskrit, seems only to be a mythical patriotic belief of the Tamil people.

Schomerus mentions the names of twenty-eight *Śaivāgamas*, though he sometimes spells them wrongly². He further mentions

¹ In *Sūta-saṃhitā*, part 1, ch. 2, we find that the Vedas, Dharmasāstras, Purāṇas, Mahābhārata, Vedāṅgas, Upavedas, the Āgamas such as *Kāmika*, etc. the *Kāpāla* and the *Lākula*, the *Pāśupata*, the *Soma* and the *Bhairavāgamas* and such other Āgamas are mentioned in the same breath as forming a cognate literature. *Sūta-saṃhitā* is generally regarded as a work of the sixth century A.D.

² *Kāmika*, *Yogaja*, *Cintya*, *Kāraṇa*, *Ajita*, *Dipta*, *Sūkṣma*, *Sāhasraka*, *Aṇsumān*, *Suprabhedha*, *Vijaya*, *Niḥśvāsa*, *Svāyaṃbhuvā*, *Anila*, *Vīra*, *Raurava*, *Makūṭa*, *Vimala*, *Candrahāsa*, *Mukha-jug-bimba* or *Bimba*, *Udgīta* or *Prodgīta*, *Lālita*, *Siddha*, *Santāna*, *Nārasīṃha*, *Pārameśvara*, *Kīraṇa* and *Vātula*. Most of these have been already mentioned by the present writer and some of them are in his possession. Schomerus says that these names are found in Śrīkaṇṭha's *bhāṣya*, but the present writer is definite that they are not to be found there.

the names of fourteen canonical texts forming the materials of the *Śaiva-siddhānta Śāstra*. They are written in Tamil and the present writer only has the privilege of having the Sanskrit texts of the most important of them called the *Śiva-jñāna-bodha* of Meykaṇḍadeva¹.

Meykaṇḍadeva's *Śiva-jñāna-bodha* is a brief summary in twelve verses of an argumentative character taken from *Rauravāgama*. These twelve verses have also commentaries called *Vārtika* and a number of other sub-commentaries. Meykaṇḍadeva's real name was Svetabana, and there are a number of mythical statements about him. A great scholar Aruḷ-nanti Śivācārya became the disciple of Meykaṇḍadeva. Namaḥ-śivāya-deśika was the fifth disciple in succession of Meykaṇḍadeva, and Umāpati, who was the third successor of Meykaṇḍadeva, lived in A.D. 1313. It is held, therefore, that Meykaṇḍa lived in the first third of the thirteenth century. Umāpati was also the author of the *Pauṣkarāgama*.

The earliest Tamil author of Śaiva-siddhānta is Tirumular, who probably lived in the first century A.D. Only a part of his writings has been translated in the *Siddhānta-dīpikā* by N. Pillai. The later four Ācāryas of Śaiva-siddhānta are Mānikka-vāchakar, Appar, Jñāna-sambandha and Sundara, who flourished probably in the eighth century. Later on we have two important Śaiva-siddhānta writers, Nampiyāṇḍār and Sekkilar. The former has a collection of works which passed by the name of *Tamil-veda*. He flourished probably towards the end of the eleventh century.

This Tamil-veda is even now recited in Śaivite temples of the south. It consists of eleven books; the first seven are of the nature of hymns. Of three Ācāryas, Appar, Jñāna-sambandha and Sundara, the eighth book is *Tiru-vāchaka*, the ninth again consists of hymns. In the tenth book we find again some hymns of Tirumular. A part of the eleventh book contains mythological legends which form the groundwork of *Periya-purāṇa*, the basis of the most important Tamil legends of the Tamil saints. The book was completed by the eleventh century. The Śaiva-siddhānta

¹ The Tamil works referred to by Schomerus as forming the group of the *Śaiva-siddhānta Śāstra* are as follows: *Śiva-jñāna-bodha*, *Śiva-jñāna-siddhi*, *Irupavirupathu*, *Tiruvuntiyar*, *Tirukkalirrupadiyar*, *Unmaiivilakka*, *Śiva-prakāśa*, *Tiruvāruḍpayan*, *Vinā-veṇba*, *Porripakrodai*, *Kodikkavi*, *Nencuvitūtū*, *Uṇ-maineriivilakka* and *Sanḥkalpa-nirākaraṇa*. The *Śiva-jñāna-bodha* of twelve verses is supposed to be a purport of the *Rauravāgama* and it has eight commentaries.

school sprang forth as a school of Śaivism in the thirteenth century with Meykaṇḍadeva and his pupils Aruṇanti and Umāpati.

The account of Śaivism, as can be gathered from the Tamil sources, may be found in Pope's translation of *Tiru-vāchaka*, *Der Śaiva-siddhānta* by Schomerus, and in the writings of N. Pillai. The present writer is unfamiliar with the Tamil language and he has collected his account from original Sanskrit manuscripts of the Āgamas of which the Tamil treatment is only a replica.

The Āgama Literature and its Philosophical Perspective.

The philosophical views that are found in the Āgama literature had been briefly summarised in the *Sarva-darśana-saṃgraha* under Śaivism and have also been treated fairly elaborately in some of the sections of the present work. The Āgama literature is pretty extensive, but its philosophical achievement is rather poor. The Āgamas contain some elements of philosophical thought, but their interest is more on religious details of the cult of Śaivism. We find therefore a good deal of ritualism, discussion of the architectural techniques for the foundation of temples, and *mantras* and details of worship connected with the setting up of the phallic symbol of Śiva. Yet in most of the Āgamas there is a separate section called the *Vidyā-pāda* in which the general philosophical view underlying the cult is enunciated. There are slight differences in the enunciation of these views as we pass on from one Āgama to another. Most of these Āgamas still lie unpublished, and yet they form the religious kernel of Śaivism as practised by millions of people in different parts of India. There may thus be a natural inquiry as to what may be the essential tenets of these Āgamas. This, however, cannot be given without continual repetitions of the same kind of dogmatic thought. The present work is, of course, mainly concerned with the study of philosophy, but as the study of Śaiva or Śākta thought cannot be separated from the religious dogmas with which they are inseparably connected, we can only take a few specimens of the Āgamas and discuss the nature of thought that may be discovered there. In doing this we may be charged with indulging in repetitions, but we have to risk it in order to be able to give at least a rapid survey of the contents of

some of the most important Āgamas. In what follows, the reader will have the opportunity of judging the literary contents of the philosophical aspects of some of the important Āgamas, thereby getting a comprehensive view of the internal relation of Śaivism to other branches of Indian philosophy.

The *Mṛgendrāgama* has often been quoted in the *Sarva-darśana-saṃgraha*. This work is said to be a subsidiary part of *Kāmikāgama*, supposed to be one of the oldest of the Āgamas, and has been referred to in the *Sūta-saṃhitā* which is regarded as a work of the sixth century. The *Sūta-saṃhitā* refers to the *Kamikāgama* with the reverence that is due to very old texts.

*Mṛgendrāgama*¹ opens the discussion of how the old Vedic forms of worship became superseded by the Śaiva cult. It was pointed out that the Vedic deities were not concrete substantial objects, but their reality consisted of the *mantras* with which they were welcomed and worshipped, and consequently Vedic worship cannot be regarded as a concrete form of worship existing in time and space. But devotion to Śiva may be regarded as a definite and concrete form of worship which could, therefore, supersede the Vedic practices. In the second chapter of the work, Śiva is described as being devoid of all impurities. He is omniscient and the instrumental agent of all things. He already knows how the individual souls are going to behave and associates and dissociates all beings with knots of bondage in accordance with that.

The *Śaivāgama* discusses the main problem of the production, maintenance, destruction, veiling up of the truth and liberation. These are all done by the instrumental agent, God Śiva. In such a view the creation of the world, its maintenance and destruction are naturally designed by the supreme Lord in the beginning, yet things unfold in the natural course. The changes in the world of our experiences are not arranged by the later actions of beings. But yet the attainment of liberation is so planned that it cannot take place without individual effort.

Consciousness is of the nature of intuitive knowledge and spontaneous action (*caitanyaṃ dyk-kriyā-rūpaṃ*). This conscious-

¹ Since writing this section on the basis of the original manuscript the present writer has come across a printed text of the *Vidyā* and *Yogapāda* of *Mṛgendrāgama* published in 1928 by K. M. Subrahmaṇya Śāstri, with a commentary by Bhaṭṭa-nārāyaṇa Kaṇṭha called *Mṛgendrar-vṛtti*, and a sub-commentary by Aghora-śivācārya called *Mṛgendrar-vṛtti-dīpikā*.

ness always abides in the soul, and some of the categories for the application of this consciousness are discussed along with the various religio-moral conducts called *caryā*. There is also a brief criticism for refuting Vedānta, Sāṃkhya, Vaiśeṣika, Buddhism and Jainism.

The *Śaivāgama* holds that, from perceiving our bodies and other embodied things, we naturally infer that there is some instrumental agent who must be premised as the cause of the world. A difference of effects naturally presumes a difference in the cause and its nature. Effects are accomplished through particular instruments. These instruments are all of a spiritual nature. They are also of the nature of energy. In the case of inference the concomitance is generally perceived in some instances. But in the case of attributing creation to Śiva we have no datum of actual experience, as Śiva is bodiless. But it is held that one can conceive the body of Śiva as being constituted of certain *mantras*. When anyone is to be liberated, the quality of *tamas* as veiling the consciousness of the individual is removed by God. Those whose *tamas* is removed naturally ripen forth for the ultimate goal of liberation. They have not to wait any longer for Śiva to manifest their special qualities. We have already seen that Śiva is the manifesting agent or *abhiv-yañjaka* of all our activities.

The source of all bondage is *māheśvarī śakti* which helps all people to develop and grow in their own pattern (*sarvānugrāhikā*). Though there may be many cases in which we suffer pain, yet the *māheśvarī śakti* is regarded as being of universal service. The explanation is to be found in the view that often it is only through the way of suffering that we can attain our good. Śiva is always directing the *śakti* for our own good, even though we may seem to suffer in the intervening period (*dharmiṇo'nugraho nāma yat-taddharmānuvartanam*). All actions of the Lord are for the sake of the individual souls, that is, for making them wise and act forward, so that ultimately they may be purged of their *malas*.

The different causal chains manifest different kinds of chains in the effects. The Śaiva view accepts *sat-kārya-vāda* and so admits that all the effects are there. It is only in the manner in which the causal chains manifest that different kinds of chains are effected. Thus the same *malas* appear in diverse forms to different kinds of persons and indicate different stages of progress. The *mala* is

regarded as the unholy seed that pervades the whole world and manifests through it and is ultimately destroyed. It is through these manifestations that one can infer the existence of God, the instrumental cause (*kartā'-numīyate yena jagad-dharmeṇa hetunā*). This *mala* is inanimate, for such a theory suits the nature of effects. It is easier to assume preferably one cause of *mala* than many. The cloth is manifested by the action of the weaving spindles. The substance of the cloth would have been manifested in other forms according to the action of the various accessories, for all the effects are there, though they can only be manifested through the operation of accessories. It is difficult to imagine the concept of productive power. It is better to assume that the things are already there and are revealed to us by the action of the different kinds of causes¹.

The individual souls are all-pervasive and they possess eternal power by the Power of God. The only trouble is that on account of the veils of *mala* they are not always conscious of their nature. It is through the action of Śiva that these veils are so far removed that the individual souls may find themselves interested in their experiences. This is done by associating the individual minds with the thirty-six *kalās* produced from the disturbance of *māyā*. We have already discussed the nature of these thirty-six *tattvas* or categories in our treatment of the philosophy of *Tattva-prakāśikā* of Bhoja. It is through these categories that the veils are torn asunder and the individual becomes interested in his experiences. *Kalā* means that which moves anybody (*prasāraṇaṃ preraṇaṃ sākurvati tamasaḥ kalā*). The individual soul has to await the grace of God for being associated with these *kalās* for all his experiences, as he is himself unable to do so on his own account. The *karma* done by a man also remains embedded in Prakṛti and produces effects by the category of *niyati*.

¹ *sānvaya-vyatirekābhyāṃ ruḍhito vā 'vasīyate,
tadvyakti-jānaṇaṃ nāma tat-kāraka-samāśrayāt.
tena tantu-gatākāraṃ paṭākārā'barodhakaṃ,
vemādinā 'paṇīyātha paṭavyaktiḥ prakāśyate.*

Śiva-jñāna-bodha.

By Meykaṇḍadeva

This is a brief work of twelve *kārikās* (sometimes called *sūtras*), and taken from *Rauravāgama*, as has already been pointed out. It has a number of commentaries. Its Tamil translation forms the basic work of the *Śiva-jñāna-siddhi* school of thought, and has been elaborated by many capable writers. The general argument of the *Śiva-jñāna-siddhi* is as follows:

This world, consisting of males, females and other neutral objects, must have a cause. This cause is not perceivable, but has to be inferred. Since it has come into being in time, it may be presumed that it has a creator. Moreover the world does not move of itself and it may, therefore, be presumed that there must be an agent behind it.

The world is destroyed by God and is re-created by Him to afford proper facilities to the *malas* for their proper expression. The position, therefore, is that though the material cause (*upādāna*) is already present, yet there must be a *nimitta-kāraṇa* or instrumental agent for the creation and the maintenance of the world. At the time of dissolution the world-appearance becomes dissolved in the impurities or *malas*. After a period, the world again reappears through the instrumentality of Śiva. Śiva thus on the one hand creates the world, and on the other hand destroys it. It is said that as in the summer all roots dry up and in the rains they shoot up again into new plants, so though the world is destroyed the impressions of the old *malas* remain inlaid in the *prakṛti*, and when the proper time comes they begin to show themselves in diverse forms of world creation according to the will of God. The creation has to take a definite order in accordance with the good and bad deeds of persons. This creation cannot take place spontaneously by compounding the four elements.

God is the instrumental agent through which the functions of creation, maintenance and destruction take place. The Śaiva view of Meykaṇḍadeva is entirely opposed to the purely monistic theory of Śaṅkara. The *jīva* cannot be regarded as identical with Brahman. It is true that in the Upaniṣads the individual soul (or *jīva*) and Brahman are both regarded as self-luminous and inner-controlled, but that does not mean that the self and the Brahman are identical.

The instrumental agent is one. The individual souls being bound by bondage or *pāśa* cannot be regarded as being identical with the ultimate agent or Brahman.

The deeds of a person do not automatically produce effects. The effects are associated with the person in accordance with the will of God. The deeds themselves are inanimate and they cannot therefore produce effects spontaneously. All effectuation is due to God, though it does not imply any change of state in the nature of God. An analogy is taken to illustrate how changes can be produced without any effort or change in the changeless. Thus the sun shines far away in the sky and yet without any interference on its part, the lotus blooms in the lake on the earth. So God rests in His self-shiningness, and the changes in the world are produced apparently in a spontaneous manner. God lives and moves in and through all beings. It is only in this sense that the world is one with God and dependent on Him.

The very denial of the different assertions that the self is this or that proves the existence of the self through our self-consciousness. We thereby assume the existence of an unconditioned self, because such a self cannot be particularised. It is easily seen that such a self is not the same as any of the visible organs or internal organs or the *manas*.

The self is different from the inner organs, the mind and the senses; but yet they can be taken as forming a joint view of reality, as in the case of the sea. The waves and billows and the foam and the wind form one whole, though in reality they are different from one another. The *malas* which are supposed to be mainly embedded in the *māyā*, naturally stick to our bodies which are the products of *māyā*, and being there they pollute the right perspective as well as the right vision of all things. The commentator, whose name is untraceable, adduces the example of the magnet and iron filings to explain the action of God on the world without undergoing any change. It is the power of Śiva working in and through us by which we can act or reap the fruits of our action according to our deeds.

Śiva is to be known through inference as the cause which is neither visible nor invisible. His existence thus can only be known by inference. The *acit* or unconscious material passes before Śiva, but does not affect it, so that Śiva is quite unconscious of the world-appearance. It is only the *jīvas* that can know both the

world and Śiva¹. When a saint becomes free from impurities of three kinds, the *āṇava*, *māyika* and *kārmaṇa-mala*, the world appearance vanishes from before his eyes, and he becomes one with the pure illumination.

Suradantācārya in his *Vyākhyāna-kārikā* repeats the above ideas, but holds that Śiva through His omniscience knows all about the world and the experiences of all beings, but He is not affected by them². Another fragmentary commentary of an unknown author, who had written a commentary on *Mṛgendra* called *Mṛgendra-vṛtti-dīpikā*, which sometimes refers to the *Svāyambhuvāgama* and the *Mātāṅga-parameśvara-āgama*, discusses some of the main topics of *Śiva-jñāna-bodha* in the work called *Pāśupati-pāśa-vicāra-prakarana*.

Paśu is defined as pure consciousness (*cinmātra*) covered with impurities. The *paśu* goes through the cycle of birth and rebirth, and it goes also by the name *ātman*. It is all-pervading in space and time. The pure consciousness is of the nature of *jñāna* and *kriyā*. The Āgamas do not believe that the soul is one. It is pure consciousness that appears as distinct from one another by their association of different kinds of *mala* which are integrated with them from beginningless time³.

Its body consists of all the categories, beginning with *kalā* and running up to gross matter. The soul is called *anīśvara* because it may have a subtle body, but not the gross one, so that it is unable to enjoy its desire. The soul is regarded as *akriya* or devoid of action. Even when through knowledge and renunciation it avoids all action, the body may go on by the successive impulses of previous actions (*tiṣṭhati saṃskāra-vaśāt cakra-bhramavad-dhṛta-śarīrah*). Though there are many souls, they are spoken of in the singular number as *paśu* in the universal sense.

The *mala* is regarded as being included within *pāśa*. It is not therefore a different category. The pure self-consciousness is entirely different from the impurity or *mala*. How can then the *mala* affect the purity of the pure consciousness? To this the reply

¹ *nācīt-cit sannidhau kintu na vittaṣu te ubhe mithaḥ,
prapañca-śivayor vettā yaḥ sa ātmā tayoḥ pṛthak.*

² *... śivo jñānāti viśvakam,
sva-bhogyatvena tu param naiva jñānāti kiñcana.*

³ *anena mala-yukto vijñāna-kevala uktāḥ. saṃmūḍha ityanena pralayena kalāder upasaṃhṛtatvāt samyak mūḍhaḥ. Pāśupati-pāśa-vicāra-prakarana* (Adyar Library manuscript).

is that as pure gold may be associated with dross without affecting its nature, so the pure consciousness that constitutes the Śiva within us may remain pure, even though it may be covered with *mala* from beginningless time. The *mala* thus does not affect the nature of the self as Śiva.

It is by the grace of Śiva, attained through proper initiation in Śaivism by a proper preceptor, that the impurities can be removed, and not by mere knowledge as such. The *mala* being the nature of substance, it can be removed only by an action on the part of God. Mere knowledge cannot destroy it. The *malas* being beginningless are not many but one. According to different kinds of *karma*, the *malas* have distinct and different kinds of bondage. The different distinctive powers and obscurations made by the *mala* serve to differentiate the different selves, which basically are all Śiva. Liberation does not mean any transformation, but only the removal of particular *malas* with reference to which different individual entities as *jīvas* were passing through the cycle of birth and rebirth. This removal is effected by Śiva when the Śaiva initiation is taken with the help of proper preceptors¹.

The *malas* consist of *dharma* and *adharma*, and may be due to *karma* or *māyā*; they also constitute the bondage or the *pāśas*. This Āgama refers to *Mrgendrāgama*, the doctrines of which it follows in describing the nature of *pāśa*, *mala*, etc. The *pāśa* is really the *tirodhānaśakti* of Śiva. The *pāśas* are threefold: (1) *sahaja*, those *malas* with which we are associated from beginningless time and which stay on until liberation; (2) *āgantuka*, meaning all our senses and sense-objects; and (3) *sūmsargika*, that is those which are produced by the intercourse of *sahaja* and the *āgantuka mala*.

The creation and the manifestation of our experiences take place in accordance with our *karma* as revealed by God. Just as a field sown with seeds does not produce the same kind of crop for every peasant, so in spite of same kinds of actions we may have different kinds of results manifested to us by God. The *karmas* and other things are all inanimate, and thus it is only by the will of God that different kinds of results are manifested to us. The Śaiva view thus upholds the *satkārya-vāda* theory and regards God as *abhivyañjaka* or manifestor of all our experiences and *karmas*.

¹ *evañ ca pāśa-panayanad ātmanah sarva-jñatva-sarva-kartṛtvātmaka-śivatvābhivyañjaktir eva mukti-daśāyām, na tu pariṇāma-svarūpa-vināśah.*

Mātaṅga-parameśvara-tantra.

The *Śaiva śāstra* is described as *ṣaṭ-padārtha* and *catuṣ-pāda* and not as *tri-padārtha* and *catuṣ-pāda*; formerly it was written by Sadā-śiva in ten million verses and Ananta summarised it in one lakh verses, which has been further summarised in 3500 verses. The six categories are (1) *pati*; (2) *śakti*; (3) *triparvā*; (4) *paśu*; (5) *bodha*; and (6) *mantra*.

Śakti or energy is the means by which we can infer *pati*, the possessor of *śakti*. In inference we sometimes infer the possessor of the quality by its quality, and sometimes the cause from the effect or the effect from the cause. Sometimes the existence of a thing is taken for granted on the authority of the Vedas. From the body of Śiva, which is of the nature of *mantras*, the *śakti* emanates downwards in the form of *bindu*, which later on develops into the world¹. Śiva enters into the *bindu* and unfolds it for various types of creation. The diversity in the world is due to a difference in *karma* and *guṇa* of the individual souls, where the individual souls may be regarded as the container and the *karma* as contained. The individual souls are responsible for their actions and have to enjoy their good or bad fruits. God is the controller of the creation, maintenance and destruction of the world. It is He who is the instrumental cause of the world, and the energies are the material cause and are regarded as the *samavāyi-kāraṇa* of the world. This world is the production of *māyā*. As the rays of the sun or the moon induce the blooming of flowers spontaneously without any actual interference, so the Śiva manifests the world by His mere proximity.

Seven *sahaṣa-malas* have been enumerated as follows: (1) *moha*, (2) *mada*, (3) *rāga*, (4) *viṣāda*, (5) *śoṣa*, (6) *vaicitta* and (7) *harṣa*.

The *kalās* are produced from *māyā*, and it is in association with *māyā* that they carry on their work, just as paddy seeds can produce shoots in association with the husk in which they are enclosed.

The souls as they are driven through the world, become attached to worldly things through *kalā*. This association is further

¹ It is traditionally believed that the *mantras* or hymns constitute the body of a deity.

tightened by *vāsanā*; so the souls become attached to all enjoyments, and this is called *rāga*. With all attachments there is sorrow, and therefore non-attachment to all sense-pleasures leads to the best attainment of happiness.

The nature of *kāla* and *niyati* are discussed in the same way as in other books of Śaiva-siddhānta.

Māyā comes out from God as an expression of His subtle energy, and from *māyā* there evolves the *pradhāna*, which in its first stage is only pure being or *sattā*. Later on other categories evolve out of it and they supply the materials for the experience of *puruṣa*. The *puruṣa* and the *prakṛti* thus mutually support each other in the development of categories and experience.

The *ahankāra* infuses the self in and through the sense-organs and operates as their functions. The same may be said regarding the application of *ahankāra* in and through the *tanmātras*. The *ahankāra* thus represents the entire psychic state in a unity. The *ahankāra* is present also in dormant state in trees, plants, etc.

Pauṣkarāgama.

In the *Pauṣkarāgama jñāna* is defined as consisting of the energy inherent in Śiva. Six categories described are “*patiḥ kuṇḍalinī māyā paśuḥ pāśaś ca kārakah.*” *Laya*, *bhoga* and *adhikāra* are the three functions of *śakti*. *Māyā* as generated by the actions of men, supplies the elements by which the objects of experience and experience are made. *Paśu* is that which experiences and reacts. The categories beginning from *kalā* to earth (*kṣiti*) are real entities. *Laya* is called bondage and is regarded as the fifth category. The sixth category is equal to *bhukti*, *mukti*, *vyakti*, *phala*, *kriyā* and *dīkṣā* taken together. *Bindu* and *aṇus* are the real entities. When the manifold creation shrinks into the *bindu*, we have that stage in Śiva which is called dissolution (*laya*). In the original state actions of the type of *sadṛśa pariṇāma* go on. Śiva is described as *viśpaṣṭa cīnmātra* and *vyāpaka*. His energies only can operate, while He remains unmoved. When the energies begin to operate in the *bindu*, the *bindu* becomes fit for being the data of experience. This state of *bindu* with Śiva reflected in it is called the *sadū-śiva*. Even in this stage there is really no change in Śiva. When the energies

are in the state of operation, we have the state of creation, and the experience of it is called *bhoga*.

The point arises that if the *bindu* is itself active in creation, then its relation with Śiva becomes redundant. On the other hand, if the *bindu* is moved by Śiva to active operation, Śiva becomes changeable. The reply is that an agent can affect any material in two ways, either by his simple desire or by his organised effort, as in the case of the making of a pot by the potter. Śiva moves the *bindu* simply by His *saṃkalpa*, and therefore He does not suffer any change. In the case of the action of the potter also, it is by the wish of Śiva that the potter can act. Therefore, Śiva is the sole agent of all actions performed by animate beings or by inanimate matter.

It may be said that Śiva is wholly unconditioned, and therefore He can remain the sole agent without undergoing any change. Another tentative answer is that in the presence of Śiva, the *bindu* begins to work without any causal efficiency (compare the movement of *prakṛti* in the presence of *puruṣa*).

The *bindu* has sometimes been described as *śāntyatīta* and other times as the material cause of the creation. This difficulty is explained on the assumption that part of the *bindu* is *śāntyatīta* and the other part is responsible for being the material cause of the world. The third category including the *bindu* and Śiva is called *Īśvara*. Śiva produces commotion in *bindu* merely by His presence. In this way Śiva is not only the instrumental agent of all happenings in the inanimate, but He also is responsible for all actions of the human body which are seemingly produced by the human will.

Knowledge and activity are in essence identical, and for that reason, when there is action (*vyāpāra*), we may feel as if we are the agents of those actions. The element of action that seems to express itself is thus something more than the action, and it is called the *adhikāra-kriyā*. The action and that which is acted upon is the result of *guṇa-saṃkalpa*. Śiva stands as the *citi-śakti* which makes all energies dynamic, as the sun makes the lotus bloom from a distance without any actual interference.

In further explaining the philosophical situation Śiva says that a part of the *bindu* is in the transcendental (*śāntyatīta*) state, while the other part is responsible for the creative action. This second category, that is, the lower half of the *bindu*, is supposed to be moved by Śiva. The energies are often classified under different

names as performing different functions. *Śakti* and *śaktimān* are the same. They are only differently classified according to their diverse functions.

The inanimate world is inoperative without the action or the interference of a conscious being. That conscious being is God Śiva; even the milk in the udder of the cow flows by the active affection of the cow for the calf. The illustration of the magnet drawing the iron filings does not fit in, for there also is the person who brings the magnet near the iron filings.

It cannot, however, be urged that the *puruṣas* themselves could be regarded as active agents, for according to the scriptural texts they are also moved to activity by the will of God¹.

The world-appearance cannot be proved to be false or illusory. It is made up of the stuff of one common object called *māyā*, which is later on conceived as functioning in different ways called *sattva*, *rajas* and *tamas*. The *māyā* stuff is the repository of all *karmas*. But yet not all persons gain the fruits of all their *karmas*. They have to depend upon some other being for the proper fruition of their *karmas*. This is where God comes in as the ultimate bestower of the fruits of *karma*.

Mala or impurity is always associated with all souls. The Āgama tries to refute the epistemological view of other systems of thought like the Cārvāka and the monism of Śaṅkara. The Āgama holds that since the souls are eternal, their knowledge must also be eternal due to eternal unchanging cause. The difference of knowledge in individuals is due to the obscuration of their knowledge by the various veils of *mala*. The original cause of knowledge is all-pervading and is the same in all persons².

The self is realised as revealing itself and others. If it is supposed that the self is reflected through *buddhi*, then even *buddhi*

¹ *vivādādhyāsitam viśvaṃ viśva-vit-karṭṭ-pūrvakam,
kāryatvād āvayoḥ siddham kāryaṃ kumbhādikaṃ yathā.*

Fourth paṭala.

also may be regarded as conscious self. So the idea of explaining the situation as being the reflection of consciousness in *buddhi*, also fails. Again this reflection of consciousness in *buddhi* cannot be regarded as conscious entity. It may also be pointed out that the consciousness as spirit cannot be reflected in *buddhi* which is known as spiritual. The view of mutual reflection of consciousness into *buddhi* and *buddhi* into consciousness is also untenable. It has, therefore, to be admitted that the soul as an eternal being can perceive all things and act as it likes. If the qualities inhere permanently or temporarily in an entity, then that inherence in the entity must be of a permanent or of a temporary nature as the case may be. The consciousness of the soul should, therefore, be regarded as co-extensive with its being. The selves are atomic in size and cannot therefore pervade the whole body. We have already said that the self in revealing itself also reveals other things. We must remember in this connection that an entity like the fire cannot be distinguished from the energy that it has.

Again the objects perceived cannot be regarded as mere ignorance (*ajñāna*), for one cannot deal with mere *ajñāna*, just as one cannot bring water without a pitcher. The things we perceive are real entities. This *ajñāna* cannot be taken in the sense of *prāgabha*, for then that would imply another origination of knowledge; or it could be explained as wrong knowledge. This wrong knowledge may be regarded as accidental or natural. If it is accidental or natural, then it must be due to some causes and cannot, therefore, be regarded as wrong knowledge. If it is wrong knowledge only arising occasionally, then it cannot contradict right knowledge. Ordinarily one cannot expect the illusoriness of silver to contradict the knowledge of conch-shell¹. For this reason the self, which is intuitively realised as all-consciousness, cannot be regarded as having only limited knowledge. That appearance of the souls possessing limited knowledge must be due to its association with impurities. The energy of consciousness is eternal, and therefore its nature cannot be disturbed by the association of impurities which may constitute experience, as arising from *dharma* and *adharma*. The *malas* are regarded as sevenfold, and include within them the passions of *mada*, *moha*, etc. These *malas* are

¹ *kiñ caitad anyathā-jñānaṃ na samyag jñāna-bādhakam.*

Fourth *paṭala*.

regarded as being natural to the souls. The *mala* of *moha* appears in various forms, as attachment to wife, son, money, etc.

It is only the spiritual that can contradict the non-spiritual. Two spiritual entities or the non-spiritual entities cannot contradict each other. One soul cannot be contradicted by another soul.

If the association of *malas* with the souls is regarded as beginningless, then how can they veil the nature of the self, and what must be the nature of this veil? It cannot be said that this veiling means the covering of what was already illuminated; for in that case, this obscuration of illumination of an entity, which is of the nature of light, must mean its destruction. The reply is that the energy of consciousness (*cicchakti*) cannot be veiled by the *malas*. The *malas* can only arrest its function.

Śakti is defined as being of the nature of immediate intuition and action. If that is so, the *śakti* is associated with knowable objects. How can then the objects be different from the energy? In reply it is said that the intuitive knowledge and action (*dr̥kkriyā*), the *śakti*, as such remains united as *dr̥k* and *kriyā*. They are indivisibly connected as one, and it is for us to think of them as divided into *dr̥k* and *kriyā*¹. All words denoting particular objects are for others and are under the veil of *mala*. By the suppression of *mala*, the energy is turned away from sense objects. In this way the *mala* operates against the *cicchakti*, and thereby *malas* obscure the omniscient character of the souls.

In the fifth chapter, the Āgama deals with the different kinds of *pāśas* or bonds. These bonds are *kalā*, *avidyā*, *rāga*, *kāla* and *niyati*. These five categories are regarded as proceeding from *māyā*. The consciousness shows itself through these *kalās*. The consciousness is associated with both intuitive knowledge and the power of work. The *kalās* reflect the consciousness of the soul only partially. This reflection is effected in accordance with one's *karma*.

All experience is due to the functioning of the power of knowledge and of the objects to be known. This is technically called *grāhaka* and *grāhya*. It is by the association of consciousness that the *kalās* appear to be functioning for the apprehension of things. From *kalā* comes *vidyā*. *Kalā* supplies the basis of experience as time and space. Later on other categories of the intellect also

1

avibhāgasya bhāgoktau tad-vibhāga upādhitah.

evolve and we have the concept of *buddhi* as deliberate decision. In this way the different categories such as *ahaṅkāra* or *abhīmāna* are produced. They in themselves would not be conscious except through the consciousness which impregnates them.

The *buddhi* manifests itself through diverse forms according to their *vāsanās*. A full enumeration of them is given in the texts, but we omit them as they are not philosophically important. They, however, include the various instinctive tendencies and delusions which are enumerated in *Sāṃkhya* and other places.

The difficulty is that the *buddhi* and *ahaṅkāra* seem to cover the same ground. How is it then possible to distinguish *buddhi* from *ahaṅkāra*? To this the reply is that when something is deliberately known as this or that, we have the stage of *buddhi*. But in the stage of *ahaṅkāra* we seem to behave as knowers, and all objects that come to our purview are labelled as parts of our knowledge. There is no means by which the ego-consciousness of any individual can be confused with the ego-consciousness of another. They are thus realised as different from one another¹.

The Āgama describes the three kinds of creation as *sāttvika*, *rājasa* and *tāmasa* as proceeding from three kinds of *ahaṅkāra*, and describes the origination of *jñānendriyas*, *karmendriyas*, *tanmātras* and *manas*. When things are perceived by the senses and their value as this or that is attested by an inner function, so that the red can be distinguished from the blue, that inner function is called *manas*².

When we perceive an animal having certain peculiarities, then we can extend the use of the word to denote another animal having the same kind of features. The inner function by which this is done is *manas*.

The Āgama gives an elaborate description of the cognitive senses and particularly of the organ of the eye. The mere proximity of consciousness cannot generate the activity. This can only be generated by the association of the consciousness with the sense organs.

The Āgama criticises the Buddhist position and supposes that the Buddhist doctrine of *artha-kriyā-kāritā* can hold good only if the entities are not momentary, but have extensive existence.

¹ *yady abhinnaṃ ahaṅkṛt syāu devadatto 'pyahaṃ matiḥ,*
anyasyām upajāyeta nātmaikatvaṃ tataḥ sthitam. Sixth paṭala.

² *cakṣuṣā locite hy arthe tamarthaṃ buddhi-gocaram,*
vidadhātīha yad viprās tanmanāḥ paripaṭhyate. Sixth paṭala.

Speaking of the *guṇas*, the Āgama refuses to admit their substantive nature. It is only when certain *guṇas* are in a collocated state that we call them *guṇa* reals.

Our senses can only perceive certain objective qualities, but they cannot perceive any substratum behind them. Therefore it is logically incorrect to infer any substratum, which may be called *guṇas* as reals. After a discussion about what may be the original material cause either as partless atoms or as immaterial *prakṛti*, the Āgama decides in favour of the latter. But this *prakṛti* is not the state of equilibrium (*sāmyāvasthā*) of the *guṇas* as the Sāṃkhya holds.

The Āgama discusses the *prāpya-kāritva* and *aprāpya-kāritva* of the different senses. It also says that movement does not belong originally to every atom, but it belongs only to the living atoms, the souls. It cannot also be due to the mere presence of other things.

When the *manas* is associated with *cicchakti*, then it attains the knowledge of all things by the exercise of the internal organs. At the first moment this knowledge is indeterminate. Later on various determinations become associated with it. The perception of things at different times becomes synthetised and concretised, otherwise the various memory images might arise before the mind and prevent the formation of a synthetic image, as we find in the case of a concrete perception.

It is only the ego-consciousness or the *abhimāna* that produces in us the sense agency (*katṛtva*). Without this sense of *abhimāna* there would be no difference between the self and other material objects. From ego-consciousness there proceeds the deliberate consciousness of decision (*niścaya*).

Knowledge of things cannot arise merely from *buddhi*, for the stuff of *buddhi* is material. Consciousness can only arise occasionally in consequence of its relation with *cicchakti*. If the mental states are always changing, then they cannot be perceived as constant, though they may appear to be so, like the flame of a lamp which changes from moment to moment, but yet appears to be the same.

Turning to the doctrine of *artha-kriyā-kāritā* of the Buddhists, the Āgama says that if the doctrine of *artha-kriyā-kāritā* be accepted, then the existence of things cannot properly be explained. The proper view is that of *pariṇāma-vāda*. If the things are momentary, then effects cannot be produced, for a thing must remain for at least two moments in order to produce an effect. If

the two moments are separate entities, then one cannot be the cause of the other. The causal change can only be with reference to the existing things, but not with regard to the entities which are momentary. In order that there may be a production, the thing must remain for two moments at least. Things that are existent need not always be productive. The production of an effect may depend on accessory causes. A jug cannot be produced by threads, but the threads may produce a piece of cloth. This shows that the effect is always already in the cause.

It cannot also be held that our mental states are identical with the external objects, for in that case it would be difficult to explain the multiplicity of our cognitive states in accordance with their objects. We would not be able to explain how one entity assumes so many diverse forms. The only course left is to admit some external objects with which our senses come into contact. These objects consist of a conglomeration of *tanmātras*. It is in and through this conglomeration of *tanmātras* that new qualities arise to which we give the names of different *bhūtas*. The difference between *tanmātras* and *bhūtas* is that the former are more subtle and the latter more gross. This view is somewhat different from the Sāṃkhya view, for here the *bhūtas* are not regarded as different categories, but only as a conglomeration of *tanmātras*. The idea that the *guṇas* are certain objective entities is again and again repudiated. It is held that it is the conglomeration of *guṇas* that is regarded by us as substantive entity.

The Āgama then criticises the theory of atoms which are partless. It is held that the partless atoms cannot have sides in which other atoms could be associated. The question is raised that *tanmātras* being formless (*amūrta*) cannot themselves be the causes of all forms. The world of forms thus leads us to infer some material as its cause. To this Śiva replies that the *prakṛti* can be regarded as being endowed with form and also as formless¹.

Śiva in further replying to the questions says that things having form must have other entities endowed with forms as their causes. Therefore one may infer that the atoms are the causes of the world. In that case one cannot deny the fact that the atoms have forms. In further discussing the subject Śiva says that the atoms are many

1

*māyā tu paramā mūrta nityānityasya kāraṇam,
ekāneka-vibhāgādhyā vastu-rūpā śivātmikā.*

Sixth *paṭala*.

and they have parts. So they are of the same type as other effects, such as jug, etc. As such the cause of the world must be regarded as being something which is formless. All effects are *anitya*, dependent on others (*āśrita*), and have parts and are many. The Śaivism, therefore, holds that their cause must be different, it must be one, independent and partless. Therefore it discards the view that the atoms are the material cause of the world¹. The gross elements gradually evolved from the five *tanmātras*.

The Āgama refutes the view that *ākāśa* is mere vacuity. Had it been a vacuity, it would have been a negation, and a negation always belongs to the positive entity. The Āgama also refutes the possibility of *ākāśa* being regarded as any kind of negation. *Śabda* is regarded as the specific quality of *ākāśa*.

The Āgama says that it admits only four *pramāṇas*: *pratyakṣa*, *anumāna*, *śabda*, and *arthāpatti*. In reality it is pure consciousness devoid of all doubts that constitutes the truth underlying the *pramāṇas*. Doubt arises out of the oscillation of the mind between two poles. Memory refers to objects experienced before. In order that any knowledge may attain to the state of proper validity, it must be devoid of memory and doubt.

Pure consciousness is the real valid part in knowledge. *Buddhi* being itself a material thing cannot be regarded as constituting the valid element of knowledge. It is in and through the *kalās* that the pure consciousness comes into contact with the objective world. This perception may be either *nirvikalpa* or *savikalpa*. In the *nirvikalpa* perception there is no reference in the mind to class concepts or names. By the *nirvikalpa* perception one can perceive things as they are without any association of names, etc.

Perception is of two kinds: (1) as associated with the senses, and (2) as unassociated with the senses as in the case of intuitive knowledge by *yoga*. When associated with senses the perceptive function removes the veil between the objects and the self, so that the objects can be directly perceived. In explaining the nature of perception the Āgama follows the Nyāya technique of *saṃyukta-samavāya*, etc., for explaining the situation. It believes like Nyāya in five types of propositions, namely *pratijñā*, *hetu*, *dṛṣṭānta*, *upanaya* and *nigamana*.

*Vātulāgama*¹.

Vātulāgama from Adyar with commentary seems to be almost identical with the *Vātulāgama* of the Mysore Oriental Research Institute, only with this difference that the *Vātulāgama* of Mysore contains more verses in the concluding tenth chapter in which the Vira-śaiva doctrine is praised above other Śaiva doctrines. But the original beginning is more or less like the general Śaiva doctrine as may be found in *Tattva-prakāśikā* with Aghora-śivācārya's commentary. There is also the tendency to derive the existence of Śiva as the ultimate reality on the basis of inference, as may be found in the Siddhānta systems of Śaivism, such as the *Mṛgendrāgama* or in the Lākuliśa-Pāśupata system. The supplementary portion of *Vātulāgama* introduces the doctrine of *līṅga-dhāraṇa* of the Vira-śaivas, but does not say anything about its specific philosophy or about its other doctrines associated with *ṣaṭ-sthala*.

*Vātula-tantram*².

Śiva-tattva is of three kinds: (1) *niṣkala*, (2) *sakala* and (3) *niṣkala-sakala*. Śiva may be distinguished in ten ways: (1) *tattva-bheda*, (2) *varṇa-bheda*, (3) *cakra-bheda*, (4) *varga-bheda*, (5) *mantra-bheda*, (6) *praṇava*, (7) *brahma-bheda*, (8) *aṅga-bheda*, (9) *mantra-jāta*, (10) *kīla*. Though previously it has been said to be of three kinds, it has three forms again: (1) *subrahmanya-śiva*, (2) *sadā-śiva* and (3) *maheśa*.

Śiva is called *niṣkala* when all His *kalās*, that is parts or organs or functions, are concentrated in a unity within Him. In further defining the nature of *niṣkalatva*, the author says that when the pure and impure elements that contribute to experience are collected together and merged in the original cause, and remain there as the budding cause of all powers that are to develop the universe, we have the *niṣkala* stage. The commentator supports this idea by quotations from many texts. The *sakala-niṣkala* is that in which the deeds of persons are in a dormant state, and when the time of creation comes it associates itself with the *bindu* state for

¹ Oriental Research Institute, Mysore.

² Adyar Library manuscript.

the formation of the world. The *bindu* represents the *māyopādāna* with which Śiva associates Himself for the creation¹. These different names of *sakala* and *niṣkala* and *sakala-niṣkala* of Śiva are but different moments in Śiva and do not constitute any actual transformation in Him, for He always remains unchanged in Himself. In Śiva, therefore, there is no change. The changes are to be found in the *bindu* and the *amus*².

God can only be proved by *anumāna* as being the instrumental cause of the world. This is taking the old Śaiva view of the Siddhānta, like the *Mṛgendrāgama*. The agency of God is to be explained by the supposition that by His desire everything is accomplished. He does not take to any instrument or organs for accomplishing any act. Thus when the potter makes his pot, it is through the infusion of God's power that he can do so. In the case of the potter, the agency is different, because he works with his instruments and organs. Śiva through His energy can know and do all things.

Śiva creates all things by His simple *saṃkalpa* and this creation is called the *śuddhādhva*. The author refers to *Tattva-prakāśika* of Bhoja and the commentary on it by Aghora-sivācārya.

Śakti is the will of God and that is called *bindu*. From that arises *nāda* which is a source of all speech³.

We have given some analysis of some of the important Āgamas just to show the nature of the subjects that are dealt with in these Āgamas. A more comprehensive account of the Āgamas could easily have been given, but that would have involved only tiresome repetition. Most of the Āgamas deal with the same sort of subjects more or less in the same manner with some incidental variations as

¹ *maheṣaḥ sakalaḥ bindu-māyopādāna-jamita-tanu-karaṇādibhiḥ ātmānaṃ yadā śuddhāśuddha-bhogaṃ prayacchati tadā śiva-saṅgakaḥ sa eva bhogavān sakala ity ucyate.*

² *laya-bhogādhikārānāṃ na bhedo vāstavaḥ śive, kintu vindor aṇūnāṃ ca vāstava eva te matāḥ.*

³ *śaktir iccheti vijñeyā śabdo jñānaṃ ihocyate, vāgbhavaṃ syāt kriyā-śaktiḥ kalā vai śoḍaśa smṛtaḥ. yā parameśvarasya icchā sā śaktir iti jñeyā, śaktestu jāyate śabdaḥ. Yat parameśvarasya jñānaṃ tadeva śabdaḥ. śabdāt jāyate vāgbhavaḥ. yā parameśvarasya kriyā sā tu vāgbhavaḥ. śoḍaśa svarāḥ kalā ity ucyante.*

Quoted from *Pauṣkarāgama*:

*acetanaṃ jagad viprāś cetana-prerakaṃ vinā,
pravṛttau vā nivṛttau vā na svatantraṃ rathādivat.*

regards their emphasis on this or that subject. They also sometimes vary as regards their style and mode of approach. Thus the Āgama called *Śiva-jñāna-siddhi* deals with the various subjects by quotations from a large number of Āgamas. This shows that there was an internal unity among the various Āgamas. From these collective works we can know much of the contents of the different Āgamas. This is important as some of these Āgamas are scarcely available even as a single manuscript.

The date of these Āgamas cannot be definitely fixed. It may be suggested that the earliest of them were written sometime in the second or third century A.D., and these must have been continued till the thirteenth or fourteenth century. In addition to the theological or religious dogmatics, they contain discussions on the nature of the various ducts or *nāḍis* in connection with the directions regarding the performance of *yoga* or mental concentration. There are some slight disputations with rival systems of thought as those of the Buddhists, Jains and the Sāṃkhya. But all this is very slight and may be practically ignored. There is no real contribution to any epistemological thought. We have only the same kind of stereotyped metaphysical dogma and the same kind of argument that leads to the admission of a creator from the creation as of the agent from the effects. Thus apparently the material cause, the *upādāna kāraṇa*, described as *prakṛti* and sometimes atoms, is different from the instrumental cause, God. But in order to maintain the absolute monistic view that Śiva alone is the ultimate reality, this material cause is often regarded as the *śakti* or energy which is identical with God. Sometimes the entire creation is described as having an appearance before the individuals according to their *karma* through God's power of bondage. The individual souls are all infected by various impurities derived from *māyā* or *karma*. These impurities are ultimately destroyed by the grace of God, when the Śaiva initiation is taken.

These Āgamas are also full of directions as regards various religious practices and disciplines, and also of various kinds of rituals, *mantras*, directions for the building of temples or of setting up of various kinds of phallic symbols, which, however, have to be entirely omitted from the present treatment of Śaivism. But it is easy to see that the so-called Śaiva philosophy of the Āgamas is just a metaphysical kernel for upholding the Śaiva religious life and

practices. These consist largely in inspiring the devotees to lead an absolutely moral life, wholly dedicated to Śiva, and full of intoxicating fervour of devotion, as one may find in *Tiru-vāchaka* of Māṇikka-vāchakar. This devotion is the devotion of service, of a life entirely dedicated to Lord Śiva.

CHAPTER XXXV

VĪRA-ŚAIVISM

History and Literature of Vīra-śaivism.

THE name 'Vīra-śaiva' as applied to a particular Śaiva sect appears to be of a later date. Mādhava in his *Sarva-darśana-saṃgraha* of the fourteenth century A.D., who mentions the Pāśupatas and the Āgamic Śaivas, does not seem to know anything about the Vīra-śaivas. Śaṅkara and Vācaspati and Ānanda-giri of the eighth and the ninth centuries do not seem to know anything of the Vīra-śaivas. Neither are they alluded to in any of the *Śaivāgamas*. The *Vātula-tantra* seems to have two editions (in manuscript), and in one of them the *ṣaṭ-sthala* doctrine is mentioned in the form of an appendix, which shows that this introduction was of the nature of an apocrypha. The doctrine of *līṅga-dhāraṇa* in the manner in which it is done by the Līṅgāyats of the Vīra-śaivas can hardly be traced in any early works, though later Vīra-śaiva writers like Śrīpati and others have twisted some of the older texts which allude to *līṅga* to mean the specific practices of *līṅga-dhāraṇa* as done by the Līṅgāyats.

There is a general tradition that Basava, a Brahmin, son of Mādirāja and Mādāmba was the founder of the Vīra-śaiva sect. From his native place Bāgevaḍi, he went to Kalyān near Bombay, at a comparatively young age, when Vijjala was reigning there as king (A.D. 1157–67). His maternal uncle Baladeva having resigned on account of illness, Basava was appointed as the minister in complete charge of Vijjala's treasury and other administrative functions. According to another tradition Basava succeeded in deciphering an inscription which disclosed some hidden treasure, and at this, King Vijjala was so pleased that he gave Basava the office of prime minister. According to the *Basava-purāṇa*, which narrates the life of Basava in a mythical purāṇic manner, Basava, on assuming the office, began to distribute gifts to all those who professed themselves to be the devotees of Śiva. This led to much confusion and heart-burning among the other sects, and it so happened that King Vijjala cruelly punished two of the devotees

of Śiva. At this, by the instigation of Basava, one of his followers murdered Vijjala. Bhandarkar gives some other details, which the present writer has not been able to trace in the *Basava-purāṇa* (the source, according to Bhandarkar himself)¹.

The *Basava-purāṇa* was written after the time of Śrīpati Paṇḍita. It is said there that at one time Nārada reported to Śiva that, while other religions were flourishing, the Śaiva faith was with few exceptions dying out among the Brahmins, and so it was decaying among other castes also. Lord Śiva then asked Nandi to get himself incarnated for taking the Vira-śaiva faith in consonance with the *Varṇāśrama* rites². If this remark is of any value, it has to be admitted that even after the time of Śrīpati Paṇḍita the Vira-śaiva faith had not assumed any importance in the Carnatic region. It also indicates that the Vira-śaiva faith at this time was not intended to be preached in opposition to the Hindu system of castes and caste duties. It has been contended that Basava introduced social reforms for the removal of castes and caste duties and some other Hindu customs. But this claim cannot be substantiated, as, in most of the Vira-śaiva works, we find a loyalty to the Hindu caste order. There is, of course, a tendency to create a brotherhood among the followers of Śiva who grouped round Basava, as he was both politically and financially a patron of the followers of Śiva. The *Basava-purāṇa* also says that Basava was taken before the assembly of paṇḍits for the performance of the rite of initiation of the holy thread at the age of eight, according to the custom of compulsory initiation among the Brahmins. Basava, however, at that early age protested against the rite of initiation, on the grounds that the holy thread could purify neither the soul nor body, and that there were many instances in the purāṇic accounts where saints of the highest reputation had not taken the holy thread. We find no account of Basava as preaching a crusade against Hindu customs and manners, or against Brahmanism as such.

Basava's own writings are in Canarese, in the form of sayings or musings, such as is common among the devotees of other sects of Śaivism, Vaiṣṇavism, etc. The present writer had the occasion to go through a large mass of these sayings in their English translations. On the basis of these it can be said that they contain a

¹ See Bhandarkar's *Vaiṣṇavism and Śaivism*, p. 132.

² *varṇācārāmurodhena śaivācāran pravartaya*. *Basava-purāṇa*, ch. II, verse 32.

rapturous enthusiasm for the God Śiva, who to Basava appeared as the Lord Kudala Saṅgama. These sayings referred to Śiva as the supreme Lord, and to Basava himself as his servant or slave. They also contain here and there some biographical allusions which cannot be reconstructed satisfactorily without the help of other contemporary evidence. So far as can be judged from the sayings of Basava, it is not possible to give any definite account of Vīra-śaiva thought as having been propounded or systematised by Basava. According to *Basava-purāṇa*, the practice of *līṅga-dhāraṇa* seems to have been in vogue even before Basava. Basava himself does not say anything about the doctrine of *śaṭ-sthala*, and these two are the indispensably necessary items by which Vīra-śaivism can be sharply distinguished from the other forms of Śaivism, apart from its philosophical peculiarity. On this also Basava does not seem to indicate any definite line of thought which could be systematised without supplementing it or reconstructing it by the ideas of later Vīra-śaiva writers. Though the kernel of the Vīra-śaiva philosophy may be traced back to the early centuries of the Christian era, and though we find it current in works like *Sūta-saṃhitā* of the sixth century A.D., yet we do not know how the name Vīra-śaiva came to be given to this type of thought.

In the work *Siddhānta-śikhāmaṇi*, written by Revaṇācārya some time between Basava and Śrīpati, we find the name 'Vīra-śaiva' associated with the doctrine of *sthala*, and this is probably the earliest use of the term in available literature. *Siddhānta-śikhāmaṇi* refers to Basava and is itself referred to by Śrīpati. This shows that the book must have been written between the dates of Basava and Śrīpati. The *Siddhānta-śikhāmaṇi* gives a fanciful interpretation of the word, 'vīra' as being composed of 'vi' meaning knowledge of identity with Brahman, and 'ra' as meaning someone who takes pleasure in such knowledge. But such an etymology, accepting it to be correct, would give the form 'vira' and not 'vīra.' No explanation is given as to how 'vi' standing for 'vidyā,' would lengthen its vowel into 'vī.' I therefore find it difficult to accept this etymological interpretation as justifying the application of the word 'vīra' to Vīra-śaiva. Moreover, most systems of Vedāntic thought could be called vīra in such an interpretation, for most types of Vedānta would feel enjoyment and bliss in true knowledge of identity. The word 'vīra' would thus not

be a distinctive mark by which we could distinguish Vira-śaivas from the adherents of other religions. Most of the Āgamic Śaivas also would believe in the ultimate identity of individuals with Brahman or Śiva. I therefore venture to suggest that Vira-śaivas were called Viras or heroes for their heroic attitude in an aggressive or defensive manner in support of their faith.

We have at least two instances of religious persecution in the Śaiva context. Thus the Chola King Koluttunga I, a Śaiva, put out the eyes of Mahāpūrṇa and Kureśa, the Vaiṣṇava disciples of Rāmānuja, who refused to be converted to Śaivism. The same sort of story comes in the life of Basava where the eyes of two of his disciples were put out by Vijjala, and Vijjala got himself murdered by Basava's followers. These are but few instances where violence was resorted to for the spread of any religion, or as actions of religious vengeance. I suppose that the militant attitude of some Śaivas, who defied the caste rules and customs and were enthusiasts for the Śaiva faith, gave them the name of Vira-śaiva or Heroic Śaiva. Even the *Siddhānta-śikhāmaṇi* refers to the view of Basava that those who decried Śiva should be killed¹. Such a militant attitude in the cause of religion is rarely to be found in the case of other religions or religious sects. In the above context *Siddhānta-śikhāmaṇi* points out in the ninth chapter that, though Vira-śaivas are prohibited from partaking in the offerings made to a fixed phallic symbol *sthāvara-līṅga*, yet if there is a threat to destroy or disturb such a symbol, a Vira-śaiva should risk his life in preventing the aggression by violent means.

So far our examination has not proved very fruitful in discovering the actual contribution to Vira-śaiva philosophy or thought, or even the practice of *ṣaṭ-sthala* and *līṅga-dhāraṇa*, made by Basava. He must have imparted a good deal of emotional enthusiasm to inspire the Śaivas of different types who came into contact with him, either through religious fervour or for his

¹ *atha vira-bhadrācara-basaveśvaracāraṇi sūcayan bhaktā-cāra-bhedaṇi prati-pādayati—*

Siddhānta-śikhāmaṇi, ch. 9, verse 36.

It is further introduced in the context:

*nanu prāṇa-tyāge durmaraṇam kiṃ na syāt,
śivārthaṇi mukta-jīvaś cecchiva-sāyujyam āpnuyāt.*

financial and other kinds of patronage. It seems from the *Basava-purāṇa* that his financial assistance to the devotees of Śiva was of rather an indiscriminate character. His money was poured on all Śaivas like showers of rain. This probably made him the most powerful patron of the Śaivas of that time, with the choicest of whom he founded a learned assembly where religious problems were discussed in a living manner, and he himself presided over the meetings.

The present writer is of opinion that the kernel of Vīra-śaiva thought is almost as early as the Upaniṣads, and it may be found in a more or less systematic manner by way of suggestion in the writings of Kālidāsa who lived in the early centuries of the Christian era¹. The *Sūta-saṃhitā*, a part of the *Skanda-purāṇa*, seems to teach a philosophy which may be interpreted as being of the same type as the Vīra-śaiva philosophy propounded by Śrīpati, though the commentator interprets it in accordance with the philosophy of Śaṅkara. The *Sūta-saṃhitā* gives a high place to the Āgama literature such as the *Kāmika*, and others, which shows that it was closely related with the Āgamic Śaivism².

But it is difficult to say at what time the Vīra-śaiva sect was formed and when it had this special designation. Vīra-śaivism differs from the Āgamic Śaivism and the Pāsupata system in its philosophy and its doctrine of *sthala*, the special kind of *liṅga-dhāraṇa* and also in some other ritualistic matters which are not quite relevant for treatment in a work like the present one. It is unfortunate that *Siddhānta-śikhāmaṇi*, a work probably of the thirteenth century, should contain the earliest reference to Vīra-śaivism in literature. A small manuscript called *Vīra-śaiva-guru-paramparā* gives the names of the following teachers in order of priority: (1) Viśveśvara-guru, (2) Ekorāma, (3) Vīreśārādhyā, (4) Vīra-bhadra, (5) Viraṇārādhyā, (6) Māṇikyārādhyā, (7) Buccayārādhyā, (8) Vīra-malleśvarārādhyā, (9) Deśikārādhyā, (10) Vṛṣabha, (11) Akṣaka and (12) Mukha-liṅgeśvara. In the *Vīra-śaivāgama*³, eighth *paṭala*, it is said that in the four *pīṭhas* or pontifical seats, namely *yoga-pīṭha*, *mahā-pīṭha*, *jñāna-pīṭha* and

¹ See author's *A History of Sanskrit Literature*, Vol. I, pp. 728 et seq.

² *Sūta-saṃhitā*, *yajña-vaibhava-khaṇḍa*, ch. 22, verses 2 and 3. See also ch. 20, verse 22; ch. 39, verse 23.

³ Madras manuscript.

soma-pīṭha, there were four teachers of different priority, Revāṇa, Marula, Vāmadeva¹, and Paṇḍitārādhyā. These names are of a mythical nature, as they are said to be referred to in the different Vedas. But the names that we have quoted above from the *Vīra-śaiva-guru-paramparā* form a succession list of teachers up to the time of the teacher of the author of the manuscript². On studying the succession list of teachers, we find that we know nothing of them either by allusion or by any text ascribed to them, excepting Vīra-bhadra, who has been referred to in the *Siddhānta-śikhāmaṇi*³. We cannot say how much earlier Vīra-bhadra was than the author of the *Siddhānta-śikhāmaṇi*. But since Vīra-bhadra is mentioned along with Basava in the same context, we may suppose that this Vīra-bhadra could not have been much earlier than Basava. So if we are safe in supposing that Vīra-bhadra lived somewhere in the twelfth century, we have only to compute the time of the three Ācāryas who lived before Vīra-bhadra. According to ordinary methods of computation we can put a hundred years for the teaching period of the three teachers. This would mean that Vīra-śaivism as a sect started in the eleventh century. It is possible that these teachers wrote or preached in the Dravidian tongue which could be understood by the people among whom they preached. This would explain why no Sanskrit books are found ascribed to them. Basava was probably one of the most intelligent and emotional thinkers, who expressed his effusions in the Kāuṇḍa language.

But about our specification of the succession list of Vīra-śaiva teachers much remains yet to be said. It does not explain anything about the other lines of teachers, of whom we hear from stray allusions. Thus we hear of Agastya as being the first proponent of the Śaiva faith. We find also that one Reṇukācārya wrote the work, *Siddhānta-śikhāmaṇi* based upon the verdict of other Vīra-śaiva works and giving us the purport of the mythical dialogue that took place between Reṇuka-siddha and Agastya some time in the past. The Reṇuka-siddha was also called Revāṇa-siddha, and it is supposed that he expounded the Vīra-śaiva Śāstra to Agastya in the beginning of the Kali age. We find at a much later date one Siddha-rāmeśvara, who was impregnated with

¹ Another reading is Rāma-deva (eighth and sixteenth *paṭalas*).

² *asmad-ācārya-paryantam bande guru-paramparām*. (Madras manuscript.)

³ *Siddhānta-śikhāmaṇi*. *avataraṇikā* of the 36th verse, ch. 9.

the doctrine of Vīra-śaivism; it is in his school of thought that we have a person called Śiva-yogīśvara, who gives us the supposed purport of the dialogue between Raṇuka and Agastya, as it had traditionally come down to him, supplementing it with the teachings of other relevant literature. In the family of Siddha-rāmeśvara there was born one Mudda-deva, a great teacher. He had a son called Siddha-nātha, who wrote a work called *Śiva-siddhānta-nirṇaya* containing the purport of the Āgamas. The other teachers of the time regarded him as the most prominent of the Vīra-śaiva teachers (*Vīra-śaiva-śikhā-ratna*) and Reṇukācārya, who called himself also Śiva-yogin, wrote the work, *Siddhānta-śikhāmaṇi*. We thus see that there was a long list of Vīra-śaiva teachers before Reṇukācārya, who probably lived somewhere in the thirteenth century. Even if we do not take this into account, Reṇukācārya, the author of *Siddhānta-śikhāmaṇi* says that he had written the work for the elucidation of the nature of Śiva by consulting the Śaiva Tantras beginning from the *Kāmikāgama* to the *Vātulāgama* and also the Purāṇas. He further says that the *Vīra-śaiva Tantra* is the last of the Śaiva Tantras and therefore it is the essence of them all¹.

But what is exactly the content of the Vīra-śaiva philosophy as explained in the *Siddhānta-śikhāmaṇi*? It is said that Brahman is the identity of 'being,' 'bliss' and 'consciousness,' and devoid of any form or differentiation. It is limitless and beyond all ways of knowledge. It is self-luminous and absolutely without any obstruction of knowledge, passion or power. It is in Him that the whole world of the conscious and the unconscious remains, in a potential form untraceable by any of our senses, and it is from Him that the whole world becomes expressed or manifest of itself, without the operation of any other instrument. It implies that when it so pleases God, He expands Himself out of His own joy, and thereby the world appears, just as solid butter expands itself into its liquid state. The qualities of Śiva are of a transcendent nature (*aprākṛta*). The character of being, consciousness and bliss is power (*śakti*). It is curious, however, to note that side by side with this purely ultra-monistic and impersonal view we find God Śiva as being endowed with will by which He creates and destroys the

¹ *Siddhānta-śikhāmaṇi*, ch. I, verses 31-2.

world. As we shall have occasion to notice later on, the whole doctrine of *ṣaṭ-sthala*, which forms the crux of Vīra-śaiva thought, is only an emphasis on the necessity on the part of every individual to look upon him and the world as being sustained in God and being completely identified with God. There are, indeed, many phrases which suggest a sort of *bhedābheda* view, but this *bhedābheda* or difference in unity is not of the nature of the tree and its flowers and fruits, as such a view will suggest a modification or transformation of the nature of Śiva. The idea of *bhedābheda* is to be interpreted with the notion that God, who is transcendent, appears also in the form of the objects that we perceive and also of the nature of our own selves.

The *Siddhānta-śikhāmaṇi* was based on the Āgamas and therefore had the oscillating nature of philosophical outlook as we find in the different Āgamas. Thus in *Siddhānta-śikhāmaṇi*, ch. v, verse 34, it is said that the Brahman is without any form or quality, but it appears to be the individual souls (*jīvas*) by its beginningless association with *avidyā* or nescience. In that sense *jīva* or the individual soul is only a part of God. *Siddhānta-śikhāmaṇi* further says that God is the controller, the mover (*preraka*) of all living beings. In another verse it says that Brahman is both God and the souls of beings at the same time. In pure Śiva there are no qualities as *sattva*, *rajas* and *tamas*¹. Again *Siddhānta-śikhāmaṇi* oscillates to the Vedānta view that the individual souls, the objects of the world as well as the Supreme Controller, are all but illusory imposition on the pure consciousness or Brahman². The *Siddhānta-śikhāmaṇi* admits both *avidyā* and *māyā* after the fashion of Śāṅkarites. It is in association with *avidyā* that we have the various kinds of souls and it is with the association of *māyā* that Brahman appears as omniscient and omnipotent. It is on account of the *avidyā* that the individual soul cannot realise its identity with Brahman, and thus goes through the cycle of births and rebirths.

Yet there is another point to note. In the *Yoga-sūtra* of Patañjali, it is said that the nature of our birth, the period of life

¹ *guṇa-trayātmikā śaktir brahma-niṣṭhā-sanātani,
tad-vaiṣamyāt samutpannā tasmin vastu-trayābhidhā.*

Siddhānta-śikhāmaṇi, ch. v, verse 39.

² *bhoktā bhojyaṃ prerayitā vastu-trayaṃ smṛtaṃ,
akhaṇḍe brahma-caitanya kalpitam guṇa-bhedataḥ.*

Ibid. ch. v, verse 41.

and the nature of our experiences, are determined by our *karma*, and that the law of the distribution of the fruits of *karma* is mysterious. But the effects of *karma* take place automatically. This view is only modified by the Pāsupatas and the Naiyāyikas who belong to their fold. It is interesting to notice that the *Siddhānta-śikhāmaṇi* borrows this idea of *karma* from the Pāsupatas, who hold that the distribution of *karma* is managed and controlled by God. *Siddhānta-śikhāmaṇi* thus seems to present before us an eclectic type of thought which is unstable and still in the state of formation. This explains the author's ill-digested assimilation of elements of thought on Pāsupata doctrine, the varying Āgama doctrines, the influence of Sāṃkhya, and ultimately the Vedānta of the Śaṅkarites. This being so, in the thirteenth century we cannot expect a systematic Vira-śaiva philosophy in its own individual character as a philosophical system in the time of Basava. It will be easy for us to show that Allama-prabhu, the teacher of Basava, was thoroughly surcharged with the Vedāntism of the Śaṅkara school.

In the *Śaṅkara-vijaya* Ānandagiri, a junior contemporary and a pupil of Śaṅkara gives a long description of the various types of the devotees of Śiva who could be distinguished from one another by their outward marks. Śaṅkara himself only speaks of the Pāsupatas and the Śaivas who followed the Siddhāntas or the Āgamas, in which God Śiva has been described as being the instrumental cause, different from the material cause out of which the world has been made. Vācaspati in his *Bhāmatī*, a commentary on the *bhāṣya* of Śaṅkara on the *Brahma-sūtra* II. 2. 37, speaks of four types of the followers of Śiva. Of these we have found ample literature of the Śaivas and the Pāsupatas, and had ventured to suggest that the Kāruṇika-siddhāntins were also the followers of the Āgamic Śaiva thought. But we could find no literature of the Kāpālikas or of the Kālamukhas referred to in the *bhāṣya* of the same *sūtra* by Rāmānuja. In the *Sūta-saṃhitā* we find the names of the *Kāmika* and other Āgamas, the Kāpālikas, the Lākulas, the Pāsupatas, the Somas, and the Bhairavas, who had also their Āgamas. These Āgamas branched off into a number of sections or schools¹. In our investigation we have found that the Lākulas and the Pāsupatas were one and the same, and we have the testimony of Mādhava, the author of the *Sarva-darśana-saṃgraha*, to the same effect.

¹ *Sūta-saṃhitā* IV, *Vajña-vaibhava-khaṇḍa*, ch. XXII, verses 2-4.

Sūta-saṃhitā was probably a work of the sixth century A.D., while Mādhava's work was of the fourteenth century. Nevertheless, it seems that the Pāsupatas were earlier than the Lākulas. Neither Śaṅkara nor Vācaspati speaks of the Lākuliśas as being the same as the Pāsupatas. But some time before the fourteenth century the Lākuliśas and Pāsupatas had coalesced and later on they remained as one system, as we find them regarded as one by Appaya Dikṣita of the sixteenth century in his commentary, *Vedānta-kalpataru-parimala* on *Brahma-sūtra* II. 2. 37. But there can be but little doubt that the Lākulas had their own Āgamas long before the sixth century A.D., which is probably the date of *Sūta-saṃhitā*. We find references to the Bhairavas, and the name Bhairava is given to Śiva as the presiding male god wherever there is the Śakti deity representing the limbs of Śakti, the consort of Śiva and the daughter of Dakṣa. But we have not been able to secure any Āgamas containing an account of the philosophical doctrine of this creed of Bhairavism, though we have found ritualistic references to Bhairava. The *Sūta-saṃhitā* also refers to the Āgamic *ṛsis* such as Śveta, etc.; each of these twenty-eight *ṛsis* had four disciples, thus making the number one hundred and twelve. They are also referred to in the *Sūta-saṃhitā* (Book IV, ch. XXI, verses 2-3), where they are described as smearing their bodies with ashes and wearing the necklaces of *rudrākṣa*. We have noticed before that *Śiva-mahāpurāṇa* also refers to them. The existence of so many Śaiva saints at such an early date naturally implies the great antiquity of Śaivism. These Śaiva saints seem to have been loyal to the *Varṇāśrama dharma* or duties of caste and the stages of life.

A later Āgama probably of the thirteenth century called the *Vira-śaivāgama* speaks of the four schools of thought, Śaiva, Pāsupata, Vāma and Kula. Śaiva is again divided into Saumya and Raudra. The Saumya is of five kinds including demonology and magic as antidote to poison. The Śaiva school is called Dakṣiṇa, and the cult of Śakti is called Vāma. The two can be mixed together as Vāma and Dakṣiṇa, and regarded as one school. The *Siddhānta śāstra* is called pure Śaiva belonging only to Śiva. There is, however, another sect, or rather three schools of a sect, called Dakṣiṇa, Kālamukha and Mahāvratā¹. Bhandarkar has suggested that the Kāla-mukhas and the Mahāvratadhārins are

¹ See Rāmānuja's *bhāṣya* (*Śrī-bhāṣya*), II. 2. 37.

one and the same. The Siddhāntas again are divided into three sects: Ādi-śaiva, Mahā-śaiva and Anta-śaiva. These subdivisions of Śaivism have sprung from the Pāsupata-śaivism. The writer of the *Vīra-śaivāgama* says that Śaivism scattered itself into infinite variety of schools of thought or bands of devotees and had a huge literature for supplementing their position¹. All these sects have now practically vanished with their literature if they had any.

From the testimony of the same Āgama it appears that Vīra-śaivism was not a part of the older Śaivas, but it originated as a doctrinal school which accepted four *līngas* in the four pontifical seats, the worship of Śiva as *ṣaṭ-sthala* and their special rites and customs. This view may be correct, as we cannot trace the Vīra-śaiva as a system of thought in any of the earlier works on Śaivism. We have a number of *Vīra-śaivāgamas* such as *Makutāgama*, *Suprabhedāgama*, *Vīra-śaivā'-gama* and the like in manuscript. But none of them, excepting the *Basava-rājīya* called also *Vīra-śaiva-sāroddhāra* (manuscript) with the *bhāṣya* of Somanātha, make any reference to Basava or even the Vīra-śaiva philosophy. The *Basava-rājīya* also speaks of Basava as being the incarnation of the bull of Śiva and the patron of Śaivas. But the author of the work does not say anything about the philosophical doctrine of Basava, but only describes the idea of *ṣaṭ-sthala* in an elaborate manner.

Professor Sakhare in his introduction to *Līnga-dhāraṇa-candrikā* of Nandikeśvara quotes a passage from *Svāyaṃbhuvāgama* in which the mythical origins of Revāṇa-siddha from *Someśa-līnga*, of Marula-siddha from *Siddheśa-līnga*, of Paṇḍitārya from *Mallikārjuna-līnga*, of Ekorāma from *Rāmanātha-līnga*, and of Viśvārādhyā from the *Viśveśa-līnga*, are described. We have no further evidence of these teachers or the nature of their teachings. We do not even know if they called themselves Vīra-śaivas. This account does not tally with the description found in the *Vīra-śaiva-guru-paramparā*, or with the other Vīra-śaiva texts published or unpublished with which we are familiar.

The *gotras* and the *pravaras* of the Vīra-śaivas, given in the *Suprabhedāgama* as emanating from the unknown past, are quite

¹ *samudra-sikatāsaṃkhyās samayās santi kotīśaḥ. Vīra-śaivāgama* (Madras manuscript).

fanciful and need not further be discussed. Such a discussion could shed no historical light on the origin and development of the Vira-śaiva philosophy and dogmatics.

We have seen before that there is a tradition which links Agastya, Reṇuka or Revaṇa-siddha, Siddha-rāma and Reṇukā-cārya, the author of the *Siddhānta-śikhāmaṇi*. Śrīpati mainly bases his arguments on the Upaniṣads and the Purāṇas, but he also refers to *Agastya-sūtra* and Reṇukācārya. He does not, however, refer to Basava and the contemporaries who were associated with him, such as Allama-prabhu, Cannabasava, Mācaya, Goga, Siddha-rāma and Mahādevī¹. This seems to show that the Vira-śaivism had two or more lines of development which later on coalesced and began to be regarded as one system of Vira-śaiva thought. From Basava's *vacanas* it is difficult to assess the real philosophical value of the faith that was professed by Basava. In the *Prabhu-līṅga-līlā* and the *Basava-purāṇa* we find a system of thought which, in the absence of other corroborating materials, may be accepted as approximately outlining the system of thought which was known as Vira-śaivism in Basava's time.

We find that the doctrines of *sthala* and *līṅga-dhāraṇa* were known to the author of the *Prabhu-līṅga-līlā*. But though in one place, where instruction was being given to Basava by Allama-prabhu, *ṣaṭ-sthala* is mentioned, yet the entire emphasis throughout the book is on the doctrine of unity of the self with Śiva, the ground of the reality². In the above passage it is held that there are double knots associated with the gross, the subtle and the cause, in accordance with which we have the six *sthalas* in three groups of a pair of each. Thus the two knots associated with the gross go by the name of *bhakta* and *maheśvara*; those with the subtle as associated with *prāṇa* are called *prāṇa* and *prasāda-līṅgi sthalas*;

¹ Thus it appears from Śrīpati's statement in the *Śrīkara-bhāṣya* II. 2. 37, p. 234, and III. 3. 3, p. 347, that Revaṇa-siddha, Marula-siddha, Rāma-siddha, Udbhaṭārādhya, Vemaṇārādhya were real teachers who had expressed their views or articles of faith in some distinctive works. But unfortunately no trace of such works can be discovered, nor is it possible to enunciate the actual views propounded by them. Whether Śrīpati had himself seen them or not is merely a matter of conjecture. He does not quote from the works of those teachers, and it is just possible that he is only making statements on the strength of tradition. In another passage (II. 1. 4) Śrīpati mentions the names of Manu, Vāmadeva, Agastya, Durvāsā, Upamanyu, who are quite mythical purāṇic figures along with Revaṇa-siddha and Marula-siddha.

² See *Prabhu-līṅga-līlā*, ch. 16, pp. 132-4.

those with the cause are of an emotional nature, and are called *śarana* and *aikya sthalas*. In other works such as *Basava-rājīya*, *Vira-śaivāgama* and *Siddhānta-śikhāmaṇi* the names of *sthalas* extend to one hundred and one. But in none of those works is the idea of these different *sthalas* explained to show their philosophical importance. In *Prabhu-liṅga-līlā* we hear that Cannabasava knew the mystery of *ṣaṭ-sthala*, but we do not know exactly what that mystery was. In this connection *guru*, *liṅga*, *cara*, *prasāda* and *pādodaka* are also mentioned. The whole emphasis of the book is on the necessity of realising the unity of the self and, indeed, of anything else with Śiva. Allama decries the external ritualism and lays stress on the necessity of realising the ultimate reality of the universe and the self with Śiva. He vehemently decries all forms of injury to animal life, and persuades Goga to give up ploughing the ground, as it would involve the killing of many insects. Allama further advised Goga to surrender the fruits of all his actions to God and carry on his duties without any attachment. As a matter of fact the Vira-śaiva thought as represented by Allama can hardly be distinguished from the philosophy of Śaṅkara, for Allama accepted one reality which appeared in diverse forms under the condition of *māyā* and *avidyā*. In that sense the whole world would be an illusion. The *bhakti* preached by Allama was also of an intellectual type, as it consisted of a constant and unflinching meditation and realisation of the ultimate reality of all things with Śiva. This view of *bhakti* seems to have influenced Reṇukācārya, the author of *Siddhānta-śikhāmaṇi*, who describes inner devotion (*āntara-bhakti*) in almost the same type of phraseology¹.

In his teachings to Mukṭāyī, Allama says that just as the sucking babe is gradually weaned from the mother's milk to various kinds of food, so the real teacher teaches the devotee to concentrate his

Prabhu-liṅga-līlā, ch. 16, verse 63.

mind on external forms of worship and later on makes him give them up, so that he ultimately becomes unattached to all kinds of duties, and attains true knowledge by which all his deeds are destroyed. There is not much use in learning or delivering speeches, but what is necessary, is to realise the unity of all with Śiva¹.

In his conversation with Siddha-rāma and Gorakṣa, he not only demonstrates the non-existence of all things but Śiva, but he also shows his familiarity with a type of magical *yoga*, the details of which are not given and cannot be traced in the *Yogaśāstra* of Patañjali. In the instruction given by Allama to his pupil Basava, the former explains briefly the nature of *bhakti*, *ṣaṭ-sthala* and *yoga*. It seems that the restful passivity that is attained by *yoga* is nothing but complete and steady identification of the ultimate truth, Śiva, with all the variable forms of experience, and our life and experience as a complete person. This *yoga* leading to the apperception of the ultimate unity can be done by arresting all the vital processes in the nervous centres of the body at higher and higher grades, until these energies become one with the supreme reality, God Śiva. It is in this way that the *cakras* are traversed and passed over till the Yogin settle down in Śiva. The entire physical processes being arrested by the peculiar *yoga* method, our mind does not vacillate or change, but remains in the consciousness of the pure Lord, Śiva.

The teacher of Basava, Allama, says that without a strong effort to make the mind steady by the complete arrest of the vital forces, the *Vāyu*, there can be no *bhakti* and no cessation to bondage. It is by the arrest of these vital forces or *Vāyu*, that the *citta* or the mind of the Vira-śaiva becomes arrested and merged in the elemental physical constituents of the body, such as fire, water, etc. The *māyā* is a product of *manas*, and *vāyu* also is regarded as a product of *manas*, and this *vāyu* becomes the body through the activity of the *manas*. The existence of the body is possible only by the activity of the vital forces or *vāyu*, which keep us away from realising the unity of all things with Śiva, which is also called *bhakti*. The Vira-śaiva has, therefore, to take recourse to a process opposite to the normal course of activity of the *vāyus* by concentrating them on one point, and by accepting the mastery of the *vāyus* over the different *cakras* or nerve plexuses (technically

¹ See *Prabhu-līnga-līlā*, ch. 12, pp. 57-8.

known as the control of the six *cakras*), which would in their own way be regarded as the six stages or stations of the process of the control of the *vāyus*, the *ṣaṭ-sthalas*¹. It is thus seen that according to the description given in *Prabhu-līṅga-līlā* of the doctrine of *ṣaṭ-sthala*, the process of *ṣaṭ-sthala* is to be regarded as an upward journey through a hierarchy of stations, by which alone the unity with Śiva can be realised. The instruction of this dynamic process of *yoga* is a practical method of a semi-physiological process by which the ultimate identity of God and soul can be realised. In Śaṅkara's monistic philosophy it is said that the realisation of the ultimate identity of the self with Brahman is the highest attainable goal of life. It is, however, said that such an enlightenment can be realised by proper intuition of the significance of the monistic texts such as "thou art that." It refuses to admit any practical utility of any dynamic course of practice which is so strongly advised in the Vīra-śaiva doctrine of *ṣaṭ-sthala* as taught by Allama.

Allama had met Gorakṣa in one of his travels. Gorakṣa, who was also probably a Śaiva, had by his yogic processes attained such miraculous powers that no stroke of any weapon could produce an injury on him. He made a demonstration of it to Allama. Allama in reply asked him to pass a sword through his body. But to Gorakṣa's utter amazement he found that when he ran through Allama's body with his sword, no sound of impact was produced. The sword passed through Allama's body as if it were passing through vacant space. Gorakṣa wanted humbly to know the secret by which Allama could show such miraculous powers. In reply Allama said that the *māyā* becomes frozen, as does the body, and when the body and the *māyā* both become frozen, shadow forms appear as real², and the body and the mind appear as one. When the body and the *māyā* are removed in the heart, then the shadow is destroyed. At this, Gorakṣa further implored Allama to initiate him into those powers. Allama touched his body and blessed him, and by that produced an internal conversion. As an effect of this, attachment vanished and with the disappearance of attachment, antipathy, egotism and other vices also disappeared. Allama further said that unless the self could realise that the association with the body was false, and the two were completely separated, one could

¹ *Prabhu-līṅga-līlā*, part III, pp. 6-8 (1st edition).

² *Ibid.* p. 25 (1st edition).

not realise the true identity with the Lord Śiva, devotion to whom was the cause of all true knowledge. It is only by the continual meditation of Śiva and by the proper processes of breath control, that it is possible to realise the ultimate unity.

There is a subtle difference between the proper and practical adoption of the dynamic process of *ṣaṭ-sthala* and the realisation of unity as taught by the *Śāṅkara Vedānta*. In the *Śāṅkara Vedānta*, when the mind is properly prepared by suitable accessory processes, the teacher instructs the pupil or the would-be saint about the ultimate knowledge of the unity of the self and the Brahman, and the would-be saint at once perceives the truth of his identity with Brahman as being the only reality. He also at once perceives that all knowledge of duality is false, though he does not actually melt himself into the nothingness of pure consciousness or the Brahman. In the Vira-śaiva system the scheme of *ṣaṭ-sthala* is a scheme of the performance of yogic processes. By them the vital processes as associated with the various vital forces and the nerve plexuses, are controlled, and by that very means the yogin gets a mastery over his passions and is also introduced to new and advanced stages of knowledge, until his soul becomes so united with the permanent reality, Śiva, that all appearance and duality cease both in fact and in thought. Thus a successful Vira-śaiva saint should not only perceive his identity with Śiva, but his whole body, which was an appearance or shadow over the reality, would also cease to exist. His apparent body would not be a material fact in the world, and therefore would not be liable to any impact with other physical bodies, though externally they may appear as physical bodies.

A similar philosophical view can be found in the work called *Siddha-siddhānta-paddhati* attributed to Gorakṣa-nāth, who is regarded as a Śaiva saint, an incarnation of Śiva Himself. Many legends are attributed to him and many poems have been composed in vernaculars of Bengali and Hindi, extolling the deeds and miraculous performances of his disciples and of himself. His date seems to be uncertain. References to Gorakṣa are found in the works of writers of the eighth to fifteenth centuries, and his miraculous deeds are described as having taken place in countries ranging from Gujarat, Nepal and Bengal and other parts of northern and western India. One of his well-known disciples was called Matsyendra-nātha. Śiva is called Paśupati, the lord of animals,

and the word *gorakṣa* also means the protector of the cattle. In the lexicons the word *go* means the name of a *ṛṣi* and also the name of cattle. There is thus an easy association of the word *gorakṣa* with the word *paśupati*. Gorakṣa's views are also regarded as the views of Siddhānta. This reminds us of the fact that the Śaiva doctrines of the South were regarded as having been propounded by Maheśvara or Śiva in the Siddhāntas, an elaboration of which has elsewhere been made in this work as the Āgama philosophy of the Siddhāntas. Only a few Sanskrit books on the philosophical aspects of the teachings of Gorakṣa-nāth have come down to us. There are, however, quite a number of books in the vernaculars which describe the miraculous powers of the Kānpḥāṭā Yogis of the school of Gorakṣa-nāth, also called Gorākḥ-nāth.

One of these Sanskrit works is called *Siddha-siddhānta-paddhati*. It is there that the ultimate reality of the unmoved, and the immovable nature of the pure consciousness which forms the ultimate ground of all our internal and external experiences, are to be sought. It is never produced nor destroyed, and in that sense eternal and always self-luminous. In this way it is different from ordinary knowledge, which is called *buddhi*. Ordinary knowledge rises and fades, but this pure consciousness which is identified as being one with Śiva is beyond all occurrence and beyond all time. It is, therefore, regarded as the ground of all things. It is from this that all effects, for example, the bodies, the instruments or the *karāṇas* (senses, etc.), and the agents, for example, the souls or the *jīvas*, shoot forth. It is by its spontaneity that the so-called God as well as His powers are manifested. In this original state Śiva shows itself as identical with His *śakti*. This is called the *sāmarasya*, that is, both having the same taste. This ultimate nature is the original ego, called also *kula*, which shows itself in various aspects. We should distinguish this ultimate nature of reality, which is changeless, from the reality as associated with class concepts and other distinguishing traits. These distinguishing traits are also held up in the supreme reality, for in all stages of experience these distinguishing features have no reality but the ultimate reality, which holds them all in the oneness of pure consciousness. Since the distinguishing characteristics have no further reality beyond them than the unchangeable ground-consciousness, they ulti-

mately have to be regarded as being homogeneous (*sama-rasa*) with ubiquitous reality.

The concept of *sama-rasa* is homogeneity. A thing which appears as different from another thing, but is in reality or essence the same, is said to be *sama-rasa* with the first one. It is also a way in which the *bhedābheda* theory of the reality and the appearance is explained. Thus a drop of water is in appearance different from the sheet of water in which it is held, but in fact it has no other reality and no other taste than that sheet of water. The ultimate reality, without losing its nature as such, shows itself in various forms, though in and through them all it alone remains as the ultimately real. It is for this reason that though the ultimate reality is endowed with all powers, it does not show itself except through its various manifesting forms. So the all-powerful Śiva, though it is the source of all power, behaves as if it were without any power. This power therefore remains in the body as the ever-awaking *kuṇḍalinī* or the serpentine force, and also as manifesting in different ways. The consideration of the body as indestructible is called *kāya-siddhi*.

We need not go into further detail in explaining the philosophical ideas of Gorakṣa as contained in *Siddha-siddhānta-paddhati*, for this would be to digress. But we find that there is a curious combination of Haṭha-yoga, the control of the nerve plexuses, the idea of the individual and the world as having the same reality, though they appear as different, as we find in the lecture attributed to Allama in *Prabhu-linga-līlā*. It also holds a type of *bhedābheda* theory and is distinctly opposed to the monistic interpretation of the Upaniṣads as introduced by Śaṅkara.

The idea of *ṣaṭ-sthala* must have been prevalent either as a separate doctrine or as a part of some form of Śaivism. We know that there were many schools of Śaivism, many of which have now become lost. The name *ṣaṭ-sthala* cannot be found in any of the sacred Sanskrit works. We have no account of Vira-śaivism before *Siddhānta-śikhāmaṇi*. Descriptions of it are found in many works, some of the most important of which are *Prabhu-linga-līlā* and *Basava-purāṇa*. We also hear that Canna-basava, the nephew of Basava, was initiated into the doctrine of *ṣaṭ-sthala*. In *Prabhu-linga-līlā* we hear that Allama instructed the doctrine of *ṣaṭ-sthala* to Basava. We also find the interesting dialogue between Allama

and Gorakṣa in the *Prabhu-līṅga-līlā*. We have also examined briefly some of the contents of *Siddha-siddhānta-paddhati* of Gorakṣa, and we find that the *ṣaṭ-sthala* doctrine preached by Allama was more or less similar to the *Yoga* doctrine found in the *Siddha-siddhānta-paddhati*. If we had more space, we could have brought out an interesting comparison between the doctrines of Allama and Gorakṣa. It is not impossible that there was a mutual exchange of views between Gorakṣa and Allama. Unfortunately the date of Gorakṣa cannot be definitely known, though it is known that his doctrines had spread very widely in various parts of India, extending over a long period in the Middle Ages.

The interpretation of *ṣaṭ-sthala* is rather different in different works dealing with it. This shows that, though the *ṣaṭ-sthala* doctrine was regarded as the most important feature of Vīra-śaivism after Basava, we are all confused as to what the *ṣaṭ-sthala* might have been. As a matter of fact we are not even certain about the number. Thus in *Vīra-śaiva-siddhānta* (MS.) we have a reference to 101 *sthalas*, and so also in *Siddhānta-sikhāmaṇi*. But elsewhere in Śrīpati's *bhāṣya*, *Anubhava-sūtra* of Māyī-deva, and in *Prabhu-līṅga-līlā* and *Basava-purāṇa* we find reference to six *sthalas* only.

In the same way the *sthalas* have not been the same in the various authoritative works. The concepts of these *sthalas* are also different, and they are sometimes used in different meanings. In some works *sthala* is used to denote the six nerve plexuses in the body or the six centres from which the power of God is manifested in different ways; sometimes they are used to denote the sixfold majestic powers of God and sometimes to denote the important natural elements, such as earth, fire, air, etc. The whole idea seems to be that the macrocosm and microcosm being the same identical entity, it is possible to control the dissipated forces of any centre and pass on to a more concentrated point of manifestation of the energy, and this process is regarded as the upward process of ascension from one stage to another.

Anubhava-sūtra of Māyi-deva¹.

Upamanyu, the first teacher, was born in Aaipura. The second teacher was Bhīma-nātha Prabhu. Then came Mahā-guru Kalesvara. His son, well versed in *śrauta* and *smārta* literature and their customs and manners, was Śrī Boppa-nātha. Boppa-nātha's son was Śrī Nāka-rāja Prabhu, who was well versed in Vīra-śaiva rites and customs of religion. The disciple of Nāka-rāja was Saṅgameśvara. Saṅgameśvara's son was Māyi-deva. He is well versed in the knowledge of *Śivādvaita*, and he is a *ṣaṭ-sthala-Brahma-vādī*. The *Śaivāgamas* begin with *Kāmika* and end with *Vātula*. *Vātula-tantra* is the best. Its second part, called *Pradīpa*, contains the *Śiva-siddhānta-tantra*. *Ṣaṭ-sthala* doctrine is based on the principles of the *Gītā* together with the older views. It is supported by the instructions of teachers and self-realisation by *anubhūti* and by arguments. In the *Anubhava-sūtra* there are (1) the *guru-paramparā*; (2) the definition of *sthala*; (3) the *līṅga-sthala*; (4) the *aṅga-sthala*; (5) the *līṅga-samyoga-vidhī*; (6) the *līṅgārpaṇa-sadbhāva*; (7) the *sarvāṅga-līṅga-sāhitya*; and (8) the *kriyā-viśrānti*.

Sthala is defined as one Brahman identically the same with *sat*, *cit* and *ānanda*, which is called the ultimate category of Śiva—the ground of the manifestation of the world and dissolution. He is also the category from which the different categories of *mahat*, etc. have sprung forth. '*Stha*' means *Sthāna* and '*la*' means *laya*. It is the source of all energies and all beings have come from it and shall return into it. It is by the self-perturbation of the energy of this ultimate category that the various other *sthalas* are evolved. This one *sthala* may be divided into the *līṅga-sthala* and the *Aṅga-sthala*. As the empty space can be distinctively qualified as the space inside the room or inside the jar, so the dual bifurcation of *sthala* may appear as the object of worship and the worshipper.

Śiva remaining unchanged in Himself appears in these two forms. It is the same Śiva which appears as pure consciousness and also as the part of *līṅga*. The part of *līṅga*, *līṅgāṅga* is also called *jīva* or the individual souls.

¹ *Anubhava-sūtra* forms the second part of *Śiva-siddhānta-tantra*, which is complete in two parts. The first part is *Vīśeṣārtha-prakāśaka*. *Anubhava-sūtra* is written by Māyi-deva; it is evident from the colophons of *Anubhava-sūtra*. It is also mentioned in the last colophon of *Śiva-siddhānta-tantra*.

As *sthala* is of two parts, Brahma and jīva, so His *śakti* is also twofold. It is indeterminate and is called Maheśvara. It assumes two forms by its own pure spontaneity. One part of it may be regarded as associated with *līṅga*, the Brahman, and the other with *aṅga*, the *jīva*. In reality *śakti* and *bhakti* are the same¹. When the energy moves forward for creation it is called *śakti* as *pravṛtti*, and as cessation *nivṛtti* is called *bhakti*². On account of the diverse nature of *bhakti* its indeterminateness disintegrates into various forms. The twofold functions of *śakti* as the upper and the lower show themselves in the fact that the upper one tends to manifest the world and the lower one, appearing as *bhakti*, tends to return to God. In these twofold forms the same *śakti* is called *māyā* and *bhakti*. The *śakti* in the *līṅga* appears as the *bhakti* in the *aṅga*, and the unity of *līṅga* and *aṅga* is the identity of Śiva and *jīva*.

The *līṅga-sthala* is threefold, as: (1) *bhāva-līṅga*; (2) *prāṇa-līṅga*; and (3) *iṣṭa-līṅga*. The *bhāva-līṅga* can only be grasped through inner intuition as pure Being, and this *bhāva-līṅga* is called *niṣkala*. *Prāṇa-līṅga* is the reality as grasped by thought and as such it is both indeterminate and determinate. The *iṣṭa-līṅga* is that which fulfils one's good as self-realisation or adoration, and it is beyond space and time.

The ultimate *śakti* as being pure cessation and beyond all, is *śāntyatīta*; the next one is *icchā-śakti*, called also *vidyā* as pure knowledge. The third one is called the *kriyā-śakti* which leads to cessation. The three *śaktis* of *icchā*, *jñāna* and *kriyā* become sixfold.

The six *sthalas* are again described as follows:

(1) That which is completely full in itself, subtle, having no beginning nor end, and is indefinable, but can be grasped only by the intuition of the heart as the manifestation of pure consciousness, is called the *mahātma-līṅga*.

(2) That in which we find the seed of development as consciousness beyond the senses, called also the *sādākhya-tattva*, is called *prasāda-ghana-līṅga*.

(3) The pure luminous *puruṣa*, which is without inward and outward, without any form, and known by the name Ātman, is called the *cara-līṅga*.

1

2

Śakti-bhaktyor na bhedo 'sti. Anubhava-sūtra, p. 8.
śaktiā prapañca-sṛṣṭiḥ syāu,
bhaktiā tad-vīlayo mataḥ. Ibid.

(4) When this by the *icchā-śakti* manifests itself as the ego, we have what is called *Śiva-līṅga*.

(5) When it by its own knowledge and power and omnipotence assumes the role of an instructor for taking all beings beyond the range of all pleasures, it is called *guru-līṅga*.

(6) The aspect in which by its action it upholds the universe and holds them all in the mind, is called the *ācāra-līṅga*.

There are further divisions and sub-divisions of these *sthalas*, *aṅga-sthala*.

‘*Aṃ*’ means Brahma and ‘*ga*’ means that which goes. *Aṅga-sthala* is of three kinds as *yogāṅga*, *bhogāṅga* and *tyāgāṅga*. In the first, one attains the bliss of union with Śiva. In the second, *bhogāṅga*, one enjoys with Śiva, and in *tyāgāṅga* one leaves aside the illusion or the false notion of the cycle of births and rebirths. *Yogāṅga* is the original cause, the *bhogāṅga* is the subtle cause and *tyāgāṅga* is the gross one. *Yogāṅga* is the dreamless state, *bhogāṅga* is the ordinary state of sleep, and *tyāgāṅga* is the waking state. *Yogāṅga* is the state of *prajñā*, *bhogāṅga* is *taijas* and *tyāgāṅga* is *viśva*. *Yogāṅga* is called the unity with Śiva and *śaraṇa-sthala*. *Bhogāṅga* is twofold, *prāṇa-līṅgi* and *prasādi*. The gross is twofold, *bhakta-sthala* and *māheśvara sthala*. Again *prajñā* is *aikya-sthala* and *śaraṇa-sthala*. The *taijas* is *prāṇa-līṅgi* and *prasādi*. *Viśva* again is twofold as *māheśvara* and *bhakta-sthala*. The unity, the *śaraṇa*, the *prāṇa-līṅgi*, the *prasādi*, the *māheśvara* and the *bhakta* may be regarded as the successive of the six *sthalas*.

Again omnipotence, contentment, and beginningless consciousness, independence, unobstructedness of power and infinite power—these are the parts of God, which being in *ṣaṭ-sthala* are regarded as six types of *bhakti* depending on various conditions. The *bhakti* manifests itself in diverse forms, just as water manifests in various tastes in various fruits. The *bhakti* is of the nature of Śiva. Then it is of the nature of *ānanda* or bliss. Then it is of the nature of *anubhava* or realisation. Then it is of the nature of adoration (*naiṣṭhikī*) and the sixth is of the nature of *bhakti* among good men. It is further said that all those classifications are meaningless. The truth is the identity of myself and everything, all else is false—this is *aikya-sthala*. By the self-illumination of knowledge, the body and senses appear as having no form, being united with God; when everything appears as pure, that is called the *śaraṇa-sthala*.

When one avoids all illusions or errors about body, etc., and conceives in the mind that one is at one with the *līṅga*, that is called the *prāṇa-līṅga*, or *cara-sthala*. When one surrenders all objects of gratification to God, it is called the *prasāda-sthala*, and when one fixes one's mind on God as being one with Him—it is called *māheśvara-sthala*. When the false appears as true and the mind is detached from it by the adorative action of *bhakti*, and the person becomes detached from the world—this is called *bhakti-sthala*. Thus we have another six kinds of *ṣaṭ-sthala*.

Again from another point of view we have another description of *ṣaṭ-sthala*, such as from Ātman comes *ākāśa*, from *ākāśa* comes *vāyu*, from *vāyu* comes *agni*, from *agni* comes water and from water—earth. Again the unity of Ātman with Brahman is called *vyomāṅga*. *Prāṇa-līṅga* is called *vāyuvāṅga*, and *prasāda* is called *analāṅga*, and *maheśvara* is called *jalāṅga* and the *bhakta* is called *bhūmyāṅga*. Again from *bindu* comes *nāda*, and from *nāda* comes *kalā*, and reversely from *kalā* to *bindu*.

Unlike the Vaiṣṇavas, the *Anubhava-sūtra* describes *bhakti* not as attachment involving a sense-duality between the worshipper and the worshipped, but as revealing pure oneness or identity with God in the strongest terms. This implies, and in fact it has been specifically stated, that all ceremonial forms of worship involving duality are merely imaginary creations. In His sportive spirit the Lord may assume diverse forms, but the light of *bhakti* should show that they are all one with Him.

CHAPTER XXXVI

PHILOSOPHY OF ŚRĪKAṆṬHA

**Philosophy of Śaivism as expounded by Śrīkaṇṭha in his
Commentary on the *Brahma-sūtra* and the Sub-
commentary on it by Appaya Dīkṣita.**

INTRODUCTORY

IT has often been stated in the previous volumes of the present work that the *Brahma-sūtra* attributed to Bādarāyaṇa was an attempt at a systematisation of the apparently different strands of the Upaniṣadic thought in the various early Upaniṣads, which form the background of most of the non-heretical systems of Indian philosophy. The *Brahma-sūtra* had been interpreted by the exponents of different schools of thought in various ways, for example, by Śaṅkara, Rāmānuja, Bhāskara, Mādhva, Vallabha, and others, and they have all been dealt with in the previous volumes of the present work. Vedānta primarily means the teachings of the Upaniṣads. Consequently the *Brahma-sūtra* is supposed to be a systematisation of Upaniṣadic wisdom; and its various interpretations in diverse ways by the different exponents of diverse philosophical views, all go by the name of the Vedānta, though the Vedānta philosophy of one school of thinkers may appear to be largely different from that of any other school. Thus while the exposition of the *Brahma-sūtra* by Śaṅkara is monistic, the interpretation of Mādhva is explicitly pluralistic. We have seen the acuteness of the controversy between the adherents of the two schools of thought, extending over centuries, in the fourth volume of the present work.

As Śrīkaṇṭha expounded his views as an interpretation of the *Brahma-sūtra* and accepted the allegiance and loyalty to the Upaniṣads, the work has to be regarded as an interpretation of the Vedānta. Like many other interpretations of the Vedānta (for example, by Rāmānuja, Mādhva, Vallabha, or Nimbārka), the philosophy of Śrīkaṇṭha is associated with the personal religion, where Śiva is regarded as the highest Deity, being equated with

Brahman. It can, therefore, be claimed as an authoritative exposition of Śaivism. Śaivism, or rather Śaiva philosophy, also had assumed various forms, both as expressed in Sanskrit works and in the vernacular Dravidian works. But in the present work, we are only interested in the exposition of Śaiva philosophy in Sanskrit works. The present writer has no access to the original Dravidian literature such as Tamil, Telegu and Canarese, etc., and it is not within the proposed scheme of the present work to collect philosophical materials from the diverse vernacular literature of India.

In introducing his commentary, Śrīkaṇṭha says that the object of his interpretation of the *Brahma-sūtra* is the clarification of its purport since it has been made turbid by previous teachers¹. We do not know who were these previous teachers, but a comparison between the commentary of Śaṅkara and that of Śrīkaṇṭha shows that at least Śaṅkara was one of his targets. Śaṅkara's idea of Śaiva philosophy can briefly be gathered from his commentary on the *Brahma-sūtra* II. 2. 35-8, and his view of the Śaiva philosophy tallies more with some of the Purāṇic interpretations which were in all probability borrowed by Vijñāna Bhikṣu in his commentary on the *Brahma-sūtra* called *Vijñānāmṛta-bhāṣya*, and his commentary on the *Īśvara-gītā* of the *Kūrma-purāṇa*. Śaṅkara lived somewhere about the eighth century A.D., and his testimony shows that the sort of Śaiva philosophy that he expounded was pretty well known to Bādarāyaṇa, so that he included it as a rival system for refutation in the *Brahma-sūtra*. This shows the great antiquity of the Śaiva system of thought, and in a separate section we shall attend to this question.

Śaṅkara came from the Kerala country in the South, and he must have been acquainted with some documents of Śaiva philosophy or the *Śaivāgamas*. But neither Śaṅkara nor his commentators mention their names. But obviously Śrīkaṇṭha followed some *Śaivāgamas*, which were initiated in early times by one called Śveta, an incarnation of Śiva, who must have been followed by other teachers of the same school, and according to Śrīkaṇṭha's own testimony, twenty-eight of them had flourished before

¹ *Vyāsa-sūtram idaṃ netraṃ viduṣāṃ brahma-darśane.
pūrvācāryaiḥ kaluṣitaṃ śrīkaṇṭhena prasādyate.*

Śrīkaṇṭha's *bhāṣya*, introductory verse, 5.

Śrīkaṇṭha and had written *Saivāgama* works. The original teacher Śveta has also been mentioned in the *Vāyavīya saṃhitā* of the *Śiva-mahāpurāṇa*¹.

In the initiatory adoration hymn Śrīkaṇṭha adores Śiva, the Lord, as being of the nature of ego-substance (*aham-padārtha*). The sub-commentator Appaya Dikṣita (A.D. 1550), in following the characterisation of Śiva in the *Mahābhārata*, tries to give an etymological derivation in rather a fanciful way from the root *vaśa*, 'to will.' This means that the personality of Śiva, the Lord, is of the nature of pure egohood and that his will is always directed to the effectuation of good and happiness to all beings. This egohood is also described as 'pure being' (*sat*), 'pure consciousness' (*cit*) and 'pure bliss' (*ānanda*). Śrīkaṇṭha further says that his commentary will expound the essence of the teachings of the Upaniṣads or the Vedānta and will appeal to those who are devoted to Śiva². Śrīkaṇṭha describes Śiva on the one hand as being the category of *aham* or egohood which forms the individual personality, and at the same time regards it as being of the nature of 'pure being,' 'pure consciousness,' and 'pure bliss.' He thinks that this individual personality can be regarded only in unlimited sense to be identified with the infinite nature of Śiva. Appaya Dikṣita in commenting on this verse quotes the testimony of some of the Upaniṣads to emphasise the personal aspect of the God Śiva as a personal God. Ordinarily the word '*sac-cid-ānanda-rūpāya*' would be used in the writings of monistic Vedānta of the school of Śaṅkara, in the sense of a concrete unity of 'pure being,' 'pure consciousness,' and 'pure bliss.' But that kind of interpretation would not suit the purposes of a purely theistic philosophy. For this reason Appaya says that the words '*sac-cid-ānanda*' are the qualities of the supreme God Śiva and that this is indicated by the terminal word '*rūpāya*,' because Brahman as such is *arūpa* or formless. The expansion of the limited individual into the infinite nature of Śiva also implies that the individual enjoys with Him qualities of bliss and consciousness. In a Śaṅkarite interpretation the person who attains liberation becomes one with Brahman, that

Preliminary adoration to Śiva by Śrīkaṇṭha.

is, with the unity of *sat*, *cit* and *ānanda*. He does not enjoy consciousness or bliss but is at once one with it. The Brahman in the system of Śaṅkara and his school is absolutely qualityless and differenceless (*nirviśeṣa*). Rāmānuja in his commentary on the *Brahma-sūtra* tries to refute the idea of Brahman as qualityless or differenceless and regards the Brahman as being the abode of an infinite number of auspicious and benevolent characters and qualities. This is called *saguṇa-brahman*, that is, the Brahman having qualities. The same idea is put forward in a somewhat different form by Śrīkaṇṭha. Except in the Purāṇas and some older Sanskrit literature, the idea of a Brahman with qualities does not seem to be available in the existent philosophical literature outside Rāmānuja. Rāmānuja is said to have followed the *Bodhāyana-vṛtti* which, however, is no longer available. It may, therefore, be suggested that Śrīkaṇṭha's *bhāṣya* was inspired by the *Bodhāyana-vṛtti*, or by Rāmānuja, or by any of the *Śaivāgamas* following a simple theistic idea.

On the one hand Lord Śiva is regarded as the supreme and transcendent Deity, and on the other he is regarded as the material cause of this material universe, just as milk is the material cause of curd. This naturally raises some difficulties, as the supreme God cannot at the same time be regarded as entirely transcendent and also undergoing changes for the creation of the material universe which is to be regarded as of the nature of God Himself. To avoid this difficulty Appaya summarises the view of Śrīkaṇṭha and tries to harmonise the texts of the Upaniṣads, pointing to monistic and dualistic interpretations. He thus says that God Himself is not transformed into the form of the material universe, but the energy of God which manifests itself as the material universe is a part and parcel of the entire personality of God. The material universe is not thus regarded either as illusion or as an attribute of God (in a Spinozistic sense), nor is the universe to be regarded as a part or a limb of God, so that all the activities of the universe are dependent on the will of God, as Rāmānuja holds in his theory of *Viśiṣṭādvaita*; nor does Śrīkaṇṭha regard the relation between the universe and God as being of the same nature as that between the waves or foam and the sea itself. The waves or foam are neither different from nor one with the sea; this is called the *bhedābheda-vāda* of Bhāskara. It may also be noted that this view of Śrīkaṇṭha

is entirely different from the view of Vijñāna Bhikṣu as expressed in the *Vijñānāmṛta-bhāṣya*, a commentary on the *Brahma-sūtra* in which he tries to establish a view well known in the Purāṇas, that the *prakṛti* and the *puruṣa* are abiding entities outside God and are co-existent with Him; they are moved by God for the production of the universe, for the teleological purposes of enjoyment and experience of the *puruṣas*, and ultimately lead the *puruṣas* to liberation beyond bondage. It may not be out of place here to refer to the commentary of Śaṅkara on the *Brahma-sūtra* (II. 2. 37 *et seq.*) where he tried to refute a Śaiva doctrine which regards God as the instrumental cause that transforms the *prakṛti* to form the universe, a view somewhat similar to that found in the *Vijñānāmṛta-bhāṣya* of Vijñāna Bhikṣu. This Śaiva view seems to have been entirely different from the Śaiva view expressed by Śrīkaṇṭha, expressly based on the traditions of the twenty-eight yogācāryas beginning with Śveta. Lord Śiva, the supreme personal God, is regarded as fulfilling all our desires, or rather our beneficent wishes. This idea is brought out by Appaya in his somewhat fanciful etymology of the word 'śiva,' a twofold derivation from the root *vaśa* and from the word 'śiva' meaning good.

Śrīkaṇṭha adores the first teacher of the Śaiva thought and regards him (Śveta) as having made the various Āgamas. But we do not know what these Āgamas were. Appaya in his commentary is also uncertain about the meaning of the word '*nānāgama-vidhāyine*.' He gives two alternative interpretations. In one he suggests that the early teacher Śveta had resolved the various contradictions of the Upaniṣadic texts, and had originated a system of Śaiva thought which may be properly supported by the Upaniṣadic texts. In the second interpretation he suggests that the word '*nānāgama-vidhāyine*,' that is, he who has produced the various Āgamas, only means that the system of Śveta was based on the various *Śaivāgamas*. In such an interpretation we are not sure whether these Āgamas were based on the Upaniṣads or on other vernacular Dravidian texts, or on both.¹ In commenting upon the *bhāṣya* of Śaṅkara on the *Brahma-sūtra* (II. 2. 37), Vācaspati says in his *Bhāmatī* that the systems known as Śaiva,

¹ *asmin pakṣe 'nānāgama-vidhāyina' ity
asya nānāvidha-pāśupatādy-āgama-nirmātrā ity arthaḥ.*

Appaya's commentary on Śrīkaṇṭha's *bhāṣya* (Bombay, 1908), Vol. I, p. 6.

Pāsupata, Kāruṇika-siddhāntin, and the Kāpālikas are known as the fourfold schools called the Māheśvaras¹. They all believe in the Sāṃkhya doctrine of *prakṛti*, *mahat*, etc., and also in some kind of Yoga on the syllable *om*; their final aim was liberation and end of all sorrow. The individual souls are called *paśus* and the word 'pāśa' means bondage. The Maheśvaras believe that God is the instrumental cause of the world as the potter is of jugs and earthen vessels.

Both Śāṅkara and Vācaspati regard this Maheśvara doctrine, based upon certain treatises (*Siddhānta*) written by Maheśvara, as being opposed to the Upaniṣadic texts. None of them mentions the name of the teacher Śveta, who is recorded in Śrīkaṇṭha's *bhāṣya* and the *Śiva-mahāpurāṇa*. It is clear therefore that, if Śāṅkara's testimony is to be believed, this word '*nānāgama-vidhāyine*' cannot mean the reconciliatory doctrine based on the Upaniṣads as composed by Śveta and the other twenty-seven Śaiva teachers². We have already pointed out that the Śaiva doctrine, that we find in Śrīkaṇṭha, is largely different from the Maheśvara school of thought which Śāṅkara and Vācaspati wanted to refute. There Śāṅkara had compared the Maheśvara school of thought as being somewhat similar to the Nyāya philosophy.

What the Siddhānta treatises, supposed to have been written by Maheśvara, were, is still unknown to us. But it is certain that they were composed in the beginning of or before the Christian era, as that doctrine was referred to by Bādarāyaṇa in his *Brahma-sūtra*.

¹ Rāmānuja, however, in his commentary on the same *sūtra* mentions as the fourfold schools the Kāpālas, the Kālamukhas, the Pāsupatas, and the Śaivas.

² The *Vāyavīya-saṃhitā* section mentions the names of the twenty-eight yogācāryas beginning with Śveta. Their names are as follows:

*Śvetah sūtāro madanaḥ suhotraḥ kaṅka eva ca,
laugākṣīś ca mahāmāyo jaigīṣavyas tathaiṣa ca. 2.
dadhivāhaś-ca ṛṣabho munir ugro 'trir eva ca,
supūlako gautamaś ca tathā vedaśirā muniḥ. 3.
gokarṇaś-ca guhāvāśī śikhaḍī cāparaḥ smṛtaḥ,
jaṭmālī cāṭṭahāso dāruko lāṅgulī tathā. 4.
mahākālāś ca śūlī ca daṇḍī muṇḍīśa eva ca,
saviṣṇus soma-śarmā ca lakuliśvara eva ca. 5.*

Vāyavīya-saṃhitā II. 9, verses 2-5 (compare *Kūrma-purāṇa* I. 53, 4 *et seq.*). The names of their pupils are given from II. 9, verses 6-20 (compare *Kūrma-purāṇa* I. 53, 12 *et seq.*).

Each one of the yogācāryas had four disciples. The better known of them are as follows (*Vāyavīya-saṃhitā* II. 9, 10 *et seq.*): Kapila, Asuri, Pañcaśikha, Parāśara, Bṛhadaśva, Devala, Śālihotra, Akṣapāda, Kaṇāda, Ulūka, Vatsa.

Śrīkaṇṭha definitely says that the souls and the inanimate objects, of which the universe is composed, all form materials for the worship of the supreme Lord. The human souls worship Him directly, and the inanimate objects form the materials with which He is worshipped. So the whole universe may be regarded as existing for the sake of the supreme Lord. Śrīkaṇṭha further says that the energy or the power of the Lord forms the basis or the canvas, as it were, on which the whole world is painted in diverse colours. So the reality of the world lies in the nature of God Himself; the universe, as it appears to us, is only a picture-show based on the ultimate reality of God who is regarded as definitely described and testified in the Upaniṣads¹. On the testimony of Śrīkaṇṭha, the philosophy of Śaivism as interpreted by him follows an interpretation of the Upaniṣads and is based on them. It is unfortunate that most of the scholars who have contributed articles to the study of Śaivism or written books on it, have so far mostly ignored the philosophy propounded by Śrīkaṇṭha, although his work had been published as early as 1908.

We have already seen that Śaṅkara in his *bhāṣya* on the *Brahma-sūtra* II. 2. 37, had attributed the instrumentality of God as being the doctrine of the Siddhānta literature supposed to have been written by Maheśvara. Appaya, in commenting upon the same topic dealt with by Śrīkaṇṭha, says that this is the view which may be found in the *Śaivāgamas* when they are imperfectly understood. But neither he nor Śrīkaṇṭha mentions the names of any of the *Śaivāgamas* which have come down to us, which describe the instrumentality of God. So Śrīkaṇṭha also undertakes to refute the view of Śaivism which holds that God is only the instrumental cause of the world. We may therefore infer that some of the *Śaivāgamas* were being interpreted on the line of regarding God as being the instrumental cause of the world.

Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra* II. 2. 37 and the commentary of Appaya on it bring out some other important points. We know from these that there were two types of Āgamas, one meant for the three castes (*Varṇa*) who had access to the Vedic

¹ *nija-śakti-bhitti-nirmīta-nikhila-jagajjālā-citra-nikurumbāḥ,

literature, and the other for those that had no access to the Vedic literature. These latter Āgamas might have been written in the Dravidian vernaculars, or translated into the Dravidian vernaculars from Sanskrit manuals. Śrīkaṇṭha's own interpretation of the *Brahma-sūtra* is based mainly on the views propounded in the *Vāyaviya-saṃhitā* section of the *Śiva-mahāpurāṇa*. In the *Kūrma-purāṇa* and the *Varāha-purāṇa* also we hear of different types of Śaivāgamas and Śaiva schools of thought. Some of the Śaiva schools, such as Lakuliśa or Kāpālikas, are regarded in those Purāṇas (*Kūrma* and *Varāha*) as being outside the pale of Vedic thought, and the upholders of those views are regarded as following delusive Śāstras or scriptures (*mohā-śāstra*). In reply to this it is held that some of those schools follow some impure practices, and have on that account been regarded as *moha-śāstra*. But they are not fully opposed to the Vedic discipline, and they encourage some kinds of adoration and worship which are found in the Vedic practice. The Āgamas of this latter type, that is, which are for the Śūdras and other lower castes, are like the well-known Āgamas such as *Kāmika*, *Mṛgendra*, etc. It is urged, however, that these non-Vedic Āgamas and the Vedic Śaivism as found in the *Vāyaviya-saṃhitā* are essentially authoritative, and both of them owe their origin to Lord Śiva. Their essential doctrines are the same, as both of them regard Śiva as being both the material and the instrumental cause of the world. It is only that some superficial interpreters have tried to explain some of the Āgamas, emphasising the instrumentality of the supreme Lord, and the above topic of the *Brahma-sūtra* is intended to refute such a view of the supreme Lord as being only the efficient or instrumental cause.

It is curious to note that the two systems of Śaiva philosophy called *Lākuliśa-pāśupata* and the *Śaiva-darśana* as treated in the *Sarvadarśana-saṃgraha*, deal mainly with the aspect of God as the efficient cause of the universe; they lay stress on various forms of ritualism, and also encourage certain forms of moral discipline. It is also surprising to note that the *Sarva-darśana-saṃgraha* should not mention Śrīkaṇṭha's *bhāṣya*, though the former was written somewhere about the fourteenth century A.D. and Śrīkaṇṭha's *bhāṣya* must have been written much before that time, though it is not possible for us as yet to locate his time exactly. Neither does the *Sarva-darśana-saṃgraha* refer to any Purāṇic materials as

found in the *Śiva-mahāpurāṇa*, the *Kūrma-purāṇa* and the *Varāha-purāṇa*. But we shall treat of the systems later on in other sections and show their relation with the philosophy as propounded in Śrīkaṇṭha's *bhāṣya*, so far as manuscript material and other published texts are available.

In interpreting the first *sūtra* of the *Brahma-sūtra* '*athāto-brahma-jijñāsā*,' Śrīkaṇṭha first introduces a long discussion on the meaning of the word '*atha*.' The word '*atha*' generally means 'after,' or it introduces a subject to a proper incipient. Śrīkaṇṭha holds that the entire *Mīmāṃsā-sūtra* by Jaimini, beginning with "*athāto dharma-jijñāsā*" to the last *sūtra* of the *Brahma-sūtra* IV. 4. 22 "*anāvṛttiḥ śabdād anāvṛttiḥ śabdāt*," is one whole. Consequently the *brahma-jijñāsā* or the inquiry as to the nature of Brahman must follow the inquiry as to the nature of *dharma*, which forms the subject-matter of the *Pūrva-mīmāṃsā-sūtra* of Jaimini. We have seen in our other volumes that the subject-matter of the *Pūrva-mīmāṃsā* starts with the definition of the nature of *dharma*, which is regarded as being the beneficial results accruing from the dictates of the Vedic imperatives "*codanā-lakṣaṇor̥tho dharmah*"). The sacrifices thus are regarded as *dharma*, and these sacrifices are done partly for the attainment of some desired benefits such as the birth of a son, attainment of prosperity, a shower of rain, or long residence in heaven after death; partly also as obligatory rites, and those which are obligatory on ceremonial occasions. Generally speaking these sacrificial duties have but little relation to an inquiry about the nature of Brahman. Śaṅkara, therefore, had taken great pains in his commentary on the *Brahma-sūtra* as well as in his commentary on the *Gītā*, to show that the sacrificial duties are to be assigned to persons of an entirely different character from those who are entitled to inquire about the nature of Brahman. The two parts of sacrifices (*karma*) and knowledge (*jñāna*) are entirely different and are intended for two different classes of persons. Again, while the result of *dharma* may lead to mundane prosperity or a residence in heaven for a time and will, after a time, bring the person in the cycle of transmigratory birth and death, the knowledge of Brahman once attained or intuited directly, would liberate the person from all bondage eternally. So, these two courses, that is the path of *karma* and the path of knowledge, cannot be regarded as complementary to each other. It is

wrong to regard them as segments of the same circle. This is what is known as the refutation by Śaṅkara of the joint performance of *karma* and *jñāna*, technically called the *jñāna-karma-samuccaya-vāda*.

Śrīkaṇṭha here takes an entirely opposite view. He says that the Brāhmin who is properly initiated with the holy thread has a right to study the Vedas, has even an obligatory duty to study the Vedas under a proper teacher, and when he has mastered the Vedas he also acquaints himself with their meaning. So the study of the Vedas with a full comprehension of their meaning must be regarded as preceding any inquiry or discussion regarding the nature of Brahman. As *dharma* can be known from the Vedas, so the Brahman has also to be known by the study of the Vedas. Consequently, one who has not studied the Vedas is not entitled to enter into any discussion regarding the nature of Brahman. But then it cannot be said that merely after the study of the Vedas one is entitled to enter into a discussion regarding the nature of Brahman. For such a person must, after the study of the Vedas, discuss the nature of *dharma*, without which he cannot be introduced into a discussion regarding the nature of Brahman. So the discussion about the nature of Brahman can only begin after a discussion on the nature of *dharma*¹. He further says that it may be that the principles and maxims used in the interpretation of Vedic injunctions as found in the *Pūrva-mīmāṃsā* were necessary for the understanding of the Upaniṣadic texts leading to a discussion on the nature of Brahman. It is for this reason that a discussion of the nature of *dharma* is indispensably necessary for the discussion of the nature of Brahman.

It cannot, however, be said that if sacrifices lead to an understanding of the nature of Brahman, what is the good of any discussion on its nature. One might rather indulge in a discussion of the nature of *dharma*, because when the Vedic duties are performed without desire for the fulfilment of any purpose, that itself might purify the mind of a man and make him fit for inquiring into the nature of Brahman, for, by such a purposeless performance of

¹ *tarhi kiṃ anantaram asyārambhaḥ. dharma-vicārānantaram. Śrīkaṇṭha's bhāṣya* I. 1. 1, Vol. I, p. 34.

na vāyam dharma-brahma-vicāra-rūpayoś śāstrayor atyanta-b-hedavādinah. kintu ekatva-vādinah. Ibid.

Vedic sacrifices, one may be purified of one's sins, and this may lead to a proper illumination of the nature of Brahman¹. He also makes references to Gautama and other *smṛtis* to establish the view that only those who are initiated in the Vedic ceremonial works are entitled to abide with Brahman, and get commingled with him. The most important point is that only those Vedic sacrifices which are done without any idea of the achievement of a purpose lead finally to the cessation of sins, and thereby making the Brahman-illumination possible. In the case of such a person the result of *karma* becomes the same as the result of knowledge. The *karmas* are to be performed until true knowledge dawns. Consequently one can say that the discussion on the nature of Brahman must be preceded by the discussion on the nature of *dharma* accruing from the prescribed Vedic duties. The inquiry after the nature of Brahman is not meant as the carrying out of any Vedic mandate, but people turn to it for its superior attraction as being the most valued possession that one may have, and one can perceive that only when one's mind is completely purified by performing the Vedic duties in a disinterested manner, can one attain the knowledge of Brahman. It is only in this way that we can regard the discussion on the nature of *dharma* as leading to the discussion of the nature of Brahman. If the mind is not purified by the performance of the Vedic duties in a disinterested manner, then the mere performance of the Vedic duties does not entitle anyone to inquire about the nature of Brahman.

Appaya Dikṣita, in commenting on the above *bhāṣya* of Śrīkaṇṭha, says that the discussion on the nature of Brahman means a discussion on the texts of the Upaniṣads. Such discussions would naturally lead to the apprehension of the nature of Brahman. The word '*brahman*' is derived from the root '*br̥ṇhati*' meaning 'great' which again is not limited by any qualification of time, space, or quality, that is, which is unlimitedly great. We have to accept this meaning because there is nothing to signify any limitation of any kind (*saṃkocakābhāvāt*). The Brahman is different from all that is animate (*cetana*) and inanimate (*acetana*). There are two kinds of energy: that which is the representative of the material power or energy (*jaḍa-śakti*), which transforms itself in the form of

¹ *tasya phalābhisandhi-rahitasya pāpāpanayana-rūpacitta-suddhi-sampādana-dvārā bodha-hetuvāt. Śrīkaṇṭha's bhāṣya* I. 1. 1, Vol. I, p. 39.

the material universe under the direction or instrumentality of the Brahman; and there is also the energy as consciousness (*cicchakti*), and this consciousness energy, as we find it in animate beings, is also controlled by the Brahman¹. The Brahman Himself is different from the phenomenal world consisting of inanimate things and conscious souls. But as the conscious souls and unconscious world are both manifestations of the energy of God called Brahman or Śiva or any other of His names, God Himself has no other instrument for the creation and maintenance of the world. So the greatness of Brahman is absolutely unlimited as there is nothing else beyond Him which can lend Him any support. The two energies of God representing the material cause and the spiritual force may be regarded somehow as the qualities of God.

Just as a tree has leaves and flowers, but still in spite of this variety is regarded as one tree, so God also, though He has these diversified energies as his qualities, is regarded as one. So, when considered from the aspect of material and spiritual energies, the two may be differentiated from the nature of Brahman, yet considered internally they should be regarded as being one with Brahman. These two energies have no existence separate from the nature of God. The word 'brahman' means not only unlimitedness, it also means that He serves all possible purposes. He creates the world at the time of creation and then leading the souls through many kinds of enjoyment and sorrow, ultimately expands them into His own nature when the liberation takes place.

Appaya Dikṣita, after a long discussion, conclusively points out that not all persons who had passed through the discipline of sacrificial duties are entitled to inquire about the nature of Brahman. Only those who, by reason of their deeds in past lives, had had their minds properly purified could further purify their minds in this life by the performance of the Vedic duties without any desire for fruit, and can attain a discriminative knowledge of what is eternal and non-eternal, and have the necessary disinclination (*vairāgya*), inner control and external control of actions and desire for liberation, thereby qualifying themselves for making an

¹ *tasya cetanācetana-prapañca-vilakṣanatvā-bhyupagameṇa vastu-paricchīnat-vād ity āśaṅkāṃ niraśitum ādya-viśeṣaṇam. sakala-cetanācetana-prapañcā-kāryayā tadrūpa-pariṇāmīnyā parama-śaktyā jaḍa-śakter māyāyā niyāmakatvena tata utkrīṣṭayā cicchaktyā viśiṣṭasya. Śivārkaṇṭha-dīpikā, Appaya's commentary, Vol. I, p. 68.*

inquiry about the nature of Brahman. Appaya Dikṣita thus tries to bridge over the gulf between the standpoint of Śrīkaṇṭha and the standpoint of Śaṅkara. With Śaṅkara it is only those inner virtues and qualities, desire for liberation and the like that could entitle a person to inquire about the nature of Brahman. According to Śaṅkara the discussion on the nature of Vedic duties or their performance did not form an indispensable precedent to the inquiry about the nature of Brahman. But Appaya Dikṣita tries to connect Śrīkaṇṭha's view with that of Śaṅkara by suggesting that only in those cases where, on account of good deeds in past lives, one's mind is sufficiently purified to be further chastened by the desireless performance of Vedic duties, that one can attain the mental virtues and equipments pointed out by Śaṅkara as an indispensable desideratum for inquiry into the nature of Brahman.

Appaya Dikṣita tries to justify the possibility of a discussion regarding the nature of Brahman by pointing out that in the various texts of the Upaniṣads the Brahman is variously described as being the ego, the food, the bio-motor force (*prāṇa*), and the like. It is necessary, therefore, by textual criticism to find out the exact connotation of Brahman. If Brahman meant only the ego, or if it meant the pure differenceless consciousness, then there would be no scope for discussion. No one doubts his own limited ego and nothing is gained by knowing Brahman, which is pure differenceless consciousness. For this reason it is necessary to discuss the various texts of the Upaniṣads which give evidence of a personal God who can bestow on His devotee eternal bliss and eternal consciousness.

The Nature of Brahman.

Śrīkaṇṭha introduces a number of Upaniṣadic texts supposed to describe or define the nature of Brahman. These apparently are in conflict with one another, and the contradiction is not resolved either by taking those definitions alternately or collectively, and for this reason it is felt necessary to enter into a textual and critical interpretation of those texts as yielding a unified meaning. These texts describe Brahman as that from which everything has sprung into being and into which everything will ultimately return, and

taht, it is of the nature of pure bliss, pure being and pure consciousness. Appaya Dikṣita says that, such qualities being ascribed to various deities, it is for us to find out the really ultimate Deity, the Lord Śiva, who has all these qualities. He also introduces a long discussion as to whether the ascription of these diverse epithets would cause any reasonable doubt as to the entity or person who possesses them. He further enters into a long discussion as to the nature of doubt that may arise when an entity is described with many epithets, or when an entity is described with many contradictory epithets, or when several objects are described as having one common epithet. In the course of this discussion he introduces many problems of doubt with which we are already familiar in our treatment of Indian philosophy¹. Ultimately Appaya tries to emphasise the fact that these qualities may be regarded as abiding in the person of Śiva and there can be no contradiction, as qualities do not mean contradictory entities. Many qualities of diverse character may remain in harmony in one entity or person.

Lord Śiva is supposed to be the cause of the creation of the world, its maintenance, and its ultimate dissolution, or the liberation of souls, through the cessation of bondage. All these qualities of the production of the world, its maintenance, etc., belong to the phenomenal world of appearance, and cannot therefore be attributed to the Lord Śiva as constituting His essential definition. It is true that a person may, by his good deeds and his disinclination to worldly enjoyments and devotion, attain liberation automatically. But even in such cases it has to be answered that, though the person may be regarded as an active agent with reference to his actions, yet the grace of God has to be admitted as determining him to act. So also, since all the epithets of creation, maintenance, etc., belong to the world of appearance, they cannot be regarded as in any way limiting the nature of Lord Śiva. They may at best be regarded as non-essential qualities by which we can only signify the nature of Brahman, but cannot get at His own true nature. The application of the concept of agency to individual persons or inanimate things is only one of emphasis; for, from certain points of view, one may say that a person attains liberation by his own action, while from another point of view the whole action of the individual may be

¹ See especially the third volume of the present work dealing with the problem of doubt in Venkaṭa.

regarded as being due to the grace of God. So, from one point of view the laws of the world of appearance may be regarded as natural laws, while from another all the natural laws may be regarded as being the manifestations of the grace of God.

It may be urged that if Lord Śiva is all-merciful why does He not remove the sorrows of all beings by liberating them? To this question it may be said that it is only when, by the deeds of the persons, the veil of ignorance and impurity is removed that the ever-flowing mercy of God manifests itself in liberating the person. Thus there is a twofold action, one by the person himself and the other by the extension of mercy on the part of God in consonance with his actions.

Again, the dissolution of the world of appearance is not a magical disappearance, but rather the return of the grosser nature of the *prakṛti* or primal matter into its subtle nature of the same *prakṛti*. The world as a whole is not illusion, but it had at one time manifested itself in a grosser form of apparent reality, and in the end it will again return into the subtle nature of the cosmic matter or *prakṛti*. This return into the nature of the subtle *prakṛti* is due to the conjoint actions of all animate beings as favoured by the grace of God.

The second *sūtra*, which describes or defines Brahman as that from which all things have come into being, into which all things will ultimately return, and wherein all things are maintained, regards these qualities of production, maintenance, and dissolution of all things, according to Śrīkaṇṭha as interpreted by Appaya, as being the final determinant causal aspect, both material and instrumental, by virtue of which the nature of Brahman as God or Īśvara can be inferred. So according to Śrīkaṇṭha and Appaya this *sūtra* '*janmādy-asya yataḥ*' should be regarded as a statement of infallible inference of the nature of Brahman. Śaṅkara in his commentary had definitely pointed out that those who regard Īśvara or God as the cause of all things and beings interpret this *sūtra* as an example of inference, by which the unlimited nature of Brahman could be directly argued; and that such a definition, in that it points out the reasons, is sufficient description, not too wide nor too narrow. Therefore, by this argument one can understand the Brahman as being the supreme and unlimited Lord of the whole of the material and spiritual universe. Śaṅkara definitely

refuses to accept such an interpretation, and regards it as merely stating the general purport of the Upaniṣadic texts, which say that it is from Brahman that everything has come into being, and that it is in and through Brahman that everything lives, and that ultimately everything returns into Brahman. The main point at issue between Śaṅkara and Śrīkaṇṭha is that, while Śaṅkara refuses to accept this *sūtra* as establishing an argument in favour of the existence of Brahman, and while he regards the purpose of the *Brahma-sūtra* as being nothing more than to reconcile and relate in a harmonious manner the different texts of the Upaniṣads, Śrīkaṇṭha and the other Śaivas regard this *sūtra* as an inferential statement in favour of the existence of the unlimited Brahman or the supreme Lord Śiva¹.

Rāmānuja also does not interpret this *sūtra* as being an inferential statement for establishing the nature and existence of Brahman. He thinks that by reconciling the apparently contradictory statements of the Upaniṣadic texts, and by regarding Brahman as the cause of the production, maintenance, and dissolution of the world, it is possible to have an intuition or apprehension of the nature of Brahman through the Upaniṣadic texts².

Śrīkaṇṭha tries to interpret the various epithets of Brahman such as *ānanda* or bliss, *sat* or being, *jñāna* or consciousness, and the fact that in some texts Śiva is mentioned as the original cause of the world in the sense that Śiva is both the original and ultimate cause of the universe. He raises the difficulty of treating these epithets as applying to Brahman either alternately or collectively. He also further raises the difficulty that in some of the Upaniṣadic texts *prakṛti*, which is inanimate, is called the *māyā* and the cause of the inanimate world. If Brahman is of the nature of knowledge or consciousness then He could not have transformed Himself into the material world. The transformation of pure consciousness into the material universe would mean that Brahman is changeable and this would contradict the Upaniṣadic statement that the Brahman is absolutely without any action and in a state of pure passivity.

¹ *etad evānumānam saṃsāriṇo-vyatirikte-śvarāstitvādi-sādhanaṃ manyanta īśvara-kāraṇinaḥ. nanu ihāpi tad evopanyastam jannmādi-sūtre, na; vedānta-vākya-kusuma-grathanārthatvāt sūtrāṇām. Śaṅkara's bhāṣya on Brahma-sūtra 1.*

1. 2.

² Rāmānuja's *bhāṣya* on *Brahma-sūtra* 1. 1. 2.

From this point of view the objector might say that all the epithets that are ascribed to Brahman in the Upaniṣads cannot be applied to it at the same time, and they may not be taken collectively as the defining characteristics of the nature of Brahman. Śrīkaṇṭha, therefore, thinks that the abstract terms as truth, consciousness, bliss, etc., that are applied to Brahman, are to be taken as personal qualities of the Supreme Lord. Thus, instead of regarding Brahman as pure consciousness, Śrīkaṇṭha considers the Supreme Lord as being endowed with omniscience, eternally self-satisfied, independent, that is, one who always contains his power or energy, and one who possesses omnipotence. He is eternally self-efficient (*nitya aparokṣa*) and never depends on any external thing for the execution of his energy or power (*anaṣṭhita-bāhya-karaṇa*). Lord Śiva, thus being omniscient, knows the deeds of all animate beings and the fruits of those deeds to which they are entitled, and He also knows the forms of bodies that these animate souls should have in accordance with their past deeds, and He has thus a direct knowledge of the collocation of materials with which these bodies are to be built up¹. The fact that the Brahman is described as *ānanda* or bliss is interpreted as meaning that Lord Śiva is always full of bliss and self-contented².

In the Upaniṣads it is said that the Brahman has the *ākāśa* as his body (*ākāśa-śarīram brahma*). It is also said in some of the Upaniṣads that this *ākāśa* is bliss (*ānanda*). Śrīkaṇṭha says that this *ākāśa* is not the elemental *ākāśa* (*bhūtākāśa*); it merely means the plane of consciousness (*cidākāśa*), and in that way it means the ultimate material (*para-prakṛti*), which is the same as the ultimate energy. Appaya points out that there are people who think that the energy of consciousness is like an instrument for creating this universe, as an axe for cutting down a tree. But Appaya denies this view and holds that the ultimate energy is called the *ākāśa*³. It is this energy of consciousness

¹ *anena sakala-cetana-bahu-vidha-karma-phala-bhogānu-kūla-tat-tac-charīra-nirmāṇopāya-sāmagrī-viśeṣa jñam brahma nimittam bhavati*. Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra* I. 1. 2, p. 121.

² *parabrahma-dharmatvena ca sa eva ānando brahmeti pracuravād brahmat-venopacaryate. tādṛśānanda-bhoga-rasikaṃ brahma nitya-triptam ity ucyate*. *Ibid.* p. 122.

³ *yasya sā paramā devī śaktir ākāśa-saṃjñitā*. Appaya's commentary, Vol. I, p. 123.

(*cicchakti*) that is regarded as pervading through all things and it is this energy that undergoes the transformations for the creation of the universe. It is this *cicchakti* that is to be regarded as the original force of life that manifests itself in the activities of life. All kinds of life functions and all experiences of pleasure are based on the lower or on the higher level of this ultimate life force, called also the *cicchakti* or *ākāśa*.

Again, Brahman is described as being of the nature of being, consciousness and bliss (*ānanda*). In this case, it is held that Brahman enjoys His own bliss without the aid of any external instrumentality. And it is for this reason that the liberated souls may enjoy bliss of a superlative nature without the aid of any external instruments. The truth as consciousness is also the truth as pure bliss which are eternal in their existence not as mere abstract qualities, but as concrete qualities adhering to the person of Lord Śiva. Thus, though the Brahman or Lord Śiva may be absolutely unchangeable in Himself, yet His energy might undergo the transformations that have created this universe. Brahman has thus within Him both the energy of consciousness and the energy of materiality which form the matter of the universe (*cid-acit-prapañca-rūpa-śakti-viśiṣṭatvam svābhāvikam eva brahmaṇaḥ*). As the energy of Brahman is limitless, he can in and through those energies form the material cause of the universe. As all external things are said to have 'being' as the common element that pervades them all, it represents the aspect of Brahman as 'being,' in which capacity it is the material cause of the world. The supreme Lord is called *Śarva*, because all things are finally absorbed in Him. He is called *Īśāna*, because He lords over all things, and He is hence also called *Paśupati*. By the epithet *paśupati* it is signified that He is not only the Lord of all souls (*paśu*), but also all that binds them (*pāśa*). The Brahman thus is the controller of all conscious entities and the material world¹.

It has been said that the *māya* is the primal matter, *prakṛti*, which is the material cause of the universe. But God or the Lord Śiva is said to be always associated with the *māyā*, that is, He has no separate existence entirely apart from the *māyā*. In such a view, if the *māyā* is to be regarded as the material cause of the universe,

¹ *anena cid-acit-niyāmakaṃ brahmeti vijñāyate. Śrīkaṇṭha's bhāṣya on Brahma-sūtra* 1. 1. 2, p. 127.

then the Lord Śiva, who is associated with the *māyā*, has also to be, in some distant sense, regarded as the material cause of the universe. So the final conclusion is that the Brahman as associated with subtle consciousness and subtle materiality is the cause, and the effect is the universe which is but gross consciousness as associated with gross matter¹. It is true, indeed, that the facts of production, maintenance, and dissolution are epithets that can only apply to the phenomenal world, and therefore they cannot be regarded as essential characteristics determining the nature of Brahman as an inferential statement. Yet the production, maintenance, and dissolution of the world of phenomena may be regarded as a temporary phase (*taṭastha-lakṣaṇa*) of the nature of Brahman. It should also be noted that when *māyā* transforms itself into the world by the controlling agency of God, God Himself being eternally associated with *māyā*, may in some sense be regarded as being also the material cause of the world, though in His supreme transcendence He remains outside the *māyā*. The difference between this view and that of Rāmānuja is that, according to the latter, the Brahman is a concrete universal having the entire materiality and the groups of souls always associated with Him and controlled directly by Him, as the limbs of a person are controlled by the person himself. The conception is that of an entire organisation, in which the Brahman is the person and the world of souls and matter are entirely parts of Him and dominated by Him. The position of Śaṅkara is entirely different. He holds that the central meaning of the *sūtra* is just an interpretation of the texts of Upaniṣads which show that the world has come out of Brahman, is maintained in Him, and will ultimately return into Him. But it does not declare that this appearance of the world is ultimately real. Śaṅkara is not concerned with the actual nature of the appearance, but he has his mind fixed on the ultimate and

Appaya Dikṣita's commentary, Vol. 1, p. 134.

unchangeable ground which always remains true and is not only relatively true as the world of appearance¹.

We have said above that Śrīkaṇṭha regarded the second *sūtra* as indicating an inference for the existence of God. But in the course of later discussions he seems to move to the other side, and regards the existence of Brahman as being proved by the testimony of the Vedas. The general argument from the unity of purpose throughout the universe cannot necessarily lead to the postulation of one creator, for a house or a temple which shows unity of purpose is really effected by a large number of architects and artisans. He also thinks that the Vedas were produced by God. That is also somehow regarded as additional testimony to His existence. The nature of Brahman also can be known by reconciling the different Upaniṣadic texts which all point to the supreme existence of Lord Śiva. In *Brahma-sūtra* II. 1. 18, 19 Śrīkaṇṭha says that the Brahman as contracted within Himself is the cause while, when by His inner desire He expands Himself, He shows Himself and the universe which is His effect². This view is more or less like the view of Vallabha, and may be regarded as largely different from the idea of Brahman as given by Śrīkaṇṭha in I. 1. 2. Śrīkaṇṭha, in further illustrating his views, says that he admits Brahman to be the ultimate material cause of the universe only in the sense that the *prakṛti*, from which the world is evolved, is itself in Brahman. So as Brahman cannot remain without His *śakti* or energy, He can be regarded as the material cause of the world, though He in Himself remains transcendent, and it is only His *māyā* that works as an immanent cause of the production of the world. He thus says that there is a difference between the individual souls and the Brahman, and there is a difference between the *prakṛti* and the Brahman. He would not admit that the world of appearance is entirely different from Brahman; neither would he admit that they are entirely identical. His position is like that of the modified

monists, like that of the *Viśiṣṭādvaita-vāda* of Rāmānuja. Brahman exists in quite a transcendent manner, apart from the individual souls and the inanimate world. But yet, since the individual souls and the material universe are emanations from His energy, the world of souls and matter may be regarded as parts of Him, though they are completely transcended by Himself¹.

Moral Responsibility and the Grace of God.

The question is, why did the supreme Lord create the whole universe? He is always self-realised and self-satisfied, and He has no attachment and no antipathy. He is absolutely neutral and impartial. How is it, then, that He should create a world which is so full of happiness to some (e.g. the gods) and so full of sorrow and misery to others? This will naturally lead us to the charge of partiality and cruelty. Moreover, since before the creation there must have been destruction, it will necessarily be argued that God Himself is so cruel as to indulge in universal destruction out of simple cruelty. So one may naturally argue that what purpose should God have in creating a world which is not a field for the attainment of our own desires and values. The reply given to this is that God indulges in the creation and destruction of the world in accordance with the diversity of human deeds and their results (*karma* and *karmaphala*).

It cannot be argued that before the creation there were no souls, for we know from the Upaniṣadic texts that the souls and God both exist eternally. As the souls have no beginning in time, so their deeds also are beginningless. This may lead to an infinite regress, but this infinite regress is not vicious. The series of births and deaths in the world in different bodies is within the stream of beginningless *karma*. Since God in His omniscience directly knows by intuition the various kinds of deeds that the individual

¹ *bhedābheda-kalpanaṃ viśiṣṭādvaitaṃ sādhayāmaḥ na vayaṃ brahma-prapañcayor atyantam eva bheda-vādināḥ ghaṭa-paṭayor iva. tad-ananyatva-para-śruti-virodhāt. na vā'tyantā-bheda-vādināḥ śukti-rajatayor iva. ekatara-mūhyātvena tat-svābhāvika-guṇa-bheda paraśruti-virodhāt. na ca bhedābheda-vādināḥ, vastu-virodhāt. kin tu śarīra-śarīrīṇor iva guṇa-guṇīṇor iva ca viśiṣṭādvaita-vādināḥ. prapañca-brahm aṇor ananyatvam nāma mṛd-ghaṭayor iva guṇa-guṇīṇor iva ca kārya-kāraṇatvena viśeṣaṇa-viśeṣyatvena ca vinābhāva-rahitatvam. Śrīkaṇṭha's bhāṣya on Brahma-sūtra II. 1. 22, Vol. II, p. 31.*

would perform, He arranges suitable bodies and circumstances for the enjoyment or suffering of such deeds already anticipated by Him. So the difference in creation is due to the diversity of one's deeds. The time of destruction comes when the souls become tired and fatigued by the process of birth and death, and require some rest in dreamless sleep. So the effectuation of dissolution does not prove the cruelty of God.

Now, since the pleasures and sorrows of all beings depend upon their deeds (*karma*), what is the necessity of admitting any God at all? The reply is that the law of *karma* depends upon the will of God and it does not operate in an autonomous manner, nor does it curb the freedom or independence of God. This, however, would lead us in a circular way to the same position, for while the pleasures and sorrows of men depend upon the deeds of men and the law of *karma*, and since the law of *karma* depends upon the will of God, it actually means that the pleasures and sorrows of beings are due indirectly to the partiality of God.

Again, since the *karma* and the law of *karma* are both unintelligent, they must be operated by the intelligence of God. But how could God before the creation, when beings were devoid of the miseries of death and birth, were not endowed with any bodies, and were therefore in a state of enjoyment, associate them with bodies, lead them to the cycle of birth and rebirth, and expose them to so much sorrow? The reply is that God extends His grace to all (*sarvānugrāhaka paramēśvara*); and thus, since without the fruition of one's deeds (*karmapākaṁ antareṇa*) there cannot be pure knowledge, and since without pure knowledge there cannot be the liberation of enjoying bliss in a superlative manner, and since also without the fruition of *karma* through enjoyment and suffering there cannot be the relevant bodies through which the souls could enjoy or suffer the fruits of *karma*, bodies have necessarily to be associated with all the souls which were lying idle at the time of the dissolution. So when in this manner the deeds of a person are exhausted through enjoyment or suffering, and the minds of beings become pure, it is only then that there may arise self-knowledge leading to the supreme bliss of liberation.

It may again be asked that, if God is absolutely merciful, why could not He arrange for the fruition of the deeds of all persons at one and the same time and allow them to enjoy the bliss of

liberation? The reply is that, even if God would have extended His grace uniformly to all persons, then those whose impurities have been burnt up would be liberated and those whose impurities still remained could only attain salvation through the process of time. Thus, though God is always self-contented, He operates only for the benefit of all beings.

From the interpretation of Appaya it appears that the word grace (*annugraha*) is taken by him in the sense of justice. So God does not merely extend His mercy, but His mercy is an extension of justice in accordance with the deeds of persons, and therefore He cannot be regarded as partial or cruel¹. Appaya anticipates the objection that in such a view there is no scope for the absolute lordship of God, for He only awards happiness and misery in accordance with the law of *karma*. It is therefore meaningless to say that it is He, the Lord, that makes one commit sins or perform good deeds merely as He wishes to lower a person or to elevate him. For God does not on His own will make one do bad or good deeds, but the persons themselves perform good or bad actions according to their own inclinations as acquired in past creations, and it is in accordance with those deeds that the new creation is made for the fulfilment of the law of *karma*². Appaya further says that the good and bad deeds are but the qualities of the mind (*antahkaraṇa*) of the persons. At the time of dissolution these minds are also dissolved in the *māyā* and remain there as unconscious impressions or tendencies (*vāsānā*), and being there they are reproduced in the next creation as individual bodies and their actions in such a way that, though they were dissolved in the *māyā*, they do not commingle, and each one is associated with his own specific mind and deeds at the next birth³. In the Āgamas, where thirty-six categories

¹ *evam ca yathā narapatih prajānām vyavahāra-darśane taditya-yuktāyukta-vacanānusāreṇa annugraha-nigraha-viśeṣam kurvan pakṣapātītva-lakṣaṇam vaiṣamyam na pratipadyate evam īśvaro'pi taditya-karma-viśeṣā-nusāreṇa viśama-sṛṣṭim kurvan na tatpratipadyate*. Appaya Dikṣita's commentary, Vol. II, p. 48.

(*tattva*) are counted, the law of *karma* called *niyati* is also counted as one of the categories. Though the category of *niyati* is admitted, it cannot operate blindly, but only under the superintendence of God, so that the actions or fruits of action of one may not be usurped by another. Pure *niyati* or the law of *karma* could not have done it. The view supported here is that when, at the time of dissolution, all *karmas* are in a state of profound slumber, God awakens them and helps the formation of bodies in accordance with them, and associates the bodies with the respective souls, and makes them suffer or enjoy according to their own deeds.

The problem still remains unexplained as to how we are to reconcile the freedom of will of all persons with the determinism by God. If God is regarded as being responsible for making us act in the way of good or of evil, then deferring God's determination to beginningless lives does not help the solution of the difficulty. If God determines that we shall behave in a particular manner in this life, and if that manner is determined by the actions of our past lives *ad infinitum*, then when we seek for the original determination we are bound to confess that God is partial; for He must have determined us to act differently at some distant period and He is making us act and suffer and enjoy accordingly. So the ultimate responsibility lies with God. In reply to this it is held by Appaya, interpreting the commentary of Śrīkaṇṭha, that we were all born with impurities. Our bondage lies in the veil that covers our wisdom and action, and God, who possesses infinite and manifold powers, is always trying to make us act in such a manner that we may ultimately purify ourselves and make ourselves similar to Him. The dissolution of our impurities through natural transformation is like that of a boil or wound in the body which disappears only after giving some pain. The Vedic duties which are obligatory and occasional help to cure us of these impurities, just as medicine helps to cure a wound, and this may necessarily cause misery of birth and death. It is only when our deeds fructify that knowledge can spring from them. So also by the performance of obligatory and occasional deeds as prescribed in the Vedas, our *karmas* become mature and there arises in us a spirit of disinclination (*vairāgya*), devotion to Śiva and an inquiry after Him, which ultimately produces in us the wisdom that leads to liberation. The fruition of one's *karma* cannot take place without the environment

of the world such as we have it. Thus, for the ultimate liberation we must perform certain actions. God makes us perform these actions, and according to the manifold character of our deeds He creates different kinds of bodies, making us do such actions as we may suffer from, and thereby gradually advance towards the ultimate goal of liberation. In accordance with the diversity of our original impurities and actions, we are made to perform different kinds of deeds, just as a medical adviser would prescribe different kinds of remedies for different diseases. All this is due to the supreme grace of God. Śrīkaṇṭha's usage of the word *karma* means that by which the cycle of birth and death is made possible through the agency of God¹. In the dissolution, of course, there cannot be any process for the fulfilment or fruition of action, so that state is supposed to be brought about only for giving a rest to all beings.

In *Brahma-sūtra* II. 3. 41 Śrīkaṇṭha seems to make it definitely clear that the individual souls themselves do things which may be regarded as the cause of their acting in a particular way, or desisting from a particular way of action, in accordance with the nature of the fruition of their past deeds. It is further said that God only helps a person when he wishes to act in a particular way, or to desist from a particular action. So a man is ultimately responsible for his own volition, which he can follow by the will of God in the practical field of the world. The responsibility of man rests in the assertion of his will and the carrying of the will into action, and the will of God helps us to carry out our will in the external world around us. Man performs his actions in accordance with the way in which he can best satisfy his interests. He is therefore responsible for his actions, though in the actual carrying out of the will he is dependent on God. God thus cannot be charged with partiality or cruelty, for God only leads the individual souls to action in accordance with His own will and inner effort².

¹ *bhāṣye* "karma-pākam antareṇetyādi-vākyeṣu karma-śabdaḥ kriyate" *nena saṃsāra iti karaṇa-vyutpattiyā vā parameśvareṇa pakvaḥ kriyata iti karma-vyutpattiyā vā malāvarenaṇa paro draṣṭavyaḥ*. Appaya Dikṣita's commentary, Vol. II, p. 50.

² *ato jīva-kṛta-prayātñāpekṣatvāt karmasu jīvasya pravartaka īśvaro na vaiṣamyabhāk. tasyāpi svādhāna-pravṛtti-sadbhāvāt vidhi-niṣedhādi-vaiyartham ca na sambhavaatīti siddham*. Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra* II. 3. 41, p. 157.

It is curious to note, however, that Appaya thinks that, even allowing for the inner human effort of will, the individual is wholly dominated by God. Appaya thus leaves no scope for the freedom of the will¹.

In *Brahma-sūtra* II. 2. 36-8 Śrīkaṇṭha makes a special effort to repudiate the view of Śaṅkara, that the Śaivas believed in a doctrine that God was the instrumental cause of the world, and could be known as such through inference. He also repudiates the view that the Brahman or Śiva had entered into the *prakṛti* or the primal matter, and thereby superintended the course of its evolution and transformation into the universe. For in that case He should be open to the enjoyment and suffering associated with the *prakṛti*. Śrīkaṇṭha therefore holds that according to the Śaiva view the Brahman is both the material and the efficient cause of the universe, and that He cannot be known merely by reason, but by the testimony of the Vedic scriptures. There is here apparently an oscillation of view on the subject as propounded by Śrīkaṇṭha. Here and in the earlier parts of his work, as has been pointed out, Śrīkaṇṭha asserts that, though God is the material cause of the universe, He is somehow unaffected by the changes of the world². The ultimate Brahman or Śiva is associated with a subtle energy of consciousness and materiality which together are called *cicchakti*, and as associated with the *cicchakti*, God Śiva is one and beyond everything. When in the beginning of creation there comes out from this supreme *māyā* or *cicchakti* the creative *māyā* which has a serpentine motion, then that energy becomes the material cause of the entire world. It is from this that four categories evolve, namely as *śakti*, *Sadāśiva*, *Maheśvara*, and *Śuddha-vidyā*. After that comes the lower *māyā* of a mixed character, which is in reality the direct material cause of the world and the bodies. Then comes time (*kāla*), destiny (*niyati*), knowledge (*vidyā*), attachment (*rāga*), and the souls. In another line there comes from the impure *māyā* the entire universe and the bodies of living beings. From that comes intelligence (*buddhi*), egotism (*ahaṅkāra*), *manas*, the fivefold cognitive senses, the fivefold conative senses, the fivefold subtle

¹ *tathā ca paramēśvara-kārita-pūrva-karma-mūla-svecchādhāne yatne, paramēśvarādhīnatvaṁ na hīyate*. Appaya's commentary, Vol. II, p. 156.

² *jagad-upādāna-nimitta-bhūtasya'pi paramēśvarasya "niṣkalam niṣkriyam" ityādi-śrutiḥ nirvikāratvaṁ apy upapadyate*. Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra* II. 2. 38, p. 109.

causes of gross matter called *tanmātra*, and also the fivefold elements of matter. Thus are the twenty-three categories. Counting the previous categories, we get thirty-six categories altogether. These are well known in the Śaiva texts and they have been established there both logically and by reference to the testimony of the scriptural texts. A distinction is made, as has been shown above, between the pure *māyā* and the impure *māyā*. The impure *māyā* includes within itself all the effects such as time and the impure souls. The word *vyakta* is used to denote the material cause or the purely material world, including the mental psychosis called *buddhi*.

The category of Śiva is also sometimes denoted by the term *śakti* or energy¹. The word *śiva-tattva* has also been used as merely Śiva in the *Vāyaviya-saṃhitā*.

We have seen before that Śaṅkara explained this topic of the *Brahma-sūtra* as refuting the view of the different schools of Śaivas or Maheśvaras who regard God as being the instrumental cause of the universe. Śrīkaṇṭha has tried to show that God is both the material cause and the instrumental cause of the universe. In his support he addresses texts from the *Vāyaviya-saṃhitā* of the *Śiva-mahāpurāṇa* to show that, according to the Vedic authority, God is both the material and the instrumental cause of the universe. But Śrīkaṇṭha says that, though the Āgamas and the Vedic view of Śaivism are one and the same, since both of them were composed by Śiva, in some of the Āgamas, such as the *Kāmika*, the instrumental side is more emphasised; but that emphasis should not be interpreted as a refutation of the view that God is also the material cause of the universe. It is true that in some sects of Śaivism, such as the Kāpalikas or Kālamukhas, some of the religious practices are of an impure character and so far they may be regarded as non-Vedic; and it is possible that for that reason, in the *Mahābhārata* and elsewhere, some sects of Śaivism have been described as non-Vedic. Yet from the testimony of the *Varāha-purāṇa* and other Purāṇas, Śaivism or the *Pāśupata-yoga* has been regarded as Vedic. Śrīkaṇṭha and Appaya took great pains to bridge the gulf between the vernacular Śaivism and the

¹ *śiva-tattva-śabdena tu śiva evocyate. na tu atra śiva-tattva-śabdaḥ para-śaktiparaḥ. śakti-śabdas tat-kārya-dvītiya-tattva-rūpa-śaktiparaḥ.* Appaya Dīkṣita's commentary, Vol. II, p. 110.

Sanskritic, that is, those forms of Śaivism which were based on the authority of the Vedas and were open to the first three castes (*varṇa*), and those which are open to all castes. Both try to make out that the present topic was not directed against the views propounded in the *Śaivāgamas* as Śāṅkara explained, but against other views which do not form any part of the Śaiva philosophy.

In some texts of the *Kalpa-sūtras* we hear of objections against the valid authority of some of the texts, but these objections do not apply to the Āgamas composed by Śiva. It is said that Śiva cannot be the material cause of the universe, because the Upaniṣads hold that the Brahman is changeless, and in this way an attempt is made to refute the *pariṇāma* doctrine. *Pariṇāma* means "change from a former state to a latter state." It is further held that *śakti* or energy is in itself changeless. Even if that *śakti* be of the nature of consciousness, then such a change would also be inadmissible. Against this view it is held that there may be change in the spiritual power or energy (*cicchakti*) on the occasion of a desire for creation or a desire for destruction. The *cicchakti* which is within us goes out and comes into contact, in association with the senses, with the external objects, and this explains our perception of things. So, since we have to admit the theory of the functional expansion (*vyrtti*) of the *cicchakti*, it is easy to admit that the original *śakti* has also its functional expansion or contraction¹.

According to the Śaiva school as propounded by Śrīkaṇṭha, the individual souls have not emanated from God, but they are co-existent with Him. The apparent scriptural texts that affirm that souls came out of Brahman like sparks from a fire are interpreted as meaning only the later association of souls with *buddhi* and *manas*, and also with the different bodies. It must also be said that the souls are the conscious knowers, both by way of senses and by the *manas*. The *manas* is explained as a special property or quality of knowledge which the soul possesses and by virtue of which it is a knower. This *manas* must be differentiated from a lower type of *manas* which is a product of *prakṛti*, and which becomes associated with the soul in the process of birth and rebirth through association

¹ *teṣvapi sisṛkṣā-saṃjihīrṣādi-vyavahāreṇa śiva-cicchakṭeḥ "cicchaktir artha-saṃyogo-'dhyakṣam indriya-mārgata" iti cicchakti-vyrtti-nīrgama-vyavahāreṇa jīva-cicchakṭeḥ ca pariṇāmitvam āviṣkṛtam eveti bhāvaḥ*. Appaya Dikṣita's commentary, Vol. II, p. 112.

with the power of *māyā*. This power gives it a special character as a knower, by which it can enjoy or suffer pleasure and pain, and which is limited to the body and the egoism. It is by virtue of this *manas* that the soul is called a *jīva*. When through Brahma-knowledge its threefold association with impurities is removed, then it becomes like Brahman, and its self-knowledge in a liberated state manifests itself. This knowledge is almost like Brahma-knowledge. In this state the individual soul may enjoy its own natural joy without the association of any of the internal organs, merely by the *manas*. The *manas* there is the only internal organ for the enjoyment of bliss and there is no necessity of any external organs. The difference between the individual soul and God is that the latter is omniscient and the former knows things only particularly during the process of birth and rebirth. But in the actual state of liberation the souls also become omniscient¹. Śrīkaṇṭha also holds that the souls are all atomic in size, and that they are not of the nature of pure consciousness, but they all possess knowledge as their permanent quality. In all these points Śrīkaṇṭha differs from Śaṅkara and is in partial agreement with Rāmānuja. Knowledge as consciousness is not an acquired quality of the soul as with the Naiyāyikas or the Vaiśeṣikas, but it is always invariably co-existent in the nature of the selves. The individual souls are also regarded as the real agents of their actions, and not merely illusory agents, as some philosophical theories hold. Thus Sāṃkhya maintains that the *prakṛti* is the real agent and also the real enjoyer of joys and sorrows, which are falsely attributed to the individual souls. According to Śrīkaṇṭha, however, the souls are both real agents and real enjoyers of their deeds. It is by the individual will that a soul performs an action, and there is no misattribution of the sense of agency as is supposed by Sāṃkhya or other schools of thought. The souls are ultimately regarded as parts of Brahman, and Śrīkaṇṭha tries to repudiate the monistic view that God falsely appears as an individual soul through the limitations of causes and conditions (*upādhi*)².

¹ *tat-sadṛśa-guṇatvāt apagata-saṃsārasya jīvasya svarūpānandānubhava-sādhanaṃ manorūpam antaḥ-karaṇam anapekṣita-bāhya-karaṇam asti iti gamyate. jñājñau iti jīvasya ajñatvam kiñcij jñatvam eva. asaṃsāriṇaḥ paramēśvarasya tu sarvajñatvam ucyate. ataḥ saṃsāre kiñcij jñatvam muktau sarvajñatvam iti jñātā eva ātmā. Śrīkaṇṭha's bhāṣya on Brahma-sūtra, II. 3. 19, pp. 142-3.*

² Śrīkaṇṭha's bhāṣya on Brahma-sūtra, II, 3. 42-52.

Regarding the view that *karmas* or deeds produce their own effects directly, or through the intermediary of certain effects called *apūrvā*, Śrīkaṇṭha holds that the *karmas* being without any intelligence (*acetana*) cannot be expected to produce the manifold effects running through various births and various bodies. It has therefore to be admitted that, as the *karmas* can be performed only by the will of God operating in consonance with the original free will of man, or as determined in later stages by his own *karma*, so the prints of all the *karmas* are also distributed in the proper order by the grace of God. In this way God is ultimately responsible on the one hand for our actions, and on the other for the enjoyment and suffering in accordance with our *karmas*, without any prejudice to our moral responsibility as expressed in our original free inclination or as determined later by our own deeds.¹

In the state of liberation the liberated soul does not become one with the Brahman in its state of being without any qualities. The Upaniṣadic texts that affirm that the Brahman is without any qualities do so only with the view to affirm that Brahman has none of the undesirable qualities, and that He is endowed with all excellent qualities which are consistent with our notion of God. When in the state of liberation the liberated souls become one with the Brahman, it only means that they share with God all His excellent qualities, but they never become divested of all qualities, as the monistic interpretation of Śaṅkara likes to explain. It has been pointed out before that God may have many attributes at one and the same time, and that such a conception is not self-contradictory if it is not affirmed that he has many qualities of a contradictory character at one and the same time. Thus, we can speak of a lotus as being white, fragrant and big, but we cannot speak of it as being both blue and white at the same time.²

Śrīkaṇṭha holds that only those *karmas* which are ripe for producing fruits (*prārabdha-karma*) will continue to give fruits, and will do so until the present body falls away. No amount of knowledge or intuition can save us from enjoying or suffering the fruits of *karma* that we have earned, but if we attain true knowledge by continuing our meditation on the nature of Śiva as being one with ourselves, we shall not have to suffer birth and rebirth of the

¹ Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra*, III. 2. 37-40.

² Śrīkaṇṭha's *bhāṣya* on *Brahma-sūtra*, III. 3. 40.

accumulated *karmas* which had not yet ripened to the stage of giving their fruits of enjoyment or suffering¹.

When all the impurities (*mala*) are removed and a person is liberated, he can in that state of liberation enjoy all blissful experiences and all kinds of powers, except the power of creating the universe. He can remain without a body and enjoy all happiness through his mind alone, or he can at one and the same time animate or recreate many spiritual bodies which transcend the laws of *prakṛti*, and through them enjoy any happiness that he wishes to have. In no case, however, is he at that stage brought under the law of *karma* to suffer the cycles of birth and rebirth, but remains absolutely free in himself in tune with the Lord Śiva, with whom he may participate in all kinds of pleasurable experiences. He thus retains his personality and power of enjoying pleasures. He does this only through his mind or through his immaterial body and senses. His experiences would no longer be of the type of the experiences of normal persons, who utilise experiences for attaining particular ends. His experience of the world would be a vision of it as being of the nature of Brahman².

CHAPTER XXXVII

THE ŚAIVA PHILOSOPHY IN THE PURĀṆAS

The Śaiva Philosophy in the *Śiva-mahāpurāṇa*.

WE shall discuss the antiquity of the Śaiva religion and philosophy in a separate section. It is a pity that it is extremely difficult, nay, almost impossible, to trace the history of the continuous development of Śaiva thought from earliest times. We can do no more than make separate studies of different aspects of Śaiva thought appearing in different contexts, and then try to piece them together into an unsatisfactory whole. This is largely due to various factors. First, the Śaiva thought was expressed both in Sanskrit and also in Dravidian languages. We do not yet know definitely if the Dravidian texts were but translations from Sanskrit sources, or were only inspired by Sanskrit writings. Later writers, even in the Purāṇas, hold that Śiva was the author of all Śaiva scriptures either in Sanskrit or in Dravidian. This, of course, refers to the earliest writings, the Āgamas.

We do not know the exact date of the earliest Āgamas. The word 'āgama' needs a little explanation. It means "texts that have come down to us", and which are attributed either to God or to some mythical personage. We have a list of twenty-eight Śivācaryas in the *Vāyaviya-saṃhitā* of the *Śiva-mahāpurāṇa*, and these have been referred to as late as the tenth century A.D. But there is nothing to prove the historical existence of these Śaiva teachers, nor do we know what Āgamas we owe to each of them. We have no direct knowledge of any Dravidian philosophical culture before the Aryan culture had penetrated into the South. It is, therefore, difficult to imagine how there could be Dravidian works of philosophy which ran parallel to the Sanskrit works.

The other difficulty is that most of these supposed Āgamas of the past are not now available. Most of the Āgamas that we get now are written in Sanskrit in various Dravidian scripts. The records of the schools of Śaiva philosophy mentioned by Śaṅkara in his *bhāṣya* on the *Brahma-sūtra* must have been written in Sanskrit, but the present writer is quite unable to identify all the

schools referred to in the seventh or eighth centuries with the existing records of Śaiva thought. There was a great upheaval of Śaiva thought from the twelfth century, contemporaneously with the revival of Vaiṣṇava thought in Rāmānuja, but Rāmānuja himself does not refer to all the schools of Śaivism referred to by Śaṅkara and Vācaspati Miśra in his *Bhāmātī* commentary. Rāmānuja only mentions the Kālamukhas and the Kāpālikas, and no literature about their philosophical views is now available. The Kāpālika sect probably still exists here and there, and one may note some of their practices, but so far we have not been able to discover any literature on the practices of the Kālamukhas. But we shall revert again to the problem when we discuss the antiquity of Śaiva thought and its various schools. The three schools of Southern Śaivism that are now generally known are the Viraśaivas, the Śivajñāna-siddhi school and the school of Śaivism as represented by Śrīkaṇṭha. We have dealt with the Śaivism of Śrīkaṇṭha in two sections. The school of Pāśupata-Śaivism is mentioned in the fourteenth century in Mādhava's *Sarva-darśana-saṃgraha* and the Pāśupata school is referred to in the *Mahābhārata* and many other Purāṇas. In the *Śiva-mahāpurāṇa*, particularly in the last section called the *Vāyaviya-saṃhitā*, we have a description of the Pāśupata philosophy. I shall, therefore, now try to collect the description of the Pāśupata system of thought as found in the *Vāyaviya-saṃhitā* of the *Śiva-mahāpurāṇa*.

The *Śiva-mahāpurāṇa*, according to the testimony of the Purāṇa itself, is supposed to have been a massive work of one hundred thousand verses divided into seven sections, written by Śiva Himself. This big work has been condensed into twenty-four thousand verses by Vyāsa in the Kaliyuga. We know nothing about the historicity of this Vyāsa. He is supposed to have written most of the Purāṇas. The present *Śiva-mahāpurāṇa*, however, contains seven sections, of which the last section called the *Vāyaviya-saṃhitā* is divided into two parts and is supposed to elucidate the view of the different schools of Śaivism. According to our interpretation it shows only one school of Śaivism, namely the Pāśupata-Śaivism in two variant forms. None of the works that we have been able to discover so far have been attributed to Śiva or Maheśvara, though Śaṅkara in his *bhāṣya* on the *Brahma-sūtra* II. 2, 37 refers to Siddhānta works written by Maheśvara. We have traced some of

the Āgamas, but these Āgamas are not called Siddhānta, nor are they supposed to owe their authorship to Maheśvara. On the evidence of the *Śiva-mahāpurāṇa*, we have quite a number of Śaiva teachers who are regarded as incarnations of Śiva and also many of their disciples, but we know nothing about these mythical teachers. One teacher called Upamanyu is often referred to in the *Vāyaviya-saṃhitā* section as instructing the principles of Śaivism. The account of Śaivism given by Śaṅkara in his *bhāṣya* referred to above, is very meagre, but it seems to indicate that the Śaivas regarded *prakṛti* as the material cause and Śiva as the instrumental or efficient cause; and it is this latter view that Śaṅkara mainly criticises as the school of Īśvara-kāraṇins, implying thereby the view that the Upaniṣads cannot tolerate the idea of a separate efficient cause as Īśvara. Vācaspati also points out that the *prakṛti* being the material cause could not be identified with the efficient cause, the Īśvara. In Śaivism we are faced with the problem of solving the issue between Śaṅkara and the Śaivas. Our treatment of Śrīkaṇṭha's *bhāṣya* has shown the direction in which the Śaivas want to solve the difficulty, but Śrīkaṇṭha's *bhāṣya* is probably a work not earlier than the eleventh century, and many other works of Śaivism can be traced only as far back as the twelfth century A.D. On the testimony of the *Śiva-mahāpurāṇa*, which must have been written before the time of Śaṅkara, we know that Śaiva works by great Śaiva teachers were written both for those who adhered to the *Varṇāśrama dharma* and for those who did not care for the *Varṇāśrama dharma* and were not privileged to study the Vedas. The latter class of works must therefore have been the Dravidian works of the South, many of which are now lost, and of which only some traditions are available in the Sanskrit Āgamas. We have already dealt with these in another section. We shall have occasion to show that the Kāśmīr form of Śaivism was more or less contemporaneous with Śaṅkara.

In the second section of the *Śiva-mahāpurāṇa* called the *Rudra-saṃhitā*, we are told that at the time of the great dissolution, when all things were destroyed, there was only darkness, no sun, no planets, no stars, no moon, and no day and night; there is only pure vacuity devoid of all energy. There was no sensibility of any kind; it was a state when there was neither being nor non-being; it was beyond all mind and speech, beyond all name and form. But yet

in that neutral state there existed only the pure being, the pure consciousness, infinite and pure bliss, which was immeasurable and a state in itself; it had no form and was devoid of all qualities¹. This was purely of the nature of pure consciousness, without beginning and end and without any development. Gradually there arose a second desire or will by which the formless was changed into some form by its own playful activities. This may be regarded as the all-creating pure energy, of which there is no parallel. The form created by this energy is called *sadāśiva*. People also call Him Īśvara, or God. The lone energy, spontaneously moving, created from itself its own eternal body, which is called *pradhāna*, *prakṛti*, or *māyā*, and which generates the category of *buddhi*. This *māyā* or *prakṛti* is the creator of all beings and is regarded as coming into contact with the supreme *puruṣa*, the Śiva, called *Sambhu*, who is different from God. This *śakti* or energy is also regarded as *kāla* or time.

From *prakṛti* came the *mahat* or *buddhi* and from *buddhi* came the three *guṇas*, *sattva*, *rajas* and *tamas*, and from them the three-fold *ahaṅkāra*. From *ahaṅkāra* came the *tanmātras*, the five *bhūtas*, the five conative senses, and the five cognitive senses, and *manas*.

In the *Kailāsa-saṃhitā* of the *Śiva-mahāpurāṇa* the view of Śaivism is described as being the Śivādvaita system or the monistic theory of Śaivism². It is said here that since all living beings are constituted of a male and a female part, the original cause must also be represented by a male and a female principle united. As a matter of fact, the Sāṃkhya had taken that idea from this statement, and had regarded the original cause as being *prakṛti* and *puruṣa*. But they tried to establish it merely on rational grounds; they were not disposed to establish it in a theistic sense. For that reason, though some of the Sāṃkhya categories may be accepted, yet the Sāṃkhya philosophy as a whole, being a purely rationalistic system, ought to be abandoned. The Brahman is regarded in the Vedas as being the unity of *sat*, *cit* and *ānanda*, and it is in the neuter gender. The

¹ *satyaṃ jñānam anantaṃ ca parānandaṃ paraṃ-mahaḥ.
āprameyam anādhāram avikāram anākṛti,
nirguṇaṃ yogigamyaṃ ca sarva-vyāpyeka-kāraṇam.*

Śiva-mahāpurāṇa, II. I. 6, 11 c, d-12.

² *utpātya ajñāna-sambhūtaṃ saṃśayākhyaṃ viṣa-drumanam,

Ibid. VI. 16. 11.

being represented in Brahman means that all negation of being is excluded. The neuter character of the being represents the fact that it is the *puruṣa*, and this *puruṣa* also is of an illuminating nature. The pure consciousness in the unity of *sat-cid-ānanda* represents the female part. So the two parts that are regarded as male and female are the illuminating part (*prakāśa*) and the pure consciousness, and these two together are the generating causes of the world. So in the unity of *sac-cid-ānanda* we have the unity of Śiva and Śakti. This illumination is also sometimes impeded, as the flame of a wick is impeded by smoke and other impurities. These are the *malas* which do not belong to Śiva, but are seen in the fire of pure consciousness. It is on this account that the *cicchakti* or the energy of pure consciousness is seen in an impure state in human souls. It is for the expulsion of this *mala* that the pervasiveness of *śakti* or energy is to be assumed as existing in all time. *Śakti* thus is the symbol of *bala* or strength. In the *paramātmān* there is both the Śiva-aspect and the *śakti*-aspect. It is by the connection of Śiva and Śakti that there is *ānanda* or bliss. The Ātman is pure consciousness and this consciousness holds within it all knowledge and all energy; it is independent and free, and that is its nature. In the *Śiva-sūtra*, *jñāna* or knowledge has been described as a bondage, but the word *jñāna* there means only finite, limited or turbid knowledge which all human beings have, and in this way alone can knowledge be regarded as bondage.

The Śakti or energy is also called *spanda* or vibration. Knowledge, movement and will are like the three sides of Śiva, and human beings get their inspiration from between these. As we have said above, the Śiva and Śakti combined gives the supreme *śakti* called *parāśakti*, and from this *parāśakti* there evolves the *cicchakti* or power of consciousness. From this comes the *śakti* or bliss or *ānanda-śakti*, from this the will-power or *icchā-śakti*, and from this come *jñāna-śakti*, or power of knowledge, and the power of motivation, or *kriyā-śakti*. The first category of vibration in the category of Śiva is called *śiva-tattva*. The world and the souls are entirely identical with Śiva, and such a knowledge leads to liberation.

The supreme Lord contracts Himself and manifests Himself as the individual *puruṣas* or souls who enjoy the qualities of the *prakṛti*. This enjoyment takes place through the function of fivefold *kalā*,

such as that which leads the individual to action; that which leads him to discover the true reality of twofold *vidyā*; that which attaches him to the objects of sense (*rāga*); *kāla* or time which makes things happen in succession; *niyati*, which is used in a peculiar sense, not of destiny but of conscience, that is, it is the factor by which one decides what one should do or not do¹.

The *puruṣa* or the individual souls possess in a cumulative way the qualities of knowledge, will, etc. The so-called *citta* or the psychic plane is constituted of the various qualities existent in the *prakṛti*. From *buddhi* come the various senses and subtle matter.

The system of thought referred to above, the Śivādvaita system, is arranged in rather a clumsy manner. The points that emerge from the above statements can be briefly summarised. First, it regards the Brahman as being an undifferentiated Being or Non-being, when there is nothing but void in the universe. From this Being-and-Non-being, the Brahman, there sprang forth an entity which represents within it the two principles of male and female energy which pervades all living beings. It is out of this principle, the Śiva, that we have, on the one hand the individual selves which are but contractions of the nature of the supreme Lord, and on the other we have the world evolving out of the female energy side, the *prakṛti*, more or less in the Sāṃkhya fashion. The *puruṣa* is supposed to have within him fivefold categories, through which he can experience joys and sufferings of his intercourse with the world as such. These individuals, on account of the contraction that they suffered, show themselves as impure as a flame in a wick appears smoky. Thus the whole system tends towards a sort of monism without being purely idealistic. The closeness or its affinity with Śrīkaṇṭha's philosophy will be immediately apparent, though there are differences in the mode of expression. There are certain passages which remind us of some form of Kāśmīr Śaivism, which though a monism, is largely different from the monism as expressed herein. We also find here a reference to the *spanda* theory of Kāśmīr Śaivism. But in spite of this we need not think that the monistic Śaivism was first enunciated in this Purāṇa or in this chapter. We shall have occasion to show that some form of distinctly monistic Śaivism with relative

1

*idaṃ tu mama kartavyam idaṃ neti niyāmikā,
niyatis syāt...*

Śiva-mahāpurāṇa, vi. 16. 83.

bias could be traced to the beginnings of the Christian era. The Kāśmīr Śaivism flourished probably from the seventh to the eleventh century A.D. It may, therefore, be thought that the chapter under reference of the *Śiva-mahāpurāṇa* was probably written somewhere about the ninth or the tenth century A.D., which may also be regarded as the time of Śrīkaṇṭha, though we are not sure if he flourished somewhere at the eleventh century A.D. after Rāmānuja. We discuss these matters further in the appropriate sections.

In the second chapter of the *Rudra-saṃhitā* of the *Śiva-mahāpurāṇa*¹, Śiva is supposed to say that the highest reality, the knowledge of which brings liberation, is pure consciousness, and in that consciousness there is no differentiation between the self and the Brahman². But strangely enough Śiva seems to identify *bhakti* or devotion with knowledge. There can be no knowledge without *bhakti*³. When there is *bhakti* or devotion, there is no distinction of caste in the way of attaining the grace of God. Śiva then classifies the different types of *bhakti*. The nature of devotion, as described in this chapter under consideration, shows that *bhakti* was not regarded as an emotional outburst, as we find in the Caitanya school of *bhakti*. Here *bhakti* is regarded as listening to the name of Śiva, chanting it, and meditating on Him as well as worshipping Him and regarding oneself as the servitor to Śiva, and also to develop the spirit of friendship through which one can surrender oneself to God Śiva. The chanting of the name of Śiva is to be associated with the legendary biography of Śiva as given in the Purāṇas. The meditation on Śiva is regarded as amounting to the development of the idea that Śiva is all-pervasive and is omnipresent. And this makes the devotee fearless. It is through *bhakti* that true knowledge and the disinclination to worldly things can occur.

In IV. 41 four types of liberation are described as *sārūpya*, *sālokya*, *sānnidhya*, and *sāyujya*. We have already discussed in the fourth volume the nature of those types of liberation which are also

Ibid. II. 2. 23. 16.

admitted by the followers of the Mādhva school of Vaiṣṇavas. And this liberation is only granted by Śiva who is beyond all the *guṇas* of *prakṛti*.

The ultimate nature of Śiva is described here (iv. 41) as being changeless (*nirvikārin*) and beyond *prakṛti*. He is of the nature of pure knowledge, unchangeable, all-perceiving. The fifth kind of liberation called the *kaivalya* can be attained only by the knowledge of Śiva and His ultimate nature. The whole world springs out of Him and returns to Him and is always pervaded by Him. He is also designated as being the unity of being, consciousness, and bliss (*sac-cid-ānanda*); He is without any qualities or conditions, pure, and cannot be in any way made impure. He has no colour, no form and no measure. Words cannot describe Him and thoughts cannot reach Him. It is the Brahman which is also called Śiva. Just as space (*ākāśa*) pervades all things, so He pervades all things. He is beyond the range of *māyā* and beyond conflict (*dvandvātīta*). He can be attained either through knowledge or through devotion, but the way of devotion is easier to follow than the way of knowledge. In the next chapter (iv. 42) it is said that it is from Śiva, the ultimate Brahman, that *prakṛti* as associated with *puruṣa* (individual souls) is produced¹. This evolution of *prakṛti* as associated with *puruṣa* is called the category of *Rudra*, which is only a transformation of Śiva, the highest Brahman, just as golden ornaments may be regarded as transformations of gold. The formless Śiva is considered as having a form only for the advantage of meditation.

All that one can know or see in the universe, in the highest or the lowest, is only Śiva, and the character of things in their plurality is formed from Him. Śiva alone remains the same unchangeable reality before the creation, and at the dissolution of the creation. The pure Śiva is regarded as qualified only when one considers Him as being the possessor of *śakti* or energy with which in reality He is identical. It is through the will of Śiva that all operations in the world can go on. He knows them all, but no one knows Him. Having created the world He remains away from it and is not involved with it. But it is in His form as pure consciousness that He is seen in and through the world, as the sun is seen in

1

*tasmāt prakṛtir utpannā puruṣeṇa samamcitā.**Ibid.* iv. 42. 3.

his reflections. In actuality Śiva does not enter into this world of change. In reality Śiva is the whole of the world, though the world appearances seem to occur in a time series of discontinuity. *Ajñāna* or nescience only means misunderstanding, it is not a substance that stands by Brahman and could be regarded as a dual entity¹.

According to the Vedāntins the reality is one, and the individual soul (*jīva*), which gets deluded by *avidyā* or nescience and thinks itself to be different from the Brahman, is only a part of it. But when released from the grasp of nescience it becomes one with Śiva, and Śiva, as we have already said, pervades all things without being actually in them. One can attain liberation by following the path indicated by the Vedānta. As fire, which exists in the wood, can be manifested by the constant rubbing of the wood, so by the various processes of devotion one can attain Śiva, but one must be convinced of the fact that whatever exists is Śiva, and it is only through illusion that various names and forms appear before us². Just as the ocean, or a piece of gold, or a piece of mud may appear in various shapes, though actually they remain the same, so it is only by various conditions through which we look at things that they appear so different, though they are actually nothing but Śiva. There is actually no difference between the cause and the effect³, yet through illusion one thinks of something as cause and something else as effect. From the seed comes the shoot, appearing as different from the seed, but ultimately the shoot grows into a tree and fructifies and thereby reduces itself into fruit and seed. The seed stays on and produces other shoots and the original tree is destroyed. The true seer is like the seed from which there are many transformations, and when these have ceased we have again the true seer. With the removal of nescience (*avidyā*) a person is dissociated from egoism and becomes pure, and then through the grace of God Śiva he becomes what he really is, that is, Śiva. Just

Ibid. IV. 43. 17.

as in a mirror one can see one's body reflected, so one can see one-self reflected in one's pure mind, that is Śiva, which is one's real character.

We thus see that in this school of Śaivism as described in the *Śiva-mahāpurāṇa* iv. 43, we have a monistic system of Śaivism which is very much like the monistic system of Śaṅkara. It believes that the plurality of appearance is false, and that the only reality is Brahman or Śiva. It also believes that this false appearance is due to the interference of nescience. It does not admit any difference between cause and effect, but yet it seems to adhere to the monotheistic faith that God Śiva can bestow liberation on those who are devoted to Him, though it does not deny that the Brahman can be attained by the way indicated in the Upaniṣads. It says that *jñāna* comes from *bhakti* or devotion, from *bhakti* comes love (*prema*), and from *prema* one gets into the habit of listening to episodes about the greatness of Śiva, and from that one comes into contact with saintly people, and from that one can attain one's preceptor. When in this way true knowledge is attained, one becomes liberated. The practice of the worship of the preceptor is also introduced here. It is said that if one gets a good and saintly preceptor, one should worship him as if he were Śiva Himself, and in this way the impurities of the body will be removed, and it will be possible for such a devotee to attain knowledge.

We thus see that in this chapter, though Śaivism is interpreted purely on Vedāntic lines, the doctrine of theism and the doctrine of preceptor worship are somehow grafted into it, though such doctrines cannot fit in with the monism of the Upaniṣads as interpreted by Śaṅkara. This system, therefore, seems to present a specimen of Śaivism different from what we had in the second book of the *Śiva-mahāpurāṇa*, and different also from the philosophy of Śaivism as presented by Śrīkaṇṭha and Appaya Dīkṣita.

Śaiva Philosophy in the *Vāyavīya-saṃhitā* of the *Śiva-mahāpurāṇa*.

§ 1

The *Śiva-mahāpurāṇa* seems to be a collection of seven treatises, called Saṃhitās, dealing with different aspects of the worship of Śiva, myths of Śiva, and philosophy of Śaivism. Though there is a general agreement on the fundamental patterns of Śaiva thought in the various systems of Śaivism, yet these patterns often present marked differences, which ought to be noted for the sake of a detailed study of Śaivism. This is particularly so, as no other system of thought which had spread so far and wide all over India from the days of the hoary past has suffered so much mutilation and destruction of its literature as did Śaivism. We have some older records in the Vedas and the Upaniṣads, and also in the Indus Valley Civilization period, but the systematic Śaiva thought has lost most of its traces from pre-Christian times, until we come to the ninth or tenth centuries A.D. Most of the Āgama works written in Sanskrit and in Dravidian are not now available, and it is even difficult to identify the systems of Śaiva thought as referred to by Śaṅkara in the eighth century A.D. Our treatment of Śaivism can therefore be only gleanings from here and there, and it will not have any proper historical perspective. Even writers in the eleventh or the fourteenth and fifteenth centuries are unable to indicate the proper texts and their mutual relations, at least so far as Sanskrit works are concerned. Much of what is written about the Dravidian texts and their authors is either mythological or largely unhistorical. Even the *Śiva-mahāpurāṇa* seems to be a composite work written at different times. It consists of collections of thought more or less different from each other, and points to different levels of attitude of Śaiva thought. It is not therefore possible to give a consistent account of the whole work of the *Śiva-mahāpurāṇa*; I have accordingly attempted to give an estimate of Śaivism as delineated in Chapters II, IV, VI and VII. But as the philosophical level of the seventh Saṃhitā, the *Vāyavīya-saṃhitā*, seems to be somewhat different from that of the *Śiva-mahāpurāṇa*, I shall try briefly to review the contents of the

Vāyavīya-saṃhitā, which may be regarded as a school of Pāsupata Śaivism. I shall try later on to give estimates of other forms of Śaivism so far as they have been available to me.

In VII. 1. 2. 19 of the *Vāyavīya-saṃhitā*, the ultimate God is regarded as being the original cause, the cause of maintenance, as the ground, and also as the cause of destruction of all things. He is called the ultimate *puruṣa*, the Brahman, or the *paramātman*. The *pradhāna* or the *prakṛti* is regarded as His body, and He is also regarded as the agent who disturbs the equilibrium of *prakṛti*¹. He manifests Himself in twenty-three different categories and yet remains absolutely undisturbed and unchanged. Though the world has been created and maintained by the supreme Lord, yet people do not know him under the delusion of *māyā* or nescience.

In VII. 1. 3 it is said that the ultimate cause is that which is unspeakable and unthinkable, and it is that from which the gods Brahmā, Viṣṇu and Rudra have sprung forth, together with all gross matter and sense faculties. He is the cause of all causes and is not produced from any other cause. He is omnipotent and the Lord of all. The supreme Lord stands silent and rooted in one place like a tree and yet He pervades the whole universe. Everything else in the universe is moving excepting their final cause, the Brahman. He alone is the inner controller of all beings, but yet He Himself cannot be recognised as such, though He knows all. Eternal power, knowledge, and action belong naturally to Him. All that we know as destructible (*kṣara*) and indestructible (*akṣara*) have sprung from the supreme Lord, by whose ideation they have come into being. In the end of the *māyā*, the universe will vanish with the disappearance of the individual souls². The supreme Lord, like an omnipotent artist, has painted the canvas of world appearance, and this appearance will ultimately return to Him. Every being is under His control and He can only be realised through supreme devotion (*bhakti*). Only the true devotees can have any real communication with Him. The creation is gross and subtle, the former is visible to all, and the latter only to the yogins, but beyond that there is a supreme Lord of eternal knowledge and

¹ *namaḥ pradhāna-dehāya pradhāna-kṣobha-kāriṇe,

Vāyavīya-saṃhitā VII. 1. 2. 19.

² *bhūyo yasya paśor ante viśva-māyā nivartate.*

Ibid. VII. 1. 3. 13.

bliss, and unchangeable. Devotion to God is also due to the extension of grace by God. As a matter of fact, the grace is produced out of devotion and the devotion is produced out of grace, just as the tree grows out of a seedling and a seedling grows out of a tree.

When one tries to think oneself as being of the nature of the supreme Lord, then His grace is extended to such a person and this increases his merit and his sins are attenuated. By a long process of attenuation of sins through many births, there arises devotion to God, as the supreme Lord with the proper consciousness of it. As a result of that there is a further extension of grace, and in consequence of that one can leave off all desires for the fruits of one's action, though one may be working all the same.

By the renunciation of the fruits of *karma*, one becomes associated with the faith in Śiva. This can be either through a preceptor or without a preceptor. The former is much preferable to the latter. Through knowledge of Śiva one begins to discover the sorrows of the cycles of birth and rebirth. In consequence of that there is a disinclination to all sense-objects (*vairāgya*). From this comes emotion (*bhāva*) for the supreme Lord, and through this emotion one is inclined to meditation, and one is then naturally led to renounce actions. When one thus concentrates and meditates on the nature of Śiva one attains the state of *yoga*. It is through this *yoga* again that there is a further increase of devotion, and through that a further extension of the grace of God. At the end of this long process the individual is liberated, and he then becomes equal to Śiva (*śiva-sama*), but he can never become Śiva. The process of the attainment of liberation may be different in accordance with the fitness of the person concerned.

In VII. 1. 5 Vāyu is supposed to say that the knowledge of *paśu*, the individual souls, *pāśa* or the bondage, and *pati*, the supreme Lord, is the ultimate object to all knowledge and faith, and this only can lead to supreme happiness. All sorrows proceed from ignorance, and they are removed through knowledge. Knowledge means limitation by objectivity. This objectivisation through knowledge may be with reference to material objects and non-material things (*jada* and *ajada*). The supreme Lord controls them both. The individual souls are indestructible and are therefore called *akṣara*; the bondage (*pāśa*) is destructible and therefore

called *kṣara*; and that, which is beyond these two, is the supreme Lord.

Vāyu, in further explaining the subject, says that *prakṛti* can be regarded as *kṣara*, and *puruṣa* as the *akṣara*, and the supreme Lord moves them both to action. Again *prakṛti* is identified with *māyā* and *puruṣa* is supposed to be encircled by *māyā*. The contact between *māyā* and the *puruṣa* is through one's previous deeds by the instrumentality of God. The *māyā* is described as the power of God. The impurity or *mala* consists in its power to veil the nature of consciousness of the souls. When divested of this *mala* the *puruṣa* returns to its original natural purity. The association of the veil of *māyā* with the soul is due, as we have said before, to previous deeds and this gives the opportunity for enjoying the fruits of our actions. In connection with this, one should also note the category of *kalā* which means knowledge, attachment, time, and *nīyati* or destiny. The individual person enjoys all this through his state of bondage. He also enjoys and suffers the fruits of his good and bad deeds. The association with the impurities (*mala*) is without a beginning, but it may be destroyed with the attainment of liberation. All our experiences are intended for experiencing the fruits of our *karma* through the gates of our external and internal senses and our body.

Vidyā or knowledge is here defined as that which manifests space and action (*dik-kriyā-vyañjakā vidyā*). Time or *kāla* is that which limits or experiences (*kālo'vacchedakah*), and *nīyati* is that which determines the order of things, and *rāga* or attachment impels one to do actions. The *avyakta* is the cause consisting of the three *guṇas*; from it come all objects and to it everything returns. This *prakṛti*, called also *pradhāna* or *avyakta*, manifests itself in the form of pleasure, pain, and numbness. The method of the manifestation of the *prakṛti* is called *kalā*. The three *guṇas*, *sattva*, *rajas* and *tamas* come out of *prakṛti*. This is distinctively a new view, different from the classical Sāṃkhya theory. In the classical Sāṃkhya theory, *prakṛti* is merely the state of equilibrium of the three *guṇas*, and there *prakṛti* is nothing but that which is constituted of the equilibrium between the three *guṇas*. These *guṇas* permeate through the *prakṛti* in a subtle state as oil permeates through the seeds of sesamum. It is out of the modification of the *avyakta* or *pradhāna* that the five *tanmātras* and five gross matter-elements, as well as five cognitive and five conative senses and the

manas, come into being. It is the causal state as such that is called the unmanifested or the *avyakta*. The effects as transformations are called the *vyakta* or the manifested; just as a lump of clay may be regarded as the unmanifested and the earthen vessels made out of it are regarded as the manifested. The manifold world of effects find their unity in the unmanifested *prakṛti*, and all bodies, senses, etc. are regarded as being enjoyed through *puruṣa*.

Vāyu, in further explaining the subject, says that, though it is difficult to find out any proper reason for admitting a universal soul, yet one is forced to admit a universal entity which experiences the enjoyments and sufferings, and which is different from intellect, the senses, and the body. This entity is the permanent enjoyer of all human experiences, even when the body perishes (*ayāvad-deha-vedanāt*). It is this universal entity to which all objects of experience appeal, it is called the inner controller in the Vedas and the Upaniṣads. It pervades all things, yet it manifests itself here and there under certain circumstances and is itself unperceivable. It cannot be seen by the eye nor by any of the senses. It is only by the right wisdom of the mind that this great soul or Ātman can be realised. It is unchangeable in all changes and it is the perceiver of all things, though it cannot be perceived itself. Such a great soul is different from the body and the senses, and those who consider it as being identical with the body cannot perceive it. It is by being associated with the body that it undergoes all impurities and suffering, and is drawn to the cycles of births and rebirths by its own deeds. As a field that is flooded with water soon generates new shoots, so in the field of ignorance the *karma* begins to shoot up and produce bodies which are the source of all miseries. Through the cycle of birth and rebirth one has to experience the fruits of one's *karma* and so the process goes on. This universal entity appears as many and manifests various intellectual shades in different persons¹. All our human relations are accidental and contingent, like two pieces of floating wood drawn together by the waves and then separated again. All beings, from the plants to Brahma, are the *paśus* or manifestations of this

1

*chādītaś ca viyuktaś ca śarīrair eṣu lakṣyate,

aneka-deha-bhedena bhinnā vṛttir ihātmanah.*

Śiva-mahāpurāṇa VII. 1. 5. 56 et seq.

puruṣa. It is the *puruṣa* that is bound by the ties of pleasure and pain, and is like the plaything of the great Lord. It is ignorant and impotent, and cannot provide for its pleasure or arrange for the dispelling of sorrow.

We have already seen the nature of the *paśu* and the *pāśa*. The *pāśa* is the energy or *śakti* of Śiva manifesting itself as *prakṛti*; it evolves the material world, the subjective world, as well as pleasures and pains, which fetter the universal soul, the *paśu*, appearing as many under different conditions and circumstances. We cannot fail to note that the *puruṣa* or *Ātman* here is not many as the *puruṣas* of the Sāṃkhya or the *Ātmans* of the Nyāya, or of some other systems of Śaiva thought. The idea of the Vedāntic monism is eclectically introduced here, and we are faced with the conception of one *puruṣa* which appears as many in different bodies under different conditions. This one *puruṣa* is all-pervading, and it is on account of its being reflected through various conditions that it appears in various divergent forms of things, ranging from Brahma to a blade of grass.

But the supreme Lord who possesses an infinite number of excellent and attractive qualities is the creator of both the *paśu* and the *pāśa*. Without Him there could not be any creation of the universe, for both the *paśu* and the *pāśa* are inanimate and without knowledge. We must remember that according to Sāṃkhya the *puruṣas* are nothing but pure consciousness, but here they are regarded as the reflection of one conscious entity appearing as many through its being reflected in various conditions or environments. Beginning from the *prakṛti* down to the atoms, we have only the inanimate things entering into various modifications. This could not have been if they were not created and moulded by an intelligent creator. This world consisting of parts is an effect, and must therefore have an agent to fashion it. The agency as the supreme Lord, the Creator, belongs to Śiva and not to the soul or to the bondage. The soul itself is moved into activity by the motivity of God. When an individual thinks of himself as the agent of his action, it is only a wrong impression of the nature of causality (*ayathā-karaṇa-jñāna*). It is only when one knows oneself to be different from the true motivating agent that one may ultimately attain immortality. The *kṣara* and *akṣara*, that is, the *pāśa* and the *paśu*, are all associated with each other and they are both main-

tained by the supreme Lord in their manifested and unmanifested forms. The so-called plurality itself is pervaded by the supreme Lord. God alone is the Lord of all and the refuge of all. Though one, He can uphold the universe by His manifold energies.

This sixth chapter of the first part of the *Vāyavīya-saṃhitā* deals mostly with the contents derived from the Śvetāśvatara Upaniṣad and may be regarded as an expansion of the philosophy of the Śvetāśvatara Upaniṣad. The Lord Himself pervades all things and there is no tinge of impurity in Him. Various other texts of the Upaniṣad are also collated with it for the same purpose, and the Brahman is identified with Śiva. In the previous volumes of the present work, attempts have been made to show that the Upaniṣads were interpreted in the *Brahma-sūtras*, in the *Gītā*, and also in the commentaries of the various schools of interpreters of the *Brahma-sūtras* in accordance with the specific views of the relevant authors. In the *Śiva-mahāpurāṇa* we find also the same attempt to adapt the Upaniṣadic texts for the promulgation of the Śaiva view of philosophy. It is again and again emphasised that there is only one Lord and there is no one second to Him, yet the idea of *māyā* or *prakṛti* is introduced to explain the transformation of the world of appearance. We have seen before that *māyā* is regarded as the energy or *śakti* of Brahman. But we do not find much discussion about the relationship of this energy with God. It is said also in accordance with the Upaniṣads that God is naturally endowed with knowledge and power. But we have not the philosophical satisfaction to know what is exactly the nature of knowledge and power, and how this power is exerted, and what knowledge can mean in relation to the supreme Lord, who has no senses and no *manas*.

In VII. 1. 6. 67 the Lord is described as one who produces time and is the Lord of all the *guṇas* and the liberator of all bondage. A question is raised as regards the nature of *kāla* or time. In reply to such a question Vāyu says that *kāla* appears before us in the form of successive moments and durations. The real essence of *kāla* is the energy of Śiva. *Kāla* therefore cannot be outstripped by any being whatsoever. It is, as it were, the ordering power of God¹. The *kāla* thus is an energy of God that emanates from Him

1

*nīyogarūpaṃ īśasya balaṃ viśva-nīyāmakam.**Śiva-mahāpurāṇa* VII. 1. 7. 7.

and pervades all things. For this reason everything is under the domination of time. But Śiva is not fettered by time; He is the master of all time. The unrestricted power of God is manifested through time, and for this reason no one can transcend the limits of time. No amount of wisdom can take us beyond time, and whatever deeds are done in time cannot be outstripped. It is time which decides the fates and destinies of persons in accordance with their deeds, yet no one can say what is the nature of the essence of time.

We have so far seen that the *prakṛti* as superintended by *puruṣa* evolves as the world before us by the inexorable will and order of God. The order of the evolution of the *prakṛti* or the *avyakta* into different categories is more like what we have in the classical Sāṃkhya. The creation is a process of emanation or emergence from the state of *avyakta* in the well-known classical line of Sāṃkhya, and the dissolution takes place by a process of retrogression, in which the same process is reversed until the whole world of appearance returns to *avyakta* or *prakṛti*.

Turning again to the nature and function of Śiva, the supreme Lord, it is said that there is nothing but the tendency for helping others that may be regarded as the essential nature of Śiva. He has nothing to do but help all beings to attain their best through their actions. He is otherwise without any specific character, except to be of service to the world consisting of the *paśu* and the *pāśa*. This extension of the grace of the Lord is often described as His ordering will. It is for the fulfilment of the function of the Lord's will that one has to admit the existence of something for the good of which the will of the Lord goes forward. For this reason God may not be said to be dependent on others for the exercise of His will. It is in and through the function of His will that things come into being and move forward in an orderly process in accordance with *karma*. The independence of God means that He is not dependent on anything else; dependence means the condition in which one thing depends on another¹.

The whole world is supposed to be dependent on *ajñāna* or nescience, there is nothing of reality in the visible appearance of the world. All the characters of Śiva as described in the scriptures

¹ *ataḥ svāntantrya-śabdārthān anaṇḍaśatva-lakṣaṇaḥ.*

Ibid. VII. 1. 31. 7.

are only conditional assumptions; in reality there is no form that one can ascribe to Śiva¹.

All that has been said so far about the evolution of the world is based upon logical assumptions, while the transcendental reality of God is beyond all logic. It is by imagining God to be something of the nature of our *Ātman* that we attribute the supreme lordship to Him. Just as fire is different from the wood but cannot be seen without it, so we ascribe the lordship to Śiva, in and through the persons in whom He is manifested. It is by a similar extension of thought that the image of Śiva is also regarded as Śiva and is worshipped.

Śiva always helps all beings and never does harm to anyone. When it may seem apparent that he has punished somebody, it is only for the good of others. In many cases the punishment awarded by Śiva is for purging the impurities of the beings concerned. The basis of all good and evil deeds is to be found in the ordinance of God, that one must behave in this way and not in the other way. Goodness means abidance in accordance with His will. He who is engaged always in doing good to others is following the commandment of God, and he cannot be made impure. God only punishes those who could not be brought to the right path by any other course, but his punishment is never due to any spirit of anger or resentment. He is like the father who chastises the son to teach him the proper course. He who tyrannises over others deserves to be chastened. God does not injure others to cause them pain, but only to chasten them and make them fitter for the right path. He is like a doctor who gives bitter medicine for curing a malady. If God remained indifferent to the vices and sins of beings, then that would also be improper for Him, for that would be a way of encouraging people to follow the wrong path; and that also would be denying the proper protection to persons who ought to be protected and whom God is able to protect. The Lord Śiva is like fire; on contact with Him all impurities are resolved. When a piece of iron is put into fire, it is the fire that burns and not the iron; so all the inanimate objects of the world are pervaded by Śiva, the supreme Lord, and He alone shines through all the appearances.

1

*ajñānādhiṣṭhitam sambhor na kiñcid iha vidyate,
yenopalabhyate 'smābhīs sakalenāpi niṣkalaḥ.*

Śiva-mahāpurāṇa VII. 1. 31. 9 et seq.

The grace of Śiva is not like the ordinary good qualities of friendship, charity, etc., but it cannot be regarded as a good or a bad quality. It means only the will of God leading to the benefit of all beings. Obedience to His commandments may be regarded as identical with the highest good, and the highest good is the same as obedience to His commandments. God, therefore, may be regarded as doing good to all and not merely to one individual. In this manner the individual good is associated with the good of humanity at large, and this can only be effected when all beings follow the commandments of God. The things in the world would behave in their own manners according to their specific nature. It is the function of God to make them grow in consonance with one another as far as their nature should permit. The natural character of things is an important limitation to the scope of this development. One can only melt gold by fire, but not charcoal, so God can only liberate those whose impurities have been purged, but not those who are still in an impure condition. Things which naturally can evolve into some other thing can be made to do so by the will of God. So God's will is only effective when it acts in co-operation with the natural tendency and the effective limits of the things. The individual souls are naturally full of impurities, and it is for that reason that they pass through the cycle of birth and rebirth. The association of the souls with *karma* and illusion is really what is called *saṃsāra*, the passage through the cycle of birth and rebirth. Since Śiva is not associated with any such *karma* and is absolutely pure, He can be the real agent for the motivation for the development of the animate and inanimate world. The impurity of the soul is natural to the soul and not accidental.

In the theory of the classical Sāṃkhya as represented in the *kārikā* of Īśvarakṛiṣṇa or the *Sāṃkhya-sūtra*, the teleology is made to abide in the *prakṛti*, which out of its own necessity impels the *prakṛti* to evolve in the twofold scheme of the psychical and the physical world for serving the *puruṣas* in twofold ways of the experience of pleasure and pain, and the attainment of liberation through knowledge. In this sense *prakṛti* is supposed to move for the fulfilment of the purpose of the *puruṣas*. In the Pātañjala school of Sāṃkhya, called also the *Yoga-sūtra* as explained by Vyāsa and Vācaspati, the *guṇas* forming the *prakṛti* have a natural obstruction which limits their scope of development. It is admitted

that there is the permanent will of God, that things would evolve in particular directions in accordance with the *karma* of the individuals. The energy of the *prakṛti* or the *guṇas* flows naturally in the direction from which the obstruction has been removed. God does not of Himself push the *prakṛti* to move in a particular direction. The function lies in the removal of obstructions in the way of the development in particular channels. Had there been no such obstruction or if all obstructions were removed, then every thing could have become every other thing. There would be no definite order of evolution and no limitation to various conditions and by time and place. In the system that we are now dealing with the natural obstructions of individuals are frankly admitted as being due to the existence of impurities, and it is held that by the all-pervading nature of God the souls can be emancipated only when the natural obstructions are washed off. For this purpose the individual persons have to exert themselves and through the near proximity of God, the process of pacification is held; this is called the grace of God, not grace in the ordinary sense of the term, but a cosmic operation which helps all things and persons to develop in accordance with their respective deserts. The commandment of God is not like the commandment of a Mosaic god, but it simply means the carrying on of the cosmic process for the good of all. In the carrying out of this process some people must suffer for their own good and some people may attain rewards according to their merits. God Himself transcends all the appearances of the world; He does not actually exert His will to effect anything, but the very fact that all things are pervaded by Him produces the removal of such impurities as are consistent with the development of the cosmos as a whole.

Though the soul is the same, yet some of the souls are in bondage, as also, there are others who are in a state of liberation. Those who are in bondage may also be in different conditions of progress and may have accordingly different kinds of knowledge and power. The impurities associated with the soul may be regarded as green (*āma*) and ripe (*pakva*), and in these two forms they are responsible for the commission of all actions leading to birth and rebirth. But even though all souls are associated with *mala* or impurities, they are pervaded in and through by Śiva; and as the *malas* are purged, the proximity of Śiva becomes more

manifest, and the individual becomes more and more pure, until he becomes like Śiva. The differences of the souls are only due to the conditioning factor of the *mala*. It is in accordance with the nature and condition of the *mala* that one soul appears to be different from the other. The root cause for all the suffering in the world is the impurities, and it is the function of the divine doctor, Śiva, to lead us through knowledge far away from the impurities. Knowledge alone is a means by which all sins may be removed. It may be objected that, since God is all-powerful He could liberate human beings without making them undergo suffering. To this question it is suggested in reply that misery and suffering constitute the nature of the *saṃsāra* of birth and rebirth. It has already been stated before that God's omnipotence is somehow limited by the natural conditions of the materials on which the will of God operates. The nature of the *malas* or the impurities being of the nature of sorrow and pain, it is not possible to make them painless, and for this reason, in the period in which one passes through the process of the expurgation of *malas* through *saṃsāra*, one must necessarily suffer pain. The individual souls are by nature impure and sorrowful, and it is by the administration of the order which acts as medicine, that these individuals are liberated. The cause of all impurities that generate the *saṃsāra* is the *māyā* and the material world, and these would not be set in motion in any way without the proximity of Śiva. Just as iron filings are set in motion by the presence of a magnet without the magnet's doing anything by itself, so it is by the immediate proximity of God that the world process is set in motion for its benefit. Even though God is transcendent and does not know the world, the fact of His proximity cannot be ruled out. So He remains the superintending cause of the world. All movement in the world is due to Śiva. The power by which He controls the world is His ordering will which is the same as His proximity. We are reminded of the analogical example introduced by Vācaspati in his commentary on the *Yogasūtra-bhāṣya*, where it is said that though the *puruṣa* does not do anything, yet its proximity produces the special fitness (*yogyatā*) on account of which the *prakṛti* moves for the fulfilment of the purposes of the *puruṣa*. The example of the magnet and the iron filings is also given in that connection. As the whole world is but a manifestation of Śiva's own power, we may quite imagine that

when there was nothing in the world, He alone existed with His majestic order of will and there in the functioning of that will He was not in any way polluted by the worldly impurities.

In this connection Vāyu is supposed to say that knowledge is of two kinds, mediate (*parokṣa*) and immediate (*aparokṣa*). That which is known by reason or by instruction is called mediate knowledge. Immediate knowledge, however, can only dawn through practice of a high order, and without such immediate knowledge there cannot be any liberation.

§2

In the present section of the *Vāyavīya-saṃhitā* VII. 2, we find a modification of the philosophical view as expressed in the previous section, and this deserves some special attention. In the previous section it was stated that the impurities of the individual souls were natural to themselves, and God's will had to refashion them or remould them or purge the impurities through the cycles of birth and rebirth, in accordance with the natural limitations of the individual souls, so that though God's will operates uniformly through all, the development is not uniform. The sufferings of human beings are due to the obstacles and resistance offered by the inherent impurities of different souls. For this reason it is not possible for God to liberate all souls without making them undergo the cycles of birth and rebirth and sorrow.

The view that the souls are by nature impure is found also among the Jains and among the followers of the Pāñcarātra school¹. In the Vedānta view, as explained in the school of Śaṅkara, the individual souls are no doubt regarded as the same as Brahman, but yet it is believed that the individual souls are associated with the beginningless nescience or *Avidyā* which can be destroyed later on by the realisation of the true nature of the Self. Thus in a way, the individual souls remain within a covering of impurity from beginningless time. But in the second section of the *Vāyavīya-saṃhitā* that we are now dealing with, it is said that God Himself binds all beings through the impurities, the *māyā* and the like,

¹ See the relevant portion of Jainism in Vol. I (pp. 169 *et seq.*) and the philosophy of Pāñcarātra, especially of the *Ahīrbudhnyā-saṃhitā* in Vol. III (pp. 21 *et seq.* and 34 *et seq.*).

and He alone can liberate them when He is pleased to do so in accordance with the devotion of the beings concerned¹. All the twenty-four categories of Sāṃkhya are to be regarded as being due to the action of *māyā*², and they are called the *viśayas* or objects which are the bonds or ties by which the individuals are bound. By binding all beings, from the blade of a grass up to Brahman, the highest god, the great Lord makes them perform their own duties. It is by the order of the Lord that the *prakṛti* produces the *buddhi* for the service of the *puruṣas*, and from *buddhi* there arise the ego, the senses, the subtle matters (*tanmātras*), and the gross matter. It is by the same order that the different beings are associated with different bodies suitable to them. The world order is maintained in its uniform process by the will of God. This will or order of God cannot be transcended by anybody. It is in accordance with the same commandment of God as controlling all processes that one attains riches and knowledge through the performance of meritorious deeds, or that the sinners are punished. The parable of the Kena Upaniṣad is quoted to show that the powers of all deities and natural forces are derived from God. The whole world thus may be regarded as manifestations of Lord Śiva.

In different forms and functions and superintendence Lord Śiva is called by different names. Thus, when He enjoys the *prakṛti* and the *puruṣa* He is called *īśāna*. This *īśāna* appears in its eightfold form, technically called *aṣṭamūrti*; these are: earth, water, fire, air, the *ākāśa*, the soul, the sun and the moon. So these are the forms of Śiva as performing different functions and called by different names such as *śārvī*, *bhāvī*, *raudrī*, etc. *Raudrī* is the form in which the whole world is vibrating. The soul itself, as we have seen above, is a form of Śiva.

The proper worship of Śiva consists in giving protection from fear to all people, to do good to everybody, and to be of service to

¹ *mala-māyā-dibhiḥ pāśaiḥ sa badhmāti paśūn patiḥ,
sa eva mocakas teṣāṃ bhaktyā samyag-upāsitaḥ.*

Śiva-mahāpurāṇa. VII. 2. 12 et seq.

² *Māyā* is twofold: the *prakṛti* and the *buddhamāyā*. From the latter spring up the deities Brahmā, Viṣṇu and Rudra. The former is the *prakṛti* of the Sāṃkhya into which all beings return, and for that reason *prakṛti* is called *liṅga*, whereas the classical Sāṃkhya restricts the term to the *mahat* and calls *prakṛti* the *alīṅga*. There *mahat* is called *liṅga*, as it points to some original cause behind it and *prakṛti* being the ultimate cause does not point to any other original cause behind it. See *ibid.* VII. 2. 34. 7 et seq.

everybody. It is by satisfying all people that God becomes satisfied. Any injury done to any living being is an injury done to one of the forms of God itself.

We have seen above that the whole world is a personification of God. This pantheistic doctrine should be distinguished from the monism of the Vedānta as explained by Śaṅkara and his followers. In the Vedānta the reality is Brahman as *sac-cid-ānanda*, and everything else that we perceive is but an imposition on the reality of Brahman. They are ultimately false and their falsehood is discovered when the person attains liberation. So the world appears, but there may be a time when it may absolutely disappear before a liberated person. Here, however, the material world as such in all its various forms of the living and non-living is regarded as but different real forms of God, which are controlled by God, and are set in motion by God for the benefit of the souls, which latter again are but forms of God.

In this connection the question is raised as to the way in which God pervades the world as the male and the female powers. In reply to such a question Upamanyu is supposed to have replied that the energy or *śakti* called the great female Deity (*mahādevī*) belongs to *mahādeva*, the Great Lord, and the whole world is a manifestation of them both. Some things are of the nature of consciousness and some things are of the nature of the unconscious. Both of them can be pure or impure. When consciousness is associated with the unconscious elements, it passes through the cycles of birth and rebirth and is called impure. That which is beyond such associations is pure. Śiva and His *śakti* go together, and the whole world is under their domination. As it is not possible to distinguish the moon from the moonlight, so it is not possible to distinguish the *śakti* from Śiva. So the *śakti* or the power of the *śaktimān*, the possessor of the power, the supreme Lord, are mutually dependent. There cannot be *śakti* without Śiva, and there cannot be Śiva without *śakti*. It is out of this *śakti* that the whole world is created through the process of *prakṛti* or *māyā* and the three *guṇas*. Everywhere the operation of the *śakti* is limited by the will of Śiva and ultimately this goes back into Śiva. From the original *śakti* as inherent in Śiva, there emanates the 'active energy' (*kriyākhyā śakti*). By the disturbance of the original equilibrium there arises *nāda*, and from that arises *bindu*,

and from *bindu* arises *sadāśiva*, and from *sadāśiva* arises Maheśvara, and from him arises true knowledge (*śuddha-vidyā*), and this is called the logos or the power of speech. This also manifests itself in the form of the alphabetical sounds. From this manifestation of *māyā* comes *kāla* or time, *niyati*, *kalā* and *vidyā*. From this *māyā* again come out the three *guṇas* constituting the unmanifested (*avyakta*). From the *avyakta* there evolve the categories as described in the Sāṃkhya. In brief it may be said that as the body is permeated by the inner controller, so the whole world is permeated by Śiva in His form as *śakti*. For this reason all the living and the non-living are but manifestations of the *śakti*. It is the supreme Lord that is associated with knowledge, activity and will, and through them all the supreme Lord controls and pervades the world. The order of the world and the world process is also determined by His will.

That which is imaginatively perceived by the supreme Lord is put into a fact by His will; so, just as the three *guṇas* arise in Him as the three manifested energies, so the whole world, which is identified with Śiva, is also the form of His energy, because it has come into being through His energy¹. This *śakti* of Śiva is the *māyā*.

The *Śiva-mahāpurāṇa* refers to the *Śaivāgamas* as being instructions given by Śiva to Śivā. It seems, therefore, that the *Śaivāgamas* were written long before the *Śiva-mahāpurāṇa*, and it is the substance of the *Śaivāgamas* that is collected in the *Śiva-mahāpurāṇa* in the elucidation of the Pāsupata view. The instructions of the *Śaivāgamas* are supposed to have been given as the means for the attainment of the highest good through the mercy of Śiva, for the benefit of the devotees of Śiva².

Turning to the practical side of the attainment of direct or intuitive knowledge, we find that Śiva says that He is only properly approached through sincere faith in Him (*śraddhā*) and not by

¹ *evam śakti-samāyogāc chaktimān ucyate śivāḥ,
śakti-śaktimaduttham tu śaktaṃ śaivam idaṃ jagat.*

Śiva-mahāpurāṇa VII. 2. 4. 36.

² *śrīkaṇṭhena śivenoktaṃ śivāyai ca śivāgamaḥ,
śivāśritānāṃ kārūṇyāc chreyasām ekasādhanaṃ.*

Ibid. VII. 2. 7. 38 *et seq.*

It is difficult to say whether this is a reference to the Mahākāruṇika school of Śaiva thought, as referred to by Śaṅkara in the *bhāṣya* in the penultimate topic of the criticism of Śaivism. *Brahma-sūtra* II. 2.

tapas, chanting, or various postures of the body (*āsanas*), or even by instructional knowledge. Faith is the basis on which one should stand and this faith can be attained by following the natural duties of the four *varṇas* or castes and the *āśramas* or the stages of life. Faith is thus regarded not as a spontaneous emotion but as the consequence of a long traditional practice of the duties assigned to each caste and to each stage of life.

The *Śaiva dharma* consists of knowledge, action, rigid conduct, and *yoga*. The knowledge is the knowledge of the nature of souls, the objects, and the supreme Lord. Action is the purification in accordance with the instruction of the preceptor. *Caryā* or the right conduct means the proper worship of Śiva in accordance with the caste rights as instructed by Śiva. *Yoga* means the arresting of all mental states, excluding the constant thinking of God. Knowledge arises from *vairāgya* or disinclination towards worldly things, and from knowledge comes *yoga*; sense-control, called *yama*, and *niyama* remove the sins and when a man is disinclined to worldly objects he gradually turns to the path of *yoga*. In this connection, universal charity, non-injury, truthfulness, abstention from stealing, and supreme faith, teaching, performing sacrifices and meditation on one's identity with God are regarded as natural accessories. For this reason those who wish to attain liberation should keep themselves away from virtue and vice, merit and demerit. Those who have attained the state in which the stone and gold are of equal value, or have no value, need not worship God, because they are liberated beings.

Purity of mind is a hundredfold better than purity of body, because without the purity of the mind nobody can be pure. God accepts only the internal states of man (*bhāva*); that which is performed without any sincere emotion is merely an imitation. Devotion to God ought to be spontaneous, not practised for any advantage. Even when a man is attached to God for the attainment of some advantage, it may please God according to the depth of the emotion which is displayed by him. We find that the external expression of emotion as manifested in bodily movements, interest in listening to the adoration of Śiva, the choking of the voice, the shedding of tears, and the constant meditation and dependence on God, are regarded as the significant signs of a true devotee, whatever may be his caste and status in society.

We have already seen that the practical way towards liberation should be through the attainment of knowledge of the nature of souls, the objects that bind them and the supreme Lord. This knowledge should be supplemented by action in accordance with the direction of the Teacher, who in Śaiva cult is to be regarded as the incarnation of Śiva. This action called *kriyā* is to be supplemented by the prescriptive duties allotted to the different castes and stages of life in the scriptures, and the duty which consists of the worship of God goes by the name of *caryā*. This has further to be supplemented by a process of devotional meditation, with Śiva as the centre of attention, when all other mental states have been inhibited. The scriptures dealing with these subjects are twofold, one of Vedic origin, the other of independent origin. These latter are of twenty-eight kinds (like the Āgamas), called *Kāmika*, etc., which also go by the name of *Siddhānta*¹.

In VII. 1. 32 certain esoteric and obscure physiological processes are described by which one can bring oneself in contact with immortality as inherent in Śiva, the Mahādeva².

In VII. 2. 37 the *yoga* is described as being of five kinds: *mantrayoga*, *sparsāyoga*, *bhāṇayoga*, *abhāṇayoga* and *mahāyoga*. The *mantrayoga* is that in which by constant repetition of certain *mantras* the mental states becomes steady. When this is associated with breath control it is called *sparsāyoga*. When this state is further on the progressive scale and becomes dissociated from the necessity of chanting the *mantras*, it is called the *bhāṇayoga*. By further advancement of this *yoga* process, the world appearance in its various forms entirely disappears, and this is called the *abhāṇayoga*. At this stage the yogin is not concerned with the world. He

¹ H. W. Schomerus in his *Śaiva-siddhānta*, p. 3, says that there are six and sixteen schools of Śaivism, according to a commentary on *Śiva-jñāna-bodha* which we shall refer to later on. These schools as referred to by Schomerus are:

- I. Pāsupata, Māvratavāda(?), Kāpālika, Vāma, Bhairava and Aikyavāda.
- II. Ūrdhvaśaiva, Anādiśaiva, Ādiśaiva, Mahāśaiva, Bhedaśaiva, Abhedaśaiva, Antaraśaiva, Guṇaśaiva, Nirguṇaśaiva, Adhvaṇaśaiva, Yogaśaiva, Jñānaśaiva, Anuśaiva, Kriyāśaiva, Nālupādaśaiva(?) and Śuddhaśaiva.

We do not know what were the contents of these different schools of Śaivism and we cannot also identify any particular texts giving the views of any of these schools of Śaivism. In our treatment we have noted different types of Śaivism, and many of them go by the name of Pāsupata-Śaivism, but whether this Pāsupata-Śaivism was also divided into different schools having different names, it is impossible for us to judge for want of definite materials, either published or unpublished.

² See verses 45-56 (VII. 1. 32).

thinks of himself as being of the nature of Śiva, and of being one with Him, and he is dissociated from all conditions. This is called the state of *mahāyoga*. At this stage one becomes disinclined to all worldly objects of attachment, whether as experiences by the senses or as prescribed by the scriptures. Of course, this practice of *yoga* includes the practices of *yama* and *niyama* as prescribed in the *Yoga-sūtras*, and also the practice of the different postures, the breath-control (*prāṇāyāma*), the holding back of the mind from other objects (*pratyāhāra*), the practice of concentration on particular objects (*dhāraṇā*), and also meditation (*dhyaṇa*), and becoming one with the object (*samādhi*). The processes of the different kinds of *yoga* and their accessories are described in the Śaiva scriptures, and also in the *Kāmika* and the other Āgamas. So far as the *Śiva-mahāpurāṇa* is concerned we do not find much difference between the practices of the different accessories such as *yama*, and *niyama*, *āsana*, etc., and those that are described in the *Yogaśāstra* of Patañjali. The only important difference is that, while in Patañjali's *yoga* the mind has to be concentrated first on the gross objects, then on the subtle entities or *tanmātras*, then on the *ahankāra* or egohood, and then on *buddhi*, here in the Śaiva *yoga*, the yogin has to meditate on the divine nature of Śiva. In the *Yogaśāstra* also it is prescribed that one may meditate upon Īśvara, and it is through devotion to him that liberation may be granted to any yogin. The treatment of a yogin in *Yogośāstra* may take a twofold course: one meditation on Īśvara, the other the ascending scale of meditation on subtler and subtler categories, as a result of which the mind becomes absolutely shorn of all primitive tendencies and impressions, and becomes ultimately lost in the *prakṛti* itself, never to return again. The *Yoga* of Patañjali, therefore, seems to be a double synthesis of associating the Sāṃkhya doctrine and Sāṃkhya metaphysics with the pre-existent system of *yoga*-practice which we find in Buddhism, and the association of the theistic cult of Īśvara, who hangs rather loosely with the *yoga* system.

The *Śiva-mahāpurāṇa* goes on with the description of *prāṇāyāma*, consisting of: *pūraka*, the filling of the body with air through the nose; *recaka*, the expelling of the air out of the body; and *kumbhaka*, the process of keeping the body still after inflating it. By the processes of *prāṇāyāma* one may leave the body at will.

The advancement of *prāṇāyāma* is made gradually by lengthening the respiratory and inhibitory time. In this way there are four different classes of *prāṇāyāma* called *kanyaka*, *madhyama*, *uttama*, and *para*. That which is associated with the emotional expression of sweating, shivering, etc., is due to the expression of the sentiment of bliss on account of which tears flow spontaneously and there is sometimes incoherent speech, swooning. It should be noted that such states do not occur nor are recommended in the *yoga* of Patañjali. In this connection the discussion about *prāṇāyāma* is introduced and we hear of the five *vāyus* or bio-motor forces called *prāṇa*, *apāna*, *samāna*, *udāna*, and *vyāna*. The *prāṇavāyu* consists of five other types of *vāyu*, namely *nāga*, *kūrma*, *kṛkara*, *devadatta*, and *dhanañjaya* which performs the different functions of the *prāṇavāyu*. The *apānavāyu* is the bio-motor force by which all that is taken in by way of food and drink is assimilated and drawn down to the lower cavities. The *vyāna* is the bio-motor force that pervades the whole body and develops it. The *udāna* is that which affects the vital glands and the body. The *samāna* is that which provides the circulation through the body. When the functions and the forces of these *vāyus* are properly co-ordinated in accordance with the will of the yogin, he is able to burn up all the defects and maladies of the body and preserve his health in the proper manner, his power of assimilation becomes greater and his exertions become less. He becomes light in body, can move about quickly, and has energy and excellence of voice. He suffers from no diseases and has sufficient strength and vigour. He has power of retention, memory, usefulness, steadiness, and contentedness. He can perform asceticism and destroy his sins and perform sacrifice and make gifts as people should.

Pratyāhāra is effort of mind, by which the mind controls itself in relation to the objects to which the senses may be attracted. One who desires happiness should practise the virtue of disinclination and also try to attain true knowledge. It is by controlling one's senses that one can raise oneself up. When in this way the mind can be steadily attached to some object we have the state of *dhāraṇā*. This object to which the mind should be steadily attached is nothing but Śiva. In the proper state of *dhāraṇā* the mind should not be dissociated even for a moment from its object, Śiva. It is from the steadiness of the mind that *dhāraṇā* can proceed. So

by continuous practice of *dhāraṇā* the mind should be made constant and steady. The word '*dhyāna*' is derived from the root *dhyai* denoting the thinking of Śiva with an undisturbed mind. Therefore this state is called *dhyāna*. When a person is in the state of *dhyāna*, the object of his meditation is constantly repeated in the same form without the association of any other idea. This constant flow of the same sort of image or idea is called *dhyāna*¹. It is remembered that one should perform *tapa* or chanting the name or the *mantras* and pass into *dhyāna*, and when *dhyāna* is broken one should go on with *tapa* and from that again to *dhyāna*, and so on until the *yoga* is firmly attained. *Samādhi* is regarded as the last state of *yoga* in which the mind is illuminated with intuitive wisdom (*prajñāloka*). It is a state which itself seems to be nothing in essence and where the object alone shines like a limitless, waveless ocean². After fixing the mind on the object of meditation, the saint looks like a fire which is being extinguished, he does not hear nor smell nor see nor touch anything, nor does his mind think. He does not understand anything, he is like a piece of wood. So when one's soul becomes lost in Śiva one is said to be in the state of *samādhi*. It is like a lamp that burns in a steady flame. From this state of *samādhi* the saint never breaks off.

It must, however, be noted that in the course of the practice of this *yoga* many obstacles come in, and they have to be conquered. Some of these are indolence, troublesome diseases, carelessness, doubt as to the proper object of meditation, inconstancy of mind, absence of faith, illusory notions, pain, melancholia, attachment to objects. Indolence refers both to bodily and mental laziness. The diseases, of course, come through the disturbances of the three *dhātus*—*vāyu*, *pitta*, and *kapha*. Carelessness (*pramāda*) comes through the non-utilisation of the means of performing the *yoga*. A doubtful inquiry as to what may be the true object of meditation is called *sthāna-samasyā*. Absence of faith means the

¹ *dhyeyāvasthita-cittasya sadṛśaḥ pratyayaś ca yaḥ,
pratyayāntara-nirmuktaḥ pravāho dhyānam ucyate,
sarvam anyat parityajya śiva eva śivāṅkaraḥ.*

Śiva-mahāpurāṇa VII. 2. 37. 52-3.

² *samādhinā ca sarvatra prajñālokaḥ pravartate,
yad-artha-mātra-nirbhāsaṃ stimitodadhi-vat-sthitaṃ,
svarūpa-śūnyavad bhānaṃ samādhir abhidhīyate.*

Ibid. VII. 2. 37. 61-2.

continuance of the *yoga* process without the proper emotion. All sorrow comes through false knowledge. These sorrows are divided into three classes, in accordance with the classical Sāṃkhya classification, as *ādhyātmika*, *ādhibhautika*, and *ādhidaivika*. Disappointment is the frustration of one's desires, and causes mental troubles which are called *daurmanasya*. When the mind is drawn to various objects of desire it is said to be in a state of flirtation. When these obstacles are overcome then come other obstacles in the way of the appearance of miraculous powers.

The word '*yoga*' in the *Pāśupata-yoga* is used as a derivative from the root '*yujir yoge*,' and not from '*yuj samādhanau*,' as we find the word used in Patañjali's *Yoga*. The true *yoga* can only arise by the proper integrative knowledge of the meditation, the object of meditation, and the purpose of meditation. In meditating on Śiva one should also meditate upon the energy of Śiva, as the whole world is pervaded by them both.

Among the miraculous powers which are regarded as obstacles in the progressive path of *yoga* one counts *pratibhā*, which means the power of knowing subtle things, things that are passed, and things that are obscure from our eyes, and things that are to come in future. In the *Nyāya-mañjarī* Jayanta mentions the word *pratibhā* in an entirely different sense. He means by *pratibhā* there an inexplicable intuition as to what may occur in the future, for example, "tomorrow my brother will come." It also includes the power of understanding all kinds of sound without effort, all that may be communicated by any animal in the world, and also the power of having heavenly visions. So by these miraculous powers one may taste heavenly delights and exquisite pleasures of touch and smell of a higher order. So one may attain all kinds of miraculous powers, and one has a full command of all things that one may wish to have. It is unnecessary for us to dilate further on the various types of miraculous powers which the yogin may attain, and which may detract him from his onward path toward attaining the *mahāyoga* or the highest *yoga*, that is, the union with Śiva.

But it is interesting to notice that the same chapter on the *Pāśupata-yoga* introduces certain methods which are not to be found in Patañjali's *Yoga*. Thus in VII. 2. 38, in a description of a particular posture of *yoga*, one is advised to fix one's attention on

the tip of the nose and not to look at one side or the other. One sits down unmoved, like a piece of stone, and tries to think of Śiva and Śakti within oneself, as if they were installed in the seat of the heart, and meditates on them. One may also concentrate on one's navel, throat, palatal cavity and the spot between the eyebrows. One should think of a lotus having two, six, ten, twelve or sixteen petals, or a sort of quadrangle wherein one may place the Śiva. The lotus in the spot between the eyebrows consists of two petals which are as bright as lightning. So in the case of other lotuses having a number of petals the vowels are associated with each of the petals from the bottom upwards. The consonants beginning with *ka* and ending in *ṭa* may also be regarded as being associated with the lotus, and should be meditated upon. In rather an obscure manner the different consonants are supposed to be associated with the different petals of the imaginary lotuses, and one should steadily meditate upon Śiva and Śakti as associated with the letters of the petals.

In order to proceed on the path of *yoga* it may be necessary to meditate upon some of the recognised images of Śiva, such as the different gross images of Śiva mentioned in the Śaiva scriptures.

Meditation should at first commence with an object, and later on it becomes objectless. But the learned people always discard the state of meditation in which there is no object, and it is said that *dhyāna* consists in the stretching out of an intellectual state¹. For this reason, in the state of *dhyāna* it is the mere *buddhi*, or the intellectual state that flows on, which may often be regarded as having no object. So what is called an objectless (*nirviśaya*) *dhyāna* is only meditation on subtle entities. It is also often said that when meditation is upon some particular form of Śiva it is called *saviśaya*, and when this is in a formless state as an extension of the knowledge of self, it is called *nirviśaya*. This *saviśaya dhyāna* is also called *sabīja*, and the *nirviśaya dhyāna* is called *nirbīja*. As a result of *prāṇāyāma* and meditation, the mind becomes transparent, and then thoughts of Śiva continually recur. As we have said above, *dhyāna* means nothing more than the constant flow of an intellectual state (*buddhi*) of the form of Śiva. It is this continuous flow of

1

*tatra nirviśayaṃ dhyānaṃ nāstīty eva satāṃ matam,
buddher hi santatiḥ kācid dhyānaṃ ity abhidhīyate.*

Śiva-mahāpurāṇa VII. 2. 39. 5.

an intellectual state that is regarded as an object of *dhyāna*¹. Both happiness and liberation come from *dhyāna*; for this reason, one should always try to practise *dhyāna*. There is nothing greater than *dhyāna*². Those who perform *dhyāna* are dear to Śiva, not those who only perform the rituals.

CHAPTER XXXVIII

ŚAIVA PHILOSOPHY IN SOME OF THE IMPORTANT TEXTS

The Doctrine of the *Pāśupata-sūtras*.

SOME of the philosophical doctrines of the Pāśupata system of Śaivism are discussed in the relevant sections. But the formal and ritualistic sides of the system, which have often been referred to elsewhere, as for example in the treatment of Śaivism in the *Sarva-darśana-saṃgraha*, need an authoritative explanation. This is found in the *Pāśupata-sūtras* with the *bhāṣya* of Kauṇḍinya, published in 1940 by the Oriental Manuscripts Library of the University of Travancore, Trivandrum. It is said that Śiva incarnated Himself as Nakulīśa and so was the author of the *Pāśupata-sūtras*. The *bhāṣya* by Kauṇḍinya is also an ancient one, as may be judged from the style of the writing. The editor of the *Pāśupata-sūtras*, A. Śāstri, thinks that Kauṇḍinya may have lived between the fourth and sixth centuries. The *Pāśupata-sūtras* together with the *bhāṣya* of Kauṇḍinya do not give us any philosophy of Śaivism. They deal almost wholly with the rituals, or rather modes of life. It may be quite possible that such ascetic forms of life existed from early times, and that later the philosophy of Śaivism was added. Though these ascetic forms of life had but little connection with the Śaiva philosophy as propounded later, they have a general anthropological and religious interest, as these forms of asceticism remain connected with the life of those who believe in the Śaiva philosophy. In the *Sarva-darśana-saṃgraha* of Mādhava the Pāśupata system is not identified with any form of philosophy, but with different kinds of ascetic practices. When Śaṅkara refutes the Śaiva system, he does not specifically mention any philosophical doctrines of an elaborate nature. He only brands the Śaivas as those who believe in God as the creator of the world (*īśvara-kāraṇin*). Of course, the Naiyāyika is also an *īśvara-kāraṇin* and he is also a Śaiva by faith. The other doctrines of the Naiyāyika are largely taken from the Vaiśeṣika, and Śaṅkara in his joint criticism of Nyāya and Vaiśeṣika had referred to them. The Naiyāyika thus shares his theistic

conviction with the Śaivas. But while the Śaivas of the Pāśupata school lay emphasis on ascetic rituals, the Naiyāyika laid stress on logical arguments. It will therefore not be out of place if we treat the general outline of the Pāśupata sect on its ascetic side, though it may not be regarded as a contribution of philosophical value.

Kauṇḍinya, the commentator, in the beginning of his *bhāṣya*, offers adoration to Pāśupati who had created the whole world, beginning from the Brahman for the good of all. He says that the five subjects of discussion in the Pāśupata system are effect (*kārya*), cause (*kāraṇa*), meditation (*yoga*), behaviour (*vidhi*), and dissolution of sorrow (*duḥkhānta*)¹.

The teaching of the Pāśupata system is for the total annihilation of all kinds of sorrow and this teaching can only be communicated to proper disciples. When the disciple follows the ascetic practices recommended by the Lord, he attains liberation through His grace. It has been noticed before that the Śaiva is called Mahākāruṇika. In our exposition of the Śaiva thought we have examined carefully the doctrine of grace or *karuṇā*, and have also seen how this doctrine of grace is associated with the doctrine of *karma* and the theory of rebirth, in accordance with the justice implied in the theory of *karma*. But here in the *Pāśupata-sūtra* we are told that liberation comes directly from the grace of Śiva. The word *paśu* means all conscious beings, excluding the saints and the all powerful ones. Their animality or *paśutva* consists in the fact that they are impotent and their impotence is their bondage. This bondage, which means their complete dependence on the causal power, is beginningless. The word *paśu* is connected with the word *pāśa*, which means "cause and effect", and is technically also called *kalā*. All animals are thus bound by cause and effect, the sense images and their objects, and become attached to them. The word *paśu* is also derived from *paśyati*. Though the animals are all-pervasive and are of the nature of pure consciousness, they can only perceive

¹ The editor of the *Pāśupata-sūtras* gives the following list of the succession of teachers from Nakulīśa: Nakulīśa, Kauśika, Gārgya, Maitreya, Kauruṣa, Iśāna, Paragārgya, Kapilāṇḍa, Manuṣyaka, Kuśika, Atri, Piṅgala, Puṣpaka, Bṛhadārya, Agastī, Santāna, Rāśīkara (Kauṇḍinya), and Vidyāguru. The seventeenth *guru* called Rāśīkara has been identified with Kauṇḍinya by the editor. This has been done on the supposition that Kauṇḍinya occurs as the *gotra* name in the Bṛhadāraṇyaka Upaniṣad vi. 2 and 4.

their bodies; they do not understand the nature of cause and effect and they cannot go beyond them. The Pāśupati is so called because He protects all beings. Kauṇḍinya definitely says that the liberation from sorrow cannot be attained by knowledge (*jñāna*), disinclination (*vairāgya*), virtue (*dharma*) and giving up of one's miraculous powers (*aiśvarya-tyāga*), but by grace (*prasāda*) alone¹.

The person who is regarded as fit for receiving the Śaiva discipline must be a Brahmin with keen senses. The instruction of the teacher, leading to devotional practices and exciting desire for becoming Śiva, is given out of a spirit of charity to those who wish to annihilate all sorrow.

The word 'yoga' is used to denote the contact of the self with *īśvara* or God (*ātmeśvara-samyogo yogaḥ*). The contact thus means that the person who was otherwise engaged leads himself to the supreme object of *īśvara*; or it may also mean that the contact is due to the dual approach of both God and the person, until they meet. The *yoga* must have disinclination to worldly things as the first condition.

Yoga cannot be attained by mere knowledge but one has to take to a certain course of action called *yoga-vidhi*. *Vidhi* means action. Thus we have the effect (*kārya*) which is the dissolution of pleasure and pain, the cause, the *yoga* and the *vidhi*, and these are the five categories which form the subject-matter of discussion of the *Pāśupata-sāstra*.

Describing the two kinds of perceptual knowledge Kauṇḍinya distinguishes between sense perception and self-perception. By the senses one can perceive various kinds of sense objects, such as sound, touch, colour, taste, smell and the objects to which they belong. In reality, most perceptions occur through sense-object contact, and are manifested in their totality in diverse aspects through such a contact, and are regarded as valid (*pramāṇa*). Self-perception means the totality of the relation that is produced by *citta* and *antaḥkaraṇa*, the mind and the thought. Inference (*anumāna*) is naturally based upon perception. The relationship between the thought, the mind, and the self expresses itself in diverse forms and produces diverse impressions and memories.

¹ *tasmāt prasādāt sa duḥkhāntaḥ prāpyate. na tu jñāna-vairāgya-dharma-aiśvarya-tyāga-mātrād ity arthaḥ. Pāśupata-sūtras* (commentary, p. 6).

And these lead to other kinds of awareness, or those which can be inferred from them.

Inference is of two kinds, *dr̥ṣṭa* (perceived) and *sāmānyato dr̥ṣṭa* (perceived through universals). The first again is of two kinds, called *pūrvavat* and *śeṣavat*. *Pūrvavat* is that which is affiliated with a previous experience. It has been seen to have six fingers, and now we find it of six fingers; therefore it is the same as the previous one. When an animal is recognised as a cow on the evidence of its horns and the hanging neck, this is said to be an inference of the type of *śeṣavat*. The *śeṣavat* inference is intended to distinguish a class of things from others. As an example of *sāmānyato dr̥ṣṭa* (perceived through universals), it is said that as the location at different places of the same object cannot take place, one can infer that the moon and the stars which change places are travelling in the sky. Āgama or testimony is the scriptural testimony that is handed down to us from Maheśvara through His disciples. The *Pāśupata-sāstra* only admits perception, inference, and testimony; all other kinds of *pramāṇas* are regarded as falling within them.

It is the individual perceiver to whom things are proved by means of the *pramāṇas*. The object of the *pramāṇas* are the fivefold categories, namely *kārya*, *kāraṇa*, *yoga*, *vidhi*, and the dissolution of sorrow. Awareness or thought product is called *saṃvid*, *saṃcintana*, or *sambodha*. It is through these that knowledge is revealed. The process of knowledge continues from the first moment of inception to the completion of the knowledge.

Turning to the practices, it is said that one should collect ashes and bake them, and then smear the body in the morning, midday, and afternoon with these ashes. The real bathing is of course through the attainment of virtue by which the soul is purified. One should also lie down on the ashes and remain awake, for the person who is afraid of the cycles of birth and rebirth cannot have time to sleep. The ashes are to be used for bathing instead of water, both for purification and for bearing the signs of a Śaiva. The ashes (*bhasman*) are therefore called *līṅga*, or sign of a Pāśupata ascetic. We must note here that the word *līṅga*, which is often used in connection with the Śaiva doctrine for a phallic sign, is here regarded as a mere indicatory sign of a person's being a Pāśupata ascetic. The ashes which besmear the body are indicators

of the person being a Pāśupata ascetic. The *bhasman* therefore is regarded as *līṅga*. These ashes distinguish the Pāśupata ascetic from the adherents of other sects.

The Pāśupata ascetic may live in the village, in the forest, or in any place of pilgrimage, and there he may employ himself in muttering the syllable *om*, laughing, singing, dancing, and making peculiar sounds through his mouth and lips.

In introducing moral virtues, great emphasis is laid on the *yamas* consisting of non-injury, celibacy, truthfulness, and non-stealing. Next to these are the *niyamas* consisting of non-irritability (*akrodha*), attendance on the teachers, purity, lightness of diet, and carefulness (*apramāda*). Of these two *yama* and *niyama*, *yama* is regarded as being most important. Non-injury in the fashion of the Jainas is highly emphasised, and is regarded as the best of all virtues. We have translated *brahma-carya* by celibacy, but in reality it means all kinds of sense control, particularly the palate and the sex organs; association with women is strongly deprecated. Though verbal truth implying agreement of statements to facts is appreciated, it is held that the final standard of truth is the amount of good that is rendered to people by one's words. Even a misstatement or a false statement, if beneficial to all beings, should be regarded as preferable to a rigorous truthful statement. It is interesting to note that the Pāśupata system forbids all kinds of commercial dealings and trades, as they may cause pain to persons involved in mutual intercourse. Absence of anger (*akrodha*) has been enumerated above as a virtue. This includes both mental apathy consisting of jealousy, enmity, vanity and desire for the evil of others in one's own mind, as well as any action that may be committed in accordance with them. The Pāśupata ascetic has to earn his living by mendicancy alone.

It has been said above that the Pāśupata ascetic should be a Brahmin. It is prohibited for him to address women or Śūdras, except under special circumstances. Under such exceptional circumstances one should purify oneself by bathing in ashes and also *prāṇāyāma*, and the muttering of the *raudrīgāyatrī*. This prescription of practising *prāṇāyāma*, etc., in case one has to meet a woman or a Śūdra and to talk to them, is suggested for purifying the mind of the ascetic, for otherwise on being forced to meet them the ascetic may get angry in his mind, and that may cause injury to his own mind.

When the mind is purified, and one proceeds on the line of *yoga* with the Maheśvara, the supreme Lord, one attains various miraculous powers¹.

The Maheśvara, regarded also as Brahman, is beginningless and indestructible; He is unborn and without any kind of attachment. When one knows the nature of the Lord, one should take refuge in Him and follow the practices described by Him in His scriptures.

The supreme Lord is regarded as producing and destroying all things out of His nature as a playful being. The Lord is supreme as he controls the movements and tendencies of all beings. His eternity consists in his continual knowledge and action, by which he pervades all. He is called Rudra because he is associated with fear on the part of all².

The supreme Lord, being in Himself, creates, maintains and destroys the universe, that is, in Him the universe appears and dissolves like the stars in the sky. God creates the world at His will, as the world of effects exists in His own power and energy, and remains also by virtue of His power.

In explaining the position further, it is said in the *bhāṣya* (II. 5) that the category of Maheśvara is the all-pervasive one, and that the twenty-five categories like *puruṣa*, *pradhāna*, etc., are permeated by the supreme category. So also the category of the *puruṣa*, being the category of the self, is the all-pervading one, and the twenty-four categories of *pradhāna*, etc., are permeated by *puruṣa*. So also in the field of the categories, the *buddhi* is all-pervasive and the twenty-two other categories, beginning with *ahankāra*, are permeated by *buddhi*. So also the *ahankāra* is all-pervasive and the eleven senses are permeated by it; so again the eleven senses are the all-pervasive ones and the subtle five *tanmātras* are permeated by them. So also in the case of gross matter, where the same processes may be assigned to *ākāśa*, *vāyu*, *tejas*, etc.

The question is raised as regards the starting-point of difference between the cause and the effect. The writer of the *bhāṣya* (II. 5) says that it has to be understood on the analogy of a mixture of

¹ See *Pāśupata-sūtras* I. 21-37.

² *rutasya bhayasya drāvaṇāt saṃyojanād rudrah.*

Pāśupata-sūtras II. 4 (commentary).

turmeric and water; in turmeric water you have on the one hand the qualities of water, and on the other the qualities of turmeric. So when the supreme Lord is considered as being associated with the pleasures and pains that He gives to all beings, and the bodies with which He associates them, we may have a conception of a whole. So God can be associated with pleasures and pains that belong to the *prakṛti*, though He himself is absolutely unchangeable. The same analogy may explain the other categories of *pradhāna* and *prakṛti*. Being all-pervasive, the supreme Lord naturally pervades both the causal and the efficient states. The effect as identified in the cause is eternal; the cause, the Lord, is eternal, and all creation takes place in and through Him. Arguing in this way the world becomes eternal, for if the protector is eternal, the things to be protected must also be eternal. The world being eternal, the supreme Lord only connects the relevant parts of it in a relevant order. The grace of God consists in bringing about the proper association of the relevant parts.

God's will being all powerful and unlimited, He can create changes in the world and in the destinies of men according to His own pleasure. He does not necessarily depend upon the person or his *karma* or action¹. God's will may operate either as the evolutionary process or as an interference with the state of things by inducing bondage or liberation. There is, however, a limit to the exercise of God's will in that the liberated souls are not associated with sorrow again. The limit of the effect world is that it is produced, helped and dissolved or changed by the causal category, the supreme Lord. This, therefore, is the sphere of cause and effect. Those who want the cessation of all sorrows should devote themselves to the worship of the Lord Śiva and to no one else.

It is advised that the Pāśupata ascetic should not be too much delighted on the attainment of miraculous powers. He should go on behaving like a Pāśupata ascetic, smearing his body with ashes and smiling and so on, both in places of pilgrimage and temples, and also among people in general. These are called *caryā*. In this *caryā* the joy of the ascetic should be manifested in its pure form

¹ *karma-kāmināś ca maheśvaram apekṣante, na tu bhagavān īśvaraḥ karma-puruṣaṃ vā'pekṣate. ato na karmāpekṣa īśvaraḥ. Pāśupata-sūtras* II. 6 (commentary).

and not associated with any form of vanity which goes with the attainment of miraculous powers.

The process of spiritual worship can only be done through the surrendering of oneself in one's mind to the supreme Lord, and to continue to do it until the goal is reached. When one gives oneself up entirely to Śiva alone, he does not return from the state of liberation. This is the secret of self-surrender¹.

The supreme Lord, called Vāmadeva, *jyeṣṭha*, Rudra, is also called Kāla. It is within the scope of His function to associate the different beings in different kinds of bodies and in different states of existence, with different kinds of experiences, pleasurable and painful, through the process of time. The individual beings are called *kālya* as they happen to be in God or Kāla. The term *kalā* is given to the effects (*kālya*) and their instruments (*kāraṇa*). Thus, the five elements, earth, water, etc., are called *kalā* as *kārya* or effect. So also are their properties. The eleven senses together with *ahankāra* and *buddhi* are called *kāraṇa*. God Himself is *vikarṇa* or without any senses, so there is nothing to obstruct His powers of perception and action. It is God who associates all things and beings with the different *kalās* as *kālya* and *kāraṇa*. The supreme Lord is regarded as *sakala* and *niṣkala*, immanent and transcendent, but even in His transcendental aspect He has in Him all the powers by which He can extend His grace to all beings.

In the third chapter it is said that the real Śaiva ascetic may dispense with all the external practices, so that no one will recognise him as a Śaiva ascetic, and will not give him a high place in society. When the Śaiva ascetic is thus ignored by the people among whom he lives, this very degradation of him serves to remove his sins. When the ascetic bears the insults showered upon him by ignorant persons, he naturally attains fortitude. People may often abuse him as a lunatic, an ignorant man, or a dullard, etc., and in such circumstances he should get away from the public attention and fix his mind on God. With such behaviour he is not only purified but is spiritually ennobled. When a person thus moves about like a poor lunatic, besmeared with ashes and dirt, with

¹ *aikāntikātyantika-rudra-samāpa-prapṭer ekāntenaiva anāvṛtti-phalatvād asā-dhāraṇa-phalatvāc cātma-pradānam atidānam. Ibid. II. 15 (commentary).*

beard and nails and hair uncut, and when he does not follow habits of cleanliness, he is naturally regarded as an outcast. This leads him further on the path towards disinclination, and the insults he bears meekly make him advanced spiritually.

When a person is firm in *yama* and *niyama* practices, and meekly suffers the indignities and abuses showered on him by other people, he is well established in the path of asceticism.

Throughout the whole of the fourth chapter of the *Pāśupata-sūtras* the *pāśupata-vrata* is described as a course of conduct in which the ascetic behaves or should behave as a lunatic, ignorant, epileptic, dull, a man of bad character, and the like, so that abuses may be heaped on him by the unknowing public. This will enliven his disinclination to all worldly fame, honours, and the like, and the fact the people had unknowingly abused him would raise him in the path of virtue. When by such a course of action and by *yoga* one attains the proximity of the great Lord, one never returns again. India is supposed to have performed the *pāśupata-vrata* in the earliest time.

In the fifth chapter the process of *pāśupata-yoga* is more elaborately discussed. The supreme Lord is referred to by many names, but they all refer to the same being, the supreme Lord, and *yoga* means a steady union of the soul with Him. For this purpose the person should be completely detached from all objects, present, past and future, and be emotionally attached to Maheśvara¹. The union of the self with Śiva must be so intimate that no physical sounds and disturbances should lead the person away. In the first stages the attachment with Śiva takes place by the withdrawal of the mind from other objects, and making it settle on the Lord; then the association becomes continuous.

The soul or the Ātman is defined as the being that is responsible for all sense cognitions, all actions, and all attachments to objects. The constant or continuous contact of the self with the supreme Lord constitute its eternity. We can infer the existence of the self from the experiences of pleasure, pain, desire, antipathy, and consciousness. The self is regarded as unborn in the sense that it is not born anew along with the chain of sensations and other activities of the mind, or in other words it remains the same

¹ *evam maheśvare bhāvasthis tadasaṅgitvam ity arthaḥ. Pāśupata-sūtras v. 1 (commentary).*

through all its experiences. It is called *maitra* in the sense that it can remain in a state of equanimity and in attachment with the supreme Lord, when all its desires, antipathies, and efforts have disappeared.

The detachment referred to above can only be attained by the control of all the cognitive and conative senses, *manas* and *buddhi* and *ahankāra*. The control of the senses really means that their activities should be directed towards good acts, and they should not be allowed to stray away into the commission of evil deeds¹.

Kauṇḍinya says that the definition of the goal as described by Sāṃkhya and Yoga is not true. That is not the way to liberation. The teachings of Sāṃkhya and Yoga are impure. To be liberated means to be connected with Lord Śiva, and not to be dissociated from all things².

The ascetic should live in some vacant room; he should devote himself to study and meditation, and make himself steady. He should be in continuous meditation for at least six months; and as he advances on the path of *yoga*, he begins to attain many miraculous powers through the grace of the supreme Lord.

The Pāsupata ascetic should live on mendicancy and should bear all hardships like animals. The yogin who has realised his goal, is not affected by any actions or sins. He is also unaffected by any mental troubles or physical diseases.

To sum up the whole position, one may say that when one becomes absolutely detached from all one's actions and sins, one should continue to meditate by drawing one's mind from all other objects and concentrating the mind on Śiva or on some symbolic name. We have already seen that *yoga* has been defined as the continuous connection of the self with the Lord, and this is also called *sāyujya*, that is, being with God. The supreme Lord has the infinite power of knowledge and action by which He controls everything, and this Lord should be meditated upon in His aspect as formless (*niṣkala*). God should not be approached with the association of any of the qualities attributed to Him. This is expressed by the *sūtra* v. 27, in which it is said that God is

¹ *tasmād akuśalebhyo vyāvartayitvā kāmataḥ kuśale yojitāni (yadā), tadā jītāni bhavanti. Pāsupata-sūtras v. 7 (commentary).*

² *ayaṃ tu yukta eva. na mukta iti viśuddham etad darśanam draṣṭavyam. Ibid. v. 8 (commentary).*

unassociated with anything that can be expressed by speech. The supreme Lord is therefore called *vāg-viśuddha*. The ascetic should often better stay in the cremation grounds where, not having any association, he will have greater time to devote to meditation, and attain merit or *dharma* which is identified with the greatness that is achieved by *yama* and *niyama*. In this way the ascetic cuts asunder all impurities. This cutting asunder of impurities means nothing more than taking away the mind from all sense objects and concentrating the mind on the Lord (*yantraṇa-dhāraṇātmakaś chedo draṣṭavyaḥ*). This *cheda* or dissociation means the separating of the self from all other objects. By this means all the network of causes that produce the defects are cut asunder. The defects are the various sensations of sound, touch, etc., for from these we get in our minds desire, anger, greed, fear, sleep, attachment, antipathy, and delusion. Then again these defects manifest themselves in our efforts to earn things, to preserve them, to be attached to them, and to indulge in injuring others. As a result of this, one afflicts oneself and also others. When one is afflicted oneself, one suffers, and if one afflicts others, then also on account of this vice one suffers. All such suffering thus is associated with the self. The sense objects are like the fruits of a poisoned tree which at the time of taking may appear sweet, but in the end will produce much suffering. The suffering of a man commences from the time of his being born, and continues throughout life till the time of death, so one should see that one may not have to be born again. The pleasures of enjoying sense objects have to be maintained with difficulty, and they produce attachment; when they disappear they produce further sorrow. Moreover, it is hardly possible to enjoy a sense object without injuring other persons. Even in wearing ordinary apparel one has to kill many insects. So one should refrain from enjoyment of all sense objects and be satisfied with whatever one gets, vegetable or meat, by begging.

The dissociation recommended above is to be done through *buddhi*, the internal organ (*antaḥkaraṇa*) which is conceived as being put in motion through merit, meditation, commandments and knowledge. The *buddhi* is also called *citta*. *Citta* means to know and to give experience of pleasure and pain, to collect merit and demerit and other impressions. So, as *buddhi* is called *citta*,

it is also called *manas* and the internal organ, *antahkaraṇa*. The mind has thus to be dissociated from all sense objects by the self, and attached to Rudra or Śiva. When this is done then all intention of merit and demerit disappears; it slides away from the self like the old coil of a snake, or falls down like a ripe fruit. The self which is thus fixed in Śiva becomes static (*niṣkriya*) and is also called *niṣkala*. The mind in this state is devoid of all good and bad thoughts. When this *yoga* ideal is reached, the person becomes omniscient, and he cannot any further be drawn to any kind of illusory notions. So the liberated person, according to this *śaiva-yoga*, does not become a *kevalin* like the yogin following the Pātañjala discipline, but he becomes omniscient and has no sorrows, and this happens by the grace of God. He becomes absolutely liberated in the sense that he can arrest any future aggression of evil or time, and he is not dependent on anybody. In this way he attains or he shares the supreme power of the Lord. Neither does he become subject to all the sufferings of being in the mother's womb, or being born, and the like. He is free from the sorrows due to ignorance, from which is produced egotism, which leads one to forget that one is bound. So the liberated person becomes free from all sorrows of birth and rebirth and all bodily and mental sorrows as well.

The supreme Lord is also called Śiva, because He is eternally dissociated from all sorrows.

We thus see that there are five categories in this system. First, there is the *pati* or the Lord which is the cause, which is called by various names, Vāma, Deva, Jyeṣṭha, Rudra, Kāmin, Śaṅkara, Kāla, Kala-vikaraṇa, Bala-vikaraṇa, Aghora, Ghoratara, Sarva, Śarva, Tatpuruṣa, Mahādeva, Omkāra, Ṛṣi, Vipra, Mahāniśa, Īśāna, Īśvara, Adhipati, Brahmā, and Śiva¹. The Sāṃkhya system admits *pradhāna* as the cause, but in the Pāśupata system God, as distinguished from the *pradhāna*, is the cause.

The category of effect is the *paśu*, and *paśu* is described as knowledge, the means of knowledge, and the living beings. They are produced changed, or dissolved. By knowledge we understand the scriptures, wisdom, merit, attainable objects, values, desires, etc., leading up to the dissolution of all sorrows. The second constituent of *paśu* called *kalā* is of two kinds: as effect, such as

¹ Pāśupata-sūtras v. 47 (commentary).

earth, water, air, etc., and as the instrument of knowledge, such as *buddhi*, egoism, *manas*, and internal organs, etc. The living beings, the *paśus*, are of three types, the gods, men and animals. The category of *pradhāna*, which is regarded as cause in Sāṃkhya, is regarded as effect in the *Pāsupata-sāstra*. Whatever is known or visible (*paśyana*) is called *pāśa*, and is regarded as effect. So *puruṣa*, which is regarded as cause elsewhere, is regarded as an effect, a *paśu*, here. We have already discussed the categories of *yoga* and *vidhi* leading to the dissolution of all sorrows.

A survey of the *Pāsupata-sūtras* with Kauṇḍinya's *bhāṣya* leads us to believe that it is in all probability the same type of Lakuliśa-Pāsupata system as referred to by Mādhava in his *Sarva-darśana-saṃgraha* in the fourteenth century. It may also be the same system of Pāsupatas as referred to by Śaṅkara in his *bhāṣya* on the second book of the second chapter of the *Brahma-sūtra*. There is no reference here to the doctrine of *māyā*, nor to the doctrine of monism as propounded by Śaṅkara. Even at the time of emancipation the liberated souls do not become one with Śiva, the supreme Lord, but the emancipation only means that by mental steadiness the devotee is in perpetual contact with Śiva, and this is what is meant by the word *sāyujya*. We also hear that, though God is omnipotent, He has no power over the liberated souls. Apparently the world and the beings were created by God, but this Pāsupata system does not make any special effort to explain how this world came into being. It is only in acknowledging Śiva as the instrumental cause of the world in this sense, that this Pāsupata system is very different from the Śaiva system of Śrīkaṇṭha and of the *Vāyavīya-saṃhitā*, where the monistic bias is very predominant. Here we have monotheism, but not monism or pantheism or panentheism. It may also be pointed out that the Pāsupata system as represented in this work is a Brahmanical system. For it is only Brahmins who could be initiated to the Pāsupata doctrines, but at the same time it seems to break off from Brahmanism in a variety of ways. It does not recommend any of the Brahmanical rites, but it initiates some new rites and new ways of living which are not so common in the Brahmanical circle. It keeps some slender contact with Brahmanism by introducing the meditation on the syllable *om*. But as regards many of its other rituals it seems to be entirely non-Vedic. It does not refer to any of the Dravidian works as its

source book, and yet it cannot be identified with the Pāśupata system of Śrīkaṇṭha or the *Vāyavīya-saṃhitā*.

It is also important to know that the Pāśupata system of the *Pāśupata-sūtras* has but little connection with the idea of *prakṛti* as energy or otherwise, as we find in the Purāṇic Pāśupata system. None of the categories of Sāṃkhya appear to be of any relevance regarding the creation of the world. About Yoga also one must always distinguish this *Pāśupata-yoga* and the *Pāśupata-yogas* referred to in the Purāṇas or in the *Yoga-sūtra* of Patañjali. The word *yoga* is used in the sense of continuous contact and not the suppression of all mental states (*citta-vṛtti-nirodha*), as we find in the *Pātañjala-yoga*. The emphasis here is on *pratyāhāra*, that is, withdrawing the mind from other objects and settling it down to God. There is therefore here no scope for *nirodha-samādhi*, which precedes *kaivalya* in *Pātañjala-yoga*. It may not be impossible that the Śaiva influence had somehow impressed upon the *Yoga-sūtra* of Patañjali, which apparently drew much of its material from Buddhism, and this becomes abundantly clear if we compare the *Vyāsa-bhāṣya* on the *Yoga-sūtra* with the *Abhidharmakosa* of Vasubandhu. The *Sāṃkhya-sūtra* that we now possess was probably later than the *Yoga-sūtra*, and it therefore presumed that the metaphysical speculations of Sāṃkhya could be explained without the assumption of any God for which there is no proof. The *Yoga-sūtra* did not try to establish Īśvara or God which is also the name for Śiva, but only accepted it as one of its necessary postulates. As a matter of fact, none of the systems of Indian philosophy tried to establish God by any logical means except the Naiyāyikas, and according to tradition the Naiyāyikas are regarded as Śaivas.

In this connection, without any reference to some Āgama works to which we may have to refer later on, we can trace the development of the Pāśupata system in the tenth, eleventh, and up to the fourteenth centuries. It has been said before that the Īśvara-kāraṇins, referred to by Śaṅkara, may refer to the Naiyāyikas, and now I shall be referring to *Gaṇakārikā*, a Pāśupata work attributed to Haradattacarya, on which Bhāsarvajña wrote a commentary, called the *Ratnaṭīkā*. Bhāsarvajña is well known as the author of the *Nyāya-sāra*, on which he wrote a commentary called *Nyāya-bhūṣana*. In this he tried to refute the views of Diṇnāga, Dharmakīrti, Prajñā-karagupta, the author of *Pramāṇa-vārttikālaṃkāra*,

who lived about the middle of the tenth century and is quoted by Ratnākaraśānti of about A.D. 980. Bhāsarvajña, therefore, seems to have lived in the second half of the tenth century. The *Gaṇakārikā* consists of eight verses, and its purport is the same as that of the *Pāśupata-sūtras*. The *Pāśupata-sūtra* that we have dealt with is the same as that which is referred to as *Pāśupata-śāstra*, as the *Sarva-darśana-saṃgraha* quotes the first *sūtra* of the *Pāśupata-śāstra*¹.

Guṇaratna in his commentary on Haribhadra's *Ṣaḍdarśana-samuccaya* says that the Naiyāyikas are also called Yaugas and they walk about with long staffs and scanty loin-cloths, covering themselves up with blankets. They have matted locks of hair, smear their bodies with ashes, possess the holy thread, carry utensils for water, and generally live in the forests or under trees. They live largely on roots and fruits, and are always hospitable. Sometimes they have wives, sometimes not. The latter are better than the former. They perform the sacrificial duties of fire. In the higher state they go about naked; they purify their teeth and food with water, smear their bodies with ashes three times, and meditate upon Śiva. Their chief *mantra* is *om namaḥ śivāya*. With this they address their *guru* and their *guru* also replies in the same manner. In their meetings they say that those men or women who follow the practices of Śaiva initiation for twelve years attain ultimately salvation or *Nirvāṇa*. Śiva the omniscient being, the creator and destroyer of the world, is regarded as a god. Śiva has eighteen incarnations (*avatāra*), namely Nakulīśa, Kauśika, Gārgya, Maitreya, Kauruṣa, Īśāna, Para-gārgya, Kapilāṇḍa, Manuṣyaka, Kuśika, Atri, Piṅgala, Puṣpaka Bṛhadārya, Agasti, Santāna, Rāśikara, and Vidyāguru. They adore the aforesaid saints.

They further say that the ultimate being that they worship is not associated with any of the Purāṇic characteristics of Śiva, such as having matted locks, or the lunar digit in the hair, etc. Such a supreme being is devoid of all such characteristics and passions. Those who desire mundane happiness worship Śiva with such associated qualities, and as possessing attachment or passion. But those who are really absolutely unattached, they worship Śiva as unattached. People attain just those kinds of fruits that they wish to have, and the manner in which they wish to worship the deity.

¹ *Sarva-darśana-saṃgraha*, *Nakulīśa-pāśupata-darśana: Tatredam ādi-sūtram*, "athātāḥ paśupateḥ pāśupata-yoga-vidhiṃ vyākhyāsyāmaḥ" iti.

Guṇaratna says that the Vaiśeṣikas also follow the same kind of external insignia and dress, because the Vaiśeṣikas and the Naiyāyikas are very much similar in their philosophical attitudes. Guṇaratna further says that there are four types of Śaivas—Śaivas, Pāśupatas, Mahāvratadharas, and Kālamukhas, as well as other subsidiary divisions. Thus there are some who are called Bharata who do not admit the caste rules. He who has devotion to Śiva can be called a Bharata. In the Nyāya literature the Naiyāyikas are called Śaivas, because they worship Śiva, and the Vaiśeṣikas are called Pāśupatas. So the Naiyāyika philosophy goes by the name of Śaiva and Vaiśeṣika by the name of Pāśupata. Guṇaratna says that he gives this description just as he has seen it and had heard of it. Their main dialectical works are *Nyāya-sūtra*, *Vātsyāyana-bhāṣya*, Udyotkara's *Vārttika*, Vācaspati Miśra's *Tātparyā-tikā*, and Udayana's *Tātparyā-pariśuddhi*. Bhāsarvajña's *Nyāya-sāra* and its commentary *Nyāya-bhūṣaṇa* and Jayanta's *Nyāya-kalikā* and Udayana's *Nyāya-kusumāñjali* are also mentioned as important works.

The statement of Guṇaratna about the Śaivas is further corroborated by Rājaśekhara's description of the Śaiva view in his *Ṣaḍdarśana-samuccaya*. Rājaśekhara further says that Akṣapāda, to whom the *Nyāya-sūtras* are attributed, was the primary teacher of the Nyāya sect of Pāśupatas. They admit four *pramāṇas*, perception, inference, analogy, and testimony, and they admit sixteen categories of discussion, namely, *pramāṇa*, *prameya*, *saṁśaya*, *prayojana*, *drṣṭānta*, *siddhānta*, *avayava*, *tarka*, *nirṇaya*, *vāda*, *jalpa*, *vitandā*, *hetvābhāsa*, *chala*, *jāti* and *mīgrahasthāna*. These are just the subjects that are introduced in the first *sūtra* of Akṣapāda's *Nyāya-sūtra*. The ultimate object is the dissolution of all sorrow preparatory to liberation. Their main logical work is that by Jayanta and also by Udayana and Bhāsarvajña.

Kauṇḍinya's commentary on the *Pāśupata-sūtras* seems to belong to quite an early period, and it may not be inadmissible to say that it was a writing of the early period of the Christian era. But whether Kauṇḍinya can be identified with Rāśikara, is more than we can say. Rāśikara is mentioned in *Sarva-darśana-saṁgraha*, and there is of course nothing to suggest that Kauṇḍinya could not have been the *gotra* name of Rāśikara.

Apart from the *Ratnaṭikā* on the *Gaṇakārikā*, it seems that there was also a *bhāṣya*, but this *bhāṣya* was not on *Gaṇakārikā*, but it

was the *bhāṣya* of Kaunḍinya on the *Pāśupata-sūtras* which we have already examined. In the *Gaṇakārikā*, a reference is made to eight categories of a fivefold nature and also one category of a tripartite nature. Thus in speaking of strength or power (*bala*), which must be a source of the attainment of the other categories, we hear of faith in the teacher, contentment (*mateḥ prasāda*), fortitude (that is, power of bearing all kinds of sorrow), merit or *dharma*, and also conscious carefulness (*apramāda*).

The question of *bala* or strength may naturally come when one has to conquer one's enemies. One may, therefore, ask the significance of the attainment of *bala* or strength in following a course for the attainment of liberation. The answer to such an inquiry is that strength is certainly required for destroying ignorance, demerit, and the like. These are counted as destruction of ignorance in all its dormant seats, destruction of demerit, dissolution of all that leads to attachment, preservation from any possible failure, and also the complete cessation of the qualities that lead to animal existence as *paśu* through the meditation of God.

This strength may be exercised under different conditions and circumstances. First, when one shows oneself as a member of the Pāśupata sect, smearing the body with ashes and lying on the ashes, and so on; secondly, in the hidden stage, when one hides from other people the fact of one's being a member of the Pāśupata sect, and when one behaves like an ordinary Brāhmin. The third stage is a stage when one conquers all one's sense propensities. Next is the stage when all attractions cease. These include the other behaviours of a Pāśupata ascetic, such as dancing and acting like a madman. The final stage is the stage of *siddhi*, the final emancipation.

The fifth *kārikā* refers to the process of initiation (*dīkṣā*), which consists of the necessary ceremonial articles, the proper time, the proper action, the phallic insignia of Śiva, and the teachers.

The *kārikās* then go on to enumerate the different kinds of attainment (*lābha*). Of these the foremost is knowledge. This knowledge is to be attained methodically by the enumeration of the categories of knowledge, and thereafter by a sufficient description of them as we find in the *Nyāya-sūtras*. This will also include the various kinds of *pramāṇas* or proof, the differentiation between substance and attitude, the definition of action leading up to the

final action of dissociation of all sorrows. In other philosophies the dissociation of sorrows is merely a negative quality, but in this system the dissolution of sorrow involves within it the possession of miraculous powers. This attainment of miraculous powers is called also *jñāna-śakti* and *kriyā-śakti*. *Jñāna-śakti* means *jñāna* as power. This *kriyā-śakti* consists of various kinds of powers of movement. As this system does not hold the idea of evolution or self-manifestation, the attainment of these powers is by association with superior powers. This is quite in accordance with the Nyāya theory regarding the origination of qualities. All the categories of knowledge, merit, etc., are included as being within the range of attainment. This also includes the inanimates and the animate characters such as the elements, the five cognitive senses, the five conative senses, and the *manas*.

God is called the Lord or *pāti*, because He is always associated with the highest powers; these powers do not come to Him as a result of any action, but they abide in Him permanently. For this reason He can by His will produce any action or effect which stands before us as creation and it is for this reason that the creation of the world is regarded as a sort of play by Him. This is what distinguishes Him from all other animate beings, and this is His greatness.

The whole course of *vidhi* or proper religious behaviour consists of those kinds of action which would ultimately purify the individual and bring him close to God. In this connection *tapas* is recommended for the destruction of sins and for the generation of merit. *Dharma*, also consisting of various kinds of ritualistic behaviour, is recommended for the attainment of knowledge. The continuous meditation on God with emotion (*nityatā*) and the complete dissociation of the mind from all defects (*sthiti*) are also advised. These ultimately lead to the final liberation when the individuals become associated with great miraculous powers like Śiva Himself. In other systems the liberated souls have no miraculous powers; they have only all their sorrows dissolved.

The above attainments should be made by residence with the teacher, or where people live who follow the caste and the *Āśrama* rules, or in any vacant place which is cleaned up and which has a covering on it, or in the cremation ground; or finally the aspirant

with the cessation of his body may live in fixed association with the supreme Lord.

We must now turn to the means by which the aspirant may attain his desired end. The first is technically called *vāsa*. It means many things; it means the capacity to understand the proper meanings of words of texts, to remember them, to be able to collate and complete that knowledge in association with knowledge gained in other places, the ability to criticise the teachings of opposite schools in favour of one's own school, to be able to grasp the correct meaning of texts which have been differently interpreted, to be able to carry one's own conviction to other people, the ability to speak without contradiction and repetition and without any kind of delusion, and thereby to satisfy the teacher. To these must be added the proper courtesy and behaviour towards the teacher. This latter is called *caryā*, *paricaryā*, or *kriyā*. The term *caryā* is also used to denote various kinds of action, such as smearing the body with ashes, and so on. According to the Pāśupata system the bathing of the body with ashes is equivalent to proper sacrifice, that is, *yajña*. Other kinds of sacrifice are regarded as bad sacrifices.

Bhāsarvajña follows Kauṇḍinya's *bhāṣya* in describing *caryā* as being twofold or threefold. Thus the bathing of the body with ashes, lying down, muttering *mantras*, etc., are called *vrata*, which produces merit and removes demerit. All the other recommendations found in Kauṇḍinya's *bhāṣya* as regards shivering, laughing, making noises, etc., are also repeated here. In fact, the *Gaṇa-kārikā* and the *Ratnaṭīkā* closely follow the teachings of Kauṇḍinya in his *bhāṣya*, which is regarded as the most prominent work of the Pāśupata school.

One important point in this system deserves to be noticed. God Himself is absolutely independent. The introduction of the idea of *karma* and its fruit is not so indispensable, for the simple reason that no *karmas* can produce any fruit without the will of God. All *karmas* can be frustrated by God's will. So the introduction of the *karma* theory, which is held in so high an esteem in other systems of philosophy, is here regarded as superfluous. That this was the idea of the Nakulīśa-Pāśupata philosophy from the time of the *Pāśupata-sūtras* and Kauṇḍinya's *bhāṣya* to the fourteenth century when the *Sarva-darśana-saṃgraha* was written, is

thoroughly borne out by texts. The action of all living beings depends upon the will of God. God Himself having no purpose to fulfil, does not want *karma* as an intermediary between His will and His effect.

After considerable difficulty we obtained a copy of *Mṛgendrā-gama* from the Government Manuscript Library of Madras. It appears that this Āgama was one of the important texts of the Pāsupata sect. But the portions that we have recovered deal mainly with various kinds of rituals and they have no philosophical interest.

The Śaiva Ideas of Māṇikka-vāchakar in the *Tiru-vāchaka*.

In the present work the writer has refrained from utilising material from a Dravidian language such as Tamil, Telegu, and Kanarese. This is due to more than one reason. The first is that the writer has no knowledge of the Dravidian languages, and it is too late for him to acquire it, as it might take a whole life time to do so. The second is that this history in all its past volumes has only taken note of material available in Sanskrit. Thirdly, so far as the present author can judge, there is hardly anything of value from the philosophical point of view in Dravidian literature which is unobtainable through Sanskrit. A Tamil work could, however, be taken in hand, if there were any trustworthy translation of it, and if the work were of any great reputation. It is fortunate that Māṇikka-vāchakar's *Tiru-vāchaka*, which is held in very high esteem, has a trustworthy translation by the Rev. G. U. Pope, who devoted his life to the study of Tamil, and may be regarded as a very competent scholar in that language. It appears that Tamil was particularly rich in poetry, and we have many devotional songs both in Tamil and in Kanarese, but I do not know of any systematic philosophical work either in Tamil or in Kanarese which is not presented in Sanskrit. The Tamil literature also abounds in mythical and legendary accounts of many of the saints, which go by the name of Purāṇas, such as *Periya-purāṇa* and *Tiru-vātavurār-purāṇa*, *Nampiyāndār-nampī-purāṇa* and *Sekkilar-purāṇa*.

Tiru-vāchaka is a book of poems by Māṇikka-vāchakar. It is full of devotional sentiments and philosophical ideas, but it is not

a system of philosophy in the modern sense of the term. Pope wishes to place Māṇikka-vāchakar in about the seventh or eighth century, apparently without any evidence. R. W. Frazer, in his article on Dravidians¹, places him in the ninth century, also without any evidence. Māṇikka-vāchakar is supposed to have been born near Madura. The meaning of his name is "he whose utterances are rubies." He is supposed to have been a prodigy of intellect and was a consummate scholar in the Brahmanical learning and the *Śaivāgamas*. These Āgamas, as we have pointed out elsewhere, are written in Sanskrit verses and also in Tamil. It appears, therefore, that the background of Māṇikka-vāchakar's thought was in Sanskrit. The mythical story about Māṇikka-vāchakar, available in the *Tiru-viḷaiyāḍil* and in the *Vāṭavurar-purāṇa* as summarised by Pope, need not detain us here. We find that he renounced the position of a minister of the king and became a Śaiva ascetic. His mind was oppressed with the feeling of sadness for all people around him, who were passing through the cycles of birth and death, and had no passionate love for Śiva which alone could save them. This state of his mental agitation, and the confession of his ignorance and youthful folly, are specially described in some of his poems.

Later on Śiva Himself meets him, and from that time forward he becomes a disciple of Śiva. Śiva appears before him with His three eyes, His body smeared with ashes, and holding a book in His hand called *Śiva-jñāna-bodha*, the well-known work of Meykaṇḍadeva. Pope himself admits that the *Śiva-jñāna-bodha* could not have been written by the sixth century A.D., the supposed date of Māṇikka-vāchakar².

In the course of his career he travelled from shrine to shrine until he came to Chidambaram, where in a discussion he completely discomfited the Buddhists, partly by logic and partly by the demonstration of miraculous powers. He then returned to other devotees and set up a *liṅgam* under a tree and worshipped it day and night. It was from that time that he began his poetical compositions which are full of the glory of Śiva and His grace.

¹ In Hastings' *Encyclopaedia of Religion and Ethics*.

² *Śiva-jñāna-bodha* is supposed to have been written by Meykaṇḍadeva in or about A.D. 1223. See article on Dravidians by Frazer in *Encyclopaedia of Religion and Ethics*.

A study of his poems reveals the gradual evolution of his mind through various states of repentance, afflictions, sadness, and his extreme devotedness and love for Śiva. Pope, in commenting on the poetry of Māṇikka-vāchakar, says "scarcely ever has the longing of the human soul for purity and peace and divine fellowship found worthier expression¹."

The fact of the omnipresence of God is often expressed in the Śaiva songs as the sport of Śiva. The whole universe is bright with his smile and alive with his joyous movements. This idea is so much overstressed that Śiva is often called a deceiver and a maniac, and in the Pāśupata system the Pāśupata ascetics are advised to behave like mad people, dancing about and even deceiving others into thinking of them as bad people, and making all kinds of noise and laughing in an irrelevant manner. It is also supposed that Śiva would often try the loyalty of his devotees in various forms of manifestations, trying to represent Himself in an exceedingly unfavourable light. The dancing of Śiva is particularly symbolical of his perpetual gracious actions throughout the universe and in loving hearts. He reminds one of the pre-Aryan demon dancers in the burning grounds.

We assume that the teaching of Māṇikka-vāchakar is in consonance with the teaching of the *Śiva-jñāna-bodha*, which was composed at a later date. Umāpati has a commentary on the *Śiva-jñāna-bodha* which has been translated by Hoisington in the *American Oriental Society Journal* of 1895. In this book various types of liberation are described. Distinguishing the Śaiva view from other views, one may find a number of variations in conception in the different Śaiva schools. Some of these variations have already been noted in the different sections of Southern Śaivism. There are many who think that the innate corruptions of the soul can be removed, and this may lead to a permanent release from all bonds (*pāśa*). The *Śaiva-siddhānta*, however, insists that even in this liberated state the potentiality of corruption remains, though it may not be operative. It remains there in the soul as a permanent dark spot. So the personal identity and the imperfections cling together in all finite beings, and they are never destroyed even in liberation. Other sectarian Śaivas, however, think that by the grace of Śiva the innate corruptions of the soul may be removed,

¹ Pope's translation, p. xxxiv.

from which it necessarily follows that there may be permanent release from all bonds. There are other Śaivas who think that in liberation the soul acquires miraculous powers, and that the liberated persons are partakers of divine nature and attributes, and are able to gain possession of, and exercise, miraculous powers called *siddhi*. There are others who think that in emancipation the soul becomes as insensible as a stone. This apathetic existence is the refuge of the soul from the suffering and struggle of the cycle of births and rebirths. We have already mentioned most of these ideas of liberation in a more elaborate manner in the relevant sections. But according to Māṇikka-vāchakar the soul is finally set free from the influence of threefold defilement through the grace of Śiva, and obtains divine wisdom, and so rises to live eternally in the conscious, full enjoyment of Śiva's presence and eternal bliss. This is also the idea of the Siddhānta philosophy¹.

A great pre-eminence is given to the idea of the operation of divine grace (called *aruḷ* in Tamil) in the Śaiva Siddhānta. The grace is divine or mystic wisdom, to dissipate the impurities of the *āṇava-mala* and to show the way of liberation. The souls are under the sway of accumulated *karma*, and it is by the grace of the Lord that the souls of men, in a state of bondage in the combined state, are let loose and find their place in suitable bodies for gradually working out and ultimately attaining liberation. Through all the stages, grace is the dynamic force that gradually ennoble the pilgrim towards his final destination. The grace of Śiva through the operation of His energy (*śakti*) affords light of understanding, by which people perform their actions of life and accumulate their *karma* and experience joys and sufferings. The material world is unconscious and the souls have no knowledge of their own nature. It is only by the grace of Śiva that the individuals understand their state and acquire the mystic knowledge by which they can save themselves; yet no one knows the grace of Śiva and how it envelops him, though he is endowed with all sense perceptions. From beginningless time the individuals have been receiving the grace of God, but they have seldom come under its influence, and are thus devoid of the right approach to the way to deliverance.

The grace can be observed as operative when the proper *guru* comes and advises the person to follow the right course. When the

¹ Pope, *loc. cit.* p. xliv.

opposition of sins and merits is counter-balanced, Śiva's emancipating grace begins to show its work. In order to be saved, one should know the spiritual essence of *karma* and the twofold kinds of *karma*, and the joys and sorrows which are associated with them, and the Lord Who brings the deeds to maturity at the appointed time so that the soul may experience their effects.

Just as a crystal reflects many colours under the sun's light and yet retains its own transparent character, so the energy or wisdom obtained as a grace of the Lord irradiates the soul and permeates the world. Without the mystic wisdom obtained through the grace of Śiva, no one can obtain real knowledge. The soul is unintelligent without Śiva. All the actions of souls are performed with the active guidance of Śiva, and even the perception of the senses as instruments of knowledge is owed to Śiva's grace.

In the second stage we are taught how to apply knowledge for the cleansing of the soul. Those who endure the delusive sufferings of worldly experience would naturally seek relief in the grace of God as soon as they became convinced of their impurities. To a jaundiced person even sweet milk appears bitter, but if the tongue is cleansed the bitterness is gone; so under the influence of the original impurities all religious observances are distasteful, but when these impurities are removed then the teachings of the *guru* become operative.

What cannot be perceived by the senses, supreme bliss, is known by the operation of grace in a spiritual manner. The grace of God is spontaneously revealed to us. The supreme felicity is thus a gift of grace which souls cannot obtain of themselves.

Only those who are introduced to this grace can combine with Śiva in bliss. There is a curious notion that the souls are feminine and so is the *śakti* or energy, and Śiva is the Lord with whom there is a mystic unification. Śiva is perfect bliss. If there is a mystic union between the soul and the Lord, then they should become one, leaving the duality between the soul and God unexplained; it has to be assumed, therefore, that they both become one and remain divided. When the bonds are removed the devotee becomes one with God in speechless rapture, and there is no scope for him to say that he has obtained Śiva. Those who obtain release, and those who attain the state of *samādhi*, are never torn asunder from the Lord. In that state all their physical actions are under the

complete control of the Lord. There thus comes a state when the knower, the mystic knowledge, and the Śiva appear no more as distinct, but as absorbed in one another.

Though those who enter this state of *samādhi* gain omniscience and other qualities, yet while they are on this earth they know nothing whatever except the supreme Lord, the object of their mystic knowledge. All their sense-organs are restrained and sink deep into their source and do not show themselves. Within and without the divine grace stands revealed. In this mystic enlightenment the phenomenal universe is only seen in God.

In the *Vāṭavurār-purāṇam* as translated by Pope there is an account of the controversy of Māṇikka-vāchakar with the Buddhist teachers in Chidambaram. The controversy does not manifest any great knowledge of Buddhism on either side. The disputation hangs round this or that minor point and lacks logical co-ordination, so that it is unprofitable to follow it up. It is also extremely doubtful if that controversy were in any way responsible for the loss of prestige on the side of Buddhist thought, which must have been due, from the ninth century onwards, to the rise of various South Indian sects which quarrelled with each other, and also, mainly, to political reasons.

Māṇikka-vāchakar and Śaiva Siddhānta.

We read in Śaṅkara's commentary (II. 2. 27) that he mentions the name *Siddhānta-śāstra* written by Śiva Himself, and he gives us some specimen ideas of these which can be covered within two concepts: (1) that the Siddhāntas assume God to be the instrumental cause, against the Vedānta view that God represents the whole of reality and that there is nothing outside Him. He also (2) refers to the Śaiva doctrine which acknowledged three categories, the *pati*, *paśu*, and *pāśa*. Among the Śaivas he refers to the Mahā-kāruṇikas, Kāpālikas, etc. As I have often said, it is extremely difficult to discover with any exactitude the sort of Śaivism that Śaṅkara designates by the name Siddhānta, as also to define the characteristics of the systems that he wanted to refute. We have now before us a system of Śaivism which goes by the name of Śaiva Siddhānta and a whole lot of works regarded as the works of the Śaiva Siddhānta school. Much of it, particularly in

the way of commentaries, is written in Tamil: some of it is available in Sanskrit. A sort of Śaivism very similar to this is found in the *Vāyavīya* section of the *Śiva-mahāpurāṇa*. It is said in those sections that the original doctrine of that philosophy was written in the Āgama works as composed by the successive incarnations of Śiva. The same teachings are to be found also in Tamil Āgamas, which have the same authority and content. Pope says that the Śaiva Siddhānta system is the most elaborate, influential, and undoubtedly the most intrinsically valuable of all the religions of India. This seems to me to be a wild exaggeration. The fundamental facts of Śaivism are composed of Vedāntic monism and Sāṃkhya, and sometimes the Nyāya doctrines have also been utilised. This latter refers to the Pāśupata school of Śaivism, as has been noted elsewhere. It is also doubtful if it is peculiarly South Indian and Tamil, for we have similar doctrines in the *Vāyavīya-saṃhitā* and also in a somewhat variant form in the Northern Śaivism. There are many statements by Pope which seem to have no factual value, and if the present work had any polemical intention, it would be necessary to criticise him more definitely.

Some people say that the oldest form of Śaivism is the old pre-historic religion of South India, but I have not found any evidence to show the exact nature of an existent pre-Aryan, Dravidian religion which could be identified with what we now know as Śaivism. It is as yet very doubtful whether the pre-Aryan Dravidians had any systematic form of philosophy or religion differing from that of the kindred classes of other aborigines.

In our view the *Pāśupata-sūtra* and *bhāṣya* were referred to by Śaṅkara and were probably the earliest basis of Śaivism, as can be gathered by literary evidences untrammelled by flying fancies. We are ready to believe that there were ecstatic religious dances, rites of demon-worship, and other loathsome ceremonials, and that these, though originally practised for ancestor-worship and the like, were gradually accepted by the earliest Pāśupatas, whose behaviour and conduct do not seem to affiliate them with the Brahmanic social sphere, though holders of such Śaiva doctrines had to be Brahmins. Castelessness was not a part of the earlier Pāśupata Śaivism. In a separate section we shall try to give an estimate of the evolution of the concept of Śiva from Vedic times. The affirmation that one little Christian Church on the east coast

of India exerted its influence on the dominant Śaiva and Vaiṣṇava faith in the country lacks evidence. We have found that as a rule those who held the Sanskritic culture hardly ever read even Pāli texts of Buddhism, though Pāli is so much akin to Sanskrit. On this account we find that the reputed disputation of Māṇikka-vāchakar with the Buddhists is uninteresting, as it does not seem that Māṇikka-vāchakar or the Ceylonese knew much of each other's faith. Pope's statement, that Kumārila Bhatta preached the doctrine of a personal deity in the South, is absolutely wrong, because the Mīmāṃsā view as expounded by Kumārila did not admit any God or creator.

Māṇikka-vāchakar, probably of the ninth century, was one of the earliest saints of the school of thought that goes by the name of Śaiva Siddhānta. Probably about a century later there arose Nāṇasambandar and other devotees who developed the doctrine further. Their legendary tales are contained in the *Periya-purāṇa*. But it is peculiar that King Bhoja of Dhāra, who wrote a Śaiva work of great distinction called *Tattva-prakāśa*, does not take any notice of these Tamil writers. Similarly Mādhava, also in the fourteenth century, does not mention any of these Tamil writers. We are told that thereafter came fourteen sages, called *Santāna-gurus* (succession of teachers), who properly elaborated the system of philosophy known as the Śaiva Siddhānta. One of these was Umāpati, who lived in A.D. 1313. He was thus a contemporary of Mādhava, though Mādhava makes no reference to him.

The thirteenth and the fourteenth centuries were periods of great theistic enterprises in the hands of the Śaivas and the Śrīvaiṣṇavas. In interpreting *Tiru-vachakam*, Umāpati says that the real intention of all the Vedas is summed up in three mystic words: *pati*, *paśu*, and *pāśa*, the Lord, the flock, and the bond. These are the three categories of the Śaiva Siddhānta system. But we have already pointed out that there were no special peculiarities of the Śaiva Siddhānta; it was referred to by Śaṅkara in the eighth century and it formed the cardinal doctrine of the Pāśupata school of Śaivism, and also to the schools of Śaivism as we find them in the *Vāyaviya* section of the *Śiva-mahāpurāṇa*. The *pati*, *paśu* and *pāśa* are equally eternal, existing unchanged and undiminished through the ages. This *pati* is none else but Śiva, who is called by various names, such as Rudra, *paśūnām-pati*, Śiva, etc. Umāpati

says that Śiva is the supreme Being, is neither permanently manifested nor unmanifested; He is without qualities or distinguishing marks, free from all impurities, absolute and eternal, the source of wisdom to innumerable souls, and not subject to any fluctuations. He is immaterial and of the nature of pure bliss. He is difficult of access to the perverse, but He is the final goal of those that truly worship Him. Śiva is thus described to be *niṣkala*, without parts, perfect in Himself, but is capable of manifestation, and in order to energise in souls the various constituents of that eternal aggregate of impurity which constitutes the bond, He assumes a *sakala* nature, that is, one composed of pieces of spiritual bodies. He is formless and has the form of wisdom. He creates, preserves, and consigns all to the power of *māyā*, but He is the ultimate refuge who never leaves us. He dwells everywhere and pervades all things as fire pervades all wood. He offers His boon only to those who approach Him for it.

Turning to the groups of animate beings called *paśu*, it is suggested that from beginningless time an infinite number of souls must have obtained their release. Generally there are three kinds of impurities—darkness, deeds (*karma*) and delusion. When delusion is removed, darkness may still continue. The souls can perceive objects through sense organs only when their functions are supplemented by some innate divine faculty. All beings are infested with original impurities. The threefold impurities which constitute the bond are directly known by Śiva.

Para-śiva or the supreme Lord and Parā-śakti are two in one. Śiva is pure intelligence (*jñāna*) and Śakti is pure energy (*kriyā*). Out of their union, evolves (1) *icchā-śakti*, which is a combination of *jñāna* and *kriyā* in equal proportion; (2) *kriyā-śakti* which is a combination of *jñāna* and *kriyā* with an excess of *kriyā*; and (3) *jñāna-śakti*, which is a combination of *jñāna* and *kriyā* with an excess of *jñāna*, also called *aruḷ-śakti*. The *aruḷ-śakti* is the *jñāna-śakti* active at the time of the liberation of the souls, while as *tirodhāna-śakti* it is active at the time when the souls are fettered.

To sum up the position of the Śaiva Siddhānta as far as we can understand it from authoritative translations of Tamil works, and also authoritative studies of Tamil literature like Pope and Schomerus, we find that the souls which pervade the body are themselves inanimate, and the intellectual apparatus by which

things are perceived are also unconscious. Conscious experience can only originate by the energy of Śiva. This energy, like a ray of sun, is the original *śakti* or energy which is indistinguishable from Śiva. The Śaiva Siddhānta school is in direct opposition to the Cārvāka school which denies the existence of any creator. The Śaiva Siddhānta school argues for the existence of a supreme Being who evolves, sustains, and involves the phenomenal universe. The whole universe, constituted of all beings, male and female, and those which are without life, but which come into phenomenal existence, subsists for a while and then subsides; but yet, as we have said before, this does not clarify our knowledge regarding the nature of the physical world and of the souls. It does not explain how beings became associated from the beginning with impurities called *āṇava-mala*. Even at the attainment of release the souls could not be united or become one with God. Other forms of Śaivism have attempted to follow slightly diverse lines to avoid these difficulties.

Though *śakti* is regarded as a part of Śiva—and this has led to many mystical aspects of Tantra philosophy—yet the relation of the individual devotees to God is one of servitude and entire self-surrender. It has none of the amorous sides of rapturous love that we notice among the Vaiṣṇava saints, the Ārvārs.

Tiru-vāchakam may in some sense be regarded as a spiritual biography of Māṇikka-vāchakar which records his experiences at different times of his life and explains. The work is full of his religious experiences and enthusiasm, showing different states of religious pathology. Thus he says:

What shall I do while twofold deeds' fierce flame burns still out,—
Nor doth the body melt,—nor falsehood fall to dust?
In mind no union gained with the "Red fire's honey"
The Lord of Perun-turrai fair!¹

Shall I cry out, or wait, or dance or sing, or watch?
O Infinite, what shall I do? The Śiva who fills
With rapturous image,—great Perun-turrai's Lord
Let all with me bending adore!²

He filled with penury; set me free from 'births,' my soul
With speechless fervours thrilled,—blest Perun-turrai's Lord,—
The Śiva in grace exceeding made me His; the balm
For all my pain, the deathless Bliss!³

¹ *Tiru-vāchakam*, p. 334.

² *Ibid.*

³ *Ibid.* p. 336.

Glorious, exalted over all, the Infinite,—
 To me small slave, lowest of all, thou has assigned.
 A place in bliss supreme, that none beside have gained or known!
 Great Lord, what can I do for thee!¹

All ye His servants who've become, put far away each idle sportive
 thought;
 Such refuge at the fort where safety dwells; hold fast unto the end
 the sacred sign;
 Put off from you this body stained with sin; in Śiva's world He'll
 surely give us place!
 Bhujanga's self, whose form the ashes wears will grant you entrance
 'neath His flow'ry feet!²

Śaiva Philosophy according to Bhoja and his commentators.

Mādhava in his *Sarva-darśana-saṃgraha* of the fourteenth century refers to a system of philosophy *Saiva-darśana* which rejects the view that God of His own will arranges all experiences for us, but that he does so on the basis of our own *karma* and that this philosophy is based upon the *Śaivāgamas*, supposed to have been composed by Śiva, Maheśvara. In examining the philosophy of Śrīkaṇṭha and Appaya we have seen that they speak of twenty-eight Āgamas, which were all written by Śiva or His incarnations, and that, whether in Dravidian or in Sanskrit, they have the same import. Though it will not be possible for us to get hold of all the Āgamas, we have quite a number of them in complete or incomplete form. On the evidence of some of the Āgamas themselves, they were written in Sanskrit, Prakṛt, and the local country dialects³. We also find that, though written by Maheśvara, all the Āgamas do not seem to have the same import. This creates a good deal of confusion in the interpretation of the *Śaivāgamas*. Yet the differences are not always so marked as to define the special characteristics of the sub-schools of Śaivism.

Bhoja, probably the well-known Bhoja of the eleventh century who wrote *Sarasvatī-kaṇṭhābharana* and a commentary on the *Yoga-sūtra*, wrote also a work called *Tattva-prakāśa* which has

¹ *Ibid.* p. 336.

² *Ibid.* p. 329.

³ *saṃskṛtaiḥ prakṛtair yaś cāśiṣyāmurūpataḥ,
 deśa-bhāṣadyupāyais ca bodhayet sa guruḥ smṛtaḥ.*

Śiva-jñāna-siddhi (Mysore manuscript, no. 3726).

been referred to by Mādhava in his *Sarva-darśana-saṃgraha*. Mādhava also refers to Aghora-śivācārya, whose commentary on *Tattva-prakāśa* has not yet been published, but he omits Śrikumāra, whose commentary on *Tattva-prakāśa* has been published in the Trivendrum Series along with the *Tattva-prakāśa*. Aghora-śivācārya seems to have written another commentary on the *Mṛgendrāgama* called the *Mṛgendrāgama-vṛtti-dīpikā*. In writing his commentary Aghora-śivācārya says that he was writing this commentary, because other people had tried to interpret *Tattva-prakāśa* with a monistic bias, as they were unacquainted with the Siddhānta of the Āgama-śāstras. From the refutation of the Māheśvara school by Śaṅkara in II. 2. 37, we know that he regarded the Māheśvaras as those that held God to be only the instrumental agent of the world and the material cause of the world was quite outside Him. According to the monistic Vedānta of Śaṅkara, Brahman was both the material and the instrumental cause of the world. The world was in reality nothing but Brahman, though it appeared as a manifold world through illusion, just as a rope may appear as a snake through illusion. This is called the *vivarta* view as opposed to the *pariṇāma* view, according to which there is a material transformation leading to the production of the world. The *pariṇāma* view is held by the Sāṃkhyaists; the other view is that God is the instrumental agent who shapes and fashions the world out of atoms or a brute *māyā*, the material force. The Naiyāyikas hold that since the world is an effect and a product of mechanical arrangement, it must have an intelligent creator who is fully acquainted with the delimitations and the potencies of the atomic materials. God thus can be proved by inference, as any other agent can be proved by the existence of the effect. This is also the viewpoint of some of the *Śaivāgamas* such as the *Mṛgendra*, *Mātāṅga-parameśvara*, etc.

Śrikumāra, in interpreting *Tattva-prakāśa*, seems to be in an oscillating mood; sometimes he seems to follow the Āgama view of God being the instrumental cause, and sometimes he tries to interpret on the Vedāntic pattern of *vivarta*. Aghora-śivācārya takes a more definite stand in favour of the Āgama point of view and regards God as the instrumental cause¹. In our account of Śaivism

¹ *vivādādhyāsitaṃ viśvaṃ viśva-vit-kartṛ-pūrvakam, kāryatvād āvayoḥ siddhaṃ kāryaṃ kumbhādikaṃ yathā, iti śrīman-mātāṅge' pi, nimitta-kāraṇaṃ tu iśa iti. ayam ceśvara-vādo 'smābhīḥ mṛgendra-vṛtti-dīpikāyāṃ vistareṇāpi darśita iti.* Aghora-śivācārya's commentary on *Tattva-prakāśa* (Adyar manuscript).

as explained in the *Vāyaviya-saṃhitā*, we have seen how in the hands of the Purāṇic interpreters Śaivism had taken a rather definite course towards absolute monism, and how the Sāṃkhya conception of *prakṛti* had been utilised as being the energy of God, which is neither different from nor identical with Him. Such a conception naturally leads to some kind of oscillation and this has been noticed in the relevant places.

Mādhava sums up the content of the *Śaivāgamas* as dealing with three categories, *pati*, the Lord, *paśu*, the beings, and *pāśa*, the bonds, and the four other categories of *vidyā*, knowledge, *kriyā*, behaviour or conduct, *yoga*, concentration, and *caryā*, religious worship. Now the beings have no freedom and the bonds themselves are inanimate; the two are combined by the action of God.

Bhoja writes his book, *Tattva-prakāśa*, to explain the different kinds of metaphysical and other categories (*tattva*) as accepted by the Śaiva philosophy. The most important category is Śiva who is regarded as being *cit* by which the Śaivas understand combined knowledge and action¹. Such a conscious God has to be admitted for explaining the superintendence and supervision of all inanimate beings. This ultimate being is all by itself; it has no body and it does not depend upon any thing; it is one and unique. It is also all-pervading and eternal. The liberated individual souls also become like it after liberation is granted to them, but God is always the same and always liberated and He is never directed by any supreme Lord. It is devoid of all passions. It is also devoid of all impurities².

Aghora-śivācārya follows the *Śaivāgamas* like the *Mygendra* or the *Mātaṅga-parameśvara* in holding that the existence of God can be inferred by arguments of the Naiyāyika pattern. It is, therefore, argued that God has created the world, maintains it, and will destroy it; He blinds our vision and also liberates us. These five actions are called *amugraha*, which we have often translated, in the absence of a better word, as grace. In reality, it means God's power that manifests itself in all worldly phenomena leading to

¹ Aghora-śivācārya quoting *Mygendra* in his commentary on *Tattva-prakāśa* says: *caitanyam dṛk-kriyā-rūpam iti cid eva ghaṇam deha-svarūpam yasya sa cidghanaḥ*. This *cidghana* is the attribute ascribed to Śiva in *Tattva-prakāśa*.

² *moho madaś ca rāgaś ca viṣādaḥ śoka eva ca, vaicittaṃ caiva harṣaś ca saptaite sahaḥ malāḥ*. Aghora-śivācārya's commentary (Adyar manuscript) on *Tattva-prakāśa*, *kārikā* 1.

bondage and liberation, everything depending upon the *karma* of the individual. It is quite possible that in some schools of Śaivism this dynamism of God was interpreted as His magnificent grace, and these people were called the Mahā-kāruṇikas. *Anugraha*, or grace, thus extends to the process of creation. If it were ordinary grace, then it could have been only when the world was already there¹. This *anugraha* activity includes creation, maintenance, destruction, blinding the vision of the individuals, and finally liberating them². Śrīkumāra explains the situation by holding that the act of blinding and the act of enlightening through liberation are not contradictory, as the latter applies only to those who have self-control, sense-control, fortitude, and cessation from all enjoyment, and the former to those who have not got them³. God thus is responsible for the enjoyable experiences and liberation of all beings through His fivefold action. His consciousness (*cit*) is integrally connected with His activity. Though God is of the nature of consciousness and in that way similar to individual souls, yet God can grant liberation to individual souls with powers which the individual souls themselves do not possess. Though God's consciousness is integrally associated with action, it is indistinguishable from it. In other words God is pure thought-activity.

The *śakti* or energy of Śiva is one, though it may often be diversely represented according to the diverse functions that it performs. Śrīkumāra points out that the original form of this energy is pure bliss which is one with pure consciousness. For the creation of the world God does not require any other instrument than His own energy, just as our own selves can perform all operations of the body by their own energy and do not require any outside help. This energy must be distinguished from *māyā*. Taking *māyā* into consideration one may think of it as an eternal energy, called *bindu-māyā* which forms the material cause of the world⁴.

¹ *anugrahaś cātropalakṣaṇam. Ibid.*

The monistic interpretation as found in Śrīkumāra's commentary is already anticipated as the Śivādvaita system in the Purāṇas, more particularly in the *Sūta-saṃhitā*¹.

Śiva arranges for the experiences and liberation of the individual souls in and through His energy alone. The fivefold action, referred to above, is to be regarded as somehow distinguishing the one energy in and through diverse functions.

The object of *Tattva-prakāśa* is to explain the Śaiva philosophy as found in the *Śaivāgamas*, describing mainly the categories of *pati*, *paśu*, and *pāśa*. The *pati* is the Lord and *paśu* is called *anu*, and the five objects are the five *pāśas* or bonds. The *anus* are dependent on God and they are regarded as belonging to different classes of bondage. The fivefold objects are those which are due to the *mala* and which belong to *bindu-māyā* in different states of evolution of purity and impurity. Śrīkumāra points out that since the souls are associated with *mala* from eternity, it comes under the sway of the *māyā*, but since the souls are of the nature of Śiva, when this *mala* is burnt, they become one with Him. The fivefold objects constituting the bondage are the *mala*, the *karma*, the *māyā*, the world which is a product of *māyā*, and the binding power².

It may be asked, if the energy belongs to God, how can it be attributed to the objects of bondage? The reply is that in reality the energy belongs to the Lord and the force of the *pāśa* or bondage can only be regarded as force in a distant manner, in the sense that the bondage or the power of bondage is felt in and through the individual soul who receives it from the Lord³.

The *paśus* are those who are bound by the *pāśa*, the souls that

associated with the *māyā* forms the instrumental and material cause of the world :
nimittopādāna-bhāvena avasthānād iti brūmah.

Such a view should make Śaivism identical with the Advaitism of Śaṅkara. Aghora-śivācārya wrote his commentary as a protest against this view, that it does not represent the view of the *Śaivāgamas* which regard God only as the instrumental cause.

¹ *Sūtasamhitā*, Book IV, verse 28 et seq.

go through the cycles of birth and rebirth. In this connection Śrikumāra tries to establish the identity of the self on the basis of self-consciousness and memory, and holds that these phenomena could not be explained by the Buddhists who believed in momentary selves. These are three kinds; those which are associated with *mala* and *karma*, those which are associated only with *mala* (these two kinds are jointly called *vijñāna-kala*); the third is called *sakala*. It is associated with *mala*, *māyā* and *karma*. The first, namely the *vijñāna-kala*, may again be twofold, as associated with the impurities and as devoid of them. Those who are released from impurity are employed by God with various angelic functions, and they are called *vidyeśvara* and *mantrēśvara*. Others, however, pass on to new cycles of life, being associated with a composite body of eight constituents which form the subtle body. These eight constituents are the five sensibles, *manas*, *buddhi*, and *ahaṅkāra*, and they all are called by the name of *puryaṣṭaka*, the body consisting of the eight constituents.

Those whose impurities (*mala*) get ripened may receive that power of God through proper initiation by which the impurity is removed, and they become one with God. The other beings, however, are bound by God to undergo the series of experiences at the end of which they may be emancipated.

The bonds or *pāśa* are of four kinds: first, the bond of *mala* and the *karma*. The bond of *mala* is beginningless, and it stands as a veil over our enlightenment and power of action. The *karma* also flows on, depending on the *mala* from beginningless time. The third is called *māyēya*, which means the subtle and gross bodies produced through *māyā*, which is the fourth. Aghora-śivācārya says that *māyēya* means the contingent bonds of passion, etc., which are produced in consequence of *karma*. Even those who have not the *māyēya* impurity at the time of dissolution (*pralaya*) remain by themselves but not liberated.

But what is *mala*? It is supposed to be one non-spiritual stuff, which behaves with manifold functions. It is for this reason that when the *mala* is removed in one person it may function in other persons. This *mala* being like the veiling power of God, it continues to operate on the other persons, though it may be removed in the case of some other person. As the husk covers the seed, so the *mala* covers the natural enlightenment and action of the individual; and

as the husk is burnt by fire or heat, so this *mala* also may be removed when the internal soul shines forth. This *mala* is responsible for our bodies. Just as the blackness of copper can be removed by mercury, so the blackness of the soul is also removed by the power of Śiva.

Karma is beginningless and is of the nature of merit and demerit (*dharma* and *adharma*). Śrīkumāra defines *dharma* and *adharma* as that which is the special cause of happiness or unhappiness, and he tries to refute other theories and views about *dharma* and *adharma*. *Māyā* is regarded as the substantive entity which is the cause of the world. We have seen before that bondage comes out of the products of *māyā* (*māyēya*); so *māyā* is the original cause of bondage. It is not illusory, as the Vedāntists say, but it is the material cause of the world. We thus see that the power or energy of God behaving as *mala*, *māyā*, *karma*, and *māyēya*, forms the basic conception of bondage.

These are the first five pure categories arising out of Śiva. The category of Śiva is regarded as the *bindu*, and it is the original and primal cause of everything. It is as eternal as *māyā*. The other four categories spring from it, and for this reason it is regarded as *mahā-māyā*. These categories are the mythical superintending lords of different worlds called *vidyeśvara*, *mantreśvara*, etc. So, from *bindu* comes *śakti*, *sadāśiva*, *īśvara*, and *vidyeśvara*. These categories are regarded as pure categories. Again, in order to supply experiences to individuals and their scope of action, five categories are produced, namely, time (*kāla*), destiny (*niyati*), action (*kalā*), knowledge (*vidyā*), and attachment (*rāga*). Again, from *māyā* comes the *avyakta* or the unmanifested, the *guṇas*, and then *buddhi*, and *ahaṅkāra*, *manas*, the five conative senses and the five cognitive senses, and the gross matter, which make up twenty-three categories from *māyā*.

We thus see that these are in the first instance the five categories of *śiva*, *śakti*, *sadāśiva*, *īśvara*, and *vidyā*. These are all of the nature of pure consciousness (*cidrūpa*), and being of such a nature, there can be no impurity in them. We have next the seven categories which are both pure and impure (*cidacid-rūpa*), and these are *māyā*, *kāla*, *niyati*, *kalā*, *vidyā*, *rāga* and *puruṣa*. *Puruṣa*, though of the nature of pure consciousness, may appear as impure on account of its impure association. Next to these categories we

have twenty-four categories of *avyakta-guṇa-tattva*, *buddhi*, *ahaṅkāra*, *manas*, the five cognitive senses, the five conative senses, the five *tanmātras*, and five *mahābhūtas*. Altogether these are the thirty-six categories.

If we attend to this division of categories, we find that the so-called impure categories are mostly the categories of Sāṃkhya philosophy. But while in the Sāṃkhya, *prakṛti* is equated with the *avyakta* as the equilibrium of the three *guṇas*, here in the Śaiva philosophy the *avyakta* is the unmanifested which comes from *māyā* and produces the *guṇas*.

To recapitulate, we find that the system of thought presented in the *Tattva-prakāśa*, as based on the *Śaivāgamas*, is a curious confusion of certain myths, together with certain doctrines of Indian philosophy. One commentator, Śrīkumāra, has tried to read the monistic philosophy of Śaṅkara into it, whereas the other commentator, Aghora-śivācārya, has tried to read some sort of duality into the system, though that duality is hardly consistent. We know from Śaṅkara's account of the philosophy of the Śaiva school that some Śaivas called Māheśvaras tried to establish in their works, the Siddhāntas, the view that God is only the instrumental cause (*nimitta-kāraṇa*) of the world, but not the material cause (*upādāna-kāraṇa*). In Śaṅkara's view God is both the material and the instrumental cause of the world and of all beings. Aghora-śivācārya's pretext for writing the commentary was that it was interpreted by people having a monistic bias, and that it was his business to show that, in accordance with the *Śaivāgamas*, God can only be the instrumental cause, as we find in the case of the Naiyāyikas. He starts with the premise that God is the sum total of the power of consciousness and the power of energy, and he says that the *māyā* is the material cause of the world, from which are produced various other material products which are similar to the Sāṃkhya categories. But he does not explain in what way God's instrumentality affects the *māyā* in the production of various categories, pure and impure and pure-and-impure. He says that even the energy of *māyā* proceeds from God and appears in the *māyā* as if undivided from it. There is thus an original illusion through which the process of the *māyā* as *bindu* and *nāda* or the desire of God for creation and the creation takes place. But he does not any further explain the nature of the illusion and the

cause or the manners in which the illusion has been generated. The original text of the *Tattva-prakāśa* is also quite unilluminating regarding this vital matter. Aghora-śivācārya often refers to the *Mṛgendrāgama* for his support, but the *Mṛgendrāgama* does not follow the Sāṃkhya course of evolution as does the *Tattva-prakāśa*. There we hear of atoms constructed and arranged by the will of God, which is more in line with the Nyāya point of view.

Dealing with the nature of the soul, it is said that the souls are *aṇus* in the sense that they have only a limited knowledge. The souls are essentially of the nature of Śiva or God, but yet they have an innate impurity which in all probability is due to the influx of *māyā* into them. Nothing is definitely said regarding the nature of this impurity and how the souls came by it. Śrīkumāra explains this impurity on the Vedāntic lines as being of the nature of *avidyā*, etc. But Aghora-śivācārya does not say anything on this point. It is said that when by the fruition of action the impurity will ripen, God in the form of preceptor would give proper initiation, so that the impurity may be burnt out, and the souls so cleansed or purified may attain the nature of Śiva. Before such attainment Śiva may appoint some souls, which had had their impurities cleansed, to certain mythical superintendence of the worlds as *vidyeśvaras* or *mantrēśvaras*. At the time of the cycles of rebirth, the individual souls, which have to pass through it for the ripening of their actions, do so in subtle bodies called the *puryaṣṭaka* (consisting of the subtle matter, *buddhi*, *ahaṅkāra*, and *manas*).

Turning to the categories, we see that the so-called *pāśa* is also in reality a derivative of the energy of Śiva, and for this reason the *pāśa* may be a blinding force, and may also be withdrawn at the time of liberation. The category of Śiva or *śiva-tattva*, also called *bindu*, makes itself the material for the creation of the fivefold pure *tattvas* and the other impure categories up to gross matter, earth. These fivefold pure categories are *śiva-tattva*, *śakti-tattva*, *sadāśiva-tattva*, *īśvara-tattva*, and *vidyā-tattva*. The bodies of these pure categories are derived from the pure *māyā*, called the *mahāmāyā*. Next to these we have the pure-and-impure categories of *kāla*, *niyati*, *kalā*, *vidyā*, and *rāga*, which are a sort of link between the souls and the world, so that the souls may know and

work. Next from the *māyā* comes *avyakta*, the *guṇa-tattva*, and from the *guṇa-tattva*, the *buddhi-tattva*, from that, *ahaṅkāra*, from that *manas*, *buddhi*, the five conative and five cognitive senses, the five *tanmātras* and the five gross objects.

As we have hinted above, most of the Siddhānta schools of thought are committed to the view that the material cause is different from the instrumental cause. This material cause appears in diverse forms as *māyā*, *prakṛti* or the atoms and their products, and the instrumental cause is God, Śiva. But somehow or other most of these schools accept the view that Śiva, consisting of omniscience and omnipotence, is the source of all energy. If that were so, all the energy of the *māyā* and its products should belong to Śiva, and the acceptance of a material cause different from the instrumental becomes an unnecessary contradiction. Various Siddhānta schools have shifted their ground in various ways, as is evident from our study of the systems, in order to get rid of contradiction, but apparently without success. When the Naiyāyika says that the material cause, the relations, and the instrumental cause are different, and that God as the instrumental cause fashions this world, and is the moral governor of the world in accordance with *karma*, there is no contradiction. God Himself is like any other soul, only different from them in the fact that He eternally possesses omniscience and omnipotence, has no body and no organs. Everything is perceived by Him directly. Again, if one takes the *yoga* point of view, one finds that Īśvara is different from *prakṛti* or the material cause, and it is not His energy that permeates through *prakṛti*. He has an eternal will, so that the obstructions in the way of the developing of energy of *prakṛti* in diverse channels, in accordance with *karma*, may be removed to justify the order of evolution and all the laws of nature as we find them. The Īśvara or God is like any other *puruṣa*, only it had never the afflictions with which the ordinary *puruṣas* are associated, and it has no *karma* and no past impressions of *karma*. Such a view also saves the system from contradiction, but it seems difficult to say anything which can justify the position of the Siddhānta schools wavering between theism and pantheism or monism. In the case of the Śaṅkara Vedānta, Brahman also is real and he alone is the material and instrumental cause. The world appearance is only an appearance, and it has no reality apart from it. It is a sort of illusion

caused by *māyā* which again is neither existent nor non-existent as it falls within the definition of illusion. The different forms of Śaiva school have to be spun out for the purpose of avoiding this contradiction between religion and philosophy.

The category of Śiva, from which spring the five pure categories spoken of above (*sadāśiva*, etc.), is called also the *bindu*, the pure energy of knowledge and action beyond all change. It is supposed that this pure *śiva* or *bindu* or *mahāmāyā* is surcharged with various powers at the time of creation and it is in and through these powers that the *māyā* and its products are activated into the production of the universe which is the basis of the bondage of the souls. This movement of the diverse energies for the production of the universe is called *anugraha* or grace. By these energies both the souls and the inanimate objects are brought into proper relation and the work of creation goes on. So the creation is not directly due to Śiva but to His energy. The difficulty is further felt when it is said that these energies are not different from God. The will and effort of God are but the manifestations of His energy¹.

The different moments of the oscillation of God's knowledge and action are represented as the different categories of *sadāśiva*, *īśvara*, *vidyā*. But these moments are only intellectual descriptions and not temporary events occurring in time and space. In reality the category of Śiva is identical all through. The different moments are only imaginary. There is only the category of Śiva, bristling with diverse powers, from which diverse distinctions can be made for intellectual appraisal².

In the Sāṃkhya system it was supposed that the *prakṛti*, out of its own inherent teleology, moves forward in the evolutionary process for supplying to all souls the materials of their experiences, and later on liberates them. In the Siddhānta systems the same idea is expressed by the word *anugraha* or grace. Here energy is to co-operate with grace for the production of experience and for liberation. The fact that Śiva is regarded as an unmoved and immovable reality deprives the system of the charm of a personal

¹ Thus Śrīkumāra says, quoting from the *Mātaṅga-parameśvara* (p. 79):
tad uktam mātaṅge:

*patyuh śaktiḥ parā sūkṣmā jāgrato dyotana-kṣamā,
tayā prabhuḥ prabuddhātmā svatantraḥ sa sadāśivaḥ.*

² *tattvam vastuta ekaṃ śiva-saṃjñam citra-śakti-śata-khacitam,
śakti-vyāpṛti-bhedāt tasyaite kalpitā bhedaḥ. Tattva-prakāśa II. 13.*

God. The idea of *anugraha* or grace cannot be suitably applied to an impersonal entity.

God's energies, which we call His will or effort, are the organs or means (*kāraṇa*), and the *māyā* is the material cause out of which the world is fashioned; but this *māyā* as such is so subtle that it cannot be perceived. It is the one common stuff for all. This *māyā* produces delusion in us and makes us identify ourselves with those which are different from us. This is the delusive function of *māyā*. The illusion is thus to be regarded as being of the *anyathā-khyāti* type, the illusion that one thinks one thing to be another, just as in *Yoga*. All the *karmas* are supposed to abide in the *māyā* in a subtle form and regulate the cycles of birth and rebirth for the individual souls. *Māyā* is thus the substantial entity of everything else that we may perceive.

We have already explained the central confusion as regards the relation of the changeable *māyā* and the unchanging God or Śiva. But after this the system takes an easy step towards theism, and explains the transformations of *māyā* by the will of God, through His energies for supplying the data of experience for all individual souls. Time is also a product of *māyā*. In and through time the other categories of *niyati*, etc., are produced. *Niyati* means the ordering of all things. It stands for what we should call the natural law, such as the existence of the oil in the seed, of the grain in the husk, and all other natural contingencies. We have translated the word *niyati* as 'destiny' in other places, for want of a single better word. *Niyati* comes from *niyama* or law that operates in time and place. The so-called *kalā-tattva* is that function of *niyati* and *kāla* by which the impurity of the individual souls becomes contracted within them so that they are free, to a very great extent, to act and to know. *Kalā* is thus that which manifests the agency (*karṭṛtva-vyañjikā*). It is through *kalā* that experiences can be associated with individuals¹. From the functioning of *kalā* knowledge proceeds, and through knowledge all experience of worldly objects becomes possible.

In the Sāṃkhya system the *buddhi* is supposed to be in contact with objects and assume their forms. Such *buddhi* forms are

¹ Thus Śrīkumāra quoting from *Mātaṅga*, says (p. 121): *yathāgni-tapta-mṛtpātraṃ jantunā'lingane kṣamaṃ, tathānum kalayā viddhaṃ bhogaḥ śaknoti vāsituṃ, bhoga-pātri kalā jñeya tadādharas ca pudgalaḥ*.

illuminated by the presiding *puruṣa*. The Siddhānta system as explained in *Tattva-prakāśa* differs from this view. It holds that the *puruṣa*, being inactive, cannot produce illumination. Whatever is perceived by the *buddhi* is grasped by the category of *vidyā* or knowledge, because the *vidyā* is different from *puruṣa* and is a product of *māyā* as such. It can serve as an intermediate link between the objects, the *buddhi*, and the self. *Buddhi*, being a product of *māyā*, cannot be self-illuminating, but the *vidyā* is produced as a separate category for the production of knowledge. This is a very curious theory, which differs from Sāṃkhya, but is philosophically ineffective as an epistemological explanation. *Rāgā* means attachment in general, which is the general cause of all individual efforts. It is not a quality of *buddhi*, but an entirely different category. Even when there are no sense objects to which one may be inclined there may be *rāga* which would lead a person towards liberation¹. The totality of *kāla*, *nīyati*, *kalā*, *vidyā*, and *rāga* as associated with the *paśu* renders him a *puruṣa*, for whom the material world is evolved as *avyakta*, *guṇa*, etc. Here also the difference from the Sāṃkhya system should be noted. In Sāṃkhya the state of equilibrium of the *guṇas* forms the *avyakta*, but here the *guṇas* are derived from the *avyakta*, which is a separate category.

The Śaiva system admits three *pramāṇas*: perception, inference, and testimony of scriptures. In perception it admits both the determinate (*savikalpa*) and the indeterminate (*nirvikalpa*), which have been explained in the first two volumes of this work. As regards inference, the Śaivas admit the inference of cause from effect and of effect from cause, and the third kind of inference of general agreement from presence and absence (*sāmānyato dṛṣṭa*).

The category of *ahaṅkāra*, which proceeds from *buddhi*, expresses itself in the feeling of life and self-consciousness. The *ātman*, the basic entity, is untouched by these feelings. The system believes in the tripartite partition of *ahaṅkāra*, the *sāttvika*, *rājasa*, and *tāmasa*, after the pattern of the Sāṃkhya, and then we have virtually the same sorts of categories as the Sāṃkhya, the details of which we need not repeat.

¹ Thus Śrīkumāra says (p. 124): *asya viśayāvabhāśena vinā puruṣa-pravṛtti-heturvād buddhi-dharma-vailakṣaṇya-siddhiḥ, mumukṣor viśaya-tṛṣṇasya tatsādhanē viśayāvabhāśena vinā pravṛttir dṛṣṭā*.

The relation between the *māyā* and the category of Śiva is called *parigraha-śakti*, by which the mechanism of the relation is understood as being such that, simply by the very presence of Śiva, various transformations take place in the *māyā* and lead it to evolve as the world, or to be destroyed in time and again to be created. The analogy is like that of the sun and the lotus flower. The lotus flower blooms of itself in the presence of the sun, while the sun remains entirely unchanged. In the same way, iron filings move in the presence of a magnet. This phenomenon has been variously interpreted in religious terms as the will of God, the grace of God, and the bondage exerted by Him on all living beings. It is in this sense again that the whole world may be regarded as the manifestation of God's energy and will, and the theistic position confirmed. On the other hand, since Śiva is the only ultimate category without which nothing could happen, the system was interpreted on the lines of pure monism like that of Śaṅkara, wherein it appeared to be a mere appearance of multiplicity, whereas in reality Śiva alone existed. This led to the interpretation of the system of Śivādvaita that we find in the *Sūta-saṃhitā*, *Yajña-vaibhava* chapter.

The *śakti* of God is one, though it may appear as infinite and diverse in different contexts. It is this pure *śakti* which is identical with pure will and power. The changes that take place in the *māyā* are interpreted as the extension of God's grace through creation for the benefit of the individual souls. God in the aspect of pure knowledge is called *śiva* and as action is called *śakti*. When the two are balanced, we have the category of *sadā-śiva*. When there is a predominance of action it is called *maheśvara*.

The theory of *karma* in this system is generally the same as in most other systems. It generally agrees with a large part of the Sāṃkhya doctrine, but the five *śuddha-tattvas*, such as *sadā-śiva*, etc., are not found elsewhere and are only of mythological interest.

The *Śiva-jñāna-siddhiyar* not only advocates the *niyamas*, such as good behaviour, courteous reception, amity, good sense, blameless austerity, charity, respect, reverence, truthfulness, chastity, self-control, wisdom, etc., but also lays great stress on the necessity of loving God and being devoted to Him.

Śrīpati Paṇḍita's Ideas on the Vedānta Philosophy, called also the *Śrīkara-bhāṣya* which is accepted as the Fundamental Basis of Vīra-śaivism.

Śrīpati Paṇḍita lived towards the latter half of the fourteenth century and was one of the latest commentators on the *Brahma-sūtra*. Śrīpati Paṇḍita says that he got the inspiration of writing the commentary from a short treatise called the *Agastyavṛtti* on the *Brahma-sūtra* which is now not available. He also adores Revaṇa, who is regarded by him as a great saint of the sect, and also Marula who was supposed to have introduced the doctrine of six centres (*ṣaṭ-sthala*). He adores also Rāma, who flourished in the Dvāpara-yuga, and who collected the main elements from the Mīmāṃsā and the Upaniṣads for the foundation of the Śaiva philosophy as it is being traditionally carried on.

The *Śrīkara-bhāṣya* should be regarded as a definite classification of the views of the different Śrutis and Smṛtis, and for this our chief admiration should go to Rāma. But though this work keeps itself clear of the dualistic and non-dualistic views of Vedāntic interpretation, it holds fast to a doctrine which may be designated as Viśiṣṭadvaita, and the Śaivas, called Vīra-śaivas, would find support in the tenets of the doctrine herein propounded. It may be remembered that Śrīpati came long after Rāmānuja, and it was easy for him to derive some of his ideas from Rāmānuja.

Śaṅkara, in his interpretation of the present *sūtra* "Now then the inquiry about Brahman," lays stress on the pre-condition leading to the necessity of inquiring about Brahman, and Rāmānuja also discusses the same question, and thinks that the Pūrva-mīmāṃsā and the Vedānta form together one subject of study; but Śrīpati here avoids the question, and thinks that the *sūtra* is for introducing an inquiry as to the ultimate nature of Brahman, whether Brahman is being or non-being. According to him the *sūtra* is further interested in discovering the influence of Brahman over individuals.

He took for granted the unity of the two disciplines of Pūrva-mīmāṃsā and Vedānta as forming one science, but he fervently opposes the view of the Cārvākas that life is the product of material combinations. He explains that the Cārvākas' denial of Brahman is

based on the supposition that no one has come from the other world to relate to us what happens after death. He also points out that there are other schools within the *Vaidika* fold which do not believe in the existence of God or His power over individual beings, and that the power of *karma*, technically called *apūrva*, can very well explain the sufferings and enjoyments of human beings. So, if one admits the body to be the same as the spirit, or if one thinks that there is no necessity to admit God for the proper fruition of one's deeds, the twofold reason for the study of Vedānta could be explained away.

The doubt leading to an inquiry should therefore be located somewhere else, in the nature of God, Śiva, or in the nature of the individual soul. The existence of the God Śiva as being the only reality has been declared in a number of Vedic texts. The self, which shows itself in our ego-consciousness, is also known as a different entity. As such, how can the point of doubt arise? Moreover, we cannot know the nature of Brahman by discussion, for the self being finite it is not possible to understand the nature of the infinite Brahman by understanding the nature of such a soul. Moreover, the Upaniṣads have declared that the Brahman is of two kinds, consciousness and unconsciousness. So even when there is the Brahman knowledge, the knowledge of the unconscious Brahman should remain, and as such there would be no liberation.

Now the other point may arise, that the discussion is with regard to the attainment of a certitude as to whether the Brahman is identical with the self. There are many texts to that effect, but yet the contradiction arises from our own self-consciousness manifesting us as individual personalities. To this the ordinary reply is that the individuality of our ego-consciousness will always lead us to explain away the Upaniṣad texts which speak of their identity. But the reply, on the other side, may be that the Brahman may, through *avidyā* or nescience, create the appearance of our individuality, such as "I am a man." For without such an all-pervading illusion the question of liberation cannot arise. Moreover, the pure Brahman and all the objects are as distinct from each other as light from darkness, and yet such an illusion has to be accepted. For otherwise the entire mundane behaviour would have to be stopped. So there is hardly scope for making an inquiry as to the exact nature of the Brahman, the souls and the world. For one has to

accept the ultimate reality of the transcendent Brahman which cannot be described by words. Brahman is thus beyond all discussion.

In a situation like this Śrīpati first presses the question of the existence of God as being proved by the Upaniṣadic and Śruti texts, by perception and by inference. We know from experience that often people cannot attain their ends, even if they are endowed with talent, ability, riches and the like, while others may succeed, even if they have nothing. According to Śrīpati, this definitely proves the existence of an omniscient God and His relationship with human beings. In ordinary experience, when we see a temple, we can imagine that there was a builder who built it. So in the case of the world also, we can well imagine that this world must have had a builder. The Cārvāka argument, that the conglomeration of matter produces things out of itself, is untenable, because we have never seen any such conglomerations of matter capable of producing life as we find it in birds and animals. In the case of cow-dung, etc., some life may have been somehow implanted in them so that beetles and other flies may be born from them. It has also to be admitted that in accordance with one's *karma* God awards punishments or rewards, and that the fruition of deeds does not take place automatically, but in accordance with the wishes of God.

In some of the Upaniṣadic texts it is said that there was nothing in the beginning, but this nothingness should be regarded as a subtle state of existence; for otherwise all things cannot come out of nothing. This non-being referred to in the Upaniṣads also does not mean mere negation or the mere chimerical nothing, like a lotus in the sky. Bādarāyaṇa in his *Brahma-sūtra* has also refuted this idea of pure negation (II. 1. 7). In fact, the Vedas and the Āgamas declare God Śiva, with infinite powers, to be the cause of the world, whether it be subtle or gross. The individuals, however, are quite different from this Brahman, as they are always afflicted with their sins and sufferings. When the Upaniṣads assert that Brahman is one with *jīva*, the individual, naturally the inquiry (*jijñāsā*) comes, how is it possible that these two which are entirely different from each other should be regarded as identical?

Śrīpati thinks that the 'identity' texts of the Upaniṣads, declaring the identity of the individual and the Brahman, can well

be explained by supposition of the analogy of rivers flowing into the ocean and becoming one with it. We need not assume that there is an illusion as Śaṅkara supposes, and that without such an illusion the problem of emancipation cannot arise, because we have a direct and immediate experience of ignorance when we say "we do not know."

Śrīpati objects strongly to the view of Śaṅkara that there is a differenceless Brahman of the nature of pure consciousness, and that such a Brahman appears in manifold forms. The Brahman is of an entirely different nature from the individual souls. If such a Brahman is admitted to have *avidyā* or nescience as a quality, it would cease to be the Brahman. Moreover, no such *avidyā* could be attributed to Brahman, which is often described in the Śruti texts as pure and devoid of any thought or mind. If the *avidyā* is supposed to belong to Brahman, then one must suppose that there ought to be some other entity, by the action of which this factor of *avidyā* could be removed for liberation. Brahman cannot itself find it; being encased by the *avidyā* at one moment and free at another, it cannot then retain its absolute identity as one. It is also fallacious to think of the world as being made up of illusory perceptions like dreams, for there is a definite order and system in the world which cannot be transgressed. Bādarāyaṇa himself also refutes the idea of a non-existence of an external world (II. 2. 27, 28). Moreover, the differenceless Brahman can only be established by the authority of the scriptural texts or by inference, but as these two are included within our conceptual world of distinctions, they cannot lead us beyond them and establish a differenceless Brahman. Moreover, if the truth of the Vedas be admitted, then there will be duality, and if it is not admitted, then there is nothing to prove the one reality of the Brahman. Moreover, there is nothing that can establish the fact of world illusion. *Avidyā* itself cannot be regarded as a sufficient testimony, for the Brahman is regarded as self-illuminating. Moreover, the acceptance of such a Brahman would amount to a denial of a personal God, which is supported by so many scriptural texts including the *Gītā*.

Again, the Upaniṣad texts that speak of the world as being made up of names and forms do not necessarily lead to the view that the Brahman alone is true and that the world is false. For the same purpose can be achieved by regarding Śiva as the material cause of the world, which does not mean that the world is false.

The whole idea is that, in whatsoever form the world may appear, it is in reality nothing but Śiva¹.

When Bādarāyaṇa says that the world cannot be distinguished as different from Brahman, it naturally means that the manifold world, which has come out of Brahman, is one with Him. The world cannot be regarded as the body of Brahman, and the scriptures declare that in the beginning only pure being existed. If anything else but Brahman is admitted, then the pure monism breaks. The two being entirely opposed to each other, one cannot be admitted as being a part of the other, and the two cannot be identified in any manner. So the normal course would be to interpret the texts as asserting both the duality and the non-duality of the Brahman. Thus the Brahman is both different from the world and identical with it.

Śrīpati thinks that on the evidence of the Śruti texts a Brahmin must take initiation in Śaiva form and bear with him the Śaiva sign, the *līṅga*, as much as he should, being initiated into Vedic rites. It is then that the person in question becomes entitled to the study of the nature of Brahman, for which the *Brahma-sūtra* has been written². The inquiry into the nature of Brahman necessarily introduces to us all kinds of discussions regarding the nature of Brahman.

Though Śrīpati emphasises the necessity of carrying the *līṅga* and of being initiated in the Śaiva form, yet that alone cannot bring salvation. Salvation can only come when we know the real nature of Brahman. In introducing further discussions on the nature of Brahman, Śrīpati says that wherever the scriptural texts describe Brahman as differenceless and qualityless, that always refers to the period before the creation. It is Śiva, the differenceless unity, that expands His energy and creates the world and makes it appear as it

¹ *vācārambhaṇaṃ vikāro nāmadheyaṃ mṛttikety eva satyam iti śrutau apavāda-darśanād adhyāso grāhya iti cen na vācārambhaṇa-śrutiṇāṃ śivopādānatvāt prapañcasya tattādātmya-bodhakatvaṃ vidhīyate na ca mithyātvaṃ. Śrīkara-bhāṣya*, p. 6.

² *Śrīkara-bhāṣya*, p. 8. Śrīpati takes great pains to show on the evidence of scriptural texts the indispensable necessity of carrying the insignia of Śiva, the *līṅga* in a particular manner which is different from the methods of carrying the *līṅga* not approved by the Vedas, pp. 8-15.

Śrīpati points out that only the person, who is equipped with the four accessories called the *sādhana-saṃpad* consisting of *śama*, *dama*, *titikṣā*, *uparati*, *mumukṣutva*, etc., is fit to have the *līṅga*.

is, though He always remains the ultimate substratum. The world is thus not illusion but reality, and of the nature of Śiva Himself. This is the central idea which is most generally expanded, as we shall see. Brahman thus appears in two forms: as pure consciousness and as the unconscious material world, and this view is supported by the scriptural texts. Brahman is thus with form and without form. It is the pure Brahman that appears as this or that changing entity, as pleasure or pain, or as cause and effect. Such an explanation would fit in with our experience, and would also be perfectly reconcilable with the scriptural texts.

The suggestion of the opponents, that Īśvara or God is an illusory God, is also untenable, for no one is justified in trusting an illusory object for showing devotion to him. Such a God would seem to have the same status as any other object of illusion. Moreover, how can an illusory God bestow benefits when He is adored and worshipped by the devotee?

Śrīpati then tries to refute the idea of the pure differenceless Brahman, and summarises the arguments given by Rāmānuja as we have described them in the third volume of the present work; and we are thus introduced to the second *sūtra*, which describes Brahman as that from which the production of the world has come about.

Śrīpati, in commenting upon *Brahma-sūtra* I. 1. 2, says that the pure consciousness as the identity of being and bliss is the cause of the production and dissolution of the world, as well as its fundamental substratum. The Brahman, who is formless, can create all things without the help of any external instrument, just as the formless wind can shake the forest or the self can create the dreams. It is in the interest of the devotees that God takes all the forms in which we find Him¹. He also refers to some of the scriptural texts of the *bhedābheda* type, which considers the relation between God and the world as similar to the relation between the ocean and the waves. Only a part of God may be regarded as being transformed into the material world. In this way Śiva is both the instrumental and the material cause. A distinction has to be made between the concept that there is no difference between the instrumental and

¹ *bhaktāmugrahārtham ghṛta-kāṭhinyavad-dīvyā-maṅgala-vigraha-dharasya maheśvarasya mūrtāmūrta-prapañca-kalpane apy adoṣaḥ. Śrīkara-bhāṣya, p. 30.*

the material cause, and the concept that the two are the same¹. There is no question of false imposition.

The individual souls are spoken of in the Upaniṣads as being as eternal as God. The scriptural texts often describe the world as being a part of God. It is only when the powers of God are in a contractive form before the creation, that God can be spoken of as being devoid of qualities². There are many Upaniṣadic passages which describe the state of God as being engaged in the work of creation, and as the result thereof His powers seem to manifest. It is true that in many texts *māyā* is described as the material cause of the world and God the instrumental. This is well explained if we regard *māyā* as a part of God. Just as a spider weaves out of itself a whole web, so God creates out of Himself the whole world. For this reason it should be admitted that the material world and the pure consciousness have the same cause. In this connection Śrīpati takes great pains to refute the Śāṅkarite doctrine that the world is illusion or imposition. If we remember the arguments of Mādhva and his followers against the doctrine of illusion as expounded in the fourth volume of the present work, the criticisms of Śrīpati would be included in them in one form or another. We thus see that the views of Śāṅkara were challenged by Rāmānuja, Nimbārka and Mādhva.

Śrīpati says that the so-called falsity of the world cannot be explained either as indescribable (*anirvācya*) or as being liable to contradiction, for then that would apply even to the Vedas. The phrase "liable to contradiction" cannot be applied to the manifold world, for it exists and fulfils all our needs and gives scope for our actions. So far as we see, it is beginningless. It cannot therefore be asserted that at any time in the future or in the present the world will be discovered as false. It has often been said that falsehood consists in the appearance of a thing without there being any reality, just as a mirage is seen to be like water without being able to serve the purpose of water. But the world not only appears, it also serves all our purposes. All the passages in the Purāṇas and other texts where the world is described as being *māyā* are only

¹ *tasmād abhinna-nimtopādāna-kāraṇatvaṃ na tu eka-kāraṇatvaṃ. Śrīkara-bhāṣya*, p. 30.

² *Śakti-śāṅkocatayā sṛṣṭeḥ prakṛ-
parmeśvarasya nirguṇatvāt.*

Ibid. p. 31.

delusive statements. So God alone is both the instrumental and the substantial cause of the world, and the world as such is not false as the Śaṅkarites suppose.

In the same way, the supposition that Īśvara or the *jīva* represents a being which is nothing else but Brahman as reflected through *avidyā* or *māyā* is also untenable. The so-called reflecting medium may be conditional or natural. Such a condition may be the *māyā*, *avidyā* or the *antaḥkaraṇa*. The condition cannot be gross, for in that case transmigration to the other world would not be possible. The idea of reflection is also untenable, for the Brahman has no colour and therefore it cannot be reflected and made into Īśvara. That which is formless cannot be reflected. Again if Īśvara or *jīva* is regarded as a reflection in *māyā* or *avidyā*, then the destruction of *māyā* or *avidyā* would mean the destruction of God and of the individual soul. In the same way Śrīpati tries to refute the theory of *avaccheda* or limitations, which holds that the pure consciousness as qualified or objectively limited by the mind would constitute the individual soul; for in that case any kind of limitation of consciousness such as we find in all material objects would entitle them to the position of being treated as individual souls.

The qualities of production and destruction, etc., belong to the world and not to Brahman. How then can the production and destruction of the world, of which God is the source, be described as being a defining characteristic of Brahman? The reply is that it cannot be regarded as an essential defining characteristic (*svarūpa-lakṣaṇa*), but only as indicative of Brahman as being the source of the world, so that even if there is no world, that would not in any way affect the reality of existence of God. This is what is meant by saying that the present definition (I. 1. 2), is not a *svarūpa-lakṣaṇa*, but only *taṭastha-lakṣaṇa*. Śiva alone is the creator of the world and the world is maintained in Him and it is dissolved back into Him.

In commenting upon the *Brahma-sūtra* I. 1. 3, Śrīpati follows the traditional line, but holds that the Vedas were created by God, Śiva, and that all the texts of the Vedas are definitely intended for the glorification of Śiva. This is, of course, against the Mīmāṃsā view that the Vedas are eternal and uncreated, but it agrees with Śaṅkara's interpretation that the Vedas were created by Īśvara. In Śaṅkara's system Īśvara is only a super-illusion formed by the

reflection of Brahman through *māyā*. We have already noticed that Śrīpati regards this view as entirely erroneous. With him Īśvara or Maheśvara means the supreme God. Śrīpati further says that the nature of Brahman cannot be understood merely by discussion or reasoning, but that He can be known only on the evidence and testimony of the Vedas. He further says that the Purāṇas were composed by Śiva even before the Vedas, and that of all the Purāṇas the *Śiva-mahāpurāṇa* is the most authentic one. Other Purāṇas which glorify Viṣṇu or Nārāyaṇa are of an inferior status.

In commenting on *Brahma-sūtra* 1. 1. 4, Śrīpati says that the Mimāṃsā contention is that the Upaniṣadic descriptions of the nature of Brahman should not be interpreted as urging people to some kind of meditation. They simply describe the nature of Brahman. Knowledge of Brahman is their only end. In this interpretation Śrīpati shares more or less the view of Śaṅkara. He further says that the nature of Brahman can only be known through the Upaniṣads. No kind of inference or general agreement can prove the fact that there is one God who is the creator of the world. In all things made by human beings, such as temples, palaces, or stone structures, many people co-operate to produce the things. We cannot, therefore, argue from the fact that since certain things have been made, there is one creator who is responsible for their creations. This is a refutation of the Nyāya view or the view of many of the *Śaivāgamas*, that the existence of one God can be proved by inference.

He further says that the force that manifests itself, and has plurality or difference or oneness, is in Brahman. We cannot distinguish the force or energy from that which possesses the force. The Brahman thus may be regarded both as energy and as the repository of all energies. There cannot be any energy without there being a substance. So the Brahman works in a dual capacity as substance and as energy¹. It cannot be said that mere knowledge cannot stir us to action; for when one hears of the good or bad news of one's son or relation, one may be stirred to action. Thus, even pure knowledge of Brahman may lead us to His meditation,

¹ *bhedābhedātmikā śaktir brahma-niṣṭhā sanātani, iti smṛtau śakter vahni-śakter iva brahmādhiṣṭhānatvopadeśāt. niradhiṣṭhāna-śakter abhāvāt ca śakti-śaktimator abhedāc ca tatkarṣṭvaṃ tadātmakatvaṃ tasyaivopapannatvāt. Śrīkara-bhāṣya, p. 45.*

so the Mīmāṃsā contention that the description of Brahman must imply an imperative to action, and that the mere description of an existing entity is of no practical value, is false.

Śrīpati makes fresh efforts to refute the Mīmāṃsā contention that the Vedas are not expected to give any instruction regarding a merely existing thing, for that has no practical value. Śrīpati says that a pure power of consciousness is hidden from us by *avidyā*. This *avidyā* is also a power of the nature of Brahman, and by the grace of Brahman this *avidyā* will vanish away into its cause. So the apparent duality of *avidyā* is false, and the instruction as regards the nature of Brahman has a real practical value in inducing us to seek the grace of God by which alone the bondage can be removed. The intuition of Brahman (*brahma-sākṣātkāra*) cannot be made merely by the study of the Upaniṣadic texts, but with the grace of God and the grace of one's preceptor.

Śrīpati says that the *nitya* and the *naimittika karma* are obligatory, only the *kāmya karma*, that is, those actions performed for the attainment of a purpose, should be divested of any notion of the fulfilment of desire. Only then, when one listens to the Vedāntic texts and surrenders oneself entirely to Śiva, the heart becomes pure and the nature of Śiva is realised.

Śrīpati again returns to his charge against the doctrine of the falsity of the world. He says that since the Upaniṣadic texts declare that everything in the world is Brahman, the world is also Brahman and cannot be false. The entire field of bondage as we perceive it in the world before us would vanish when we know that we are one with Śiva. For in that case the appearance of the world as diverse and as consisting of this or that would vanish, for everything we perceive is Śiva. Brahman is thus both the substantial cause and the instrumental cause of the whole world, and there is nothing false anywhere. The world cannot be a mere illusion or mere nothing. It must have a substratum under it, and if the illusion is regarded as different from the substratum, one falls into the error of duality. If the so-called non-existence of the world merely meant that it was chimerical like the lotus in the sky, then anything could be regarded as the cause of the world underlying it.

It may be held that the Śāṅkarites do not think that the world is absolutely false, but that its truth has only a pragmatic value

(*vyavahārika-mātra-satyatvam*). To this, however, one may relevantly ask the nature of such a character, which is merely pragmatic, for in such a case the Brahman would be beyond the pragmatic, and no one would ask a question about it or give a reply, but would remain merely dumb. If there were no substance behind the manifold appearances of the world, the world would be a mere panorama of paintings without any basic canvas. It has already been shown that the Upaniṣads cannot refer to a differenceless Brahman. If any experience that can be contradicted is called pragmatic (*vyavahārika*), then it will apply even to the ordinary illusions, such as the mirage which is called *prātibhāsika*. If it is held that to be contradicted in a pragmatic manner means that the contradiction comes only through the knowledge of Brahman, then all cases of contradiction of a first knowledge by a second knowledge would have to be regarded as being not cases of contradiction at all. The only reply that the Śāṅkarites can give is that in the case of a non-pragmatic knowledge one has the intuition of the differenceless Brahman and along with it there dawns the knowledge of the falsity of the world. But such an answer would be unacceptable, because to know Brahman as differenceless must necessarily imply the knowledge of that from which it is different. The notion of difference is a constituent of the notion of differencelessness.

Neither can the conception of the *vyavahārika* be made on the supposition that that which is not contradicted in three or four successive moments could be regarded as uncontradicted, for that supposition might apply to even an illusory perception. Brahman is that which is not contradicted at all, and this non-contradiction is not limited by time.

Again it is sometimes held that the world is false because it is knowable (*dṛśya*), but if that were so, Brahman must be either knowable or unknowable. In the first case it becomes false, in the second case one cannot talk about it or ask questions. In this way Śrīpati continues his criticism against the Śāṅkarite theory of the falsity of the world, more or less on the same lines which were followed by Vyāsatīrtha in his *Nyāyā-mṛta*. It is, therefore, unprofitable to repeat these, as they have already been discussed in the fourth volume of the present work. Śrīpati also continues his criticism against the view that Brahman is differenceless on the

same lines as was done by Rāmānuja in the introductory portion of his *bhāṣya* on the *Brahma-sūtra*, and these have been fairly elaborately dealt with in the third volume of the present work.

To declare Brahman as differenceless and then to attempt to describe its characteristics, saying, for example, that the world comes into being from it and is ultimately dissolved in it, would be meaningless. According to the opponents, all that which is regarded as existent would be false, which under the supposition would be inadmissible. If the world as such is false, then it is meaningless to ascribe to it any pragmatic value.

The question may be raised, whether the Brahman is knowledge or absence of knowledge. In the first case it will be difficult for the opponent to describe the nature of the content of this knowledge. The other question is, whether the opponent is prepared to regard the distinction between the false objects (the appearance of the world) and the Brahman as real or not. If the distinction is real, then the theory of monism fails. There is no way of escape by affirming that both the ideas of difference and identity are false, for there is no alternative. Moreover, if Brahman was of the nature of knowledge, then we should be able to know the content of such knowledge, and this would be contradictory to the idea of Brahman as differenceless. There cannot be knowledge without a content; if there is a content, that content is as external as Brahman Himself, which means that the manifold world of appearance before us is as external as Brahman. There cannot be any knowledge without a definite content. Moreover, if the world appearance is regarded as having a pragmatic value, the real value must be in that something which is the ground of the appearance of the manifold world. In such a case that ground reality would be a rival to the Brahman and would challenge His oneness. In this way, Śrīpati refutes the interpretation of Śaṅkara that the Brahman is differenceless and that the world-appearance is false. He also asserts that human beings are inferior to God's reality, and can have a glimpse of Him through His grace and by adoring Him.

The central idea of the Vīra-śaiva philosophy as propounded by Śrīpati is that God is indistinguishable from His energies, just as the sun cannot be distinguished from the rays of the sun. In the original state, when there was no world, God alone existed, and all the manifold world of matter and life existed in Him in a subtle

form wholly indistinguishable from Him. Later on, when the idea of creation moved Him, He separated the living beings and made them different and associated them with different kinds of *karma*. He also manifested the material world in all the variety of forms. In most of the philosophies the material world has been a questionable reality. Thus, according to Śāṅkara, the world-appearance is false and has only a pragmatic value. In reality it does not exist, but only appears to do so. According to Rāmānuja the world is inseparably connected with God and is entirely dependent upon Him. According to Śrīkaṇṭha the world has been created by the energy of God and in that sense it is an emanation from Him, but Śrīpati refers to certain texts of the Upaniṣads in which it is said that the Brahman is both conscious and unconscious. Thus Śrīpati holds that everything we see in the world is real, and has Śiva or God as its substratum. It is only by His energy that He makes the world appear in so many diverse forms. He denounces the idea of any separation between the energy (*śakti*) and the possessor of it (*śaktimān*). Thus, if the world is a manifestation of the energy of God, that does not preclude it from being regarded as of the nature of Śiva Himself. Thus Śrīpati says that liberation can only come when God is worshipped in His twofold form, the physical and the spiritual. This makes him introduce the idea of a compulsory visible insignia of God, called the *līṅga*. Śrīpati also advocates the idea of gradation of liberation as held by Mādhva and his followers.

It must, however, be noted that, though God transforms Himself into the manifold world, He does not exhaust Himself in the creation, but the greater part of Him is transcendent. Thus, in some aspect God is immanent, forming the stuff of the world, and in another aspect he is transcendent and far beyond the range of this world. The so-called *māyā* is nothing but the energy of God, and God Himself is an identity of pure consciousness and will, or the energy of action and power.

Though, originally, all beings were associated with particular kinds of *karma*, yet when they were born into the material world and were expected to carry out their duties and actions, they were made to enjoy and to suffer in accordance to their deeds. God is neither partial nor cruel, but awards joy and suffering to man's own *karma* in revolving cycles, though the original responsibility of association with *karma* belongs to God. In this Śrīpati thinks

that he has been able to bridge the gulf between the almighty powers of God and the distribution of fruits of *karma* according to individual deeds, thus justifying the accepted theory of *karma* and reconciling it with the supreme powers of the Lord. He does not seem to realise that this is no solution, as at the time of original association the individuals were associated with various kinds of *karma*, and were thus placed in a state of inequality.

Śrīpati's position is pantheistic and idealistically realistic. That being so, the status of dream experiences cannot be mere illusion. Śaṅkara had argued that the experiences of life are as illusory as the experiences of dreams. In reply to this Śrīpati tries to stress the view that the dream-experiences also are not illusory but real. It is true, indeed, that they cannot be originated by an individual by his personal effort of will. But all the same, Śrīpati thinks that they are created by God, and this is further substantiated by the fact that the dreams are not wholly unrelated to actual objects of life, for we know that they often indicate various types of lucky and unlucky things in actual life. This shows that the dreams are somehow interconnected with the actual life of our waking experiences. Further, this fact demolishes the argument of Śaṅkara that the experiences of waking life are as illusory as the experiences of dreams.

In speaking of dreamless sleep, Śrīpati says that in that state our mind enters into the network of nerves inside the heart, particularly staying in the *purītat*, being covered by the quality of *tamas*, and this state is produced also by the will of God, so that when the individual returns to waking life by the will of God, this *tamas* quality is removed. This explains the state of *suṣupti*, which is distinguished from the stage of final liberation, when an individual becomes attuned to God and becomes free of all associations with the threefold *guṇas* of Prakṛti. He then finally enters into the transcendent reality of Śiva and does not return to any waking consciousness. So it must be noted that, according to Śrīpati, both the dream state and the dreamless state are produced by God. Śrīpati's description of *suṣupti* is thus entirely different from that of Śaṅkara, according to whom the soul is in Brahma-consciousness at the time of dreamless sleep.

Śrīpati supports his thesis that in dreamless sleep we, with all our mental functions, pass into the network of nerves in the heart,

and do not become merged in Brahman, as Śaṅkara might lead us to suppose. For this reason, when we wake the next day, we have revived in our memory the experiences of the life before the sleep. This explains the continuity of our consciousness, punctuated by dreamless sleep every night. Otherwise if we had at any time merged into Brahman, it could not be possible for us to remember all our duties and responsibilities, as if there were no dreamless sleep and no break in our consciousness.

In discoursing on the nature of difference between swoon (*mūrcchā*) and death, Śrīpati says that in the state of unconsciousness in swoon, the mind becomes partially paralysed so far as its different functions are concerned. But in death the mind is wholly dissociated from the external world. It is well to remember the definition of death as given in the *Bhāgavata Purāṇa* as being absolute forgetfulness (*mṛtyur atyanta-vismṛti*).

According to the view of Śaṅkara, the Brahman is formless. Such a view does not suit the position of Vīrā-śaivism as propounded by Śrīpati. So he raises the question as to whether the Śiva, the formless, is the same as the Śiva with the form as found in many *Śiva-līṅgas*, and in reply Śrīpati emphasises the fact that Śiva exists in two states, as the formless and as being endowed with form. It is the business of the devotee to realise that Śiva is one identical being in and through all His forms and His formless aspect. It is in this way that the devotee merges himself into Śiva, as rivers merge into the sea. The individual or the *jīva* is not in any sense illusory or a limitation of the infinite and formless nature into an apparent entity as the Śaṅkarites would try to hold. The individual is real and the Brahman is real in both the aspects of form and formlessness. Through knowledge and devotion the individual merges into God, as rivers merge into the sea, into the reality which is both formless and endowed with manifold forms.

Vīra-śaivism indeed is a kind of *bhedābheda* interpretation of the *Brahma-sūtra*. We have, in the other volumes of the present work, dealt with the *bhedābheda* interpretation, as made by Rāmānuja and Bhāskara from different angles. In the *bhedābheda* interpretation Rāmānuja regards the world and the souls as being organically dependent on God, who transcends the world of our experience. According to Bhāskara, the reality is like the ocean of which the world of experience is a part, just as the

waves are parts of the ocean. They are neither absolutely one with it nor different from it. The Vira-śaivism is also a type of *bhedā-bheda* interpretation, and it regards the absolute reality of the world of experience and the transcendent being, which is beyond all experience. Śrīpati sometimes adduces the illustration of a coiled snake which, in one state remains as a heap, and in another state appears as a long thick cord. So the world is, from one point of view different from God, and from another point of view one with God. This example has also been utilised by Vallabha for explaining the relationship between God and the world. The individual beings or *jīvas* may, through knowledge and devotion, purge themselves of all impurities, and with the grace of God ultimately return to the transcendent being and become merged with it. So things that appeared as different may ultimately show themselves to be one with Brahman.

Śrīpati points out that by the due performance of caste duties and the Vedic rites, the mind may become purified, so that the person may be fit for performing *yoga* concentration on Śiva, and offer his deep devotion to Him, and may thus ultimately receive the grace of God, which alone can bring salvation.

There has been a long discussion among the various commentators of the *Brahma-sūtra* as to whether the Vedic duties, caste-duties, and occasional duties form any necessary part of the true knowledge that leads to liberation. There have been some who had emphasised the necessity of the Vedic duties as being required as an indispensable element of the rise of the true knowledge. Others like Śaṅkara and his followers had totally denied the usefulness of Vedic duties for the acquisition of true knowledge. Śrīpati had all along stressed the importance of Vedic duties as an important means for purifying the mind, for making it fit for the highest knowledge attainable by devotion and thought. It may be noted in this connection that the present practice of the Liṅgāyats is wholly the concept of an extraneous social group and this anti-caste attitude has been supported by some authors by misinterpretation of some Vira-śaiva texts¹. But in commenting on the first topic of *Brahma-sūtra* III. 4, Śrīpati emphasises the independent claims of the knowledge of God and devotion to Him as leading

¹ See Professor Sakhare's *Liṅga-dhāraṇa-candrikā* (Introduction, pp. 666 *et seq.*) and also *Vīra-śaivānanda-candrikā* (*Vāḍakāṇḍa*, ch. 24, pp. 442 *et seq.*).

to liberation, though he does not disallow the idea that the Vedic duties may have a contributory effect in cleansing the mind and purifying it, when the person performs Vedic duties by surrendering all his fruits to God. Śrīpati, however, denounces the action of any householder who leaves off his Vedic duties just out of his personal whim.

In commenting on *Brahma-sūtra* III. 4. 2, Śrīpati quotes many scriptural texts to show that the Vedic duties are compulsory even in the last stage of life, so that in no stage of life should these duties be regarded as optional. In this connection he also introduces incidentally the necessity of *liṅga-dhāraṇa*. Though the Vedic duties are generally regarded as accessories for the attainment of right knowledge, they are not obligatory for the householder, who may perform the obligatory and occasional duties and yet attain a vision of God by his meditation and devotion.

The essential virtues, such as *śama* (inner control), *dama* (external control), *tiṭikṣā* (endurance), *uparati* (cessation from all worldly pleasures), *mumukṣutva* (strong desire for liberation), etc., are indispensable for all, and as such the householders who have these qualities may expect to proceed forward for the vision of God. All injunctions and obligations are to be suspended for the preservation of life in times of danger. The Upaniṣads stress the necessity of the various virtues including concentration of mind leading to *Brahma-vidyā*. Śrīpati points out that every person has a right to pursue these virtues and attain *Brahma-vidyā*. This is done in the very best way by accepting the creed of Pāśupata Yoga.

The duties of a Śiva-yogin consist of his knowledge, disinclination, the possession of inner and outer control of passions, and cessation from egotism, pride, attachment and enmity to all persons. He should engage himself in listening to Vedāntic texts, in meditation, in thinking and all that goes with it in the *yoga* process, like *dhyāna*, *dhāraṇā*, and also in deep devotion to Śiva. But though he may be so elevated in his mind, he will not show or demonstrate any of these great qualities. He will behave like a child. Those that have become entirely one with Śiva need not waste time in listening to Vedāntic texts. That is only prescribed for those who are not very advanced. When a man is so advanced that he need not perform the *Varṇāśrama* duties or enter into *samādhi*, he is called *jīvan-mukta* in such a state; it depends upon

the will of such a man whether he should enter into the *jīvan-mukta* state with or without his body. When a person's mind is pure, he may obtain an intuitive knowledge of Śiva by devotion. A truly wise man may be liberated in the present life. Unlike the system of Śaṅkara, Śrīpati introduces the necessity of *bhakti* along with knowledge. He holds that with the rise of knowledge, all old bonds of *karma* are dissolved and no further *karma* would be attached to him.
